# Pure Dhamma 

## A Quest to Recover Buddha's True Teachings

## Table of Contents

Part I Home ..... 1
Part II Buddha Dhamma ..... 5
1 User's Guide to Pure Dhamma Website ..... 7
2 Buddha Dhamma - A Scientific Approach ..... 12
Introduction - A Scientific Approach to Buddha Dhamma .....  12
Theories of Our World - Scientific Overview ..... 16
Mind and Matter - Buddhist Analysis ..... 18
Sensual Pleasures - The Hidden Suffering ..... 22
Kammic Energy Leads to Consciousness ..... 25
Brain and the Gandhabba ..... 29
Mind Is Not in the Brain ..... 29
Gandhabba in a Human Body - an Analogy ..... 32
Persistent Vegetative State - Buddhist View ..... 35
Patient H.M. - Different Roles of Brain in Memory ..... 39
Memory Recall for Gandhabba in a Human Body ..... 43
Our Two Worlds - Rupa Loka and Nāma Loka ..... 46
Autobiographical Memory - Preserved in Nāma Loka ..... 47
Rūpa and Rūpakkhandha, Nāma and Nāmagotta ..... 50
Response to a Sensory Stimulus - Role of Gati/Anusaya ..... 54
Ārammaṇa Plays a Critical Role in a Sensory Event ..... 58
Nāma Loka and Rūpa Loka - Two Parts of Our World ..... 62
Tipiṭaka - A Systematic Approach ..... 66
Tipiṭaka - The Uniqueness of Buddha Dhamma ..... 66
Pāli Canon Is Self-Contained but Requires Detailed Explanation ..... 69
Vinaya Piṭaka - More Than Disciplinary Rules ..... 73
Abhidhamma Piṭaka - Deeper Analyses of Concepts ..... 76
Antarābhava and Gandhabba ..... 79
Antarābhava - No Connection to Gandhabba ..... 79
Antarābhava Discussion in Kathāvatthu - Not Relevant to Gandhabba ..... 82
How Do We See? - Role of the Gandhabba ..... 86
Interpretation of the Tipiṭaka - Gandhabba Example ..... 91
3 Buddhahood Associated Controversies ..... 96
Buddhahood Controversies - Introduction ..... 96
Pātịāriya (Supernormal Abilities) of a Buddha - Part I ..... 99
Pāṭihāriya (Supernormal Abilities) of a Buddha - Part II ..... 103
4 What is Buddha Dhamma? ..... 108
5 Foundation of Dhamma ..... 112
6 The Importance of Purifying the Mind ..... 115
7 The Grand Unified Theory of Dhamma ..... 119
The Grand Unified Theory of Dhammā - Introduction ..... 119
Our Two Worlds: Material and Immaterial ..... 123
31 Realms Associated with the Earth ..... 128
Gandhabba - Only in Human and Animal Realms ..... 132
Body Types in 31 Realms - Importance of Manomaya Kāya ..... 137
Gandhabba Sensing the World - With and Without a Physical Body ..... 141
Nibbāna in the Big Picture ..... 146
8 Buddha Dhamma: Non-Perceivability and Self-Consistency ..... 150
9 Saṃsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory ..... 154
10 Evidence for Rebirth ..... 156
11 Power of the Human Mind ..... 160
Power of the Human Mind - Introduction ..... 160
Difference Between Jhāna and Stages of Nibbāna ..... 162
Power of the Human Mind - Anāriya or Mundane Jhānā ..... 166
Power of the Human Mind - Ariya Jhānā ..... 170
Are There Procedures for Attaining Magga Phala, Jhāna and Abhiññ̄a? ..... 172
12 Transfer of Merits (Pattidāna) - How Does it Happen? ..... 176
13 First Noble Truth is Suffering? Myths about Suffering ..... 180
14 Vinaya - The Nature Likes to be in Equilibrium ..... 183
Part III Key Dhamma Concepts ..... 186
1 Basic Framework of Buddha Dhamma ..... 190
Buddha Dhamma - Noble Truths, Paṭicca Samuppāda, Tilakkhaṇa ..... 190
Noble Truths, Paṭicca Samuppāda, Tilakkhaṇa - Key Relationships ..... 193
Anicca Nature, the First Noble Truth, and Paṭicca Samuppāda ..... 197
Tilakkhana - Introduction ..... 201
Anicca and Anatta - Two Characteristics of the World ..... 201
Anuloma Khanti and Sammattaniyāma - Pre-requisites for a Sotāpanna ..... 205
Anicca Nature - Not Possible to Overcome Suffering in This World ..... 209
Dukkha in Tilakkhaṇa Is a Characteristic - Not Dukkha Vedanā ..... 212
Attachment to Things with Dukkha Lakkhaṇa Leads to Dukkha ..... 215
How Does Anicca Nature Lead to Dukkha? ..... 218
Anatta is a Characteristic of the World, not About a "Self" ..... 223
Anatta in Anattalakkhaṇa Sutta - Part 1 ..... 226
Anatta in Anattalakkhaṇa Sutta - Part 2 ..... 229
2 San ..... 233
What is "Say"? Meaning of Saysāra (or Saṃsāra) ..... 233
Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka ..... 237
Sañkhāra - Life is a Bundle of Sańkhāra ..... 242
Difference Between Dhammā and Sañkhāra ..... 244
Kamma are Done with Sańkhāra - Types of Sañkhāra ..... 249
3 Nibbāna ..... 253
Nibbāna - Is it Difficult to Understand? ..... 253
The Four Stages in Attaining Nibbāna ..... 256
What Are Rūpa? (Relation to Nibbāna) ..... 260
Nirāmisa Sukha ..... 262
Does the First Noble Truth Describe only Suffering? ..... 264
Nirodha and Vaya - Two Different Concepts ..... 268
Nibbāna "Exists", but Not in This World ..... 270
4 Anicca, Dukkha, Anatta ..... 276
Anicca, Dukkha, Anatta - Wrong Interpretations ..... 276
Anatta and Dukkha - True Meanings ..... 282
Anicca, Dukkha, Anatta - According to Some Key Suttas ..... 285
Anicca - True Meaning ..... 290
Anicca - Inability to Keep What We Like ..... 290
Anicca - Repeated Arising/Destruction ..... 295
Anicca - Worthlessness of Worldly Things ..... 296
Anicca - The Incessant Distress ("Pīlana") ..... 300
How to Cultivate the Anicca Saññā ..... 304
How to Cultivate the Anicca Saññā - II ..... 307
If Everything is Anicca Should We Just give up Everything? ..... 310
Anattā - A Systematic Analysis ..... 312
Anattā in Anattalakkahana Sutta - No Soul or an Ātma ..... 313
Anatta - No Refuge in This World ..... 315
Dasa Akusala and Anatta - The Critical Link ..... 319
Anatta - the Opposite of Which Atta? ..... 322
Anattā (Mundane Interpretation) - No "Unchanging Self" ..... 326
Tilakkhaṇa - English Discourses ..... 329
The Way to Nibbāna - Transcription of a Discourse by Waharaka Thero ..... 331
Sotāpanna Stage and Tilakkhaṇa ..... 332
Sakkāya Diṭṭhi and Tilakkhaṇa ..... 332
Sakkāya Diț̣̣hi - Getting Rid of Deeper Wrong Views ..... 336
Associations (Sevana) - A Root Cause of Wrong Views ..... 340
Why are Tilakkhana not Included in 37 Factors of Enlightenment? ..... 344
Two Versions of 37 Factors of Enlightenment ..... 346
Types of Bodies in 31 Realms - Connection to Jhāna ..... 350
Finest Manomaya Kāya of an Arūpāvacara Brahma ..... 352
5 Gati, Bhava, and Jāti ..... 356
Namagotta, Bhava, Kamma Bīja, and Mano Loka (Mind Plane) ..... 356
Gati and Bhava - Many Varieties ..... 359
Gati to Bhava to Jāti - Ours to Control ..... 363
Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka ..... 367
Bhava and Jāti - States of Existence and Births Therein ..... 369
Cuti and Marana - Related to Bhava and Jāti ..... 372
Anusaya, Gati, Bhava - Connection to Manomaya Kāya (Gandhabba) ..... 376
Difference Between Taṇhā and Upādāna ..... 379
Pāpa Kamma Versus Akusala Kamma ..... 384
6 Sorting out Some Key Pali Terms (Taṇhā, Lobha, Dos a, Moha, etc) ..... 388
Kama Tanhā, Bhava Tannhā, Vibhava Tanhā ..... 388
Tanhā - How We Attach Via Greed, Hate, and Ignorance ..... 390
Lobha, Rāga and Kāmacchanda, Kāmarāga ..... 393
Lobha, Dosa, Moha Versus Rāga, Paṭigha, Avijjā ..... 395
What is Avijjā (Ignorance)? ..... 397
Vedanā (Feelings) Arise in Two Ways ..... 400
Indriya and Āyatana - Big Difference ..... 402
Hetu-Phala, Paccuppanna, and Paṭicca Samuppāda ..... 405
Diṭṭhi (Wrong Views), Sammā Diṭṭhi (Good/Correct Views) ..... 407
Correct Meaning of Vacī Sañkhāra ..... 409
Kāmacchanda and Icca - Being Blinded by Cravings ..... 413
7 The Five Aggregates (Pañcakkhandha) ..... 417
Five Aggregates - Introduction ..... 417
Difference Between Physical Rūpa and Rūpakkhandha ..... 421
Rūpakkhandha and Rūpa Upādānakkhandha ..... 424
Arising of Five Aggregates Based on an Ārammaṇa ..... 427
Memory Records - Critical Part of Five Aggregates ..... 432
Pañca Upādānakkhandhā - Introduction ..... 436
Five Aggregates - Connection to Tilakkhaṇa ..... 439
Five Aggregates and Tilakkhaṇa - Introduction ..... 439
Icca, Nicca, Anicca - Important Connections ..... 444
"Me" and "Mine" - The Root Cause of Suffering ..... 449
Difference Between "Me and Mine" and Sakkāya Dițṭhi ..... 453
Sakkāya Ditṭhi - "Me and Mine" View ..... 457
Atta - Two Very Different Meanings ..... 461
Saññā (Perception) ..... 466
Vedanā (Feelings) ..... 466
Viññāṇa (Defiled Consciousness) ..... 468
Rūpa (Material Form) ..... 471
Pañcakkhandha or Five Aggregates - A Misinterpreted Concept ..... 473
Pañcaupādānakkhandha - It is All Mental ..... 478
8 Nāma \& Rūpa to Nāmarūpa ..... 482
Mental Aggregates ..... 482
What is Sañña (Perception)? ..... 482
Saññā - What It Really Means ..... 483
Future Suffering - Why It Arises ..... 485
Vipallāsa (Diṭṭhi, Saññā, Citta) Affect Sañkhāra ..... 488
Ps 1.8 Treatise of Distortions - Vipallāsakathā ..... 493
Samāropanahāra vibhañga ( Ne 19 ) ..... 497
What Is Vedanā (Feelings)? ..... 505
Vedanā and Samphassa Jā Vedanā - More Than Just Feelings ..... 505
Vedanā - What It Really Means ..... 508
Does Bodily Pain Arise Only Due to Kamma Vipāka? ..... 512
Sañkhāra - What It Really Means ..... 515
Rūpa Aggregate ..... 520
Bhūta and Yathābhūta - What Do They Really Mean ..... 520
What are Rūpa? - Dhammā are Rūpa Too! ..... 524
Viññāṇa Aggregate ..... 529
Viññāṇa - What It Really Means ..... 529
Kamma Viññāṇa - Link Between Mind and Matter ..... 533
Anidassana Viññāṇa - What It Really Means ..... 537
Nāmarūpa Formation ..... 541
Kamma Viññ̄ạ̣a and Nāmarūpa Pariccheda Ñāṇa ..... 542
Part IV Living Dhamma ..... 546
1 Essential Buddhism ..... 548
Four Noble Truths - Suffering and Its Elimination ..... 548
Introduction to Citta, Vedanā, Saññā, Sañkhāra, and Viññāṇa ..... 552
Viññ̄ṇa - Consciousness Together With Future Expectations ..... 556
Connection Between Sañkhāra and Viññ̄āna ..... 561
Viññāṇa and Sañkhāra - Connection to Paṭicca Samuppāda ..... 564
Breath Meditation Is Addictive and Harmful in the Long Run ..... 567
Ānāpānasati Eliminates Mental Stress Permanently ..... 572
Ānāpāna and Satipaṭṭhāna - Fundamentals ..... 576
Sati in Ānāpānasati/Satipaṭ̣̆hāna - Two Meanings of Sati ..... 578
2 Living Dhamma - Overview ..... 584
Living Dhamma - Introduction ..... 584
Peace of Mind to Nibbāna - The Key Step ..... 587
Starting on the Path Even without Belief in Rebirth ..... 590
3 Dhamma with Less Pāli ..... 593
Buddha Dhamma for an Inquiring Mind - Part I ..... 593
Root of All Suffering - Ten Immoral Actions ..... 597
Is Suffering the Same as the First Noble Truth on Suffering? ..... 598
Dhamma, Sañkhāra, Sañkhata, Rūpa, Viññāṇa, Gati, Āsava, Anusaya ..... 601
Complexity of the Mind - Viññāṇa and Sañkhāra ..... 605
Citta, Manō, Viññ̄n̄a - Nine Stages of a Thought ..... 607
4 Living Dhamma - Fundamentals ..... 612
What Are Kilesa (Mental Impurities)? - Connection to Cetasika ..... 612
Suffering in This Life - Role of Mental Impurities ..... 616
Satipaṭṭhāna Sutta - Relevance to Suffering in This Life ..... 617
How Are Gati and Kilesa Incorporated into Thoughts? ..... 617
Noble Eightfold Path - Role of Sobhana Cetasika ..... 618
Getting to Samadhi ..... 622
Sexual Orientation - Effects of Kamma and Gati (Sañkhāra) ..... 623
5 Mundane Sammā Samādhi ..... 627
Micca Dițṭhi - Connection to Hethu Phala (Cause and Effect) ..... 627
Suffering in This Life and Paṭicca Samuppāda ..... 628
Suffering in This Life and Paṭicca Samuppāda II ..... 629
6 Transition to Noble Eightfold Path ..... 631
Is It Necessary for a Buddhist to Eliminate Sensual Desires? ..... 631
Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi ..... 634
Ye Dhammā Hetuppabhavā.. and Yam Kiñci Samudaya Dhammam. ..... 639
7 Samādhi, Jhāna (Dhyāna), Magga Phala ..... 644
Samādhi, Jhāna, Magga Phala - Introduction ..... 644
Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra ..... 646
Jhānic Experience in Detail - Sāmaññaphala Sutta (DN 2) ..... 650
Ascendance to Nibbāna via Jhāna (Dhyāna) ..... 653
Paññāvimutti - Arahanthood without Jhāna ..... 658
Mundane versus Supramundane Jhāna ..... 661
Nirodha Samāpatti, Phala Samāpatti, Jhāna, and Jhāna Samāpatti ..... 666
8 Mental Body - Gandhabba ..... 672
Our Mental Body - Gandhabba ..... 672
Gandhabba State - Evidence from Tipiṭaka ..... 677
Antarābhava and Gandhabba ..... 681
Ānantarika Kamma - Connection to Gandhabba ..... 686
Mental Body (Gandhabba) - Personal Accounts ..... 690
Abnormal Births Due to Gandhabba Transformations ..... 692
Cattāro Āhāra for Mental Body or Gandhabba ..... 695
Micchā Ditṭhi, Gandhabba, and Sotāpanna Stage ..... 698
Working of kammā - Critical Role of Conditions ..... 702
Part V Dhamma and Science ..... 706
1 Dhamma and Science - Introduction ..... 709
2 Origin of Life ..... 713
Origin of Life - There is No Traceable Origin ..... 714
Human Life - A Mental Base (Gandhabba) and a Material Base (Cell) ..... 717
Clarification of "Mental Body" and "Physical Body" - Different Types of "Kāya" ..... 721
Four Types of Births in Buddhism ..... 724
Buddhist Explanations of Conception, Abortion, and Contraception ..... 728
Cloning and Gandhabba ..... 731
Living Cell - How Did the First Cell Come to Existence? ..... 736
Mystical Phenomena in Buddhism? ..... 740
Views on Life ..... 744
Views on Life - Wrong View of Materialism ..... 745
Wrong View of Creationism (and Eternal Future Life) - Part 1 ..... 748
Wrong View of Creationism (and Eternal Future Life) - Part 2 ..... 751
Worldview of the Buddha ..... 754
Buddhist Worldview - Introduction ..... 755
Contact Between Āyatana Leads to Vipāka Viññāṇa ..... 760
How Do Sense Faculties Become Internal Āyatana? ..... 764
Indriya Make Phassa and Āyatana Make Samphassa ..... 768
Wider Worldview of the Buddha ..... 772
The Framework of Buddha Dhamma ..... 772
The Suffering (Dukkha) in the First Noble Truth ..... 777
Dangers of Ten Types of Wrong Views and Four Possible Paths ..... 781
Sammā Dițṭhī - Only One Leads to the Noble Path ..... 785
Fear of Nibbāna (Enlightenment) ..... 789
Worldview of the Buddha - Explanatory Material ..... 793
Ghost 1990 Movie - Good Depiction of Gandhabba Concept ..... 793
Mental Body Versus the Physical Body ..... 797
"Tipitaka English" Convention Adopted by Early European Scholars - Part 1 ..... 801
"Tipitaka English" Convention Adopted by Early European Scholars - Part 2 ..... 805
Origin of Life - One Creates One's Own Future Lives ..... 809
3 Good Explanations - Key to Weeding Out Bad Versions of Dhamma ..... 815
Consciousness and the Brain ..... 816
Matter Creates Mind or Mind Creates Matter? ..... 816
4 Conscious ness - A Dhamma Perspective ..... 818
Consciousness Dependence on Number of Dimensions ..... 818
Six Kinds of Consciousness in Our 3-D World ..... 819
Expanding "Consciousness" by Using Technology ..... 821
Expanding "Consciousness" by Purifying the Mind ..... 822
5 Consistencies with Science ..... 826
Second Law of Thermodynamics is Part of Anicca! ..... 826
Quantum Entanglement - We Are All Connected ..... 828
Infinity - How Big Is It? ..... 830
Gödel's Incompleteness Theorem ..... 832
Truine Brain: How the Mind Rewires the Brain via Meditation/Habits ..... 835
How Habits are Formed and Broken - A Scientific View ..... 839
6 Inconsistencies with Science ..... 844
Neuroscience says there is no Free Will? - That is a Misinterpretation! ..... 844
The Double Slit Experiment - Correlation between Mind and Matter? ..... 848
Vision (Cakkhu Viññāṇa) is Not Just Seeing ..... 851
Part VI Elephants in the Room ..... 856
1 Word-for-Word Translation of the Tipitaka ..... 857
Elephant in the Room 1 - Direct Translation of the Tipitaka ..... 857
Niddesa (Brief Description) of Paṭicca Samuppāda ..... 861
Paṭicca Samuppāda During a Lifetime ..... 865
Idappaccayatā Paṭicca Samuppāda - Bhava and Jāti Within a Lifetime ..... 865
Change of Mindset Due to an Ārammana ..... 869
Khandhā in Idappaccayatā Paṭicca Samuppāda ..... 872
Seeing Is a Series of "Snapshots" ..... 876
Aggregate of Forms - Collection of "Mental Impressions" of Forms ..... 880
Rūpakkhandha in Idappaccayatā Pațicca Samuppāda ..... 883
Five Aggregates - Experiences of Each Sentient Being ..... 887
Pañcupādānakkhandha - Attachment to One's Experiences ..... 891
Noble Truth of Suffering- Pañcupādānakkhandhā Dukkhā ..... 894
Sakkāya Diṭṭhi and Pañcupādānakkhandhā ..... 898
Bhava and Jāti Within a Lifetime - Example ..... 902
Often Mistranslated Pāli Keywords ..... 905
Rāga and Jhāna - Two Commonly Misunderstood Words ..... 906
Elephant in the Room 2 - Jhāna and Kasina ..... 910
Samādhi, Jhāna, and Sammā Samādhi ..... 910
Jhāna, Jhāya, and Jhāyi - Different Meanings ..... 913
Elephant in the Room 3 - Ānāpānasati ..... 917
Ānāpānasati - Overview ..... 917
Assāsa Passāsa - What Do They Mean? ..... 920
Ānāpānasati Not About Breath - Icchānañgala Sutta ..... 924
Mahārāhulovāda Sutta and Ānāpānasati ..... 927
Part VII Three Levels of Practice ..... 932
1 Moral Living and Fundamentals ..... 935
The Basics ..... 936
The Pale Blue Dot ..... 936
The Law of Attraction, Habits, Character (Gati), and Cravings (Āsava) ..... 937
Habits, Goals, and Character (Gati or Gathi) ..... 940
Wrong Views (Micchā Dițṭhi) - A Simpler Analysis ..... 942
Four Noble Truths: Recipe for Problem Solving ..... 945
First Noble Truth - A Simple Explanation of One Aspect ..... 949
Difference between a Wish and a Determination (Parāmitā) ..... 951
Calming the Mind ..... 953
Key to Calming the Mind - The Five Hindrances ..... 953
Solution to a Wandering Mind - Abandon Everything? ..... 956
Right Speech - How to Avoid Accumulating Kamma ..... 958
Three Kinds of Happiness - What is Nirāmisa Sukha? ..... 959
Learning Buddha Dhamma Leads to Nirāmisa Sukha ..... 961
How to Taste Nibbāna ..... 965
Need to Experience Suffering in Order to Understand it? ..... 966
Does Impermanence Lead to Suffering? ..... 968
Buddha Dhamma and Buddhism ..... 971
What is Unique in Buddha Dhamma? ..... 971
A Buddhist or a Bhauddhayā? ..... 974
Where to Start on the Path? ..... 977
Recent Evidence for Unbroken Memory Records (HSAM) ..... 979
Buddhism without Rebirth and Nibbāna? ..... 981
"Self" and "no-self": A Simple Analysis - Do We Always Act with Avijjā? ..... 985
Dhamma Concepts ..... 988
Kilesa - Relationship to Akusala, Kusala, and Puñña Kamma ..... 989
Ten Immoral Actions (Dasa Akusala) ..... 992
Puñña Kamma - Dāna, Sīla, Bhāvanā ..... 996
Details of Kamma - Intention, Who Is Affected, Kamma Patha ..... 999
The Five Precepts - What the Buddha Meant by Them ..... 1003
What is Kamma? - Is Everything Determined by Kamma? ..... 1006
How to Evaluate Weights of Different Kamma ..... 1009
Account of Angulimāla - Many Insights to Buddha Dhamma ..... 1011
The Four Bases of Mental Power (Cattāro Iddhipāda) ..... 1016
Why is it Necessary to Learn Key Pāli Words? ..... 1017
Buddha Dhamma and Morality ..... 1020
Origin of Morality (and Immorality) in Buddhism ..... 1020
Is Eating Meat an Akusala Kamma (Immoral Deed)? ..... 1022
Do Things Just Happen? - The Hidden Causes ..... 1025
Craving for Pornography - How to Reduce the Tendency ..... 1028
2 Working Towards Good Rebirths ..... 1032
Sansāric Habits, Character (Gati), and Cravings (Āsava) ..... 1032
Complexity of Life and the Way to Seek "Good Rebirths" ..... 1034
How to Avoid Birth in the Apāyā ..... 1035
Rebirth - Connection to Suffering in the First Noble Truth ..... 1037
How the Buddha Described the Chance of Rebirth in the Human Realm ..... 1041
Nakhasikha Sutta (SN 22.97 SN 56.51 SN 13.1 SN 20.2) ..... 1044
Dutiyachiggalayuga Sutta (SN 56.47, 56.48) ..... 1047
Assu Sutta (SN 15.3) ..... 1049
Kamma, Debt, and Meditation ..... 1051
How do we Decide which View is Wrong View (Ditṭhi)? ..... 1053
Three Kinds of Diț̣hi, Eightfold Paths, and Samādhi ..... 1056
Implications of the Rebirth Process in Daily Life and in Society ..... 1058
What Does Buddha Dhamma Say about Creator, Satan, Angels, and Demons? ..... 1060
Pațisandhi Citta - How the Next Life is Determined According to Gati ..... 1063
3 Seeking Nibbāna ..... 1065
Atṭha Purisa Puggalā - Eight Noble Persons ..... 1065
Āsava, Anusaya, and Gati (Gathi) ..... 1070
The Way to Nibbāna - Removal of Āsavā ..... 1074
Kaṇh (Dark) and Sukka (Bright) Kamma and Kammakkhaya ..... 1076
Dasa Samyojana - Bonds in Rebirth Process ..... 1080
The Cooling Down Process (Nibbāna) - How the Root Causes are Removed ..... 1086
Why is Correct Interpretation of Anicca, Dukkha, Anattā so Important? ..... 1089
How to Cultivate the Noble Eightfold Path starting with Anicca, Dukkha, Anatta ..... 1091
Difference Between Giving Up Valuables and Losing Interest in Worthless ..... 1094
4 Sotāpanna Stage of Nibbāna ..... 1098
The Sotāpanna Stage ..... 1099
Why a Sotāpanna is Better off than any King, Emperor, or a Billionaire ..... 1102
Myths about the Sotāpanna Stage ..... 1106
Sotāpanna Anugāmi and a Sotāpanna ..... 1108
Sotāpanna Anugāmi - No More Births in the Apāyā ..... 1113
Four Conditions for Attaining Sotāpanna Magga/Phala ..... 1118
Sotāpatti Anga - The Four Qualities of a Sotāpanna ..... 1122
Sammā Dițṭhi - Realization, Not Memorization ..... 1126
How Does One Know whether the Sotāpanna Stage is Reached? ..... 1130
Assāda, Ādīnava, Nissarana ..... 1135
Assāda, Ādīnava, Nissaraṇa - Introduction ..... 1135
How Perceived Pleasures (Assāda) lead to Dukkha ..... 1139
Kāma Guna, Kāma, Kāma Rāga, Kāmaccfanda ..... 1142
Vedanā (Feelings) Arise in Two Ways ..... 1146
Feelings: Sukha, Dukha, Somanassa, and Domanassa ..... 1149
Kāma Assāda Start with Phassa Paccayā Vedanā or Samphassa Jā Vedana ..... 1152
Sakkāya Ditṭhi is Personality (Me) View? ..... 1156
Akusala Citta - How a Sotāpanna Avoids Apāyagāmi Citta ..... 1161
What is the only Akusala Removed by a Sotāpanna? ..... 1163
Udayavaya Ñāna ..... 1167
Udayavaya (Udayabbaya) Ñāna - Introduction ..... 1167
Nibbatti Lakkhana in Udayavaya Ñāṇa ..... 1169
Āhāra (Food) in Udayavaya Ñāṇa ..... 1172
Udayavaya Ñāna - Importance of the Cittaja Kāya ..... 1175
Part VIII Tables and Summaries ..... 1180
1 Pāli Glossary ..... 1181
2 Pāli Glossary - (A-K) ..... 1189
3 Pāli Glossary - (L-Z) ..... 1198
4 List of "San" Words and Other Pāli Roots ..... 1210
5 The 89 (121) Types of Citta ..... 1215
6 Cetasika (Mental Factors) ..... 1218
7 Rūpa (Material Form) - Table ..... 1220
8 Rūpa - Generation Mechanisms ..... 1223
9 Rūpa Kalāpa (Grouping of Matter) ..... 1225
10 Akus ala Citta and Akus ala Vipaka Citta ..... 1229
1137 Factors of Enlightenment ..... 1232
12 Conditions for the Four Stages of Nibbāna ..... 1235
13 Ultimate Realities - Table ..... 1237
1431 Realms of Existence ..... 1239
Part IX Paṭicca Samuppāda ..... 1243
1 Paṭicca Samuppāda - "Pati+ichcha" + "Sama+uppāda" ..... 1246
2 Sakkāya Diṭṭhi and Paṭicca Samuppāda ..... 1250
Sakkāya Dițṭhi - Wrong View of "Me" and "Mine" ..... 1250
What Reincarnates? - Concept of a Lifestream ..... 1254
Anatta and Sakkāya Diṭ̣hi - Two Different Concepts ..... 1257
3 Paṭicca Samuppāda - Essential Concepts ..... 1260
Nibbāna - Rāgakkhaya Dosakkhaya Mohakkhaya - Part 1 ..... 1260
Pañca Nīvaraṇa and Sensual Pleasures (Kāma) ..... 1264
What is "Kāma"? It is not Just Sex ..... 1267
Icchā, Taṇhā, Kāma - Root Causes of Suffering ..... 1270
Jāti - Different Types of Births ..... 1274
Bhava - Kammic Energy That Can Power an Existence ..... 1278
Bhava and Punabbhava - Kammic Energy Giving Rise to Renewed Existence ..... 1281
Concepts of Upādāna and Upādānakkhandha ..... 1283
Where Are Memories "Stored"? - Connection to Pañcakkhandha ..... 1283
Loka Sutta - Origin and Cessation of the World ..... 1286
Dukkha Samudaya Starts With Samphassa-Jā-Vedanā ..... 1290
Key Steps of Kammic Energy Accumulation ..... 1293
Generating Kammic Energy in the "Upādāna Paccayā Bhava" ..... 1297
Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna) ..... 1301
4 Kamma and Paṭicca Samuppāda ..... 1305
Kamma and Paṭicca Samuppāda - Introduction ..... 1305
Kāma Assāda - A Root Cause of Suffering ..... 1308
Gati (Habits/Character) Determine Births - Sañsappanīya Sutta ..... 1312
5 Paṭicca Samuppāda, Tilakkhaṇa, Four Noble Truths ..... 1317
Paṭicca Samuppāda - Introduction ..... 1317
What Did the Buddha Mean by a "Loka"? ..... 1319
Future Suffering (Loka/Dukkha Samudaya) Starts With Sensory Input (Ārammaṇa) ..... 1323
Sotāpanna - One With the "Wider Worldview" of the Buddha ..... 1326
Sotāpannā - Just Starting on the Noble Path ..... 1330
Yoniso Manasikāra and Paṭicca Samuppāda ..... 1333
Dhamma - Different Meanings Depending on the Context ..... 1337
Dhammānudhamma Paṭipatti - Connection to Paṭicca Samuppāda/Tilakkhaṇa ..... 1339
6 Understanding the Terms in Paṭicca Samuppāda ..... 1343
Distortion of Pāli Keywords in Paṭicca Samuppāda ..... 1343
Sañkhāra - Many Meanings ..... 1347
Sañkhāra - Should Not be Translated as a Single Word ..... 1348
Kamma and Sañkhāra, Cetanā and Sañcetanā ..... 1352
Kusala-Mūla Sañkhāra Are Needed to Attain Nibbāna ..... 1354
Rebirths Take Place According to Abhisañkhāra ..... 1359
Viññāna - Two Critical Meanings ..... 1362
Abhisañkhāra Lead to Kamma Viññāṇa ..... 1362
Two Types of Kamma Viññāṇa ..... 1366
Summary of Key Concepts About Viññ̄āna and Sañkhāra ..... 1369
Anidassana, Appaṭigha Rūpa Due to Anidassana Viññāṇa ..... 1372
Memory, Dhammā, and Viññāṇa Dhātu ..... 1378
Critical Influence of Wrong Views on Akusala Citta ..... 1378
Near-Death Experiences (NDE): Brain Is Not the Mind ..... 1381
Gandhabba (Mental Body) Separating from Physical Body in Jhāna ..... 1384
Where Are Memories Stored? - Viñ̃̃āṇa Dhātu ..... 1387
Citta Vithi - Fundamental Sensory Unit ..... 1392
Does any Object (Rūpa) Last only 17 Thought Moments? ..... 1396
Phassa (Contact) - Contact With Pasāda Rūpa ..... 1399
Arising of the Five Aggregates With an Ārammaṇa ..... 1402
7 Paṭicca Samuppāda - Overview ..... 1407
8 How Are Paṭicca Samuppāda Cycles Initiated? ..... 1409
9 What Does "Paccayā" Mean in Paṭicca Samuppāda? ..... 1413
10 Paṭicca Samuppāda Cycles ..... 1416
Avyākata Paṭicca Samuppāda for Vipāka Viññāna ..... 1416
Akusala-Mūla Upapatti Paṭicca Samuppāda ..... 1421
Uppatti Paṭicca Samuppāda (How We Create Our Own Rebirths) ..... 1424
Kusala-Mūla Paṭicca Samuppāda ..... 1428
Idappaccayatā Paṭicca Samuppāda ..... 1431
11 Paṭicca Samuppāda in Plain English ..... 1436
Introduction - What is Suffering? ..... 1436
Introduction-2-The Three Categories of Suffering ..... 1440
Avijjā Paccayā Sañkhārā ..... 1444
Sañkhāra Paccayā Viñ̃̃āṇa - 1 ..... 1446
Sańkhāra Paccayā Viñĩāṇa - 2 ..... 1449
Viññāna Paccayā Nāmarūpa ..... 1451
Nāmarūpa Paccayā Saḷāyatana ..... 1454
Difference between Phassa and Samphassa ..... 1456
Phassa Paccayā Vedanā....to Bhava ..... 1459
Bhava Paccayā Jāti....Jarā, Maraṇa, ..... 1463
12 Imas mim Sati Idam Hoti - What Does It Really Mean? ..... 1469
13 Paṭiloma Paṭicca Samuppāda - Key to Nibbāna ..... 1473
14 Paṭ̣̣hāna Dhammā ..... 1476
Paṭthāna Dhammā - Connection to Cause and Effect (Hetu Phala) ..... 1476
Anantara and Samanantara Paccayā ..... 1479
Āsevana and Aññamañña Paccayā ..... 1481
Part X Is There a 'Self’? ..... 1485
1 Citta-Basis of Our Experience and Actions ..... 1486
2 Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event ..... 1490
3 Kāma Guṇa - Origin of Attachment (Taṇhā) ..... 1495

## Welcome!

Revised August 12, 2019; August 16, 2020; May 28, 2022; July 4, 2022
Note: Now you can select the "dark mode" (good for nighttime reading) or the "regular mode" by clicking the "crescent Moon icon" at the bottom right.

- I have been told that some browsers display the following message when opening the puredhamma.net webpage: "puredhamma.net wants to know your location." I am not sure why that message comes up. There is no need for the website to know anyone's location. Please say "no" to any such request.

Buddhism (Buddha Dhamma) describes the "laws of nature" as discovered by the Buddha 2500 years ago. This website presents those teaching per the Pāli Canon, Tipiṭaka. Even though I am a Buddhist by birth, I never bothered to look into the question of why I was a Buddhist. When I retired several years ago, I first started reading widely on many subjects, including science, philosophy, and religion.

- When I started to glean the profound message of the Buddha, I realized that I had not known much about my own "religion." Furthermore, it had been "contaminated" over its long history. Since 2009, I have been trying to find the essence of the message of the Buddha. I wanted to share the results with the rest of the world; see, "About."

There seem to be three types of people who become interested in "Buddhism":

1. Those who have gone through hardships see that there is suffering "in this world," and seek solutions.
2. Those getting to old age are beginning to see that there are signs of possible problems looming in the future. That includes aging, various ailments, not being able to get satisfaction from those things that provided comfort before, etc.
3. Those who are intellectually motivated, and exposed to Dhammapada verses or some other types of sayings by the Buddha, see a glimpse of a broader world view of the Buddha.

Some of those who have been to meditation retreats realize that there is indeed a second option compared to seeking material wealth and indulging in sense pleasures. Especially for those people in categories 1 and 2, it becomes clear that indulging in sense pleasures does not have staying power. On the other hand, the sense of well-being achieved via insight meditation (not breath meditation) has staying power and does not go down as one gets old.

- I believe that for people in any category, it is a good idea first to understand what the Buddha's message was. Those who are intellectually motivated will be able to get a complete picture, and thus a better intellectual satisfaction. For those in categories 1 and 2, a much better idea of how to focus their efforts will become apparent with an insight into why focusing efforts on purifying the mind will be beneficial.
- January 30, 2019: For those who are new to Buddha Dhamma (or want to look at the essential fundamentals, see, "Essential Buddhism."
- Today, there are many incorrect interpretations of Buddha's teachings. See the new section on "Elephants in the Room."

I believe that anyone could benefit in some way by first getting a complete overview of the Buddha Dhamma, which is about a "world" that is much more expansive and complex than the one we perceive with our senses. The mind is the precursor to everything in this world: "Manopubbangamā Dhammā..."

This website was launched in early January 2014. As of August 2020, it has around 600 posts. You may want to look at some new sections listed at the end of this post. Some early posts may need revisions.

- I discuss many "scientific aspects" to illustrate that Buddha Dhamma is a complete world view that has withstood all scrutiny for 2500 years. However, my main goal is to convey the benefits of actual practice.
I have experienced much of what I discuss here. The reason that I started this website is to share that experience with anyone interested. The "practice" part will come out as I lay down the basic ideas. To practice something, one needs to know what to practice. (Note added May 29, 2014: I posted the first few essays on meditation under "Bhāvanā (Meditation)." November 6, 2014: The first 12 posts provide a meditation program that one could follow systematically; my own experience is in the 10th and 11th posts).
- Buddha Dhamma is NOT a religion to be followed by following rituals or blindly following a few precepts. It describes laws of nature that need to be "grasped" and "lived." Dhamma means "to bear"; to
bear something, it needs to be understood. Then it becomes clear WHY one must live life in a certain way.
- This website is not a blog but a Content Management System (CMS). The material does not belong to me, but to the Buddha. What I try to do is to keep the information accurate to the best of my ability. I will be making changes to the format and even the contents either to revise as needed or to present better. So, please make sure to go back and read "old topics" once in a while.
- Also, one needs to contemplate the ideas presented; just quickly going through them may not yield many benefits.

Another aspect that I try to highlight is the CONSISTENCY of Buddha Dhamma. You will see links from any given area to other sections. The Buddha is called "Bhaghavath" [bhagava] because he analyzed the same thing in many different ways. They are all consistent internally, as well as with the primary axioms such as 31 realms of existence, the concept of kamma, and rebirth.

- As science has progressed mainly over the past hundred or so years, consistency with science is becoming apparent as well. But science has not grasped the importance of the mind (over matter) yet. In some of the posts, I am making predictions about what will be discovered by science in the future. To have a timestamp, I started putting the date of publication of new posts beginning in late October 2015.
- Please send your suggestions/comments/questions and also let me know of any technical issues with the site using the "Comments" tab. I do not plan to have a discussion forum, so your comments will not be published.
- I usually write four to five essays a month, and they are in the "New/Revised Posts" in the menu at the bottom of each page. Engaging/relevant news articles are also on that menu.
- I started posting the date of publication in new posts starting on October 23, 2015. Thus, if a web post is not dated, it must have been published before October 23, 2015.

The Buddha said, "Sabba dānaì Dhamma dānamं jināti," or "Gift of Dhamma excels all other gifts." Please inform others about this site if you benefit from it. [Sabba-rasaì dhamma-raso jināti. All taste(s) the dhamma-taste excels.]

- However, we should only inform others. Humanity has suffered enough from those who have tried to force their views on others. As the Buddha said, "Come and see for yourself!."

The Buddha also said, "Sabba ratin Dhamma ratin jināti," or "Taste of Dhamma excels all other tastes (pleasures)." I hope you will have the patience to look around the site to learn enough pure Dhamma to start enjoying its taste.
Note added/revised December 7, 2016: I have added a "Font Size Selector" on the top right so that any reader can control the font size.

- There are two other possible tools: 1. Each post can be printed using the PRINT button below that post. 2. All the posts at the site can be downloaded using three eBook formats. One can read them on electronic readers like Amazon Kindle: Pure Dhamma Essays in Book Format.

Note addled June 8, 2017: As of today, there are over 450 posts on the website. Recently, I have been getting inquiries on "where to start?." I just added the following post to summarize various sections and how to locate posts of interest: "User's Guide to Pure Dhamma Website."

April 14, 2018: Discussion forum initiated in December of 2017: "Forum." Updates and new posts at "New / Revised Posts."

March 2018: New section on "Quantum Mechanics and Dhamma."
November 20, 2018: I have disabled comments on individual posts. You can make comments at the "Forums" or send me an email: lal@puredhamma.net.

July 10, 2019: New section on "Origin of Life."
July 31, 2020: New section on "Buddha Dhamma - A Scientific Approach."
February 19, 2021: New subsection on "Paticca Samuppāda - Essential Concepts."
July 2, 2021: New subsection on "Basic Framework of Buddha Dhamma."
February 28, 2022: New section on "Elephants in the Room."
It is important to know that there is a special convention to write Pāli words: "Tipitaka English" Convention Adopted by Early European Scholars - Part 1." There is also a "Pāli Glossary - (A-K)."

### 2.1 User's Guide to Pure Dhamma Website

## June 8, 2017, revised October 1, 2017; August 28, 2022

As of August 2022, there are over 700 posts on the website. Recently, I have been getting inquiries on "where to start?" when one first comes to the website.

1. First, there are a few general tools that can be used to navigate the website:

- Following is what the home page of the site should look like.

## Welcome!

- If you do not see it like that with the menu system, you should update your browser (Google Chrome, Microsoft Explorer, Firefox, etc) so that you would be able to see the menu as shown above.
- Another way to look at the whole menu is "Pure Dhamma - Sitemap." All posts are categorized under sections and subsections there. One could scan through it to locate relevant posts of interest.
- The "Search" button at the top right is also good at extracting relevant posts for a given keyword or keywords.
- I have added a "bread crumbs" link at the top of each page so you can see which section/subsection the page belongs to. You can go to that section/subsection and read more on that topic.
- January 30, 2019: For those new to Buddha Dhamma (or just want to look at the essential fundamentals, see "Essential Buddhism."
- February 28, 2022: New section pointing out the glaring inconsistencies (with the Tipitaka) in the current Theravāda texts: "Elephants in the Room."

2. First, for those familiar with Buddha Dhamma (Buddhism), I like to point out that three main misconceptions are prevalent today. They not only block the path to Nibbāna but are micchā dițthi that could be responsible for rebirth in the ap $\bar{a} y \bar{a}$. I am not trying to scare anyone, but "making adhamma to be dhamma is a serious offense."

- Misinterpretation of anicca, dukkha, anatta: "Anicca, Dukkha, Anatta - Wrong Interpretations."
- Misinterpretation of breath meditation as Ānāpānasati: "Is Ānāpānasati Breath Meditation?."
- Insisting that the gandhabba (manomaya kāya) is a Mahāyāna concept: "Gandhabba State - Evidence from Tipitaka."
- These misconceptions are not the fault of current Theravādins; they have been handed down for hundreds of years, as explained in the "Historical Background." However, it makes no sense to adhere to them when solid evidence is presented, per the above posts and many others on this website.
- Of course, no one should be able to insist, "this is the only truth, and nothing else is the truth," but the truth can be verified to one's satisfaction by critically examining the evidence. I am open to discussing any valid contrary evidence. We need to sort out the truth for the benefit of all.

3. Now, let us discuss which sections could interest people with different backgrounds on their exposure to Buddha Dhamma.

- The "Moral Living and Fundamentals" section is a good start for anyone since the fundamentals of Buddha Dhamma are discussed. In particular, the subsections, "Buddha Dhamma and Buddhism" and "Dhamma Concepts" could be informative.
- The subsection on "Working Towards Good Rebirths" broadens the concepts discussed in the above subsection to indicate how one's actions need to be tailored to seek rebirths in higher realms and to avoid births in the lower realms (apāyā) in case one is unable to attain any stages of Nibbāna in this life.
- Even those exposed to "Buddhism" may realize that some fundamental aspects have been misrepresented in many textbooks and websites.

4. The "Buddha Dhamma" section is a more advanced version of the above-mentioned sections. It discusses the basis of the Buddha Dhamma, i.e., the importance of purifying one's mind in the first few posts.

- The Buddha described a wider world of 31 realms of which we know only two: the animal and human realms: "The Grand Unified Theory of Dhamma."
- Then it discusses how the Buddha could see that "bigger picture" in the post, "Buddha Dhamma: NonPerceivability and Self-Consistency."
- The two posts "Samsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory" and "Evidence for Rebirth" discuss how we have been going through the birth/death/rebirth process from hte beginningless time.

5. For those who have had exposure mainly to "Mahāyāna Buddhism," the following two posts will provide an idea of why Mahāyāna sutrās are very different from the suttā that the Buddha delivered: "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis" and "What is Sunyata or Sunnata (Emptiness)?."

- Further details on how various "schools of Buddhism" - like Mahāyāna, Vajrayāna (Tibetan), Zen, etc. - evolved within the first 1000 years after the Buddha can be found in the "Historical Background" section.

6. Even Theravāda Buddhism - which is supposed to be closest to the Buddha's original teachings - has been contaminated over the years, mainly due to three key reasons. The first reason is losing the true interpretations of ten types of micch $\bar{a}$ ditṭhi (wrong views).

- There are two types of Eightfold Paths: mundane and transcendental (lokuttara). One needs to first get into the mundane Path by getting rid of the 10 types of micchā ditthi; see "Buddha Dhamma - In a Chart"" and "Mahā Cattārīsaka Sutta (Discourse on the Great Forty)."
- One of the ten micchā dittthi is "para loka ("paralowa" in Sinhala) or the world of gandhabba does not exist." Many people think that gandhabba is a Mahāyāna concept, but that is a big mistake; see below.
- One cannot even get into the mundane Eightfold Path if one believes that para loka and gandhabba are not real.

7. Second, various Hindu meditation techniques - including wrong interpretations of kasina meditation and $\bar{A} n a ̄ p a ̄ n a s a t i ~(a s ~ b r e a t h ~ m e d i t a t i o n) ~-~ w e r e ~ i n c o r p o r a t e d ~ i n t o ~ T h e r a v a ̄ d a ~ t e a c h i n g s ~ e s p e c i a l l y ~ a f t e r ~$

Buddhaghosa's Visuddhimagga; see, "Buddhaghosa's Visuddhimagga - A Focused Analysis," and the posts referred to there.
8. Third and most important reas on is the incorrect translation of key Pāli words like anicca and anatta by the Early European scholars in the 1800 s, see, "Misinterpretation of Anicca and Anatta by Early European Scholars."

- Let us briefly discuss each of those three and point to a few more relevant posts.

9. Many people don't realize that the concept of gandhabba (mental body) is a critical component in explaining how life functions in human and animal realms.

- First, it is a misconception that gandhabba is a Mahāyāna concept; see "Antarabhava and Gandhabba" and "Gandhabba State - Evidence from Tipitaka."
- Without the concepts of gandhabba, it is not possible to explain so many rebirth stories and out-of-body experiences that have been widely reported in recent years; see, "Evidence for Rebirth" and "Manomaya Kāya and Out-of-Body Experience (OBE)."
- The main opposition to the concept of gandhabba in current Theravāda circles is the misconception that it is an "antarābhava," i.e., between two bhava. But a human gandhabba is in the same "human bhava.'This is clarified in "Antarabhava and Gandhabba."
- The critical role of the mental body (gandhabba) in giving rise to multiple births (jāti) within human and animal existences (bhava) has been disregarded. However, not believing in the existence of gandhabba is a micch $\bar{a}$ ditṭhi, and is a hindrance to attain the Sotāpanna stage; see, "Miccā Ditthi, Gandhabba, and Sotāpanna Stage."
- Because of its high importance, gandhabba is discussed in two main sections: "Mental Body Gandhabba" and "Gandhabba (Manomaya Kāya)."

10. Regarding the problems with Buddhaghosa's Visuddhimagga - published 1500 years ago - the two issues mentioned above are:

- Regarding kasiña meditations discussed in the Visuddhimagga, there is not a single sutta in the Tipitaka that discusses kasina meditation.
- Regarding the breath meditation discussed in the Visuddgimagga, no suttā in the Tipitaka discusses BREATH MEDITATION. Those suttā have been mistranslated. Furthermore, there is a sutta in the Tipiṭaka that specifically says breath meditation is not Ānāpānasati meditation, see, "Is Ānāpānasati Breath Meditation?."

11. The critical problem of incorrect translation of anicca and anatta has prevented so many people from making progress over the past 200 years. I strongly recommend the post, "Anicca, Dukkha, Anatta - Wrong Interpretations."

- More posts can be found in the section, "Anicca, Dukkha, Anatta." The correct interpretation of many relevant key sutt $\bar{a}$ is discussed in that section.
- The introductory timeline on those historical developments is given in "Incorrect Theravāda Interpretations - Historical Timeline," and all relevant posts are in the "Historical Background" section.

12. Now let us turn to an issue of relevance to many new to Buddha Dhamma. Many people - especially in Western countries - have a hard time believing in rebirth; see, "Buddhism without Rebirth and Nibbāna?."

- The section, "Living Dhamma," is specially designed for one to start following Buddha Dhamma even without believing in the concept of rebirth.
- The first two subsections there are good to be read by everyone. One can experience a real "cooling down" even without believing in rebirth.
- The latter subsections gradually take one to advanced concepts, and the latter sections are appropriate even for people with advanced backgrounds in Buddha Dhamma. One would be able to clarify advanced concepts in later subsections.

13. Once one starts looking into Buddha Dhamma seriously, it is a good idea to learn a few basic things about the Pāli language. The Pāli Canon, first transmitted orally and then written 2000 years ago, still has all the suttā composed by the Buddha and memorized by Ven. Ānanda.

- See "Preservation of the Dhamma" and other relevant posts in the "Historical Background."
- While the Buddha encouraged delivering Dhamma to others in their native language, there are some advantages to learning at least some key Pāli words, see, "Why is it Necessary to Learn Key Pāli Words?."
- In particular, learning the meanings behind some key roots like "san" makes a huge difference in gaining an understanding of keywords like samisāra and sammā, see, the subsection on "What is "San"? Meaning of Sansāra (or Samsīra)."

14. Learning the correct meanings of the suttā in the Tipiṭaka is essential to learning Buddha Dhamma. Most existing literature, even on Theravāda, has incorrect translations.

- The section "Sutta Interpretations" discusses some key suttā in the Tipiṭaka.
- It is a good idea first to read two important posts in that section, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa" and "Pāli Dictionaries - Are They Reliable?."
- Short and succinct sayings of the Buddha in the Dhammapada provide deep insights in short verses. Some of these are discussed in the "Dhammapada" section.

15. Meditation (both formal and informal) is essential to following the Path of the Buddha. The "Bhāvanā (Meditation)" provides a series of posts on the fundamentals of meditation and also on advanced topics.

- A critical misconception that is prevalent today is that Annāpānasati bhāvanā is breath meditation. Several posts discuss the correct version, and the post, "Is Ānāpānasati Breath Meditation?" discusses evidence from the Tipitaka that breath meditation is not Annāpāna.
- The Satipaṭthāna bhāvanā is discussed in the subsection, "Mahā Satipatthāna Sutta."

16. Buddha Dhamma is based on the principle of causation (cause and effect), which in Pāli is Patticca Samuppāda. The principles are discussed in the section "Paticca Samuppāda."

- While the meaning of Paticca Samuppāda is clear from its name itself, "Paticca Samuppāda "Pati+ichcha"+"Sama+uppāda"," the main concepts are discussed in plain English: "Paticca Samuppāda in Plain English."
- Comprehension of the Four Noble Truths requires understanding Paticca Samuppāda and Tilakkhaṇa. See "Paticca Samuppāda, Tilakkhana, Four Noble Truths."
- Just because causes exist does not necessarily mean that effects (results) will follow. There must be suitable conditions for those results (also called vipāka). This is discussed in detail in the subsection "Patthāna Dhamma."

17. Chanting of sutt $\bar{a}$ and reciting the virtues of Buddha, Dhamma, and Sañgha can prepare one's mind to be receptive to learning Dhamma and thus could be an important part of the practice, see, "Buddhist Chanting."

- The section on "Myths or Realities?" is also important since it discusses many concepts and practices that some considere to not belong to Buddha Dhamma.

18. For those who would like to see how compatible Buddha Dhamma is with modern science, the "Dhamma and Science" section is a good resource.

- That section points out both consistencies and inconsistencies with modern science.
- Modern science has had to revise or come up with new theories to explain many phenomena over the past 500 years, but Buddha Dhamma (in the Tipitaka) has remained the same for over 2500 years.
- I predict the remaining inconsistencies will also be resolved in favor of Buddha Dhamma.

19. The section on "Tables and Summaries" is an important collection of posts summarizing bits of information or "data" that are not necessary to be memorized but could be needed to explain things in detail.

- There are several posts with listings of types of citta, cetasika, 28 types of rūpa, etc., in this section.
- There is also a Pāli glossary with pronunciation: "Pāli Glossary - (A-K)" and "Pāli Glossary - (L-Z)."
- The section on "Comments/Reviews" has two subsections on "Discussion of Comments" and "Book Reviews."

20. Some either have already learned Abhidhamma, or would like to learn. For them, the "Abhidhamma" section could be useful. There are several subsections in this section on various topics.

- The section on "Abhidhamma via Science" highlights some overlaps between Abhidhamma Science.
- One of my favorite subjects is Abhidhamma. When one has proceeded along the Path to some extent, it could be useful to learn Abhidhamma, which will help gain a deeper understanding.

21. Finally, but most importantly, three important subsections discusse issues involved in attaining magga phala (stages of Nibbāna). The primary goal of this website is to provide enough material for one to attain the Sotāpanna stage of Nibbāna.

- First, the concept of Nibbāna is a puzzle to many. It is discussed in several posts in the subsection: "Nibbāna."
- Some critical points to consider by those making an effort in that direction are discussed in the subsection: "Seeking Nibbāna."
- The first goal of those who seek Nibbāna is the Sotāpanna stage. Many concepts are requirements for achieving that goal are discussed in the subsection: "Sotāpanna Stage of Nibbāna."
- The section, "Living Dhamma" is specially designed for one to start following Buddha Dhamma even without believing in the concept of rebirth, all the way to the Sotāpanna stage. People with a more advanced background can start at later subsections, skipping the early ones.

### 2.2 Buddha Dhamma - A Scientific Approach

July 31, 2020

- Introduction - A Scientific Approach to Buddha Dhamma

- Interpretation of the Tipitaka - Gandhabba Example

### 2.2.1 Introduction - A Scientific Approach to Buddha Dhamma

July 31, 2020; revised August 2, 2020

## A Scientific Approach to Buddha Dhamma

1. Buddha Dhamma is the Grand Unified Theory (a theory that explains everything about this world) that scientists are seeking. They do not realize it because the correct version of it, with its deeper aspects, has not been available in English. There are two major relevant points.

- First, scientists will never get to a Grand Unified Theory until they realize that mental phenomena must be a part of such a theory. Modern science only focuses on just "material phenomena." The reason is the following incorrect assumption by them: Psychological (mental) aspects arise from matter. The Buddha
taught that it is the other way around: Mind is the forerunner of ALL phenomena, mental and material.
- The second point is the following. When scientists propose a brand new theory, they just use a set of assumptions. Some assumptions (axioms) are revolutionary and opposed by other scientists at the beginning. We will discuss such a prominent case below. The point is that they are not starting off with a truly essential set of axioms that cover mental as well as physical phenomena.

I will use the standard scientific method in this series of posts. I will start with a set of "assumptions," even though those are NOT ASSUMPTIONS for a Buddha. Upon attaining the Buddhahood, a Buddha DISCOVERS those fundamental laws of Nature.

## What Is a Scientific Approach?

2. Most of the time, science makes progress in a gradual step-by-step way. An existing scientific theory is "tweaked" to get a better agreement with new experimental results.

- However, In some cases, scientists come with "previously unheard" theories to explain new observations. Most other scientists are first skeptical about such a drastically new approach. But if it turns out to be able to explain observations, then it becomes accepted over time.
- Such a "revolutionary change" is a paradigm change. A good example is theories on atomic structure. There, paradigm changes happened twice within the past 100 years, as we will see below.

## Western Theories of the Atom Started with Democritus

3. Around the time of the Buddha, Democritus (400 B.C.E.) proposed that all matter is made of indivisible particles called atoms. But nothing much was known about atoms at that time.

- Democritus just assumed that if one keeps cutting in half a piece of a given material (say, an aluminum foil), it will reach a stage where it would not be possible to cut. That ultimate "indivisible" unit, he called an "atom."
- That picture has changed drastically over the years, especially within the past 150 years or so.
- Of course, Buddha's ultimate unit of matter was a suddhatthaka. It is also electrically-neutral, just as Democritus' atom. However, a mind can create a suddhatṭhaka with javana citta. A suddhatthaka is a billionth times smaller than an atom in modern science. See, "The Origin of Matter - Suddhatthaka."

## Modern Theories of the Atom

4. John Dalton, in 1803, proposed a modern theory of the atom. He suggested that different materials are made of different atoms and that a given atom cannot be broken down into smaller parts.

- For example, an oxygen atom would be eight times bigger than a hydrogen atom, but an oxygen atom CANNOT be made by combining eight hydrogen atoms. Hydrogen and oxygen have different types of "building blocks" or different atoms.
- Dalton was able to make some progress with his model.

## Plum-Pudding Model of the Atom by J. J. Thomson

5. In the late 1800s, there were many experiments on electrical discharges. J. J. Thomson discovered that negatively-charged electrons could be removed from an atom. Since atoms are electrically neutral, in 1904, he proposed that an atom is made of a positively-charged material with electrons embedded in it.

- That is analogous to plums embedded in a pudding. Thus, it came to be known as the "plum-pudding model" of an atom. See, "WebLink: wikipedia.org: Plum Pudding Model" for that model of an atom.

The following video illustrates this point:
WebLink: youtube: Discovery of the Electron: Cathode Ray Tube Experiment

- Therefore, the indivisibility of the atom was no longer accepted. Yet, Thomson's model still preserved one aspect of the original model of Democritus. An atom could be visualized as a "single unit" with two kinds of particles packed together. Later on, the positively-charged component was found to be due to protons, and a neutral particle (neutron) was also found to be inside an atom.

## Rutherford's Discovery of Mass-Concentrated Nucleus

6. Soon after that another English physicist, Ernest Rutherford, directed small alpha particles (much smaller than an atom) to a thin gold foil. He observed that most particles went right through the foil. However, some got deflected and a few even bounced back. It appeared that the atoms were mostly empty space, but there was something dense and small in there that bounced off some of the projectile particles.

- Based on those experiments, Rutherford, in 1911, proposed a radically new theory of the atom. He proposed that the positively-charged component of an atom be in a tiny volume in comparison to the rest of the atom. That central volume also contained the bulk of the mass of the atom. This region would be known as the "nucleus" of the atom. Negatively-charged electrons would be outside that nucleus, but Rutherford did not propose a model for that "outer layer" of the atom with electrons.

## Bohr's Planetary Model of the Atom

7. In 1913, Niels Bohr came up with another paradigm change for atomic structure. He purposed that the electrons "revolved around" a tiny nucleus, a small core that contained all the protons. That is similar to the structure of the Solar System, where the planets revolve around the Sun.

- Thus, some called it the "planetary model" another name for the "WebLink: wikipedia.org: Bohr Model." That planetary model of the atom was able to explain many experimental observations.

## WebLink: youtube: Discovery of the Nucleus: Rutherford's Gold Foil Experiment

- Atoms of different materials have different numbers of protons (and electrons). For example, a hydrogen atom has one proton in the nucleus and one electron moving around it. An oxygen atom has eight protons and eight electrons, etc.
- However, Bohr's planetary model unable to explain a growing number of other observations.

## Quantum Mechanics

8. In the end, the planetary model of the atom was replaced by another change of paradigm. That was the modern quantum mechanical treatment of the atom. It was first postulated by Wolfgang Pauli in 1925, using Heisenberg's matrix mechanics.

- Many other scientists including Einstein, Max Planck, Niels Bohr, and Erwin Schrödinger contributed to the development and refinement of the new quantum theory. They postulated the occurrence of energy in discrete quantities (quanta) in order to explain phenomena such as the spectrum of black-body radiation, the photoelectric effect, and the stability and spectra of atoms. Thus the name "quantum mechanics."
- In quantum theory, the position of an electron in an orbital cannot be specified. One could only calculate the likelihood of an electron being at a given location. It is known as the Copenhagen interpretation of quantum mechanics. See, "WebLink: wikipedia.org: Copenhagen interpretation."
- That is the accepted theory at present. However, there are still many unresolved issues in quantum mechanics. Even though it is able to calculate the results of ANY experiment, it is "too abstract" for many, including Einstein. The current position is summarized by the sentence "Shut up and calculate!" as
discussed in "WebLink: wikipedia.org: Copenhagen interpretation." I have discussed a new interpretation of quantum mechanics, "Quantum Mechanics and Dhamma - Introduction."

## Ability to Explain Observations - Primary Requirement of a Scientific Theory

9. The determining factors of a scientific theory are the ability to explain observations and selfconsistency. It does not matter how crazy the new theory appears to be, as long as it meets those two criteria. As we saw above, quantum theory is accepted today despite not being an "understandable" theory.

- In fact, as long as a theory fulfills those criteria, objections by even the most prominent scientists cannot prevent a good theory from taking hold.
- For example, Einstein opposed quantum theory. He tried to come up with a "better explanation" until he died. Despite his objections, quantum theory became firmly established.
- Quantum theory, in its current form, is incomprehensible to even many scientists. The problem is that it is just a mathematical tool to make calculations. Even physicists do not have an "intuitive grasp" of the underlying aspects of quantum mechanics.

## Scientific Approach to Buddha Dhamma

10. In this section, we will use the above discussed "scientific approach." We will start with the "new theory about the world" put forth by the Buddha. It was a revolutionary theory 2600 years ago and still remains a revolutionary theory today.

- Just like even Einstein was unable to come to terms with the quantum theory, many people today find it difficult to comprehend Buddha Dhamma.
- However, much of the current confusion lies in the fact that many people are not aware of the "full and complete theory" of Buddha Dhamma. They have seen only parts of Buddha's theory and conclude that those ideas are too "esoteric" or "mystical."
- Yet, unlike quantum mechanics, anyone can understand Buddha Dhamma, if the basic principles are understood.
- I hope that by presenting a "complete theory" using a "bottom-up approach" we can take a fresh perspective of some concepts like kamma, rebirth, and Nibbāna.

## The Necessary Components of Buddha Dhamma

11. We need to convince ourselves of the validity of the basic concepts in Buddha Dhamma before being able to comprehend the deeper teachings like Paṭicca Samuppāda, Tilakkhaṇa (anicca, dukkha, anatta,) and the Four Noble Truths.

- Those basic concepts (equivalent to "assumptions" or "axioms" in scientific theories) are the laws of kamma, the existence of 31 realms, and the rebirth process within those realms.
- However, those concepts are not assumptions. They are laws of Nature, discovered by a Buddlha. When one starts understanding (and practicing) Buddha Dhamma, one will see the truth of that statement.

### 2.2.2 <br> Theories of Our World - Scientific Overview

August 9, 2020; revised July 25, 2022
We will first briefly discuss three main theories of our world. Then we will start a broader discussion of Buddha's description of this world.

## Theories of Our World - According to Modern Science

1. Western science has been studying our world since the time of the ancient Greeks. But its focus has been on the material world. There have been investigations on TWO fronts. The structure of matter and the origin of life.

- Investigations on the structure of matter started with Socrates and Aristotle. As discussed in the previous post, Democritus proposed the first atomic theory, which has evolved into current studies on quantum physics. See "Introduction - A Scientific Approach to Buddha Dhamma" and Ref. 1 below.
- The second front is on the origin of life or the study of the living world. That includes plants and conscious life. See "WebLink: wikipedia.org: History of biology." Modern science believes that living cells evolved FROM inert matter ("abiogenesis.") See Ref. 2 for more details.
- Both conscious and non-conscious (plant) life have living cells as the basis. See "Origin of Life There is No Traceable Origin."
- A separate area of research looks into how consciousness (or mental phenomena) can arise from inert matter. See "WebLink: wikipedia.org: Consciousness." As discussed, modern science CAN NOT explain the origin of conscious life.

## Theories of Our World - Religious Explanation

2. Of course, the other prevailing explanation of the origin of life is that a Creator created the whole world, including all the stars, planets, our Earth, and the first forms of life on Earth.

- Even though easiest to state, this explanation has no factual basis. One HAS TO accept it based purely on the faith of a Creator.
- See, for example, "WebLink: answersingenesis.org: Evidence for Creation."

## Theories of Our World - Buddhist Explanation

3. Even though Buddha Dhamma (commonly known as Buddhism) is normally considered a religion, it is NOT a religion, as described in \#2. It can be treated as a scientific theory, as we will do in this series of posts.

- Buddha Dhamma provides a complete description of our world.
- However, the Buddha did not try to provide detailed descriptions of material phenomena. He taught that finding such details will only take precious time away from the urgent need to find the truth about the unimaginable suffering associated with the rebirth process.
- Therefore, much of the Sutta Piṭaka and the Vinaya Piṭaka focus on the "problem of suffering" and how to stop future suffering in the rebirth process.
- As we know, Buddha's teachings are contained in three Pitaka or Tipitaka. The third one, Abhidhamma Pitaka, describes the building blocks of our world in great detail. That includes material (rūpa) and mental (citta and cetasika) aspects. If one is interested in figuring out those details, not in the other two Pitaka, one needs to understand the Abhidhamma material.
- However, it is not necessary to go to the great depths of Abhidhamma to get an idea about the underlying principles. In the upcoming posts, we will do such a simplified analysis. That discussion will augment the series of posts on "Origin of Life."

## Overview of Modern Science

4. The focus of modern science is on figuring out the origin and the behavior of matter. Scientists consider mental phenomena to be secondary and to arise from inert matter! Most scientists believe that mental phenomena arise in the brain.

- There are several proposals on how the mind (or thoughts) can arise from matter. But there is no credible theory that comes even close to begin to explain it. See "WebLink: wikipedia.org: Consciousness."
- A critical outcome of this approach is that modern science falls under the "annihilation view" (uccheda ditthi.) That wrong view says that life ENDS at the death of the physical body.

## Evidence Against Proposed Scientific Theories of the Mind

5. Since mental phenomena are supposed to arise in the brain, that conclusion (in red in \#4) leads to two critical implications.

- The death of the brain - thus the death of a human - is the ABSOLUTE end of that life. There is no way to "transfer" the memories of one life to another. Thus, the rebirth process is COMPLETELY ruled out in modern science.
- Furthermore, it also RULES OUT the possibility of Out-of-Body Experiences (OBE), including Near-Death Experiences (NDE.)
- Let us briefly discuss evidence regarding those three areas.

## Evidence from Rebirth Accounts

6. I will just provide one account here. In their book, "Soul Survivor: The Reincarnation of a World War II Fighter Pilot," Bruce and Andrea Leininger detail the amazing story of their son's recount of a past life.

Here is a recent youtube video on it:
WebLink: youtube: Boy Remembers His Past Life As a World War II Pilot!!

- More rebirth accounts are discussed in "Evidence for Rebirth."

## Evidence from Out-of-Body Experiences (OBE)

7. In his book "Travels," the famous author of Jurassic Park, Michael Crichton (1988, p. 307), mentions his ability to "shift my awareness out of my body and move it around the bedroom." He says, "..I didn't think anything about it... I assumed that anybody could do it..".

- A similar account has been given by a woman recently who also thought that "everybody could do it": https://abcnews.go.com/Health/woman-body-experiences/story?id=22825927
- A series of books, including "Journeys of the Body," has been written by Robert A. Monroe based on his experiences.

## Evidence from Near-Death Experiences (NDE)

8. Only a few people can experience OBE at will. Typically, OBE happens under stressful conditions, most commonly during heart operations. These have a special name of near-death experiences (NDE.) The following video provides a good summary of NDE accounts.

- There are many books on NDE. "Consciousness Beyond Life" by Pim van Lommel (2010) gives detailed accounts of case studies of NDE experienced by people undergoing heart operations.
- A recent book, "Dying to be me: My Journey from Cancer, to Near Death, to True Healing," by Anita Moorjani (2012), describes her NDE experience.

## Current Philosophical Ideas on Consciousness

9. Philosophers put forth their ideas when science cannot make much progress. Physics evolved from philosophy.

- There are many ideas in philosophy about consciousness, including one (for example, by Daniel Dennett) that says consciousness is not real!
- The following video is a presentation by David Chalmers, a leading philosopher on consciousness. He makes much more sense and gets to the heart of the issue.
WebLink: youtube: Hard Problem of Consciousness - David Chalmers

## Consciousness Is a Fundamental Aspect of Nature

10. In the following video presentation, David Chalmers makes some important points.

- Around 8 minutes, he explains that current theories of our world cannot accommodate consciousness.
- Then he proposes to investigate the possibility that consciousness is a fundamental aspect of nature that CANNOT be derived from other entities (such as matter.)
- Another philosopher who believes that consciousness cannot be derived is Thomas Nagel. He discusses that in his book in Ref. 3. That is what the Buddha explained; see "Buddha Dhamma - A Scientific Approach."

WebLink: youtube: How do you explain consciousness? | David Chalmers

## Further Information

1. The scientific effort on a single theory to explain material phenomena, "Grand Unified Theory."
2. Scientific studies on the emergence of life from inert matter, "Abiogenesis."
3. Thomas Nagel, "Mind \& Cosmos: Why the Materialist Neo-Darwinian Conception of Nature Is Almost Certainly False" (2012).
4. Evidence emerges from several investigations that a brain is not necessary to have conscious experiences. I encourage watching the following video.

### 2.2.3 Mind and Matter - Buddhist Analysis

August 15, 2020; revised August 16, 2020
Mind and matter go together in Buddha Dhamma. It is one meaning of "nāmarūpa." It starts at a level much finer than the atomic level in modern science. It is even below the elementary particle level.

## The Three Basic Building Blocks of Buddha Dhamma

## 1. Everything in this world arises out of three building blocks: citta, cetasika, and rūpa.

- An analogy in modern science is to start with electrons, protons, and neutrons (elementary particles would be even more fundamental). A tasty cake, an oak tree, or a nuclear bomb all have origins in those fundamental particles.
- In the same way, Buddha Dhamma (the theory) can start with those three fundamental entities. They can describe all mental phenomena as well as material phenomena.
- On the other hand, modern science can describe ONLY material phenomena. It just ASSUMES that mental phenomena come out of material phenomena. But that assumption has NOT been validated. See the previous post, "Theories of Our World - Scientific Overview."
- Modern science cannot explain how a living-being is born. It seems to say that "it just happens." We will discuss that below.

## Connection Between Mind and Matter

2. In Buddha Dhamma, analysis of rūpa directly provides the connection between mind and matter.

- In Abhidhamma, there are 28 types of rūpa. However, there are only a few types of rūpa that are sufficient to start our discussion here.
- We will start with six types of rūpa directly related to the mind and are essential in sensing the external world. First, there is hadaya vatthu, the "seat of the mind," where thoughts (citta) arise. Seeing, hearing, smelling, tasting, and body touching sensations are sensed at five pasāda rūpa: cakkhu, sota, ghāna, jivhā, and kāya.
- We are accustomed to the idea that we see things with our eyes, hear with our ears, etc. But all those five physical sense faculties just have inert matter. Inert matter cannot "sense" or "feel" anything.
- Scientists go one step further and say that eyes, ears, etc. only capture the corresponding visual, auditory,..signals. They say that it is in the brain that those sensations are processed and "detected." But they have no idea how such a "feeling" or "sensation" can arise in a brain. After all, the brain itself is made of inert atoms and molecules!

## Brain Sends Those Signals to the "Actual Sensing Units"

3. It is correct that the brain processes those sensory signals captured by eyes, ears, etc. However, there is nothing in the brain that actually "detect" or "experience" those signals.

- As mentioned above, those actual sensing units are the hadaya vatthu and the five pasāda rūpa. I will stick to these Pāli terms, and you will see that it is necessary to do so. The English vocabulary does not have corresponding words.
- Now, we need to discuss two issues. Where are those six "sensing units" located? Also, how can they "feel" or "sense" those signals? Let us consider the latter question first.
- It is kammic energy that creates those six elementary sensory units (hadaya vatthu and the five pasāda rūpa of cakkhu, sota, ghāna, jivhā, kāya) at the beginning of a new existence. For simplicity, let us call those six entities "sensing units." In some existences, there are less than six. For example, a rūpāvacara Brahma has only three, and an arupāvacara Brahma has only one (just hadaya vatthu.)
- ONLY kammic energy can create those special types of rūpa. They have a trace of matter (suddhatthaka) AND also the ability to "feel" or "experience" the sensory inputs. That is the FUNDAMENTAL connection between mind and matter.

## Kammic Energy - Origin of Life

4. It is the kammic energy created by a STRONG previous kamma that leads to a new existence as a result (vipāka) of that kamma.

- For example, if person X kills another person, then that person X would have created a kammic seed (or a kamma bija) that can germinate and give rise to existence in hell. If the kamma were rape, that would create a kammic seed to be born an animal. The vipāka (result) is according to the kamma. That is described in detail in "Paticca Samuppāda."
- At the beginning of a new existence, kammic energy creates a set of "sensing units" appropriate for that existence. All living-beings in the kāma loka (six Deva realms, the human realm, and the four apāy $\bar{a}$ ) have all six units listed in \#3 above.

## Examples of Various Existences

5. Without getting deeper into Pațicca Samuppāda, let us try to get the basic idea of that process. It just says that an existence corresponds to the kamma that gave rise to that existence.

- Someone who cultivates one of the four highest jhāna (arupāvacara jhāna) will be born as an arupāvacara Brahma. Someone in such an arupāvacara jhāna does not experience any of five sensory inputs (seeing, hearing, smelling, tasting, and touching). As a result (vipāka) of cultivating such a $j h a ̄ n a$, one would be born in the corresponding arupāvacara realm (there are four such realms.) An arupāvacara Brahma cannot see, hear, smell, taste, or touch anything. He has only a hadaya vatthu, and thus, can only think (just like the experience in an arupāvacara jhāna.) A hadaya vatthu is the LEAST bit of matter that can sustain mind (mental activity.)
- Therefore, existence as an arupāvacara Brahma is the simplest. One is free of burdens of making a living to buy houses, cars, or even food. There is no need to eat. That "Brahma body" only has a hadaya vatthu, which is so small that a Brahma cannot be seen even with the finest microscope scientists have. Kammic energy sustains that "body" with just an unimaginably small amount of "matter."
- At the next higher level of "complexity" are the 16 rūpāvacara Brahma realms. As you can guess now, birth in a rūpāvacara Brahma realm is a vipāka of cultivating rūpāvacara jhāna. A human can get into a rūpāvacara jhāna by suppressing or removing the cravings for close-contact sensory pleasures (eating, smelling, and touching.) The bottom line is that a rūp$\overline{\boldsymbol{a} v a c a r a ~ B r a h m a ~ c a n ~ o n l y ~ s e e ~ a n d ~}$ hear in addition to being able to think. Thus, a rūpāvacara Brahma would have only cakkhu and sota pasāda rūpa in addition to hadaya vatthu. Thus he would have only three "sensing units."
- It is only in the kāma loka (six Deva realms, the human realm, and the four apāy $\bar{a}$ ) that living-beings have all six "sensing units" listed in \#3 above. Births in kāma loka are much more complex, and that is where one needs a better understanding of Patticca Samuppāda to describe various births such as animal and hell beings. Of course, those births in the four ap $\bar{a} y \bar{a}$ are due to akusala kamma.

## A Human Gandhabba Is a Set of Six "Sensory Units"

6. At the beginning of human existence, kammic energy creates a human gandhabba (or a manomaya $k \bar{a} y a$ ) with a hadaya vatthu and five pasāda rūpa. That is the basic mind and matter overlap (nāmarūpa) in a human.

- Just like it is impossible to see a Brahma, it is not possible to see a gandhabba. A gandhabba is almost like a Brahma, but with a full set of pasāda rūpa.
- After created by kammic energy, a gandhabba stays with that "invisible body" may be for even many years. When a "matching womb" becomes available, it is pulled into that womb by kammic energy.
- Modern science can explain the growth of a baby, starting with an embryo in a womb. But it CANNOT explain how that baby became CONSCIOUS.
- The conception of a human baby (i.e., creating an embryo from an inert zygote) happens when a gandhabba comes into the womb and merges with the zygote. For details, see "Buddhist Explanations of Conception, Abortion, and Contraception."

## Many Physical Bodies For a Single Mental Body (Gandhabba)

7. Therefore, a human being does not start with a physical body, i.e., with physical eyes, ears, etc. or the brain. As the Buddha explained, a physical body is a temporary residence for a human gandhabba. Within a human existence (that may last thousands of years), a gandhabba may acquire MANY different physical bodies. See, "Bhava and Jāti - States of Existence and Births Therein."

- When the gandhabba is trapped inside a physical body, it has to get external sensory signals indirectly. The eyes, ears, etc. capture those sensory signals, which are then processed by the brain. We will discuss how the brain transfers that information to the gandhabba in a future post.
- It is a human existence (bhava) that is hard to get. But within a human bhava, one may be born many times with different human bodies. That is why we have so many rebirth stories where one is reborn within several years.
- For the duration of a human bhava, one will have ONLY ONE mental body (manomaya kāya), also known as gandhabba. Of course, that gandhabba may undergo some changes. But it will last the whole duration of that human bhava.

## Pāli Word for Eye Is Not Cakkhu - It Is Nayana or Akkhi

8. Most people do not realize the following critical fact. Pāli words for eyes, ears, nose, tongue, and the body, are nayana (or akkhi), kaṇna, nāsā (or nāsik $\bar{a}$ ), jivhā, and sarīra or deha or kāya.

- The Pāli words cakkhu, sota, ghāna, jivhā, kāya refer to the five pasāda rūpa associated with the manomaya kāya (gandhabba).
- Thus, two words could be used in both ways either to refer to a physical sense faculty or a pasāda rūpa (jivhā and kāya).
- While inside a physical body, a gandhabba is shielded from the external world. We will discuss how pasāda rūpā receive signals from the physical sensory faculties in the next post.
- In the Abhidhamma analysis of $r \bar{u} p a$, the five pasāda rūpa are listed as five fundamental types of rūpa. Thus, it is clear that cakkhu, sota, ghāna, jivhā, kāya DO NOT refer to eyes, ears, nose, tongue, and the physical body!
- On p. 236 of Ref. 1, they are listed as "sensitive phenomena." If you look at p. 237, the Pāli term is "pasāda rūpa." The five types of pasāda rūpa are \#5 through \#9 in Table 6.1 on p. 237. I tried to make that clear in the post, "Rūpa (Material Form) - Table."
- In Ref. 1, the description of $r \bar{u} p a$ is in Chapter VI (pp. 234-263.)
- By the way, I will use Ref. 1 as the standard text on Abhidhamma for this series of posts. I have provided a link to the free pdf version. Ref. 2 is good as well.

## Summary - Special Types of Rūpa With Ability to "Sense"

9. There are six "sensing units" (created by kammic energy) that have the ability to "sense" or "experience." That kammic energy is created with citta and cetasika. Therefore, it is a cyclic process (and why the rebirth process has no beginning!). We will discuss that intricate mind and matter connection in upcoming posts.

- We started the post by pointing out that citta, cetasika, and rūpa can describe EVERYTHING in this world.
- In the above, we went through a simple description of the arising of a living-being with a set of "sensing units." That particular living-being will then do more kamma and create the seeds for more future births.
- That is how the rebirth process continues.
- However, by understanding this relationship between mind and matter, we have the ability to avoid "bad births" and also to attain Nibbāna. We will get into details in future posts.

### 2.2.4 Sensual Pleasures - The Hidden Suffering

## August 22, 2020; revised June 15, 2022

## Sensual Pleasures (Kāma Assāda)

1. The word sensual means the gratification of physical senses. It may have a sexual connotation, but not necessarily. We will use that word in that sense to represent the meaning of the Pāli word "kāma." People like sensual pleasures because they have "kāma rāga." [assāda : [m.] gratification, taste; enjoyment; satisfaction.]

- Such sensory contacts occur in close proximity. The three main "close sensory contacts" involve eating, smelling, and body touches (including sex.) However, visuals and sounds also are used to enhance these three sensory experiences.
- Therefore, "kāma rāga" means craving for sensual pleasures (tasty foods, nice fragrances, bodily comforts, etc.) not just for sex. See, "What is "Kāma"? It is not Just Sex."
- All five sensory contacts are available in most of the lowest 11 realms (four apāy $\bar{a}$, human realm, and six Deva realms.) Thus, kāma loka includes those 11 realms.
- However, those sensual pleasures (kāma assāda) come at a price. There is much suffering in kāma loka, as we will see below.

## What Is a Body (Kāya)?

2. In the previous post, we saw that out of 31 realms in this world, living-beings in 20 realms do not have physical bodies like ours. Brahmā in those 20 realms have only a trace of matter. They cannot be seen even with the best scientific instruments available today. See "Mind and Matter - Buddhist Analysis." Therefore, we need to abandon our perception of "solid, dense" bodies like ours to be universal.

- There is also the following related issue. We conventionally translate the Pāli word "kāya" as "body." Now, we are only used to "physical, dense bodies" like ours or animals. The idea of a living being with very little matter (and thus invisible to us) is strange to most of us.
- However, the Pāli word "kāya" means a "collection." As we know, a living being is a collection of five aggregates (pañcakkhandha) in Buddha Dhamma. An entity that can support those five aggregates has a "kāya."
- In English, also we sometimes use "body" as a collection or aggregate. Some examples are "body of water" and "body of evidence."
- Brahma has a set of "bare minimum" (a trace of) rūpa that can support the five aggregates, as discussed below. A "k $\bar{a} y a$ " of a living being is a collection of aggregates of mind and matter.
- The Pāli word for a physical body is "sarīra" even though the word " $k \bar{a} y a$ " is sometimes used.

## Why Do Humans Need Dense Physical Bodies?

3. Then, a question comes up. Why do humans need physical bodies? We discussed that human (and animal) life also starts with an "invisible body" (gandhabba), just like for a Brahma. A dense physical body arises later on when that gandhabba gets into a womb. See the previous post, "Mind and Matter - Buddhist Analysis." Why doesn't the gandhabba stays with that invisible body?

- We need physical bodies to taste the food, smell nice odors, have sex, etc. Those sensory experiences REQUIRE dense bodies. We highly value those "bodily-contacts" and constantly think, speak, and work to get more.
- But there is a "hidden price to pay" for close-contact sensory pleasures. Such dense bodies are prone to diseases, injuries, and body pains. Unfortunately, such problems are not very evident at a young age, and for most people, by the time they realize these problems, it is too late. Their brains are getting weak too, and they may not be able to learn the deeper teachings of the Buddha.
- Most living-beings in the 11 realms of kāma loka have dense bodies. The bodies of Devas are a bit less dense but dense enough to experience those three sensory inputs. The word " $k \bar{a} m a$ " implies such close contact.
- Let us consider a different approach to see the "drawbacks" and "dangers" in sensual pleasures. Let us look into how Brahmā in 20 realms (out of 31 realms in the world) overcome the desire for sensual pleasures and live for billions of years in "jhānic bliss" in those realms.

## Sufferings Due to "Dense Bodies" Is Absent in Brahma Realms

4. Out of the 31 realms of our world, the higher-lying 20 realms of Brahmā are absent from any suffering (diseases like cancer, injuries, brain defects, or even body aches). As we discussed in \#2, those Brahmā do not have dense bodies like ours. To be born in Brahma realms, one must overcome kāma rāga at least temporarily; see, "Rebirths Take Place According to Abhisanikhāra."

- Their "physical bodies" have just an unimaginably small amount of "matter" that is a billion times smaller than an atom in modern science. It is better to call it an invisible "magnetic body" or an "energy field." Some people think these Brahma have ONLY the mind, but that is not correct. The Buddha stated that the mind could not exist without a material base. These Brahmā have "bodies" with the least amount of matter in Buddha Dhamma, a suddhat! haka.
- Furthermore, there is no need to eat since there is no dense physical body to maintain. The subtle "body" of a Brahma is sustained by kammic energy.
- Of course, "bodies" that are invisible is a strange notion to many people. That is why the Buddha said his Dhamma has never been known to the world.
- How do those Brahmā get such "invisible bodies" that are not subject to any suffering (illnesses, injuries, hunger, etc.)?

## Births in Arūpāvacara Brahma Realms

5. As briefly mentioned in the previous post, one can be born in those four realms by cultivating the four highest jhāna. In fact, those who cultivate such jhāna enjoy the same life experiences as arūpāvacara Brahmā (with just the ability to think.)

- Anāriya yogis get to such jhāna using various techniques, but abstaining from sensual pleasures is a requirement. Such anāriya yogis normally stay away from sensual attractions by living in forests, especially away from women. But Noble Persons (Ariyas) get to such jhānā by cultivating wisdom and comprehending the dangers of sensual pleasures. Once getting to Ariya jhāna, one could associate with
even the most beautiful women without being tempted. For example, an Anāgāmi has no kāma rāga. [anāriya : [adj.] [doublet of anariya] not Ariya, ignoble, Sn. 815 (v. l. SS. anariya)]
- The four arūpāvacara Brahma realms correspond to optimum levels of mettā, karuṇā, muditā, and upekkhā.
- For details, see "WebLink: accesstoinsight.org: The Four Sublime States" by Nyanaponika Thera. To quote from that article, "Brahma is free from hate; and one who assiduously develops these four sublime states, by conduct and meditation, is said to become an equal of Brahma (Brahmasamo). If they become the dominant influence in his mind, he will be reborn in congenial worlds, the realms of Brahma. Therefore, these states of mind are called God-like, Brahma-like."
- These arūpāvacara Brahmā (in the four highest realms) have the "smallest bodies" of all living beings. In the Abhidhamma language, they only have the "seat of the mind" (hadaya vatthu) for thinking. They do not have any of the five "physical senses" of seeing, hearing, smelling, tasting, or body touches.

## Births in R̄̄pāvacara Brahma Realms

6. Rūpāvacara Brahmā have only a "bit more complex bodies" with the addition of two pasāda rūpa of cakkhu and sota. They can see and hear, in addition to being able to think. As we know, the 16 rūpāvacara Brahma realms lie below the 4 arupāvacara Brahma realms. See, " 31 Realms of Existence" and "The Thirty-one Planes of Existence."

- Note that rūpāvacara Brahmā can "see" and "hear' without having physical eyes and ears like humans. I explained in the previous post ("Mind and Matter - Buddhist Analysis.") that we do not see or hear with our physical eyes and ears. Our physical eyes are like cameras that only "take pictures" of the external world for the gandhabba trapped inside the dense physical body. Also see, "Vision Is a Series of "Snapshots" - Movie Analogy."
- A human can be assured of birth in a rūpāvacara Brahma realm by cultivating rūpāvacara jhāna. The 16 realms in rūpāvacara Brahma loka correspond to the four lower jhānā at various "strengths."
- Even to get to the four lower jhāna corresponding to the 16 realms in rūpāvacara Brahma loka, one needs to suppress at least the desire for sensual pleasures (or "kāma rāga") in addition to abstaining from immoral deeds (dasa akusala.) That is why all suttā on jhāna have a verse with, "vivicceva kāmehi, vivicca akusalehi dhammehi." or "withdrawn from sensuality, withdrawn from akusala thoughts." See, "Jhānic Experience in Detail - Sāmaññaphala Sutta (DN 2)."

## Why Do People Cultivate Jhāna?

7. Sensory pleasures due to "close contacts" (eating, smelling, sex, and other "bodily-comforts") come at a price, as we discussed in \#3. Such "close-contacts" are possible ONLY with a complex, dense body. However, such a dense body is subjected to various types of ailments.

- In addition, the ability of the physical body to provide such sensory experiences GO DOWN with age. At old age, the taste buds don't work well. One may not be able to smell odors the same way as one used to. And, one's sexual capabilities go down as well. One can clearly see such drawbacks.
- Furthermore, there is also a hidden danger in such cravings for sense pleasures. The pursuit of sense pleasures INEVITABLY lead to immoral deeds sooner or later. People kill, rape, steal, and lie to get possession of "material things" that provide those sensory contacts. Such actions are papa kamma (or strong immoral deeds) that can lead to bad results (vipāka). In particular, they can lead to rebirth in the 'bad realms' or apāy $\bar{a}$.
- Ancient yogis (even before the Buddha,) realized that sense pleasures (kāma assāda) have such bad consequences. They saw that by staying away from such sense pleasures, one could GET INTO

particular. They focused their minds on "neutral objects" such as one's breath or a kasiña object. With such techniques, they were able to get to both rūpāvacara and arupāvacara jhānic states.

## Why Are Such "Non-Buddhist" Jhāna Techniques Are Useless in the Long Run?

8. We remember that ascetic Siddhattha (before attaining the Buddhahood) learned such mundane jhāna techniques from two yogis, Āḷāra Kālāma and Uddaka Rāmaputta. The Bodhisatta realized that such techniques do not remove kāma rāga from one's mind, but can only SUPPRESS them.

- While cultivation of such a jhāna will lead to rebirths in a Brahma realm, the existence in that realm WILL END once that kammic energy runs out. Then one can be reborn in an apaya in the future. The only PERMANENT solution is to end the rebirth process. That DOES NOT mean extinction, because there is no "soul-type entity" going through the rebirth process. See, "What Reincarnates? Concept of a Lifestream." For a deeper analysis, "Yamaka Sutta (SN 22.85) - Arahanthood Is Not Annihilation but End of Suffering." Both those at puredhamma.net.
- The Bodhisatta spent six more years pursuing the way to permanently REMOVE kāma rāga (and other defilements) from the mind.

## The Permanent Solution Is Nibbāna

9. Upon attaining the Buddhahood, the Buddha realized that one must first understand the unfruitfulness and dangers in pursuing such sensory pleasures. That is the ONLY way to PERMANENTLY remove cravings for sensual pleasures and to avoid rebirths in the apāy $\bar{a}$ due to INEVITABLE temptations in $k \bar{a} m a$ loka.

- Just with that understanding of the anicca nature, one becomes a Sotāpanna and be free of rebirths in the $a p \bar{a} y \bar{a}$. That is when one ENTERS the Noble Path.
- Then, by following that Noble Path, one can become free of kāma rāga first, and stop rebirths anywhere in kāma loka at the Anāgāmi stage.
- The main point is that birth in ANY of the 31 realms of this world WILL end up in death. Even the "relatively peaceful" life in a Brahma realm will end in death. There is no refuge anywhere in the 31 realms. Therefore, the ONLY permanent solution is to stop any and all rebirths. Of course, that process starts with understanding the overall rebirth process among the 31 realms. That understanding is embedded in the Four Noble Truths (and Tilakkhana.)
- We are going through this process to get a better understanding of that grand scheme of things.

### 2.2.5 <br> Kammic Energy Leads to Consciousness

August 29, 2020; revised August 30, 2020
Kammic energy leads to consciousness in all living beings. In this post, I am not going to refer to a specific type of consciousness (like cakkhu viññanna or mano viñnān̄a) but just the ability to generate any types of viñ $\tilde{n} \bar{a} n a$ in any of the 31 realms. Let us first recap our discussion so far in the new section, "Buddha Dhamma - A Scientific Approach,"

## Kammic Energy Leads to Consciousness

1. In this new section, we discuss Buddha Dhamma using a novel approach. One critical point is that the essence of ANY living being is a set of "sensing faculties" created by kammic energy.

- As we remember from the previous few posts, the main difficulty with the scientific community's current efforts is identifying how feelings (consciousness) can arise in the brain made of inert matter. As some
philosophers have pointed out, consciousness is NOT derived from matter. See, "Theories of Our World - Scientific Overview."
- In simple terms, the Buddha said that there is a set of elementary units of matter with the ability to faciitate CONSCIOUSNESS. See "Mind and Matter - Buddhist Analysis."
- Those are the hadaya vatthu (seat of mind) and a set of five pasāda rūpa (cakkhu, sota, ghāna, $j i v h \bar{a}, k \bar{a} y a)$. These are UNIQUE bits of matter with the ABILITY to EXPERIENCE things in the world. I cannot emphasize enough the importance of comprehending the uniqueness of these six entities.
- Kammic energy leads to consciousness because kammic energy alone can create those six entities.

## Why Life Cannot Be Created in a Laboratory

2. Those six "sensing faculties" (unimaginably small) can ONLY be created by kammic energy. That kammic energy is produced in THOUGHTS (specifically javana citta.) We will discuss this in detail in the future.

- That is why it will NEVER be possible to CREATE life (a conscious living being) in a laboratory. Consciousness does not arise in a chemical process or by increasing the processing power of computer chips.
- Kammic energy leads to consciousness, and our minds create kammic energy. Thus, we create our own future lives!

## Seeds (Kamma Bīja) for New Existences

3. It is kammic energy that produces seeds (kamma bïja) that give rise to a new set of "sensing units" for future existences.

- "Good seeds" generated by good kamma (puñña abhisankkhāra) can give rise to good rebirths (in human and higher realms.) Births in the highest four Brahma realms are due to $\bar{a} n e \tilde{n} j a ~ a b h i s a n ̃ k h a ̄ r a, ~ a ~$ special kind of "good abhisañkhāra."
- Bad rebirths (in the four lowest realms or apāy $\bar{a}$ ) arise due to "bad seeds" generated by immoral kamma (apuñ̃̃a abhisañkhāra)
- However, a seed cannot germinate and give rise to life if one has lost the craving for doing the corresponding kamma. Thus, one attains Nibbāna by cultivating pañ̃̃ā (wisdom) and getting rid of attachment to worldly things (tanhh $\bar{a}$.) We will discuss that later, but it has been discussed in other sections.
- First, let us discuss different types of kamma bīja with some examples.

## Good Seeds and Bad Seeds

4. Person X likes to enjoy sensory pleasures to the extent that he/she is willing to do any immoral deed to enjoy them. If X kills a human, that mindset is very powerful and creates a kamma bïja that can lead to rebirth in hell. If X kills an animal that generates a "smaller kamma bija," but if X keeps killing animals regularly, that kamma bïja will get stronger and, at some point, will be strong enough to lead to rebirth in hell.

- There is a person Y who engages in good deeds. That person enjoys feeding those in need (bhikkhus, poor people, animals, etc.) He/she would instinctively help those who fall into hard times and is able to forgive actions by others. Such a person builds up strong good kamma bīja to give rise to rebirths in human and higher realms.
- Then there is person Z who has understood the drawbacks of sensory pleasures. He/she has a natural tendency to cultivate jhāna by minimizing engaging in sensory pleasures and dasa akusala in general.

The first four jhāna fall under puñ̃̃a abhisañkhāra and can lead to rebirths in the 16 rūpāvacara Brahma realms. The higher jhāna fall under āneñja abhisañkhāra and can lead to births in the 4 arupāvacara Brahma realms.

- Those are a few examples of the types of abhisañkhāra (or kamma) that keep us bound to the rebirth process. They ALL fall under "avijjā paccayā sañkhāra" in the akusala-mūla Paṭicca Samuppāda process. In the detailed explanation of that step, those sañkhāra are described as "apuñña abhisañkhāra, puñña abhisañkhāra, and āneñja abhisañkhāra." See, \#11 through \#13 in "Kamma, Sañkhāra, and Abhisañkhāra - What Is "Intention"?."
- Our own kammic energy leads to consciousness (in future lives.) That consciousness may arise in any of the 31 realms.

## The essence of a Living Being - The "Primary Sensory Units"

5. "Awareness" happens at hadaya vatthu, the seat of the mind. "Seeing" happens at the hadaya vatthu with the help of cakkhu pasāda rūpa. Similarly, "hearing" happens at the hadaya vatthu with the help of sota pasāda rūpa. The other three physical senses work the same way with ghāna, jivhā, and kāya pasāda rūpa.

- In addition, hadaya vatthu can recall past memories.
- Based on those six types of external signals, thoughts arise in the hadaya vatthu.
- That happens in EVERY living-being. Every living being has a maximum of six of those "sensory units."

## Living Beings in Most Realms Have Only "Primary Sensory Units"

6. In the post, "Mind and Matter - Buddhist Analysis," we noted that living beings in 20 of the 31 realms in this world have only such sensory units and nothing else (no physical bodies.)

- The 16 rūpāvacara Brahma realms have hadaya vatthu and two pasāda rūpa.
- The 4 arūpāvacara Brahma realms have only the hadaya vatthu.
- They all have just a "mental body" and no "solid body" like ours. But our gandhabba is similar to them.

## Dense Bodies In Kāma Loka

7. The situation is the 11 realms of kāma loka is more complex. That complexity is necessary to accommodate "close sensory contacts" of smell, taste, and body touch. Such contacts are not possible for the mental body (gandhabba); see, "Ghost 1990 Movie - Good Depiction of Gandhabba Concept."

- A gandhabba needs to get into a womb and make a physical body to experience "close sensory contacts" of taste, smell, and touch. That process is described in "Buddhist Explanations of Conception, Abortion, and Contraception."
- However, it is not the dense body that FEELS or EXPERIENCES those sensory contacts. Sensory experience happens ONLY at hadaya vatthu with the help of the corresponding pasāda rūpa.
- Depending on the type of the "physical body," there are different mechanisms to transfer the information generated in the "physical body" to the corresponding pasāda rūpa and then to the hadaya vatthu (seat of the mind.)
- However, if the "mental body" (gandhabba) comes out of a human's physical body, it can see and hear without having eyes and ears. There are many verified accounts of such Out-of-Body Experiences. See, "Mental Body (Gandhabba) - Personal Accounts" and "Out-of-Body Experience (OBE) and Manomaya Kāya."
- Also, see the Wikipedia articles, "WebLink: en.wikipedia.org: Out-of-body experience" and "WebLink: en.wikipedia.org: Near-death experience."

## Our Dense Physical Bodies are Just "Shells"

8. Out dense physical bodies weighing tens of kg (or hundreds of pounds) DO NOT sense ANYTHING.

- The crucial mental body (gandhabba) with the six "sensing units" is "trapped" inside the physical body. That allows it to experience the three additional senses of smell, taste, and touch. However, it also forces the gandhabba to experience "seeing" and "hearing" with physical eyes and ears.
- Therefore, a gandhabba trapped inside a physical body cannot sense ANYTHING without the aid of the five physical senses AND the brain.
- The (physical) sensory faculties (eyes, ears, nose, tongue, body) can be considered mechanical instruments to capture external signals. For example, eyes are like two cameras taking pictures.
- It is the brain that analyzes the sensory signals captured by those five "sensing equipment." But the brain does not EXPERIENCE anything either. It breaks down those signals to a level that can be received by the five pasāda rūpa. Then each pasāda rūpa transfers that information to the hadaya vatthu. That is when we EXPERIENCE such a signal.
- Therefore, the brain is just a very fancy computer. Of course, the design of the brain is also by kammic energy, as is the design for all body parts. That "design" or the "blueprint" is in the gandhabba. We will discuss those details in the "Buddhist model" in a future post.

## Complexity In the Kāma Loka

9. The simplest in the kāma loka are the 6 Deva realms. Devas are born with "full physical bodies." Such 'bodies" are like ours but much more subtle. We can't see Devas either.

- On the other hand, we know a lot about how our physical bodies and brains work, thanks to many scientists' efforts over the past hundred years or so. Animal bodies work pretty much the same way.
- However, scientists have the wrong idea that such experiences are FELT in the brain, and it is the brain that generates our thoughts. Some scientists and philosophers are beginning to realize that, as we discussed to some extent in "Theories of Our World - Scientific Overview."

## Summary

10. I am going through this slowly because it is critically important to understand the basic structure of "our world."

- "Our world" is much more complex than what we can directly experience. We can only "see" two realms: the human and animal realms.
- That "wider world view" can be seen ONLY by a Buddha with a highly-purified mind. It covers 31 realms in total.
- Kammic energy leads to consciousness (or life) in all those realms.
- It is necessary to understand how births occur in each realm. As we discussed above, the root causes are the types of kamma we commit based on how we think, speak, and take actions based mainly on vaci and $k \bar{a} y a$ sañkhāra. We do not have DIRECT control over mano sañkhāra. They arise automatically due to our gati (character/habits.) But we CAN control vacī and kāya sañkhāra and thereby control our gati. See, "Gati (Habits/Character) Determine Births - Samsappanīya Sutta."
- We have discussed those aspects in other sections. But we will go through some of them as needed here. I will also refer to other sections since it is not possible to cover everything in one section.

### 2.2.6 Brain and the Gandhabba

September 6, 2020

- Mind Is Not in the Brain
- Gandhabba in a Human Body - an Analogy
- Persistent Vegetative State - Buddhist View
- Patient H.M. - Different Roles of Brain in Memory
- Memory Recall for Gandhabba in a Human Body

### 2.2.6.1 Mind Is Not in the Brain

September 6, 2020
The mind is not in the brain, but the brain is essential for the mind to work as long as the gandhabba is inside the physical body.

## Relevant Summary of Previous Posts

1. In the previous posts, we discussed that only in the kāma loka that some living beings have physical bodies with brains. Brahmā in 20 realms do not have physical bodies or brains. See "Mind and Matter Buddhist Analysis," "Sensual Pleasures - The Hidden Suffering," and "Kammic Energy Leads to Consciousness."

- Of course, modern science is not aware of realms other than the human and animal realms. That is one reason that most scientists believe that consciousness arises in the brain.
- Per Buddha Dhamma, humans and animals (and other beings in kāma loka) REQUIRE physical bodies to have access to close sensory contacts (taste, smell, and touch.) That, in turn, REQUIRES a brain to control the movement of heavy body parts. See, "Our Mental Body - Gandhabba."
We will discuss that more in the next post.
- But let us first review the current status of scientific research on the efforts by scientists to explain consciousness to arise in the brain.
- We already discussed the following roadblock facing "materialistic science": How can feelings arise in inter matter? That is the "hard problem of consciousness" that philosopher David Chalmers discussed in the video in \#9 and \#10 of "Theories of Our World - Scientific Overview."

## Mind Is Not in the Brain

2. The following video summarizes the current status of scientists' attempts to prove that consciousness arises in the brain. Many of them, who spent their whole lives looking into this issue, have concluded the following: The brain does play a role in consciousness. But consciousness does not arise in the brain.

WebLink: youtube: Neuroscientific Evidence: Irreducible Mind (Part 1)

- @ 3 minutes: Neuroscientist Wilder Pennfield argued that "the causal force is missing within the brain that can account for the actions and intentions." How can intention arise in inter matter?
- @ 4 minutes: There are correlations between the mind and the brain, but correlation does not mean causation. That is where science got stuck. However, it is fully explained in Buddha Dhamma. The brain is just a conduit facilitating body movements. A gandhabba does not have a brain. The brain becomes necessary only where a solid physical body is required for close sensory contacts for sensory pleasures (kāma assāda.)

## More Comments About the Above Video

3. Around 5 minutes, the author explains the "Visual Binding Problem," which is a part of a broader "unified perception." This is important.

- Let me give you another example. Suppose you are in a restaurant and see someone entering the restaurant. It is an old friend you have not seen any many years. But how long does it take you to recognize who it is, and even recall some "good old memories"?
- I discussed that in detail at \#4 through \#6 in "Amazingly Fast Time Evolution of a Thought (Citta)."
- The mind is not in the brain and can work MUCH faster than the brain. In the above examples, recognition happens not in the brain, but in the mind. We will discuss details in future posts.

4. At 8 minutes: Instead of the brain giving rise to mind, the evidence is emerging that the mind can affect the brain. The brain has this property called "plasticity." That means our thoughts can make some brain changes, especially "re-wiring of neural connections" and even repairing some minor damages to the brain.

- The video in the following section a presentation by neuroscientist Dr. Schwartz mentioned here. He has successfully treated some patients with Obsessive-Compulsive Disorder (OCD.)
- In fact, the correct mindful meditation (Satipattthāna or Ānāpānasati; not breath meditation) can vastly improve brain function in all of us to help grasp deeper aspects of nature. That is what entails following the Eightfold Noble Path. We will get to that in the future.
- At 13:45 minutes: A study found that it is possible to control one's sexual urges by "applying the mind." They were able to control brain activity with "mind control."
- It is clear that the mind is not in the brain because it can affect brain activity.

## You Are More than Your Brain

5. More and more scientists and philosophers realize that "you are more than your brain." A human has the freedom and capability to change his/her destiny.

- Dr. Jeffrey Scwartz is a neuroscientist who has developed a novel program to treat OCD successfully. He has written several books on the subject of the mind, including Ref. 1 below.
- Here is a recent presentation of Dr. Schwartz on the subject:

WebLink: youtube: Jeffrey Schwartz: You Are More than Your Brain - Science Uprising Extra Content

- Dr. Schwartz was one of the early scientists to become aware that we (our minds) are more than our brains. He did most of his studies in the 1980s and 1990s. Since then, there have been more studies conducted using new techniques for brain imaging.

## More Evidence against Materialism

6. The current Western tradition of thinking is that the only things that really exist are the atoms and the void. Everything else, including the mind, is reducible to matter made of atoms. That world view is "materialism."

The following presentation by Dr. Michael Ignor provides a summary of evidence against materialism from recent research by many neuroscientists.

## WebLink: youtube: Michael Egnor: The Evidence against Materialism

- At 5 minutes: Cutting a brain in half does not lead to significant changes in a person. If the brain gave rise to consciousness, one would expect such a drastic change would lead to a huge change in personality (and perhaps to two personalities). But the changes were insignificant (except that it relieved the patients of susceptibility to seizures.
- At 7 minutes: Research of Dr. Wilder Pennfield showed that probing various areas of the brain could not affect personal characteristics, such as intellect, political biases, habits, etc. There is a "core personality" that does not depend on the brain. But, of course, if the brain is dead, then such attributes cannot manifest.
- More evidence that the mind is not in the brain!

## Those in Vegetative States May Be Fully Conscious

7. Another notable fact from the video by Dr. Ignor is that some of the "brain-dead" patients in "vegetative states" could be fully conscious.

- At 9:30 minutes: People who are "brain dead" and are in vegetative states may be "alive inside." They are just not able to express their feelings because they cannot talk or move body parts. A discussion of Dr. Owen's brain scan studies (mentioned by Dr. Ignor) is in Ref. 2. There are aspects of the mind that cannot be destroyed even with severe brain damage. I will discuss this more in the next post.
- At 15:30 minutes: Libet experiments on free will that seemed to suggest that humans do not have free will. Also, see, "Neuroscience says there is no Free Will? - That is a Misinterpretation!" More information providing evidence that humans do have free will in Ref. 3.
- At 19:30 minutes: The book by Bennett and Hacker referred to y Dr. Ignor is Ref. 4.
- At 22:20 minutes: Importance of intentionality that we touched on in \#2 above. How can intentionality arise from the lifeless matter in a brain?

## Teleology - Purpose of Things in the World

8. At 25 minutes, the discussion turns to teleology. Teleology is about "a reason or explanation for something to exist." See Ref. 5. An acorn grows into an oak tree and not to an apple tree. The blueprint for bringing an oak tree into existence is in that tiny seed. Of course, the acorn needs to germinate and extract all necessary material from the earth to grow into that huge oak tree.

- So, even scientists like Dr. Ignor cannot explain the ROOT CAUSES for either an oak tree or a human being comes into existence. Therefore, they assign that to a Creator. In their view, it is the Creator that designs EVERYTHING in this world. That is the "WebLink: wikipedia.org: Teleological argument" for the existence of a Creator. It sometimes goes as "WebLink: wikipedia.org: Intelligent Design."
- As Dr. Ignor asks around 26 minutes what the purpose of an eye is. He would say that it was created by the Creator for humans to see. He says that there is a "grand mind" (that of the Creator God) behind the universe. That is because Dr. Ignor is not aware of the "previously unknown theory of the Buddha."
- But the Buddha said that we create our own future eyes because we like to enjoy seeing things in this world! Again, this needs to be explained in a bigger picture.
- An acorn giving rise to an oak tree is very similar to a gandhabba giving rise to a human body. That gandhabba is unimaginably smaller than an acorn but has the blueprint for the human body. The gandhabba starts building the body while inside the mother's womb, by taking nutrition from the mother. Once born, the baby starts eating food, and that is how the body of a full-grown adult comes into being. See, "Buddhist Explanations of Conception, Abortion, and Contraception."

## If Mind Is Separate From the Body, What Happens to It at the Death of the Body?

9. Therefore, there is strong evidence emerging to support the idea that the mind is not in the brain, even though the brain helps facilitate the mind's workings. That gives rise to the following critical question. If the mind is something more than the brain (and the physical body), what happens to that mind when the body dies?

- For those who have not been exposed to true Buddha Dhamma, there could be only one option. That is the ASSUMPTION that the mind (stated to be "soul") must be going to either heaven or hell forever.
- But as we have already discussed, the mind creates "seeds" for future lives. Many such "seeds" exist for many future lives (some with physical bodies and brains) for ANY living being. That is why we all have been in this rebirth process from a time that cannot be traced back. See, "Origin of Life - There is No Traceable Origin."
- The "previously unheard Dhamma" is that living beings themselves are responsible for creating SEEDS for their future lives. Furthermore, living beings are also responsible for creating their environment to live in! That includes living things without consciousness (like vegetation) and the whole environment for all of that to exist. This is a VERY DEEP subject. But we will first address the issue of living beings creating the seeds their future lives.
- Both aspects are explained with Paticca samuppāda. We will, of course, first focus on human beings and other living beings.

### 2.2.6.2 Gandhabba in a Human Body - an Analogy

September 11, 2020

## Gandhabba in a Human Body Senses Differently Than When Outside

1. The six critical entities in the gandhabba (hadaya vatthu and the five pasāda rūpa of cakkhu, sota, $\boldsymbol{g h a ̄ n a}, \boldsymbol{j} \boldsymbol{i} \boldsymbol{\nu} \overline{\boldsymbol{a}}, \boldsymbol{k} \overline{\boldsymbol{a}} \boldsymbol{y} \boldsymbol{a}$ ) are responsible for the amazing feats of cognition. See, "Mind and Matter Buddhist Analysis,"

- As we have discussed, a gandhabba has only a trace of matter and is invisible. It is essentially an invisible "mental body."
- When outside the physical body, a gandhabba can hear and see by itself without having eyes and ears like us. This idea of a living being without a physical body like ours is hard to imagine for us. But Brahmā in the higher 20 realms have such "invisible bodies."
- Of course, a Brahma or a gandhabba cannot taste, smell, or touch, since they do not have "dense solid bodies."
- But when trapped inside a physical body, a gandhabba can experience all five sensory inputs. However, now the gandhabba depends on the brain to receive those sensory inputs.
- One way to get the basic idea is to look at the following analogy. This analogy works ONLY for the five physical senses.

## A Soldier in a Totally-Enclosed Military Tank

2. Visualize a soldier operating a fully-enclosed military tank. I do not even know whether such "totallyenclosed" military vehicles exist. But one can visualize it. Consider a tank that is essentially a big metal box without even a single window. It has video cameras and microphones mounted on it to capture the scenes and sounds. It also has guns mounted on it that can shoot heavy artillery shells over long distances.

- Let us also assume that the tank's movement is also fully automated, i.e., the soldier cannot drive it manually.
- There is a sophisticated computer system that controls all those activities. The soldier makes the decisions on where to go, what to shoot at, etc.
- Now, suppose the computer system breaks down completely. The soldier is fully alive but he/she is incapable of knowing what is happening outside. $\mathrm{He} /$ she is also incapable of moving the tank or firing its guns. To someone looking from outside, it appears that the tank is "lifeless." It is no different from a nearby rock.

## A Gandhabba inside a Physical Body

3. In the same way, a gandhabba trapped inside a physical body cannot see, hear, taste, smell, or touch anything without the aid of the brain.

- The physical body, just like the military tank, cannot "sense anything." But it has a set of five "instruments" to interact with the external world (eyes, ears, tongue, nose, and body).
- Then there is a brain, just like the on board computer in the military tank, that controls those body parts. It performs two types of tasks. (1) Process external signals coming through those five body parts and pass them to the gandhabba inside. (2) It also carries out the instructions given by the gandhabba to control those body parts. Thus the gandhabba speaks and controls body movements with the aid of the brain.
- In the case of extensive brain damage, the gandhabba will not be able to get any information from outside the body. It will also not be able to speak or move body parts either because those tasks are also accomplished by the brain.
- That is why a "brain-dead person" in a "vegetative state" shows no sign of life, as we will discuss.

## How Can a Gandhabba Move a Heavy Physical Body?

4. Again the "tank analogy" is helpful. The soldier does not have the energy to move the tank. That energy comes from the fuel in the tank. Therefore, the tank will become "lifeless" if fuel runs out. The computer system will also not have the power to run.

- The physical body, just like the tank, cannot move without energy. That energy comes from the food that the human eats.
- Furthermore, the brain cannot function either without having enough energy provided by the food human eats.
- It turns out that the brain consumes roughly $25 \%$ of the energy produced by food digestion. That gives an idea of the immense workload on the brain. It has to process all the information coming in through the five senses AND also to move body parts to speak and to carry out other bodily actions.

## More Comparisons Of the Two Cases

5. More bodily actions can be visualized that way. For example, gandhabba cannot throw a stone. But gandhabba in a human body can get the physical body to throw a stone (with the help of the brain.) It takes
a lot of energy to throw a stone. But that energy does NOT come from the gandhabba. that comes from the food consumed by the physical body.

- Correspondingly, the soldier cannot throw the heavy artillery. But he/she can set up the computer to aim and fire the guns. The energy to propel heavy projectiles comes from the fuel in the military tank.
- If the computer breaks down, the soldier will be helpless and will not be able to see or hear what is happening outside. Furthermore, he/she will not be able to move the tank or shoot artillery shells. That is just like a "brain-dead person" in a vegetative state (see below.)

## Why Can't the Gandhabba "See-Through" the Physical Body?

6. If a gandhabba outside a human body can travel through walls, and see/hear through walls, why cannot it see and hear without the physical eyes and ears while inside the physical body?

- That is a manifestation of kammic energy dictated by the purpose of the physical body. The physical body arises to provide a way for the gandhabba to experience close contacts of taste, smell, and touch. That NECESSITATES its entrapment inside the physical body.
- Again, the military tank analogy is useful. The soldier will be able to see and hear without the aid of that tank-mounted equipment when he is outside the tank. But while being INSIDE the tank, he CANNOT see outside without the use of the equipment. In the same way, the gandhabba is TOTALLY shielded once inside the physical body.

7. There is another aspect of why a gandhabba in a human body becomes isolated. Kammic influences block the gandhabba from "seeing through the physical body." That is a mechanism to make the physical body subject to kamma vipāka.

- Some people incur brain damage due to kamma vipāka. Being trapped inside one's own body and not being able to communicate with others is unimaginably harsh, as we will see below.
- In general, "being trapped inside a heavy body" is one mechanism for humans to "pay for the privilege" of having a physical body to enjoy sense pleasures. Without exception, those who have had out-of-body experiences describe a joyful feeling of "lightness."

## What Happens if the Computer System (Brain) Malfunctions?

8. There are two possible scenarios in each of the cases. Let us consider the tank analogy first.
a) If part of the on-board computer-controlled circuitry malfunctions, the soldier may be able to do only certain tasks. For example, suppose the circuitry that controls automated driving and the guns malfunctions. Then he would be unable to do anything with the tank (either to move it or to fire the guns.) But he may be still capable of seeing and hearing what is happening outside.
b) If the computer completely breaks down, then the soldier would be completely isolated. He will not see or hear what is happening outside, in addition to not being able to do anything with the tank.
9. In the case of a gandhabba in a human body, the above two scenarios are analogous to two possible situations for a person in a vegetative state.
a) If only certain areas of the brain circuitry are damaged (especially the brain stem), that person may be able to see and hear but may be incapable of moving body parts to respond to them.
b) If the brain is totally damaged, that person may not see or hear AS WELL AS not be able to respond either.

- Yet, the gandhabba inside is alive and well in both those cases, just like the soldier in the tank.
- We will discuss the case of a person in a "vegetative state" in detail in the next post.

## How Does A Gandhabba See/Hear When Outside a Physical Body?

10. Another possible question is: "How does the gandhabba see and hear when outside the human body?"

- It is only in the human (and animal) realms that beings communicate via speech (and bodily gestures). In other realms, living beings communicate directly via sañ̃ $\bar{a}$, one of the five aggregates (pañcakkhandha).
- Not all living beings can communicate with all others via saññ̄ā (it depends on the realm.) When possible, communications take place via sañ̃ñ generated in one's thoughts.

11. That mode of communication is similar to one's experience with dreams. In a dream, we do not "hear" what others say in the same way when we hear speech normally, i.e., through the ears. In a dream, we perceive what they are saying. We perceive sañña $\overline{\text {. }}$

- We also do not "see dreams" with our eyes, which are closed while we sleep.
- Here, we need to remember that the "real sensing elements" are not the physical eyes, ears, etc., but the five pasāda rūpa: cakkhu, sota, ghāna, jivhā, and kāya. See, "Mind and Matter - Buddhist Analysis."

## The Blind Woman Who Could See With an Out-of-Body Experience

12. The following real-life account provides a good understanding of the working of the gandhabba in a human body versus outside.

- In some cases, people are born with the cakkhu pasāda rūpa in good condition, but the optic nerve (or the physical eye itself) may be damaged. In that case, they cannot see because the brain is not getting a signal from the eyes.
- But if the gandhabba can come out of the body, it can see by itself. The following video clearly illustrates this situation.
WebLink: youtube: Near Death Experience - Blind woman 'sees' while out of body

13. Note that she had "never seen anything" in her whole life. It seems that either her physical eyes or the optic nerve/visual cortex in the brain had been damaged at birth. But the cakkhu pasāda rūpa was fully functional. That is why she was able to see when the gandhabba came out of her body.

- However, in other cases, one may be born blind because one may not be born with the cakkhu pasāda rūpa. In that case, even if the gandhabba comes out of the body, it would not be able to see.
- All five sensory faculties are in the gandhabba or the manomaya kāya. Those signals are first processed by the brain before the signals arrive at the corresponding pasāda rūpa. Then that pasāda rūpa transfers the signal to the hadaya vatthu and it is the hadaya vatthu that really "sees", "hears", etc. See "Mind and Matter - Buddhist Analysis."

### 2.2.6.3 <br> Persistent Vegetative State - Buddhist View

September 18, 2020; revised September 19, 2020
Some people in "persistent vegetative state" may have awareness per Buddha Dhamma. (1). As long as the physical body is alive, there is life. (2). Depending on the extent of brain damage, awareness of the external world may or may not be there.

## What Is a "Vegetative State" or Unresponsive Wakefulness Syndrome?

1. A persistent vegetative state is when a person is awake but showing no signs of awareness for an extended time. Such a patient may have awoken from a coma, but still don't seem to have regained awareness (Refs. 1, 2 [Ref. 1, and Ref. 2]).

- Ref. 1 states, "A vegetative state is when a person is awake but showing no signs of awareness."
- According to Ref. 2, a person in a vegetative state "completely lack cognitive function."
- The term "vegetative state" may have come from "vegetable-like" in the sense that the body is obviously alive, but does not show any sign of awareness. A vegetable is also "alive," but of course, does not have any awareness.
- But there is a clear difference between "being aware" and "being able to communicate that one is aware." Some people classified to be in a "vegetative state" may be aware but not able to communicate that they are aware. This difference is VERY CLEAR in the Buddhist explanation.

## There Could be Awareness in a Person Classified to be in a "Vegetative State"

2. Scientists are beginning to realize that there is a "thinking being" in a human body in a "persistent vegetative state." In 2010, it was proposed to refer to this condition as unresponsive wakefulness syndrome or UWS (Ref. 3.)

- However, many still consider ANY person in a vegetative state to be "clinically dead." Disconnecting life-support is legally allowed.
- In Buddha Dhamma, the issues become much clear. The gandhabba is fully alive inside. Since the brain's areas controlling body movement and speech are disabled, it cannot show awareness. But depending on the condition of the other areas of the brain, it may or may not be aware of the surroundings. That means a person in a vegetative state COULD BE fully aware of his/her surroundings just like a normal person.
- Progress in neuroscience now makes it possible to check whether such a person is aware of the surroundings, even if he/she cannot express that via speech or bodily movements. We will discuss that below. Let us first discuss the general picture per Buddha Dhamma.

## A Person in a Persistent Vegetative State - Buddhist Explanation

3. In the previous post, we described the workings of the gandhabba (mental body) and the physical body where the brain plays a significant role.

- One part of the brain (neocortex) provides the gandhabba with the sensory inputs coming through the physical sense faculties (eyes, ears, nose, tongue, body.)
- There is a separate brain circuit (brain stem) that controls speech and bodily movements. Per gandhabba's instructions, that part of the brain controls the movement of body parts.
- We discussed those two aspects using an analogy of a military tank operated by a soldier. Here, an onboard computer has two circuits: One to bring in external video and audio to the soldier. The other part of the computer-controlled circuit drives the tank and fires the guns mounted on the soldier's tank per instructions. See, "Gandhabba in a Human Body - an Analogy."

## "Vegetative State" is Proper Terminology If the Brain Is Fully Damaged

4. If there is extensive damage to the onboard computer and all circuits under its control, the soldier is completely isolated. $\mathrm{He} /$ she would not be able to see/hear what is happening outside OR to drive the tank or fire its guns.

- Similarly, if the brain is fully damaged, the gandhabba will not be able to see, hear, taste, smell, or touch (It will also not be able to recall any past events as we will discuss later.) Furthermore, since the brain cannot help with speech or other body movements, the gandhabba cannot show any life sign.
- However, the soldier inside the tank is alive. Similarly, the gandhabba inside the physical body is also fully alive.
- It is because that the gandhabba is alive that the physical body stays alive. The physical body can be in that "persistent vegetative state" as long as the gandhabba stays inside AND the physical body is on life-support (food and water provided.)
- Thus, the term "vegetative state" is appropriate in this case, since the gandhabba cannot respond AND is totally unaware of what is going on. In Abhidhamma terminology, the mind is in the bhavañga state. There are no "active thoughts" or citta vithi.

## If Only the Brain Stem Damaged, Gandhabba May Have "Awareness"

5. Now, let us consider the second possible scenario. If only the brain stem is damage d, that person may see and hear but is incapable of moving body parts to respond to them.

- In the military tank analogy, this is similar to when the computer circuits for driving and firing of guns are damaged. The video and audio equipment are working, so that the soldier can see and hear what is going on outside, but is unable to move the tank or fire its guns. To someone looking from outside, the military tank appears to be totally disabled.
- Similarly, some people who appear to be in persistent vegetative states may be fully aware of what is going on. They have no abilities of body movements and cannot speak or move even a finger. Thus, they are unable to express anything with words or bodily movements.
- The following video is about a woman in a vegetative state for two years and was able to recover. During those two years, she heard and saw what was going on. However, there was "no sign of life" in her other than her vital signs.
WebLink: youtube: Miracle Drug Wakes Up Woman In A Coma After 2 Years | My Shocking Story

## Gandhabba of a Person in a Persistent Vegetative State is Fully Alive in All Cases

6. Therefore, as long as the body's vital functions are intact, the gandhabba inside is alive and well. In other words, the fact that the physical body does not decay MEANS that the gandhabba inside is alive.

- Of course, if life-support disconnected the physical body will die. Then the gandhabba would move out of the dead body.
- Some people in a "vegetative state" may not be able to think in addition to not being able to respond. That is a "strong vegetative state," as discussed in \#4. That is similar to a living being in the asañña realm with no thoughts or perceptions.
- On the other hand, some who are classified to be in a "persistent vegetative state" may be fully aware of what is happening, as discussed in \#5.
- The following amazing video describes the accounts of three people who were in vegetative states for years per \#5. They recovered and say that they were able to see or hear everything. But they were incapable of even moving a finger, let alone talk, so they could not acknowledge that they knew what was happening.
WebLink: youtube: This Guy Came out of a 12-Year Coma and What He Told Amazed Everyone
- Imagine being in a situation like that! Totally helpless. That is one example of anatta nature! This is why anatta means much more than just "impermanence." One can get into situations where one loses
any control over one's situation. Most animals are like that throughout their lives. They have to bear whatever happens.

## Is There a Way to Check if a Person In a Vegetative Stats Is Aware of Surroundings?

7. It would be horrible to discontinue life-support for a person who cannot communicate but is fully aware of what is happening. As we saw in the above video, some people in persistent vegetative states CAN see and hear everything. They cannot speak or even make bodily gestures to indicate that they can see and hear.

- Imagine being in such a situation. In some cases, the medical staff and even the family members may be talking about taking away life support! That would be a cruel punishment even though not intended.
- But new imaging technology developments have made it possible to find out whether a given patient is aware, even though unable to communicate. The following video explains the technology. A Neuroscientist Used fMRI to Communicate With People in a Vegetative State:
WebLink: youtube: This Neuroscientist Uses fMRI to Communicate With People in a Vegetative State Freethink
- According to this doctor, about 1 in 5 patients (from a sample of several hundred in his study) were fullly aware! Hopefully, this technique will be adopted in the future before deciding to remove life support.
- Note that the thirst person discussed in the video in \#6 (@9.06) underwent this brain scan diagnosis.

## The Buddhist Explanations Are Very Clear on Many Moral Issues

8. The prevalent "materialistic view" is making it difficult to understand some critical moral issues with clarity. What we discussed above is just one example.

- Another actively-debated issue is related to the fact that there is no clear understanding of the conception of a baby per materialistic view. The only thing that is universally accepted is that the conception STARTS with the formation of a single cell (zygote) when a sperm cell joins an egg cell in the mother's womb.
- But that zygote is inert. When does it become alive? Some people even say it is not alive until it is born! Yet, one can clearly see that the baby is alive in the womb with the heart pumping.
- In the Buddhist view, the situation is crystal clear. The inert zygote becomes alive when a gandhabba "descends to the womb" (okkanti) and merges with that zygote. That normally happens within a day or two of sexual intercourse. Thus, the time of conception is well-defined. See, "Buddhist Explanations of Conception, Abortion, and Contraception."

### 2.2.6.4 <br> Patient H.M. - Different Roles of Brain in Memory

September 25, 2020; revised April 11, 2022
Patient H.M. provided a critical clue to the role of the hippocampus in memory preservation. Studies on him and a few other patients point to direct and indirect roles played by the brain in preserving memories. The Buddhist and scientific descriptions are the same for habitual (procedural) memory but different for autobiographical (declarative) memory.

## Major Components of the Brain

1. The following diagram shows the brain divided into three regions. The following bullet points provide the KEY FUNCTIONS of each area. It is a crude description but provides a simple picture.

- The cerebellum (indicated in red) controls body movements. The cerebellum also helps with body balance and remembering repetitive tasks. If there is significant damage to the brain stem, one is likely to die. The brain stem controls vital functions like breathing.
- The limbic system plays a vital role in memory. It also deals with emotions.

Components of the limbic system are indicated in black.

- The neocortex (indicated in blue) is the largest area of the brain and manages sensory inputs such as vision and hearing. It is also the "thinking brain." It wraps around the limbic system, starting from the edge of the cerebellum.

Click on the link to download the figure: "Major Components of the Brain."

## Structural Information on the Three Regions of the Brain

2. The above figure shows a brain cut in the middle. Some components of the limbic system have two parts on either side. For example, the hippocampus and amygdala have two identical structures on the brain's left and right sides. [The hippocampus is a small, curved formation in the brain that plays an important role in the limbic system. The hippocampus is involved in the formation of new memories and is also associated with learning and emotions. The amygdala is a collection of cells near the base of the brain. There are two, one in each hemisphere or side of the brain. This is where emotions are given meaning, remembered, and attached to associations and responses to them (emotional memories). The amygdala is considered to be part of the brain's limbic system.]

- On the other hand, the brain stem and cerebellum are single structures.
- In contrast to both, the neocortex has different areas specialized for various tasks. Analysis of sensory inputs happens in the back (visual and auditory cortex.) Parts of the frontal cortex manage planning, speech, and related motor control aspects. The neocortex accounts for $76 \%$ of the brain.

## Overview of Our Discussion So Far

3. Now, we can better visualize our discussion so far in the previous few posts, especially the post on "Persistent Vegetative State - Buddhist View." Let us first go over that post.

- The brain stem regulates breathing, heart rate, and blood pressure. Therefore, it is likely that people in vegetative states do not have significant damage to their brain stems.
- The loss of motor control (body movements) is likely due to damage to the cerebellum.

damaged, the patients would not be able to see or hear as well.
- The visual and auditory cortexes are close to the cerebellum (left figure). Click to download the figure: "Neocortex Areas and Cerebellum." The limbic system is hidden in this view.
- That roughly matches what we discussed in the previous post about different situations of people in vegetative states. For example, suppose there is damage to the cerebellum area but minimal damage to the visua/auditory cortexes. Such patients may be able to see/hear but not able to respond.
- On the other hand, if visual/auditory cortexes and the cerebellum are
- We discussed those two situations in the previous post.

## The Opposite of a "Vegetative State" - Living Without Memory

4. Now, let us discuss a few people who were unfortunate to face different problems due to a third region of the brain located close to the middle of the brain. As we can see from the first figure above, the limbic system lies underneath the neocortex and sits above the brain stem/cerebellum area.

- The limbic system is the "emotional center" of the brain because it controls emotions. It has several components, including the hippocampus, amygdala, and thalamus.
- Our focus here is on the hippocampus. As we will see, it plays a significant role in memory.
- There are two symmetrically-placed hippocampi on either side of the brain. Surgeons removed both of them in a patient who went by the name "patient H.M."

## The account of "Patient H.M." - Critical Role of Hippocampus

5. Patient H.M. (or Henry Molaison) suffered from frequent bouts of seizures. In 1953, a surgeon removed both his hippocampi in an attempt to solve that problem. Even though the episodes went away, HM suffered a devastating memory loss.

- HM lost the ability to retain NEW memories. But he could remember events up to the operation but could not remember anything for more than a few minutes AFTER the operation. The following video explains it in more detail.
WebLink: youtube: What happens when you remove the hippocampus? - Sam Kean
- After extensive studies on patient HM (he died in 2008) and on several other patients with memory loss, neuroscientists have concluded that the hippocampus is the component in the brain that strengthens shortterm memories to long-term memories and "passes them over to the neocortex."
- However, they do not know how those memories can be "passed over to another brain region" or how the brain can keep such "long-term memories" for long times. In the next post, we will discuss some people's ability to remember past events extensively. For example, some people can remember what they ate for lunch several years ago on a specific arbitrary date! We will discuss that in upcoming posts.
- The extensive study of patient HM is vital since it allows us to pinpoint one brain component responsible for long-term memories.

## Nomenclature of Memory

6. We need to be aware are some standard terms used by neuroscientists. That will help us understand the content in the following videos.

- Autobiographical (or episodic or declarative, or explicit) memory is about remembering events, facts, etc. These memories are about dates, events, names, etc. They are the same as nāmagotta in Buddha Dhamma. In Buddha Dhamma, nāmagotta are not in the brain but reside in the "viññāna plane." There is a "transmitter" in the brain that transmits memories to the "viññāna plane." Then there is a "receiver" in the brain that makes it possible to recall memories from the "viññāṇa plane." More on that in upcoming posts.
- The other is habitual (or procedural or implicit) memory or being able to do repetitive tasks like playing the piano, riding a bicycle, brushing teeth, etc. They are related to one's habits. These memories are "hard-wired" in the brain. It appears that the cerebellum in the brain is where such "memory connections" take place.
- Anterograde amnesia is the failure to store memories after trauma. Retrograde amnesia is the failure to recall memories before the trauma. The loss of the hippocampus leads to anterograde amnesia.

## Further Details on Patient H.M.

7. The following video is a bit long. But it provides a lot of information.

## WebLink: youtube: Patient HM and Jacopo Annese

- @ 4 minutes: Hippocampi on both sides of the brain surgically removed. After that, he couldn't remember anything that had happened minutes ago. Of course, he could remember events before the operation.
- Imagine the hippocampi to be the "transmitter." Suppose it transmits new memories to the "viñãāṇa plane," where they remain intact forever. Then suppose another component (yet unidentified) in the brain can help recall memories. That "receiver" worked for patient H.M. since he could recall memories formed BEFORE removing the hippocampi.
- We will discuss this "theory" in the next post. But keep this in mind as we continue the discussion here.
- @4:40 minutes: "Declarative memory" is the same as the aforementioned autobiographical memory. "Procedural memory" is the same as "habitual memory."
- @5:40 minutes: The narrator says there is only one book on patient H.M., But there are two more. See Ref. 1.

8. The Nova clip @ 7 minutes says that memories are created and erased by chemical processes. But that is not consistent with either Buddha Dhamma or recent findings in science.

- @ 8:40 minutes: The account of H.M.'s medical problems led to surgery.
- @ 10 minutes: Patient H.M. could remember everything that happened before his operation.
- @ 10:30 minutes: Dr. Milner concluded that the hippocampus MAKES long-term memories. But we will see that there is a better explanation.
- @ 11:00 minutes: The drawing experiment showed that he could learn repetitive processes. As we will see below, that comes under "habitual memory" (learning a motor skill) controlled by the cerebellum. But, of course, he had no memory of going through those trial runs of drawing the star.
- @ 12 minutes: Current scientific explanation of memory formation. This explanation is also consistent with Buddha Dhamma. Construction of "habitual memories" or motor skills appears to occur in the cerebellum.

## The Account of Patient E.P.

9. The account of a different person, patient E.P. starts at 4:30 minutes. In 1992, E.P. suffered a viral infection that seemed to have damaged parts of the limbic system. That is very similar to the case of Clive Wearing that we will discuss below.

- @ 17 minutes: Patient E.P. could not retain memories of events AFTER coming down with the infection. But he remembered events before that. Thus, he does not have autobiographical memories of events AFTER the infection.
- @ 19:30: The virus destroyed areas around the hippocampus. After that damage, patient E.P. could not retain any NEW autobiographical information. But he remembers everything that happened BEFORE that virus-induced damage. That is similar to the case of patient H.M.
- @ 22 minutes: The narrator says the hippocampus helps "record the memories." But as we will see, the hippocampus transmits those memories to the viññ̄ạna plane.
- @ 24 minutes: Brief discussion of Clive Wearing.
- @ 25:40 minutes: The account of Dr. Jacopo Annese, who compiles records of the brains of people with different backgrounds, including those with memory problems.
- @ 30:10 to 32 minutes: The brain of patient H.M. The discussion relevant to our topic stops at 32 minutes.
- @ 32 minutes to end: Work of Dr. Annese. He plans to make a repository of complete brain scans of 1000 people.
- Next, we discuss a third patient who lost ALL his memories AND cannot make ANY memories.

## Clive Wearing - Musician With Seven Second Memory

10. Clive Wearing was a reputable musician. A herpes virus damaged his brain (around the limbic system) just over a few days in 1985. Unlike patient H.M. and patient E.P., he cannot recall ANY memories. He can remember only those events within the last seven seconds. His situation is even worse than that of the previous two patients.

- Therefore, he cannot recognize anyone. Even though he cannot remember his wife's name, he knows that she is a special person in his life.
- So, he virtually lives "just at that moment"!
- The following video is a bit long. But it provides a lot of information.

WebLink: youtube: The Man With The Seven Second Memory (Amnesia Documentary) | Real Stories

## Significant Deductions from Clive Wearing's Case

11. Note in the beginning that he can play the piano but cannot remember anything that happened even several seconds ago!

- Therefore, his habitual memory is intact (consistent with his cerebellum undamaged.) But he has anterograde AND retrograde amnesia, i.e., total loss of autobiographical memory. Therefore, he seems to have lost both the transmitter (hippocampus) and "receiver" (cannot be identified yet.)
- @ 6:40 minutes: He says it is like being dead. No thoughts of any kind, except the one that passes by. In that sense, his state is a kind of a "vegetative state" even though he can maintain his physical activities.
- @ 9:30 minutes: The account of how he lost memory in several days in 1985.

12. Here are more notable things from the above video:

- @ 10 minutes: How he lost memory within several days. The herpes virus crossed the blood-brain barrier and got into the brain. There is only a one-in-a-million chance of that happening!
- @14 minutes; He says he cannot think about anything. That is why he initially cried all day long. He says it is like being dead.
- @ 19 minutes: Every moment is the beginning of consciousness! He repeats that at @ 43 minutes. No thoughts mean like being dead! He was fortunate to be able to play the piano. As we mentioned, such "learned memories" remain hard-wired in the cerebellum. That is a notable difference from "episodic memories," which are not (and cannot be) "stored" in the brain. We will discuss that in the next post. That is also why he can dress by himself, eat and do other "regular activities" by himself.

13. We can learn a lot about the working of the brain and the gandhabba by carefully analyzing the accounts of patient H.M., patient E.P., and Clive Wearing.

- We will continue the discussion in the next post.

### 2.2.6.5 Memory Recall for Gandhabba in a Human Body

October 2, 2020; revised October 3, 2020
Memory preservation and recall involve two components in the brain per Buddha Dhamma. We identify the "transmitter" as the hippocampus. The "receiver" is tentatively identified to be in the posterior visual areas of the cortex possibly the precuneus.

## Key Points From the Discussion So Far

1. When outside the physical body, a gandhabba can see, hear, and recall memories "directly." The invisible gandhabba sees and hears with the cakkhu and sota pasāda rūpa and recall memories directly in hadaya vatthu. Kammic energy creates up to six sensory units, including those three. See "Mind and Matter - Buddhist Analysis."

- When inside a physical body, a gandhabba is TOTALLY shielded from outside. But thanks to that solid, dense body, the gandhabba can taste, smell, and touch things too. But ALL six types of interactions with the external world now REQUIRE a functional brain.
- Using an analogy of a military tank, we discussed how the brain analyzes the sensory inputs coming through five physical senses (eyes, ears, nose, tongue, body) and passes them to the gandhabba. See, "Gandhabba in a Human Body - an Analogy."
- Now, let us discuss the critical role played by the brain in the memory preservation/recall process.

## Memory Preservation/Recall for a Gandhabba Inside a Human Body

2. The sights, sounds, tastes, odors, and touchable objects are in the external world. In the same way, our memories are also in the external world.

- Of course, that Buddhist view differs from the scientific view that the memories are "stored" in our brains. See, "Mind Is Not in the Brain."
- The "physical world" or "rūpa loka" that is spread out in space ( $\bar{a} k \bar{a} s a ~ d h a \bar{a} u)$ is only one part of our world.
- That physical world has a mental counterpart. It is the "mental world" or "nāma loka" associated with the viññāna dhātu. Our memories or "nāmagotta" (as well as plans and our kamma bija) are in that nāma loka.

3. Out of the five aggregates (pañcakkhandha), the rūpakkhandha encompasses everything associated with the rūpa loka. The other four aggregates (vedanakkhandha, saññākkhandha, sañkhārakkhandha, and viññānakkhandha) are associated with the nāma loka. We will discuss that in more detail in upcoming posts.

- As discussed in the above-mentioned posts, eyes, ears, nose, tongue, and the physical body brings in the five physical sensory inputs to the gandhabba trapped inside the physical body. The brain plays a key role in processing those sensory inputs and passing them to the gandhabba.
- Two brain components play critical roles in memory preservation/recall for the gandhabba trapped in a physical body. Let us discuss that now.

## A Transmitter and a Receiver of Memory in the Brain

4. The five physical senses need to "bring in" external sensory inputs from the physical world. People, animals, and things in the rūpa loka can be seen with the eyes. Our physical bodies can touch those things, etc.

- On the other hand, records of our thoughts (nāmagotta) need to be first sent out of the physical body to the nāma loka (viññāña dhātu.) Those thoughts arise in the gandhabba inside the physical body. As thoughts arise in gandhabba, the "transmitter" in the brain transmits them to the outside.
- We can recall those records as needed, with the aid of the "receiver" in the brain.

## The Critical Roles of the Transmitter and the Receiver

5. If the transmitter in the brain does not work, then records of one's thoughts cannot be transmitted out to the viññāna dhātu. That means those records WILL NOT be saved. If someone's transmitter stops working, the recording of nāmagotta will stop.

- If the transmitter keeps working, but the receiver stops working, then one will not be able to recall ANY of the memories. However, one's nāmagotta will continue to accumulate in the nāma loka.
- Of course, if both transmitter and receiver fail, then one's nāmagotta will not be saved, AND one will not be able to recall ANY memories.

6. Now, let us see what happens when that person dies and is reborn with a human body again. If both the transmitter and receiver work in the new life, then the only problem would be the following.

- If the transmitter had not worked for a certain time period in the previous life, nāmagotta for that period would be missing FOREVER.
- That last scenario would be similar to the case of nāmagotta missing for the time spent in the asañña realm. For that whole time spent in the asañña realm, there would be no thoughts, and thus no "events" to record.

## Identification of the Transmitter of Nāmagotta as Hippocampus

7. In the previous post, "Patient H.M. - Different Roles of Brain in Memory," we discussed the case of patient H.M. As explained in \#4 in that post, a surgeon removed H.M.'s hippocampus to treat a different medical problem.

- After the surgery, H.M. lost to the ability to recall anything that happened AFTER the operation. But he was able to recall events that took place BEFORE the operation.
- The fact that he was able to recall some memories means that the receiver was working!
- The second clue is that he cannot recall new memories made AFTER the operation, which means the transmitter was removed in operation. Only one small part of the brain (hippocampus) was removed in operation. Thus it is a clear-cut case that the hippocampus is the transmitter!
- By the way, patient E.P. discussed in \#9 of that same post had the same issue of not recalling only those memories created AFTER an incident. In that case, a virus attacked E.P.'S brain area that contained the hippocampus. Thus his account is also consistent with the hippocampus being the transmitter.

## Loss of the Receiver Leads to Complete Loss of Episodic Memories

8. What would happen if the receiver is damaged? Of course, one would not be able to recall anything at all.

- We discussed the case of Clive Wearing in that same post starting at \#10. Clive did lose ALL memories. Thus, it is clear that Clive lost the receiver.
- However, he lost his memories due to a viral attack just like patient E.P. It was not a specific brain component like for patient H.M.
- There was much more damage to Mr. Wearing's brain than for patient E.P.'s brain. Some areas in the frontal and temporal lobes and the area around the hippocampus were damaged. There are many small components around the hippocampus (like the amygdala.) I could not find more specific information on the damaged areas of Mr. Wearing's brain.
- On the other hand, his cerebellum (located in the back of the head) did not have any damage. Thus, he was able to do routine tasks using habitual memory. He was even able to play the piano, as we discussed in that post. As discussed in \#12 there, "learned memories" remain hard-wired in the cerebellum. His cerebellum did not have any damage
- But he would not recall playing the piano a minute after he finished playing! He could not recall ANY "episodic memories" because his "memory receiver" was damaged. His transmitter (hippocampus) was also damaged.

## Tentative Identification of the Receiver

9. A recent study monitored various regions of the brain when a subject was asked to recall a past event. I just came across this publication today, October 3, 2020.

- The authors of the publication state, "..Results showed that initial access was very fast, did not activate the hippocampus, and involved activation of predominantly posterior visual areas, including the precuneus."
- As we discussed above in \#7, we believe that the hippocampus is the transmitter. Thus, this study is consistent with that.
- The publication is available for free distribution: WebLink: PDF download: Highly Superior Autobiographical Memory-The role of the precuneus-Mazzoni-2019.

## Connection to the Ability to Recall Past Lives - Why Scientists Are Wrong

10. Since memories (nāmagotta) remain preserved in the nāma loka (viñ̃āṇa dhātu), they will NEVER be lost. That is why some children can recall their past lives.

- On the other hand, if memories are "stored in the brain," as some scientists speculate, recalling a past life would be impossible. Thus, even if just ONE one numerous past life accounts is correct, that model has to be discarded.
- Of course, those who cultivate abhiññā powers can recall MANY past lives. The Buddha recalled how he received "niyata vivarana" to become a Buddha from many previous Buddhas who lived billions of years ago! See, "Pāramitā and Niyata Vivarana - Myths or Realities?"
- Further evidence is building up from numerous Near-Death-Experience (NDE) studies conducted by heart surgeons. We discussed those problems with the "memories stored in the brain" theory in the post, "Theories of Our World - Scientific Overview."

## Buddha Dhamma Is Self-Consistent and Compatible With Scientific Findings

11. Buddha Dhamma is fully self-consistent. See, "Buddha Dhamma: Non-Perceivability and SelfConsistency." All the posts at this website are self-consistent and are consistent with the Tipitaka.

- Over the years, scientific theories kept changing to be consistent with new findings. I predict that science WILL discard the idea that memories remain stored in the brain. It is just a matter of time.
- Another piece of recent evidence is the following. Some people can remember what happened in any ARBITRARILY selected day, even several years ago. It Is as though their memories were digitally recorded.
- Our brains are not digital, as proven in recent years. They do not work the same way as digital computers. It is impossible to "record" events in such detail in our brains.
- We will discuss accounts of some of those people with "perfect memories" in the next post.

All posts in this section at, "Buddha Dhamma - A Scientific Approach."

### 2.2.7 <br> Our Two Worlds - Rupa Loka and Nāma Loka

October 9, 2020

- Autobiographical Memory - Preserved in Nāma Loka
- Rūpa and Rupakkhandha, Nāma and Nāmagotta
- Response to a Sensory Stimulus - Role of Gati/Anusaya
- Ārammana Plays a Critical Role in a Sensory Event
- Nāma Loka and Rūpa Loka - Two Parts of Our World

### 2.2.7.1 Autobiographical Memory - Preserved in Nāma Loka

October 9, 2020; revised October 10, 2020 (added the video in \#7)
Autobiographical memory (nāmagotta) remains preserved in nāma loka (mental world.) Material things are

## Our Two Worlds - Rūpa Loka and Nāma Loka

1. Living beings enjoy material things in the rūpa loka. We are all familiar with our material world (rūpa loka), which has "things" that we can see, hear, taste, smell, and touch.

- We also enjoy RECALLING past experiences and also recalling anticipated future events (desires or expectations.) Both those types remain in our mental world (nāma loka.)
- A satta (living being) results when attaching to either of the two. See \#6 of "Me" and "Mine" - The Root Cause of Suffering."

## Autobiographical Memory Versus Habitual Memory

2. When we say "we remember" something, that memory could be one of two things.

- We remember past events like attending a wedding or a funeral, the birth of a child, etc. which is autobiographical memory. A memory of what one ate for dinner on any arbitrary day, even years ago, falls into the same category. Everything that you did from the moment of waking up to going to bed goes into autobiographical memory.
- On the other hand, remembering how to ride a bike (or play the piano) is also a memory. Even if you don't ride a bike for many years after learning it, you can recall that memory fairly quickly later on. It would not be like learning to ride a bike for the first time in your life. Such a "capability" is a habitual memory.
- There is recent evidence that some people have exceptional abilities with autobiographical memory. They can recall what happened on any arbitrary day within the past several years in great detail. Let us discuss that now.

## Highly Superior Autobiographical Memories (HSAM)

3. These studies started with Jill Price, who contacted a team of scientists in the early 2000s about her ability to recall anything from 1974 onwards. Since then, scientists have studied more people with that ability.

- Scientists have coined the term Highly-Superior Autobiographical Memories (HSAM, pronounced HSAM) to describe their abilities.
- The following video illustrates how astounding their memories are:

WebLink: youtube: Endless Memory, Part 1

## Notable Facts

4. It starts with Louise Owen's account. Note that around 2 minutes, she says she "scanned through April 21 of that year to April 21, 1992." It is like playing back a recorded file. She started on April 21, 2011 (the
year she answered that question) and jumped (in her memory) year by year until getting to April 21, 1991. We cannot imagine how she did that, but you can see how quickly she "got to that specific date." She said she went through 25 twenty-firsts and zeroed in on the one in 1991. That is amazing! Of course, we cannot even imagine how she accurately described events on all those arbitrary dates given to her.

- @ 4 minutes: It is NOT memorization. Instead, it is the same way we can recall what happened a few hours ago. It just comes to our minds. But, of course, we cannot do that for more than a day or two in the past (unless it is a notable event.)
- @ 4:35: The account of Jill Price, the first person to be identified with HASM ability. But she did not want to meet with the others that we will later in the video. She was the only one who was not happy to have that ability (HSAM.)
- @ 4:50 Brad Williams, Rick Barron, and Bob Petrella. @ 5:50, the person checking the account of Bod Petrella got the date wrong, not him!
- @ 6:00 Actress Mary Lou Henner. @ 8:15, she says it is like playing back a DVD! That is not possible with "neuronal connections in the brain" (see below).
- @ 9:45 The meeting of five HSAM memory wizards.
- @ 11 minutes: They are all "ordinary people" with no exceptional or unusual capabilities.
- @ 11:50 They "re-live" their recalled experiences.

## Brain Scans of Those With HSAM

## WebLink: youtube: Endless Memory, Part 2

5. Here is a list of important information from the above video.

- @ 1 minute: MRI scans of HSAM people's brains. Their left temporal lobes and the caudate nucleus (in the limbic system) are somewhat more prominent. As we saw, these are the suspected receiver and transmitters in the brain. See, "Memory Recall for Gandhabba in a Human Body."
- Disregard the comment about the possible connection to OCD (Obsessive Compulsive Disorder). Latter studies (see Ref. 2) show that there is no connection.
- @ 6:20: Memories do not need to be "memorable." They remember mundane, unextraordinary things. Bob remembered 19 seasons of Pittsburgh Steelers football games in 19 seconds! They show on the recorded video playback at $7: 33$ is t Bob played back in his mind a few seconds ago.
- @ 8:45: Do their memories clutter up their minds, i.e., do all those memories hang around in their minds all the time? No. They call any specific memory as needed, just like scanning through a recording. They can "pull up the right information at the right time." Dr. McGaugh says it is a puzzle, but it is NOT a puzzle in the Buddhist explanation. Those memories are fully intact in the nāma loka. Those with the ability can extract that information at any time.
- @ 9:35 DNA and other types of testing.

## A Recent Account of HSAM With More Information

## WebLink: youtube: The woman who remembers everything $\mid 60$ Minutes Australia

6. The previous two videos came out soon after finding several people with HSAM abilities. The above video is from 2019 and has further information about two other individuals, Becky and Markie.

- @ 2:10: Becky "re-lives" her old experiences. We saw that in the previous videos too, but this account is more explicit.
- @ 2:50: She can recite any page from any of the seven Harry Potter books. That is truly amazing. She must have read the books very carefully so that each word got "recorded." It is essential to realize that what is "recorded" as nāmagotta are our thoughts, as they arise.
- @ 5:00: Becky thought everyone could do it. It was a puzzle to her why her Mom could not remember something that happened five years ago!
- @ 7:00: Out of 60 people identified with HSAM capability since 2008, Becky is the only one with autism.
- @ 7:20: Relevant brain regions of HSAM people are not as unusually large, as initially thought (see \#4.) However, there may be more connections between brain areas.
- @ 8:20: Account of Markie Pasternak, who remembers every day of her life since age 10.
- @ 10:55: Becky and Markie meet.
- @ 11:00 minutes: Becky remembers everything from the first year she was born!
- @ 11:45: Becky is a Harry Potter fan. No wonder she could remember all seven books, page by page.

## Current Scientific Hypothesis on Memory Preservation

7. The following short video provides a good idea of the present scientific concept of "memory formation." WebLink: youtube: How memories form and how we lose them - Catharine Young

- It says memories "form in the hippocampus" and then "transfer" to other regions in the brain. They came up with that hypothesis after studies on patient H.M. As we have discussed, after removing the hippocampus from patient H.M.'s brain, he lost the ability to recall memories formed AFTER the operation. But since he could remember old memories, scientists concluded that those old memories must have been "transferred" to other regions in the brain.
- That is the ONLY way to explain the accounts by patient H.M. within the "memory stored in the brain" hypothesis. However, they have not explained HOW that transfer process takes place. They would have a hard time explaining the abilities of those with HSAM, in particular.
- @ 1 minute: Discussion of synapses and "long term potentiation" or "stabilization of memories." But does not jive with memory recall by those with HSAM. Preservation DOES NOT require repetition. EACH EVENT (like remembering what one ate for dinner) remains preserved. As thoughts ARISE in one's mind, a record is kept instantaneously as nāmagotta. That is hard for us to imagine, but many features of nāma loka (viññāṇa dhātu) are not conducive to our experiences.
- @ 1:20: Memory records are NOT lost. It is only the ability to recall that is lost. However, people with HSAM have a near-perfect ability to recall memories, vividly displayed by Becky in \#6 above. She can remember word-by-word what she had read! But it is true that as one gets older, the "receiver" in the brain gets weaker, and therefore the ability will become less with age.

## Difference Between Autobiographical and Habitual Memories

8. The cases of Clive Wearing and patient H.M. that we discussed in "Patient H.M. - Different Roles of Brain in Memory" provides a good idea about the difference.

- Clive lost ALL of his past autobiographical memory, presumably due to losing both the "transmitter" and "receiver" of nāmagotta. But he had perfect habitual memory as demonstrated by his ability to conduct daily routines and also being able to play the piano.
- Patient H.M. lost only part of his autobiographical memory since he lost only his transmitter (hippocampus.) His habitual memory also remained intact.
- The above videos are about people with exceptional autobiographical memory. It is likely to be related to better performance of the receiver circuitry in the brain.
- It is a good idea to read previous posts in this series and absorb these key points.

## Only Habitual Memories Are Stored In The Brain

9. As we discussed in "Patient H.M. - Different Roles of Brain in Memory," habitual memory involves an entirely different brain region, presumably the cerebellum. These memories get established by repeating a given task over and over until the neural connections become strong (in the cerebellum). Thus, II contend that the scientific model discussed above in \#7 pertains ONLY to habitual memories.

- Synaptic wirings are indeed responsible for habit formation (see, "How Habits are Formed and Broken A Scientific View "),
- However, it is a stretch to assume that "video-like recordings" of all past events get recorded in neural connections!
- Strengthening of neural circuits DOES NOT happen in autobiographical memory preservation. A record of each thought or action gets preserved! Of course, only a few people can recall most of them.

## Further Problems With "Autobiographical Memory Storage in the Brain" Hypothesis

10. If autobiographical memory storage is in the brain, one would lose all such memories at death.

- However, there is mounting evidence that many people can recall their previous lives. See "Evidence for Rebirth." Even if just one of the thousands of such accounts is true, then the theory of "memory storage in the brain" fails.
- There is more evidence from the out-of-body experiences (OBE) and near-death-experiences (NDE.) Scientists and physicians have studied numerous cases in each category. How do those experiences result without a physical brain? See, "Out-of-Body Experience (OBE) and Manomaya Kāya."
- According to Buddha Dhamma, those who cultivate abhiññā powers can recall autobiographical memories (nāmagotta) with high-precision. They can recall events from previous lives as well. The level of accuracy and how far back in previous lives depend on the practitioner. The Buddha could remember as far back as he wished. It is the same as with HSAM, but those with abhiñña powers can see memory records (nāmagotta) of past lives.

Finally, several years ago, I wrote the following post, which has some additional information: "Recent Evidence for Unbroken Memory Records (HSAM)" It has a video on Jill Price, the person to be identified to have HSAM.

### 2.2.7.2 Rūpa and Rūpakkhandha, Nāma and Nāmagotta

October 16, 2020; revised October 17, 2020; September 10, 2022

Rūpa and rūpakkhandha, together with nāma and nāmagotta, help describe two parts of our world: rūpa loka and nāma loka. Rūpa (forms) are in the rūpa loka (material world), and rūpakkhandha includes mental images of ALL rūpa that we have ever experienced (but not directly preserved.) The four nāma aggregates are preserved in the nāma loka (immaterial or mental world) as nāmagotta.

## Critical Differences Between Rūpa Loka and Nāma Loka

1. We are familiar with the rūpa loka or the material world. It has people, animals, trees, Sun, Moon, stars, etc. One distinct feature of the rūpa loka is that EVERYTHING has a finite lifetime, i.e., no permanent existence. Each "thing" comes into existence, exists for a finite time, and is then destroyed. No exceptions.

- We experience the rūpa loka using the five physical sense faculties. We see "things" with our eyes, hear sounds via vibrations in the air, smell things when tiny particles enter our noses, taste things when they touch our tongues, and feel the touch sensation when things touch our skins.
- Each physical contact involves an interaction of a sensory faculty with external "things" or "rūpa" or "forms." The result is a mental image of a rūpa that arises in the mind. The collection of all possible such MENTAL IMAGES is the rūpakkhandha. Thus, rūpa and rūpakkhandha are two different things.

2. Furthermore, nāma loka is our "main world." With that mental image of a rūpa, four types of "mental attributes" or "nāma" arise in mind: vedan $\bar{a}$, saññ $\bar{a}$, sañkh $\bar{a} r a$, and viññạna. Records of only those four " $n \bar{a} m a$ " entities are preserved in nāma loka as nāmagotta. When we recall such nāmagotta, we can re-create the corresponding rupa in our minds.

- We experience the nāma loka with the mind, the sixth sense faculty.
- One unique aspect of nāma loka is that all our thoughts will leave a PERMANENT record (nāmagotta) in the nāma loka.
- Thus, even though rūpa in the rūpa loka decay and die, nāmagotta in nāma loka never die, as stated in the "WebLink: suttacentral: Najīrati Sutta (SN 1.76)" which states, "rūpaï jīrati maccānaï, nāmagottaì na jīrati."
- Until a Buddha explains, humans don't even think much about the nāma loka or the mental world. It is also called the viñ̃n̄ạna dhātu.

## "Seeing" Is In a Thought (Cakkhu Viññạ̣̄a)

3. Let us take a simple example to illustrate this point. Suppose you are looking at an apple on your desk. An apple is a physical object.

- You can see the apple if there is light in the room. Light bounces off the apple and enters your eyes. The brain processes that apple's image and passes it over to cakkhu pasāda rūpa in the gandhabba. The cakkhu pasāda rūpa makes contact with the hadaya vatthu and transfers that image to the hadaya vatthu, the "seat of the mind," as we discussed. See "Gandhabba in a Human Body - an Analogy."
- What we stated above appears in Pāli as, "Cakkhuñca paticca rūpe ca uppajjati cakkhu viññāṇam.". That just means cakkhu viññanna (or seeing) arises when a rūpa makes contact with the cakkhu (short for cakkhu pasāda rūpa.) Here, pațicca $[p a t!i+c a]$ means cakkhu and rūpa "getting together" or "making contact."

4. Thus, "seeing" is a cakkhu viñ̃̄̄̄ṇa (a thought.) We see that apple when a cakkhu viññāna arises in our minds. This is a fundamental fact, but it is good to clarify it. When we see that apple, a thought arises in our mind saying, "it is an apple."

- The apple that you saw is NOT the same as the apple itself. It is just an image of the apple captured by your eyes. "Seeing" happens in your mind.
- Every time you see an object, that "image" goes into the "rūpa aggregate" or "rūpakkhandha." However, that rūpakkhandha is NOT preserved. When you recall memory, you "regenerate that mental image" in your mind. We will discuss that mechanism in upcoming posts.
- There in no record of rūpakkhandha (aggregate of forms) in the rūpa loka! Rūpa and rūpakkhandha are different entities.

## That Holds for the Other Sense Faculties - The Origin of Nāmagotta

5. Similarly, we hear a sound with thought and recall a memory with thought. All six sense faculties work the same way.

- As soon as a thought arises in mind, the critical point is that it is transmitted to the nāma loka (via the mana indriya in the brain), where a record of that will stay forever. This may sound astonishing, but that can be shown to be correct. How else would those people with HSAM be able to recall their memories with such precision? See the post, "Autobiographical Memory - Preserved in Nāma Loka." Some children can recall their past life and those with abhiññā powers can recall many past lives in great detail.
- We will discuss the details of the "memory preservation" process in the future. But it turns out that it is not the rūpakkhandha that is preserved, but the other four aggregates: vedan $\bar{a}$, saññā, sañkhāra, and viññāna. The four mental aggregates are preserved as a memory record or nāmagotta.
- That is how the Buddha recalled how he received "niyata vivarana" from Buddha Dīpañkara, who lived many billions of years ago by recalling those "memory records" are nāmagotta.

## Each Person Has His/Her Nāmagotta Preserved

6. Each event that we experience has a rūpa, vedanā, sañ̃̃̄, , sañkhāra, and viñ $\tilde{n} \bar{a} n a$ associated with it. For example, when we see an apple, the associated $r \bar{u} p a$ is the MENTAL IMAGE of the apple (which becomes part of rūpakkhandha.)

- That event also has a vedanā, i.e., we know that we saw that apple. The associated saññ̄ is the recognition of the object as an apple. Then we may generate sañkhāra about it; for example, we may be to decide to eat it (as a vacī sañkhāra.) Then the viññāna encompasses all those AND any associated plan (to eat it.) All five of those automatically added to the corresponding AGGREGATES (COLLECTIONS), i.e., rūpakkhandha, vedanakkhandha, sañ̃̄̄̄kkhandha, sañkhārakkhandha, and viññānakkhandha.
- And the four mental components get added to his/her nāmagotta.
- Thus it is critical to see that each person's five aggregates (pañcakkhandha) are THEIR OWN. One's pañcakkhandha is one's whole world! One has experienced all of it.
- To emphasize, only the four mental components are preserved in the nāma loka. The rūpa loka has only "material things." Thus, rūpakkhandha is NOT preserved. The rūpa component (the associated mental image) is "re-generated" only when one recalls that past event. We will discuss that recalling process later.

## Memory Recall - Each Person Has His/Her Nāmagotta

7. Pick the name of a friend that you have not seen for many years. How long does it take to recall his/her face? Almost instantly.

- That is the same way those people with HSAM recall their past. I urge everyone to re-read the post, "Autobiographical Memory - Preserved in Nāma Loka."
- That post gives an idea of how precisely one's experiences are preserved in the nāma loka. I must emphasize that one's experiences are the same as one's thoughts that arose in mind at THAT TIME. However, that depends on one's ability to recall that memory. An average human doesn't even remember many past events.
- When someone with HSAM recalls a past event, he/she RE-LIVES that experience. But it is not so vivid for those who do not have HSAM.
- But the point is that over 50 people have such vivid and detailed "re-living" of past experiences means that those detailed records have been kept somewhere.

8. As discussed in that post, recalled memories resemble to digital records preserved in video form. For example, in \#5 of that post, Bob Petrella recalled past events as accurately as video recording playback. In \#6, we saw how Becky "re-lives" her past experiences as a child.

- As discussed in that post, habitual memories (like riding a bike) remain "stored" in the brain. However, it would be unimaginable to assume that detailed autobiographical memories (what happened on a past arbitrarily-picked day several years ago) can be "stored" in the brain.
- The brain is NOT a digital computer. It is essential to think and grasp this key idea.
- Now, let us look into another aspect of nāma loka.

## "Seeing" Something Can Lead to a Lot of Mental Activity

9. "Seeing" is a mental activity, as we saw above in \#3 and \#4. But if the object seen is attractive or repulsive, that can lead to more mental activity.

- For example, suppose you want to buy a car and go to a showroom and see a car you like. Then until you buy that car, your mind will be preoccupied with the car. You will spend some time thinking about various aspects, such as whether you want to go to other showrooms to get a better price, how to pay for it, etc.
- All those are "mental activities" that go on in your mind. Billions of thoughts run through your mind pondering such issues. Those are "vacī sañkhāra (vitakka/vicāra)" that arise in your mind. See, "Correct Meaning of Vacī Sañkhāra."
- You may spend hours thinking about the car. That whole time, you are in the nāma (or mano) loka. You may not even know what is happening around you. If you are deeply engrossed in your thoughts, you may not even hear someone addressing you or a nearby clock striking a chime at the top of the hour.

## We Live In Both Worlds (Rūpa Loka and Nāma Loka)

10. Every time we experience something in the rūpa loka, we INVARIABLY need to "check back" in nāma loka to identify what we experienced. It is critical to understand this point.

- When we see a person, we would not know who it is UNLESS we have some experience with him/her. The mind is VERY FAST. It goes back to records (nāmagotta) and recalls previous events of seeing and interacting with that person. We are not even aware that such a process happens.
- However, some people with brain damage cannot recognize people because of their inability to recall nāmagotta.
- Here is the account of Clive Wearing that we discussed in the post, "Patient H.M. - Different Roles of Brain in Memory."
WebLink: youtube: The Man With The Seven Second Memory (Amnesia Documentary) | Real Stories
- As we see in the video, he cannot remember someone he talked to several minutes ago. Both his 'transmitter" and "receiver"" (interacting with the nāma loka) were damaged. He cannot recall any memory. So, he cannot "match" what he is experiencing now with his past experiences.
- The account of Clive Wearing helps explain the difference between rūpa and rūpakkhandha (and between nāma and nāmagotta.) He can interact with the rūpa loka but cannot access his memories (nāmagotta) in the nāma loka. Therefore, he cannot "make sense" of the rūpa he experiences.
- It is a good idea to review the following post: "The Amazing Mind - Critical Role of Nāmagotta (Memories)."

All relevant posts at "Buddha Dhamma - A Scientific Approach."

### 2.2.7.3 Response to a Sensory Stimulus - Role of Gati/Anusaya

October 21, 2020
Response to a sensory stimulus is instantaneous with emotions arising automatically. There is NO time lag. That automatic initial response depends on one's gati (character/habits.) Gati, in turn, depends on one's anusaya (hidden cravings/defilements.)

## Response to a Sensory Stimulus Comes from the Mind

1. It is not the eyes that see, it is not the ears that hear. It is the mind that sees, hears, tastes, etc. We discussed that in "Mind and Matter - Buddhist Analysis" and "Gandhabba in a Human Body - an Analogy." It is important to refresh memory on what we discussed in previous posts since we are getting into deeper aspects.

- Let us review that process with a "seeing event." When eyes capture the image of an object, the brain analyzes that signal and passes over to cakkhu pasäda in the gandhabba. Then the cakkhu pasäda transfers it to the hadaya vatthu (seat of mind) and that is when we experience that particular "seeing event." That sensory process starts with a rūpa coming to contact with the mind. Phassa is the Pāli word for that contact.
- Upon receiving that "signal" a citta (loosely translated as a thought) arises with the "seeing sensation." That is cakkhu viññāna.
- But cakkhu viññanna is much more than taking a picture with a camera. Simultaneously with seeing that image, a set of mental factors arise in the mind. The mind recognizes (sañ̃̃̄ $\bar{a}$ ) the object and generates some initial "actions." That involves recalling past experiences with the "manasikāra" cetasika and incorporating various other cetasika like joy (pitit) or hate (dosa.)
- In a "hearing event," one hears a sound when the ears capture a sadda rūpa (a sound wave) and that signal makes contact with the mind in a similar process.
- The other three physical senses work the same way. They involve gandha rūpa (fragrant molecules entering the nose), rasa rūpa (food particles touching the tongue), and photthabba rūpa (solid objects touching the skin.)

## The Sixth Sensory Stimulus Is Dhammā (Memories/Kamma Vipāka)

2. In addition to the five physical sense inputs, there is a sixth sense input DIRECTLY to the mind. Suppose you are in a sound-proof and totally dark isolated room by yourself. Is the only sensation you have the touch of your feet with the floor? No. You can be thinking about anything that you wish. You can recall memories AND THEN think about them. Recalling memories is part of dhamm $\bar{a}$ making contact with the mind ("manañca paṭicca dhamme ca uppajjati mano viññānam..") [Here, pațicca $[p a t ̣ i+c a]$ means mana and dhamme "getting together" or "making contact."]

- Dhamma rūpa (memories/kamma vipāka) make contact with the hadaya vatthu (seat of the mind) without the help of a pasāda rūpa.
- We discussed that process in the last several posts in "Buddha Dhamma - A Scientific Approach." In particular, we discussed that memory preservation and recall involve a transmitter and a receiver in the brain. See, "Autobiographical Memory - Preserved in Nāma Loka," and "Rūpa and Rūpakkhandha, Nāma and Nāmagotta."
- Now, let us take an example to understand some more details of the response to a sensory stimulus. Let us consider a visual input as an example.

## Recognition (Sañ $\tilde{\tilde{a}}$ ) of an object ( $\overline{\text { Arammana) happens fast }}$

3. Suppose three people A, B, C are sitting in a small coffee shop. They are all facing the door, and person $X$ walks in. Suppose that person $X$ is a close friend of $A$, worst enemy of $B$, and that $C$ does not know $X$ at all. We will also assume that all are males.

- So, let us see what happens within a split second. A recognizes X as his friend, and a smile comes to his face. B recognizes X as his enemy, and his face gets darkened.
- On the other hand, C's mind does not register anything about X , and X is just another person to him. He immediately goes back to whatever he was doing.

4. That is an example of a "cakkhu viññāna," a "seeing event." It is over within a split second, just like taking a photo with a camera takes only a split second, where the image in captured on the screen instantaneously.

- However, something very complicated happens in a human mind when a "seeing event" occurs. It is much more complicated than just recording "a picture" in a camera.
- It is critically important to go slow and analyze what happens so that we can see how complicated this process is (for a human mind) to capture that "seeing event."

## Within That Split Second, a Complex Process Takes Place

5. Within that split second, A recognizes X as his good friend, and pleasant emotions arise in his mind, and he becomes happy. B recognizes X as his worse enemy, and bad emotions arise in his mind, and he becomes angry. On the other hand, C identifies X as a man or a woman, and no feelings register in his mind.

- We don't think twice about these observations usually. But if one carefully analyzes what happens, one can easily see that this is an amazingly complex process.
- How does the SAME "seeing event" (seeing X) lead to all these very different changes in the minds of three different people? (and the emotions even show up on their faces!)
- No one but a Buddha can see this fast time evolution of a citta.
- The Buddha has analyzed the response to a sensory stimulus in minute detail. We will discuss only the critical basic features here.

## Four Features of a Seeing Event (Cakkhu Viññāṇa)

## 6. The "seeing event" has four essential steps:

- First, the rūpa in question (rūpa rūpa, sadda rūpa, gandha rūpa, rasa rūpa, photthabba rūpa, or a dhamma rupa) comes into contact with the MIND. The initial contact of the external $r \bar{u} p a$ with the mind involves the phassa cetasik $\bar{a}$.
- The "event" registers in the mind and one gets into an emotional state (pleasant, unpleasant, or neutral, which is called sukha, dukha, and upekkha in Pāli.) That is vedana $\overline{\text {. }}$
- One recognizes the object, and that is called sañ̃ $\bar{a}$.
- Fourthly, based on vedanā and saññā, one MAY also generate other mental factors (cetasik $\bar{a}$ ) such as anger, joy. It is the cetana $\bar{a}$ cetasik $\bar{a}$ that "incorporates" such mental attributes to the citta.
- A few more cetasikā play key roles in the above processes. Let us briefly address those.

## Other Essential Cetasikā Contributing to the Above Process

7. First, it is the jivitindriya cetasik $\bar{a}$ that keeps the seat of the mind (hadaya vatthu) alive. Then there is ekaggat $\bar{a}$ cetasik $\bar{a}$ that keeps the citta focused on ONE sensory input at a time. They are both essential cetasikā.

- The manasikāra cetasikā plays an equally critical role. It RECALLS previous related experiences that "match" or are relevant to the current sensory experience. For example, A in the above example recognizes X as a friend only because A's mind "scanned through past experiences" and recognized X as a friend. Thus, without the manasikāra cetasik $\bar{a}$, the sañ̃̄̄ $\bar{a}$ cetasik $\bar{a}$ could not have identified X .
- Based on that recognition, more cetasika like joy (pīti) can arise, as did in A. On the other hand, patigha anusaya in B led to thoughts of anger in B . Of course, C would have different kinds of anusaya too, but none was TRIGGERED by seeing X since X was a total stranger.
- Note: If A or B was an Arahant, that Arahant would also identify X, but no feeling of joy or anger would arise since an Arahant would not have any gati/anusaya left.

## Manasikāra and Cetanā - Two Critical Cetasikā That Automatically Trigger Gati/Anusaya

8. The "cetan $\bar{a}$ " cetasik $\bar{a}$ carries out the complex process of incorporating other cetasik $\bar{a}$ and putting together that citta in response to a sensory stimulus.

- The generic name sañkhāra represents any combination of such "extra cetasikā."
- The net result of the sensing process is viñãāna. In this example, it is a cakkhu viññāna.
- The four steps in \#6 happen in that sequence, but no one but a Buddha can "see" such a fast process.
- All this happens within a billionth of a second DURING the arising of that cakkhu viññạ̄na.

## Importance of Recalling Past Experiences

9. To recognize X , one must first recall any possible past interactions with X . It turned out that A and B did have past experiences (interactions) with X , but C did not. The manasikāra cetasikā does that in a billionth of a second!

- We discussed how certain areas in the brain (the "receiver") get that information from the nāma loka. See, "Patient H.M. - Different Roles of Brain in Memory," "Memory Recall for Gandhabba in a Human Body," "Autobiographical Memory - Preserved in Nāma Loka," and "Rūpa and Rūpakkhandha, Nāma and Nāmagotta."
- It is necessary to understand the material in those posts to understand the critical points that I am trying to make in this post. One's gati/anusaya resides with one's mental body or gandhabba. That gandhabba is trapped inside the physical body. Unless it can recall past events with the help of the brain, the gandhabba is unable to recognize people. If one cannot identify someone as a friend or foe, feelings of love or anger cannot arise. That is the simplest way to put it.
- There are two special cases where the above point becomes clear. One is that a newborn baby appears to have no "defilements." The other is a case where critical parts of the brain are damaged. Let us briefly discuss them.

## Newborn Baby Has no Hidden Defilements (Anusaya)?

10. It seems that a newborn (or even a year-old) baby has no defilements. That is only because of the following two facts: (1) the baby's brain has not developed yet, and, (2) the baby has not formed that many relationships yet (other than with the parents.) It has no "sense of self" or "sakkāya."

- In the beginning of the "WebLink: suttacentral: Mahāmālukya Sutta (MN 64)," the Buddha points out this fact that sakkāya ditthi cannot arise in a new-born baby. That is exactly because of what we discussed above. There is no way to trigger the hidden anusaya in that baby.
- To quote the above translation: "For a young tender infant lying prone does not even have the notion 'identity,' so how could identity view (sakkāya diṭthi) arise in him? "

## Brain-Damaged People Still Have Anusaya/Gati - They Just Cannot be "Triggered"

11. A person with extensive brain damage is like a newborn baby. The brain is unable to recall memories in response to a sensory stimulus.

- The unfortunate saga of Clive Wearing illustrates the importance of the ability to recall memories. If you have forgotten, you may want to watch the video on Clive Wearing, who lost his memories due to brain damage. The video is at \# 10 of "Rūpa and Rūpakkhandha, Nāma and Nāmagotta."
- As we see there, Clive just "lives in the present moment." He cannot think about the past or future (thinking about the future REQUIRES past experiences.) Every person is a total stranger to him (except his wife, but even then he forgets about her too if she is not there with him.)
- Suppose Clive had an arch enemy, Z. Suppose that the enmity was so bad that before the brain damage Clive would get mad even thinking about Z .
- But Z would be a total stranger to Clive after the brain damage. What happens if Clive now goes to a restaurant and Z is sitting at an adjacent table? Since Clive cannot recognize Z (as his enemy,) he would not become angry. Even if $Z$ comes to Clive's table and say something nasty, Clive would not get angry. Instead, Clive will be puzzled as to why Z is shouting at him.
- Does that mean Clive's gati and anusaya have disappeared? Of course not. The gandhabba inside would still have the same gati and anusaya that Clive had before the brain damage. It is just that the gandhabba does not recognize Z as an enemy because it is UNABLE to "match" Z as his arch-enemy.
- Thus, understanding the concept of the gandhabba (and how it interacts with the external with the help of the brain) helps clarify many complex issues that otherwise cannot be explained.
- The following \#12 through \#14 are technical points.

## Seven "Universal" Cetasikā

12. ANY citta will ALWAYS have seven cetasikā. A citta would not arise without them.

- Thus, we see that the seven "universal" cetasikā are phassa, vedanā, sañ̃̄ $\bar{a}$, cetanā, manasikāra, $j$ jivitindriya, and ekaggat $\bar{a}$. Those seven are "universal cetasikā" that arise in ANY citta.
- Other types of cetasikā MAY arise based on one's gati/anusaya AND the ārammaṇa.

## Viññāna Is the Overall Sensory Experience in Response to a Sensory Stimulus

13. Viñ $\tilde{n} \bar{a} n a$ is the overall sense experience encompassing all those seven cetasik $\bar{a}$ PLUS all other cetasik $\bar{a}$ (included in sañkhāra.)

- But viññāna may also include "future expectations" IF one's mind attaches to that ārammaṇa. See, "Viñ̃̃āna - What It Really Means."
- We can safely say that viññāna is the overall sensory experience, INCLUDING one's expectations based on that sensory experience. That is why one's facial expressions may change too, according to such expectations.

## Nothing Faster in the World Than the Arising of a Citta

14. Buddha said it is hard to find any phenomena in this world that change faster than the mind: "WebLink: suttacentral: Añguttara Nikāya (1.48)."

- The short sutta says: "Nāhaì, bhikkhave, aññaì ekadhammampi samanupassāmi yaí evaì lahuparivattaì yathayidaì cittaì. Yāvañcidaì, bhikkhave, upamāpi na sukarā yāva lahuparivattaim cittan"ti."
- Translated: "I consider, bhikkhus, that there is no phenomenon that comes and goes so quickly as citta. It is not easy to find an analogy (a simile) to show how quickly citta can change."

15. It is essential to understand the concepts of gati and anusaya. The best way to find relevant information is to use the "Search" box on the top right. I put in "gati anusaya" in the search box and it came up with the following related posts: "WebLink: Pure Dhamma: Search Results for gati anusaya."

- All relevant posts in the current section at "Buddha Dhamma - A Scientific Approach."

### 2.2.7.4 Ārammaṇa Plays a Critical Role in a Sensory Event

## October 28, 2020; revised October 18, 2021

Arammaña means the focus of the mind at a given moment. It plays an equally important role as gati/anusaya in response to a sensory stimulus. For example, when you look at someone, that person is the $\bar{a} r a m m a n ̣ a$. When you hear a sound, that sound is the ārammana.

## The Role of Gati (Character/Habits) and Anusaya (Latent Defilements)

1. To get started, we need to review what we discussed in the previous post, "Response to a Sensory Stimulus - Role of Gati/Anusaya." In that post, we discussed the sequence of events taking place within a split second of sensory input. There we used the following example.

Suppose three people A, B, C, are sitting in a small coffee shop. They are all facing the door, and a middleaged male $\mathbf{X}$ walks in. Suppose that person $X$ is a close friend of $A$, the worst enemy of $B$, and that $C$ does not know X . We will also assume that all are males.

- So, let us see what happens within a split second. A recognizes X as his friend, and a smile comes to his face. B recognizes X as his enemy, and his face darkens.
- On the other hand, C's mind does not register anything about X , and X is just another person to him. He immediately goes back to whatever he was doing.
- X is the $\bar{a}$ rammana for $\mathrm{A}, \mathrm{B}$, and C in the above case.

2. We made the following critical observations.

- With the help of manasikāra cetasika, the minds of $\mathrm{A}, \mathrm{B}$, and C recalled past events relevant to X within a split-second. Thus, they instantly identified X as friend, enemy, and neutral, respectively.
- Those "good" memories in A trigger rāga anusaya, and A becomes happy. However, B recalls his "bad memories" with X , which triggers patigha anusaya. Of course, C may have various types of anusaya, but X did not trigger any of those since C has had no prior interactions with X (and since X looked like any average person.)

## Even Without Prior Specific Interactions, an Ārammaṇa Can Trigger Defiled Thoughts

3. Now, let us consider a different scenario with another person, Y, entering the coffee shop. Let us assume that $\mathbf{Y}$ is $\mathbf{B}$ 's girlfriend, who is quite attractive. Suppose $A$ is not in good terms with Y and that $\mathbf{C}$ is a young male who has never seen Y . Now, the ārammaña for $\mathrm{A}, \mathrm{B}$, and C would be very different ( Y is an attractive female while X was an average middle-aged male.)

- Now, we see that the moods of A and B will reverse. A will be instantaneously unhappy to see Y, and B will be happy to Y .
- Regarding C, the situation could be very different too. If Y appears attractive to him, C may instantaneously form a lustful state of mind.
- Even though C had never seen Y before, C got interested and formed lustful feelings about Y . It was NOT a memory of Y that triggered the interest in C. It was his own gati/anusaya to be attracted to a beautiful woman. Of course, he has had interactions with many OTHER women, and the mind compared those memories in a split-second!

## Dependence on the "Thought Object" (Ārammana)

4. We see why a given person does not have a "good" or "bad" mindset permanently. That is related to the fact that there are no fixed gati/anusaya either. The above two examples, $\mathrm{A}, \mathrm{B}$, and C , generated different overall mindsets upon seeing X and Y .

- What kind of mindset arises depends on the gati/anusaya of the person AND the sense object (ārammana.)
- The two different ārammaṇa in \#1 and \#3 triggered two very different gati/anusaya in all three people $\mathrm{A}, \mathrm{B}$, and C .

## Two Analogies for Anusaya and Ārammaṇa

5. One can get a good idea of the concepts of anusaya and arammaña with the following analogy. Anusaya is like gunpowder. An ārammana is like a flame. The gunpowder can stay dormant for a long time, but it will ignite if one heats it.

- For an anāriya yogi who had avoided sense attractions for long, kāma rāga anusaya can be like wet gunpowder. A tiny flame may not ignite it. But if a flame of sufficient heat can ignite such well-hidden anusaya too. There are accounts in the Tipitaka where the sight of an attractive woman (strong $\bar{a}$ rammanal brought lustful thoughts to anāriya yogis and removed their iddhi powers. On the other hand, kāma rāga anusaya in an Arahant cannot be "triggered" by ANY ārammaṇa. Here, gunpowder is not present.
- The tendency to get angry is due to patigha anusaya. Those with a high level of patigha anusaya can get angry with the slightest provocation or with even a weak ārammana.

6. In another analogy, anusaya is like some mud settled down at the bottom of a glass. The water in that glass looks clean.

- However, that mud will come up if one uses a straw to disturb the water. Now the water would not look clean anymore. Here stirring with a straw is like perturbing a "settled mind" with a strong ārammaṇa.
- In an Arahant, there is no "mud" or any anusaya. Thus, "the water in the glass will be clear" no matter how hard one tries to stir it.
- That "mud" was cleansed not in a physical process but just with wisdom, i.e., just by understanding the fundamental nature of this world (Four Noble Truths/Tilakkhana/Pațicca Samuppāda.) We will get to that in future posts in this series in a systematic way.
- A Buddha comes to the world to teach "how to cleanse the mind by controlling it" ("Sacitta pariyo dapaṇä̀.") See, "Sabba Pāpassa Akaranam...."
- More details on anusaya at "Āsava, Anusaya, and Gati (Gathi)."

## An Average Human Will Have Both Good and Bad Anusaya (and Gati)

7. We usually call someone a "good person" based on their overall character, i.e., if that person displays more "good character" than "bad character" over time. But only an Arahant is "definitely a moral person," acting $100 \%$ morally all the time.

- Even though this is a complex subject, the basic features are those mentioned above. One needs to analyze different situations to grasp these ideas. That is actual vipassana meditation! The word $v i p a s s a n \bar{a}$ means "special and clear vision" of the true nature of the world.
- One needs to understand how the mind works to make progress on the Path. Only a Buddha can DISCOVER and EXPLAIN the critical role of the MIND.
- Once we understand the fundamentals, it would be easy to analyze ANY given situation. That is why it is worthwhile to spend time and grasp what we have discussed so far.

## Key Points on Gati and Anusaya

8. As we have discussed, anusaya are "latent" or "hidden" tendencies. Even though generally referred to as "latent defilements," they could be "hidden morals," too.

- When "bad anusaya" are triggered, one displays bad gati (character/habits). On the other hand, "hidden morals" can be activated, bringing good gati to the forefront.
- For example, we label someone a hardened criminal because he is mainly engaged in evil deeds with "bad gati" in full display. But good morals in him could be awakened by seeing a child/older person in distress, and he may help them as needed.
- There is no "absolutely good" or "absolutely bad" person other than an Arahant. Any other person would have both good and bad anusaya hidden at various degrees. An Anāgāmi, for example, would have very little "bad anusaya" (and thus "bad gati") left.

## The Role of the Arammaṇa Can Come in Different Ways

9. Our discussion in \#3 shows that the ārammaña in question could be something that one had never SPECIFICALLY encountered before. Young men are generally attracted to young women, and vice versa.

- If an ārammaṇa matches one's gati/anusaya, one will attach to it.
- Suppose someone offers Z a fruit that Z had never seen or tasted. Just by seeing the fruit, Z may not be interested in it unless it looks similar to a fruit he had eaten before.
- However, Z eats it and realizes that he likes that TASTE. Then Z "falls in love" with that fruit. He would want to eat it in the future whenever he gets a chance.
- That taste in the fruit is a "kāma guṇa." Guṇa means a "quality" or "a characteristic." Most people tend to associate the word "kāma" with "sensuality." However, "kāma" could be anything that is "enticing" or "makes one happy." We will discuss that in detail in the future.

## A Summary of Hadaya Vatthu, Physical Body, Brain, Rūpa Loka, and Nāma Loka

10. Let me summarize our discussion so far in this series of posts, "Buddha Dhamma - A Scientific Approach." Life encompasses interplay among the following entities.

- The gandhabba (with the hadaya vatthu and five pasāda rūpa) is the thinking entity.
- However, it is trapped inside the physical body and cannot access the external world consisting of two parts. (1) The rūpa loka with sights, sounds, smells, tastes, and touches. (2) The nāma loka with memories and kamma bïja.
- The gandhabba accesses those sights, sounds, smells, tastes, and touches in rūpa loka with the help of eyes, ears, nose, tongue, and the body. Here, the brain plays a critical role.
- It accesses memories and kamma bīja in the nāma loka with the help of a transmitter and receiver in the brain. The brain also processes all those signals from outside and passes them to the gandhabba.
- The gandhabba decides what to do in response to such sensory inputs. The brain implements those commands from the gandhabba by moving body parts (for speech and bodily actions.)

## Rūpa Loka and Nāma Loka - Two Parts of Our World

11. We have a "mental world (nāma loka)" as well as a "material world (rūpa loka)." (1) The "material world" is the same for all of us. (2) But each person creates their own "mental world" based on that "material world."

- A mind experiences both those worlds. It experiences the material world with the help of the five physical senses. The mind experiences the mental world on its own.
- "Things" in the mental world (memories or nāmagotta) come to mind directly (without a corresponding pasāda rūpa.) However, the "transmitter" and the "receiver" in the brain play critical roles in that process. They come to the mind as dhamm $\bar{a}$, which includes our memories and also expectations for the future. We will discuss that latter part (expectations) in the future.
- On the other hand, the five physical senses (eyes, ears, nose, tongue, body) help the mind experience those things in the material world.

## Nāma Loka is Very Different from the Rūpa Loka

12. Nāma loka has no spatial boundaries. That is why we cannot ask, "where are the memories store d"? We ask that wrong question based on our ingrained perceptions of the rūpa loka.

- In rūpa loka, everything has spatial locations. A tree in the front yard is so many feet away from the house. The great wall is in China, and the Eifel Tower is in Paris, France. To see the Eifel Tower one needs to go to Paris.
- In contrast, our memories do not have spatial locations. We can access memories from ANYWHERE. Whether one is in China or France, one can recall memories. When Neil Armstrong landed on the Moon, he was able to recall memories.
- However, both the receiver and transmitter in the brain must be in good condition for the memory to work correctly. We discussed the unfortunate cases of Clive Wearing and a few others in recent posts. They were unable to recall parts or all of their memories. See, "Brain and the Gandhabba."
- Our memories and our kamma bīja (that can bring vipāka in the future) are also in nāma loka. A given kamma bīja (no matter whether created many lives ago) can bring back vipāka ANYWHERE. It does not matter whether one is in China or France. When conditions become right, a kamma bïja can trigger vipāka.
- We will discuss that in more detail in the next post.

All relevant posts in the current section at "Buddha Dhamma - A Scientific Approach."

### 2.2.7.5 Nāma Loka and Rūpa Loka - Two Parts of Our World

November 4, 2020; revised November 6, 2020; August 1, 2022

## Nāma Loka Is One of Two Parts of Our World

1. We have a "mental world (nāma loka)" as well as a "material world (rūpa loka)." The material world is the same for all of us. But each person creates one's mental world based on that material world. We briefly discussed that in the previous post, "Ārammana Plays a Critical Role in a Sensory Event."

- A mind experiences the material world with the help of the five physical senses. Then it plans to re-live any "pleasurable experiences" again and again. That is related to greed or lobha (a reduced version is kāma rāga or the craving for sensory pleasures.)
- If it were a "bad experience," the mind would avoid any such future experiences by taking various actions. Such actions may involve dosa (hatred), or its reduced version is patigha ("friction" or "annoyance.")
- Both of the above actions will lead to future suffering. That suffering can be greatly-enhanced if someone's actions include strong dasa akusala. Such a "totally covered" mind has moha and can lead to immediate and harsh suffering.
- But even those who live moral lives cannot escape future suffering because they are not aware of the "real nature" of the world. They have a lower version of moha (i.e., avijjā), the ignorance referred to in the Four Noble Truths.

## Previously Unknown Teachings

2. That last bullet point about future suffering is unknown to the world in the absence of a Buddha. Only a Buddha can discover that our world is much more expansive (with 31 realms), where life in some realms can be full of suffering.

- Other religions teach that one would be guaranteed "fiture happiness" in heavenly worlds if one lives a moral life.
- With his knowledge about a much wider world of 31 realms, the Buddha showed that there is no realm in this world where one can avoid suffering. Furthermore, suffering in the lowest four realms (apāy $\bar{a}$ ) can be quite harsh.
- Therefore, the key question is, how is it possible that one who lives a moral life is still subjected to suffering in future births?
- The explanation is in the "previously unheard Dhamma" of a Buddha. In the current series of posts, we first need to understand our "nāma loka." Of course, there are other ways to get there, mainly by just realizing the dangers of pursuing sense pleasures.

## Everything in the World Belongs to One of Six Dhätu

3. The Buddha categorized everything in the world into six types of dhātu: pathavi, āpo, tejo, vāyo, $\bar{a} k \bar{a} s a$, and viñ $\tilde{n}$ ăna. The conventional translation of the word "dhātu" is "element," but in this context, "essence" may be a better translation.

- We are quite familiar with our "physical world" made of pathavi, appo, tejo, and vāyo spread out in space ( $\bar{a} k \bar{a} s a ~ d h a \bar{t} t u$.$) Therefore, those five d h \bar{a} t u$ are associated with the $r \bar{u} p a ~ l o k a$.
- The sixth, viñ̃̃ạ̄a dhātu, is associated with the nāma loka.
- When one dissociates with the world of 31 realms, one merges with Nibbāna dhātu. See, "WebLink: sultacentral: Nibbānadhātu Sutta (Iti 44)."

## Viññāna Dhātu Is Nāma Loka

4. Viñ̃̄̄̄ṇa dhātu INCLUDES all mental entities: vedanā, saññā, sañkhāra, and viññāna.

- Here, viññaṇ̄a is a bit complex. It is of two types. (1) Vipāka viñnāṇa arises when we experience something with any of the six senses. Thus, it can be one of the six types of viññāna: cakkhu, sota, ghāna, jivhā, kāya, and mano. They arise as kamma vipāka or RESULTS of kamma. (2) Kamma viñ̃̃āna arises ONLY in mind as mano viññāna.
- Unlike vipāka viñ̃āạa, kamma viñ̃ñana has ENERGY. That energy arises in javana citta when we DO kamma.
- As we see, the experiences through any of the six senses give to "mental entities" that are in viñ̃̃āṇa dhātu.
- In other words, the mind experiences both parts of our world.

## Viññāna Dhātu Is Very Different From Other Five Dhätu

5. According to modern science, our mental world is a byproduct of the material body (specifically the brain.) It only deals with the rūpa loka and disregards the nāma loka (viññāna dhātu) altogether.

- Modern science is not equipped to tackle the mind yet. Unlike material objects that are inert and thus follow pre-set rules (like Newton's laws of motion,) the mind of EACH PERSON is unique. Thus, while we can accurately predict the path of a rocket, we cannot predict any given person's actions.
- The Buddha explained that the mind is the precursor to the material world. That is a complex subject, but I hope you are at least beginning to get the idea that our future rebirths (and thus any physical bodies in future births) arise due to our thoughts (specifically javana citta, which arise when we engage in strong kamma.)

## No Spatial Boundaries In Nāma Loka (Viññạṇa Dhātu)

6. Another unique feature of the mind (or nāma loka or viññāna dhātu) is that there are no "spatial locations" or "spatial boundaries" in viññanna dhātu. We cannot ask WHERE it is located. It is everywhere and anywhere. See the previous post, "Ārammana Plays a Critical Role in a Sensory Event."

- The absence of spatial boundaries in nāma loka becomes apparent when we realize that we only access the nāma loka while dreaming.
- The arupāvacara Brahmas do not have access to the rūpa loka. As we have discussed, they do not have any of the five physical senses or the corresponding five pasāda rūpa. They have the hadaya vatthu, which can only recall memories. Those memories come directly to the hadaya vatthu since they don't have brains.

## The Best Way to Visualize Viññāṇa Dhātu - Dreams

7. When we dream, our minds are ONLY in the nāma loka. As we have discussed before, all five physical senses "go to sleep" while we sleep, which is when we dream.

- We see, hear, smell, taste, and touch WITH OUR MINDS when we dream.
- As we know, there are no "spatial locations" in dreams. We see a dream. We cannot say where it was. If we see a jungle, our mind is there. We feel as if we are in a jungle.

## Nāma Loka and Rūpa Loka Co-Exist

8. When we dream, our five physical senses become inactive. In a primitive way, our minds detach from $\bar{a} k \bar{a} s a$ dhātu. A mind is then in just viññāṇa dhātu. That is why we don't perceive "locations" in dreams. We see people, buildings, trees, etc., but a location is not defined.

- Another way to state that is to say viññāna dhātu normally co-exists with the $\bar{a} k \bar{a} s a d h a ̄ t u$. However, when we dream, the mind detaches from $\bar{a} k \bar{a} s a d h \bar{a} t u$ (since the five physical senses are not active) and is engaged only with the viññanna dhātu (nāma loka.)

## Mind Separates From Rūpa Loka After the Fourth Jhāna

9. A mind detaches from the rūpa loka when transcending the fourth jhāna, the highest rūp $\overline{\mathrm{a}} \mathrm{vacara}$ $j h a ̄ n a$. This is a technical point that can be skipped by those not familiar with Abhidhammajjhāna.

- One is aware ONLY of the "infinite space" (no other rūpa) when one gets to the fifth jhāna or the "ākāsānañcāyatana" (meaning "infinite space.") When one transcends the $\bar{a} k a \bar{s} a \overline{n a n ̃ c a ̄ y a t a n a ~ a n d ~ g e t s ~}$ to the viññānañcāyatana (or infinite viñ̃̄āna.) This is when the mind (viññāna) "decouples" or "separates" from "space." Now, the mind has no awareness of space or the rūpa loka.
- That is why the highest four jhānā are "arūpāvacara jhāna." Arūpa means "without rūpa." The only rūpa there would be a trace of matter associated with hadaya vatthu of arupāvacara Brahmā. Even in $\bar{a} k \bar{a} s a \bar{n} a n ̃ c \bar{a} y a t a n a$, there is only space and no other "rūpa."

## Kamma Bhava Is Also In Nāma Loka

10. The nāma loka encompasses (includes) kamma bhava. The appropriate bhava manifests under the right conditions. If we drink too much alcohol, we get drunk and get into a mindset of a drunkard. We may stay in that "drunkard existence" for a few hours.

- At the moment of death (if it is at the end of human bhava, a mind will grasp a new bhava (existence) and instantaneously be born in that existence at the CORRESPONDING spatial location. For example, if one can grasp a Deva existence, one will be instantaneously born a thousand miles above the Earth in that Deva realm.
- That is also why a human can be born INSTANTANEOUSLY as a Deva in a Deva realm at the end of the human bhava. Grasping of a patisandhi viññāna of a Deva happens instantaneously at the corresponding spatial location (in a Deva realm). The viñ̃̃āna dhātu does not have spatial restrictions.

## It is EVERYWHERE!

- That happens because the viññāṇa dhātu is normally "merged with" ākāsa dhātu. They overlap. Thus, based on the type of paṭisandhi viñ̃ñạna, one will automatically be born in the appropriate spatial location in ākāsa dhātu.
- That is a very brief description. But it is enough for now to get the basic idea.

## A Gandhabba Is Shielded From Both Loka While Inside a Physical Body

11. A gandhabba is shielded from both the rūpa loka and the nāma loka while inside a human body.

- As discussed in previous posts, a gandhabba accesses the outside material world (rūpa loka) using the five physical senses of eyes, ears, nose, tongue, and body. It accesses the näma loka using the "transmitter" and "receiver" in the brain. See "Brain and the Gandhabba." It is good to review posts in that subsection.
- For a gandhabba inside a physical body, sensory signals from outside must come through the five "physical sensors" mounted on the body (eyes, ears, nose, tongue, body.) The brain plays a vital role in transferring those signals to the gandhabba inside.
- In the same way, memories experienced by the gandhabba "go out" to the viññāna dhātu via a "transmitter" in the brain. Old memories in viññaṇa dhātu "come back" via a "receiver" in the brain. Recent findings in medical science allowed us to identify the "transmitter," as we discussed.

## Consequences of a Gandhabba Trapped and Isolated Inside a Physical Body

12. Even though viññāna dhātu is everywhere, it is NOT present inside the physical human body. As we discussed before, the "entrapment" of a gandhabba inside a physical body is a kammic effect.

- This is also why an Arahant does not attain Parinibbāna until the death of the physical body. The "subtle body" of a gandhabba cannot "bear the Arahanthood" and dies instantly when it comes out of the dead physical body of an Arahant.
- That is also why there are no Arahants in Brahma loka. As soon as a Brahma attains the Arahanthood, the death of the subtle Brahma body follows.

## Buddhist Model of Memory Preservation and Retrieval

13. All memories (from an untraceable beginning) are in nāma loka or viññāna dhātu, which may also be called "viññāna plane" or "nāma loka." Of course, our kammic energies (kamma bija) are also in nāma loka.

- Those "physical entities" we see, hear, etc., reside in ākāsa dhātu.
- We are familiar with our "physical world" spread out in space ( $\bar{a} k \bar{a} s a ~ d h a \bar{a} t u$ ), where each "thing" has its specific location. We tend to automatically carry over that concept to viññāna dhātu. However, the viññāna dhātu is very different from the $\bar{a} k \bar{a} s a$ dhātu. There are no spatial restrictions in viñ $\tilde{n} \bar{a} n a$ dhātu.
- Thus, we cannot talk about a "specific location" for memories. They are just in nāma loka. That is why memories can be recalled effortlessly, whether one is on Earth or the Moon.

## Summary of Discussion So Far

14. We have been discussing the role of the brain in our mental activities; see "Brain and the Gandhabba." In this Buddhist model of human life, the human body is only a "shell" controlled by the "mental body" or gandhabba. See "Gandhabba in a Human Body - an Analogy."

- Human existence is not limited to a single life of about 100 years with a human body. Like in many other realms, human existence can be very long, at least several thousand years. See "Bhava and Jāti - States of Existence and Births Therein." Therefore, each of us could have lived previous human lives within the current human existence (bhava.) If so, some of us may be able to recall one or two past lives. But it is very rare to recall a previous life in another existence, for example, a Deva bhava or an animal bhava.
- A gandhabba can smell, taste, or touch only if it is inside a physical body. The physical body makes those contacts. The brain is the intermediary in all sensory interactions when the gandhabba is inside a physical body.
- The brain also helps recall memories in the nāma loka, as we discussed above-more details about that memory recall process in future posts.
- In previous posts, we discussed the role of the brain in some special situations, including total or partial "vegetative states."

### 2.2.8 <br> Tipitaka - A Systematic Approach

November 11, 2020

- Tipitaka - The Uniqueness of Buddha Dhamma
- Pāli Canon Is Self-Contained but Requires Detailed Explanation
- Vinaya Pitaka - More Than Disciplinary Rules
- Abhidhamma Pitaka - Deeper Analyses of Concepts

### 2.2.8. 1 Tipiṭaka - The Uniqueness of Buddha Dhamma

November 11, 2020; revised \#1, \#3, \#10 on November 12, 2020

## The Need for a Systematic Approach

1. Tipitaka (Tripiṭaka in Sanskrit) is the Pāli Canon, which contains the teachings of the Buddha. It is selfconsistent. It is also a vast collection of texts (in 57 volumes) divided into three sections (Pitaka) of Sutta, Vinaya, and Abhidhamma.

- How would one even begin to understand that vast material? That is especially a daunting task for someone who has had no prior exposure to Buddha Dhamma.
- Two main issues need to be looked at. (1) Understand the primary and ultimate goal of a Buddhist, (2) Cultivate familiarity with key Pāli words that CANNOT and SHOULD NOT be translated into English.
- Just trying to understand various suttas (with the difficulty of comprehension in a wide range) could be a waste of time. First, one needs to focus on a few suttas that provide the Buddha's key message. But that itself requires understanding the meanings of some key Pāli words.
- In the new section, "Buddha Dhamma - A Scientific Approach." I am trying to address both those issues. This new subsection will hopefully clarify some related issues.

## The Uniqueness of Buddha Dhamma

2. A Buddha is a unique "being." Even though born a human, he transcended his human birth and attained the Buddhahood. The Buddhahood is a title attained by those who can purify their minds to the utmost. For example, Einstein had a much higher level of "intelligence" than an average human, but a Buddha's mind is infinitely superior. A Buddha appears in the world very rarely, once in many billions of years.

- A Buddha can "see" the true and complete characteristics of our world. Thus, Buddha Gotama revealed a world of 31 realms that is much more vast and complex than the two realms (human and animal) that are discernible to an average human.
- He also revealed to us a rebirth process that has no discernible beginning. A given "lifestream" evolves from one existence to another among the 31 possible realms.
- Rebirth is not a random process. It follows the principle of causation (causes lead to results; with the removal of causes, no results can manifest.) Translated to Buddha Dhamma, birth results from previous actions DONE WITH greed, anger/hate, and ignorance. With the removal of those "defilements" from a mind, the rebirth cycle will stop since necessary causes have been removed.
- But why would one want willingly to make an effort to stop the rebirth process? Before getting to that, we first need to look at the two main prevailing world views.

## False Premise of Other Religions

3. World's major religions are based on two fundamental premises: (1) If you live a moral life, you get to go to heaven forever, and (2) If you live an immoral life, expect to suffer forever in hell. Such a claim appear sound and logical, and most people are attracted to that simple premise. See, "Wrong View of Creationism (and Eternal Future Life) - Part 1."

- However, the Buddha taught that just living a moral life WILL NOT guarantee the removal of future suffering. Permanent removal of future suffering REQUIRES stopping the rebirth process.
- By living a moral life, one MAY get a "good birth" in the next life, but that WILL NOT stop future subsequent births with harsh suffering.
- By the way, if someone says one "should not criticize other religions," that statement is made out of ignorance. One needs to be able to criticize false premises, no matter where they are found. If one finds a similar issue in Buddha Dhamma, one should bring it up for discussion. I have discussed some such issues at, "Mystical Phenomena in Buddhism?" and "Myths or Realities?"
- Real compassion is to help others understand the true nature of our complex world. That will enable one to get rid of an unimaginable amount of future suffering. Of course, it is up to each individual to decide whether to accept any given explanation about the world's nature.
- The second major false premise is the view that life ends with the physical body's death.

## Rebirth is Not True? - Another False Premise

4. In the materialistic view, one lives only the present life, ending with the physical body's death. In this view, there are absolutely no consequences to one's actions (other than for breaking the mundane laws.) For example, if you kill another human, you may go to jail (if caught,) but there would be no other consequences.

- The book "Free Will" by the atheist intellectual Sam Harris provides the rationale of a "materialist." At the beginning of the book, he described heinous crimes committed by two individuals, Hayes and Komeisarjevsky. Then on page 4, he writes, "as sickening as I find their behavior, I have to admit that if I were to trade places with one of these men, atom to atom, I would be him: There is no extra part of me that could decide to see the world differently or to resist the impulse to victimize other people." (highlighting mine.)
- That quote embeds the essence of materialism. A person is just an assembly of atoms and molecules, nothing more. Also, see "Views on Life - Wrong View of Materialism."
- But then the question arises, "why is Sam Harris NOT CAPABLE of such heinous crimes?" Those crimes were not done at the spur of the moment. They had planned those crimes. I don't think Sam Harris or any other decent human is CAPABLE of committing such PLANNED crimes. One would first need to get into such a defiled mindset. Hitler planned and killed millions of Jews. Not many people are CAPABLE of such actions.
- Both types of major wrong views discussed above arise because one is not aware of the complex web of causes and effects discussed in detail in the Tipitaka. Can things happen without causes?

## Nothing Happens Without Reasons/Causes

5. Modern science agrees that nothing happens without a cause(s). In the past, people believed that earthquakes, floods, floods, etc. happen due to the "will of the Creator God." Now we know that there are natural causes for each of those, and there is no need to invoke a Creator.

- In the same way, if one wins a million dollars in a lottery or breaks a leg in an accident, that would not be the "will of a higher intelligence." Those are results (vipāka) of previous good/bad actions (kamma.)
- Similarly, there are reasons (root causes) why some people are born healthy and wealthy, some are born at the opposite end, and an infinite variety in between. By the way, all those animals had been humans in past lives too.
- Therefore, just by using that causation principle, one can come to the reasonable conclusion that there must be causes for the diversity of births. One is born poor due to the causes (bad actions) from a previous life. Similarly, one is born an animal because one had behaved like an animal in human existence in the past. A Deva in a Deva realm is born there because of good deeds in past lives.
- There are also reasons why criminals like Hayes and Komeisarjevsky or Hitler are capable of acts of violence. Their defiled minds led them to behave like animals.
- There are reasons (causes) for anything to happen. It is just that finding those root causes is not easy because the world is complex. The rebirth process is necessary for the laws of kamma to bring forth such a variety of possible outcomes within life and from life-to-life.
- Only a Buddha can provide that complete picture. Out of that picture emerges the way to stop future suffering altogether.

## Buddhist Explanation Requires a Wider World View

6. The principle of causation that explains all that is Pațicca Samuppāda. That is at the heart of Tipiṭaka text. I have tried to explain it in various ways. See, for example, "Origin of Life."

- I have recently started another, more fundamental approach in the series, "Buddha Dhamma - A Scientific Approach." But such approaches are needed ONLY IF one has doubts about the rebirth process or the other underlying aspects like laws of kamma.
- In the Buddha's days, too, there were people with both wrong views discussed in \#3 and \#4. There were teachers like Makkhali Gosala, Ajita Kesakambali, Purana Kassapa, Pudhaka Kaccayana, Sanjaya Belatthiputta, and Nigantha Nataputta who taught various versions of wrong views as described in the Tipitaka.
- The Buddha engaged them in some occasions to illustrate the soundness of Buddha Dhamma. See, for example, "WebLink: suttacentral: Brahmajāla Sutta (DN 1)," "WebLink: suttacentral: Aggañña Sutta (DN 27)," and "WebLink: suttacentral: Cūlasaccaka Sutta (MN 35)."

## The Need to Correctly Interpret the Tipitaka

7. Therefore, the basic framework to explain the deep and complex true nature of this world of 31 realms is in the Tipitaka. Various aspects are in all three sections (Pitaka) of the Tipiṭaka: Sutta, Vinaya, and Abhidhamma.

- A Dhamma teacher needs to have the following qualifications: (1) Know the meanings of key Pāli words.
(2) The ability to explain succinct and deep verses in the Tipitaka.
- Both those REQUIRE the translator to be an Ariya or a Noble Person who has attained the Sotāpanna stage.
- Let me make an analogy to explain that.

8. Suppose a medical text needs to be translated from English to French.

- Would it be possible for a person well-versed in English and French to do a good job, UNLESS he/she is also a SPECIALIST in that particular field of medicine?
- Translating a text REQUIRES a deep understanding of the SUBJECT.
- Translating Pāli text in the Tipiṭaka to English REQUIRES much more than English proficiency and some knowledge in Pāli. A CLEAR understanding of the DEEP CONCEPTS in Buddha Dhamma is NECESSARY.
- It is not just a matter of learning Pāli grammar and to use various Pāli-English dictionaries that are available.
- In this particular case, the SPECIALIST is a Noble Person. One MUST be at least a Sotāpanna to be able to explain even the basic concepts correctly.

## Which Interpretation Is Correct?

9. Of course, the question arises: "How would one know whether anyone claiming to be an Ariya (Noble Person) is indeed one or not?" Any person can make that claim. The Buddha allowed one to make that declaration if one is certain that he/she has been "freed from the rebirths in the ap $\bar{a} y \vec{a}$ " or has attained the Sotāpanna stage. See, for example, "WebLink: suttacentral: Dutivabhayaverūpasanta Sutta (SN 55. 29)" The same passage appears in the "WebLink: suttacentral: Mahāparinibbāna Sutta (DN 16)."

- That is where each person has to make the decision. If two teachers claim to have the "correct explanation" AND those two are very different, only one is right or closer to the truth. It is up to each person to decide who could be right based on the totality of writings from those two.
- Of course, even an Ariya can make mistakes. Unless one is a Sammā Sambuddha Like Buddha Gotama, one COULD make mistakes. However, those mistakes would be MINOR compared to the key mistakes that an anāriya is BOUND TO make. One is an anāriya until becoming at least a Sotāpanna Anugāmi (who has begun to understand the Noble Truths on Suffering.)

## Understanding the "Hidden Suffering"

10. To understand the key message of the Buddha, it is necessary to understand the "big picture" of a rebirth process among 31 realms. The Tipitaka explains it in detail. Without an idea of that big picture, it does not make sense to try to "attain Nibbāna." Attaining Nibbāna MEANS "stopping the rebirth process."

- One would NOT want to stop a "good thing" from happening over and over. If repeated births is a "good thing," the Buddha would not have labored for 45 years to convince us that many future births for an anāriya (one who has not understood the Noble Truths) will be filled with unbearable suffering.
- The Buddha explained that humans (and other living beings) are incapable of seeing the hidden dangers of the rebirth process.
- The average human perceives that worldly things bring happiness. In the contrary, craving for those worldly things can ONLY lead to unimaginable suffering in future lives. Such cravings CANNOT be willfully suppressed. Those cravings NATURALLY go away when one starts comprehending the real nature of this world.
- That is the "previously unheard Dhamma" of a Buddha. It goes against all the prevailing views that we discussed above.
- We will continue that discussion in the next post: "Tipitaka - A Systematic Approach."

All posts in this section at "Buddha Dhamma - A Scientific Approach."

## Pāli Canon Is Self-Contained but Requires Detailed Explanation

## November 19, 2020; revised November 24, 2020; August 23, 2002

Pāli Canon is the standard collection of scriptures in the Theravāda Buddhist tradition. That collection has all the necessary teachings of the Buddha. However, the key concepts need to be explained in detail by a Noble Person (an Ariya.)

## Initial Oral Transmission

1. After the passing away of the Buddha, his teachings were handed down ORALLY from one generation to the next over about five hundred years. It had been prepared for easy oral transmission. That becomes clear
when one listens to the recital of a given sutta. As a child, I had memorized several suttas without much difficulty.

- Even today, some people have memorized large sections of the Tipiṭaka, especially in Myanmar (formerly Burma). In Myanmar, there are special examinations to test memorization. See, Tpitakadhara Sayadaws of Myanmar (Burma) in Five Decades." Also, see "Memorizing the Tipitaka. "
- That is why the Pāli Canon survived entirely in content over that long period of oral transmission. There were groups of bhikkhus who memorized overlapping sections and passed them down.
- A major reason for the assembly of the First Buddhist Council within three months of the Buddha's Parinibbāna - around 480 BCE - was to organize the vast material that had been accumulated.
- Within the next two hundred years, two more Councils were held to recite and verify the teachings and to finalize the Tipitaka in three broad categories ("ti" + "piṭaka" or "three baskets"). The second was held about a century after the first one.
- The third was held in 250 BC at Pataliputra under the patronage of King Asoka. The "three baskets" were completed at this Council with the finalization of the Abhidhamma Pitaka.
- That material was written down in that exact form when it became possible to preserve written material for a long time; see \#2 below.

## Texts of the Tipitaka

2. That completed Tipitaka was written down in 29 BCE at the Fourth Buddhist Council in Matale, Sri Lanka. See "Welcome to Aluvihāra Rock Cave Temple" for information about the location where the Tipitaka writing took place. By then, techniques had become available to preserve written material for a long time.

- That is why the Pāli Canon (Tipiṭaka) can be trusted to have the Buddha's original teachings. Details at "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- The other earliest written Buddhist documents are from Gandhāra in modern northwestern Pakistan; see "The Buddhist Literature of Ancient Gandhāra" by Richard Salomon (2018.) However, those do not provide a complete version of the Tipitaka; see p. 83 of the book.
- Around the turn of the first millennium, translations of the Tipitaka to Chinese and subsequently to Tibetan also took place. The original manuscripts in the Pāli Tipitaka can be expected to contain most of the original discourses delivered by the Buddha.

## The Authenticity of the Tipitaka

3. After the initial writing, the whole Tipitaka was periodically re-written on specially prepared ola (palm) leaves over the next 2000 years. The leaves deteriorated over time and needed to be re-written every $100+$ years. Even though that was a very labor-intensive process (there are 57 large volumes in the modern printed version of the Pāli Canon), it served another important purpose.

- Sinhala language (both spoken and written) changed over the past 2000 years. The need to re-write it every 100 or so years made sure that the Sinhala script changes were taken into account. That assured authenticity.
- The following video gives an idea about how those leaves were prepared and what tools were used to write:

## WebLink: youtube: Ola Leaf manuscripts

4. The fourth Buddlhist Council was the last Council attended exclusively by Arahants. The writing of the Pāli Canon took place during that Council. That provides credence to the authenticity of the Tipittaka. Of course, no one can dispute that each Piṭaka is inter-consistent and consistent with the other two Pitaka.

- The discourses of the Buddha were said to have been delivered in Māgadhi ("maga" + "adhi" or Noble path) language. The written form was called the Pāli. But Pāli does not have a script, so it was written down with Sinhala script.
- That also provides a clear way of sorting out the Mahāyāna literature. They are all in Sanskrit and never in Pāli. Mahāyānic philosophers wrote all the Sanskrit sutt $\bar{a}$ (more correctly sutrā) in Sanskrit.
- Furthermore, the Tipiṭaka was NEVER translated to Sanskrit. The Buddha prohibited that. See "Preservation of the Buddha Dhamma."

## "Double-Meanings" of Many Keywords

5. The Sutta Pitaka contains the bulk of the original discourses delivered by the Buddha. It had been specially put into a format suitable for easy oral transmission.

- The Buddha knew that Buddha Dhamma would go through periods of decline where bhikkhus capable of interpreting the sutt $\bar{a}$ would not be present. Thus the sutt $\bar{a}$ were composed in a way that only the "conventional" meaning is apparent. That was a necessary step to preserve the sutt $\bar{a}$, especially before writing became commonplace.
- It is important to remember that Ven. Ānanda had memorized all the sutta $\bar{a}$, which he then recited at the First Buddhist Council, just three months after the Parinibbāna of the Buddha.
- Ven. Ānanda was Buddha's personal assistant over the last few decades of the Buddha's life. The Buddha likely condensed each sutta, and Ven. Ānanda memorized each of them. The Buddha synthesized each sutta in a "double meaning" way for them to survive the "dark periods." That point will become clear as we discuss it further.
- Then, at the first Buddhist Council, all the sutt $\bar{a}$ were recited and sorted into various categories (Nikāyā). We still have that same Sutta Piṭaka.
- The Vinaya Pitaka also remains in the same original form. Only the Abhidhamma Pitaka was finalized at the Third Buddhist Council. Then all three finalized Pitakas were written down at the Fourth Council. See "Preservation of the Buddha Dhamma."

## Need for Detailed Explanations

6. The critical point here is that a sutta is a CONDENSED version of discourse in many cases. For example, the Dhamma Cakka Pavattana sutta was delivered to the five ascetics overnight. Imagine how many written pages would be if written verbatim! Yet, it was summarized in a few pages. The same is true for all the important sutt $\bar{a}$. Otherwise, it would have been impossible to transmit all those thousands of sutt $\bar{a}$.

- Each Pāli keyword (like ānāpāna, anicca, and anatta) is packed with a lot of information. Commentaries (called "Attha Kathā") were written to expound on the meaning of important Pāli words and also to explain the key verses (like "ye dhammā hetuppabbava...")

## Importance of the Commentaries

7. Thus, deep suttas were meant to be used with the commentaries. Pāli suttā are not supposed to be translated word-by-word.

- Most Sinhala commentaries were burned in the Anuradhapura era; see "Incorrect Theravāda Interpretations - Historical Timeline."
- Fortunately, three original commentaries written by the main disciples of the Buddha (Ven. Sāriputta, Ven. Kaccayana, etc.) during the time of the Buddha had been included in the Pāli Canon (in the Khuddhaka Nikāya) and thus survived. The current revival of pure Dhamma by Waharaka Thero and a few other Theros in Sri Lanka is partially due to their perusal of these three documents
(Pațisambhidāmagga, Petakopadesa, and Nettippakarana). [Paṭisambhidāmagga by Ven. Sāriputta and Petakopadesa, \& Nettippakarana by Ven. Kaccayana]
- Once the deeper meanings stay hidden for a long time, only a few with the Patisambhidā $\tilde{N} a \bar{n} a$ can understand AND explain even those three commentaries. Certain jāti Sotāpannas are born with that the Patisambhidā Ñāna from time to time. Waharaka Thero was one of them. From the time of Buddhaghosa, the deeper meanings had been hidden until Waharaka Thero unearthed them in recent years.

## Tipiṭaka Transmitted With Mundane Meanings During "Dark Periods"

8. Therefore, there are "dark periods" when bhikkhus with the Pațisambhidā Ñāna are not born for a long time. During such times, people use conventional interpretations. And that served the purpose of keeping the suttā intact, especially before written texts became common. Even though people understood only the mundane versions, the text was faithfully transmitted.

- A perfect example is the Ānāpānasati Sutta (some of which are also part of the Satipatṭhāna Sutta). As we discussed in "What is Ānāpāna?", the conventional meaning of the word ānāpāna is to tie up " $\bar{a} n a$ " with breath inhaling and " $\bar{a} p \bar{a} n a "$ with breath exhaling. That was consistent with the breath meditation that has been there in the world at any time. Many yogis practiced it at the time of the Buddha. He learned those methods from such yogis before attaining Buddhahood.
- Other examples are the translation of the keywords of anicca and anatta as impermanence and "noself." Even though those two meanings are embedded in the correct meanings, the deeper meanings are broader. No English word has the same meaning as anicca (or anatta.) Even the word "dukkha" DOES NOT refer to just the suffering one feels. Rather, Dukkha Sacca (Noble Truth on Suffering) is about the CAUSES of FUTURE suffering.
- The true meanings of those words will EMERGE as we systematically go through the upcoming posts.

## Explanation of Dhamma - Uddesa, Niddesa, Patiniddesa

9. A deep dhamma concept may appear in the Pāli Canon (especially in the Sutta and Abhidhamma) as just an "uddesa" or "utterance."

- "Niddesa" is a "brief explanation" that appears in one of the three commentaries mentioned above. Finally, "patiniddesa" means explaining in detail with examples to clarify complex or "knotty" points by a bhikkhu (or a knowledgeable layperson) during a discourse (or in a text today.) See "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- For example, in the suttas on Anuloma Paticca Samuppāda, it is stated in the uddesa version: "avijjā paccayā sañkhārā, sañkhāra paccayā viññānam, .. ending in ".. Evametassa kevalassa dukkhakkhandhassa samudayo hotī" $t i$ OR "the whole mass of suffering." The STOPPING of the "the whole mass of suffering" is stated also in the niddesa version in Paṭiloma Paṭicca Samuppāda as, "avijjā nirodhā sañkhāra-nirodho, sañkhāra nirodhā viññāna nirodho,.." ending with "end of the whole mass of suffering."
- However, both sañkhāra and viññāna arise in an Arahant. That seems to be a contradiction when it is stated that sañkhāra nirodhā (cessation of sañkhāra) and viññāna nirodhā (cessation of viññāna.)
- In the commentary Patisambhidamagga Pakarana, it is clarified in the short form (niddesa) to say that those sañkhāra removed by an Arahant are abhisañkhāra and that only kamma viññāṇa do not arise in an Arahant.
- Then, that needs to be explained in detail (patiniddesa) as in the post, "Anuloma Patiloma Paticca Samuppāda - Key to Sotāpanna Stage."

## It Is an Offense to Misinterpret Buddha Dhamma

10. It is an offense to misinterpret sutt $\bar{a}$ or other material in the Pāli Canon. That is in several sutta $\bar{a}$ in the WebLink: suttacentral: Bālavagga of Anguttara Nikāya 2.21-31.

- For example, AN 2.23 is a short sutta that says: "Bhikkhus, these two misrepresent the Buddha. What two? (i) One who explains what was not spoken by the Buddha as spoken by him. (ii) One who explains what the Buddha spoke as not spoken by him. These two misrepresent the Buddha. These are two who slander the Tathāgatā."

## Summary

11. The following are the key points from the above discussion that I wish to emphasize:

- Many suttā are designed to convey "conventional" meanings while keeping the "deep meanings" embedded in them.
- Those "deep meanings" bring out the uniqueness of Buddha Dhamma.
- Word-to-word translation of the suttā does not convey the message of the Buddha. Examples are critical Pāli words like ānāpāna, anicca, and anatta.
- The surviving three original commentaries in the Pāli Canon (Tipitaka) can verify the deep meanings of the keywords/phrases. Once a Noble Person clarifies them with Patisambhidā Nā̄na, any other Noble Person can explain those meanings to others.
- Posts on the three Pitaka: "Tipitaka - A Systematic Approach."

All posts in this section at "Buddha Dhamma - A Scientific Approach."

### 2.2.8.3 Vinaya Pitaka - More Than Disciplinary Rules

## November 26, 2020

Vinaya Piṭaka contains much more information than Vinaya rules for bhikkhus/bhikkhunis.

## Introduction - Need to Consult All Three Piṭaka

1. The Buddha said that if there is any doubt or a concept that is not clear, one should check with Sutta, Vinaya, and Abhidhamma. These basically refer to the Tipiṭaka (three baskets) of Sutta Piṭaka, Vinaya Pitaka, and Abhidhamma Piṭaka.

- Most people refer to the Sutta Piṭaka and forget about the other two. Abhidhamma Pitaka is a bit hard to understand, and without a firm grasp of basics, it is harder.
- Most people think that the Vinaya Pitaka is just for the bhikkhus and bhikkhunis. But there are sections in the Vinaya Pitiaka that have details that are not in the other two Pitiaka.
- The following article provides details of the Vinaya Pitaka: "WebLink: accesstoinsight.org: Vinaya Pitaka - The Basket of the Discipline." We will only discuss some key features.
- For someone who is "new to Buddhism," the introductory article by Bhikkhu Bodhi could be useful: "WebLink: accesstoinsight.org: The Buddha and His Dhamma."

## A Balanced Approach - Importance of the Vinaya Pitaka

2. It is prudent to use a balanced approach to learn Buddha Dhamma. Instead of diving into analyzing deep suttas, one needs first to get an idea about the Buddha, the necessary moral background, and basic concepts like kamma and rebirth.

- In the beginning, both the Sutta Piṭaka and Vinaya Piṭaka can be quite helpful. One should get into Abhidhamma only after getting a good idea about the background, key concepts, and the ultimate goal.
- While the Sutta Piṭaka discusses dhamma concepts, the Vinaya Pitaka provides the background settings for the following two cases: (1) for many suttas, and (2) for many Vinaya rules.

## Background for Key Suttā

3. The Vinaya Pitaka provides an illuminating background account for many suttas.

- For example, the WebLink: suttacentral: Mahāvagga of the Vinaya Piṭaka has a chronological account of the events following Buddha's Enlightenment. The English translation at Sutta Central is good: "WebLink: suttacentral: On Awakening."
- That account describes in detail Buddha's daily activities following the attainment of the Buddhahood. It also explains in detail how the Buddha delivered and discussed, over several days, the material condensed in the WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11) to the five ascetics.
- That is why some highly-condensed suttas SHOULD NOT be translated word-by-word. It takes many posts to discuss in detail, even just the key verses of a deep sutta. See, "Dhammacakkappavattana Sutta."

## Background for Vinaya Rules

4. For many years after the Buddha's Enlightenment, there were no disciplinary rules for the bhikkhus. Those who ordained as bhikkhus in those early years had fulfilled most of their "pāramitä" and did not need much clarification of dhamma concepts. They also were 'self-disciplined," and it was not necessary to impose rules.

- Most Vinaya rules were set up to handle particular situations where one or more bhikkhus had done things that were not appropriate. The Vinaya Piṭaka provides background accounts for many such cases. Such accounts provide insights into dhamma concepts as well as providing reasons for enacting such rules.
- For example, there was no rule for the bhikkhus to abstain from eating after Noon. There were few other reasons to impose that rule, but one reason was to discipline those who started wearing robes to "live an easy life." That rule was enacted probably after 20 years or so, and by that time, most people had become faithful followers of the Buddha. They held bhikkhus in high regard and took care of all their needs.
- There is an account in the Vinaya Pitaka for another reason for that rule. One bhikkhu went for an alms-collection after dark, and a woman had thrown dirty water from a cooking pot at the bhikkhu because she could not see him.

5. Here is another example. Any bhikkhu commits a pārājika offense (which is one of the four most serious offenses) by declaring supermundane attainments like jhana or magga phala (uttarimanussadhamma), knowing that he does not have such attainments.

- Of course, any bhikkhu (or a layperson) can declare genuine attainment if the need arose. But if it is done without really having such attainments that is a pārājika offense for a bhikkhu. He must give up the robes since he would not be able to make progress.
- That Vinaya rule was enacted after a group of bhikkhus decided to make such claims to receive alms during a famine. That account is described in the Vinaya Pitaka: "WebLink: suttacentral: The training rule on telling truthfully."
- There were reasons for enacting each of the 227 rules for bhikkhus and 311 rules for bhikkhunis. Those accounts are given in the Vinaya Pitaka.

## "The Life of the Buddha" Is a Good Resource

6. The book, "The Life of the Buddha" by Bhikkhu Nānamoli is good to read and keep as a reference for two reasons:

- It provides a chronological record of the Buddha's life (after the Buddhahood),
- Detailed accounts of significant events by combining accounts in the sutta with those taken from the Vinaya Piṭaka.

7. For example, it provides the background for delivering some major suttā or verses.

- For example, there is a detailed account (pp. 55-60) of how the Buddha had to perform even a few miracles to convince Uruvela Kassapa, his two brothers, and 1000 of their followers before they agreed to listen to the WebLink: suttacentral: Āditta Pariyāya Sutta (SN 35.28) or the Fire Sermon (page numbers quoted are for the 2001 First BPS Pariyatti edition.)
- So, we can see that it was not easy in those early days for the Buddha to convince some of the ascetics who had their own beliefs of what Nibbāna was about.

8. The subsequent chapters provide a good chronological account of what happened until the Parinibbāna. One can get a sense of which major sutt $\bar{a}$ were delivered at around what time.

- There are accounts on the two chief disciples, and short accounts of other important personalities such as Anāthapiṇ̣ika, Angulimāla, Visākha, etc. Chapter 7 describes the formation of the order of bhikkhunis.
- Several encounters with the Māra Devaputta are scattered throughout the book.
- One paragraph on p. 109 is on how the Buddha visited the Tāvatimsa deva realm and delivered Abhidhamma. A summary was conveyed to Ven. Sariputta expanded it with the help of his students to the form that we have today.
- There is a chapter on Devadatta, which describes events that are not found in sutt $\bar{a}$ : For example, how he attained (anāriya) jhānā and iddhi (super-normal powers) powers and using those iddhi powers how he appeared on the lap of Prince Ajatasattu as a baby wrapped in snakes.
- It provides a good account of Devadatta's efforts to take the life of the Buddha and how he lost all those super-normal powers and $j h a \bar{a} \bar{a}$ at the end.
- More at "The Life of the Buddha" by Bhikkhu Nānamoli."

## An Example From the Book

9. I will provide the following as an example of what is in this book that is not available in any sutta. It describes how the five ascetics attained the Sotāpanna stage over several days with the delivery and discussions of the Dhammacakkappavattana Sutta.

Here is a direct quote from p. 45 of the book (starting from the point where the Buddha had just finished the first delivery of the Dhammacakkappavattana Sutta):
"Then Añ̃ata Kondañña, who had seen and reached and found and penetrated the Dhamma, whose uncertainties were left behind, whose doubts had vanished, who had gained perfect confidence and became independent of others in the Teacher's Dispensation, said to the Blessed One: "Blessed One, I wish to go forth under the Blessed One and to receive the full admission?"
"Come, bhikkhu," the Blessed One said, "The Dhamma is well proclaimed. Live the holy life for the complete ending of suffering." And that was his full admission.

Then the Blessed One taught and instructed the rest of the bhikkhus with a talk on the Dhamma. As he did so, there arose in the venerable Vappa and the venerable Bhaddiya, the spotless, immaculate vision of the Dhamma. All that is subjected to arising is subjected to cessation. They, too, asked for and received the full admission.

These, having seen dhamma, attained dhamma, knowing dhamma ... having attained without the help of another full confidence in the teacher's instruction, spoke thus to the Blessed One: "May we, Blessed One, receive the going forth in the Blessed One's presence, may we receive ordination?"

Then living on the food they brought to him, the Blessed One taught and instructed the rest of the bhikkhus with a talk on the Dhamma. All six lived on the food brought back by the three of them. Then there arose in the venerable Mahānāma and the venerable Assaji the spotless, immaculate vision of the Dhamma, and they too asked for and received the full admission."

## More Resources on Background Material

10. The following is also a good resource: "WebLink: accesstoinsight.org: A Sketch of the Buddha's Life: Readings from the Pāli Canon."

- That post has extractions for various suttas and provides accounts before and after the Enlightenment.
- Another one (presumably tailored to young children) is: "WebLink: budsas.org: A Young People’s Life of the Buddha."

11. Posts on the three Pitaka: "Tipitaka - A Systematic Approach."

### 2.2.8.4 Abhidhamma Pitaka - Deeper Analyses of Concepts

December 3, 2020

## Abhidhamma Pitaka Goes Into Fine Details

1. The Abhidhamma Pitaka plays a critical role in the Tipitaka. Abhidhamma encompasses the deeper and detailed accounts of the material in the Sutta Pitaka. We can consider the following analogy to get an idea of the role of the Abhidhamma Pitaka.

- To drive a car, one needs to learn how to use various car components. Even more importantly, one needs to practice driving. That is how one needs to use the Sutta Pitaka. It is necessary to learn the key concepts in suttas AND to practice what one learns.
- In that analogy, Abhidhamma plays the role of a detailed account of how the car is assembled and the role played by each part. If the car breaks down, a knowledgeable technician can refer to that technical manual and figure out the problem. Similarly, someone knowledgeable in Abhidhamma can clarify a deep concept that needs a full and detailed analysis.
- In most cases, it is not necessary to learn Abhidhamma in detail. However, it helps to have a cursory background in Abhidhamma to understand deep suttas better.
- The following article provides a brief description of the Abhidhamma Pitaka: "WebLink: accesstoinsight.org: Abhidhamma Pitaka - The Basket of Abhidhamma."

## Historical Background

2. The Abhidhamma Pitaka was finalized at the Third Buddhist Council held about 200 years after the Parinibbāna (passing away) of the Buddha. Many English scholars (and texts) say that the Abhidhamma Piṭaka was a late addition to the Tipiṭaka. That is a misunderstanding.

- In the Introduction to his book, "A Comprehensive Manual of Abhidhamma," Bhikkhu Bodhi provides a detailed account of the history of the Abhidhamma Pitaka; see pp. 9-11 of Ref. 1. An account with a few more details is given in Ref. 2. That can be summarized as follows.
- In the seventh year after attaining the Buddhahood, the Buddha visited the Tāvatimsa Deva world. There he delivered the material in the Abhidhamma Pitaka to Devas where the chief recipient was his
mother Mahāmāyā Devi, who had been born there. The material was delivered over three months, and each day the Buddha would descend to the human world for food. Each day, he would provide a synopsis of the teaching given to the Devas on that day to Ven. Sāriputta.
- Having learned the key aspects of the Abhidhamma, Ven. Sāriputta taught it to his 500 pupils, and thus the basis of the Abhidhamma Pitaka was established. They needed to work out a detailed account of the material in a way that others could understand.
- It took several generations of bhikkhus of the lineage of Ven. Sāriputta - over 200 years - to finalize the Abhidhamma Pitaka.
- Reference 2 provides a list of bhikkhus who contributed that effort, including Ven. Moggaliputta Tissa, who apparently contributed to the final version at the Third Buddhist Council.

3. At the First Buddhist Council, just three months after the Parinibbāna of the Buddha, only a framework of the Abhidhamma theory was recited. More was added at the second Council, and the task was completed only at the third Council led by Ven. Moggaliputta Tissa.

- That completed Tipitaka that was written down in 29 BCE at the Fourth Buddhist Council; see, "Preservation of the Buddha Dhamma."
- It is essential to realize that hundreds of Arahants at the Fourth Council wrote down the whole Tipitaka. That included the complete Abhidhamma Pitaka. Therefore, we can be confident about the authenticity of the Abhidhamma Pitaka AND the whole Tipiṭaka.
- That is why it is incorrect to say that Abhidhamma was "invented" by bhikkhus after the Parinibbāna of the Buddha.
- Those who make such statements have not studied Abhidhamma or have not understood the in-depth analyses in Abhidhamma. The minute details of the very fast citta vithi are discernible only to the mind of a Buddha. No one else can even invent such concepts. It is the inter-consistency that makes ALL the material in the Tipiṭaka trustworthy. See, "Buddha Dhamma: Non-Perceivability and Self-Consistency."

## The Enormity of the Material in the Abhidhamma Piṭaka

4. The Abhidhamma Pitaka contains about the same dhamma groups (dhammakkhandha) as the Sutta Pitaka and Vinaya Piṭaka COMBINED. It is said to contain 42,000 dhamma groups compared to 21,000 for each of the other two. Thus, there are 84,000 dhamma groups in the Tipiṭaka.

- Philosophers talk about mind and matter as the two basic entities in the world. Scientists have studied the matter in great detail. But neither scientists nor philosophers have any idea of even how to BEGIN to describe the mind. We have discussed that in "Theories of Our World - Scientific Overview."
- Abhidhamma breaks down all rūpa to be combinations of 28 elementary $r \bar{u} p a$. Those 28 types of $r \bar{u} p a$ are in the physical bodies of living beings and all inert matter.
- Then the mind is described in terms of citta (loosely translated as "thoughts") and cetasika (mental factors.) There are 89 (or 121 depending on categorization) types of citta, which arise with different combinations of 52 types of cetasika. Thoughts of any living being can be described in terms of those entities.
- To analyze the concepts in the suttas in terms of those "basic entities" is an exhilarating experience. Concepts can be investigated to depths as much as one wishes (and is willing to spend the time and effort).

## Introduction to Abhidhamma - Current Standard Text

5. The Abhidhamma Pitaka consists of the following categories: Dhammasañghaṇ $\bar{\imath}$ (Classification of Dhammas), Vibhañga (The Book of Divisions), Kathāvatthu (Points of Controversy) Puggala Paññatti
(Description of Individuals), Dhātukathā (Discussion about Elements), Yamaka (The Book of the Pairs), and Paṭthāna (The Book of Relations). Kathāvatthu provides an in-depth account of controversial issues discussed at the Third Buddhist Council compiled by venerable Moggaliputta Tissa. Mahāyāna concepts like "antarābhava" were shown to be inconsistent, for example. See "Antarābhava and Gandhabba."

- There is a vast and complex material in the Abhidhamma Piṭaka. This is why it took so long to finalize that material per \#2 and \#3 above.
- It is doubtful that anyone in recent years has read and comprehended all the material in the Abhidhamma Pitaka, especially Patthāna or the Yamaka.
- Most people try to understand one summarized text to get a basic idea about the contents in the Abhidhamma Pitaka. That standard text is Abhidhammatta Sangaha, a summary of the Abhidhamma Pitaka compiled by Ven. Anuruddha, an Indian bhikkhu. That text does not go to deeper issues but provides the fundamentals.
- That Päli text was translated to English by Ven. Narada in 1956 (Ref. 3.) Subsequently, it was revised by Bhikkhu Bodhi in 1993 (Ref. 1.)

## Critical Aspects of Buddha Dhamma

6. Even if one can understand the whole of the Abhidhamma theory, one MAY NOT understand the Buddha's message. One must first understand the Four Noble Truths (same as understanding Paticca Samuppāda or the true meanings of anicca, dukkha, anatta.)

- Abhidhamma only facilitates one to analyze situations to deep levels ONLY IF one starts with understanding the Buddha's message. That message is that there is a rebirth process where most rebirths happen in the four lowest realms where there are harsh levels of suffering. The only way to escape future suffering is to stop the rebirth process and to attain Nibbāna.
- Once one has that basic understanding, Abhidhamma helps make that picture very clear. One can resolve any remaining issues/doubts by studying the detailed analyses in Abhidhamma. In a way, one cannot even begin to grasp the value of a Buddha until one can see deep concepts explained in an amazingly consistent way from many different angles.
- Abhidhamma can solidify and "fill-in-the-blanks" of Buddha Dhamma from the sutt $\bar{a}$, which can be an exhilarating experience.

## Benefits of the Abhidhamma Piṭaka

7. Even though it is not necessary to have a deep knowledge of Abhidhamma, a basic understanding can be quite valuable.

- Abhidhamma starts at a basic level and proceeds to get to deeper levels systematically. Therefore, one can get a good understanding of key concepts like kamma, cetana, sañkhāra, viññāna, etc., by studying introductory Abhidhamma.
- Even if one does not wish to study Abhidhamma in detail, those basic concepts need to be wellunderstood.
- We will start discussing those essential concepts next.

The other two Pitakas were discussed in the subsection, "Tipitaka - A Systematic Approach."

### 2.2.9 Antarābhava and Gandhabba

December 11, 2020

- Antarābhava - No Connection to Gandhabba
- Antarābhava Discussion in Kathāvatthu - Not Relevant to Gandhabba
- How Do We See? - Role of the Gandhabba
- Interpretation of the Tipitaka - Gandhabba Example

### 2.2.9.1 Antarābhava - No Connection to Gandhabba

## December 11, 2020; revised December 12, 2020 (\#7 revised and \#8 added)

## Antarābhava - Need to Understand the Terminology

1. Antarābhava is not a concept in Buddha Dhamma. Antarābhava ("antara" + "bhava") means "inbetween bhava." There are no such "gaps" between two existences (bhava.) It was a heretical view that existed even before the formal emergence of Mahāyāna.

- Some current Theravādins have the misconception that the gandhabba state (mental body or manomaya kaya) is the same as antarābhava, and thus needs to be rejected.
- However, the gandhabba state encompasses the whole of the "human bhava," within which there are many rebirths with physical human bodies.
- I will use two rebirths accounts to clarify the terminology and also to clarify this hugely misunderstood issue.

## Rebirth Account of Jeffrey Keene

## WebLink: youtube: Reincarnation, BORN AGAIN?

2. General John Gordon died in the Civil war. He was reborn as Jeffrey Keene in recent years.

- They are two "human bodies" that resulted from the same gandhabba (mental body or manomaya $k \bar{a} y a$ ). Those two births (as General Gordon and Jeffrey Keene) are within the same "human bhava."
- When General Gordon died, the mental body (gandhabba) came out of that dead body. Then that gandhabba was in the "paraloka" waiting for a suitable womb.
- Many years later, gandhabba was pulled into Jeffrey Keene's mother's womb, which is how he was born ( $j \bar{a} t i)$ with that physical body.
- Therefore, both General Gordon and Jeffrey Keene are in the same "lifestream." They belong to the "same human bhava."
- This clearly explains the position of the Buddha about rebirth. Jeffrey Keene is NOT the same as General Gordon. However, Jeffrey Keene's life is irrevocably connected to that of General Gordon. Therefore, it is also NOT correct to say that there in no connection between them.
- It is the same HUMAN mental body (gandhabba) that was reborn ( $j \bar{a} t i$ ) with physical human bodies twice (as General Gordon and Jeffrey Kean).

3. A few more observations may be helpful.

- Even though the physical bodies of General Gordon and Jeffrey Keene were remarkably close, that does not happen all the time. Parents' physical features (their DNA) also contribute to the physical features of any child.
- There is a large time gap between those two lives. It is possible that there could have been more births with physical bodies in between.
- The time gap between successive lives can vary hugely. In some cases, there may be only days or months, but more typically, there are gaps of several years.
- The gandhabba does not have the choice of "selecting a womb." When a zygote is created in the womb of a woman following sexual intercourse, a gandhabba matching the parents' general gati is pulled into the womb. See "Buddhist Explanations of Conception, Abortion, and Contraception."

## Rebirth Account of James Leininger

## WebLink: youtube: Reincarnation - Airplane Boy (abc Primetime)

4. The relevant points are noted below.
@ beginning: The narrator asks: "Could we come back as someone else"?

- It is not "someone else" that comes back or reborn. It is the same lifestream with a different appearance (physically.) Those successive births ( $j \bar{a} t i$ ) are within the same human bhava. In other words, it is the same "lifestream." See, "What Reincarnates? - Concept of a Lifestream."
@ 0.3 minutes: James Houston, Jr. was shot down over the Pacific Ocean on March 3, 1945. James Leininger was born some 60 years later and started talking about "getting shot by the Japanese."
@ 3:20 minutes: The narrator says, "dead can be reborn."
- That is not the right way to describe the situation. It is the same lifestream that is reborn with a different physical body!
@ 4 minutes: Usually, a child's memories of a previous life fades away around $7-8$ years.
(a) 5 minutes: James Leininger's own account of getting shot.
(a) 7:30 minutes: James Leininger provided the name of a friend, Jack Larson, from his previous life, and correctly says that his plane took off from the ship "Natoma." This is STRONG evidence.
@ 8:20 minutes: He describes himself as James 3 because, in his previous life, he was James Houston, Jr (i.e., James 2).
@ 10:40 minutes: The dad, Bruce Leininger, says that he thinks his son came back because "he had something to finish."
- No. We all come back. We can come back in human form and also in other forms corresponding to any of the 31 realms.
@ 10:55 minutes: Comments of Anne Barron, sister of James Houston, Jr.
@ 11:30 minutes: Comments of Prof. Kurtz, who does not believe in rebirth, says the account of James Leininger (a two-year-old) is made up. It is, of course, up to each person to make that decision. There are many more rebirth accounts and other types of evidence as Near-Death Experiences and Out-of-the Body Experiences; see "Evidence for Rebirth."

## Are Those Successive Births in Different Bhava?

5. The above two accounts provide us with the opportunity to clarify the two concepts of human bhava and human $j a \bar{a} t i$.

- Those who question the gandhabba state must answer the following questions: "Are James Houston and James Leininger in two different bhava?"
- If they answer "yes," then the following must be true: In between those two human bhava, that lifestream must have been in a different bhava, such as animal bhava or Deva bhava.
- However, the Buddha clearly stated getting a human bhava is extremely difficult. There could be millions or even billions of years between successive human bhava. See, "Rebirth - Connection to Suffering in the First Noble Truth."
- Therefore, it is clear that those two successive births (jāti) are within the same human bhava. Further details at, "Bhava and Jāti - States of Existence and Births Therein."

## The "Antarābhava" Issue Raised at Third Buddhist Council Was a Different Issue

6. The concept of an antarābhava was discussed and rejected at the Third Buddhist Council. It is documented in the Kathāvatthu section of the Abhidhamma Pitaka.

- There was no discussion on gandhabba regarding that issue. I will discuss that in detail in the next post, "Antarābhava Discussion in Kathāvatthu - Not Relevant to Gandhabba."
- Therefore, it is a critical error to identify the gandhabba state as an antarābhava. Rather, the gandhabba state encompasses a whole human bhava.

## Insights on "Self" and "No-Self" Issue

7. This is also a good opportunity to get insights into the "Self" and 'No-Self" Issues.

- Is James Leininger the SAME as James Houston? Of course not. They lived very different lives and did not look the same either. Is Jeffrey Keene the same as General Gordon in \#2 above? Even though there were some physical resemblances, they were very different and lived different lives. As we can see clearly, the physical bodies of those two individuals are entirely different. James Houston's physical body had disintegrated a long time ago. At some point in the future, that "lifestream" may be born a Deva, Brahma, animal, etc. No ESSENCE propagates from life-to-life, especially from bhava-to-bhava. A Deva bhava is vastly different from a human bhava or animal bhava. That is why the Buddha rejected the idea of an unchanging "self" or "soul."
- However, there is obviously a STRONG CONNECTION between the two lives in each of those cases. There would be no James Leininger if there were no James Houston. James Leininger is a descendant of that same "lifestream." As we can see clearly, the physical bodies of those two individuals are entirely different. James Houston's physical body had disintegrated a long time ago. However, there is an UNBROKEN connection in the mental body. In fact, James Leininger must have inherited SOME of the mental characteristics- such as anusaya - of James Houston (there would have been some changes in the intervening time.) Thus, the Buddha rejected the idea of "no-self" as well. As long as the samisäric process is there, an unbroken (mental) lineage exists between any two stages within that lifestream.

## Nothing In This World Worthwhile to be Taken as "Mine"

8. The real issue is whether there is anything in this world that is worthwhile to be "taken to be mine." Immoral actions done with such vision/perception can create kammic energies leading to "bad bhava" such as animal bhava. That is what we need to be concerned with. That is what the Buddha stated in his very first discourse by, "samikhittena pañcupādānakkhandhā dukkhä" OR "in brief, the origin of
suffering is the craving for the five aggregates of rūpa, vedanā, sañ̃ $\bar{a}$, sañkhāra, and viñ $\bar{n} \underline{a} a$ (pañcupādānakkhandha)." [sañkhittena means being overthrown by defilements]

- Even though human bhava is much longer than 100 years, living beings spend most of their time in other existences (bhava) with unimaginable suffering because of not seeing that "big picture" of the long rebirth process that spans not only human bhava but much worse bhava.
- When the human bhava ends and a "bad bhava" (for example an animal bhava) is grasped, that animal is NOT the preceding human. But it has a "cause and effect connection" to the previous human bhava. When in animal bhava, for example, that animal cannot even think about these issues; but it still has the perception of "me and mine." But that animal is totally helpless. That is anatta nature! This is the outcome of having the wrong view of "'This is mine, I am this, this is my self'." That is the meaning of the Pāli verse, "etaì mama, esohamasmi, eso me attā"" $t i$
- That change of bhava happens at the cuti-patisandhi moment, at the end of the human bhava. There could be many "deaths" of human bodies before that. For example, General Gordon and Jeffrey Keene in \#2 above were just two births ( $j \bar{a} t i$ ) within a single human existence (bhava.) That is the difference between bhava and $j \bar{a} t i$, in this context. See, "Bhava and Jāti-States of Existence and Births Therein."
- These are complex issues. The key is to get some traction, and then it will become easier.

### 2.29.2 Antarābhava Discussion in Kathāvatthu - Not Relevant to Gandhabba

December 16, 2020; revised December 17, 2020; July 16, 2022

## Antarābhava Was Discussed at the Third Buddhist Council

1. The concept of an antarābhava was discussed and rejected at the Third Buddhist Council. It is documented in the Kathāvatthu section of the Abhidhamma Piṭaka.

- Many current Theravādins say that the concept of an antarābhava is associated with gandhabba. They say that since antarābhava was rejected at that Council, the concept of a gandhabba was rejected.
- However, gandhabba was not even mentioned in that discussion at the Third Buddhist Council. I will fully translate and discuss the relevant sections of Kathāvatthu in this post to put this issue to rest.

## Antarābhava Discussion in Kathāvatthu

2. Many "heretical views" that were discussed and emphatically rejected by a group of Arahants at the Third Buddhist Council held in India at the time of Emperor Asoka. Ven. Moggaliputta Tissa recorded those discussions in the Kathāvatthu section of the Abhidhamma Piṭaka.

- The relevant section is "WebLink: suttacentral: Antarābhavakathā," and an incomplete English translation is there: "WebLink: suttacentral: Of an Intermediate State."
- For those who understand the Sinhala Language, a complete Sinhala translation is in the Buddha Jayanthi Tipitaka. See pp. 340-355 of "WebLink: PDF file: 48.OTAP_KathaVatthu_Prakarana 2-Sinhala."
- Here, we will translate some key verses, first providing the Pāli text and then a translation (with details as necessary.) Hopefully, anyone will understand what was rejected and not rejected (or even discussed.)

## Is Antarābhava Within the Three Major Existences?

3. At the beginning of the Pāli text, we can see that the wrong view about an "antarābhava" or an "intermediate state" was the following.

- Theravādins ask: "Atthi antarābhavoti? or "Is there an intermediate state?"
- The other side (heretics) says "Amant $\bar{a}$ " or "Yes."
- Theravādins ask: "Kāmabhavoti?" or "Is it in the kāma bhava?" and the answer is "Na hevaí vattabbe" or "That is not so."
- Similarly, the heretics say that this "intermediate state" in not in the rūpa bhava or the arūpa bhava.

However, all existences in this world MUST BE within one of those three major existences: kāma bhava, rūpa bhava, or arūpa bhava. Then each of those sub-divide into minor categories. For example, human bhava, and animal bhava are in the kāma bhava.

- But the heretics say that the "intermediate state" is not in any of the existences.

## Is Antarābhava In Between the Three Major Existences?

4. Theravādins ask: "Kāmabhavassa ca rūpabhavassa ca antare atthi antarābhavoti?" or "Does this intermediate state exist in between kāma bhava and rūpa bhava"?

- Heretics: No.
- Then the Theravādins declare "Hañci kāmabhavassa ca rūpabhavassa ca antare natthi antarābhavo, no ca vata re vattabbe-"atthi antarābhavo" ti" OR "If you affirm that there is no intermediate state between kāma bhava and rūpa bhava, then you cannot maintain your proposition."
- In the same way, the heretics admit that there is no intermediate state between rūpa bhava and arūpa bhava, and the Theravädins point out that the heretics' position is untenable.

## Antarābhava In Terms of Yoni, Gati, Viññāṇaṭthiti, Sattāvāsa

5. All living beings in this world belong to those three major types of bhava. Buddha explained all possible existences in this world in many other ways as well.

- All living beings can be categorized according to four types of yoni (modes of birth), gati (according to five major types of samंsāric habits), seven types of viñ̃̄̄ạnatthiti (stations of consciousness), and nine types of abodes (sattāvāsa.)
- The first two categories are discussed in the "WebLink: suttacentral: Mahāsīhanāda Sutta (MN 12)." The seven types of viññänatṭhiti discussed in the "WebLink: suttacentral: Sattaviññānatthi Sutta (AN 7.44)" and the nine types of satt $\bar{a} v \bar{a} s a$ in the "WebLink: suttacentral: Sattāvāsa Sutta (AN 9.24)"
- So, Theravādins ask: "Pañcamī sā yoni, chaṭthamī sā gati, aṭthamī sā viññānaṭṭhiti, dasamo so sattāvāsoti?" OR "Are there five types of yoni or six types of gati or eight types of viññānat!̣hiti or ten types of sattāvāsa?"
- Heretics admit that this antarābhava cannot be found under any of those categories.

## Does Antarābhava Fall Under Other Possible Categories?

6. There are many other ways of categorization discussed in that section "WebLink: suttacentral: Antarābhavakathā." However, the English translation there at Sutta Central is not complete.

- For those who understand the Sinhala Language, a complete Sinhala translation is in the Buddha Jayanthi Tipitaka per \#2 above.
- The point is that antarābhava cannot be found under ANY possible category that a living being can be put into.
- This post would be very long if I translated the whole section. However, let us look at one more important category.

## Does a Being in Antarābhava Have Pañcakkhandha (Five Aggregates)?

7. Theravādins ask: "kāmabhave/rūpabhave/arūpabhave atthi rūpaí vedanā sañña sañkhārā viññānanti?" OR "Do the five aggregates exist in kāma bhava, rūpa bhava and in arūpa bhava?"

- Heretics: "A$\overline{\text { mant }} \bar{a} "$ OR "Yes." As they agreed, the five aggregates are associated with a living-being in ANY bhava.
- Theravādins ask: "Antarābhave atthi rūpaì vedanā saññ̄à sañkhārā viññānanti? OR "Do the five aggregates exist in antarābhava?"
- Heretics: "Na hevaim vattabbe.." OR "That cannot be said."
- Here, the heretics admit that a being in antarābhava cannot be described in terms of the five aggregates!

## No Basis for the Claim of an Antarābhava

8. Therefore, it was shown without any doubt that the concept of an antarābhava does not fit into Buddha Dhamma.

- However, there was absolutely no connection made to the concept of gandhabba.
- Anyone can read the Pāli text in "WebLink: suttacentral: Antarābhavakathā" and see that the word gandhabba is not even mentioned.

## Antaräbhava Concept of Those Heretics Is Not The Same as Gandhabba

9. If the term gandhabba did not even come up in the discussion on antarābhava at the Third Buddhist Council, why do SOME present-day Theravādins say that the concept of gandhabba was rejected at that Council? The simple answer is that they may not have even read the text in the "WebLink: suttacentral: Antarābhavakathā" section of the Tipitaka!

- I have heard many bhikkhus just repeat what they heard from someone else, that the gandhabba state is a Mahāyāna concept, and it refers to an "intermediate state" or "antarābhava." They don't even try to verify that by looking up the Tipitaka.
- They may misunderstand that a human "bhava" starts with a human's birth (as a baby from a mother's womb) and that it ends when that physical body dies.
- That is a VERY BAD wrong view!
- Let us consider the following evidence against that false belief.

## Do "Human Bhava" Last Only 100 Years and "Fly Bhava" Last Only Several Days?

10. We know that a "dense body" of a human lasts for about 100 years, and a housefly lives only for several days. But that time is only a small fraction of the lifetime of the corresponding gandhabba! Whether a human or a housefly, it will be in that existence or bhava (as a human or a fly) for many thousands of years.

- As we know, the Buddha has emphasized strongly that it is VERY DIFFICULT to get a human existence (bhava.) See "Rebirth - Connection to Suffering in the First Noble Truth."
- On the other hand, many rebirth accounts from children worldwide show that they had been born with human bodies only several years previously! See "Antarābhava - No Connection to Gandhabba."
- Those previous births were within the same human bhava. It was the same human gandhabba that led to both those human births.

11. When the dense physical body of a human dies, that is not necessarily the end of the "human bhava." Unless the kammic energy of that human gandhabba is exhausted, gandhabba will stay alive. It will be pulled into another suitable womb at a later time. In between adjacent "births with human bodies," human existence continues in the gandhabba state.

- That gandhabba state is NOT an "antarābhava." It is IN "human bhava." A human gandhabba is human and has five aggregates. A subtle $r \bar{u} p a$ (invisible to us) associated with that gandhabba with a hadaya vatthu (seat of the mind) and five pasāda rūpa. It can think. It cannot touch, smell, or taste, but can see and hear. See "Ghost 1990 Movie - Good Depiction of Gandhabba Concept."

Similarly, when a fly dies, it will stay in that existence as a "fly gandhabba" and get into an egg to form another fly. That process will occur uncountable times for a fly before that "fly existence" ends!

- When a fly dies, it will stay as a "fly gandhabba" until it is pulled into an egg to start making another "dense fly body."

## Human (or Animal) Bhava (Existence) Can Last Thousands of Years

12. The four types of yoni (modes of births) mentioned in \#5 above are the following: Aṇ̣aja (egg born), jalābuj $\bar{a}$ (womb born), saimsedajā (typically translated as "moisture born" but has a better explanation), and opapātika (instantaneous birth).

- However, when a transition from one bhava to another (say, from human bhava to an animal bhava) takes place, only an opapātik $\bar{a}$ birth occurs where a NEW mental body (manomaya $k \bar{a} y a$ ) is generated by kammic energy.
- In many realms - including all 20 Brahma realms - that opapātika birth spans the whole bhava. They are born one time with a subtle (invisible to us) "mental body" (with a trace of matter), and that is all they have.
- However, in the human and animal realms, that "mental body" will get into a womb or an egg (in animals), leading to a physical body's birth. Those are conventionally called births ( $j \bar{a} t i$ ) within those two bhava. That "mental body" in the human or animal realms is given a special name of gandhabba.
- Those womb-based and egg-based births are two types of "births" mentioned above: aṇdajā and jalābujā, respectively. In some instances, the chemical composition needed to make the "seed" (for example, an animal's egg) forms in natural processes, and that is the fourth type, i.e., samsedaja birth.

13. As mentioned above, Brahmas and Devas do not go through the gandhabba state. They are born instantaneously (opapātika birth) and live for very long times (their whole life in that state.) Brahmas' subtle 'bodies" are very similar to humans' or animals' mental bodies (gandhabba state). See "Body Types in 31 Realms - Importance of Manomaya Kaya."

- It is mostly in the human and animal realms that first, a subtle manomaya kaya is born instantaneously, followed by the arising of dense physical bodies with one of the other three possibilities.
- We have discussed the birth of a human baby in "Buddhist Explanations of Conception, Abortion, and Contraception." Many such "births with physical bodies" can take place within a single human bhava.
- Now let us briefly discuss a few associated issues/conventions/terminology.

## Sometimes Gandhabba State Referred to as Paṭisandhi Viññāna

14. The "descend" of that pațisandhi viññāna to a womb is discussed in several suttas, including "WebLink: suttacentral: Assalāyana Sutta (MN 93)" where the term "gandhabba" is specifically used: "Jānāma mayam், bho-yathā gabbhassa avakkanti hoti. Idha mātāpitaro ca sannipatitā honti, mātā ca utunī hoti, gandhabbo ca paccupaṭthito hoti; evaì tiṇnaì sannipātā gabbhassa avakkanti hotī'ti."

Translated: "We do know that, sir. An embryo is conceived when these three things come togethercopulation of the mother and father, the mother is in the fertile part of her menstrual cycle, and the presence of a gandhabba." This is explained in detail in "Buddhist Explanations of Conception, Abortion, and Contraception."

- But in some other suttas, Such as "WebLink: suttacentral: Mahānidāna Sutta (DN 15)" the gandhabba is also referred to as patisandhi viññana. in some cases. That is because that manomaya $k \bar{a} y a$ is created by the kammic energy associated with a patisandhi viñ̃āṇa.
- For details, see "Gandhabba State - Evidence from Tipitaka."

## Other Use of the Name "Gandhabba"

15. There is a class of Devas called "gandhabba"; see, "WebLink: suttacentral: Suddhika Sutta (SN 31.1)" and the following many suttas in SN 31 (Gandhabba Vagga.) There are numerous types of Devas (in lower Deva realms) who intake (abba) odors of various plants and flowers (gandha), and thus that name. "WebLink: suttacentral: Mahāsamaya Sutta (DN 20)" identifies Dhataratṭha, King of the East is identified as "Chief of the Gandhabba Devas."

- There is also a group of petas with the name "gandhabba." They inhale "foul odors."
- To add to that, human gandhabbas are sometimes referred to as "tirokuḍda" or "tirokutta" because they can go through walls. See "WebLink: suttacentral: Tirokutta Sutta (Kp7)."
- Understanding the Tipitaka requires checking for inter-consistencies with a good understanding of underlying concepts and terminology usage.
- The word "right" can mean two different things "turn right" and "you are right." Similarly, the word "gandhabba" must be understood in a particular situation.

### 2.2.9.3 How Do We See? - Role of the Gandhabba

December 22, 2020; revised December 23, 2020; April 14, 2022 (Ref. 4 added among other revisions); September 21, 2022; September 22, 2022

The question "How do we see?" remains unanswered by science. The short post by the National Eye Institute, "WebLink: nei.nih.gov: How the Eyes Work," concludes: "These electrical signals travel from the retina through the optic nerve to the brain. Then the brain turns the signals into the images you see." That does not explain the important part, the EXPERIENCE.

## How Do We See?

1. Let us systematically see what happens when we "see" a tree. Please don't just read through, but stop and think about each point.

- Light reflected off the tree falls on our eyes and forms an image of that tree on the retina. As you can imagine, that image is tiny. That image then goes to the brain through a nerve in terms of a chemical/electrical signal.
- Scientists are stuck on what happens next: How does the brain "SEE" the tree using that chemica/electrical signal?
- Furthermore, we "see" that tree in great detail: leaves, individual flowers, fruits, etc. How is that possible? The images that land on the back of the eyes are TINY.
- Someone who has thought a lot about this issue is Jeff Hawkins, who is actively engaged in artificial intelligence (AI). In his book, "On Intelligence," he discusses current scientific knowledge on vision and other sensory inputs (Ref. 1.)

## Jeff Hawkins's Book "On Intelligence"

2. Starting on p. 55 of his book, Hawkins discusses how the image that falls on the back of the eye gets to the brain: "But let's take a closer look. Visual information from the outside world is sent to your brain via a million fibers in your optic nerve. .".

- "You can visualize these inputs as a bundle of electrical wires or a bundle of optical fibers.." he writes, "The inputs to the brain are like those fibers, but they are called axons, and they carry neural signals called "action potentials" or "spikes," which are partly chemical and partly electrical..".
- As discussed in that book, visual signals and all sensory inputs (sounds, taste, smell, and body touch) to the brain are similar. You hear a sound, see the light, and feel pressure, but there isn't any fundamental difference among these neural signals inside your brain. An action potential is an action potential.
- Scientists have not figured out how the brain distinguishes those different types of signals. Moreover, they have no idea how the mind "sees the light" or an image of that tree. Same for the other senses.
- They will never figure that out because it is NOT the brain that "SEES." It is the "hadaya vatthu" (seat of the mind") on the "mental body" (gandhabba) that feels the "seeing sensation." Of course, "gandhabba" is an "energy body" trapped inside the physical body. It can come out sometimes, especially during heart operations (Google 'Near-Death Experiences.")

## How Are Electrical/Chemical Signals Sensed or Experienced?

3. To quote more from that book (p. 56): "Your perceptions and knowledge about the world are built from these patterns. There is no light inside your head. It is dark in there. There is no sound entering your brain either; it is quiet inside. The brain is the only part of your body that has no senses itself. A surgeon could stick a finger into your brain, and you would not feel it. All the information that enters your mind comes in as spatial and temporal patterns on the axons."

- It is a mystery to science how the mind differentiates those chemical and electrical signals from the brain as vision, sound, taste, smell, and touch.
- For example, how do "pictures" materialize from those chemical and electrical signals? How does another set of signals lead to the sensation of sound?
- These are kammic effects that are not amenable to our minds. How kamma vipāka leads to various effects (including sight, hearing, etc.) is one of the four things that are unthinkable/incomprehensible to us and only comprehensible to a Buddha: "WebLink: suttacentral: Acinteyya Sutta (AN 4.77)."

## All Existing Scientific Theories Are Speculations

4. Scientists are trying to solve this puzzle by looking for answers in the brain. They have come to the end of the line here.

- Jeff Hawkins wrote that book in 2004. He posted the video in Ref. 2 (which discusses the brain) in 2006. He and many other scientists have done much work since that time. Yet they have made NO PROGRESS on the vital issue of "how those sensory events are EXPERIENCED."
- There are, of course, many THEORIES on that connection. For example, some have suggested that consciousness (EXPERIENCE) arises in brain nerve cells; see Ref. 3. However, plants also have microtubules. But plants, of course, cannot think.
- No matter how much they try, scientists WILL NOT be able to find a way to say that mental phenomena can arise in inert matter.
- Before discussing Buddha's description, let us review some relevant findings from recent scientific studies.

## Tiny Oak Seed Has the Blueprint for an Oak Tree

5. A tiny oak seed has the blueprint for the giant oak tree. That seed extracts necessary "materials" from the soil and "builds" that tree! Think about how complex that process is, i.e., oak seed giving rise to an oak tree!

## WebLink: youtube: Acorn to oak tree time-lapse

- The video does not show the latter stages of growing into a giant oak tree over many years.
- As we can see, all necessary "materials for the tree" come from the soil. The seed only has the blueprint for the tree!

## Gandhabba Has the "Blueprint" or the "Master Plan" for a Human Body

6. A baby's growth inside a womb (and then outside the womb) is not different from a seed growing into a tree.

- The zygote (formed by an egg from the mother and sperm from the father) is not different from a seed.
- The MAJOR difference is that a human can THINK, and a tree cannot.
- The THINIKING part in a human comes from the gandhabba! We discussed these details in the posts "Buddhist Explanations of Conception, Abortion, and Contraception" and "Cloning and Gandhabba."
- If you want to skip those two posts, you can read the Pāli and English translations of "WebLink: suttacentral: Mahātanhāsanikhaya Sutta (MN 38)" See Ref. 4 for the quote.
- Let us discuss another piece of evidence from recent scientific findings.

## Vision Is Not Continuous

7. Vision or "seeing" appears to us as continuous. We see people moving around, vehicles moving, animals running around, etc. However, "seeing" happens due to a series of "snapshots" our physical eyes take. Those chemical and electrical signals mentioned above come in packets of about 10 -millisecond duration.

- As an example, let us take the case of seeing a tree. The eyes send a series of "data packets" (chemical and electrical signals per \#2, \#3 above) to the brain. It is NOT a continuous stream of data that arrives via the optic nerve in the brain. The signal comes in "packets." Similar "data packets" come in from the other four physical senses. They are processed (in parallel) by the brain.
- Recent scientific studies show that a human needs at least $10-20$ milliseconds ( 1000 milliseconds $=1$ second) to look at the picture to recognize it. Similarly, a "sound packet" of about 30 milliseconds can be detected and identified. Thus, the brain processes sensory data in packets of about 10-30 millisecond duration.
- Some of those processes may happen in parallel in different brain regions. Further details in "Vision Is a Series of "Snapshots" - Movie Analogy." It is essential to read this post if one needs to understand Buddha's explanation fully.
- However, scientists have no idea how those "data packets" lead to seeing, hearing, etc. (actual sensory experiences)!
- Now we can start discussing Buddha's explanation.

## Sense Experience Happens in the "Mental Body" (Gandhabba)

8. Actual "seeing" (and hearing, smelling, etc.) goes on at the hadaya vatthu located in the gandhabba or the mental body. That is the critical point.

- In the case of "seeing a tree," the brain processes the data received from the eyes to a level that scientists CAN NOT probe. They are reduced (or "broken down") to the suddhatthaka level below the elementary particle level reached by scientists. At that stage, that signal gets transmitted through the mental body of the gandhabba to hadaya vatthu. That is where the sensory experience takes place!
- As discussed in \#7, the brain takes about 10-30 milliseconds to PROCESS data from each sense door. For example, when we are watching a movie, the brain needs to work non-stop to analyze visual and sound data for the movie's duration. That strains the brain, so it is impossible to watch more than one movie at a time without ending up with a headache.
- The brain consumes about $25 \%$ of the energy intake for the whole body!
- Such details could not be transmitted in the Tipitaka. Furthermore, during Buddha's days, people knew nothing about the brain. The Buddha could not provide this kind of detail at that time. We will discuss that in the next post.

## Science Will Never be Able to Create "Artificial Life" or "Artificial Intelligence"

9. That is also why science will NEVER be able to succeed in AI (Artificial Intelligence.) Note that AI differs from making efficient robots, which are purely mechanical. They can't THINK!

- Note that "artificial insemination" is not creating a new life. Scientists use DNA from humans (or animals) to form a zygote. That is not any different from a zygote produced in a womb. See "Cloning and Gandhabba."
- The bottom line is the following: Without a human gandhabba, sensory experience is not possible. The physical body is just a shell.
- That gandhabba can be created ONLY by kammic energy, based on a previous strong kamma (deed.) The laws of kamma work automatically. It is a natural process, like an oak seed giving rise to an oak tree.

## The difference Between a "Live Human" and a "Dead Body" Is Gandhabba

10. The gandhabbā is like a delicate mesh (or an "energy field") overlapping the physical body, with the hadaya vatthu located close to the physical heart. That is what gives life to the physical body.

- At the physical body's death, fine gandhabbā comes out of the physical body like a ghost. It is so fine that we cannot see it. But we all know that a body can be alive one second and become inert (like a piece of wood) at death.
- Have you touched a dead body (human or animal)? Touching it, you can immediately sense the difference between a dead body and a live person/animal.
- At death, the body starts to get cold as soon as the gandhabba comes out permanently from that body. The "life force" is no longer there! That life force is the gandhabba or the "mental body"!

## Transfer of Data from the Brain to Pasāda Rūpa/Hadaya Vatthu

11. Another critical point is that in the "energy body" of the gandhabbā, there are five "pasāda rūpa" located around the hadaya vatthu: cakkhu, sota, ghāna, jivhā, and kāya, that correspond to seeing, hearing, smelling, tasting, and touch. Those 'sensing units" overlap the physical heart located far from the brain. Scientists will never be able to solve the problem just by analyzing brain processes!

- We have discussed related essential concepts in the sub-section, "Brain and the Gandhabba." As I remind you frequently, it takes a real effort to understand these concepts. With this post, we are going back to continue that discussion.
- The brain is like a sophisticated computer that analyzes those chemical and electrical signals discussed above in \#2 and \#3.
- It converts those chemicalelectrical signals to a form that the "hadaya vatthu" can "understand." That is where the "magic of seeing sensation" takes place.
- That transfer of "information" from the brain to pasāda rūpa around the hadaya vatthu happens in the "energy-body" of the gandhabba that overlaps the physical body.

## Only a Buddha Can Figure Out the Complex Connection Between Mind and Matter

12. That is what the Buddha taught 2500 years ago. Until scientists accept that mind and matter are two different entities, they will not proceed too far from where they are now. Of course, I have tried to express those ideas in terms of current terminology as much as possible.

- The ultimate realities of this world are citta, cetasika, and rūpa. Thoughts encompass citta and cetasika. They are in a separate category from rūpa. Citta and cetasika CANNOT arise out of rūpa! Stop and contemplate on that. That is why Abhidhamma is important.
- Someone who has studied Paṭicca Samuppāda (PS) may realize that it starts with sañkhāra (ALL mental) generated due to avijja. The PS cycle ends with the $j \bar{a} t i$ (birth) of an entity with the matter.
- The "connection" between mind and matter is "defiled consciousness" (or kamma viñ $\tilde{a} \bar{n} n a$ ), and viññāna arises ONLY in a hadaya vatthu (seat of the mind) in a gandhabba created ONLY by kammic energy.

13. That is a fascinating account amenable to inquiring minds. It is NECESSARY to live a moral life and be willing to "listen to reason." As the Buddha warned, not everyone can understand the profound Dhamma. It takes effort and faith (built on one's own experiences.)

- In upcoming posts, we will discuss the deep connection between mind and matter in detail. But you can find the key points in "The Origin of Matter - Suddhatthaka."
- Of course, many details in this post are not available in that form in the Tipitaka. That holds for many of my posts on gandhabba.
- However, those descriptions are fully compatible with the Tipitaka. I will discuss that In the next post.

## References

2. WebLink: youtube: Jeff Hawkins: "How brain science will change computing."
3. "Can Quantum Physics Explain Consciousness? One Scientist Thinks It Might."
4. Following is the English translation of the critical passage at Sutta Central: "Mendicants, when three things come together an embryo is conceived. (Tiṇnaim kho pana, bhikkhave, sannipātā gabbhassāvakkanti hoti.)

In a case where the mother and father come together, but the mother is not in the fertile part of her menstrual cycle, and the spirit being reborn is not present, the embryo is not conceived. (Idha mātāpitaro ca sannipatitā honti, mātā ca na utun̄̄ hoti, gandhabbo ca na paccupaṭhito hoti, neva tāva gabbhassāvakkanti hoti.)

In a case where the mother and father come together, the mother is in the fertile part of her menstrual cycle, but the spirit being reborn is not present, and the embryo is not conceived. (Idha mātāpitaro ca sannipatitā honti, mātā ca utun̄̄ hoti, gandhabbo ca na paccupaṭthito hoti, neva tāva gabbhassāvakkanti hoti.)

But when these three things come together-the mother and father come together, the mother is in the fertile part of her menstrual cycle, and the spirit being reborn is present - an embryo is conceived. (Yato ca kho, bhikkhave, mātāpitaro ca sannipatitā honti, mātā ca utunī hoti, gandhabbo ca paccupaṭ!hito hoti-evaì tiṇnaì sannipātā gabbhassāvakkanti hoti.)

- Note that the translator has translated "gandhabbo" as "spirit." It is not a "spirit" as a "ghost." It is the "mental body," or the essence of the human being born! How come people don't ask that translator what that "spirit is"? This is why Buddha Dhamma has been hidden for all these years.
2.2.9.4 Interpretation of the Tipitaka - Gandhabba Example

December 30, 2020; revised January 7, 2021 (added \#12); re-written September 1, 2022
Interpretation of the Tipitaka requires much more than translating suttas word by word.

## Interpretation of the Tipitaka

1. The following issues are both important and relevant.
2. I need to ensure that I do not distort the teachings of the Buddha. That means I need to provide relevant CRITICAL passages in the Tipitaka when I discuss a subject.
3. However, the Sutta Piṭaka of the Tipiṭaka does not provide details on some aspects. Those details come in the Abhidhamma Pitaka and the three original commentaries in the Tipitaka. But still, it requires a $j \bar{a} t i$ Sotāpanna like Waharaka Thero to provide detailed explanations.
4. Lastly, we are lucky to live in a time where more details, for example, about the brain, are available from modern science. The Buddha could not explain the role of the brain because people knew nothing about the brain then. Further supporting evidence on related subjects is now widely available via the internet (examples are Evidence for Rebirth Accounts and Near-Death-Experiences or NDE.)

Depending on the topic, I have used one or more of the above three to write posts. Let me explain by discussing my approach to writing posts on the gandhabba (manomaya kāya,) where I utilized all three of the above.

## Details on the Gandhabba Concept

2. Many details about the manomaya kāya (gandhabba) are unavailable in the Tipitaka. However, there is enough essential evidence: "Gandhabba State - Evidence from Tipitaka." That is my posts' first layer.

- We have lost all of the Sinhala Atthakath $\bar{a}$ (early commentaries.) However, even if we had them, they would not provide details regarding the brain. Most of our knowledge about the brain is from modern science within the past 100 years or so.
- The Buddha only mentioned the brain as part of the body's 32 parts (Pāli word is matthalunga.) See "WebLink: suttacentral: Dvattimsākāra." I have not seen any details on the functions of the brain in the Tipitaka.
[Atthi imasmim kāye-
Kesā lomā nakhā dantā taco, maísamं nhāru aṭthi aṭthimiñjaí vakkamं, hadayamं yakanamं
 semham pubbo lohitaì sedo medo, assu vasā khelo siñghānikā lasikā muttanti.
Dvattiminākāraì.
There are in this body:
hairs of the head, body hairs, nails, teeth, skin; flesh, sinews, bones, bone-marrow, kidneys; heart, liver, pleura, spleen, lungs; intestines, mesentery, undigested food, excrement, the brain in the head; bile, phlegm, pus, blood, sweat, fat; tears, grease, spit, mucus, synovial fluid, and urine.
The Thirty Two Fold Nature.]

3. When a jāti Sotāpanna like Waharaka Thero (who had attained the Sotāpanna stage in a previous life) is born, we learn important details. Furthermore, not all jāti Sotāpannas can provide such information either. One needs to have Pațisambhidā Ñạna to be able to grasp AND explain concepts in detail to others. Therefore, my posts' second layer of more information comes from Waharaka Thero's discourses.

- The third layer is due to two sources: First, recent scientific findings on many subjects like the brain, living cells, etc., provide corroborating evidence. For example, I have used such information in the "Origin of Life" series.
- Thanks to the internet, many rebirth accounts, Near-Death Experiences, Out-of-Body Experiences, etc., are now available to anyone. Those also provide invaluable supporting material to complex subjects discussed, including the gandhabba concept.
- Those two resources are the thirdl layer.
- The Buddha advised in the "WebLink: suttacentral: Aranavibhañga Sutta (MN 139)" that the main task of a bhikkhu (or a lay disciple) is to explain in detail the ideas embedded in the Tipitaka without distorting key concepts. I am responsible for ensuring that EVERYTHING is consistent with the first layer or the Tipiṭaka. That is why I welcome comments on any apparent inconsistencies.

## Gandhabba ("Mental Body") Is Primary, and the Physical Body Is Secondary

4. The role of the manomaya kaya is critical. The physical body is just a shell. It dies in about 100 years. The manomaya kāya (gandhabba) may live for thousands of years in the human bhava. See, "Antarābhava Discussion in Kathāvatthu - Not Relevant to Gandhabba."

- A fly lives only about a week. But "fly bhava" (or the existence of a fly) may last many thousands of years. Therefore, between births (as a "visible fly"), that fly would have the gandhabba or the manomaya kāya.
- As we discussed, the specific term gandhabba is used mainly for the manomaya kāya of humans and animals. But living beings in almost all 31 realms are born with a manomaya kāya. Brahmas in 20 realms have only the manomaya kāya.
- Thus, the manomaya kāya (mental body) is primary, and the physical body is secondary.

## Importance of the Commentaries

5. The Tipitaka was meant to be used with the commentaries. Also, knowledgeable bhikkhus or lay disciples were supposed to explain key concepts in detail. Many Pāli suttā require detailed explanations. See, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

- Most early Sinhala commentaries disappeared in the Anurādhapura era; see "Incorrect Theravāda Interpretations - Historical Timeline. "
- Fortunately, three original commentaries provided by the Buddha's foremost disciples (Ven. Sāriputta, Ven. Kaccāyana, etc.) during the Buddha's time have been included in the Tipitaka (in the Khuddaka Nikāya) and have survived.
- The current revival of pure Dhamma by Waharaka Thero in Sri Lanka is partially due to his perusal of these three commentaries of Paṭisambhidāmagga, Peṭakopadesa, and Nettippakaraṇa.
- Even those three commentaries are somewhat condensed. Waharaka Thero was able to expand on those concepts in detail. He provided the basic model of the manomaya kaya (gandhabba) with hadaya vatthu and five pasāda rūpa. The terms hadaya vatthu and pasāda rūpa appear only briefly in the Tipiṭaka (mostly in the Abhidhamma Piṭaka.) I have expanded that model using current scientific findings on the brain. Numerous posts are throughout the website: "WebLink: PureDhamma: Search Results for gandhabba."

## Gandhabba Model - Role of the Brain

6. Waharaka Thero provided the basic model where the brain processes incoming information from the eyes, ears, etc., passing those processed signals to hadaya vatthu via the complex manomaya kāya of the gandhabba.

- Just as the nervous system connects the brain to the other parts of the physical body via the nervous system, gandhabba's body has a "ray-like" (or electromagnetic) system that connects the brain to hadaya vatthu/pasāda rūpa. It can quickly pass information generated in the brain to the hadaya vatthulpasāda rūpa.
- That model is very much consistent with recent findings in science. I have referred to such recent scientific discoveries in my posts. See, for example, "Brain - Interface between Mind and Body," and the posts referred to there.
- I realize that many people have a hard time visualizing the gandhabba concept. They may want to reread the post." Ghost 1990 Movie - Good Depiction of Gandhabba Concept," which I recently revised; see especially \#1 there.

## Brain Analyzing "Data Packets"

7. In several posts, I have utilized recent scientific findings on the brain to explain our sensory experience. I hope such explanations provide a way to visualize the sensory recognition process easier. Such posts include "How Do We See? - Role of the Gandhabba" and "Vision Is a Series of "Snapshots" - Movie Analogy."

- Also, consistent evidence has been accumulating in several areas, including rebirth accounts, Near-Death Experiences (NDE), and Out-of-Body Experiences (OBE); see "Evidence for Rebirth," "Origin of Life" and "Buddha Dhamma - A Scientific Approach."
- Hopefully, both developments will help more people understand Buddha's teachings.
- In the days of the Buddha, people accepted Buddha's explanations without such detailed explanations. That society was vastly different from the "materialistic society" of today, where recent scientific and technological advances have given a dominant platform to "materialism."
- That is why many people have a deeply embedded wrong view that the "physical body" is all there is and that mental aspects (thoughts) arise in the brain.

## Scientific Knowledge Is Limited

8. Even a few hundred years ago, science had many issues of conflict with Buddha Dhamma on even the "material world." Of course, science is far behind in understanding "mental aspects" like consciousness, feelings, perceptions, etc.

- However, science has made much progress, resolving several significant inconsistencies about the universe's material aspects.
- For example, just 400 years ago, "science" believed in the geocentric model of the universe, i.e., Earth was the center of the universe, with stars embedded in a celestial sphere far above. See: https://en.wikipedia.org/wiki/Geocentric_model
- At that time, science and religion tried to attune their beliefs to that model. Most religions still adhere to those concepts; see the same Wikipedia article above.
- But 2500 years ago, the Buddha described our Solar system as a "Cakkavāla" or a planetary system. Not only that, but he also said there are uncountable such systems in the universe. He was well ahead of science because he had discovered the ultimate truths about this world.
- Here is a video from Carl Sagan to get an idea of how vast our "detectable universe" is:

WebLink: youtube: Humility - Carl Sagan

## Scientific Knowledge Is Expanding

9. Through the years, and mainly since the beginning of the 20th century, science has "re-discovered" some aspects of the Buddha's more expansive world, including the existence of billions of galaxies, EACH OF WHICH contains billions of planetary systems like our Solar system.

- But someone living in the 19th century is likely to have ridiculed the idea of innumerable planetary systems (cakkavāla) and could have said, "where is the evidence from science?". That aspect of Buddha Dhamma was not amenable to "science" at that time.
- Like that, many aspects of Buddha's Dhamma are not amenable to science at the current time. But science will accept more of the concepts in Buddha Dhamma with time.
- Details in "Buddhism - Consistencies with Science" and "Buddhism - Inconsistencies with Science."

## My Explanations of the Gandhabba Are Consistent With the Tipiṭaka

10. The detailed descriptions that I have provided on the workings of the gandhabba are not in the Tipitaka. The Buddha could not have offered such explanations when oridinary people were naware of the brain's functions.

- However, those descriptions are entirely CONSISTENT with the contents in the Tipitaka. Furthermore, they are also consistent with current scientific knowledge.
- Despite their intense efforts, scientists have reached an impasse in explaining how consciousness (and feelings like joy and sadness) can arise in the brain. See the post, "How Do We See? - Role of the Gandhabba." The pure materialistic model of science WILL NOT be able to explain such mental phenomena as consciousness, feelings, perceptions, etc.
- The main point of that previous post was that such mental phenomena CANNOT arise without a mental body (or manomaya kāya or gandhabba.) Reviewing the post Brain - Interface between Mind and Body is a good idea to understand the relationship between the brain and gandhabba. Other pertinent issues relevant to gandhabba are in "Antarābhava and Gandhabba."

## Summary

11. Interpreting the Tipitaka requires more than translating suttā word-by-word (which is a terrible way to teach Buddha Dhamma.) See "Word-for-Word Translation of the Tipitaka." More problems with current explanations in the "Elephants in the Room" section.

- One needs to explain concepts in a way that the audience can understand.
- When one COMBINES information from Tipitaka AND other resources such as modern science, one can better understand certain complex concepts.
- That statement holds for many posts on this website but is particularly true in the sections "Buddha Dhamma - A Scientific Approach" and "Origin of Life."

12. This post concludes the section on "Buddha Dhamma - A Scientific Approach." The main point was to illustrate that the manomaya $k \bar{a} y a$ is of utmost importance. In human and animal bhava, that manomaya kāya has a unique name gandhabba.

- That manomaya kāya is just a trace of energy, but it can sustain a whole existence. Just as an oak seed has the blueprint for a giant oak tree, that bit of energy is all that is needed to maintain our dense physical bodies. See \#5 of "How Do We See? - Role of the Gandhabba."
- Kammic energy sustains the manomaya kāya. The food we eat grows and supports our physical bodies.

### 2.3 Buddhahood Associated Controversies

July 9, 2020
Buddhahood Controversies - Introduction
Pātihāriya (Supernormal Abilities) of a Buddha - Part I
Pātihāriya (Supernormal Abilities) of a Buddha - Part II

### 2.3.1 Buddhahood Controversies - Introduction

July 9, 2020; revised August 6, 2022

## Overview

1. Buddhahood is a term that remains mired in controversy. In upcoming posts in this section, I will discuss three topics that have intrigued many people over the years. That will help cultivate faith in the Buddha, Dhamma, and Sañgha.
2. The wisdom and capabilities of a Buddha. We will clarify the implications of the three types of knowledge of a Buddha mentioned in \#8 below.
3. Current scientific knowledge is compatible with most of the "supernormal capabilities" of a Buddha. Scientists have not taken the time to do an in-depth analysis. Of course, most scientists do not know enough about Buddha Dhamma (or physics) to do such an analysis.
4. We will also discuss how the teachings of the previous Buddha (Buddha Kassapa) were transmitted as Vedic teachings in distorted form. That is why there are so many common terms in Buddhism and Hinduism, like kamma (karma), jhāna (dhyāna), and even Pațicca Samuppāda (Pratītyasamutpāda.) Of course, Buddha's Ānāpānasati meditation was misinterpreted as "breath meditation." All those concepts were there (just like now) at the time of the birth of Prince Siddhattha. We will discuss Tipitaka accounts where the Buddha pointed that out.

It is easier for an average human to grasp the mundane meanings (and difficult to grasp the deeper meanings.) That is why those mundane explanations periodically come up disguised as Buddhist teachings.

## Buddha Is a Title

2. Buddha is a title. Buddha is a human who becomes "Enlightened" or attains the Buddhahood. However, It is necessary to understand his teachings to a higher level to figure out the meaning of the word "Buddha."

- A Buddha has the "perfect mind." With a perfect mind, a Buddha knows everything about the world. Even though he lived more than 2500 years ago, he described the universe much as scientists found out within the past 100 years. And he provided many more details about our world (much more than the scientists) as we will discuss.
- One is not born a Buddha. The Buddhahood is attained or achieved. There have been many Buddhā in the past, and there will be many in the future. For example, the Buddha we are discussing now is Buddha Gotama. Buddha Kassapa immediately before him (a long time ago) and the next Buddha will be Buddha Maitreya.
- It is a rare occurrence to have a Buddha in the world. Sometimes, billions of years can go by without a Buddha. See \#14 of "Pāramitā and Niyata Vivarana - Myths or Realities?"
- Before we get into the knowledge of a Buddha, let us discuss some basic facts about Buddha Gotama.

## Prince Siddhattha

3. Buddha Gotama was born with the name of Siddhattha (Siddhārtha in Sinhala or Sanskrit), and his parents were Suddhodana and Mahā Māyā. Suddhodana was a king, and Prince Siddhattha was brought up in luxury. For example, in the WebLink: suttacentral: Mahā Parinibbāna Sutta (DN 10), the Buddha says that he had four palaces for the four seasons. An English translation of "WebLink: suttacentral: The Great Discourse on the Buddha's Extinguishment."

- Scattered throughout many suttā in the Dīgha Nikāya and Majjhima Nikāya are accounts of various stages of the life of the Buddha (before and after Enlightenment.) I will refer to a few below. It is a good idea to read them. Most translations are good enough, especially regarding such life accounts. Only when deep Dhamma concepts are discussed is one need to be careful about the correctness of the translation.
- For example, a brief account of Prince Siddhattha's life can be found in "WebLink: henri-van-zeyst: Basic Buddhist Concepts." More details - extracted from the Tipiṭaka - in "WebLink: accesstoinsightorrg: A Sketch of the Buddha's Life - Readings from the Pāli Canon."
- At the age of sixteen, Prince Siddhattha married princess Yasodhara. They were happily married for thirteen years and had a son, Rāhula. Yet, Prince Siddhattha was not satisfied. He felt a "discontent" or "dissatisfaction" lingering even while immersed in a luxurious life.
- We will briefly go through a series of events that led to a drastic change in Prince Siddhattha. Those four events are the Four Great Omens.

## Four Great Omens

4. On his rare visits outside the palaces, Prince Siddhattha saw an old person one day. He had never seen an old person. His faithful companion, Channa, explained that everyone gets old.

- On a subsequent visit, he saw a sick person and learned that everyone becomes sick. On the third visit, he saw a dead body and was told he would die one day too. Those three encounters made him think deeply about life, and his discontent with life grew steadily.
- On a subsequent fourth visit outside the palace, the prince saw a recluse, a spiritual seeker, and his calm demeanor intrigued the prince. Channa explained to him that there were many recluses like that. They were discontent with life and were searching for a solution to the universal problems associated with life. Those are sicknesses, getting old, and dying.
- As we note below, people at the time of the Buddha were familiar with the concepts of rebirth. Therefore, they knew about the "cycle of suffering in the rebirth process."
- With the sight of the recluse, prince Siddhattha realized that he would also need to give up the lay life and pursue the path to end that suffering associated with the perpetual cycle of birth, old age, sicknesses, and death. One dies only to be reborn to go through the same cycle!

## Influence of Teachings of Buddha Kassapa

5. Remnants of the teachings of the Buddha Kassapa from the deep past had come down through Vedic teachings. This is a critical point. As we will see later, the Buddha explained that only the mundane interpretations of Buddha Kassapa's teachings had survived.

- For example, people at that time were quite familiar with the laws of kamma, the rebirth process, five (or eight) precepts, and even Nibbāna. However, Vedic brahmins had used the Sanskrit language to transmit those teachings and used the Sanskrit words karma and nirvāna for the Pāli words kamma and Nibbāna.
- In another example, per Tipiṭaka, queen Mahā Māyā had regularly observed eight precepts.
- That is also why so many recluses were trying to figure out the way to Nibbāna (nirvāna), freedom from suffering in the rebirth process. Some thought that cultivating jhāna and getting rebirth in a Brahma realm is nirvāna (or end of suffering.) We will discuss that in the next post.

## Renunciation - Becoming a Recluse

6. Shortly after seeing the recluse, Prince Siddhattha left the palace in the middle of the night. Channa led him out on his horse Kanthaka. The prince cut his hair and put on robes suitable for an ascetic. Let us call him ascetic Siddhattha or the Bodhisatta.

- First, the Bodhisatta went to two of the well-known yogis of the day, Ālāra Kālāma and Uddaka Rāmaputta. They taught him all they knew. He was able to get the highest jhāna (Nevasañ̃̃ $\bar{a} n \bar{a}$ sañ̃̄̄̄yatana) in a short time. Those teachers thought that they had attained Nibbāna.
- But the Bodhisatta realized that one could not get to Nibbāna merely by suppressing defilements (greed, anger, and ignorance) with breath meditation or mundane versions of kasina mediation. He realized attaining Nibbāna requires the removal of defilements for "complete purification."
- The Buddha has discussed those interactions with Ālāra Kālāma and Uddaka Rāmaputta in the "WebLink: suttacentral: Mahāsaccaka Sutta (MN 36)," "WebLink: suttacentral: Arivaparivesana Sutta (MN 26)" and various other suttā.
- You can access translations to English and several other languages by clicking the "down arrow" just above the name of the sutta at Sutta Central.

## Six Years of Extreme Asceticism

7. After leaving Āḷāra Kālāma and Uddaka Rāmaputta, the Bodhisatta tried various methods of subjecting his body to extreme hardships. Other than pursuing mundane jhāna/kasiña, many yogis then thought one could remove defilements by inflicting such punishments to the body.

- Shortly after leaving Ālāra Kālāma and Uddaka Rāmaputta, the Bodhisatta met five companions, Kondañ̃na, Bhaddiya, Vappa, Mahānāma, and Assajī. They were impressed with the Bodhisatta's determination and were convinced he would someday become a Buddha.
- By the way, the word Buddha (and Bhagavath) also came down in Vedic teachings. For example, the Bhagavad Gita (or "Recitals of Bhagavad") has many Vedic teachings originally from Buddha Kassapa. Of course, most concepts ended up with mundane interpretations.
- For example, "WebLink: suttacentral: Brahmāyu Sutta (MN 91)" provides a detailed account of brahmin Brahmāyu, who was well-versed in the three Ved $\bar{a}$ (tinṇain vedānaì pāragū). At the beginning of the sutta, brahmin Brahmāyu recites the qualities of a Buddha: 'itipi so bhagavā arahaim sammāsambuddho vijjācaraṇasampanno sugato lokavid̄̄ anuttaro purisadammasārathi satthā devamanussānaì buddho bhagavā'ti. Then he sends his pupil to the Gotama Buddha to check whether he has the "thirty-two marks of a great man (dvattimsamahāpurisalakkhaṇāni)." How would brahmin Brahmāyu know about the qualities of a Buddha? It had come down in Vedic teachings! It is good to read the English translation: "WebLink: suttacentral: With Brahmāyu (MN 91)."
- During most of those six years, the Bodhisatta subjected his body to various forms of hardship. The Buddha discussed those unimaginable sufferings in several sutta, including the "WebLink: suttacentral: Mahāsaccaka Sutta (MN 36)."

## Enlightenment (Attaining Buddhahood)

8. Finally, the Bodhisatta realized that subjecting the body to suffering is not the way to cleanse the mind of defilements. The Bodhisatta had to undergo six years of unnecessary suffering due to a hard-to-overcome bad kamma that he had committed against Buddha Kassapa. He had verbally abused Buddha Kassapa. I will just provide the link to the English translation of the sutta, MN 81: "WebLink: suttacentral: With Ghatikāra."

- On a Full Moon day in May, the Bodhisatta sat at the foot of a Bodhi tree, firmly determined to attain Buddhahood. The Buddha described the account of the events during that night in the "WebLink: suttacentral: Bodhirājakumāra Sutta (MN 85)," among several others.

During the night, the Buddha achieved three types of higher knowledge:

1. Ability to recall one's past lives (pubbe nivāsānussati nāāna),
2. The ability to see any living being's cuti (end of bhava) and patisandhi (grasping of a new bhava). This is the cutūpapāta $\tilde{n} \bar{a} n a$.
3. The attainment of the Buddhahood with āsavakkhaya $\tilde{n} a \bar{n} a$. That involved grasping the Four Noble Truths and the Noble Eightfold Path to Nibbāna.

- The Bodhisatta was now a fully-awakened Buddha or a Sammāsambuddha. He had gained knowledge about the wider world of 31 realms, how beings are born in those realms according to Paticca Samиррäda, etc. It was not mere speculation. He visited those realms and confirmed his findings, as we will discuss.

## Events After the Enlightenment

9. The Vinaya Pitaka provides a detailed account of events following the Enlightenment. Here is the English translation, "1. Going forth (Pabbajiā)." Another resource is discussed in "The Life of the Buddha" by Bhikkhu Nānamoli." I highly recommend reading those accounts. It provides a good idea of the initiation of the Buddha Sāsana, or the "ministry of the Buddha."

- Of course, the translations of some critical Pāli words are not correct there, especially anicca and anatta. That occurs in the account where the five ascetics attain Arahanthood over several days of discussing the first two suttā, the Dhammacakkappavattana Sutta (SN 56.11) and the Anattalakkhana Sutta (SN 22.59), as I have discussed in many posts.
- Besides the description of deep Dhamma concepts, most English translations of suttā are good. Accounts of Buddha's life in many suttā in the Dīgha Nikāya and Majjhima Nikāya fall into that category.
- However, even then, most translators have doubts about the various abilities of the Buddha. They openly express their doubts about the validity of the rebirth process or Buddha's ability to visit various Deva and Brahma realms (even the existence of such realms), go through walls, and 'touch the Sun and the Moon," etc. See "Mystical Phenomena in Buddhism?"

10. The Buddha stated that he never taught anything that he had not verified by himself. Buddha Dhamma is not philosophy. Most "experts" who express such opinions are not even true Buddhists (in the sense of comprehending deep concepts in Buddha Dhamma.) They are "secular Buddhists" who do not believe in rebirth, the FOUNDATION of Buddha Dhamma. Furthermore, they have no background in science (particularly in physics), and do not realize that many "mystical phenomena" are not contradictory to modern physics!

- Other posts in this section: "Buddhahood Associated Controversies."

### 2.3.2 Pāṭihāriya (Supernormal Abilities) of a Buddha - Part I

July 17, 2020; revised January 23, 2022; October 14, 2022
 sutt $\bar{a}$ in the Tipiṭaka discuss them.

Kevaṭta Sutta (DN 11)

1. I will extract a few relevant portions of the text from the English translation, "WebLink: suttacentral: To Kevatta (DN 11)." I did not choose the other English translation since it translated "paṭihāriya" as "a demonstration" rather than a "miracle." Anyone can do a demonstration. A pātihāriya can be performed only by someone with "supernormal capabilities." As we will see below, these powers are mind-boggling!

- At the beginning of the sutta, Kevatta, a young householder, comes to the Buddha and says the Buddha should instruct his disciples to perform "miracles" to convince more people to embrace Buddha's teachings. The Buddha refuses, but explains that there are three types of "miracles."
- The Buddha replies: "Kevaṭta, there are three types of miracles which I have taught, having myself understood and realized them. And what are the three? The miracle of psychic power, the miracle of telepathy, and the miracle of instruction."

## The Miracle of Psychic Power (Iddhi Pātihāriya)

## 2. "And what, Kevaṭa, is the miracle of psychic power (iddhi pātihāriya)?

- "Here, Kevatṭa, a monk wields various psychic powers: He becomes many and then becomes one again. He appears and vanishes, goes unimpeded through walls, ramparts, and mountains as if through space. He can dive in and out of the Earth as if it were water, and he walks on water without sinking as if it were Earth. Sitting cross-legged, he travels through space like a winged bird. He can touch and stroke the Sun and the moon, so mighty. He exercises mastery as far as the Brahma-world."
(This verse explaining supernormal abilities appears in many suttā, including DN 2, DN 10, DN 28, MN 6, MN 73, MN 77, SN 12.70, SN 16.9, SN 51.11, SN 51.17, AN 3.60, AN 3.101, AN 5.23, AN 6.2, AN 10.97)
- Then the Buddha points out to Kevaṭta, that someone who has learned the "Gandhāra Charm" ("Gandhāra Trick" would be a better translation) can do some of that too. That is why the Buddha prohibited the display of such abilities. (Apparently, Gandhāra Trick can be compared to the "magic tricks" performed by magicians like David Copperfield today. However, the Gandhāra Trick seems much more powerful than any magic tricks performed today.)

## The Miracle of Telepathy ( $\bar{A} d e s a n \bar{a} P \bar{a} t ̣ i h a ̄ r i y a) ~$

3. "And what, Kevat!ta, is the miracle of telepathy ( $\bar{a} d e s a n a \bar{a} p a \bar{t} t i h a \bar{a} r i y a)$ ?

- "Here, a monk reads the minds of other beings, of other people, reads their mental states, their thoughts, and ponderings, and says: 'That is how your mind is, that is how it inclines, that is in your heart.'"
- Then the Buddha points out that those who have mastered the "Manika Charm" can also read other people's minds. Therefore, that also is not impressive.

## The Miracle of Instruction (Anusāsanī Pāṭihāriya)

## 4. "And what, Kevatta, is the miracle of instruction (anusāsan̄̄ pātitihāriya)?

- "Here, Kevatta, a monk teaches in this way: 'Reason in this way, do not reason in that way. Consider this and not that. Get rid of this habit, train yourself, and live life like that.' This, Kevaṭa, is what is called 'The miracle of instruction.'
- The Buddha explainsthe fruits of such instructions in detail by a learned bhikkhu who has learned Dhamma from the Buddha. How he learns to live a moral life and to cultivate Ariya jhāna by REMOVING defilements. Then the Buddha explains that SOME OF THEM can also cultivate all those supernormal powers mentioned above.
- First, let us look at the scope and implications of the "psychic powers" (iddhi bala.) All these are performed by a purified mind.

## Psychic Powers (Iddhi Pāṭihāriya) - Unimaginable

5. Technological advances drive modern society. Scientists have studied the properties of MATTER in great detail and have used those new findings to create "innovative devices" that help us work more efficiently. For example, they can build robotic machines that can do much work that human cannot do.

- So, it is indeed a "miracle" that Ven. Cūlapanthaka created a thousand "copies" of himself to do work around the temple. Once the work is complete, he can make them disappear. That is what is referred to as "He becomes many and then becomes one again" in \#2 above-relevant information on Ven. Cūlapanthaka at, "WebLink: suttacentral: Cūlapanthaka" and "WebLink: tipitaka.net: Dhammapada Verse 25 - WebLink: tipitaka.net: Cūlapantaka Vatthu."
- Let us discuss a few more of these "miracles" to see how amazing they are.

## Traveling Through the Air With Physical Body

6. Another modern technological advance is being able to travel long distances with cars, airplanes, and rockets. These became possible due to the collective efforts of many thousands of scientists starting from Galileo and Newton, over 300 years ago.

- However, as stated in the above accounts of Ven. Cūlapanthaka, traveling through the air with one's physical body is possible after cultivating iddhi bala. That is referred to as, "Sitting cross-legged, he travels through space like a winged bird" in \#2 above.

7. All these "psychic powers" have their basis in highly concentrated energy produced in the javana citta of the yogi. Yes. even other yogis at the time of the Buddha had cultivated SOME of these powers via cultivating anāriya jhāna. They could, for example, travel through the air carrying their physical bodies.

- As we know, javana cittā generates kammic energies that lead to future births. See "Javana of a Citta - The Root of Mental Power."
- The intensity or the power of javana citta can be vastly increased for those who have cultivated pātitihāriyā powers. Such a yogi can set up an "energy field" around his physical body, which can be controlled to move the physical body as he wishes.
- The video below demonstrates the basic idea of "electromagnetic levitation." A yogi would create such an "energy field" around his body and control it to move the body.

WebLink: youtube: Electromagnetic levitation device

- By the way, these days one can buy various "levitating things" like "levitating globes."

## Traveling to a Star System "In an Instant" - With Manomaya Kāya

8. The closest star (possibly with a set of planets) to us is four light-years away. That means if a rocket ship travels at the speed of light, it will take four years to get there. For comparison, the distance from the Earth to our Moon would take only 1.25 SECONDS. Therefore, a rocket ship traveling at the speed of light will take only 1.25 SECONDS to arrive at the Moon! But our rocket ships take about three days to get to the Moon. Therefore, with a modern rocket ship, it would take about 800 thousand years (this time, depending on the speed attained in interstellar space) to get to the NEAREST star.

- The capabilities of the Buddha (and some of his disciples with pātihāriyā powers) can be truly astounding. The Buddha could travel anywhere among the 10,000 "world systems" (dasasahassi lokadhātu). A "world-system" is a set of planets associated with a star, where one planet would have life. In our "Solar system," the Sun is the star, and life is based on Earth. See " 31 Realms Associated with the Earth."
- Therefore, it is mind-boggling even to imagine someone traveling to a star thousands of light-years away in an instant. Of course, the Buddha would travel such vast distances only with his "mental body" (manomaya kāya or gandhabba.)
- By the way, Brahmā from such 10,000 world-systems can visit Earth too. They have "bodies" that are equivalent to our mental bodies. They do not have dense physical bodies. Brahma $\bar{a}$ from the 10,000 world-systems came to listen to the Buddha's first discourse, Dhammacakkappavattana Sutta.
- Many suttā state that the Buddha would arrive in a Brahma world within the time taken for someone to straighten a bent arm, i.e., less than a second! That is how Brahma $\bar{a}$ from other world systems came to listen to Dhammacakkappavattana Sutta. "Brahma bodies" are almost equivalent to manomaya kāya of a gandhabba. (In comparison, a modern rocketship takes three days to get to the Moon.)
- Nothing analogous to such fast travel has yet been discussed in modern physics. I suspect that this is related to the recently established "non-locality" (or "quantum entanglement") in quantum mechanics: "Quantum Mechanics and Dhamma - Introduction.

## Going Through Walls, Mountains, etc.

9. Compared to "traveling through air with the physical body" discussed in \#6, and \#7 above, a much more complex technique comes into play when "going through walls or diving into the Earth." I have not seen such an action attributed to anāriya yogis. In this case, one breaks down the physical body to the elementary level of suddhatt!haka.

- "Matter" is mostly empty space. An atom is virtually empty. This basic idea is illustrated in the first 3 minutes of the following video.
WebLink: youtube: What Are Atoms Made Of?

## "Solid Matter" Is Mostly Empty Space!

10. We can get an idea about "how empty" an atom is, by just watching the first 3 minutes of the above video. As shown there, an atom is more than $99.999 \%$ empty!

- Then why is it that we cannot go through a wall? The answer is that two atoms cannot get too close to each other due to electromagnetic forces. That is not discussed in the above video. In a solid, two atoms cannot come too close, because the outer "electron cloud" of one atom will repel that of the second atom. Therefore, even a steel bar is mostly empty space.
- However, the Buddha taught that matter could be reduced below that of electrons and protons. That is the suddhatthaka level where there are no electromagnetic interactions (like the repulsion among electrons.) All the "material stuff" in a physical body can be reduced to an invisible suddhatthaka level. Scientists now know that an atom is divisible into smaller parts. The recently detected Higgs boson could be at the suddhatt thaka level.
- But scientists cannot reduce bulk matter to the suddhatthaka level. Moreover, they cannot take an object like an apple, break it down to below the atomic level, and then put it all back together. But one with high-end iddhi powers can do that!
- Such a yogi can reduce one's body to the suddhatṭhaka level, move it to another location very quickly and then put it back together! This was discussed slightly differently in \#6 through \#10 in the post, "Mystical Phenomena in Buddhism?"
- That approach of reducing the "material stuff" in a body to a form that can be transported to far destinations at high speed and then "re-assembling" back to the original form is part of science fiction these days, see "WebLink: wiki.org: teleportation." I remember watching the famous movie "WebLink: wikipedia.org: The Fly (1986 film)." In that movie, a fly gets into the "teleportation machine" with the human, and the "re-assembly" at the other end produces a "human fly"!

## Comparison With Modern Technology

11. As we can begin to see, modern science and Buddha Dhamma have two very different approaches for dealing with even material phenomena. Science is exclusively based on the study of inert matter. Buddha Dhamma can explain material properties in terms of mental phenomena. Of course, scientists are still way behind the Buddha.

- From what we discussed above, just think about one comparison. While the Buddha was able to visit Deva and Brahma worlds within a split-second, scientists have only made it to the Moon which takes three days.
- The scientists are not even aware of the existence of the Deva and Brahma realms.
- Deva and Brahma realms are up there above the Earth. They have very little "matter," so scientists cannot see them or their habitats. Our rocketships can go through their habitats without them even noticing it.
- The closest analogy we have is the depiction of a gandhabba in the 1990 movie "Ghost.' See, "Ghost 1990 Movie - Good Depiction of Gandhabba Concept." We can get a good idea of why we cannot see Devā or Brahmā (or their habitats) from watching that movie. Devā or Brahmā have "bodies" even more subtle compared to a human gandhabba.
- Unless the scientists can figure out how to implement teleportation, they will not be able to even travel to the nearest star with rocket ships. Buddha's "mind-based" technique is based on a different paradigm.
- In the Sīsapāvana Sutta (SN 56.31), Buddha said that he taught only a tiny fraction of what he knew. See "WebLink: suttacentral: In a Rosewood Forest."

There is no need to study or learn about iddhi pātihāriya in detail. I am providing this account to establish the following point. By controlling the mind, even a single person can get ahead of hundreds of years of scientific effort. The other two "miracles" discussed in "Pātihāriya (Supernormal Abilities) of a Buddha - Part II."

## Additional Resources

1. There is a Wikipedia article, "WebLink: wikipedia.org: Miracles of Gautama Buddha."
2. The above video is the second of a series of videos. More information on atoms in the following set of videos:

WebLink: youtube: What Is an Atom and How Do We Know?

### 2.3.3 Pāṭihāriya (Supernormal Abilities) of a Buddha - Part II

July 24, 2020

## Introduction

1. A different paradigm involves controlling material phenomena in Buddha Dhamma compared to modern science. For example, scientists have developed rocket technology to travel to the Moon. The Buddha was able to travel much further and much faster with "mind power" 2600 years ago. We discussed some examples in the previous post; see, "Pātihāriya (Supernormal Abilities) of a Buddha - Part I."

- The mind-based approach of Buddha Dhamma is much more powerful. Such unimaginable powers MAY ARISE automatically by just cleansing or purifying one's mind. However, only certain people can develop such abilities to control material phenomena. They had cultivated such powers in recent past lives.
- What is the use of being able to fly through the air like a bird or being able to travel to the Sun instantly and touch it if one is to born as an animal or worse in a future life?
- Controlling material phenomena is of no use to get a resolution to the universal problem of suffering associated with the rebirth process.
- That is why the Buddha explained to Kevatta that the miracle of instruction is the most important. Only a Buddha or a true disciple of the Buddha can provide such guidance as to how one can understand the problem of samisāric suffering and learn how to overcome it.

## The Miracle of Instruction (Anusāsana Pātihāriya)

2. In the Kevatṭa Sutta (DN 11), the Buddha explains to Kevaṭta that a Buddha (Tathägata) arises in the world with the perfect knowledge about the world. Then anyone could learn his teachings and follow them to reach full release from future suffering via attaining Nibbāna (Arahanthood.) The Buddha in that sutta describes the steps a Bhikkhu would go through, but the process is similar (and less strict) for a lay-follower.

- He would live a moral life, abstaining from killing/hurting other living-beings, without using improper forms of speech, and also controlling greed and anger. Most of all, he would learn the true nature of this world and remove many ingrained wrong views about this world. See, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- Most of the first half of the sutta describes the recommended (more strict) lifestyle of a bhikkhu. It is a good idea to read the second half starting with the section on "Restraint of the Sense Faculties." See the English translation, "WebLink: suttacentral: To Kevatta (DN 11)."
- The Buddha advised a "middle-of-the-way" lifestyle that is away from both making one's body to hardships AND indulgence in sense pleasures.
- While following the Buddha's path, some people may also attain the ability to control material phenomena with psychic power (iddhi pätihāriya.) Let us specifically discuss that briefly now.

## What Are Iddhi?

3. Iddhi means "to cultivate" or to "grow" or "to make better."

- Those "supernormal" abilities that we discussed in the previous post result from cultivating four mental capabilities (Cattāro Iddhipādā.) They are chanda (desire for spiritual development/to attain Nibbāna,) citta (the mindset for that goal,) viriya (the effort,) and vimaimsā (figuring out the way by investigating.) The "WebLink: suttacentral: Vibhanga Sutta (SN 51.20)" discusses those factors in detail. It is a good idea to read the English translation there and also "WebLink: accesstoinsight.org: Iddhipada-vibhanga Sutta: Analysis of the Bases of Power."
- Note that chanda here does not refer to the desire for sensual pleasures (icchā.) Instead, it relates to a yearning for spiritual progress (for anariya yogis) and the desire to attain Nibbāna for those who are on the Noble Eightfold Path.
- While anariaya yogis can attain some supernormal powers, those achieved by Ariyā (Noble Persons with magga phala) are much more potent or powerful. Furthermore, an anariya yogi could lose those abilities (just like the ability to get into anariya jhāna) even in this lifetime.

## Anāriya Iddhi Powers Are Temporary

4. The Tipitaka account of Devadatta clearly illustrates this point. He was able to cultivate anariya jhāna and had developed some supernormal powers (iddhi) as well.

- By performing some supernormal tasks, Devadatta was able to impress Prince Ajātasattu. Having assumed the form of a young boy clad in a girdle of snakes, he appeared in Prince Ajātasattu's lap. Prince Ajātasattu was highly impressed and became a devout follower. Devadatta started thinking about
"replacing Buddha to lead the order of Sañgha." With that thought, Devadatta lost his supernormal capabilities.
- Still, Devadatta did not lose his ambition to "become the Buddha." Later on, he tried to take the life of the Buddha in several attempts. In the end, he was born in an apāya.
- The details are in the section starting with "The story of Devadatta" at, "WebLink: suttacentral: Schism in an Order (Sañghabheda)." It is a long read up to the end of the post, but it is worthwhile.

## What Is the Basis of Such Iddhi Powers?

5. This is where we start understanding the basis of "mental power."

- A mind burdened with greed, anger, and ignorance (about the real nature of this world) has no "strong and beneficial" abilities. Instead, such minds create "dark kammic energies," leading to unpleasant kamma vipāka in general and also rebirths in "bad realms." We know that those undesired realms are the $a p \bar{a} y \bar{a}$ or the four lowest realms. The Pali terms for those three bad causes are lobha, dosa, moha.
- If a mind is absent from those three primary defilements, then actions (kamma) by such a "noncontaminated mind" create "clean kammic energies." Those lead to good kamma vipāka and rebirths in the 27 "good realms" lying at and above the human realm. In the absence of lobha, dosa, and moha, a mind creates kammic energies with, of course, alobha, adosa, amoha. Those are the three good causes.

## Births in the Four Lowest Realms Arise Due to Actions with Lobha, Dosa, Moha

6. The "dark energies" associated with thoughts associated with lobha, dosa, moha create "kammic energies" that can bring births ( $j \bar{a} t i$ ) in the apāyā. Those energies are "bhava" in the Paticca Samuppāda process. Therefore, "bhava paccayā jāti" means a "bad bhava" leads to a corresponding "bad birth."

- With the more robust the level of ignorance (moha,) the easier it is to do the seven akusala kamma $\bar{a}$. Those are false, hurtful, deceitful, and vain speech and killing, stealing, and sexual misconduct.
- A mind that free of lobha, dosa, moha (i.e., with alobha, adosa, amoha) is a "moral mind." It would know the difference between moral deeds and immoral deeds. In particular, it would try to avoid the seven akusala kamm $\bar{a}$ done with speech and bodily actions.

## Births Above the Human Realm Arise Due to Actions with Alobha, Adosa, Amoha

7. There are 26 realms above the human realm (six Deva, sixteen rupāvacara Brahma, and four arupāvacara Brahma realms.) Such births arise due to bhava energies created with thoughts devoid of greed and anger. Here deep ignorance or moha is absent and, thus, amoha. However, as we will see, there is still ignorance about the true nature of the world (avijj $\bar{a}$ ) left in mind.

- In other words, births in the 26 "good realms" arise due to the three root causes of alobha, adosa, amoha.
- Because of that, lives in those realms are relatively free of harsh sufferings.
- If we look at the lifetimes of those realms, they become longer for higher realms. See, " 31 Realms of Existence."
- The human realm is also "good," but there is significant suffering too. So, we need to treat the human realm differently from the other 30 realms. We discuss that now.

## The Human Realm is Unique

## 8. Human births could arise due to combinations of all six root causes.

- There are three main types of humans. Some have tihetuka births, meaning that particular human birth was due to a kamma with the three "good roots" of alobha, adosa, amoha. Another set of humans have only two good roots (dvihetuka births), either alobha/amoha or adosa/amoha. The third type has only one good root of amoha. Those are ahetuka births because they are "unfortunate births." (The word "ahetuka" here does not mean the absence of even a single good root)
- It is not possible to distinguish between tihetuka and dvihetuka births. But it is relatively easy to identify ahetuka births because they have little intelligence.
- All three types of humans experience both good and bad kamma. Even tihetuka people can come down with disease or injury. Even though the Deva realms also belong to the kāma loka (just like the human realm,) the bodies of $\operatorname{Dev} \bar{a}$ are not dense enough to cause any diseases/injuries.
- The root causes and how they lead to rebirths discussed in, "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

## Second Uniqueness of the Human Realm

9. The human realm is also unique in the following way. Most rebirths are determined while in the human realm. Then they spend the lives in either lower or higher realms until the corresponding kamma $v i p a ̄ k a$ are "paid off." For example, a given human may do some bad deeds suitable for births in apāya but may change the lifestyle and cultivate jhāna. So, he/she would have created both good and bad bhava. Since developing a jhāna is an ānantariya kamma, a Brahma birth will come at his/her death. But unless he/she had attained a magga phala, a birth in an apāya will result after exhausting time in the Brahma realm.

- As we remember from the post, "Buddhism and Evolution - Aggañña Sutta (DN 27)," a newly-formed Earth would be entirely populated by humans (with Brahma-like subtle bodies.) But with time, cravings arise due to anusaya, and those with "bad gati" will be reborn in lower realms. If a Buddha does not appear in a given eon, most humans end up in the lower realms sooner. It is a complex issue.
- More details on anusaya at, "Āsava, Anusaya, and Gati (Gathi)."

## Living-Beings in Lower Realms Have Denser Bodies in General

10. In general, living-beings in the kāma loka (four lower realms, the human realm, and six Deva realms) have dense bodies with five sense faculties. In most cases, sensing odors, tastes, and bodily-touches REQUIRE dense bodies.

- Most living-beings have a craving for those "close-proximity" sense pleasures. They like to eat tasty foods, smell sweet odors, and to engage in sex. As long as a living-being does not lose cravings, they WILL NOT be free from the kāma loka. Now, some may cultivate anariya jhāna and be born in a Brahma realm but will return to the human realm at the end of that life.
- As we mentioned earlier, Devā do enjoy such 'close contacts," but those contacts are "softer." In Pali, the word "olarika" implies "close contacts with dense bodies in human and lower realms." In the Deva realms, the contacts and bodies are "sukuma" or softer. Deva also can be born in the apāy $\bar{a}$ after they exhaust their Deva lifetimes.

## The Journey Among the 31 Realms Is Perpetual

11. The above process has been going on for any of us from a time that is not possible to trace back. That is the samisāric journey or the rebirth process.

- Unfortunately, most of those births are in the four lower realms or $a p \bar{a} y \bar{a}$. But, of course, we would not know all this unless we learn it from a Buddha or a disciple of the Buddha.
- The "suffering" in the First Noble Truth is the harsh suffering in the apāy $\bar{a}$. Any pain and suffering that we FEEL NOW are due to past causes. We need to use appropriate medical treatments to alleviate such suffering.
- The First Noble Truth of Suffering refers to the harsh FUTURE suffering associated with the rebirth process. The good news is that the Buddha also explained how to stop that future suffering.

## The Miracle of Instruction (Anusāsana Pāṭihāriya) of a Buddha

12. The above description of the real nature of our world with 31 realms and a beginning-less rebirth process is not known to the world in the absence of a Buddha. Only a Buddha can discover them and explain it to the world. Furthermore, a Buddha also provides instructions on how to stop the perpetual suffering in the rebirth process.

- Those two aspects involve the "Miracle of Instruction (Anusāsana Pāṭihāriya)" of a Buddha.
- The other two "miracles" of psychic powers and telepathy are just two byproducts. But, as the Buddha told Kevaṭa in the Kevatṭa Sutta (DN 11), those are not that different from "magic tricks." They are real and not magic, as I have explained in "Pātihāriya (Supernormal Abilities) of a Buddha - Part I" and "Mystical Phenomena in Buddhism?" Still, they are not of long-term value.
- What is the use of being able to fly through the air like a bird or being able to travel to the Sun instantly and touch it if one is to born as an animal or worse in a future life?
- In the same way, what is the use of accumulation of billions of dollars in this life, only to be reborn an animal in a future life?
- This is why the Buddha advised us to focus on attaining Nibbāna. At least the Sotāpanna stage of Nibbāna.
- We will focus on the "Miracle of Instruction of a Buddha" in the upcoming posts. Then it will become apparent, from yet another angle, the uniqueness of Buddha Dhamma.

### 2.4 What is Buddha Dhamma?

Revised on January 16, 2016; major revision September 12, 2018; revised August 7, 2019; March 2, 2020

## Introduction

1. Many people, who are to a bit of Buddha Dhamma, see that there is something good about it. So, they just go to a meditation retreat and try to get a dose of Dhamma over several days.

- It is good to do that initially. But there is much more to Buddha Dhamma than to attain some temporary relief from the stresses of this life. If one can see that, then one needs to spend a bit more time and learn the full message of the Buddha.

2. If we learn the laws of motion from someone who does not fully understand them, it is harder to digest. We may even learn them incorrectly, in the case of a bit harder subject, say, relativity. If the person who explains does not have a good understanding of the theory of relativity, then it is likely that the person who learns it will not learn much.

- I have not only learned Buddha Dhamma, but have practiced it over the past ten years, and have seen the benefits for myself.
- As a scientist, I am amazed at the depth of Buddha Dhamma. You will be able to see what I mean if you spend some time here.

## A Wider World View

3. Benefits from Buddha Dhamma or the "worldview of the Buddha" can be two-fold.

- First is the spiritual aspect. One will be able to experience "peace of mind" even by reading and learning, but when one starts comprehending the critical message of the Buddha, that can have a profound impact.
- Second is the "intellectual aspect." Buddha Dhamma thoroughly explains the "laws of Nature." I have spent ten years studying it, and I am still learning. Once one starts digging deeper, one will see that modern science is far behind.

4. As I build up this site, anyone will be able to see that Buddha Dhamma is the ultimate Grand Unified Theory; see "The Grand Unified Theory of Dhamma."

- It explains everything not only that we can see, but also the existence of infinite number of worlds with living beings in 29 other realms of existence. We can only see the human and animal realms.
- Thus Buddha Dhamma is not a religion in the sense of providing salvation. Buddha was not a God, a prophet or a messenger. He was a human being who purified his mind to perfection so that he could see the whole of existence. Buddha was the perfect scientist who investigated the problem of life and found a complete solution. We all need to find our salvation by following the Path that he prescribed to purify our minds.

## Why Are There So Many Versions of Buddhism?

5. Thus Buddhism (Buddha Dhamma) is the most elaborate theory of "this world." It is called "pubbe anunussetu dhammesu" or a "Dhamma (or a theory on nature) that is not known to the world before a Buddha comes along." The Buddha uttered that phrase multiple times in his first sutta; see, "Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

- However, it has "evolved" into many different versions since the Buddha Gotama revealed it to the world over 2500 years ago.
- During the past 2500 years many different versions of "Buddhism" have emerged; see, "Historical Background - Introduction." No one can claim, "this is the original version that was delivered by the Buddha." It is up to each individual to examine different versions and decide which version makes sense.
- Thus it pays to spend some time and try to find the version(s) closest to the original. That is not an easy task these days.
- I content that it is the Pāli Tipiṭaka, not Sanskrit sutras, and not in Buddhaghosa's Visuddhimagga. I have pointed out the inconsistencies in both Mahāyāna version and also in the current Theravāda versions with Visuddhimagga as the basis, see, "Historical Background" section.

## Key Concepts of Buddhism

6. It will be quite beneficial to read the "Moral Living and Fundamentals" section to get an idea of the basic principles.

- One cannot even begin to follow Buddha Dhamma unless one learns about the key concepts, see "Key Dhamma Concepts."
- The first stage of Nibbāna (Sotāpanna stage) is attained just by fully comprehending the "world view of the Buddha." Then one sees the fruitlessness of seeking lasting happiness in "this world" of 31 realms.

7. What is the central message of the Buddha? It is essential to read the section, "Anicca, Dukkha, Anatta."

- It is also important to realize that dukkha is not the feeling of suffering; that is dukha; see, "Does the First Noble Truth Describe only Suffering?."
- If one did not know that he was talking about a much "bigger world" than the world we directly experience, one would think of that statement as nonsensical. The laws of kamm $\bar{a}$ do not make sense unless one at least knows that the Buddha was talking about a rebirth process that has no beginning.

8. Newton discovered the three laws of motion which helped describe gravity. Instead of re-discovering them, we learn them at school. We have to learn from a teacher. But if the teacher does not know the material well, then a student will not be able to learn the correct laws of motion.

- One needs to learn from a true disciple of the Buddha, one who has not only studied it but also has experienced the benefits.
- Even though I use some "science examples", there is no need to know any science. A science background may be helpful mainly in the "Dhamma and Science" sections, but even there it is not necessary.
- The new section on "Quantum Mechanics and Dhamma" is more suitable for those who have at least a high-school background in physics.

## The Big Picture

9. Before one embarks on a journey, one needs to know what the trip is about, and what the destination is. Furthermore, whether it is worthwhile to undertake the trip. Please be patient and first find out what Buddha Dhamma is about, the big picture, first. Please spend some time learning about the key message of the Buddha before undertaking the journey. If one does not know where one is going (or the terrain), how can one reach the destination?

- Buddha Dhamma describes the true nature of "this world." But "this world" does not just mean our life as a human. "This world" is unimaginably complex. Scientists admit that they are aware of only $4 \%$ of the things in this universe; see, "The 4 Percent Universe: Dark Matter, Dark Energy, and the Race to Discover the Rest of Reality", by Richard Panek (2011). Also see, "Dhamma and Science" section for details.
- Please be patient and scan through the main sections to get a brief idea first. Getting the "whole picture" will take time, see, "User's Guide to Pure Dhamma Website."

10. The next question (especially when one sees that it is indeed a complex picture) that comes to one's mind is that "How do I know this picture is right?." One makes that decision based on one's own experience. But even before that, one could get a good idea by treating Buddha Dhamma as a scientific theory. That is why the section on "Dhamma and Science" is useful.

- Please pay special attention to the rebirth process. Many people wonder why rebirth bad. But they do not realize that the chance of rebirth as a human is extremely rare; see, "Rebirth - Connection to Suffering in the First Noble Truth."
- One must also realize that $j \bar{a} t i$ (birth) and bhava (existence in a given realm) are two different things; see, "Bhava and Jāti - State of Existence and Births Therein."
- Most are reborn in planes below the human realm where suffering is much worse. Scientists estimate that at any given time, there are one quadrillion (1000 trillion) ants living on Earth; this means for each human, there are million ants. Compared to about 7 billion of the human population, an incredible number of other living species live on this planet.
- Even on our bodies, we carry a large number of sentient beings: see, "There are as many creatures on your body as there are people on Earth!."
- The human population is insignificantly small compared to the animal population. Statistically, that gives an idea of the "probability of a human birth." We do not see the much higher populations in the other lower three realms because our minds are covered by defilements. If one develops $j h \bar{a} n \bar{a}$ and acquires abhiññā powers, one can see beings in some of those realms.
- October 25, 2019: I recently started a new subsection, "Origin of Life," that discusses many scientific, philosophical, and religious views of the origins of life.

## Is Buddhism Pessimistic?

11. Many people think the Buddha Dhamma is pessimistic. The Buddha just revealed the hidden suffering in "this world" and that it can be overcome;; see, "Does the First Noble Truth Describe only Suffering?."

- He showed that there is a better type of happiness, called nirāmisa sukha, that one gains as one moves away from "this world" towards Nibbāna; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?."
- This nirāmisa sukha increases as one starts on the Noble Eightfold Path and makes a quantum jump (large gain in a short time) at the first stage of Nibbāna, the Stream Entry (Sotāpanna) stage. There are three more levels, and at the final level, Arahant, one becomes free from "this world" (no more rebirths) and attains Nibbāna.
- Thus Nibbāna is not just a promise to be fulfilled at death; it can be experienced in this very life. I invite you to take this journey with me for a while and see for yourself. As the Buddha said, "Come and see for yourself' [Dhamma quality: ehipassiko].

12. My goal is to provide at least some details of the complex world view that was provided by the Buddha, which has been muddled and distorted within the past 2500 years.

- "Our world" is much more complicated than what is grasped by our senses; see, "The Grand Unified Theory of Dhamma."
- And our lives do not end with this one; see, "Evidence for Rebirth."
- Those two facts constitute the basis of the true nature of existence. One cannot comprehend the message of the Buddha until one at least has some idea about this "big picture."
- Many questions people have on concepts like kamma, morality, Nibbāna, etc., as well as philosophical questions like "why I am here?", or "why is the world the way it is?", will have answers within this big
picture. It is a complete world view, but it is up to each individual to determine whether it makes sense.
As the Buddha pointed out, the stakes are very high, and it is a good idea to take time and critically evaluate this big picture.

13. The following sections have information at various levels. Please scan through and find sections of interest.
[^0]
## $2.5 \quad$ Foundation of Dhamma

## Revised October 25, 2019

If you have not read the introductory post, "What is Buddha Dhamma?," please read and understand that first. It describes the unique aspects of Buddha Dhamma, in the sense that it is not a religion by some definitions, and the Buddha was not a savior.

## A Worldview Not Known Without a Buddha

## 1. There are two co-existing facets of Buddha Dhamma:

- The Buddha said, "This Dhamma is unlike anything that the world has ever seen." It needs a paradigm change to get into the "new perspective about this world view of the Buddha." One needs to be able to put aside all preconceived notions to understand the core message.
- However, the Buddha also said, "My Dhamma is good in the beginning, good in the middle, and good at the end." There is something to be gained from Buddha Dhamma for people who just come to know about it to those who have really grasped the core concepts. That is why I have separated posts into three categories on the site.
- Many essential terms and verses, even whole suttā, can be interpreted at several levels, ranging from superficial to profound meanings. As I build the site, I will try to give some examples. For example, the five precepts have much deeper meanings than the ones that are apparent. It is gratifying and exhilarating to see deeper meanings as one progresses. Thus, there is something to be gained at any level.

## Three Levels of Practice

2. There are three basic ways to practice Buddha Dhamma:

- At the fundamental level (see, "Moral Living and Fundamentals"), one can find happiness or suffering according to the way one lives one's life. One whose actions are harmful to oneself or the others will be living in misery. Someone may seem to be living in luxury but could be living with a stressed mind. We know about many wealthy/famous people who even committed suicide.
- At the next level, one leads a moral life and accumulates good kamma that could lead to a good rebirth. However, we need to keep in mind that even if one does not commit a single immoral kamma, the next birth could be a bad one. That is because we may have done enough immoral deeds in our previous lives; see, "Working Towards Good Rebirths."
- At the highest level, one will act to remove all evils from one's mind so that the mind becomes liberated from the body, which causes all suffering. Thus one will be working to achieve Nibbāna, the unconditioned, permanent happiness; see, "Seeking Nibbāna" and "Sotāpanna Stage of Nibbāna."

3. The organization of this site at three levels:

- Most people intuitively know the benefit of moral life. Dhamma will help understand why, and even point to some possible improvements.
- When one lives a moral life and EXPERIENCES the benefit of that, one will be automatically drawn to think about whether there is a life after death. One reads about the evidence for/against this possibility. If the answer is "yes," then one can find possible ways to work towards a better life in the next birth. That is not much different from the moral behavior above. It is just that one will learn a lot about "the world" that we live in.
- Once achieving the second stage, some may want to explore the third stage. That third stage encompasses THE message of the Buddha, that no matter where one is born in the next life there are NO guarantees that the lives after that will be suffering-free. That is the path to Nibbāna, to cease suffering permanently.

## A Systematic Approach Is Required

4. Going straight to the third level will be like trying to get into high school without finishing primary and secondary schooling.

- However, even if one has not yet heard anything about Buddha Dhamma before, some may be already at the second stage, and few may also be ready for the third stage. This life did not start at this birth. Each of us has come a long way and has molded our character through countless lives in the past. Thus, even if one is unaware of it, one may already be mentally prepared to tackle the third stage. So, please look around and find a starting point that is comfortable for you. See, "Where to Start on the Path?." Only you know about yourself!
- Also, see, "Starting on the Path Even without Belief in Rebirth" and "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

## Critical Thinking Is Essential

5. It is critical to realize that "knowledge" is not perfect at any level as long as one remains "in this world." Even though he was not talking about that, the famous physicist Richard Feynman illustrates this point well in this video:

## WebLink: YOUTUBE: Feynman Magnets and Why questions

- Let us take his example of someone slipping on ice. A drunk person stepping onto the ice-covered surface does not even realize that it is icy and slippery. At the next level, an alert person knows that the surface is freezing, and thus will be careful. But if one needs to understand why the icy-surface is slippery, then a bit of fundamental physics is required to understand "why ice is slippery." See the next post, "The Importance of Purifying the Mind."
- It is not necessary to understand "why ice is slippery" if one has an uncontaminated mind; a sober person with a calm mind will take precautions when stepping on an icy surface. More complex situations require the cleansing of an "average mind" further. That is where Buddha Dhamma makes a difference.

## A Defiled Mind Is Unable to Grasp Deep Dhamma

6. Even though humans have an innate sense of what is right and what is wrong, the human mind becomes cloudy due to the five hindrances (see, "Key to Calming the Mind - The Five Hindrances").

- Once Dhamma Theory is understood, just that understanding leads to the clearing up of some of these hindrances; furthermore, the logic of a moral life comes naturally out the Dhamma Theory. At least some idea of the foundations of Buddha Dhamma is CRITICAL before the "practice stage."
- If one living a moral life reads about the Dhamma Theory, he/she may be motivated to explore the second stage, i.e., to think about the validity of the process of rebirth, which is a fundamental axiom of Buddha Dhamma.
- When one LIVES a life with the belief that what one does in this life will affect how one will fare after this life, then one may realize the danger in this traversing this endless cycle of rebirths. That will lead to exploring the third stage, which is THE real message of the Buddha.

## Each Person Needs to Take the Initiative

7. No one else can steer anyone else to any meaningful mundane happiness with nirāmisa sukha (in this life or next) or to Nibbāna.

- The Buddha said, "Attā hi attano nātho, ko hi nātho paro siyā," or, "One indeed is one's refuge; how can others be a refuge to one?"
- Purification of the mind is the key. That means removing greed and anger and dispelling wrong views by learning Dhamma. That is the key to attain a peaceful life now, a better rebirth, or even to attain Nibbāna.
- Each one is in charge of one's mind. Others can only help.
- It is entirely up to the individual. This site will help one find the right path.

Next, "The Importance of Purifying the Mind", .........

## The Importance of Purifying the Mind

## Revised October 25, 2019; August 27, 2022

1. Analysis of a given situation always needs to be taken in the proper context. Let us again listen to Dr. Feynman's video in the previous post, "Foundation of Dhamma."

## WebLink: YOUTUBE: Feynman Magnets and Why questions

- It is worth discussing the case of an icy surface to look deeper than even Dr. Feynman did. He merely pointed out that there is no end to the sort of questions especially when a child keeps asking: "what is the reason for that?" at every step: "Why is Aunt Mimi in the hospital?" leads to the answer, "She fell on ice." Then, "Why did she fall on ice?" leads to "Because ice is slippery" which leads to, "Why is ice (and not concrete) slippery ?."

## Material Phenomena - Not the "Ultimate" Explanation

2. Up to this point, the child (or an average adult) can understand each answer BECAUSE, based on their life experiences, all those answers make sense. But the last question cannot be answered to the complete satisfaction of a child or an average adult, who does not have a background in physics.

- Unlike most other solids, ice has this peculiar property. When water is cooled, it expands and turns into ice.
- So, when Aunt Mimi stepped on the ice, the pressure of her weight caused the ice to shrink (i.e., become water). Thus a thin layer of water was formed between her shoes and ice, which caused her to slide and fall. Other solids tend to get more hardened under pressure, so there is no slipping due to that particular cause.

3. One does not need to know that bit of physics to avoid falling on ice. What was required to prevent falling was to have a keen sense of knowing that ice is slippery and one needed to take necessary precautions.

- May be Aunt Mimi was in an agitated state of mind and hurried out of the door without realizing that there was a thin sheet of ice on the driveway. If she were drunk, that would have also led to the same result. She would have been more careful if she were in a calm, relaxed state of mind.
- An agitated mind can result from excess greed and hate too. Most people do not realize this, but if we think back, we can remember instances where we made bad decisions because of a greedy or hateful state of mind. That is why getting into heated arguments can be risky. People even kill in a moment of rage.

## Buddha Dhamma - Mind at the Forefront

4. The teachings of the Buddha are unique. The mind is at the forefront, not material phenomena; see, "Manopubbangamā Dhammā..."

- Material phenomena originate with the mind. A deeper and lengthy discussion at "Origin of Life."
- But to understand those deep teachings, one's mind must be calm and clear. Five hindrances cause our minds to be clouded; see "Key to Calming the Mind - Five Hindrances." These have accumulated via bad habits that we have developed over countless lives; see, for example, "The Law of Attraction, Habits (Gati), and Cravings (Āsavas)."
- Each has different bad habits, but we all have them. Yet we can function "in this world" with that "baseline" (for example, not falling while walking on ice) if we do not make it worse by substance abuse or making the mind agitated (by getting angry or overly greedy), etc.

## Living a Moral Life Is Not Enough

5. Most people live their lives without resorting to extreme behaviors. That still does not allow us to see the true nature of "this world." The tide just carries us. We don't even examine whether it is a good idea to "just go with the flow."

- We do our best to make our lives better (materially) and eventually die without knowing that all those life struggles were in vain at the end.

## Importance of the Rebirth Process

6. The worse thing is that the story does not end at death but moves on to another phase (rebirth), where we will be doing precisely the same again.

- We have gone through this unending process for innumerable lives. Most of those have been much worse than our current human life. If one learns true Buddha Dhamma, one will "see" the fruitlessness of our struggles to seek happiness in a "world" that cannot provide that. Then one will try to get out of "this world" by following the Noble Eightfold Path of the Buddha and achieve permanent happiness.
- That is the crux of the message of the Buddha.
- We will be able to "see" the truth in the above paragraph (i.e., the true nature of "this world") if we start cleaning our minds to get rid of the five hindrances (see "How to Calm the Mind").
- There is mounting evidence for rebirth; see "Evidence for Rebirth."

## A Wider Worldview

7. A wider worldview is necessary for the rebirth process. We need to understand the broader view of "this world" of the Buddha. Many people plunge into "practicing Dhamma" without even having an idea of the "world view" of the Buddha. How can one practice if one does not know what the goal of that exercise is? The goals could be threefold:
i. to gain some peaceful state of mind in this life
ii. by looking at a more extended range, to make sure one will have a better life experience also in the upcoming births,
iii. to be released from this cycle of rebirths filled with dissatisfaction, and to seek permanent happiness, Nibbāna.

If the goal is one of the above three (and especially if (ii) and (iii)), then one needs to know what the complete "world view" of the Buddha was: This is the Buddha Dhamma.

- A comprehensive discussion at "Origin of Life."

## Original Teachings Are in the Tipiṭaka

8. It has been over 2500 years since the Buddha declared his message about the previously unknown broader world view. During that time, many distorted versions of Buddha's teachings appeared. See "Historical Background."

- My goal is to provide a more sensible, logical explanation based on the Theravāda Tipitaka that has remained unchanged. I have pointed out that in that section.
- Throughout this website, I have shown that Buddha Dhamma is self-consistent (within the Tipitaka), and is also compatible with many findings of modern science. See "Buddha Dhamma: Non-Perceivability and Self-Consistency" and "Dhamma and Science."

9. Since many are "just-looking" and have no reason to believe the truth of this worldview, I will present it as a theory. We will test this theory to see whether it meets the established scientific standards. I am used to that methodology as a scientist.

- Many people, especially in earlier times,decided on the enhanced EXPERIENCE as they followed the path. As one moves along the Path, this EXPERIENCE starts to transcend the sensory experience or sensual pleasures. There is a crucial difference between the sensory experience and the vastly enhanced experience of a purified mind.

## True Nature of This World

10. Once one understands what this broader worldview is, one can see that the solution to our problem existence does not depend on trying to probe deeper into material aspects at each step in an endless loop. We do not have enough time in this life to learn all that.

- Instead, it is just a matter of purifying our minds. A purified mind can "see" through one's refined experience as one follows the Path.

11. Stated succinctly; Buddha discovered that the solution to the problem of the existence is the failure to "see" the true nature of "this world." The true nature of this world is even more complicated than what science is finding out. See, "Worldview of the Buddha."

- But one only needs to see that "whole picture" and to realize that no matter where we are born, we will never find long-lasting happiness "in this world." That is because "this world" is inherently ever-changing, and that change is unpredictable.
- Everything "in this world" is in constant flux, but we cannot "see" that because our minds are "too cloudy" or 'too impure."

## Different Worldviews

12. There are religious approaches, but I will stay away from that subject. By the way, Buddha Dhamma is not a religion. It is scientific and is based on cause and effect (Pațicca Samuppāda.) There are no hypotheses about a Creator. The "conventional scientific method" started with the ancient Greeks at the same time that the Buddha lived.

- So, we have two scientific approaches. The mind-based scientific method of the Buddha and the conventional matter-based scientific method.
- Currently, most scientists are trying to figure out how the mind works by analyzing the brain. However, the mind is not in the brain. See "Near-Death Experiences (NDE): Brain Is Not the Mind."
- Buddha Dhamma is entirely consistent with the material aspects of science (as we will discuss). But in Buddha Dhamma, the mind precedes matter; matter is secondary.

## Three Characteristics of This World

13. Let us go back to the case of slipping on ice discussed in Dr. Feynman's video. To cope with an icy surface, all we need to know is to have prior EXPERIENCE with such a scenario. We also need an alert mind (that is not distracted by alcohol, anger, lust, etc.) to apply that experience to cope with the situation. That is the mind-based approach.

- When one carefully examines the "world view" within the Buddha Dhamma, one can see the problem of existence. ALL PARTS of this world are unsatisfactory, one can never maintain anything to one's liking for a long time. See, "Anicca, Dukkha, Anatta."
- That is all one needs to understand, not just read about. But that is the hardest; that is what requires an effort. Of course, one first needs to read and learn about this "world view."

Conventional Scientific Approach - The Focus Is on Material Phenomena
14. On the other hand, one could keep going down the line of questions probing deeper into the causes as to why ice is slippery, why water expands when it is cooled, the nature of chemical bonds, electrons and protons, about quarks that make up those protons, etc.

- It is quite right that this probing has led to many technological advances that we all enjoy today. I can write something on this site and get it to you within minutes; it is fantastic and very beneficial. But my point is that all this "probing deeper into material aspects" has not gotten us any closer to the questions on existence. Right now, science is approaching the limits of this probing because now we know that all matter is just energy.
- Even though we may benefit from technological advances, such benefits can be enjoyed only briefly (about 100 years) in the samisāric time scale. Buddha Dhamma provides a long-term solution.

## Buddha Dhamma - The Focus Is on the Mind

15. The Buddha stated 2500 years ago that, in the end, there is no benefit in probing deeper into material properties. All one needs to realize is that no matter what we achieve, they are all transitory, not stable. That requires purifying one's mind.

- When one truly comprehends the three characteristics of existence (see "Anicca - True Meanings"), and thus the unsatisfactory nature of this existence, one will not seek to gain "material things" but will endeavor to achieve Nibbāna. That only requires purification of one's mind. It does not require examining the outside material world in detail.
- When one goes deeper into the Buddha Dhamma, it becomes clear that mental energy is the basis of all existence. But that is a long story. We first need to see whether the "broader world view" of the Buddha makes sense.
- In 2019, I started a new subsection, "Origin of Life," that gets into a deeper analysis.

### 2.7 The Grand Unified Theory of Dhamma

Expanded May 20, 2016

- The Grand Unified Theory of Dhammā - Introduction
- Our Two Worlds: Material and Immaterial
- 31 Realms Associated with the Earth
- Gandhabba - Only in Human and Animal Realms
- Body Types in Different Realms - Importance of Manomaya Kāya
- Gandhabba Sensing the World - With and Without a Physical Body
- Nibbāna in the Big Picture

### 2.7.1 <br> The Grand Unified Theory of Dhammā - Introduction

## Revised May 20, 2016; December 22, 2018; July 6, 2019; August 21, 2019

1. According to Buddha Dhamma, EVERYTHING in existence can be put into four ultimate realities (paramattha):

- Thoughts (citta)
- Thought qualities or mental factors (cetasika)
- Matter (rūpa)
- Nibbāna

These entities described in detail in the Tables and Summaries and Abhidhamma sections; see, "Abhidhamma - Introduction."

- All existence "in this world" described in terms of the first three. And they are all conditional; each is born due to the presence of a cause. If there is no cause, none of these three will arise. That is the fundamental cause and effect (Paṭicca Samuppāda) in Buddha Dhamma.
- Causes are numerous, but the root causes are six: greed, hate, ignorance, non-greed, non-hate, and nonignorance.
- Nibbāna and those other three entities are mutually exclusive (things in this world are absent in Nibbāna); see, "WebLink: suttacentral: Pathamanibbānapatisamyuutta Sutta (Ud 8.1)" (English translation: "WebLink: suttacentral: The First Discourse about Nibbāna").

2. Nibbāna results with the removal of the three roots of greed, hate, ignorance (rägakkhyo, dosakkhayo, mohakkhayo Nibbānami).

- It is necessary to cultivate the three moral roots non-greed, non-hate, and non-ignorance first while in the mundane eightfold path. That allows one to comprehend Tilakkhana (anicca, dukkha, anatta) and get to the Noble Eightfold Path; see, "Buddha Dhamma - In a Chart."
- Therefore, one strives to remove greed, hate, and ignorance, which are "san"; see, "What is 'San'?." That is the key to Nibbāna, as laid out in the Noble Eightfold Path.

3. The citta arise and decay at a fast rate: billions of citta can arise and pass away each second. But as we will see in the Abhidhamma section, "active thoughts" occur relatively infrequently in "fast bursts" or citta $v i \bar{t} h i$. Cetasika is "embedded" in each citta. There are 89 types of citt $\bar{a}$ in all, and 52 types of cetasikas; see, "Tables and Summaries." Thus the mental realm is very complicated.

- For an introduction to the mind, see "Amazingly Fast Time Evolution of a Thought (Citta)," "The Amazing Mind - Critical Role of Nāmagotta (Memories)," and "Do I Have "A Mind" That Is Fixed and "Mine"?" in that order.

4. Matter (rūpa) constitutes of 28 basic units, of which only four are truly fundamental. However, the smallest indivisible unit is called a "suddhatthaka"; see, "Rūpa - Generation Mechanisms" and "The Origin of Matter - Suddhatthaka." These suddhatṭhaka have very long lifetimes of a mahā kappa (basically the age of the universe). suddhatthaka are the building blocks of any "tangible thing" in this world.

- Any sañkhata in "this world" is subject to change. Each sañkhata (basically any material thing) has a lifetime that could be shorter than a second or as long as billions of years (for a star for example).

5. Many people confuse "udayavaya" or "formation and the breakup of a sañkhata" means anything, including suddhatthaka, is perpetually in flux. They try to tie this with "impermanence" which they incorrectly translate anicca to be. In the contrary, a suddhatthaka has a very long lifetimes.

- It is only those "composites" such as humans, animals, trees, etc, that undergo decay and death at time scales that are discernible to us; a gold bar, does not decay for a very long time; see, "Does any Object (Rūpa) Last only 17 Thought Moments?."
- For a discussion on udayavaya ñāna, see, "Udayavaya Ñān̄a."

6. The "result" of this udayavaya nature of all sankhata embedded in the Three Characteristics of "this world": anicca, dukkha, and anatta. But anicca is NOT impermanence, and anatta is NOT "no-self"; see, "Anicca, Dukkha, Anatta - Wrong Interpretations."

- Briefly, (i) it is not possible to find AND maintain happiness in anything in "this world." (ii) Because of that, we become distraught and suffer, and (iii) Thus, one becomes helpless (not in control). It is essential to realize that these are characteristics of not just this life, but our beginning-less rebirth process in "this wider world" of 31 realms described below.
- Even though gold bars are virtually permanent relative to our lifetimes, we still cannot "maintain it to our satisfaction." That is because we have to leave it (and anything else) behind when we die.
- And all this is due to "udayavaya" of sañkhata, all that we experience.

7. Therefore, there is NOTHING "in this world" that is permanent (except "nāma gotta"; see below). Everything is constantly changing. That is the fundamental reason why nothing in "this world" will meet one's expectations; see, "Second Law of Thermodynamics is Part of Anicca!."

- Some things can last longer than others, but nothing is permanent. Anything is CONDITIONAL, i.e., arises due to causes. It would not come to existence in the absence of root causes. Thus it is said that everything "in this world" is CONDITIONED.
- The only exception is "nāma gotta," which are the permanent records of a given "lifestream"; see, "Recent Evidence for Unbroken Memory Records (HSAM)." That is how one with abhiññā powers can go back and look at one's past lives; some children can recall their past lives too. That record is permanent.

8. This world made of citta, cetasika, and rūpa is very complicated. Living beings can be born in 31 realms out of which we can "see" only two realms: human and animal.

- Think about the fact that all biological matter arises from just four bases of DNA, and all computer codes based on two units, $\mathbf{0}$ and 1 . Thus, one could see how complex the mind is when there are 89 types of citt $\bar{a}$, and 52 types of cetasikas are involved!

9. Nibbāna, in contrast to citta, cetasika, and rūpa, is UNCONDITIONED. Nibbāna attained by removing all root causes. Thus Nibbāna itself does not arise due to root causes and therefore is permanent.

- Nibbāna is attained at four steps or stages: Stream Entry (Sotāpanna), Once-Returner (Sakadāgāmi), Non-Returner (Anāgām $\bar{\imath}$ ), Arahant.
- At each stage, bad character or "gathi" (pronounced "gathi") that could result in births in some realms are "removed"; see, "Gati, Bhava, and Jāti." For example, at the Sotāpanna stage, hateful gati suitable for beings in niraya, greedy gati suitable for pet $\bar{a}$ (hungry ghosts), etc. are removed.
- All causes (and all "gati") removed at the Arahant stage. However, an Arahant lives as a normal human being until death and is not reborn anywhere in "this world." Let us first examine what the Buddha meant by "this world" in the next section.

## Thirty-One Planes of Existence

Here is a video from Carl Sagan to get an idea of how vast our "detectable universe" is:

## WebLink: YOUTUBE: Carl Sagan "100 Billion Galaxies each W/100 Billion Stars"

The "worldview" of the Buddha is not merely about the living beings on this planet. Our Solar system is one of an infinite number of "world-systems" (planetary systems). In the EACH planetary system with life (scientists have not found even one yet, but they are out there!), there are 31 "planes of existence." As we find out below, we can "see" only two of these realms: our human realm and the animal realm. Thus our "world" is much more complicated than even present-day science believes.

As some of you may already know, science cannot account for $\mathbf{9 5 \%}$ of the mass of the universe, which they label "dark energy" and "dark matter"; see, "The 4 Percent Universe" by Richard Panek (2011), or do a Google search on "dark energy and dark matter." That is why I say that the Buddha transcended "this world"; see, "Power of the Human Mind - Introduction." He was able to "see" the whole of existence: see "Godel's Incompleteness Theorem" under "Dhamma and Science."

- A being in a given plane of existence is reborn in any of the 31 realms at death. That happens instantaneously, and evidence for such a mechanism is slowly emerging from quantum mechanics; see, "Quantum Entanglement - We are all Connected."

The Buddha has described these different realms of existence in many suttā, and a convenient summary is at: "The Thirty-one Planes of Existence." For a detailed discussion see, " 31 Realms Associated with the Earth" In the following, I will use a visual to simplify things a bit and to provide a simple description of Nibbāna with respect to this "wider world of existence."

- Imagine a sphere with 31 shells, with a small sphere in the middle. Thus the total volume of the big sphere is filled by the center sphere and surrounding shells. The 31 sections represent the 31 planes of existence. I emphasize that this is just a visual. The reality is different. For example, animal and human realms coexist. Also, both time and space are infinite.

1. The inner 11 shells represent the $k \bar{a} m a$ loka, where all five physical sense faculties are present.

- The innermost sphere represents the niraya (hell) where there is non-stop suffering; next is the animal realm. There are two more realms where suffering is higher than in the human plane.
- The human plane is the fifth shell. That is the last realm where greed, hate, and ignorance all prevail. However, this is unique in the sense that humans can also get rid of all those three and attain Nibbāna.
- The sixth through eleventh shells represent the realms of the $\operatorname{dev} \bar{a}$ (wrongly translated as gods by many). Devas do not have dense bodies with flesh and blood, and thus, they do not have the physical ailments. They do not generate greedy thoughts.

2. The next 16 shells represent realms where only two physical sense faculties (eye and ear) are active, in addition to mind. These beings have very fine bodies, even less dense than dev $\bar{a}$. These are called $r \bar{u} p a$ lokā.
3. The last four shells represent the arūpa lok $\bar{a}$, where beings have ultra-fine bodies and only the mind faculty; they do not have physical senses.
4. In $r \bar{u} p a$ and $a r \bar{u} p a ~ l o k \bar{a}$, living beings are in jhānic states, and those beings do not have either greed or hate; but they still have ignorance.

- Humans can attain these jhānic states, and thus humans can "temporarily live" in those lok $\bar{a}$; see, "Power of the Human Mind - Anāriya or Mundane Jhānā."
- The 16 realms in the rūpa loka correspond to the four lower $j h \bar{a} n \bar{a}$, and the four realms in the arūpa loka correspond to the four higher $j h a \bar{a} \bar{a}$.

5. Now, a lot of you may be thinking, "How do I know all this is true? Is there any evidence?." There are a lot of things we do not know about "this world." We cannot rely on our senses or even science to verify/confirm these; see, "Wrong Views (Micchā Ditthi) - A Simpler Analysis" and "Dhamma and Science."

- Only within the last 50 years or so that science has accepted that our universe has more than a few galaxies (now science has confirmed that there are billions of galaxies!).
- Furthermore, the newest findings (yet unconfirmed) in string theory indicate that we live in a 10dimensional world (of course we cannot see the other spatial dimensions), not a 3-dimensional world. For a fun look at different spatial dimensions, see, "Consciousness Dependence on Number of Dimensions."

6. Any living being (including each of us) has been in all realms in this beginning-less samisāra. We have been in the niraya (hell), and we have been at the highest (except the five pure abodes in rūpa loka which can be accessed only by $A n a \bar{a} g \bar{m} \bar{\imath}$ or Non-Returners).
7. Above the human realm, there is relatively less suffering (except at death, which is inevitable). However, unless one has achieved at least the Stream Entry (Sotāpanna) stage, even a living being in the highest plane can fall to any lower level. Therefore, a normal human is bound to end up in the niraya (hell) at some point; once there one will spend a long agonizing time there and eventually come out. Each of us has done this many times over. The cause of births in different realms is explained in terms of "kamma seeds"; see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka").
8. So, each living being moves from one realm to another, but spends the most time in the four lower worlds, mainly because once fallen there, it is hard to come out. This "samisāric wandering" is the critical point to think about and comprehend.
9. As one moves away from the center, the level of suffering decreases and the level of mundane pleasure increases up to the 11th realm. After that in the rūpa and arūpa lok $\bar{a}$ it is mainly the jhānic pleasures, not the sense pleasures; see, "Three Kinds of Happiness - What is Nirämisa Sukha?."
10. The human realm and the animal realm are the only ones where a being is born to parents. In all other realms, living beings are born instantaneously, formed fully, within an instant (cittakkhana) of dying in the previous life. That is an opapātika birth. That is why the Buddha said, "mano pubbañgama dhamma............" The mind is the root cause, not matter.

- As discussed in the Abhidhamma section, even the humans and animals start their "bhava" opapatically as gandhabbā; see, "Gandhabba (Manomaya Kāya)." They begin building a "dense physical body" after getting into a womb.

11. A person who becomes an Arahant or attains Nibbāna, will not be reborn in any of these 31 realms. Thus, Nibbāna is not difficult to understand: see, "Nibbāna - Is it Difficult to Understand?", and "What are Rūpa? Relation to Nibbāna", and other posts (by the way, you can type a keyword in the "Search box" at top right to get a list of relevant posts).

- Nibbāna, in the present model, corresponds to getting out of all 31 shells, out of the big sphere; no more rebirth in any of the 31 realms. Nibbāna is where the permanent sukha or nirāmisa sukha, is.
- When one attains Nibbāna or Arahanthood, he/she looks just like any other human but has no attachments to any worldly things. Until death, an Arahant is subjected to kamma vipāka. When that
kammic power is used up, he dies and is not reborn because he/she will not "willingly grasp" (or "upādāna") any of the possible births.

12. Why are we trapped in the 31 realms? Because we perceive that there is happiness to be had in "this world." We are not aware that there is much suffering in the lower four realms. Many people look at their lives and say, "where is this suffering the Buddha was talking about?": It is the hidden suffering that is there not only in this world but mostly in the lowest four realms. The problem is that once fallen there, it is hard to come back up. In those realms - animal realm included - beings are more like robots. They do not have developed minds like humans.

- No one or no external force is keeping us in "this world" of 31 realms. Content with sense pleasures, do not see the suffering "in the long term" or even in this life as we get old. Thus we are clinging to everything in this world like an octopus grabbing its prey with all eight legs. And we are not aware that there is a better kind of pleasure in Nibbāna, in detaching from "this world"; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?." (Also, unless a Buddha comes along, we do not know about the 31 realms and are not aware of the suffering in the lower four realms).

13. Can we taste Nibbānic "pleasure"?. Yes. We can feel it in increments, even below the Stream Entry (Sotāpanna) stage; see, "How to Taste Nibbāna." That is nirāmisa sukha, the "pleasure of giving up worldly things."

- This nirāmisa sukha has "quantum jumps" (substantial instantaneous changes) at the four stages of Nibbāna: Stream Entry, Once-Returner, Non-Returner, Arahant. Thus when one is on the Path, one can experience nirāmisa sukha at varying degrees, all the way to Nibbānic bliss, during this very lifetime; see, at the end of "The Four Stages in Attaining Nibbāna."

14. All these 31 realms are in our solar system (cakkavāla or Chakrawāta in Sinhala). They are associated with the Earth. There are billions of such cakkavāla (planetary systems) in existence at all times with living beings.

- These are in clusters of the small, medium, and large "world systems" (galaxies, galaxy clusters, and superclusters?). But none is permanent. They come into being and eventually perish. Within the past 100 years or so, scientists have confirmed the existence of billions of planetary systems within each galaxy. And there are billions of such galaxies in our universe!

We have been born in almost all of these realms in our samisāric journey that has no traceable beginning.
Continues the discussion in , "Our Two Worlds: Material and Mental", ........

### 2.7.2 Our Two Worlds: Material and Immaterial

May 14, 2016; Revised November 25, 2016; September 30, 2019; October 26, 2019; January 11, 2020; April 6, 2021; September 10, 2022

## Material World and Immaterial (Invisible) World

1. Our "human world" is made of two types of worlds:

- The material world ( $r \bar{u} p a$ loka) that we experience with the five physical senses. This is our familiar world with living beings and inert objects. This world has sights, sounds, smells, tastes, and body touches. For example, we experience sights via, "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviñãānaì," where cakkhu viñ̃̃āna is "seeing." The other four sensory faculties have similar expressions; see, "Contact Between Āyatana Leads to Vipāka Viññāna." [Here, paṭicca [paṭi $+c a$ ] means cakkhu and rūpa "getting together" or "making contact."]
- We can also recall our memories from the past and any future hopes/expectations that we have. Those are in the "immaterial world" we experience with our minds. It is also called the "nāma loka" or "viññāna dhātu."
- Here we use the phrase "immaterial world" ("nāma loka") to describe those dhammā that can only be experienced with the mind VIA, "manañca patticca dhamme ca uppajjati manoviñnān̄am.". Those dhammā include concepts, memories, etc in addition to kamma büja with energy; see below. [Here, pațicca $[p a t ̣ i+c a]$ means mana and dhamma "getting together" or "making contact."]
- Note that there are six types of dhātu. Five dhātus (pathavi, āpo, tejo, vāyo, ākāsa) are associated with the rūpa loka. The sixth, viññanna dhātu, is associated with the nāma loka.

2. Those two worlds co-exist. We experience the immaterial (invisible) world or the nāma loka with the mind.

- There are many things that we cannot "see" but we know to exist. For example, we know that radio and television signals are all around us, but we cannot "see" them. We need special equipment like radios or TVs to detect those signals.
- Those dhammā in the immaterial world are just like that. An organ (mana indriya) in the brain detects those dhammā. Scientists are not aware of that yet. They think memories, for example, are stored in the brain. They are not.
- Those memories are in that immaterial world that co-exists with the material world. Just like a radio can detect those invisible radio waves, mana indriya detects those "unseen" memories (and kamma bïja that bring kamma vipāka.)
- You may ask how can the mana indriya sort out all those different memories and uncountable kamma bija from our past lives. Did you realize that there are numerous radio and TV signals in a major city? Just like a radio or a TV can sort out and detect those signals, mana indriya can detect various types of dhammā.

## What Are Dhammā?

3. Dhamm $\bar{a}$ are what we perceive with the mind with the help of the mana indriya in the brain. Dhamm $\bar{a}$ include our memories in addition to kamma bïja (kamma bhava) that can bring vipāka.

- Only those with iddhi (super-normal) powers can recall memories from past lives. However, some children can remember past lives; see "Evidence for Rebirth."
- But dhammā (plural) also includes numerous kamma bija due to our past kamma (not only from the present life but from past lives.) They are not mere memories but have energies.
- Those dhammā with energy (i.e., kamma bija) are CREATED by our minds. Specifically, they are created in javana citta. For deep analysis, see "The Origin of Matter - Suddhatthaka."
- Einstein's famous equation relates tangible matter and energy: $\mathrm{E}=\mathrm{m} * \mathrm{c}^{\wedge} 2$, where E is energy, c is the speed of light, and $m$ is mass (amount of matter.)
- Just like plant seeds can germinate and become trees, our kamma bija (kamma seeds; bija means "seeds") can germinate in our minds and bring kamma vipāka.

## Rūpa Can be Dense or Fine (Subtle)

4. Rūpa in Buddha Dhamma cannot be translated into English as "matter" or "solid objects." As we discussed above, our kammic energies are "stored" in the immaterial world (viññāna dhātu) as very fine rūpa called dhammā.

- Of course, the word "dhamma" (without the long "a") refers to a theory or teaching, like in Buddha Dhamma. Only when used in the plural, dhamm $\bar{a}$ refer to those fine $r \bar{u} p \bar{a}$ detected with the mind (with the help of mana indriya.)
- Therefore, those very fine $r \bar{u} p \bar{a}$ are called "dhamma"" They are "anidassanaim, appatighaim," meaning they cannot be seen or detected by our five physical senses; see, "What are Dhamma? - A Deeper Analysis." They include "kammic energies" that can bring vipāka at any time.
- They bring vipāka when the corresponding dhammā contact the mana indriya and get passed down to hadaya vatthu. Since viññāña dhātu pervades the universe, dhammā (or kamma bija) can bring vipāka anywhere in the universe.

5. The five physical senses detect "dense" $r \bar{u} p \bar{a}$ in the material world. Such dense $r \bar{u} p \bar{a}$ are ABOVE the smallest "unit of matter" in Buddha Dhamma, called suddhatthaka. (A suddhatṭhaka is a billion times smaller than an atom in present-day science). The 28 types of rūpa consist of these "dense types of $r \bar{u} p a^{\prime \prime}$; see "Rūpa (Material Form)."

- The fine $r \bar{u} p \bar{a}$ are normally not called $r \bar{u} p a$ but dhamma $\bar{a}$ to make the distinction. Dhammā are very fine $r \bar{u} p a$ which are at or below the suddhatṭhaka stage. They are the $r \bar{u} p a$ are grasped only by the mana indriya or dhammayatana: "anidassanam், appaṭighaim, dhammayatana pariyapanna rūpaí. " For a more in-depth analysis, see, "What are Rūpa? - Dhammā are Rūpa too!."

## All Thirty-One Realms Share the Immaterial World

6. The immaterial world is like a fine fabric that connects all living beings. We cannot experience the immaterial world with the five physical senses (that we use to experience the material world.) All 31 realms share the immaterial world.

- In the four realms of the Arūpa loka, "dense matter" formed by suddhatthaka is absent (except for the hadaya vatthu of the arūpa Brahmā). Beings in the arūpa loka (arūpāvacara Brahmā) experience only dhamm $\bar{a}$. They do not have any five physical senses and only have the mind (hadaya vatthu).

Click to open in pdf format: WebLink: PDF File: Two Types of Loka

- Thus the "material world" is accessible only to living beings in the kāma loka and rūpa loka.
- Arūpa loka means there are no "condensed rūpa" (like those in kāma loka and rūpa loka), but of course, dhamm $\bar{a}$ are there (those arūpa beings can think and recall past events just like us).
- Furthermore, even in the $r \bar{u} p a$ loka only fine and subtle matter exists. There are no "solid objects" like trees. If we visit a rūpa loka, we may not see anything with our eyes.

## The World in Terms of Dhātu

7. Let us briefly discuss the main points depicted in the above chart. Everything in this world is made of 6 dhātu: pathavi, āpo, tejo, vāyo, akāsa, and viññāṇa. Five of them constitute the "material world" and the viññāna dhātu represents the "immaterial world."

- By the way, $a k \bar{a} s a$ is not merely "empty space." We will discuss this later.
- The basic building block for the material world is suddhatthaka. Not long ago, scientists thought that atoms were the building blocks, but now they say that even those elementary particles have structure. A suddhatthaka is much finer than any elementary particle.
- In the immaterial world (or the mental plane), there are the mental precursors to suddhatthaka. They are dhammā, gati, and bhava. Based on our gati, we make suddhatthaka in our javana citta; see, "The Origin of Matter - Suddhatthaka."

## Five Physical Senses Detect Dense Rūpa and Mana Indriya Detects Dhammā

8. We have five sense faculties to experience the material world: eyes, ears, tongue, nose, and body. They pass down the sensory inputs to the five pasāda rūpa located in the gandhabba or the monomaya kāya, which overlaps our physical body); see "Gandhabba (Manomaya Kāya)." By the way, gandhabba is not a Mahāyāna concept: "Gandhabba State - Evidence from Tipitaka."

- On the mental side, we have a mana indriya in the brain to sense the immaterial world; see, "Brain Interface between Mind and Body."
- Based on those five physical sense contacts with the material world and the contacts of the mana indriya with the immaterial world, our thoughts arise in the hadaya vatthu (also located in the gandhabba or the monomaya $k$ āya); see, "Does any Object (Rūpa) Last only 17 Thought Moments?."
- That is a very brief description of the chart above. One could gain more information by clicking on the links provided and using the "Search" button. Don't worry too much if all this does not make complete sense.

9. Thus it is important to understand that there are two types of $r \bar{u} p a$ in our human world:

- Tangible matter in the material world that we experience with the help of the five physical senses.
- Then there are unseen (anidassana), and intangible (appatigha) rūpa such as thoughts, perceptions, plans, and memories. They are dhamm $\bar{a}$, mano ru$p a, ~ g a t i, ~ b h a v a, ~ n a \overline{m a ~ g o t t a . ~ I t ~ i s ~ t h e ~ m a n a ~ i n d r i y a ~}$ in the brain that helps detect subtle rūpa.
- Both types of rūpa are eventually detected and experienced by the mind (hadaya vatthu). The hadaya $v a t t h u$ is not located in the brain but the body of gandhabba and overlaps the physical heart region of the body; see "Gandhabba (Manomaya Kāya)."
- Comprehending this "wider picture" may need a little bit of effort. The world is complex and much of the complexity is associated with the mind. The seat of the mind is not in the brain but the fine body (manomaya kāya) of the gandhabba.

## The Dream World

10. Another part of our immaterial world is the dream world.

- When we dream, we "see" people and material objects. But we cannot say where those are located. They do not have a physical location; they are in the immaterial plane. And we do not "see" those dreams with our eyes, but with the mana indriya.
- When we sleep, our five physical senses do not function. But the mana indriya in the brain does. Scientists do confirm that parts of our brains are active during sleep.
- What is experienced in Arūpa Loka is somewhat similar to seeing dreams. Of course, one can contemplate in the arūpa loka. However, one is unable to read or listen. Therefore, one cannot learn Tilakkhana (anicca, dukkha, anatta) from a Noble Person. Thus, one is unable to attain the Sotāpanna stage of Nibbāna in the arūpa loka. But if one had attained the Sotāpanna stage before being born there, one can meditate and attain higher stages of Nibbāna.

## Dense Rūpa for "Rough" Sensory Contacts

11. There is another way to look at our sense experiences. Living beings are attached to this world because they expect to gain pleasure from this world. Such pleasures are obtained by making contact with rupa. Those $r \bar{u} p \bar{a}$ come at various densities.

- Bodily pleasures are achieved by the strongest contact (touch). Then come taste, smell, vision, and sounds, becoming less dense in that order.
- The soffest contact is via dhamma. This is our immaterial world; we think, plan for the future, remember things from the past, etc: We do this all the time, and we can do it anywhere. Another way to say this is to say that we engage in mano, vacī, and kāya sañkhāra.
- Thus, contacts by the mana indriya with dhammā in the mano loka constitute a significant portion of sense experience. That involves mano rūpa (dhamma, gati, bhava, nāma gotta) in the mind plane or the immaterial world.

12. The way a living being experiences and enjoys (or suffers) sense contacts is different in the three main categories of existence: kāma loka, rūpa loka, and arūpa loka.

- Most "rough" or "olārika" sense contacts are available only in the kāma loka. Even here, they are roughest in the niraya (the lowest realm) and generally reduce in "roughness" as moving up to the human realm, the fifth. The six deva realms are significantly "softer" than the human realm; deva bodies are much finer (like gandhabba) and a normal human cannot see them.
- The roughest sense contacts (touch, taste, and smell) are absent in the rūpa loka. Only visual and sound contacts are available for the Brahmā in the 16 rūpa loka realms, in addition to the mind.
- Those arūpi Brahmā in the four arūpa loka realms has only the mind, with which they experience only the finest rūpa (dhamma) that are below the suddhatt thaka stage.
- Those Brahmā in both rūpi and arūpi loka have seen the perils of "kāma assāda" that are available in the kāma loka. They had enjoyed jhānic pleasures as humans and valued those more than the "rough" sensory pleasures. They have given up the craving for those "rough" sense pleasures that are available via touch, taste, and smell.

## Stronger Cravings Match "Denser Sensory Contacts"

13. We can get an idea of such "soft" and "rough" sense contacts with the following example. Suppose someone (a grandmother is a good example) watches her grandchild laughing, dancing, and having a good time.

- At first, she may be watching from a distance and enjoying the sight of the baby having fun.
- Then she goes and hugs the child. It is not enough to just watch from a distance; she needs to touch the child.
- If the child keeps wiggling and having a good time, the grandmother may start kissing the child. In some cases, the grandmother may start tightening the hold on the child, even without realizing it and may make the child cry out in pain.
- This last scenario exemplifies how the craving for extreme sense pleasures can instead lead to suffering. Of course, the craving for olārika sense pleasures leads to most suffering.
- But suffering is there even in the $r \bar{u} p i$ and arūpi realms. Even at the level of arūpi Brahm $\bar{a}$ - where the attachment is only to pleasures of the softest of the rūpa (dhamma) -, there is inevitable suffering at the end when they have to give up that existence and come back down to the human realm.

## Less Suffering in "Less-Dense" Realms

14. Therefore, the level of inevitable suffering goes hand in hand with the "denseness" of the sensory contact.

- Pains, aches, and illnesses are there only in the lowest five realms (including the human realm) where there are dense physical bodies. In the higher realms, those are absent. This is the price even humans pay for being able to experience "rough contact pleasures" such as a body massage, sex, eating, and smelling.
- We humans in the kāma loka enjoy close and "rough" sense pleasures. In addition, most times, just enjoying sense pleasures is not enough; we like to "own" those things that provide sense pleasures. For example, people like to "own" vacation homes; it is not enough to rent a house in that location just for a visit.
- This tendency to "own" pleasurable things also goes down in higher realms. There are fewer material things to "own" in Brahma lokas, especially in the arūpi Brahma realms.

## Connection to Magga Phala

15. As one attains higher stages of Nibbāna, craving for "rough" sensory pleasures and the desire to "own" things go down.

- A Sotāpanna has only "seen" the perils of kāma assāda; he/she still enjoys them. Thus, he/she will still be born in the kāma loka realms, but not in the apāyā.
- A Sakadāgāmī may still enjoy "kāma assāda," but has no desire to "own" those things that provide pleasures. It is enough to live in a nice rented house, and there is no desire to own a nice house. A Sakadāgāmī can see the burden of "owning things." A Sakadāgāmī will be born only in realms above the human realm.
- An Anāgāmī has no special interest in enjoying kāma assāda. He/she eats to quench the hunger (but will eat delicious foods when offered.) An Anāgāmī will never prioritize sensory pleasure over the "pleasure of Dhamma" (of course, Dhamma here means Buddha Dhamma). He/she will be born in the rūpa realms reserved for the $A n \bar{a} g \bar{a} m \bar{s}$ upon death, and will not be reborn in kāma loka.
- An Arahant has no desire for even jhānic pleasures, and will not be born anywhere in the 31 realms upon death.

16. Each habitable planetary system (cakkavāla) has all 31 realms of existence, even though we can only see two realms (human and animal) in ours.

This is discussed next: " 31 Realms Associated with the Earth",

## 31 Realms Associated with the Earth

May 20, 2016; revised November 29, 2018; April 25, 2019; August 27, 2019; March 10, 2020; July 23, 2022

1. There are many things in "this world" that we cannot see, hear, etc. (i.e., perceive with our six senses). Scientists admit that they cannot account for $96 \%$ of the "stuff" that makes our universe. See "WebLink: PDF Download: The 4 Percent Universe: Dark Matter, Dark Energy, and the Race to Discover the Rest of Reality" by Richard Panek (2011). For more information, Google "dark energy, dark matter."

- Many forms of energy do not have significant mass (or weight) but exist in the universe.
- A good example is that we are unaware of the huge amounts of "information" surrounding us. Hundreds and thousands of radio and television signals pervade a major city. We cannot see or hear any of those programs (i.e., unaware of their existence) without having a radio or a television "tuned" to the correct frequency.
- In the same way, we are unaware of the existence of 29 of the 31 realms centered around the Earth. Living beings in some of those realms live side-by-side with us, but we are unaware of them. Most of these beings have bodies "more like energy forms" than solid bodies.
- With better detection technologies, we may be able to communicate with some of these living beings with subtle bodies in the future. Of course, those who develop abhiñ̃̃̄̄ powers can also see some of them. We will get back to this issue below, but let us first discuss the relative locations of the 31 realms.

2. Buddha Dhamma says there are 31 realms associated with each habitable planetary system (cakkavāla). And there are an infinite number of them in the universe (this latter fact has been confirmed by science).

- Modern science has gradually confirmed this broader worldview explained by the Buddha 2500 years ago; see "Dhamma and Science - Introduction." Only a few hundred years ago, the Western world accepted a universe centered around the Earth with stars "embedded in a celestial sphere"; see, "WebLink: WIKI: Celestial spheres."

3. In the post, "The Grand Unified Theory of Dhamma - Introduction," we described a model that consisted of 31 concentric "shells." The actuality is close to that analogy, with some additional features. I have compiled a summary of the 31 realms in the " 31 Realms of Existence" post.

- The sphere with 31 concentric shells overlaps the Earth. The lowest realm, niraya (or hell), is deep inside the Earth.
- The next four realms (preta, asura, animal, and human) are closer to the Earth's surface. Some preta apāyā deep inside the Earth, but some pretās live on the surface. Asurās live on the surface, mostly in remote locations such as the ocean and isolated mountains. Humans can not see both pretās and asurās.
- Many suttā in the Tipitaka describe those three realms (niraya, preta, asura) in detail. The Peta Vatthu in the Khuddaka Nikāya of the Tipitaka describes pretās as well as gandhabbā.
- Most humans are born in the niraya, preta, asura, and animal realms at the end of the human bhava; see a series of suttas starting with "WebLink: suttacentral: Passing Away as Humans and Reborn in Hell (SN 56.102)."

4. Of course, humans and animals live on the surface of the Earth. Gandhabbā only belong to either the human or animal bhava. Those gandhabbā are waiting for a suitable womb to be born with human (or animal) bodies; see the Mental Body - Gandhabba section. There are many other posts as well.

- Thus we say that those gandhabbā are in para loka (nether world). Even though they live alongside us, we cannot see their subtle bodies: "Hidden World of the Gandhabba: Netherworld (Para Loka)."
- So, our world is much more complicated than we think.

5. Then come the six realms for the devas. The lowest of the six deva realms are on the surface of the Earth. Those devas are Bhummatta devas belonging to the Cātummahārājika deva realm; see " 31 Realms of Existence." They live mostly in their residences (deva vimāna) based on trees. Of course, we cannot see them or their "residences."

- The higher deva realms extend out from the Earth.
- The 16 rūpa realms extend even higher above the Earth.
- The four arūpa loka realms are located even further from the Earth.
- All these realms are concentric with Earth's center. As the Earth spins around its axis and rotates around the Sun, all 31 domains move along with the Earth, just like the human realm.
- Buddha has named these various realms in several key suttā, for example, in WebLink: suttacentral: Dhammacappavattana Sutta (SN 56.11) and WebLink: suttacentral: Mahā Samaya Sutta (DN 20).

6. In general, beings in higher realms can "see" those in the lower ones, but not the other way around (if they came "face-to-face"). For example, devas can see us but cannot see the rūpi or arūpi brahmā. Rūpi brahmā can see devas but cannot see the arūpi brahmā.

- From the previous post, "Our Two Worlds: Material and Immaterial," we know that there are only traces of "real" matter (suddhatthaka) in the arūpa realms. Thus beings in the other 27 realms cannot "see" arūpi brahmā.
- When one develops abhiññ̄ $\bar{a}$ powers, one is said to be able to "see" successively higher realms. Of course, one needs to be able to get into the fourth jhāna to develop such abhiñ̃n̄̄a powers. Eventually, when one develops the eighth jhāna (and can get into attha samāpatti), one could be able to see many of the 31 realms.

7. Now let us look at "things" in this world from a different perspective. A fundamental premise of Buddha Dhamma is the following. "Energy" is embedded in spin (bramana in Pāli; bramana or

- The smallest unit of matter, a suddhatthaka, does not stay still. Depending on its rotation or spin (bramana) and its rotation around something else (paribbramana), other "modes of energy" and "types of rūpa" arise.
- It is easy to visualize by considering the motions of the Earth. We all know that the Earth rotates (paribbhramana) around the Sun, and it takes a year to complete one revolution around the Sun.
- While doing that the Earth rotates around its North-South axis; this is the spinning (bramana). It takes a day for the Earth to complete one such spin.
- Here is an excellent video that discusses this universal feature:

WebLink: YOUTUBE: Rotation in Space - Professor Carolin Crawford
8. There are an infinite number of such cakkavāla (star systems or a collection of planets revolving around a star) in our universe. Each planet in a "star system" undergoes spin around its axis and rotates around the star. Science has confirmed this within the past hundred years.

- Each cakkavāla may have "Earth-like" planets with their own 31 realms.
- A cluster of thousand of such cakkavāla is called a "cūlanikā lokadhātu" or a "small world system." Thousand of such systems is a "majjhimikā lokadhātu" or a "medium world system." A cluster of thousand of such systems is a "mahāsahassī lokadhātu" or a "large world system"; see "WebLink: suttacentral: Cūlanikā Sutta (AN 3.80)."
- Also see "WebLink: suttacentral: Pathamakosala Sutta (AN 10.29)" and "Buddhism and Evolution Aggañ̃̃a Sutta (DN 27)."

9. Scientists have also confirmed that all elementary particles (the smallest particles scientists can detect) have spin. Furthermore, in an atom, the electrons can be said to "rotate" around the nucleus, in a crude analogy with the Earth rotating around the Sun.

- Then our Solar system rotates too. The next higher conglomerates (for example, galaxies) also undergo rotation. Because of these rotations, all these structures tend to flatten out. For instance, in our Solar system, all the planets are on a plane. In the same way, all galaxies in a galaxy cluster in a flattened disk.
- Therefore, even though we see a very calm starry night sky, things out there are in constant motion. Furthermore, violent explosions of stars (supernova) occur a billion times a year in the visible universe.
- That is why the realities out there are much more different than what we perceive with our crude sensory faculties. All the atoms and molecules in our bodies are in constant motion, not to mention the spins and rotations of uncountable suddhatṭhaka that constitute them.
- Thus everything around us is in constant flux. Our senses are just not capable of detecting them.

10. Modern science has also enabled us to see more and more living beings around us. For example, the Western world was unaware of microscopic living beings until the advent of the microscope by Leeuwenhoek in the late 17th century: WebLink: WIKI: Antonie van Leeuwenhoek.

- Now we know that billions of living beings are in the body of a human being. See, "There are as many creatures on your body as there are people on Earth!."
- Hopefully, new technologies will enable us to "see" many living beings belonging to the preta, asura, and deva realms and gandhabbā in the future.
- Even though some claims of detecting horrible sounds from the niraya deep inside the Earth have not been confirmed, see "Does the Hell (Niraya) Exist?."

11. As one moves up to higher realms, attachments to the material aspects decreases. That is why living beings in higher realms have less number of sense faculties.

- In the kāma loka, one has all six sense faculties. Even there, the higher deva realms have "less strong sense contacts" with less dense bodies that we cannot see.
- Rūpi brahmā have much more delicate "bodies" compared to kāma loka devas. They do not have touch, taste, and smell sensations.
- "Matter" is very subtle in higher rūpa loka and arūpa loka realms. Therefore, even in the final destruction of a cakkavāla (in a supernova explosion), the realms above the Abhassara realm (realm \#17) are not destroyed. That is why the lifetimes of those Brahma $\bar{a}$ are much longer than a single maha kappa (an eon or the age of the universe); see " 31 Realms of Existence."

12. Now we can understand why we cannot see the other 29 realms.

- In the higher realms around the Earth, living beings (and their environments) have very little solid matter. That is why we cannot see them or their habitats.
- The four arūpa realms are mostly devoid of even the smallest unit of matter (suddhatthaka). Realms in the rūpa loka and even in the deva realms of the kāma loka are made of fine matter that we cannot see.
- The beings in the niraya (hell) have very dense bodies subjected to various forms of torture; of course, that realm is located deep inside the Earth.

13. We are used to the perception of "solid tangible physical bodies" of humans and animals. That is called the "ghana sañ̃̄̄̄." However, those physical bodies are mostly "empty." That is because atoms, the basic building blocks, are mostly empty.

- Furthermore, our physical bodies start with a single cell (zygote) in a mother's womb. One needs a microscope to see a single cell. A gandhabba (even smaller than a cell) merges with that zygote formed by the union of a mother and a father. See "Buddhist Explanations of Conception, Abortion, and Contraception."
- Before entering the womb, gandhabba had a fine body similar to that of a rūpi Brahma. Then that cell grows by taking in food first from the mother and then eating once coming out of the womb. Our heavy physical bodies result from the accumulation of inert matter (by eating food).
- And as we discussed in "Bhava and Jāti - States of Existence and Births Therein," a human bhava may not end at the physical death of the solid body that lives about 100 years. A human bhava may last
thousands of years, and that lifestream continues its existence in many "physical bodies" with the gandhabba as the basis.

14. For example, in rebirth stories, the physical bodies in successive births are different, even though there may be some similarities; see "Evidence for Rebirth." In between consecutive lives, the lifestream continues in the form of its core, the gandhabba.

- The solid body of a few hundred pounds that we consider "me" is just a shell. When the gandhabba leaves the body - either at death or sometimes during a heart operation (see, "Manomaya Kāya and Out-of-Body Experience (OBE)"), it has no attributes of life.
- That is an excellent way to contemplate the "ghana sañ̃̄̄"" or realize that our physical bodies are mostly dead matter, an "inert shell" in which the gandhabba resides. If a person of 300 pounds loses 100 pounds of weight, really that person "loses" one-third of his/her identity? It is the same person because the gandhabba is the same.
- All beings in the 31 realms eventually have "mental bodies" that are very fine and comparable to that of a gandhabba. Even with our most excellent microscopes, we cannot see their ultra-fine "bodies."

15. The above picture gives us a perspective on how foolish we are to focus on material wealth, titles, etc., for at most 100 years in this life. By living a moral life and doing meritorious deeds, we can make a much bigger "investment" in the future. That is by accruing merits that could lead to rebirths in the Deva or Brahma worlds where there is much less suffering and no physical illnesses.

- But even in those higher realms, death is inevitable no matter how long the lifetimes are. Most of all, there is no escape from the possibility of future births in the lowest four realms. Thus Nibbāna is the only permanent solution.

16. Following is a fairly good video describing the general features of the 31 realms:

WebLink: youtube: Bhante Anandajoti: The Planes of Existence
Next in the series, "Gandhabba - Only in Human and Animal Realms."
2.7.4 Gandhabba - Only in Human and Animal Realms

June 4, 2016; revised October 3, 2019; October 17, 2022

## Difference Between Bhava (Existence) and Jäti (Births)

1. Many posts on the critical concept of gandhabba not in this series. More are scattered throughout the site, and especially in the "Gandhabba (Manomaya Kāya)" section. These posts discuss how a living being goes through rebirth process without having an unchanging "soul." But they maintain (ever-changing) personal characteristics or gati (pronounced "gathi") between two adjacent lives.

- It all started with a post on this basic concept at the start of this website: "What Reincarnates? - Concept of a Lifestream."
- While it is good to get an idea of the nature of all living beings in the 31 realms, it is not necessary to learn those in detail. I want to provide a complete and inter-consistent picture compatible with the Buddha's original teachings in this section.
- However, the concept of the gandhabba is essential to understand how we are reborn with physically different bodies - multiple times - in a single human existence (human bhava.) That human bhava may last thousands of years; see, "Bhava and Jāti - States of Existence and Births Therein." Unlike devas and Brahmā (born just once,) we live and die to be reborn human multiple times before switching to another realm.

## This World Has Thirty-One Realms of Existence

2. We will first review two significant aspects of the 31 realms. Then we will discuss the concept of a gandhabba (which applies only to human and animal realms) in more detail.

- First is that the transition from one existence (bhava) to another is ALWAYS instantaneous; it happens at the cuti-patisandhi moment ("cuti" pronounced "chuthi'); see, "Patisandhi Citta - How the Next Life is Determined According to Gati" and "Cuti-Patisandhi - An Abhidhamma Description."
- The second aspect is that in the 20 higher-lying realms, those beings (Brahmā) weigh less than a billionth of an atom in modern science!
- All beings with dense bodies are in the 11 realms of the kāma loka. Even there, the six deva realms have less-dense bodies compared to humans.

## Death of Physical Body Different From the End of an Existence

3. The following chart shows the major features of what happens at the cuti-patisandhi moment. That is when a living being makes a transition from one bhava (existence) to another, e.g., from being a human to a Brahma.

Click to open the pdf file: WebLink: PDF File: Births in Different Realms

- Without exception, at each such cuti-pattisandhi moment, a new kammaja kāya is generated by the kammic energy fueling a new existence. That kammaja kāya ALWAYS has a hadaya vatthu. That is the seat of the mind (the quality of which depends on the realm).

## Types of "Bodies" In Different Realms

4. Thus it is essential to realize that the critical thing that happens at the cuti-patisandhi moment is the generation of the unbelievably small kammaja kāya, which contains the blueprint for the new existence. At that point, the mechanism of "birth" can be roughly divided into three categories, as shown in the chart.

- The Brahmā in the rūpi and arūpi realms (top 20 realms) are instantaneously born with very little else other than several suddhatthaka-size "material elements." Their body features are discussed below. The main feature here is that they are spontaneously born in those realms and live very long times there until death. Then another cuti-patisandhi moment takes that being to a new bhava.
- The only difference in the six deva realms (in kāma loka) compared to the Brahmā is that they do have well-defined physical bodies (karaja kāya) like us. However, those bodies are much less dense, and we cannot see them even if they stand right before us.
- A deva is born with the body equivalent of a 16 -year-old, and their food is a drink called amurtha. Devas have all five sense faculties like us and are said to the optimum sense pleasures available in $k \bar{a} m a$ loka. They also live that one life until death and then switch to a new existence (bhava) at the cutipatisandhi moment.
- That completes the discussion on the green box to the right.

5. What happens in the green box to the left is a bit more complicated. That is because each realm in the ap $\bar{a} y \bar{a}$ (lowest four realms) is somewhat different. We will discuss the animal realm together with the human realm (middlebox) below. Let us first discuss briefly the lowest three realms indicated by the green box on the left.

- The lowest is the niraya (hell), where beings are born with full dense bodies like ours instantaneously. They undergo ceaseless cutting, burning, and various other forms of torture. They die innumerable times, only to be reborn promptly. Only when the kammic energy for that existence is exhausted (usually after millions of years) that they encounter the next cuti-patisandhi moment.
- Beings in the preta (peta) realm also are born instantaneously and can have subtle or dense bodies. The distinguishing feature there is suffering due to hunger.
- Beings in the asura realm are beings with massive, very inactive bodies. They are also born instantaneously and live those miserable lives until the next cuti-patisandhi moment.

## Kammaja Kāya (Gandhabba) Can Last Thousands of Years With Many Human Rebirths

6. That brings us to the middle green box, representing the human and animal realms. A little bit more complicated process takes place here. Here also, a being with a subtle (energy) body is produced at the cutipațisandhi moment, just like in the rūpa loka realms. It is called a gandhabba.

- A gandhabba has the basic thrija kāya of a rūpi Brahma: kammaja kāya, cittaja kāya, and utuja $k \bar{a} y a$, which we will discuss in detail below. Besides, a gandhabba may acquire a very fine karaja kāya (physical body) by inhaling the aroma. Thus a gandhabba is denser than a rūpi Brahma. It has a "body" more like a deva in density.
- A gandhabba could be in that state for many years until a suitable womb becomes available. More precisely, the mother's mental state at that time must match the gati of the gandhabba. The evolution of the gandhabba in the womb is discussed in "Buddhist Explanations of Conception, Abortion, and Contraception." Then it is born as a new baby, grows, and eventually, that physical body also dies. If more kammic energy is left for the bhava, then the gandhabba leaves that dead body and waits for another womb. That process continues until the bhava energy is exhausted, and then it goes through the cuti-patisandhi moment to receive a new bhava; see the chart above.
- In addition to going into a womb, (in some animal species), gandhabba may enter an egg inside a female animal. At the death of an "egg-born" animal, gandhabba comes out and waits for another egg. It is the same procedure as above.

## Physical Body is Just a Temporary Shelter

7. One of the main benefits of learning about the gandhabba is helping remove the wrong view that "I am my physical body."

- On the contrary, a physical body is a temporary shelter that the gandhabba uses to experience the much-coveted "sense pleasures." In particular, smelling, eating, and touching (most of all, sex) require a
dense human body. Unfortunately, the human body can last only about 100 years. Even that body is in the "decay mode" after about 50 years. Thus, those sensory pleasures start diminishing, and eventually, that body dies.
- Then the gandhabba comes out of that dead body and waits for a suitable womb. If and when it gets into a womb, the new physical body is influenced by the new parents. Thus the new body can be very different from that in the previous birth. Even during this same "human bhava," our human bodies may look very different from one birth to another (as confirmed by rebirth stories).
- Of course, the gandhabba does not stay the same either. The only things that can be called "personal" to that gandhabba are its gati, which also evolve.
- That is a brief explanation of the above chart.

## Brahma "Bodies" Have Only a Trace of Matter

8. As mentioned in \#4 above, most lifeforms in the 31 realms have unbelievably tiny physical bodies. They are more like "energy bodies." Brahmā in the 16 rūpa loka realms and the four arūpa loka realms weigh less than a billionth of an atom! They may be thought more as energy packets.

- In case it was not clear from previous posts, we recall that an arūpa loka Brahma has a kammaja kāya consisting of just a vatthu dasaka.
- Rūpa loka Brahmā have vatthu dasaka (seat of the mind) and two pasāda rūpa for seeing and hearing. They also have kāya dasaka and bhava dasaka. Thus their kammaja kāya has five suddhatṭhaka-size elements. A rūpa loka Brahma also has a cittaja kāya (thought stream) and a utuja kāya (very fine).
- Thus any of the Brahmā cannot be seen with the most sophisticated microscope we have today.
- More details in, "Body Types in 31 Realms - Importance of Manomaya Kāya." A manomaya kāya, when referred to the human and animal realms, is the same as gandhabba.

## Kammaja Kāya of a Human Gandhabba

9. Let us again summarize the make up of a kammaja kāya of a human gandhabba. It has a hadaya vatthu (consisting of a vatthu dasaka), bhava dasaka, and kāya dasaka, and four pasāda rūpa (cakkhu dasaka, sota dasaka, gandha dasaka, jivhā dasaka).

- This kammaja kāya consists of 7 suddhattthaka in different bramana (spin) and paribramana (rotation) modes. That is how they become dasaka (units of ten or decads); see, " 31 Realms Associated with the Earth."
- Six of these define the sense faculties of the gandhabba: vatthu dasaka is the mind, and kāya, cakkhu, sota, gandha, and jivhā dasaka) are the "fine senses" that correspond to the body, eyes, ears, nose, and tongue in the physical body. Gandhabba can interact with the external world directly via them when outside the physical body. It can smell and inhale aroma giving rise to a very fine and subtle material body. However, that body is not solid enough to physically touch anything or to eat.
- The seventh dasaka is bhava dasaka, which - together with the kāya dasaka - defines what kind of a physical body it will start building once inside a womb. For example, bhava dasaka determines sex.

10. The mind becomes active as soon as the kammaja kāya forms at the cuti-patisandhi moment, the mind becomes active. The thought stream (cittaja kaya) starts, and the mind will be mainly in the bhavañga state. Simultaneously, an utuja kāya forms by the suddhatṭhaka generated by both the kammaja kāya and cittaja kāya.

- Thus immediately after the cuti-patisandhi moment, gandhabba has three "bodies" or thrija kāya. However, the cittaja kāya is all mental, and both the kammaja kāya and utuja kāya are very fine. They are more like "energy bodies."
- Soon after this "initial formation," the gandhabba can build a "subtle, misty" body (karaja kāya) by inhaling aroma (from fruits, trees, etc.). Still, an average human cannot see it, since it is not "dense enough." However, some people (especially those with abhiññā powers) can see "sufficiently solidified" gandhabbā.

## The desire for a Dense Human Body

11. But this gandhabba is continuously under stress because it cannot enjoy the most coveted sense pleasures of those with dense human bodies, i.e., eating and sex. It can see people enjoying these sense pleasures and is very much frustrated not being able to acquire a "real physical body." Some can stay in this state for many years if a suitable womb is unavailable.

- In some cases, they may spend the kammic energy for the human bhava and undergo another cutipatisandhi moment without inheriting a human body. That is why one is indebted to one's parents, no matter how bad they may be.

12. The story of the gandhabba gets more interesting (and complicated) after it goes through the first birth as an average human, and that human body dies. The gandhabba that comes out of that dead body is, of course, different from the original gandhabba. Its kammaja kāya has changed due to whatever abhisañkhāra that the humans cultivated. But the kammic energy for the human bhava does not change; if it had 1000 years worth of kammic energy at the cuti-patisandhi moment, that would deplete with time.

- Of course, there is no cuti-pattisandhi moment when a human dies with extra kammic energy for the human bhava. Death is the death of the physical body. The gandhabba comes out of that dead body and awaits a new womb; see the above chart. Thus all three components of the thrija kaya continue after the "death of the human."

## New Physical Body Incorporates Characteristics of New Parents Too

13. Let us consider some important features of this gandhabba that comes out of that dead body after its birth as a human.

- The kammaja kāya still has a copy of the previous physical body. However, when it starts a new physical body in the new womb, it also takes some physical features from the new parents. Thus the new physical body is a trade-off between those three influences. It may keep some distinguishing features (birthmarks or gunshot wounds, for example, as we have encountered in rebirth accounts. But it will acquire new features also from the new parents (skin color, size, etc.).
- The gandhabba that comes from the dead body is just a "misty, fine version" of the person at death. They often come out with imprints of the clothes they were wearing at death and may look just like that (in a ghostly, misty form) until going into a new womb. My teacher Thero has seen gandhabbā of people who died hundreds of years ago "wearing" those old costumes. Of course, they are not actual physical clothes.

14. Since the cittaja kāya also continues, their thought streams continue. So, if someone dies in an accident, he may not realize that he is dead for a while. If he died from a gunshot instantly, the gandhabba comes out and will look at the dead body trying to figure out what happened. He may wish to go home and finds himself instantly at home. And he will try to shout to others, but they don't hear. He may try to touch them, but he cannot. It takes seven days for a gandhabba to comprehend what happened entirely and to resign to his/her new life.

- That is also why children can recall their past life. But just like we start forgetting things from years ago, those children start forgetting about their previous life when they grow older. Furthermore, it is harder to remember from a past life compared than life.
- Another point is that most such rebirth accounts are from people who died while young in accidents. Those gandhabbā who come out of the bodies of people dying in old age are not likely to remember that life. That is because they might have lost their memories even during that life.

### 2.7.5 Body Types in 31 Realms - Importance of Manomaya Kāya

Published before October 23, 2015; revised May 31, 2016; Dec. 1, 2018; Dec. 8, 2020; August 7, 2022; October 17, 2022

## 31 Realms In 3 Loka

1. There are three main categories that the 31 realms can be divided into $\boldsymbol{k} \overline{\boldsymbol{a} m a}$ loka, rūpa loka, and arūpa loka.

- Living beings in the $k \bar{a} m a ~ l o k a$ are in 11 realms: four lowest realms (apāy $\bar{a} s$ ), the human realm, and six devā realms.
- Rūpa loka has 16 rūpāvacara brahma realms. A "rūpāvacara brahma" means a brahma in the rūpa loka.
- Arūpa loka has 4 arūpāvacara brahma realms.
- Different sets of sense faculties are associated with beings in those three types of "loka."

## Body Types in Arūpa Loka

2. Those in the arūpa loka have just the mind. Therefore, the only $r \bar{u} p a$ (or matter) associated with an arūpi Brahma is the hadaya vatthu, the smallest unit of matter in Buddha Dhamma is a suddhatthaka.

- An arūpāvacara brahma has a manomaya kāya that has only a hadaya vatthu.
- That suddhattthaka is unimaginably small; much smaller than an atom in modern science. So, we cannot see these beings.
- It is important to note that we cannot even see many microscopic beings that live among us, like those in drinking water. Just because we cannot see them, it does not mean they do not exist. Furthermore, a microscopic creature like an ameba is made of billions of suddhat!thaka! That should give an idea of a suddhatṭhaka.

## Body Types in Rūpa Loka

3. Those in the rūpa loka have just three sense faculties: eyes, ears, and mind.

- But the eyes and ears are not solid and tangible things like the physical eyes and ears that the animals or we have.
- Seeing and hearing for those rūpāvacara Brahmā happen with the aid of cakkhu and sota pasāda rūpa. Each of those two is also the size of a suddhatthaka.
- Therefore, even for a rūpāvacara Brahma, the whole "body" is just three suddhattthaka, unimaginably small. This collection of hadaya vatthu and the two pasāda rūpa is called the manomaya kāya of that Brahma.

Therefore, even with the aid of the most sophisticated microscope, it will be impossible to see any Brahm $\bar{a}$ in those 20 realms (rūpa and arūpa loka.) They all have a "subtle body" with just a few suddhatṭhaka or a "manomaya kāya."

## Manomaya Kāya in Kāma Loka

4. In fact, ALL BEINGS have such basic sense faculties of the size of a suddhatthaka each. The basic sensing unit for a $k \bar{a} m \bar{a} v a c a r a ~ b e i n g ~ h a s ~ s i x ~ u n i t s ~ f o r ~ s e e i n g, ~ h e a r i n g, ~ t a s t i n g, ~ s m e l l i n g, ~ t o u c h i n g, ~$ and thinking.

- Any kāmāvacara being (including humans, animals, and devās) has a "fine body" with those unseen five sense faculties called "pasāda rūpa": cakkhu pasāda rūpa for seeing, sota pasāda rūpa for hearing, ghana pasāda rūpa for tasting, jivhā pasāda rūpa for smelling, kāya pasāda rūpa for touching.
- In kāma loka, the manomaya kāya would have a hadaya vatthu (vatthu dasaka,) bhāva dasaka, and five pasāda rūpa (each of which is a dasaka.) A dasaka is a suddhätthaka (the smallest unit of matter with eight units) and two modes of vibration and rotation; "dasaka" means a "collection of ten." Thus, a manomaya kāya in kāma loka would have seven suddhāṭthaka-size units.

## Dense Physical Body in Kāma Loka

5. The above mentioned manomaya kāya of a being in kāma loka is "trapped inside" a dense body. It contacts the external world through the "windows" on the physical body: Eyes, ears, nose, tongue, and body.

- Thus, the physical (solid) eyes, ears, nose, tongue, and body of a kāmāvacara being (human or animal) act as "sensing equipment" to collect external signals.
- The brain processes those signals and sends them to the manomaya kāya inside this solid body. See "Brain - Interface between Mind and Body."
- This is why, even for humans, the essence is in the manomaya kāya. The solid body is just an inert shell "powered by" the manomaya kāya. When the manomaya kāya comes out at death, the physical body becomes inert, like a piece of wood.

## Manomaya Kāya Has the Blueprint for the Physical Body

6. This "manomaya kaya" is the one that takes hold of the zygote in a womb at conception. The union makes that zygote of the mother and father; see "Buddhist Explanations of Conception, Abortion, and Contraception."

- A gandhabba that descends to the womb originally has a bit denser body than this manomaya kāya. In addition to the "manomaya kāya," it has a "material body," too, but that is still too fine to be seen by us. When the gandhabba enters the womb, that "material body" is shed and only the "very fine manomaya $k a y a "$ combines with the zygote.
- As discussed in that post, the zygote is the cell formed by the mother and father's union and is well understood in modern science. Of course, modern science is unaware of the manomaya kāya of the gandhabba that merges with the zygote.
- Scientists do not know how that zygote becomes a "new life," a new living being.
- Gandhabba is discussed in "Mental Body - Gandhabba."

7. Now that zygote with the manomaya kāya starts diving into more and more new cells. The energy needed to make those new cells comes from the mother (i.e., from the mother's food). See "Buddhist Explanations of Conception, Abortion, and Contraception."

- That initial single cell grows to a baby of the size that comes out of the womb after nine months. Now, we can see that the critical manomaya kaya - with those basic sensing faculties - is negligibly small compared to that baby.
- Of course, once outside the womb, the baby grows by eating food and eventually grows into an adult. Virtually all solid matter in an adult is just lifeless matter. This is why a person can lose one-third or even half of the body mass and remain the "same person."
- "Life" is not in the physical body but in the manomaya kāya.

## Manomaya Kāya is Primary

## 8. Nothing in the heavy solid body defines that "person." All the key aspects are in the mental body or the manomaya kāya.

- That solid body is made alive by the manomaya kāya with the hadaya vatthu and the five pasāda rūpa. Hard to believe, but that is what happens.
- At the death of the physical body, that manomaya kāya comes out. When it comes out, it also has a very fine "physical type" body that resembles the body of the person that dies. That combined fine body is really "ghost-like" and can be seen by even some people. That is called gandhabba, which now waits for another suitable body to enter if more kammic energy for the "human bhava" is left.

## No Dense Bodies in Rūpa and Arūpa Loka

9. For Brahmā in the rūpa loka, three units of matter are formed by kammic energy at the moment of birth; because it has three units of matter, an initial "body" formed at the moment of patisandhi is called a "tija (or thrija) kāya." The three units are kammaja kāya, cittaja kāya, and the utuja kāya. The utuja kāya is a very subtle "physical body," and those "rūpi Brahma"" can "see" and "hear."

- Those rūpi Brahmā have a kammaja kāya consisting of kāya dasaka, vatthu dasaka, bhava dasaka, and two pasāda rūpa for seeing and hearing: cakkhu pasāda and sota pasāda. Each pasāda rūpa is essentially a suddhatthaka, with different modes of spin/rotation ("bramana"/"paribramana"); see " $\mathbf{3 1}$ Realms Associated with the Earth."
- Even though "kāya" is translated as "body," the only "physical body" of a rūpi Brahma is the "utuja $k \bar{a} y a$." Thus a " $k \bar{a} y a$ " does not necessarily mean a "physical body."

10. The physical bodies (utuja kāya) of those rūpi Brahmā are much finer than those of the devas, and thus devas cannot see those rūpi Brahmā just like we cannot see the devas.

- The Brahmā (and also devas) can "see" without the aid of light and "hear" without having air to transmit sound waves; their "physical bodies" do not have "eyes" and "ears" like ours. Thus they can "see" and "hear" over great distances. And they can be anywhere they wish within a short time.
- The closest analogy of how their "vision" works is how we "see" dreams; we don't need eyes to see dreams. The Brahmā can "see" with the cakkhu pasāda rūpa (perceive may be a better word). These things will become clear in the future as we get into details.

## "Denser" Bodies in Lower Realms

11. A basic rule of thumb is that those in lower realms generally cannot see the beings in the higher realms. Humans, of course, can develop abhiññ̄a powers and "see" those beings in higher realms.

- In the kāma loka, the highest realms are, of course, the deva realms. Devas are also born instantaneously (opapātika births), just like the two kinds of Brahmā. However, devas have a fourth type of body called the "karaja kāya," which is like our physical body. And just like us, they need to
consume food ("amurtha") regularly to sustain their "karaja kāya," which is also called the "āhāraja $k \bar{a} y a "$ since it requires food ("āhāra") for sustenance.
- Thus devas have "four bodies" or "catuja kāya," i.e., the four bodies of "kammaja kāya," cittaja kāya, utuja kāya, and the "karaja kāya." are collectively called a "catuja kāya."
- But devas (and Brahmā) do not get sick. They die and disappear when the kammic energy for that existence runs out.

## Beings in Kāma Loka Start With Manomaya Kāya

12. When humans and animals are first "born" into that existence, they are also instantly formed in a form close to Brahma. This is the manomaya kāya generated by kammic energy at the cuti-patisandhi moment.

- That manomaya kāya is condensed into the gandhabba state we discussed in previous essays; see "Gandhabba (Manomaya Kāya) - Introduction" and follow-up posts.
- For example, if a man dies and still has kammic energy for the "human bhava" left, he will be reborn as a human. Otherwise, he will latch onto another "bhava" on his past strong kamma vipāka. For example, his next "bhava" could be a deer.
- If reborn as a human, a "human gandhabba" will emerge from the dead body; if he is born a deer, then a "deer gandhabba" will emerge from the dead body.

## Gandhabba Can See/Hear Without Physical Eyes/Ears

13. The body of a human or animal gandhabba is also a "catuja kāya" like a deva. But it is finer than the body of a deva. A gandhabba can only inhale odors ("gandha" + "abba") as food, and thus the name.

- Like Brahmā or devas, a gandhabba can "see" and "hear" over great distances. A gandhabba does not have a solid body to support physical eyes or ears. (Of course, we have a hard time imagining that. But it can be compared to what happens when we see a dream. There is no need for light to see dreams; we see dreams when pitch-black at night; we do not "see" dreams with our eyes).
- Even though one could think it would be nice to be a gandhabba, a human gandhabba is in perpetual stress (agony may be a better word). A gandhabba cannot enjoy any kind of "contact" sensory pleasure since the body is fine; it cannot taste the food or grasp anything.

## A Physical Body Is Needed for "Sensual Pleasures" or "Kāma Assāda"

14. A human or animal gandhabba must "build" a physical body to experience sensual pleasures with touch, smell, or taste. They received those "bhava" because they very much DESIRE "coarse sensory pleasures": "upādāna paccayā bhava."

- Thus we can see that we get these solid, dense bodies BECAUSE that is what we so eagerly desired. As long as we crave these "coarse sense pleasures," we will be born in the kāma loka. Even though the devas are in the kāma loka, their desires are not as "coarse." They do not need to "tightly grab things" to get enjoyment.
- Brahma $\bar{a}$ in rūpa loka is further removed from "coarse sensory pleasures"; they do not desire tastes, smells, or body touches. Seeing and hearing are enough for them.
- Brahmā in arūpa loka does not even have a desire for sights and sounds. Mind pleasures are enough for them, and the presence of matter is minimal in the arūpa loka.

## Those "Kāma Assāda" Come With Drawbacks (Ādīnava) [/Danger]

15. We do not realize that having a "dense body" also leads to various ailments. A dense body is also subject to decay as it gets old.

- Furthermore, now the ability to "see" and "hear" over great distances is gone. Now the gandhabba is trapped inside a heavy, solid body shell and has to "see" and "hear" through the "physical doors" that are attached to that body. That is the sacrifice made to be able to have the "grabbing experience," to be able to enjoy coarse foods and sexual pleasures, etc.
- The Buddha called the physical body ("karaja kāya" or "āhāraja kāya") a "cave" or a "shell" that a gandhabba uses temporarily. It has a certain lifetime: during that time, it grows, decays, and finally dies. Then the gandhabba needs to find another body. Especially in the kāma loka, we build a "new shell" when the old one dies and spend a lot of time as a frustrated gandhabba waiting for a suitable womb to start building a new body.
- "WebLink: suttacentral: Dhammapada Verse 37" states: "Dūrañgamaim ekacaraí, asarīraì guhāsayaim;" OR "The mind travels far, wandering alone; incorporeal, it hides in a cave."

## Physical Body a Temporary

16. Thus, it should be clear now that it is only the "physical body" that decays and finally dies. A human gandhabba will keep evolving and find a "new body" similar to the old one IF the kammic energy for that bhava is not exhausted. Otherwise, the human gandhabba will disappear (like a deva or Brahma does at death), and a new animal gandhabba will emerge if the new bhava is that of an animal; see, "Bhava and Jāti - States of Existence and Births Therein."

- Thus we can see now that even for humans and animals, "the basis" is a fine body of a gandhabba with a fine body like a rupi Brahma (and less dense than the body of a deva). The "solid body" starts growing inside the mother's womb and continues after the "birth" as a baby by eating food.

17. Nature also uses this physical body or the "shell" to impart kamma vipāka. We need to constantly clean this body all the time and also need to take care of vital body parts. These are part of the "physical suffering" we do not think twice about.

- And, of course, we can come down with not only minor colds and headaches but also major ailments like heart problems or cancer; this is also part of the "physical suffering." Both kinds of "physical suffering" arise due to the physical body.
- However, these hardships are "masked" by our sense of "anticipated future happiness" by acquiring such and such "pleasurable things."

## Human Body Is Special

18. The other point, even more important, is the special nature of the human body with a well-developed brain. See "Brain - Interface between Mind and Body." That is what makes human life special because that is what allows us to understand the message of the Buddha and get released from the suffering-filled round of rebirth.

- How the bodies of the hell beings are prepared by kammic energy just to impart kamma vipāka (they are unable to do abhisañkhāra, especially puñ̃̄̄̄bhisañkhāra) is discussed in "Does the Hell (Niraya) Exist?.

Next in the series: Gandhabba Sensing the World - With and Without a Physical Body

### 2.7.6 Gandhabba Sensing the World - With and Without a Physical Body

June 10, 2016; revised January 24, 2020

## Gandhabba Is The "Mental Body" of a Human

1. Physical bodies are just temporary shelters for the gandhabba.

- In a single "human bhava" or the "existence as a human," gandhabba could be using one to hundreds of different physical bodies; see, "Bhava and Jāti- States of Existence and Births Therein" and "Gandhabba - Only in Human and Animal Realms."
- Such "human births" could be anywhere on Earth. However, they normally take place in a specific region based on one's gati. Most rebirths occur within a given country, as seen from rebirth accounts. See, "Evidence for Rebirth."
- In between two consecutive "physical lives," the gandhabba is in the nether world or "para loka"; see, "Hidden World of the Gandhabba: Netherworld (Para Loka)."

## Racial and Cultural Differences Are Meaningless

2. Thus all racial and cultural divisions that people fight daily are meaningless; those identities change as the gandhabba "switches physical bodies" from life to life. In principle, a Chinese may be born as a "black person" in Africa or as a "white person" in Europe in the next life. However, adjacent lives are generally in similar geographic locations because of the condition for matching "gati." Still, in the following "human bhava" - which may come after billions of years - one's gati would have changed drastically.

- As more and more people start grasping the Buddha Dhamma, most of the violence in the world could reduce. Along that line, one who may be born into poverty in this life may be born a wealthy person in the very next life (if enough merits accrued), and vice versa. All these struggles we go through are only for an insignificantly short time in the scale of sainsāra (cycle of rebirths) or even compared to the duration of a single human bhava (which could last many hundreds of years). Thus it is wise to "invest in the long term."

## Sensory Faculties Are in Gandhabba

3. The physical body shields the gandhabba's sensory system, while the gandhabba is inside the physical body. The gandhabba has all sensory faculties. But now those "external sensory signals" need to come through the eyes, ears, nose, tongue, body, and mana indriya in the brain; see below.

- When outside a physical body (and waiting for a suitable womb), the gandhabba cannot eat or physically touch tangible things, because it does not have a "dense body." But it can see and hear. Furthermore, it uses a very sophisticated sensory system (not light or sound waves) to see and hear, which we will also discuss briefly below.

## Difference Between Indriya and Āyatana

4. The Buddha analyzed the world in many different ways. Here we present another such analysis since it can provide different insights about the gandhabba.

- We have six sense faculties (indriya or āyatana) to sense six different types of "matter" ( $r \bar{u} p a$ ) in our world. There is a subtle connection between our six sense faculties and the types of "matter" in our world. We will discuss this connection.
- By the way, indriya and āyatana have different meanings. For example, eyes are indriya when we happen to see things. Still, they BECOME āyatana when they are used for pleasure, i.e., to deliberately look at mind-pleasing things to enjoy them. Only an Arahant uses his/her sense faculties are indriya all the time.
- That is another way to define and analyze our world. Everything in our world belongs to the 12 ayatana. Sometimes they are called six ajjhatta āyatana (or internal āyatana or sense faculties) and six bahiddha àyatana (things in the external world that we sense).

5. These are listed in Pāli in \#6 of the post, "What are Dhamma? - A Deeper Analysis." A simpler account is at, "What are Rūpa? - Dhammā are Rūpa too!."

- We touch the densest material (phoṭthabba) out there with our bodies (kāya).
- Next, less dense are tasted (rasa) with our tongues (jivhā).
- We smell with the next less dense minute particles with smell (gandha) with our noses (ghāna).
- Hear uses vibrations propagating through the air (sadda) with our ears (sota).
- We see color/appearance (vaṇna) with the aid of photons propagating through space ( $\bar{a} k \bar{a} s a$ ) with our eyes (cakkhu).
- Our consciousness arises via dhammā in the mind plane with our minds (mano).

## Dhammā Are Just Energy

6. The last type of rupa (dhamma $\bar{a})$ is not solid matter, but just energy; see, "What are Dhamma? - A Deeper Analysis."

- Thus dhammā do not occupy space ( $\bar{a} k \bar{a} s a$ ) and are in the mind plane or the mental world.
- All other five types of $r \bar{u} p a$ occupy space and are in the material world.
- So rūpa cannot be translated as "matter." See, "Our Two Worlds: Material and Immaterial." That is why sometimes it is better use the Pāli words.

## How Does a Gandhabba "See" While Inside a Physical Body?

7. It is actually through a complicated process that a gandhabba sees, hears, etc while being inside a physical body (karaja kāya) such as ours. I have explained the basics in "Citta and Cetasika - How Viññān̄a (Consciousness) Arises," "Gandhabba (Manomaya Kāya)- Introduction," and many other posts.

- However, it is much easier to grasp how a gandhabba sees and hears while being outside the physical body. Even though most of us may not have had such "out-of-body experiences," it can happen, especially during heart operations; see, "Manomaya Kāya and Out-of-Body Experience (OBE)." Some people have a natural ability to do that on their own, as discussed in that post.
- Thus, let us discuss how a stand-alone gandhabba sees and hears while being outside a physical body; this is not only simpler but provides us with some insights.

## The Sensory Faculties In Gandhabba

8. The real sense faculties produced by kammic energy at the cuti-patisandhi moment are in the kammaja $k \bar{a} y a$ of the gandhabba. The subtle body of the gandhabba has three components, as we have discussed and will again discuss below. The sense faculties are all in the kammaja kāya.

- The kammaja kāya of the gandhabba has seven essential elements called dasaka, meaning entities with ten items (decads). They arise from suddhattthaka, which is composed of eight "items," as we have discussed; see, "The Origin of Matter - Suddhatthaka." Different types of dasaka are formed just by incorporating one mode of spin (bramana) and one mode of rotation (paribramana); see, "31 Realms Associated with the Earth."
 from the spin (bramana) mode, but I cannot be sure. This $j \bar{\imath} v i t a ~ r u \bar{u} p a$ is in all these other types of dasaka because that is what "maintains life." Thus different types of dasaka (see below) arise due to different modes of rotation (paribramana). [jīvita: :[nt.] life; span of life.]

9. Now we can list the different types of 7 dasaka (or decads) that are in the kammaja kāya of the gandhabba.

- Vatthu dasaka (mind; also called hadaya vatthu): suddhaṭthaka + jīvita rūpa + hadaya rūpa
- Kāya dasaka (body plan): suddhaṭthaka + jīvita rūpa + kāya pasāda rūpa
- Cakkhu dasaka (eye indriya): suddhaṭthaka + jīvita rūpa + cakkhu pasāda rūpa
- Sota dasaka (ear indriya): suddhatthhaka + jīvita rūpa + sota pasāda rūpa
- Ghana dasaka (nose indriya): suddhaṭthaka + jīvita rūpa + ghāna pasāda rūpa
- Jivhā dasaka (ear indriya): suddhatṭhaka + jīvita rūpa + jivhā pasāda rūpa
- Bhava dasaka (bhava): suddhaṭthaka + jīvita rūpa + itthi or purisa rūpa (determines female/male nature of the body)

Again, it is to be noted that $j \bar{v} v i t a ~ r \bar{u} p a$, itthi and purisa rūpa, and the five pasāda rūpa are not "physical matter", but modes of energy in spin and vibration of suddhatthaka.

- That is analogous to different electron orbitals giving rise to different types of molecules in chemistry.

## Components of the Gandhabba or "Mental Body"

10. A gandhabba is born with those seven dasaka (i.e., kammaja kāya) and immediately the mind starts generating citta (thoughts), which are vipāka citta and for the most part in the bhavañga. Thus now the gandhabba has a cittaja kāya as well. Note that cittaja kāya is all MENTAL.

- Almost at the same time, both the kammaja kāya and the cittaja kāya start producing more suddhatthaka giving rise to the utuja kāya. This utuja kāya is similar to the "aura" that surrounds our bodies; in fact, that aura is part of our own (i.e., gandhabba's) utuja kāya. Some people claim to be able to see "body aura"; those with abhiññ̄̄ powers can see them. Also, see "Ghost 1990 Movie Good Depiction of Gandhabba Concept."
- Thus the best way to visualize a gandhabba is to imagine a human with just the "body aura" (without the physical body). Since kammaja kāya consists of only a few suddhatṭhaka, and the cittaja kāya is just thoughts, something like an "aura body" is all a gandhabba has.
- Right now, this subtle body of my gandhabba overlaps my own physical body. All parts of my physical body are in the subtle body of my gandhabba (which is a blueprint for my physical body).
- While waiting for a physical body, this gandhabba can inhale scents from fruits, vegetables, etc., and acquire a subtle physical body (karaja kāya) too. Then it expands to the grown size of a human. But of course, it is only an "energy body" that we cannot see.
- Thus a free-standing gandhabba may have four types of "bodies": kammaja kāya, cittaja kāya, utuja kāya, and karaja kāya.

## Gandhabba Outside the Physical Body

11. This gandhabba can see over vast distances and hear over large distances and travel instantly to remote destinations. Sight does not need light, and sound does not require vibrations in the air. It is equivalent to seeing and hearing with abhiñ̃̃̄̄ powers. That is how those with abhiñ $\tilde{n} \bar{a}$ skills can see through walls and hear over vast distances; they have control over their gandhabba kāya or the manomaya kāya.

- However, since it has only a very fine body (like air), it cannot taste food or touch solid things. The gandhabba needs to be inside a dense human body to be able to touch, taste, or smell. That is why it has to take possession of a zygote in a womb and build a physical body.
- See, "Buddhist Explanations of Conception, Abortion, and Contraception" and "Cloning and Gandhabba."

12. When a gandhabba builds a physical body (inside a womb), those seven dasaka - each of which are the "size of a suddhatthaka" - determine all critical functions. Furthermore, gandhabba has the blueprint for that physical body.

- The physical body (karaja kāya) of the human grows according to kāya dasaka and bhava dasaka but also takes into account the physical qualities of mother and father (eye and skin color, as well as size, are good examples).
- When inside a physical body, the external signals that come to the physical body via eyes, ears, nose, tongue, and body touches, are converted in the brain into the form that can be sensed by the five pasäda rūpa (they are really the five dasaka with corresponding pasāda rūpa). This somewhat complicated process is discussed in "Citta and Cetasika - How Viñ̃nāna (Consciousness) Arises," "Gandhabba (Manomaya Kāya)- Introduction," among others.

## Why Are Some Born With Deformed Body Parts?

13. The blueprint in the kammaja kāya of the gandhabba has all the details of physical organs as well. When the utuja kāya forms, it has this blueprint. Some people are born without limbs because past kamma vipāka is taken into account by the kammaja kāya.

- Some are born with physical eyes, but without the cakkhu pasāda in the kammaja kāya, so they will never be able to see; they are the ones who are born blind. Similarly, some are born deaf, and sometimes both. That is because the gandhabba in them does not have the cakkhu pasāda and sota pasāda.
- However, in some cases, the gandhabba may have the cakkhu pasäda, but during birth, the optical nerves in the brain may get damaged. In such cases, it may be possible to have vision restored.

## Gandhabba Is The Bluprint For the Physical Body

14. It is, in fact, the gandhabba that controls the otherwise inert physical body. There is a carbon copy of all parts of the physical body (including the nervous system) in the fine utuja kāya of the gandhabba.

- What is the mechanism used by the gandhabba to control the inert physical body? The easiest way to visualize this is to consider the following. If we put some iron dust on a piece of paper and move a magnet below the paper, we can see that those dust particles move along as one moves the magnet. If we move the magnet in a circle, dust particles move along that circle. In the same way, when the gandhabba moves its utuja kāya, the physical body follows that motion.
- Thus, what the gandhabba does is similar to what the magnet did in the above analogy. But it is a bit more complicated, because moving heavy body parts needs much more energy. That is where the physical nervous system comes into play. The brain, in synchronization with the mind (hadaya vatthu), sends signals to muscles to move. The energy to move those muscles comes from the food we eat.
- Both the "magnetic nervous system" or the "ray system" of the gandhabba AND the physical nervous system based on the brain are needed to move the physical body.

## Two Nervous Systems

15. Thus, there are two nervous systems in the body: one is the physical nervous system known to modern science. The other is the subtle nervous system (ray system) of the gandhabba.

- When they go "out-of-sync," our physical bodies start aching. Even in a perfectly healthy human, it is not possible to maintain a given posture for too long.
- Kamma vipāka can shift the nervous system (ray system) of the gandhabba away from that of the physical body. Then body muscles need to move to the new equilibrium position, causing us discomfort or even pain.
- We will discuss more important consequences that are experienced during meditation in future posts.

## Physical Body Comes With a Price

16. The physical body can impart various other forms of suffering as well. It can develop diseases such as cancer in various parts of the body; body parts can break or injured.

- The effects that we have discussed above may be the reason that we humans (and animals) have this complicated mechanism involving repeated births in a single bhava using a gandhabba and multiple physical bodies.
- The Brahmā and even Devā do not suffer physical ailments; their subtle bodies can also last longer times, and do not need to be "regenerated" via this mechanism, i.e., just one physical body for the gandhabba.
- Another important aspect is that our physical brain slows down the generation of javana citta in a given time. The "signal processing" in the brain is much slower than the high-speed generation of cittta in the hadaya vatthu; see, "Citta and Cetasika - How Viñ̃nāna (Consciousness) Arises."

### 2.7.7 Nibbāna in the Big Picture

## July 8, 2016

Here we will discuss how one can get an idea about Nibbāna within the Grand Unified Theory of Dhamma.

1. In the posts in this series I described the wider world of 31 realms according to the Buddha, and why ALL living beings have been just meandering through these 31 realms from beginning-less time. We can summarize the results succinctly as follows:

- The lowest four realms (apāy $\bar{a}$ ) are where all beings suffer the most during the beginning-less rebirth process. Unfortunately, this is where each and every living being spends the most time in the long run. This is the real suffering that the Buddha tried to convey.
- The fifth realm or the human realm is where one is most likely to be able to grasp Buddha Dhamma and become a Sotāpanna. This is the only realm where one can experience (or at least see) both suffering and sense enjoyments.
- A deva in the next six realms is also capable of becoming a Sotāpanna, but due to the absence of much visible suffering, incentive to strive for the Sotapanna stage is almost non-existent (think about a healthy, wealthy teenager!).
- The same is true for $r \bar{u} p i$ and $\operatorname{aru} \bar{p} i \operatorname{Brahm} \bar{a}$, who enjoy jhānic pleasures in the higher realms.

2. Thus one can clearly see that as one proceeds to higher realms, suffering is reduced in stages. The worst sufferings are in the lowest 4 realms ( $a p \bar{a} y \bar{a}$ ), and we can see animal suffering if we pay attention and think especially about the animals in the wild. There are no "old animals" in the wild. As soon as they get a bit slow due to old age they are killed for food by stronger animals.

- One could try to stay away from the $a p \bar{a} y \bar{a}$ (in future births) by avoiding from immoral acts. But the problem with just that approach is that we have almost certainly done such immoral acts in our previous lives, and thus are likely to have accumulated enough kamma seeds to be born many times over in the apāyā.
- Thus the key is to cleanse our minds of the worst defilements, which will prevent apāyagām $\bar{\imath}$ citta from arising at the cuti-pațisandhi moment; see, "Akusala Citta - How a Sotāpanna Avoids Apayagami Citta." Such thoughts cannot just be suppressed; they arise in a billionth of a second. Thus the practical way to do that is to reduce cravings (āsavas) in STAGES; see, "The Way to Nibbāna Removal of Āsavas," and "Āsava, Anusaya, and Gati (Gathi)."
- As mentioned above, the first stage of the cleansing process is possible mainly in the human and deva realms, but the incentive to do that is virtually non-existent in the deva realms.

2. Another subtle reason for the uniqueness of the human realm is that one's future destiny is MOSTLY determined while in the human realm. Humans are the unique species who can access all 89 types of citta
that are present in all 31 realms. Moreover, they are the ones who can generate the all important javana citta that can produce kamma bïja (seeds) for future existences (bhava).

- Here is a simile that hopefully will convey this idea: Human realm can be compared to a training school, and the other realms can be compared to where one gets employment depending on one's qualifications upon completing the training.
- Those who did not make progress and caused problems for others are born in the $a p \bar{a} y \bar{a}$ and will have to suffer the consequences. Another way to say this is to say that they cultivated sañkhāra (or gati or habits) suitable for a being in the ap $\bar{a} y \bar{a}$ : cruel and hateful gati correspond to the lowest realm of niraya (hell); extreme greed correspond to the pretha realm; those who are lazy and depend on others are born in the asura realm; those with different combinations of those bad gati are born in the animal realm.
- Once born in the $a p \bar{a} y \bar{a}$, they are more like programmed machines. They just suffer their fate without having any way to even lessen the suffering (in contrast, humans are capable of devising ways to make their lives better).

3. This last point is worth discussing a bit more.

As we can see, animals just live their lives like robots. They are incapable of sorting out moral from immoral and also from being able to come up with ways to improve their lives. Birds have been building the same kind of nests for billions of years. Ants have been building the same types of anthills, and the dolphins (who are one of the animals with higher intelligence) have been the same way over billions of years.

- In the same way, $r \bar{u} p i$ or ar $\bar{u} p i \operatorname{Brahm} \bar{a}$ also just live their serene lives until the lifetime is exhausted. It is like a nice vacation. Then they come back to the human realm and start over.
- It is mostly humans and devas who are CAPABLE of forging their own future, but the devas enjoy so much sense pleasure, they have no incentive to think about Nibbāna.

4. Continuing that analogy, those who do well in the training school can go to one of the 27 higher realms. those who cultivate $r \bar{u} p a j h \bar{a} n \bar{a}$ are born in the $16 r \bar{u} p a$ realms. Those who cultivate higher $j h \bar{a} n \bar{a}$ are born in the 4 arūpa realms. The Brahmā in those 20 realms are like beings who are on a nice, very long vacation. They just live happy lives in $j h a \overline{n i c}$ bliss.

- Of course there are some Brahmā who had attained a magga phala in either human or a deva realm previously and they can proceed to higher stages. And there are a few rūpa realms reserved for the Anāgāmīs only.
- But in general, the rūpi and arūpi Brahmā are the ones who graduated with high qualifications and thus get to enjoy the fruits of those efforts for long times. Yet, when they come back to the human realm, they may be born into environments where they could go in a wrong path and fail next time around and thus could be born in the $a p \bar{a} y \bar{a}$.

5. Those who want to enjoy sense pleasures without causing problems to others work on it by doing meritorious deeds and are qualified to be born in the 6 deva realms (according to the level of merits accrued). They may not have even known about Buddha Dhamma, but knew moral from immoral.

- Life in a deva realm is more like a vacations to a "pleasure island." Those who cultivate "deva gati" (high moral character, but with attachment to sense pleasures) are qualified for those realms. Devas are more like humans but with fine bodies that do not age (until close to death), and are not subject to diseases. Thus if one really wants to "enjoy sense pleasures" one should focus more on doing good deeds instead of just focusing on making a lot money in this life, because this human life is so short and the human body is subjected to diseases and old age problems.
- However, devas can build up extreme attachment to sense pleasures and are capable of tailoring their future lives down to the animal realm. After their "pleasurable vacation" they could even come back to the animal realm instead of the human realm.

6. Finally, those who cultivate "human gati" are born in the human realm. They are more like deva gati, but generally have more attachment to sense pleasures at close contact.

- However, those humans who may have cultivated high moral values AND had some inkling of the sansāric suffering (via exposure to Buddha Dhamma) are like to come back to the human realm to "complete their training." That is because that is what they desired (upādāna).
- That is a very simple outline of the existence in the 31 realms.

7. Now, if one has attained the Sotāpanna stage in the human realm, then his/her number of possible destinations become less and better. In \#7 and \#8, we will discuss how a Sotāpanna goes through higher realms as he/she approaches Arahanthood.

- Of course that person will never be born in the apāy $\bar{a}$, because those "apāya gati" have been permanently removed via Sammā Dittthi with a grasp of the anicca nature.
- A Sotāpanna starts to comprehend the futility and even dangers of sense pleasures (kāma rāga).
- Then one first loses the desire to "own" sense objects ("vatthu kāma") that provide sense pleasures; one is merely satisfied with enjoying them. Thus one has not given up all kāma rāga, just "vatthu $k \bar{a} m a$." Now one is at that Sakadāgāmī stage, and will not be born again below the deva realms. Thus one is freed from rebirth where diseases are possible (including the human realm) and one is said to be "healthy forever."

8. When a Sakadāgāmī contemplates on the anicca nature more (while in the human or deva realms) he/she can remove kilesa kāma and also patigha from their minds and become free of all kāma loka realms. Then one becomes an $A n \bar{a} g \bar{m} \bar{l}$, i.e., not coming back to the kāma loka ever again.

- But an Anāgāmi has not removed the liking for Dhamma, and thus will be born in one of the five rūpa realms reserved for the $A n \bar{a} g \bar{a} m \bar{s}$. He/she will attain Nibbāna from there.
- An Anāgāmī becomes an Arahant by removing rūpa rāga, arūpa rāga, māna, uddhacca, and remaining avijjā.
- Of course one can proceed all the way to the Arahanthood while in the human realm. An Arahant will not be born anywhere in the 31 realms at death. His/her mind becomes free of even a trace of matter that is subject to decay and destruction; see, "What Are Rūpa? (Relation to Nibbāna)."

9. This gives a brief summary of how a living being goes from realm to realm in the rebirth process, until the Arahanthood is attained. It is NOT a random process. Everything happens due to causes. The following are two (related) ways to analyze that process.

- The key point to comprehend is that a birth in a given realm occurs because one has developed gati suitable for that realm; see, "Patisandhi Citta - How the Next Life is Determined According to Gati."
- One develops any kind of gati by cultivating corresponding sañkhāra, i.e., one tends to think, speak, and act in ways suitable for that realm. This is what is described in detail in Pațicca Samuppāda; see, "Paticca Samuppāda - "Pati+ichcha"+"Sama+uppāda."

10. It is also clear why it is futile to seek happiness anywhere in the 31 realms.

- One could live for millions of years in deva realm with much higher sense pleasures than in the human realm (and without being subjected to diseases), but then one has to come back to human realm or even a lower realm.
- Even if one is born in the highest brahma world (31st realm) and lives 84,000 eons in jhānic bliss there (each eon is roughly 30 billion years!), one has to eventually come back to the human realm and start over. Then at some point after that, birth in the ap $\bar{a} y \bar{a}$ is unavoidable. This is why infinite time (or beginning-less time) is a concept that is hard to wrap one's mind around; see, "Infinity - How Big Is It?" and "Samsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory."
- Thus one needs to contemplate whether it is worthwhile to seek happiness in a 100 -year human life! I know by experience that this is not easy to fully grasp, even when logically proven, because our minds are enamored and blinded with sense pleasures. That truth starts to sink in when the mind loses more and more defilements (greed, hate, and ignorance) and start seeing the perils of sense pleasures to some extent.

## 2.8

## Buddha Dhamma: Non-Perceivability and Self-Consistency

Revised November 9, 2018; March 13, 2020; September 8, 2021; August 6, 2022

## What We Perceive is Limited

1. Many people try to analyze and interpret Buddha Dhamma in terms of mundane concepts. However, there is much about this world we are unaware of, as science has shown in recent years; see below.

- The Buddha said that the world "had never known" his Dhamma. But many people try to explain the Buddha's core teachings using conventional/mundane concepts. Only a Buddha can truly perceive the true nature of this world with 31 realms; see "Wider Worldview of the Buddha." A Noble disciple of the Buddha (one who has attained a magga phala) can start perceiving some aspects of the wider world.
- This has happened ever since Nagarjuna, and other forefathers of "Mahāyāna Buddhism" tried to explain Nibbāna in terms of various concepts such as "suññata" or "emptiness"; see "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis" and "What is Sunyata or Sunnata (Emptiness)?."
- The same thing happened to "Theravada Buddhism," too. Buddhaghosa, like Nagarjuna and others, was not even a Sotāpanna. Before converting to "Buddhism," he was a Vedic brahmin, he edited and twisted Buddha Dhamma to fit his Vedic concepts; see, "Buddhaghosa's Visuddhimagga - A Focused Analysis."
- Buddha's ānāpāna bhāvanā was replaced by the Vedic prañāyāma breath meditation, for example.

## Buddhaghosa and Nagarjuna Were Not Noble Disciples

2. It is quite possible that Buddhaghosa, Nagarjuna, and others did not intentionally distort Buddha Dhamma. They just described Buddha Dhamma as they understood it with their background in vedic concepts.

- Even today, there are many "scholars" who write books explaining what "Buddhism" is. They also explain it in terms of their mundane frames of reference.
- When you look at most of the books today about Buddha Dhamma, it seems that there is not much difference between Buddha Dhamma and any other religion. They all teach "how to live a moral life."
- There is minimal discussion, if at all, on the foundational concepts such as anicca, dukkha, anatta, Pațicca Samuppāda, Ānāpāna sati, Satipatṭhāna. Whatever is discussed is mostly incorrect.

3. I think that is the biggest obstacle for most people in figuring out the true teachings of the Buddha Dhamma.

- We need to contemplate what the Buddha meant when he said, "my Dhamma has never been known to the world before."
- It is not something one can grasp within the "conventional framework," what is readily perceivable to a normal human with a defiled mind. It involves a wider world with 31 realms (we see only the human and animal realms) and a rebirth process and is based on the Laws of Kamma; see, "Essence of Buddhism In the First Sutta." Details at "Origin of Life."

## What is Perceivable to an Average Human?

4. First, let me clarify what I mean by "perceivable" or "comprehensible" to us as normal humans. Our six senses can "detect" only a tiny sliver of the "world."

- At a base level, science today can account for only 4 percent of the mass of our universe; see "The 4 Percent Universe: Dark Matter, Dark Energy, and the Race to Discover the Rest of Reality" by Richard Panek (2011).
- Many things have not been "discovered" by science (or philosophy) yet. In particular, nothing significant about the MIND has been discovered yet. For example, scientists cannot explain how consciousness can arise in a brain of inert atoms and molecules.

5. Therefore, trying to gauge the validity of Buddha Dhamma using only the known facts from science is like a blind man trying to figure out what an elephant looks like by touching a leg of the elephant; see, "How do we Decide which View is Wrong View (Ditthi)?."

- A frog living in a well knows nothing about the wider world. Similarly, a normal human, including scientists, faces the problem of figuring out the "reality" by only using data available through our limited six senses. Thus a scientific theory can't ever be "complete," as proven by the mathematician Kurt Gödel; see "Gödel's Incompleteness Theorem."

## Science Is Still Far Behind the Buddha

6. Most people believe that the only way to confirm what the Buddha taught is to see whether those teachings are compatible with science. That is not different from believing that one can get an idea of what an elephant looks like by asking a blind man who has touched an elephant's leg. OR asking a frog what the world outside the well looks like.

- This may sound ridiculous to many, but let us think back a few hundred years. Just 400 years ago, "science" believed in the geocentric model of the universe. That the Earth was in the universe and that the stars were embedded in a celestial sphere far above; see: WebLink: wiki: Geocentric model
- Science and all other major religions tried to attune their religions to this model at that time. Most religions still adhere to those concepts; see the same Wikipedia article above.

7. But 2500 years ago, the Buddha described our Solar system as a "Cakkavāla" or a planetary system. Not only that, but he also said there are uncountable such systems in the universe. Trying to find such details about the universe is a waste of time.

- Through the years, and especially since the beginning of the 20th century, science has "re-discovered" some aspects of the Buddha's wider world, including billions of galaxies, each of which contains billions of planetary systems like our Solar system.
- But someone living in the 19th century was likely to ridicule the idea of innumerable planetary systems (Cakkavāla) and could have said, "where is the evidence from science?." That aspect of Buddha Dhamma was not amenable to "science" at that time.
- Just like that many aspects of Buddha Dhamma are not amenable to science at the current time. But scientific progress will show more to be correct as science advances.

## What the Buddha Taught

8. In Abhidhamma, it is described in detail how all types of energies in the universe are "stored" in orbital motions ("bramana" in Pāli or Sinhala); see " 31 Realms Associated with the Earth."

- For example, planetary systems are planets orbiting stars. Those planetary systems combine to make galaxies, and those galaxies also undergo circular motion in the shape of disks. See: WebLink: wiki: Retrograde and prograde motion - Formation of celestial systems
- Scientists discovered that atoms are electrons orbiting the tiny nucleus made of protons and neutrons.

9. If one is going to wait for the full confirmation of Buddha Dhamma by science, one is as foolish as those who lived five hundred years ago and embraced the geocentric model and dismissed Buddha Dhamma as "exotic" or "mystical."

- We are fortunate to live in a time where science has made impressive progress and has confirmed many aspects of the Buddha's world view.
- Just as the invention of the telescope led to the discovery of a much bigger cosmos, the microscope (and its sophisticated versions) led to a previously unknown "microscopic world" teeming with innumerable microscopic living beings. There are billions of such beings in a single human body. See, "There are as many creatures on your body as there are people on Earth!."

## Scientific Tools Are Still Primitive

10. Science can accept only those phenomena that can be observed and measured with scientific instruments. Such scientific instruments are basically "extensions" of our six senses; see, "Expanding "Consciousness" by Using Technology."

- For example, while we cannot see the moons of Jupiter with our naked eyes, we can see them with telescopes. While we cannot see those microscopic creatures in our bodies with our naked eyes, we can see them with sophisticated microscopes. These are just two examples of many.
- People looked around and laughed when the Buddha said there are innumerable beings in this world. The Mahayānists are still under the impression that one could wait to attain the Buddhahood itself (not merely Nibbāna) until "everyone" is ready to attain the Buddhahood! However, they did not realize that they needed to include all those billions of microscopic creatures on one's body in the category of "everyone."

11. This is just the tip of the iceberg. While science has confirmed that there are uncountable planetary systems, it has not been able to find life on another planetary system yet. When that happens, the "wait for the Buddhahood" for the Mahayānists will become much longer.

- Similarly, the job of any "Creator" who looks after every being (even if just humans) will also become unbearably burdensome. That is because there are uncountable world systems with human beings as well.
- I am not trying to make fun at the expense of others but merely trying to get the point across that, for those who can think for themselves, it is time to get rid of all such nonsensical beliefs and wrong views; these are all micchā dittthis.
- Getting rid of such wrong views is necessary before starting any fruitful meditation. Purification through "correct views" comes before "purification through formal meditation." Sammā Ditṭhi, or "correct views of this world," comes first in the Eightfold Path.

12. When we hear about something that we cannot explain with the CURRENT SCIENTIFIC KNOWLEDGE, we categorize them as "esoteric" or "mystical." Of course, many such "made up theories" are out there without any substance. However, Buddha Dhamma can be SHOWN TO BE CONSISTENT with all our world knowledge.

- If we can bring back someone who died before the 20th century and tell him that we can "see" an event in a distant country in real-time, he will not believe it. If we turn on a television and show him the actual event, he will be flabbergasted; he will refuse to believe it, saying it is a magic trick.
- But now we know that the visuals and sounds of that event can be transformed and transmitted over long distances almost instantaneously and can retrieve those signals by "tuning a television set" to the correct frequency.
- Kamma vipāka (energy stored) or rebirth at a distant location works similarly. Even though we cannot "see" or perceive, that energy can materialize when the conditions become right; see, "Anantara and Samanantara Paccaya." It will take some time to sink in these concepts, but the more you read, the more you will understand.

## Self Consistency Is Critical

13. Two key methods are used in science to verify a given scientific theory. They have some basic axioms that appear to be inviolable. Then all other currently accepted scientific theories must be CONSISTENT with those axioms.

- If a currently accepted scientific theory is proven to be inconsistent with a newly discovered phenomenon, then that scientific theory is discarded, and a new theory is adopted.
- Scientific findings up-to-date are consistent with pure Buddha Dhamma as given in the Tipiṭaka.
- However, there are many things in Buddha Dhamma that have not been confirmed by science. More are being confirmed as new findings emerge.
- And Buddha Dhamma is self -consistent. Thus my obsession with making sure all my posts are interconsistent.

14. There are two ways to test the validity of the Buddha Dhamma. First is the self-consistency within the foundational concepts, such as Tilakkhana, Four Noble Truths, Noble Eightfold Path, Paṭicca Samuppāda, etc. Second is the compatibility with "new findings" by science.

- Here "new findings by science" do not necessarily mean the explanations given by science depict the "absolute truth." That is because scientific explanations can change with time (for example, the geocentric model had to be changed).
- If science finds evidence for life in outer space, that will be consistent with Buddha Dhamma. However, what science proposes about how life arose may not be correct.

## Power of a Purified Mind

15. One needs to contemplate the implications of these points (and there are many, as I will mention in other posts). How can a human being who lived 2500 years ago come up with such an elaborate way of describing our world? Those are just beginning to be "re-discovered" by the efforts of thousands of scientists over many generations.

- The Buddha could transcend all "normal human capabiilities" by purifying his mind. Thus Gödel's Incompleteness Theorem does not apply to Buddha Dhamma; see \#5 above.
- Thus his Dhamma may not be "amenable" to the basic frame of reference we all have as normal human beings. Concepts like rebirth and kamma vipāka may sound mysterious. The only way to see the truth in such concepts is to put them to the standard scientific method discussed above.

16. The Buddha could see those and much more just by purifying his mind. And science has not yet figured out the "Power of the Human Mind."

- Modern science is way behind Buddha Dhamma regarding the mind; see the "Abhidhamma" section.
- A human can purify the mind to the level of a Buddha only once in many eons on average. However, we can purify our minds enough to see many facts about nature that science is unaware of.
- The sense of relief and well-being one can achieve by purifying one's mind is beyond any sensory pleasure.

## Pleasures of "This World" Are Short-Lived

17. For example, one can enjoy even the best food on Earth only while eating that food. How long does that last? Jhānic experiences (Ariya or even anāriya jhānā) can last longer.

- However, the "base level" of "cooling down" or Nibbāna or "niveema" or "nivana" that comes at the Sotāpanna stage is forever. There is no comparison to any briefly-lived sensory pleasure or even "jhānic pleasures."

## Samsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory

## Revised May 22, 2018; May 25, 2022

1. To understand the Buddha's message, one needs to grasp the unimaginable length of the sainsāra (the rebirth process). The Buddha said that there is no discernible beginning to conscious life. It always existed, and it will exist until one attains Nibbāna.

- Infinity is a mind-boggling concept; see "The Infinity Problem in Buddhism."

2. This is a bit difficult concept for many because many cultures/religions have the idea of a set time of Creation. If there is a First Cause (such as Creation), then there must be a time that everything got started. But if there is no Creation, then there cannot be a set time for a beginning.

- Even as recently as at the beginning of the 1900s, Lord Kelvin, one of the top scientists of the day, estimated that the age of the Sun was $<40$ million years based on gravitational contraction (scientists did not know the atomic structure at that time). Our knowledge of the universe was pretty much limited to the Solar system.

3. Vindication of the Buddha's teachings on the long saimsāra started at the beginning of the 1900s with the advent of quantum mechanics and relativity. The discovery of radioactivity in 1898 by Becquerel and Einstein's explanation of the photoelectric effect in 1905 led to the quantum theory of atomic structure. That, in turn, led to the correct picture of nuclear fusion as the source of solar energy.

- By 1956, scientists knew the age of the solar system to be $>4$ billion years. Yet, even billions of years are hardly the same as "beginning-less time!"

4. But there was more to be discovered. By 1929, Edwin Hubble showed that distant galaxies are moving away from each other and that our galaxy is just one of many galaxies. That was a vast understatement since now we know billions of galaxies exist in our observable universe! And they are flying away from each other, meaning the universe is expanding.

- The discovery of microwave background radiation in the 1960s led to the "Big Bang Theory" that our universe started with the "Big Bang" about 14 billion ago.
- However, it is just a theory.

5. The most accepted explanation for such "big bang origin of the universe" is the inflationary theory of Alan Guth; see the book, "The Inflationary Universe" by Alan Guth, 1997. In the inflation theory, if one "Big Bang" is possible, then it is a given that many other "Big Bangs" are possible. The total energy of our universe is entirely consistent with adding up to zero.

- If a universe requires zero energy to produce, then "the universe is the ultimate free lunch," as Guth explains in his book (pp. 247-248). Thus, implied in the inflation theory is the existence of multiple universes.
- According to the "cyclic theory" model, an alternate theory, the same universe comes to a "Big Crunch," which leads to another Big Bang, and the whole process keeps repeating. So, there is no beginning to time either, time is infinite.

6. There are several theories currently being explored in quantum mechanics related to cosmology. There is one theory that requires a universe being exist for each possible event! So, there may be an infinite number of parallel universes. For example, see "The Beginning of Infinity" by David Deutsch (2011). In all these theories, multiple universes always exist.

- If that is not enough to boggle one's mind, another theory in quantum mechanics is called the "Many Worlds Interpretation of Quantum Mechanics." It speculates that multiple universes arise each time a quantum event takes place!

7. Buddha's explanation of how the universe operates is detailed in the Aggañña Sutta (DN27). However, all English translations available today are not correct. A good translation of the sutta with details would need a good background in Buddha Dhamma.

- I summarized "Buddhist Cosmology" in a recent forum discussion at the discussion forum: "WebLink: Multiverse: Different Physical Laws and Different Dhamma?."
- Also see, "Infinity - How Big Is It?."

8. I would like to close this essay with a simile from the Buddha that he used to describe the unimaginable length of saimsāra, and to point out that our time in this life is less than a blink of an eye to the length of saìsāra. The Buddha used a great eon as the measurement unit to help his followers visualize the enormous length of samisāra.

- In Buddha Dhamma, the Earth goes through a cyclic process: it forms, stays in that state, starts being destroyed, and stays in that destroyed state. That whole process takes a great eon (mahā kappa), and then the entire process repeats, again and again.
- The Buddha gave a simile to describe the length of a great eon (mahā kappa). It is longer than the time it would take a man to wear away a mountain of solid granite one yojana (about 7 miles) around and one yojana $\bar{a}$ high by stroking it once every hundred years with a silk cloth.
- These days scientists use the word "eon" to denote the duration of a universe (from the "big bang" either to a "big crunch" or just fading away). That will be proven to be incorrect in the future. I hope I will live to that day!

9. For fun, I estimated the mass of the material that needs to be removed by the silk cloth each time (this happens every 100 years). Using a 7 -mile cube of stone with a density of 2515 kg per cubic meter, I calculate the mass of the mountain to be $3.5 \times 10^{\wedge} 6 \mathrm{~kg}$.

- Assuming the lifetime of our Solar system to be 10 billion years, I calculate the mass removed by each stroke is about 36 grams or about 1.2 ounces. That appears to be a reasonable number!
- When we try to visualize the wearing of a mountain, we can imagine how long a time period that is.

10. Yet, that is still nothing compared to the length of the samisara. Infinity is a concept that is hard to wrap one's mind around; see, "Infinity - How Big Is It?."

- One day the bhikkhus asked the Buddha how many great eons had already passed and gone by. The Buddha told them, "Suppose, bhikkhus, there were four disciples here, each with a lifespan of hundred years, and each day they were each to recollect a hundred thousand great eons. There would still be great eons not yet recollected by them when those four disciples pass away at the end of a hundred years. Because, bhikkhus, this saimsāra is without discoverable beginning."
- Another simile given by the Buddha to indicate the length of sainsāra is the following: Every living being has been one's mother, father, or a close relative in this unimaginably long samisāra.
- One could understand why infinity is so hard to fathom by reading about what scientists say about infinity; a very entertaining book is "The Beginning of Infinity" (2011) by the physicist David Deutsch.

### 2.10 Evidence for Rebirth

## Revised January 18, 2020; September 3, 2020

## Introduction

Most people in Western societies are not familiar with the concept of rebirth. However, that is changing, because there is a lot of evidence emerging, and scientists and philosophers are beginning to take it seriously.

- One needs to look at the mounting evidence without any preconceived ideas. There is no plausible way to explain these accounts from a purely "materialistic" point of view, i.e., that consciousness arises from inert matter.
- Here is a video of a recent discussion on Western research on children's past lives, Near Death Experiences, etc:
WebLink: Youtube: Is There Life after Death? Fifty Years of Research at UVA

## Rebirth Accounts

The late Professor Ian Stevenson at the University of Virginia conducted over 20 years of research on the authenticity of rebirth accounts, which is being continued by Professor Jim Tucker.

- Several books about rebirth have been written by these two professors. A good book is "Twenty Cases Suggestive of Reincarnation" by Ian Stevenson. By the way, Professor Stevenson became a Buddhist later on in his life presumably because of his studies (see, "Rebirth as Doctrine and Experience" by Francis Story (2003); first edition 1975). He mentions this in the introduction he wrote to this book by Francis Story; I have scanned that introduction: "Introduction to "Rebirth by Francis Story - Ian Stevenson."

Here is a video that discusses the work of the late Dr. Ian Stevenson, Dr. Jim Tucker, and colleagues at the University of Virginia:

## WebLink: YOUTUBE: Evidence of Reincarnation

In their book, "Soul Survivor: The Reincarnation of a World War II Fighter Pilot", by Bruce and Andrea Leininger detail the amazing story of their son's recount of a past life, mentioned in the above video. Here is an ABC News report on the story:

## WebLink: YOUTUBE: Reincarnation - Airplane Boy

Here is another story of the rebirth of a Civil War General:

## WebLink: YOUTUBE: Reincarnation, BORN AGAIN?

Here is a three-year-old chanting Buddhist suttā (and doing a very good job). Can a three-year-old memorize such complex lines of suttā?

## WebLink: YOUTUBE: 3-year-old boy in Isan chants in Pāli

- Also see the post, "Boy Who Remembered Pāli Suttā for 1500 Years." This is a true story about a boy (Dhammaruwan) who recited complex and lengthy Pāli suttā at five years of age, which sounded very different from current chantings. Furthermore, he remembers accounts of his previous life 1500 years ago, when he accompanied the famous Buddhaghosa on his trip to Sri Lanka.

## Child Prodigies

Another piece of evidence comes from child prodigies. Here is a report on " 10 Mind-Blowing Chile Prodigies":

## Evidence for Rebirth Much Stronger Than Perceived

1. Many people say that direct "proof" for rebirth cannot be given; it is actually the other way around. If one's memories are in the brain (as science believes), then all those memories will be lost when one dies. There is no "physical connection" between the brains of those involved in the rebirth stories.

- Therefore, even if just one of those rebirth accounts can be proven to be true, then there is no way to explain that in any way other than rebirth. How can the brain in this life recall memories from the brain in a previous life?
- If there is a connection between two lives that lived in two geographical locations (also separated by time), there is no explanation for that in current science, i.e., no way to make a connection between the DNA of those two "persons." A purely materialistic view cannot explain it.
- Recent findings in science show that matter in different locations is entangled at a fundamental level; see, "Quantum Entanglement - We Are All Connected." Also, "a living being just goes from one physical body to another"; see, "What Reincarnates? - Concept of a Lifestream."

2. Also, it is by having this presumption of rebirth that all of the seeming anomalies and inequalities of life can be explained; see, "Vagaries of Life and the Way to Seek Good Rebirths."

- And how could we ever explain the birth of such prodigies as Jeremy Bentham, who already in his fourth year could read and write Latin and Greek? John Stuart Mill, who at the age of three read Greek and at the age of six wrote a history of Rome? Babington Macaulay, who in his sixth year wrote a compendium of world history? Beethoven, who gave public concerts when he was seven; or Mozart, who already before his sixth year had written musical compositions? Voltaire, who read the fables of Lafontaine when he was three years old?
- Does it not seem infinitely more probable that all these prodigies and geniuses, who in many cases came from illiterate parents, had already in previous births laid the foundations for their extraordinary faculties?

Here is a list of child prodigies from Wikipedia. You will recognize many of the names:

## List of Child Prodigies

Here is the link to the Wikipedia article on child prodigies:

## Child Prodigy

## Healing with Hypnosis

The late Dr. Richard Feynman was skeptical about the claims in hypnosis studies until he subjected himself to hypnosis in two different occasions. In both instances, he verified for himself that if done correctly hypnosis works. He describes these two cases in his book, "Surely You're Joking, Mr. Feynman!" (1985), pp. 6668.

- Therefore, hypnosis provides yet another set of "supporting material." There are many cases of people remembering past lives when hypnotized. It is hard to evaluate the validity of most such cases.
- However, there is a branch of hypnosis that uses it as therapy. Some people seem to have "phobias" based on a horrific event from a past life. They cannot figure out why they have these phobias, but when a hypnotist brings out that experience, they become cured. Here is a $20 / 20$ documentary of three such cases, where they vouch for the authenticity of the therapy sessions:

WebLink: YOUTUBE: Past Lives

There are hundreds of youtube videos on rebirth stories and also many on child prodigies and hypnosisbased curing of certain ailments.

## The following books are also good reads:

- "Many Lives, Many Masters", by Brian Weiss (1988).
- 'Many Mansions: The Edgar Cayce Story on Reincarnation", by Gina Cerminara (1988).
- "Children's Past Lives: How Past Life Memories Affect Your Child" by Carol Bowman (1998)
- "Return to Life: Extraordinary Cases of Children Who Remember Past Lives", Jim B. Tucker (2013).

## OBE and NDE Studies

There is an ever-growing number of reports of Out-of-Body Experiences (OBE) and Near-Death Experiences (NDE) that not only support rebirth, but also are consistent with the concept of a "manomaya $k \bar{a} y a "$ "; see, "Out-of-Body Experience (OBE) and Manomaya Kāya" and other related posts.
Here is a popular youtube video on the presentation of a physician on Near-Death Experiences:
WebLink: youtube: From life to death, beyond and back | Thomas Fleischmann | TEDxTUHHSalon

There are many youtube videos, but here are three recent books on these two subjects:

- "Consciousness Beyond Life", by Pim van Lommel (2010) gives detailed accounts of case studies by a renowned cardiologist.
- "Brain Wars" by Mario Beauregard (2012) is a book by a scientist on NDE, OBE, and the mind-body problem in general.
- "Dying to be Me: My Journey from Cancer, to Near Death, to True Healing", by Anita Moorjani (2012) is a personal story of a cancer survivor who had been diagnosed to die within a few weeks but had an "unexplainable recovery" within days during which time she had an "out-of-body experience."

## Discussion

1. Some of you may be wondering whether there is an inconsistency here. I have repeatedly mentioned that the Buddha clearly stated that it is extremely rare to be born a human. Yet, from the above rebirth case studies it appears that people have been born in the human realm in successive lives. If it is so hard to attain a human birth, how can this be?
2. There is nothing inconsistent. The key problem here is another misinterpretation. "Bhava" or existence is not the same as a " $j \bar{a} t i$ " or a birth; see, "Bhava and Jāti - States of Existence and Births Therein."

- A living being, upon exhausting the kammic energy for one existence, grabs hold of another strong kammic potential for the next existence. A human existence (bhava) can last thousands of years. Yet, each human birth ( $j \bar{a} t i)$ lasts only about 100 years. Therefore, there can be many births ( $j \bar{a} t i$ ) within human existence (bhava.)
- In between successive human births, that human lives in para loka with just the "mental body" or manomaya kāya. Another word for that entity is gandhabba. The concept of gandhabba is explained in simple terms in, "Ghost 1990 Movie - Good Depiction of Gandhabba Concept."
- The same is true for the animal realm. The life of a dog is less than 20 years, but a "dog bhava" can last thousands or more years.

3. Thus, if one has done a highly meritorious deed, and at some point in samisāra (rebirth process) latches on to that "kamma seed" (see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka"), that energy may be able to sustain that existence for many rebirths.

- In these cases, when physical death occurs BEFORE exhausting the energy of the kamma seed, the manomaya kāya (also called gandhabba) leaves the dead body and waits until a suitable womb is ready; see, "Manomaya Kāya (Gandhabba) and the Physical Body." In this case, the gandhabba may carry the physical resemblance to the next life, including scars of any significant wounds, birthmarks, etc.
- When rebirth takes place there, the new physical body could have many resemblances to the old body. In many rebirth cases, such physical resemblances have been confirmed (as in the case of the civil war general in one of the above videos).

4. In summary, it is important to remember that in Paṭicca Samuppāda, it is "upādāna paccayā bhavo," i.e., grasping or craving (upādāna) that leads to existence (bhava): for example, existence as a dog.

- That existence (bhava) may have enough kammic energy to support many repeated births as a dog. Therefore, once a given bhava or existence is grasped, the next step of "bhava paccayā jāti," will lead to repeated births as a dog until that kammic energy is exhausted; see, "Bhava and Jāti - States of Existence and Births Therein."

5. On the other hand, if the kammic energy for that "bhava" has run out by the time death occurs, then a new "bhava" will be grasped at the death moment.

- For example, a human may exhaust the kammic energy for that human existence (bhava) and grasp a kammic seed for a bhava (existence) of an elephant. In that case, an "elephant gandhabba" will come out of the dead body of the human. Then it will stay in that "mental body" until a matching "elephant womb" appears. That means the mother elephant needs to have gati similar to this new elephant.

6. It may be difficult to grasp these concepts initially. One needs to look up the links given and may need to go back several layers to grasp these ideas. It is not possible to explain everything in one post. Buddha Dhamma can be very deep if one wants to really comprehend how nature works.
You may want to read the posts in the section on "Origin of Life" and "Buddha Dhamma - A Scientific Approach."

### 2.11 Power of the Human Mind

- Power of the Human Mind - Introduction
- Difference Between Jhāna and Stages of Nibbāna
- Power of the Human Mind - Anariya or Mundane Jhānā
- Power of the Human Mind - Ariya Jhānā
- Are There Procedures for Attaining Magga Phala, Jhāna and Abhiññā?

### 2.11.1 Power of the Human Mind - Introduction

## Revised August 27, 2018

1. Most people know about Buddha Gotama as a very intelligent and compassionate human being. In "Dhamma and Science - Introduction," I pointed out the similarities and differences between a scientist and a Buddha. Here I want to discuss in detail the incomprehensible complexity of a human mind, and how a Buddha achieves the peak performance of that complex entity.

- As I pointed out in "Godel's Incompleteness Theorem," a normal human mind works within the sense sphere of a normal human and thus inherently incapable of providing a complete theory about our world; but the mind of a Buddha can transcend our sensory experience and see the whole of existence.
- Here I point out, in a systematic way in a series of posts, the progression of the human mind to higher levels achieved by purifying the mind (not by merely learning), and why a Buddha is at the very pinnacle. At the end of this series you will see why no other human being, no matter how intelligent, can even remotely approach the mind of a Buddha.

2. In the "The Grand Unified Theory of Dhamma," we discussed the 31 realms of existence as laid out by the Buddha.

- Out of these, the human realm is at the fifth level (and our knowledge base is limited to our sensory experience within it, and Godel's Incompleteness Theorem applies to any theory derived within it). There are four realms below the human realm, AND 26 realms above.
- Out of the 31 realms, we can see only the human realm and the animal realm (which is one of the four lower realms or the apa$y \bar{a}$ ). But we can access the thoughts enjoyed by the beings in the higher realms, AND we can access the transcendental (lokuttara) cittā too. Please do not put too much significance initially to the number of cittā in each realm, etc. Be patient with me as I need to lay out the "big picture" first.
- As we proceed systematically in a few posts, you will see various connections to other concepts discussed in other parts on the site, and eventually all fit together. This is why I keep saying that it is a complete and self-consistent world view on a scale unimaginable to a normal (unpurified) human mind.

3. The types of thoughts (citt $\bar{a}$ ) that can be experienced in the whole of existence ( 31 realms) is 89 (or 121 depending on the scheme); see, "The 89 (or 121) Types of Cittas." In the three main lokas (or planes) of $k \bar{a} m a l o k a, ~ r \bar{u} p a l o k a$, and arūpaloka, different types of cittā are of common occurrence. While most of the $\mathbf{8 9}$ citt $\bar{a}$ are possible in all three lokas, normally a subset of cittā operate mostly in a given realm.

- For example, in the $k \bar{a} m a l o k a$, only 54 cittā are mainly experienced. The kāmaloka consists of the lower eleven realms, with sixth through eleventh shells representing the realms of the devas. Beings in these 11 realms have all six sense bases, and in the deva realms the sense pleasures are higher than in the human realm.

4. Out of all 89 types of thoughts, only 12 are immoral or akusala cittā and these are experienced only in $k a \overline{m a l o k a}$; see, "Akusala Citta and Akusala Vipāka Citta."

- In the higher 20 realms belonging to the $r \bar{u} p a l o k a$ and arūpaloka, only $j h a \bar{a} i c ~ c i t t \bar{a}$ are mostly present, and akusala cittā normally do not arise.
- So, as one can imagine, the beings in the lower realms entertain more immoral cittā, and with higher frequency too. Human realm is kind of in the middle, with both moral and immoral cittā.
- Mostly vipāka citta arise in the lowest four realms; they basically "pay for their previous kamma." It is said that the beings in the lowest realm, niraya (hell) experience basically two immoral cittā based on hate, because of the high degree of suffering there.

5. The human realm is unique in that the human mind can access not only the cittā in the rūpa and arūpa lokas, but also the eight types of cittā that transcend the $\mathbf{3 1}$ realms. These cittō are the four path (magga) cittā for the four levels of Nibbāna (Sotāpanna, Sakadāgāmī, Anāgāmī, Arahant), and the corresponding resultant (phala) cittā. Thus all 89 types of citta are possible for a human.

- Beings in the higher realms can also attain the 8 magga/phala citta, but do not normally experience the citt $\bar{a}$ that are typical of the lower realms.
- Furthermore, the most potent cittā, those with highest javana (impulse) power in "mahā kusala citta." They are accessible mostly by humans and those in higher realms; see, "Javana of a Citta - Root of Mental Power." More posts will follow in the future.
- This is the basis of the power of the human mind. It is possible for a human to attain the mindset of a being in the lowest realm (niraya) and it is possible also to go all the way up to the mindset of a Buddha.

6. The citt $\bar{a}$ in the $r \bar{u} p a l o k a$ and arūpaloka are easily categorized according to the $j h \bar{a} n i c$ states. These are the same jhānic states attained by human via meditation.

- A human can attain all eight jhānic states, and the lower four correspond to the rūpaloka and the higher four to the arūpaloka.
- By the way, the Buddha never referred to the arupāvacara states as jhānā. Rather they are referred to in the suttā by their names: $\bar{k} k \bar{a} s a ̄ n a n c a \bar{a} a t a n a, ~ v i n ̃ n ̃ a ̄ n a n c a ̄ y a t a n a, ~ e t c . ~$
- Each jhānic state correspond to three types of cittā: wholesome (kusala) citta and the corresponding vipāka (resultant) citta are two; when the same jhānic kusala citta experienced by an Arahant it is called a kriya (functional) citta, because it does not lead to a vipāka citta.

7. In the 16 realms belong to the $r \bar{u} p a l o k a$, where only two physical sense faculties (eye and ear) are active. These beings have very fine (less dense) bodies.

- In rūpaloka 15 types of thoughts ( citta) are mostly experienced corresponding to the five $j h a \overline{n i c}$ factors: vitakka, vicara, pīti, sukha, ekaggatā; see, "Power of the Human Mind - Anāriya or Mundane Jhānā." These are the lower five jhānic kusala cittā, corresponding five vipāka cittā and five kriy $\bar{a}$ citt $\bar{a}$ (the last five are effective only for the Arahants who get into these jhānic states).
- The highest four realms represent the arūpa lokas, where beings have ultra fine bodies and only the mind faculty; no physical senses. Here there are only 12 types of jhānic citta mainly present. These are the higher four (fifth through eighth) jhānic kusala cittā, corresponding four vipāka citta, and corresponding four kriyā citta (which are effective only for the Arahants who get into these jhānic states, which do not have corresponding vipāka citta).

8. The rūpaloka and arūpaloka are collectively known as Brahma realms, which comprise the higher 20 realms. In the Brahma realms, beings are mostly devoid of both greed and hate, but they have dormant ignorance (moha) in their kamma seeds; see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka." In the deva worlds (which belong to kāmaloka), those beings are mostly devoid of hate-rooted citt $\bar{a}$, but have greed-rooted citt $\bar{a}$ since they enjoy sensual pleasures.

- It is possible for a human to attain any of those jhānic states via samatha meditation, and one does not have to be a Buddhist to attain those mundane or anāriya jhānic states.
- Those anāriya jhānic states are temporary; a yogi in a jhānic state can be "taken out" of the jhāna; see the next post. They may be lost if one does not keep practicing, and the ability to enter such jhān $\bar{a}$ is lost when one dies, i.e., he/she may not have the ability to get into $j h \bar{a} n \bar{a}$ in the next life, even if they are born human.
- However, if one dies while in even an anāriya jhānic state, he/she will be born in the corresponding rūpaloka or arūpaloka. Yet, a being who gets into even the highest arūpaloka via anāriya jhānā will end up eventually in the four lower realms (apāyā).
- However, Ariya jhānā are permanent. Once one gets into an Ariya jhāna, it will hold through future lives.

### 2.11.2 Difference Between Jhāna and Stages of Nibbāna

March 24, 2017; revised April 28, 2018; July 11, 2021

1. There are many misconceptions about the relationship between jhāna and magga phala (the four stages of Nibbāna). Some view that jhāna are necessary to attain magga phala, and others believe that being able to get into jhāna means one has attained magga phala.

- The first assumption is wrong, and the second is true if one has attained an Ariya jhāna.
- We can resolve these issues by looking into what are meant by jhāna and magga phala, and also the difference between anāriya and Ariya jhāna.

2. One attains magga phala (various stages of Nibbāna) by permanently removing greed, hate, and ignorance (about the nature of this world or Tilakkhaña): "Ragakkhayo Nibbanan, Dosakkhayo Nibbanan, Mohakkhayo Nibbanan."

- This can also be stated as "one needs to remove 7 anusaya" or equivalently "10 samyojana" to attain Nibbāna. At the Sotāpanna stage one removes 2 anusaya and 3 samyojana; see, "Conditions for the Four Stages of Nibbāna."
- The most commonly used evaluation is that a Sotāpanna has removed the three samyojana of sakkaya ditthi, vicikicchā, and silabbata paramasa.
- Therefore, a critical first step for attaining magga phala is to be exposed to the correct interpretations of anicca, dukkha, anatta; see, "Anicca, Dukkha, Anatta - Wrong Interpretations."
- The second step is, of course, to grasp the anicca (and dukkha and anatta) saññā to some extent; see, "What is Sañ̃̃̃a (Perception)?."

3. Jhāna (sometimes written as "dyāna") can provide blissful bodily sensations. These arise due to the "cleansing of the physical body and the nervous system" induced by "defilement-free" thoughts; see, "Jhānic Experience in Detail - Sāmaññaphala Sutta (DN 2)."

- Jhäna are mental states corresponding to rupavacara and arupavacara realms; they still belong to "this world" of 31 realms. Just like the human realm is "more peaceful in general" than the animal realm, jhānic states are "more peaceful in general" than the human realm.
- We all have been born in most of the 31 realms (except for the realms reserved for the Anāgāmis) uncountable times, and thus had attained those $j h a \bar{n} i c$ states uncountable times in previous lives.
- Even this second phenomenon of $j h a \overline{n a}$ is completely outside the realm of modern science. Scientists cannot explain jhānic phenomena, but soon they will not be able to ignore these as "hallucinations" because more and more people are attaining jhāna.

4. There are two main factors that come into play in cultivating jhān $\bar{a}$.

- Some people have cultivated jhānā in their recent previous lives and are able to get into anāriya jhānā very quickly. For a few it comes without any effort, just lying on the bed (by the way this can be any person who lives a moral life, whether exposed to Buddha Dhamma or not).
- The second factor involves the "cleansing of the physical body", as we discuss below. This means the actual physical body with its nervous system, in addition to cleansing the mind.

5. My late Noble teacher, Waharaka Thero, has given the following simile to explain this "cleansing process" as well as to describe the main difference between a jhāna and magga phala.

- I hope you have at least heard about - preferably seen - an old oil lantern with a glass enclosure where the wick is soaked in oil or gasoline that comes up through the wick from a built-in reservoir.
- If gasoline is contaminated, the glass enclosure gets dirty quickly. In the same way, our defiled thoughts lead to a "contamination effect" in our physical bodies.
- Many body ailments, including bodily pains and even some diseases, COULD BE reduced by cleansing one's mind. Of course, those initially arise due to kamma vipāka, and the stronger ones may not be overcome by this process; see, "What is Kamma? - Is Everything Determined by Kamma?."

6. Our thoughts can be compared to the burning wick and the physical body to the glass enclosure, in the above simile. When the thoughts become defiled, the body will be "contaminated" giving rise to discomforts and even diseases. We will discuss the causes below.

- The glass enclosure of the lamp needs to be taken out and cleaned in order to get the lamp to shine bright again, i.e., to make the "body of the lamp" clean again.
- In contrast, there is a built-in mechanism for our bodies to be cleansed.
- This built-in mechanism is our cittaja kaya or our thoughts. We can state the basic mechanism this way: The javana citta in our thoughts (cittaja kaya) produce good or bad energy fields called utuja kaya. These are actually rūpa below the suddhatthaka stage (very fine), which are analogous to electromagnetic waves in physics.
- Bad thoughts associated with dasa akusala lead to the contamination of the body, and good thoughts generate utuja kaya that can clean up such contamination.
- The "Search box" on the top right can be used to find more relevant posts, if one needs more information on these terms.

7. This utuja kaya (which is really an energy field) can and does affect our physical body. This is why people who are depressed, or have high levels of anger or greed, are more likely to be subjected to ailments and diseases, and people with joyful mindsets have relatively healthy bodies.

- This effect can be enhanced via nirāmisa sukha that arises due to "moral living." The more one stays away from the dasa akusala, the happier one becomes, and starts feeling "sukha" in the body itself. It may not be fast, but it definitely happens over time.
- It can be much more enhanced by comprehending Tilakkhaṇa. The difference here is that one will then stay away from dasa akusala mainly because one would have realized the fruitlessness and danger of seeking sensual pleasures by committing dasa akusala.

8. I have discussed - starting with basics - how our thoughts can affect our well-being in the "Living Dhamma" section. Understanding those basic concepts is crucial in order to understand deeper concepts and to do Ānāpāna and Satipatt $\mathrm{th} \bar{n} n a$ Bhāvanā effectively as discussed later in that section.

- When defiled thoughts are suppressed at least for short times (during a desanā or while reading Dhamma), one's mind becomes joyful and one will be able to get to samädhi for a short time (tadañga pahāna).
[pahāna : (nt.) removal; giving up; abandoning; avoidance.
pahāna : 'overcoming', abandoning. There are 5 kinds of overcoming:
(1) overcoming by repression (vikkhambhana-pahāna), i.e. the temporary suspension of the 5 hindrances (nīvarana, q.v.) during the absorptions, [vikkhambhana : [nt.] arrest; elimination; discarding; suppression.]
(2) overcoming by the opposite (tadañga-pahāna),
(3) overcoming by destruction (samuccheda-pahāna),
(4) overcoming by tranquillization (patipassaddhi-pahāna),
(5) overcoming by escape (nissaraṇa-pahāna).
(1) 'Among these, 'overcoming by repression' is the pushing back of adverse things, such as the 5 mental hindrances (n̄̄varana q.v), etc., through this or that mental concentration (samādhi, q.v.), just as a pot thrown into moss-clad water pushes the moss aside....
(2) " 'Overcoming by the opposite' is the overcoming by opposing this or that thing that is to be overcome, by this or that factor of knowledge belonging to insight (vipassanā q.v.), just as a lighted lamp dispels the darkness of the night. In this way, the personality-belief (sakkāyadittthi, s. ditthi) is overcome by determining the mental and corporeal phenomena ... the view of uncausedness of existence by investigation into the conditions... the idea of eternity by contemplation of impermanency ... the idea of happiness by contemplation of misery....
(3) 'If through the knowledge of the noble path (s. ariyapuggala) the fetters and other evil things cannot continue any longer, just like a tree destroyed by lightning, then such an overcoming is called 'overcoming by destruction’ " (Vis.M. XXII, 110f.).
(4) When, after the disappearing of the fetters at the entrance into the paths, the fetters, from the moment of fruition (phala) onwards, are forever extinct and stilled, such overcoming is called the 'overcoming by tranquillization'.
(5) 'The 'overcoming by escape' is identical with the extinction and Nibbāna" (Pts.M. I. 27). (App.).]
- If one spends more and more time doing such activities, the length of this calm mindset (samādhi) can be lengthened, even up to weeks (vikkhambhana pahāna). Three types of pahāna are discussed in "Suffering in This Life - Role of Mental Impurities."
- That may not be jhāna yet, but it is possible to get into jhāna by increasing one's efforts by either samatha or vipassana meditation.
- For some people, it is easier to get jhāna, because they had cultivated jhānā in recent previous births as we mentioned above.

9. The power of the javana citta are increased when one is in samādhi and is even more when one gets to a jhāna. The "body cleansing effect" is enhanced and one starts feeling joy in the face, sukha in the body.

- This can be compared to the wick in the oil lamp generating a "high-power laser light" that automatically cleans the dirty glass enclosure.
- That bright "utuja kāya," which are also called "kirana" (or electromagnetic waves in physics), can burn those long-accumulated "bad deposits" in our bodies and also "straighten out" the nervous system.
- This is the first confirmation of the effect of the mind on the body for someone starting on the Path. One can actually convince oneself that the body CAN BE affected by one's thoughts.

10. All this can be done by just SUPPRESSING the pañcanīvaraṇa for long times, see, "Key to Calming the Mind - The Five Hindrances."

- Even before the Buddha, ancient yogis were able to get to jhāna by SUPPRESSING defiled thoughts or pañcañ̄varaṇa. They did this mainly by staying away from sensual objects (usually in a forest or in an isolated place).
- In fact, they were able to cultivate powerful abhiñ̃ñ̄and even travel through the air. Therefore, it is possible that those who get into the fourth anāriya jhāna will also experience the "white light" surrounding them.
- As long as one's mind can be kept away from greedy and hateful thoughts, such states of samādhi and $j h a ̄ n a$ can be maintained for a long time (vikkhambhana pahāna).
- This is related to the fact that how people can go to even anāriya meditation retreats (breath meditation) and attain a sense of peace for many days at a stretch. However, when they come back and get back into the regular lifestyle, it slowly fades.

11. The problem is that those effects, no matter how powerful, are only temporary with anāriya jhāna. They have not removed the root cause for getting attached to greed and hate. They remain hidden deep down as anusaya/samyojana.

- This is discussed in detail in "Power of the Human Mind - Anāriya or Mundane Jhāna."
- Jhāna belong to the 31 realms: "Sila, Samādhi, Paññā to Paññā, Sīla, Samādhi."

12. Now we are getting closer to see the difference between anāriya and Ariya jhāna.

- The main difference between them is that Ariya jhāna are permanent since they are attained via REMOVING and not just SUPPRESSING some of those anusaya/samiyojana.
- Once removed via wisdom (pañña) when attaining the Sotāpanna stage of Nibbāna, some of those anusaya/samiyojana are permanently removed from one's mind (ucceda pahāna).
- After that, no matter how strong an attractive/hateful sense input comes in, strong defiled thoughts CANNOT arise in a Sotāpanna; see, "Akusala Citta - How a Sotāpanna Avoids Apayagami Citta," and other relevant posts in the "Sotāpanna Stage of Nibbāna."

13. The remaining key to the puzzle is that it is possible to attain magga phala just by getting into samādhi and not necessarily to jhāna.

- There are many types of people based on their gati (personalities) and capabilities: saddhā, viriya, samādhi, sati, paññā. In fact, the suttā in the Tipitaka are separated into five Nikāyas based on that so that each individual can study appropriate suttā for him/her, see, "Nikāya in the Sutta Pitaka."
- Without getting into details, people with predominantly pañña indriya can attain magga phala without going through jhāna.
- Others can go through jhānā to attain magga phala. This is not clear-cut, but just to get an idea.

14. The bottom line is that $j h \bar{a} n \bar{a}$ can be quite helpful in getting to magga phala. Furthermore, one may attain both within reasonably short times. But magga phala (at least the Sotāpanna stage) comes before Ariya jhāna are attained.

- The reason is that uccheda pahāna mentioned in \#12 that is necessary for the Ariya jhāna, cannot take place unless one has comprehended the Tilakkhaṇa and attained the Sotāpanna stage.
- One normally attains Ariya jhāna by recalling the (stage of) Nibbāna that one has seen, and the "cooling down" that one has thus experienced; see, "Power of the Human Mind - Ariya Jhānā."

15. For people with high levels of pañ̃̄̄a, even a brief state of samādhi, called tadañga pahāna (see \#8 above) is enough to attain the Sotāpanna stage. A famous example is Bahiya Daruchiriya who attained the Arahantship upon hearing just a single verse.

- Then there are accounts of many people who attained the Sotāpanna stage via vikkhambhana pahāna (see \#8 and \#10 above), mainly while listening to a desanā by the Buddha.
- For example, Alavaka yaksa (not a niraya yaksa but a deva yaksa) threatened the Buddha just before sitting down to listen to a desanā and attained the Sotāpanna stage during the desanā. Angulimāla
chased the Buddha with the intention of killing him but attained the Sotāpanna stage immediately afterward.
- More information on the three kinds of pahāna can be found in, "What Are Kilesa (Mental Impurities)? - Connection to Cetasika."

16. Therefore, there can be people with magga phala without any anāriya or Ariya jhāna.

- If there are people with magga phala without jhāna, they cannot experience the "jhānic sukha" in the body. Even though they do not generate "bad thoughts" to further contaminate their bodies, they have not cleansed the old contaminants. Jhānic javana citta (that can run continuously for long times, compared to just 7 javana citta in a normal citta vithi) are like laser beams that can clean contaminants in the body even in an anāriya jhāna; see \#4 of "Citta Vīhhi - Processing of Sense Inputs."
- In the simile of $\# 5$ above, this is like a wick not emitting any more smoke, but the glass enclosure is not yet cleaned.
- Of course, it would be easier for a person with magga phala to attain Ariya jhāna, and they will not attain anāriya jhāna.

17. Finally, from the above discussion it appears that the only way to confirm the attainment of the Sotāpanna stage is to see whether one has removed the three saimyojana (sanyojana) of sakkāya diṭthi, vicikicchā, and sīlabbata parāmāsa; see, "Sakk $\bar{a} y a$ Ditthi is Personality (Me) View?."

- And that cannot be determined by anyone else, but oneself.

18. April 28, 2018: I found a desanā by Waharaka Thero where he presents clear evidence that jhāna are not necessary to attain magga phala:

## WebLink: Download "Are Jhāna Required for Magga-Phala"

- The main point Thero makes is that we know that there are jāti Sotāpannas born in the human realm. But if a jhāna was REQUIRED to attain the Sotāpanna stage, then that person WOULD NOT be born in the human realm, but in a Brahma realm corresponding to that $j h a \bar{n} a$.

More information with references to suttā at: "Samādhi, Jhāna (Dhyāna), Magga Phala."

### 2.11.3 Power of the Human Mind - Anāriya or Mundane Jhānā

1. The 54 types of $\operatorname{citt} \bar{a}$ (thoughts) belonging to the kāmaloka (called kāmāvacara citt $\bar{a}$ ) are not very strong; they can just have enough power to grasp the thought object (ārammaña in Pāli or aramuna in Sinhala).

- The power of a thought comes from javana; see, "Javana of a Citta - The Root of Mental Power" for an analysis based on Abhidhamma.
- But the jhānic citta $\bar{a}$ belonging to the rūpaloka and arūpaloka have much more power and have a firm grasp of the object. This is why it is possible for someone who can get to the fourth jhānic state to acquire some capabilities that exceed the "normal" human potential, like telekinetic (move things with the mind) or the ability to see or hear from long distances; see below.
- The Pāli word "jhāna" has two roots: "to concentrate" and also "to burn up."

2. The Anariya or mundane $j h \bar{a} n \bar{a}$ are attained simply by SUPPRESSING the five hindrances. One simply focuses the mind forcefully onto one thought object, not letting those five hindrances come to surface.

- Since there is only one citta at a time (even though there are billions of citt $\bar{a}$ a second), when one forces the mind to one thought object, the five hindrances are kept at bay, and one feels the serenity of a mind unpolluted by the hindrances. This is called samatha meditation.

3. Thus attaining mundane $j h \bar{a} n \bar{a}$ is purely a mechanistic process. While some Buddhists use them to calm the mind before getting into insight (vipassana) meditation, it is used widely by the Hindus. Even before the Buddha, there were many Hindu yogis who could attain the highest $j h \bar{a} n \bar{a}$.

- There are many reports of people of other faiths also attaining such jhānic states (see, for example, "Interior Castle" by the Christian nun St. Teresa of Avila; edited by E. Allison Peers, 1946, for a fascinating description of "seven mansions" which seem to correspond to these jhänic states).
- But such jhānic states are not permanent; one could lose them in an instant, if the moral conduct is broken and defiled thoughts come to the surface (anusaya).

4. There are many techniques for conducting such samatha meditation. The popular ones are breath (whether focusing the mind on the breath at the nostrils or on the rising/falling of the stomach) and kasina meditation (where a certain object, for example a colored disk is used to focus the attention on). As one's mind gets absorbed in that object, the five hindrances are suppressed, and the mind advances to higher and higher calm states.

- Obviously, it is easier to attain jhānic states via samatha meditation if one follows at least the five precepts (not killing, stealing, sexually misbehaving, lying, or taking drugs or alcohol). This is because the greedy and hateful thoughts are at a lower baseline state for a person observing the five precepts.
- If one abstains from all ten immoral acts (dasa akusala), then it is even easier to calm the mind and to attain these jhānic states; see, "Ten Immoral Actions (Dasa Akusala)."

5. The five jhānic states corresponding to the cittt $\bar{a}$ in the ru$p a l o k a$ themselves are related to the five hindrances. To get to the first jhānic state, one needs to suppress the five hindrances; this is done by developing five sobhana [beautiful qualities of consciousness] mental factors (sobhana cetasika) to counter the five hindrances:

- Vitakka inhibits the hindrance of sloth and torpor (thina middha). This is how one trains to direct the mind to one thought object, say the breath. Vitakka is normally translated as "initial application", but it comes from "tharka" or going back and forth among many ārammana (thought objects); when this is stopped one has "vitharka" or vitakka, i.e., staying on one thought object, for example, breath or a kasina object.
- Sustained application (vicara; pronounced "vichāra") is the continued presence of the mind on that object, i.e., maintaining concentration on that object; vicara comes from stopping "chara" or moving around. Vitakka and vicara are compared to a bee flying towards a flower and then buzzing and hanging around the flower while extracting honey from it. Vicara serves to temporarily inhibit the hindrance of vicikicch $\bar{a}$.
- As the mind gets absorbed in the object, thoughts of ill will are suppressed and zest or mental happiness ( $\bar{\imath} t i$ or "preethi") arises in the mind. This is the jhānic factor of $p \bar{u} t i$, and it suppresses the hindrance of ill will (vyāpāda). This happiness is felt mainly on the face.
- The body becomes light due to physical happiness (sukha). This jhānic factor counters the hindrance of restlessness and worry (uddhacca kukkucca).
- Thus the mind now becomes totally absorbed in the thought object, and one has one-pointedness (ekaggat $\bar{a}$ ). This is the primary jhānic factor in all rūpaloka jhānic states and the essence of concentration (samādhi). This one-pointedness temporarily inhibits sensual desire (kāmacchanda).

When all five jhānic factors are present, the five hindrances are temporarily suppressed, and one is in the first $j h a ̄ n i c$ state.
6. The higher $j h \bar{a} n \bar{a}$ are attained by successively eliminating the grosser $j h \bar{a} n a$ factors and by refining the subtler jhāna factors through sustained concentration.

- Thus in the Abhidhamma it is stated that there are five jhānic states, where the last four are attained by the elimination of a jhāna factor at each stage; thus in that method, the second jhāna is attained by
removing vitakka. But in the sutt $\bar{a}$, the Buddha expounds the $j h \bar{a} n \bar{a}$ as fourfold, where both vitakka and vicara are removed to get to the second jhāna. Therefore the difference comes in at the second jhāna.
- For someone cultivating $j h \bar{a} n a$, this is not of any practical concern. In practice, it is not easy to distinguish between two steps of removing vittakka, vicara; they seem to go away together. That is probably why the Buddha just combine them into one jhāna in the sutta .

## Possible Perils of Mundane Jhānā

First of all, the anāriya (mundane) jhānā are not stable as Ariya jhānā. A yogi can be taken out of the jhāna by the anusaya (temptations) triggered by an external stimulus, for example seeing an attractive woman or hearing a seductive voice; see, "Āsava, Anusaya, and Gati (Gathi)."

- There is this story about a yogi who was travelling by air with abhiññ̄ powers and saw a flower in the shape of a woman (called "nārilathā") and lost the jhānic state and came down; there is another such story where the yogi heard the singing of a woman and had to face the same fate.
- In contrast, when someone gets into an Ariya jhāna, that jhāna cannot be broken by any such influence even though the yogi may see or hear such external stimuli; see, "Power of the Human Mind - Ariya Jhānā."
- Thus even though the yogi may have not removed some $\bar{a} s a v \bar{a}$, the anusaya are PREVENTED from arising in an Ariya jhāna; this is because the object of concentration (ārammana) in an Ariya jhāna is not a mundane object, but Nibbāna.
- June 8, 2018: The critical differences between Ariya and anāriya jhāna discussed in "Pathama Mettā Sutta."

1. There are many people even today, who can get into these mundane $j h \bar{a} n \bar{a}$. But it is not a good idea to attain such mundane $j h \bar{a} n \bar{a}$ at or above the fifth $j h \bar{a} n a$.

- This is because, if someone dies while in such an arūpa jhānic state, he/she will be born in the arūpa loka: it is not possible to attain the Sotāpanna stage in the arūpa loka because the eye and ear faculties are not present (so one could not learn Dhamma), and thus cannot become a Sotāpanna. Thus one would spend a very long time there, and has to start all over when one returns to the human world. Once in the human world, it is possible that one could accumulate bad kamma vipāka and be destined to the apāyā.
- Thus it is better to make the effort to become a Sotāpanna, rather than seeking any jhāna. A Sotāpanna will never be born in the ap $\bar{a} y \bar{a}$ (lowest four realms).

2. There is yet another danger in attaining these mundane $j h \bar{a} n \bar{a}$. Even before the $j h \bar{a} n \bar{a}$, one could start seeing objects of one's liking (such as religious figures of any religion, religious symbols, colorful lights, etc).

- Thus many people tend to believe that they have attained some of sort of advancement in meditation or in their belief system; some Buddhists may believe they have attained Nibbāna or something close to it. It could be dangerous to play with such illusions. When such lights or other images appear, one should completely ignore them. I used to see them too, but luckily I found my teachers before getting heavily involved with these illusions.

3. It is said that in some rare instances, lowly spirits try to convince meditators that they are devas or Brahm $\bar{a}$ (beings in the realms higher than the human realm). It is dangerous to get involved with them too. It is possible that some of the horror stories we hear from time to time about people killing their own families were committed under such influences.

## Extrasensory Perceptions and Powers (Abhiñña $\overline{\text { ) }}$

1. When one attains and perfects the fourth jhāna, one could start developing several extra sensory perceptions and powers, which could take considerable effort. No reports are available on anyone with ALL these abilities at the present time. However, when one attains the Arahant stage, certain extra sensory powers can be attained if cultivated, including the last one on the following list, the ability to "see" the past lives:

- Psychokinesis (iddhividha) or various manifestations of the "power of will."
- Clairaudience (dibbasota), the faculty of perceiving sounds even at long distances, far beyond the range of ordinary auditory faculties.
- Clairvoyance (dibbacakkhu), which enables one to see far events as well as heavenly worlds (i.e., other beings that are not visible to normal human eye).
- Telepathy (cetopariya ñāna), which enables one to comprehend the general state as well as the functioning of another's mind.
- Ability to recollect one's own past lives (pubbenivasanussatinana).

2. It is possible for a yogi to develop the abhiñ̃̃ā to the extent that he/she can see past lives through half of a Mahā Kappa (which can be taken to be roughly 15 billion years). The ancient yogis with such power saw that the Mahā Brahma has been there all through that time period. Therefore, they came to the wrong conclusion that the Maha Brahma was the one who created the world at that time in the past.

- Those yogis who are born in the asañña realm spend 500 Mahā Kappas there like a lifeless log (no thinking, that is what asañña means). When they exhaust that lifetime, they normally are reborn in the human realm, and because of this past "gati" to cultivate jhānā, they may again develop abhiñ̃̄̄̄ powers. Now they look back at past lives, but do not see any because they can look back only half of a Mahā Kappa, which is only a thousandth of the duration of the past life. Thus, they also conclude erroneously that they are "new" beings, who did not have any past lives. [asañña : [adj.] unconscious.]
- The Buddha, upon his Enlightenment, could see thousands of Mahā Kappas in the blink of eye. This is why he said there is no discernible beginning to life.
- An Arahant with abhiññ̄ powers can see back through numerous Mahā Kappas since Ariya jhānā are much more powerful.

3. Further details can be found in:

- "The Manuals of Dhamma", by Ven. Ledi Sayadaw (2006), p. 105.
- "Abhidhammattha Sangaha - Comprehensive Manual of Abhidhamma" by Bhikkhu Bodhi (1999), p. 344.

4. These kinds of direct knowledge are all mundane and are dependent on the mastery of the fourth jhāna and focusing attention on these tasks. The Buddha discouraged bhikkhus from pursuing these mundane powers, and also prohibited bhikkhus from public display of such powers, calling them "childish." That is because all these powers are temporary. Since one has not removed avijja (ignorance) and has only suppressed greed (lobha) and hate or ill will (dosa), they can resurface any time and remove all those achievements.

- One good example from the Buddha's time was Devadatta, who was a brother of princess Yasodhara. Devadatta became a monk and developed the mundane $j h \bar{a} n \bar{a}$ and attained those direct knowledges described above. He could perform many "miracles", and one time he appeared in the bedroom of Prince Ajasattu to impress him. But when Devadatta went against the Buddha and at one time injured the Buddha, he lost all his mundane powers and ended up in the lowest realm (avici niraya) because of those offenses.

By now one should be able to get a sense of the potential of the mind. With even these mundane jhān $\bar{a}$, a human can access the higher realms of existence and also attain super normal powers, but these mundane $j h \bar{a} n \bar{a}$ are at a much lower level than Ariya jhānā.

Next, "Power of the Human Mind - Ariya Jhānā", ...........
In depth discussions at: "Samādhi, Jhāna (Dhyāna), Magga Phala."

### 2.11.4 Power of the Human Mind - Ariya Jhānā

## Revised Februrary 12, 2018; December 3, 2019

1. We saw in the previous post that Anāriya jhānā are attained via focusing the mind (vitakka) on ANY thought object (ārammana).

- That ārammaṇa could be breath, a kasiña object, or any other religious symbol of any religion. Then keeping the mind there (vicāra or sustained application) helps one to get to a jhāna.

2. Therefore, anāriya or mundane $j h a \bar{n} \bar{a}$ are attained by SUPPRESSING the five hindrances via concentrating on mundane objects (breath, a kasiṇa object, etc.) On the other hand, Ariya jhānā are attained via using Nibbāna as the ārammaṇa (thought object.) However, Nibbāna is not "an object" in this world, so what is meant here is to recall some "cooling down" that one has experienced.

- One can start "cooling down" first by living a moral life and by staying away from dasa akusala; see, "Living Dhamma."
- When one comprehends the Three Characteristics (Tilakkhaña) of anicca, dukkha, anatta at least to some extent, there is definitely more permanent "cooling down" over time. One can look back and notice such a "cooling down." For example, one may not "flare-up" at the slightest provocation as one used to, or one may have lost cravings to some extent, etc. That is what needs to be recalled while cultivating Ariya jhāna; see \#4 below for the kammaṭthāna.

3. Thus the key is to first experience some "cooling down" by comprehending the Three Characteristics of "this world" of 31 realms. One examines the real-life situations and understands that no lasting happiness is possible, either in this life or anywhere in these 31 realms; see. "Anicca, Dukkha, Anatta," and "Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?."

- This gives rise to nirāmisa sukha (see, "Three Kinds of Happiness - What is Nirāmisa Sukha?") of Nibbāna, i.e., some sort of a "cooling down", over time. How long it takes to experience some "cooling down" will depend on the person.

4. When one has experienced some "cooling down" that one can recall, then one can use it in a kammatthāna to cultivate jhāna. This procedure is more effective for those who have attained the Sotāpanna stage. One can sit in a quiet place and recite the following kammatthāna:

- "etain santain etaim pañittain, yadidam sabbasañkhārasamatho sabbūpadhipatinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti," which means, "It is the only peace, the only happiness: prevent sañkhāra from arising (via) eliminating tanh $\bar{a}$ and excess greed, and thus stopping the arising of defilements, which is Nibbāna." This needs to be done while recalling an instance of one's own "cooling down"; see \#3 above.
- However, the above procedure is not effective unless one has at least some understanding of anicca, $d u k k h a$, anatta, and has experienced some "cooling down." It can be used to quickly enter a jhāna that had been cultivated.

5. Thus the difference between the mundane and Ariya versions of Samatha meditation is the meditation object, and this is the reason that asañ$\tilde{n} a j h \bar{a} n \bar{a}$ are avoided in the Ariya meditation. In the former, one can
focus on ANY object; in the latter one focuses on Nibbāna. Thus, vitakka, vicāra for Anariya samatha meditation becomes savitakka, savicāra, emphasizing the focus on Nibbāna, with the prefix "sa."

- "etaín santaí etaí paṇìtaín, ......." cannot be used just as a chanting without understanding what is meant by heart. Thus the chant will become more and more effective as one starts feeling the nirāmisa sukha at least to a certain extent. (One does not chant out loud; one could just say it in the mind to oneself or say it very quietly meaningfully).
- One could also start with any Anāriya Samatha meditation (the breath meditation is easy to do), and once starts feeling the calmness and early stages of nirāmisa sukha, one could permanently switch over to the Ariya version, by contemplating on anicca, dukkha, anatta and recalling one's own "cooling down."

6. Another thing to remember is that nirāmisa sukha has no equivalent sensation in any type of $\bar{a} m i s a$ sukha or sense pleasures that are available with the five physical senses. It is more like a relief sensation. When one has a headache and it goes away, one feels a relief, a calmness, a peace of mind. The nirāmisa sukha is something like that. The more nirāmisa sukha one feels one becomes calm inwardly AND outwardly.

- When one gets into $j h \bar{a} n \bar{a}, j h a ̄ n i c ~ p l e a s u r e ~ c a n ~ b e ~ f e l t ~ i n ~ t h e ~ b o d y . ~$
- In the post, "Akusala Citta - How a Sotāpanna Avoids Apayagami Citta," I have explained how a Sotāpanna automatically removes the five types of citta that are responsible for rebirth in the apāyā (the lowest four realms). In that discussion, it was also shown how vicikicch $\bar{a}$ is responsible for such bad $k a m m a$, and how contemplation on Tilakkhaṇa (anicca, dukkha, anatta) can remove vicikicchā, and also four other greed-rooted cittō that arise because of the wrong views.

7. Thus as one contemplates on anicca, dukkha, anatta, one automatically starts reducing, not just suppressing the hindrances.

Jhānic states are mental states of the Brahma realms lying above the realms in the kāma loka. In any realm in kāma loka, including the human and deva realms, kāma rāga and patigha are present. Both kāma rāga and patigha are absent in Brahma realms, as in jhānic states.

One gets to anāriya jhāna by SUPPRESSING kāma rāga and patigha. One gets to Ariya jhāna by REMOVING kāma rāga and paṭigha.

- The two hindrances of kāmacchanda and vyāpāda were reduced to kāma rāga and patigha levels at the Sotāpanna stage. Kāma rāga and patigha are reduced further at the Sakadāgāmī stage, are removed at the Anāgāmī stage. Thus it is only an Anāgāmī who has REMOVED kāma rāga and patigha.
- As one moves to higher stages of Nibbāna, it should become easier to attain jhānā.

8. In summary, Ariya jhānā are permanent in nature compared to Anāriya jhānā. By that, I do not mean that one will be permanently in a jhānic state. What I mean is that it will be possible for one to attain the $j h a \overline{n a}$ at will.

- On the other hand, anāriya jhāna can be "lost." By that I mean one who has cultivated anāriya jhāna may lose the ability to get to that $j h \bar{a} n a$. The best example is Devadatta who attained the highest anāriya jhanas AND also cultivated supernormal (iddhi) powers. He lost all that and ended up in an apāya.
- The clearest distinction of an Ariya jhāna is that once in the jhāna, the jhāna cannot be interrupted by anusaya or a lustful or a hateful thought. Even if one forcefully tries to think about such a thought, it does not "stick"; the mind rejects it; see, "11. Magga Phala via Cultivation of Saptha Bojihañga."
- One can contemplate Dhamma concepts (savitakka, savicāra) while in a jhāna. Only vitakka and $v i c a ̄ r a$ are reduced at the first Ariya jhāna, and completely eliminated at higher jhānā. Doing insight meditation (contemplating anicca, dukkha, anatta or any Dhamma concept) can be done with a clear, bright mind.
- All $j h \bar{a} n \bar{a}$ are mundane in the sense that they provide the jhānic experience in the rūpaloka and arūpaloka, which still belong to the 31 realms of existence. The Nibbānic bliss is the ultimate bliss.
- The nirodha samāpatti that can be attained by an Arahant is incomparably better compared to any $j h a ̄ n a$. An Arahant can enjoy the sensation of Nibbānic bliss continually for up to seven days in nirodha samāpatti.
- Thus ultimately what is most important is the purification of one's own mind; see, "The Importance of Purifying the Mind."

9. One gets to the first Ariya jhāna by removing (uccheda pahāna) kāma rāga, whereas one can get to the first anāriya jhāna by suppressing (vikkhambana pahāna) kāma rāga. Therefore, one will be an Anāgāmū by the time one gets to the first Ariya jhāna.

- This is discussed in detail and evidence from the Tipitaka provided in the post: "Mundane versus Supramundane Jhāna."
- Even some followers of Waharaka Thero in Sri Lanka do not seem to understand this point. However, Waharaka Thero has clearly explained this in the following short desana (in Sinhala): "WebLink: Ariya and Anariya Jhāna (Audio)."

### 2.11.5 Are There Procedures for Attaining Magga Phala, Jhāna and Abhiññā?

## April 23, 2017; revised July 15, 2020

1. Learning Dhamma (or following the Path) is very different from learning mundane subjects like history, economics, or even science and mathematics.

- Ariya jhāna and subsequent abhiñ̃n̄a powers are realized as "by products" after one attains the Sotāpanna stage. Of course, only some of those can cultivate $j h \bar{a} n a$ and subsequent abhiññā powers.
- Even attaining magga phala does not have set procedures, other than following the Eightfold Path. However, kammat!thāna based on one's personality can be helpful.
- The most important thing is to cleanse one's mind. Things just become clear with a purified mind.

2. There is an excellent example described in the Tipitaka. There were two bhikkhus at the time of the Buddha called Mahāpanthaka and Cūlapanthaka. They were brothers and Ven. Mahāpanthaka was the elder. Ven. Mahāpanthaka had been trying to teach a certain verse ( $g \bar{a} t h \bar{a}$ ) to Ven. Cūlapanthaka for six months, but Ven. Cūlapanthaka was unable to memorize it.

- Ven. Mahāpanthaka got frustrated and asked Ven. Cūlapanthaka to disrobe and he left crying. The Buddha saw this incident and realized that Ven. Cūlapanthaka had very unique hidden capabilities.
- He gave proper instructions to Ven. Cūlapanthaka, and Ven. Cūlapanthaka was able to attain not only the Arahantship but also attain vast super-normal (abhiñ̃̃̄a) powers within the same day. The trick for Ven. Cūlapanthaka was to go beyond a certain sticking point that had been blocking his mind.
- He recited not one but 500 gāthā that day. There are many reports of his $a b h i \tilde{n} \tilde{n} \bar{a}$ powers. One time he made 999 copies of himself and they were all engaged in various activities at the temple.
- The point is that none of that was gained via "book knowledge." Once the breakthrough came with the instructions from the Buddha, the rest of it came gushing through immediately.
- No one taught him how to memorize all those 500 verses or how to cultivate abhiññā powers. A decent version of this story can be found at WebLink: Dhammapada Verse 25 - Cūlapanthaka Vatthu.

3. Another example is how Ven. Ānanda attained the Arahanthood and many abhiñ $\tilde{n} \bar{a}$ powers overnight. Three months after the Parinibbāna of the Buddha, the first Buddhist Council (Sangāyana) was set to take
place, and the day before that Ven. Ānanda had not attained the Arahantship. He had been a Sotāpanna while the Buddha was alive.

- Since only "sivpilisimbiya" Arahants (those with patisambhida ñāna ['analytical knowledge' or 'discrimination']) were allowed to attend the Sangāyanā, Ven. Ānanda was under pressure to attain the Arahanthood. Despite his efforts, he had not attained the Arahantood the night before, and he decided to lie down to take a rest. As he was getting into bed while thinking about a Dhamma concept, he attained the Arahantship while not in any of the four postures (was not on the bed yet, but was off the ground).
- Simultaneous with that he acquired many abhiññ̄a powers too. The next day, when he went to the Sangāyanā hall, everyone was inside. He stood by the door and announced that he had attained the Arahantship and requested the door to be opened. One of the Arahant asked Ven. Ānanda to remove doubts of everyone present about his attainment.
- So, Ven. Ānanda went inside through the closed door, traveled through air and took his seat. Then it was clear to everyone that he had not only attained the Arahantship, but also had cultivated abhiññā powers overnight; see, "WebLink: Ānanda -The Guardian of the Dhamma."

4. Waharaka Thero has given the following simile to understand what happens when one attains the Sotāpanna stage, and WHY it takes only a fraction of second.

- Suppose person X is running back and forth past a sign that has written on it some information in small letters. It is not possible to read the sign while running, no matter how many times you run past it.
- But suppose X stops for a few seconds to read the sign, then resumes running back and forth again. Now that he has read the message that is on the post, he KNOWS what is written on the post, even though he again cannot read it while running.
- In the same way, it takes only a fraction of a second to the mind to grasp the true nature of this world (anicca, dukkha, anatta) when the mind is calm AND if one has learned enough background material (in the simile, he must know the language the sign was written in).
- While one is gathering this supporting material one is a Sotāpanna Anugami. Then the Sotāpanna phala moment can come at any time. It comes and goes even without one realizing it. Only weeks or months later, one will start realizing the permanent change in oneself.

5. This is why I said in \#1 above, that there are no set procedures for making progress on the Path or developing abhiñ̃̄̄a powers (of course anāriya techniques are different). As one makes progress, one will AUTOMATICALLY receive the results based on one's progress.

- One will automatically attain magga phala.
- One may also attain Ariya jhānic states subsequently, if one had cultivated them in recent previous lives. For others, it may take some time to cultivate Ariya jhāna. As I described in a previous post, jhāna are very different from magga phala and it may not be easy to verify whether one has attained Ariya or anāriya jhāna; see, "Difference Between Jhāna and Stages of Nibbāna."
- While certain meditation techniques COULD be helpful, the two main factors are kusala sila (moral living) and comprehending the real nature of this world, i.e., Tilakkhana.

6. Our goal should be to eliminate future suffering by cultivating wisdom (pañña), and thereby getting rid of micch $\bar{a}$ ditṭhi.

- Of course, learning correct Dhamma is a joyful experience which can motivate one to learn further and thereby help comprehending the true message of the Buddha.
- The key is to not confuse "learning" with just "memorization." One needs to get the key idea or saññā of a given concept. When one gets the saññ $\bar{a}$ of a concept, one will never lose it: "What is Saññã (Perception)?."

7. This website with hundreds of posts could discourage people, thinking that one needs to memorize all these different things to learn Dhamma.

- It is not necessary to MEMORIZE ANYTHING. Most of the material on the website is for REFERENCE. If one forgets some details about a concept it is easy to use the menu system, "Search" button on the top right, or the Pure Dhamma - Sitemap to locate relevant posts.
- However, listening to desanā or reading Dhamma (and then grasping concepts, not memorizing) is an essential part of learning (grasping concepts).
- Getting into jhānā or attaining magga phala do not have set procedures. They will AUTOMATICALLY be realized as one follows the Path and one's wisdom grows.
- The key is to stay away from dasa akusala, live a moral life, and comprehend the key message embedded in anicca, dukkha, anatta by learning Dhamma and contemplating.
- By the way, there is a connection between dasa akusala and anatta as we discussed last week; see, "Dasa Akusala and Anatta - The Critical Link." So, anicca, dukkha, anatta are related to dasa akusala.

8. Memory and wisdom are two different things, even though somewhat related. In order to comprehend the message of the Buddha, one should cultivate wisdom (paññ̄ $\bar{a}$ ) instead of memorizing verses. Let us take a simple example to explain this.

- A child can learn addition by just memorizing. Then he/she would be able to give the right answer to the addition of two numbers that has been memorized, but will not be able to add two randomly chosen numbers.
- However, if the child is taught HOW TO add two numbers, using a technique like using the fingers in the hand to represent numbers. it will be possible to "see" WHY two plus three equal to five. Then the child will be able to add any two numbers.
- Once that is grasped, it would easy for the child to then learn subtraction, multiplication, and division.
- However, it will be an impossible task to MEMORIZE the addition, subtraction, multiplication, and division of ANY two numbers.

## 9. There is a basic difference between "real learning" (grasping concepts) and memorization (just blindly following rules/instructions).

- This is a concept that is hard to grasp for many these days because we are so much used to "book learning." There are many people who can repeat certain tasks mechanically without even bothering to think through. And then when the situation changes somewhat they do not know how to handle the "new situation."

10. The message of the Buddha is unique. It goes far beyond moral living. Some people think that by living a moral life one would be able to get an afterlife in heaven forever.

- On the other end of the spectrum, another set of people believe that killing those who are unfaithful to their God can also lead to a heavenly life, which should be beyond belief for any reasonable person.
- However, if a mind is contaminated from an early age, such dangerous ideas sink into the mind and are very hard to change.
- Both extremes are faith-based.
- Hopefully, one would be able to see that there is a key element of reasoning, not faith, involved in Buddha Dhamma. It can be grasped by a reasonably moral person. It can be followed to a very deep level if desired.

11. Buddha Dhamma cannot be learned by books or with this website. But they can help by providing (correct) information; if it is incorrect information, then it would be just a waste of time.

- Since Buddha Dhamma is really different from any other religion or philosophy, one first needs to get that basic information from someone who really knows the fundamentals (kamma/vipāka, dasa akusala, Pațicca Samuppāda, etc) and then the deeper aspects like anicca, dukkha, anatta once the basics are absorbed.
- It is not possible to even absorb the fundamentals unless one is already living a moral life. It may sound hard to believe, but a defiled mind CANNOT absorb Buddha Dhamma.
- A defiled mind is like a dirty cloth, which cannot be made colorful by soaking in a dye. The cloth needs to be cleaned in order to absorb the dye and to become bright.
- Therefore, the first step is to stay away from the worst of the dasa akusala, which are also called "panca dushcharitha" or "five immoral qualities": killing, stealing, sexual misconduct, lying, and alcoholism/drug use.

12. What is discussed in the Kalama Sutta is this very first step: Understanding that what one does not like to be done to oneself, another wouldn't like either. No one likes to be hurt and to put to misery. Any normal human should be able to comprehend that simple concept.

- That step needs to happen before one starts on the five precepts or moral conduct (panca sìla) which are deeper; see "The Five Precepts - What the Buddha Meant by Them."
- Only then one can start comprehending the deeper concepts like anicca, dukkha, anatta, the Four Noble Truths, and start on the Noble Eightfold Path; see, "What is Unique in Buddha Dhamma?."
- The ability to understand deeper concepts gets easier as one purifies one's mind.

13. Even though this website will be a useful resource, one should not start memorizing key concepts. First of all, it is not possible to do that. There is so much material that it is impossible to remember everything. But it is essential to read various aspects and try to "fill in gaps" in the "big picture."

- Of course, I myself do not remember all the details. But I do know where to refer to get any needed information. It is all in the Tipitaka, and the late Waharaka Thero has clarified the key terms for us, so that we can find our own way gradually.
- It becomes easier to analyze a given concept as one progresses. The more one grasps about a concept (not merely memorize the wording), the meanings (and how to use them in other situations) start to come flowing through.
- At some point, when one starts comprehending key concepts, one will be able to see connections among different aspects and start seeing the big picture or to make that big picture even more clear. That is when a Sotāpanna Anugami becomes a Sotāpanna.

### 2.12 Transfer of Merits (Pattidāna) - How Does it Happen?

## Revised July 7, 2018; August 16, 2019; February 12, 2020; August 9, 2022

## Introduction - Unseen Mental Energy

1. Even some Buddhists are skeptical that merits can be "transferred" to other beings: It does not appear "scientific." However, Buddha Dhamma is far ahead of science, and this is another example. Even though the vocabulary is different, mechanisms of "energy transfer" (mental energy) are also explained in Dhamma.

- It is possible to transfer the merits of a good deed and many other versions of "mental energy."
- The basic idea can be thought of as follows. Suppose one has a lighted oil lamp, and many others have oil lamps but don't have access to a flame to light them. Wouldn't it be good to let others use one's lamp's flame to light their lamps?
- Of course, it is not possible to "create" many lighted oil lamps starting with one. But it is possible to light a thousand other lamps by sharing the flame of one oil lamp. In the same way, the receiving person needs to have essential ingredients to reap the benefits, as explained below. But since all those lamps will be useless without a way to light them, the person providing the light is doing an excellent service.
- One "giving merits" is doing pattidāna or "conditions" for good kamma bija (or bīja) to germinate. The receiver must have good kamma bīja or "root causes" and receive those pattidāna willingly, which is called "puñ̃̃a anumodanā," which rhymes as "puññānumodanā." [pattidāna :[nt.] transference of merit or share.]

## What Is Anumodanā?

2. Anumodana $\bar{a}$ means the receiving mind is becoming joyful with the merits it received ("anu" + "odanā"," which rhymes as "anumodana"). The giver is giving ("danna") the "paccay $\vec{a}$ " or the auxiliary causes. (The commonly-used word is "pratyaya" but that is the incorrect Sanskrit word; the correct Pāli word is paccayā). It is paccayā that represents "patti" in "pattidāna" (pronounced, "paththidāna").

- Only in direct giving of material things can a giver ensure that the receiver receives what is given.
- Giving merits (pattidāna) is different. The giver cannot ensure that the receiving party "received what is intended" unless the person receiving was attuned to receiving.
- It is the receiving person that is doing the "puñña anumodanā," i.e., gladly receiving the pattidāna of the giver and becoming joyful with the merits received. That is also called "pattānumodanā." [pattānumodanā :[f.] transference of merit.]

## Giving Can Be Mental Too - Dāna and Pattidāna

3. Giving and receiving can be done in many ways:

- The direct method of giving/receiving is when one gives money or something material. It is deducted from the giver's ledger and added to the receiver's: Transfer is complete.
- When a teacher teaches a classroom full of kids, he/she gives instructions the same way to all the kids. But how much a particular kid "receives" or comprehends depends on that specific kid's ability to receive. That is similar to pattidāna.
- A radio/television station is broadcasting a program. But the reception of the program by a radio/TV depends on the quality of that receiving device. Furthermore, it has to be "tuned" to the correct station.
- This transfer can happen instantaneously or with a time lag because that mental energy is in the "nāma loka" and is accessible at any time; see "Memory, Brain, Mind, Nāma Loka, Kamma Bhava, Kamma Vipāka," "What are Dhamma? - A Deeper Analysis," and "Our Two Worlds: Material and Immaterial."

4. Therefore, only in "direct giving" is the amount received the same. The amount received in "indirect giving" methods depends on the receiver. That latter mechanism works when "transfering merits" to another person who may be far away.

- All intentions have kammic energy. You may remember that the Buddha said, "Cetanā ahaim bhikkave kammaì vadāmi," or "Bhikkhus, I say that intention is kamma." And kamma is the vital potential energy for everything in this world. [Cetanāhaì, bhikkhave, kammaì vadāmi. Cetayitvā kammaì karoti- kāyena vācāya manasā. AN 63. Nibbedhikasutta]
- People very much underestimate the power of the human mind. Those who have experienced at least anāriya jhānā can sense at least a little about the power of the mind; see "Power of the Human Mind Introduction" and the two follow-up posts.
- Direct giving is "dāna"; indirect giving is "pattidāna." These are two of the ten meritorious deeds (puñña kamma); see, "Puñña Kamma - Dāna, Sīla, Bhāvanā."

## Giving Merits - Pattidāna

5. One such mechanism is the anantara-samanantara paccayā; see "Anantara and Samanantara Paccaya." It is one of the universal laws governing how kamma and kamma vipāka operate (kamma niyāma). Many people pronounce "niyama" as "niyāma," but "niyāma" is the Pāli or Sinhala word for "principle."

- Thus kamma niyāma are the universal laws of kamma (like the law of gravitation).

6. Suppose one is "transferring merits" by sincerely saying, "May so and so receive merits from this good deed that I have done." One could do Metta bhāvanā by saying, "May all beings be free from the suffering in the $a p \bar{a} y \vec{a} "$ or some version of it. In both cases, one is BROADCASTING one's intention.

- However, just because one is doing such a "giving," the intended recipient may not receive the benefits UNLESS the recipient has a matching mindset. It is just like the case of radio/TV, where the receiving device needs to be set to the "right frequency" to receive the signal.
- That is explained in the post, "Anantara and Samanantara Paccaya." Don't be discouraged by those Pāli words. Sometimes, as in the case of Patticca Samuppāda, it is best to use the Pāli words and understand their meanings.

7. Transfer of merits is efficient when the giver and the receiver are together, and each is aware of the other's intention. For example, in Asian countries, it is customary to transfer merits to deceased relatives. Almsgiving to the Sañgha and pattidāna offered to the deceased relative belong to this category.

- The deceased party can receive merits if it is in a state where it can receive such merits, for example, if it is in a gandhabba state.
- But if the deceased is reborn as an animal or human, it cannot receive full benefits, even though it may benefit to some extent.

## Dhamma Dāna Is The Ultimate Giving

8. It is possible to "give Dhamma" or to "give kusala" too. The Buddha said, "sabba dānaim Dhamma dānaì jinātic" or, "from all kinds of giving, Dhamma giving is the most meritorious."

- When the Buddha gave a discourse, those listening "received" Dhamma in varying degrees. Some became Arahants, and some attained the Sotāpanna stage during the discourse itself. But others did not achieve any stage but possibly still accumulated merits or kusala. Kusala ("ku" or "kunu" or "dirty"+"sala" or "remove," and thus shedding defiled thoughts from the mind). That means gaining wisdom, non-greed, non-hate AND discarding greed, hate, and delusion.
- During such a discourse, one mainly cultivates wisdom. That, in turn, results in discarding greed and hate.

## Importance of State of Mind

9. How much merit a given person receives depends on the state of mind of that person. It also depends on the intellectual level of that person. But it is impossible to quantify the intellectual level using modern standards of "book knowledge." It is not directly related to one's formal education. It is easier to give some examples.

- Ven. Ānanda was highly literate, a former prince, and had fantastic memory power. He had the whole Sutta Pitaka in his memory. And he was with the Buddha for many years but attained Arahanthood only after the Buddha's Parinibbāna (passing away).
- Sunita was of low caste and carried buckets of feces when the Buddha met him. With his supernormal powers, the Buddha saw that Sunita could comprehend Dhamma and asked Sunita to become a bhikkhu. Ven. Sunita became an Arahant within seven days.

10. A given person may be receptive to "receiving Dhamma" when his mind is calm. But the same person may not comprehend anything when his mind is excited or distracted. That is the same as saying that the five hindrances are active; see "Key to Calming the Mind - Five Hindrances." Therefore, it is IMPORTANT to have a correct mindset when learning Dhamma, whether by listening or reading.

- Therefore, try to read these posts at quiet times, when the mind is receptive, and NOT during the brief breaks at work when the mind is occupied or agitated.
- In Asian countries, that is a significant reason for going to the temple. At the temple, people offer flowers to the Buddha or the Bodhi tree. Such activities get the mind into a calm, peaceful state suitable for listening to a Dhamma discourse afterward; see "Buddhist Chanting" and "Tisarana Vandana and Its Effects on One's Gati."

## Both Anantara and Samanantara Must be Optimized

11. Therefore, both anantara and samanantara must be optimized to make all these activities efficient.

- Of course, if one is not learning the true Dhamma, there is nothing substantial in anantara. Thus, one would be wasting one's time.
- On the other hand, even with an excellent Dhamma delivery, the receiver's mind needs to be receptive to get full benefits. In other words, samanantara must be good too.

12. The following example may help clarify this concept: Having "good kamma bïja" is like having "good seeds." Suppose person X has potent seeds but does not have water and nutrients for those seeds to germinate and grow. If person Y can provide X with water and nutrients, X can plant those seeds and get them to germinate and grow.

- Some people may have "good kamma seeds" but do not have the necessary conditions to bring the corresponding good kamma vipāka. When another person does pattidāna, that is like donating water and nutrients to that person.

13. A seed is the anantara or the cause (kamma bïja), and the receiving party must have that. However, like a seed cannot grow unless it is exposed to moist soil, has nutrients, and sunlight, that kamma bïja cannot bear fruit without suitable conditions; i.e., the samanantara (or suitable conditions) must be there too.

- Therefore, the receiver can accept those conditions from the giver and get those existing good kamma $b \bar{\jmath} a$ to bring their good vipāka.
- It is only when both anantara and samanantara are optimized and matched that full benefits result. i.e., the optimum transfer takes place. This phenomenon is quite similar to the "resonance effect" in physics. Only when the energy of a photon matches an energy gap of an atom that the absorption of that photon by the atom is optimum.

## Different Types of Anumodanā

14. A type of "anumodana"" also happens in day-to-day life. Suppose X starts a project to feed the hungry. Many poor people benefit from it. Another person (Y) sees that and may become joyful seeing the hungry getting fed and may thank X for doing it. This joy of heart, even if Y did not contribute, counts as "merits"; it becomes a good kamma vipāka for Y. That does not take any merits away from X.

- Something can come out of nothing. So, where do those kinds of benefits come from? It comes from the mental energy of $Y$, who became joyful upon seeing the kind act. That is part of a human's mental energy (javana); see "Power of the Human Mind - Introduction."
- That is true of immoral acts too. Suppose X is beating up Y. Person Z may be glad to see that and may encourage X to beat up Y. Now, suppose Y dies due to the beating. Then not only X but Z also gets bad kamma vipāka for that immoral act.
- In our societies also, the same principle applies. Suppose the police are investigating the death of Y. They have evidence that $Z$ encouraged the killing; they can prosecute both $Z$ and $X$.
- Thus our feelings (good or bad) play an important role in accumulating good and bad kamma vipāka.

### 2.13 First Noble Truth is Suffering? Myths about Suffering

Most people believe that the First Noble Truth just says there is suffering. Some also think that it is possible to "remove" this existing suffering IN THIS LIFE by following extensive and elaborate meditation techniques.

1. The Buddha said, "My Dhamma has not been known in this world. It is something people have never heard of previously." So we should carefully examine to see what is really new about the suffering that he talked about.

- What is new about knowing that there is suffering around us? Everybody knows that there is suffering with old age, diseases, poverty, etc.
- And it is possible to REMOVE existing suffering by doing meditation? For example, if one has come down with a disease, can one overcome that by doing meditation? If someone is getting old and is feeling the pains and aches of old age, can that be PERMANENTLY removed by doing meditation? Even though some issues can be handled due to special reasons, in most cases we CANNOT change such EFFECTS or end results.

2. Let us discuss these two points one at a time.
3. Let us first see whether it is possible to REMOVE the existing suffering.

- For example, if someone has aches and pains due to old age, it is not possible to get rid of them other than to use medications or therapy to lessen the pain and manage it. If someone gets cancer, it is normally not possible to get rid of it by meditation. It may be handled by medication. Even the Buddha had pains and aches due to old age, and had a severe stomach ache at the end.
- In the context of that last sentence, It must be noted that there are two types of vedan $\bar{a}$ (feelings): those due to kamma vipāka and those due to sañkhāra (attachment to sensual pleasures), and an Arahant gets rid of only the second kind until the Parinibbāna (death); see, "Vedanā (Feelings) Arise in Two Ways."
- In fact, it may not even be possible to do meditation under any of such conditions. Even someone who has developed jhānā, may not be able to get into jhān̄a if the pains are too distracting.
- The purpose behind Buddhist meditation is to contemplate on the true nature of the world and find the CAUSES of such suffering, so that those causes can be stopped and FUTURE suffering can be stopped.
- It is true that one can get a relief from day-to-day stresses by doing different kinds of meditation. And it is good to do them. But such practices were there even before the Buddha. There was no need for a Buddha to reveal to the world that one could get some "calming down" by doing breath meditation or kasiña meditation.
- In a way, such "samatha" meditations are comparable to taking an aspirin for a headache. One can get relief in the short term but it is temporary. But the problem that the Buddha addressed involved a much longer time scale, and will lead to a nirāmisa sukha that is permanent.

4. So, what was the "never heard truth about suffering" that the Buddha revealed to the world? In short it is the "suffering that is hidden in sense pleasures; the suffering that WILL ARISE in future lives."

- Let us take an example to get a simple version of this "new idea."
- When a fish bites the bait, it does not see the suffering hidden in that action. Looking from the ground we can see the whole picture and we know what is going to happen to the fish if it bites the bait. But the fish is unable to see that whole picture, and thus does not see the hidden suffering. It only sees a delicious bit of food.
- In the same way, if we do not know about the wider world of 31 realms (with the suffering-laden four lowest realms), and that we have gone through unimaginable suffering in those realms in the past, we only focus on what is easily accessible to our six senses.
- In order to really comprehend suffering through repeated rebirths, one needs to comprehend that most suffering is encountered in the 4 lowest realms (ap $\bar{a} y \bar{a}$ ); see, "The Grand Unified Theory of Dhamma."
- Thus, stopping suffering requires one to first stop the causes for rebirths in the $a p \bar{a} y \bar{a}$ by attaining the Sotāpanna stage of Nibbāna; see, "Nibbāna in the Big Picture."

5. Seeing this hidden suffering is indeed difficult. It is not possible to convey the whole message in one essay, but I will try to get across the main idea. One really needs to spend some time thinking through these issues. When the Buddha attained the Buddhahood, it said that he was worried whether he could convey this deep ideas to most people.

- Everything happens due to one or (usually) many causes. The famous Third Law of motion in physics says that every action has a reaction; and the First Law says that an object will not change its status unless a force acts on it. It is easy to see these "cause and effect" principles at work in mechanical objects. If something needs to be moved, it needs to be pushed or pulled. If a stone is thrown up, it must come down if there is gravity pulling it down.
- We seek pleasures that are highly visible. But if we gain such pleasures with immoral acts, the consequences of such immoral acts are not apparent. We can see a stone thrown up coming down, but we cannot see any bad consequences to the drug dealer who seems to be enjoying life.

6. The main problem in clearly seeing the "cause and effect of mind actions" is that the results of those actions have a time delay and that time delay itself is not predictable. In contrast, it is easy to predict what is going to happen with material things (moving an object, a vehicle, a rocket, etc). The success of physical sciences is due to this reason. Once the underlying laws are found (laws of gravity, laws of motion, electromagnetism, nuclear forces, quantum mechanics, etc), one has complete control.

- But the mind is very different. To begin with, no two minds work the same way. Under a given set of conditions, each mind will chose to act differently. With physical objects, that is not so; under a given set of conditions, what will happen can be predicted accurately.
- Effects of some actions (kamma) may not materialize in this life and sometimes it may come to fruition only in many lives down the road (but with accumulated interest).
- Even in this life, mind phenomena are complex: This is why economics is not a "real science." It involves how people act sometimes "irrationally" for perceived gains. No economic theory can precisely predict how a given stock market will perform.

7. When mechanical systems have time lags, those are predictable. We can set off a device to work in a certain way AT A CERTAIN TIME, and we know that it will happen at that time if all mechanical components work properly. Not so with the mind. When we act in a certain way, the RESULTS of those actions may not be manifested for many lives. This is a key point to contemplate on.

- But cause and effect is a nature's basic principle. When something is done, it will lead to one or more effects. In mind-related causes, the effects may take time, sometime a long time over many lives, to trigger the "corresponding effect."
- Thus it should be clear that "action and reaction" associated with mind effects REQUIRE the rebirth process. It is not readily apparent and is an essential part of the "previously unheard Dhamma" that the Buddha revealed to the world.
- This "cause and effect" that involves the mind is the principle of kamma and kamma vipāka in Buddha Dhamma.
- But unlike in Hinduism, Kamma is not deterministic, i.e., not all kamma vipāka have to come to fruition; see, "What is Kamma? Is Everything Determined by Kamma?." All unspent kamma vipāka become null and void when an Arahant passes away.

8. The life we have as a human is a RESULT of a past good deed. The life of a dog or an ant is the result of a past deed by that sentient being.

- And what happens to us in this life is a COMBINATION of what we have done in the past (kamma vipāka) AND what we do in this life.
- What happens to an animal is MOSTLY due to kamma vipāka from the past.
- The difference between a human and an animal is that the animal does not have much control over what is going to happen to it. But human birth is a special one: We have a higher level mind that CAN change the future to some extent, and with possible enormous consequences.

9. What can we change and what cannot be changed?

- We are born with a certain kamma vipāka built in. Our body features, major illnesses (such as cancer) are mostly, not completely, built-in. We can avoid many kamma vipāka by acting with mindfulness, i.e., by planning well, taking precautions, etc.
- But we CANNOT change the fact that we are going to get old and eventually die, no matter what we do. Our life a RESULT.
- What we CAN change are the CAUSES for future lives.
- Even though meditation cannot relieve us of most of the pre-determined suffering, proper meditation CAN provide temporary relief, as well as PERMANENTLY removing future suffering.

10. The second Noble Truth is describes those CAUSES that we need to work on. The root causes are greed, hate, and ignorance, but they need to be removed mainly via understanding the Three Characteristics (see \#12 below) and also via removing our bad sansäric habits; see a series of posts starting with, "Habits, Goals, Character (Gati)" to "The Way to Nibbāna - Removal of Āsavas."
11. The Third Noble Truth is about what can be achieved by systematically removing those causes. Nirämisa sukha increases from the point of embarking on the Path, and has four levels of PERMANENT increases starting at the Sotäpanna stage and culminating at the Arahant stage; there are several posts starting with, "Three Kinds of Happiness - What is Nirāmisa Sukha?."
12. And then Fourth Noble Truth is the way to attain nirāmisa sukha and then various stages of Nibbāna. Nirämisa sukha starts when one lives a moral life (see, "Ten Immoral Actions (Dasa Akusala)" and followup posts). The root causes of immoral behavior are greed, hate, and ignorance. Ignorance can be reduced to the extent of attaining the Sotāpanna stage just via comprehending the Three Characteristics of "this world of 31 realms," i.e., anicca, dukkha, anatta; see, "Anicca, Dukkha, Anatta - Wrong Interpretations," and the follow-up posts. It is that powerful.

- Once one attains the Sotāpanna stage, one can find the rest of the way by oneself.

13. There are many different ways to describe and analyze what I summarized above. Different people can grasp Dhamma by looking at it from different angles. That is what I try to cover with sections like "Dhamma and Science", "Dhamma and Philosophy", and for those who like to dig deeper into Dhamma, the section on "Abhidhamma" which means "Higher or Deeper Dhamma."

- My goal is to provide a "wide view" that accommodates most people. Even though I cannot even begin to cover even a significant fraction of Buddha Dhamma, one does not need to understand "everything" even to attain the Arahanthood. The Buddha has said that one could attain all four stages of Nibbāna just via comprehending anicca, dukkha, anatta at deeper and deeper levels. This is because with deeper understanding, one's mind automatically directs one in the right direction.
- Another reason that I try to cover many topics is to illustrate the point that Buddha Dhamma is a complete description of nature.

### 2.14 Vinaya - The Nature Likes to be in Equilibrium

## Pre-2016 post; revised July 18, 2022

Our lives and existence are based on constantly getting into debt and then paying off debts. This latter is done by Nature whether we like it or not. When we steal, kill, lie, or do any of the dasa akusala, we get into debt, and nature keeps track of that via kammic energy.

- We are reborn to pay debts. This is another way of looking at the cycle of rebirth. Nature will automatically ensure that the largest debts are paid off first; this is how the next existence (bhava) is determined.
- During a given lifetime, debts are paid off when suitable conditions appear; see "Anantara and Samanantara Paccaya."
- Nature is the final arbitrator. A criminal may get away with a crime by hiring a good lawyer but must pay for the crimes in nature's court. Similarly, when we do something good, we will get the rewards regardless of whether we wish for anything in return or not. Most people do not realize this because of the delay between the act (kamma) and its result (kamma vipāka).

1. When we do either a moral or an immoral act, it is done with an intention and has associated energy. That is the kammic energy produced in javana citta. That energy resides in the universe until spent or otherwise reduced by some means (this is related to quantum entanglement; see, "Quantum Entanglement - We are All Connected "). It is really the principle of energy conservation in physics.

- We can become indebted to a living being or the "world as a whole."
- There were no Vinaya rules in Buddha sāsana for about 20 years after the Buddha attained Enlightenment. When Buddha Dhamma started flourishing, unscrupulous people started becoming monks to live a comfortable lives depending on the devotees' kindness. The Buddha admonished them about the consequences of becoming indebted and started setting up the Vinaya ("vi" + "naya", where "naya" in Pāli or Sinhala means debt) rules to rein in those people.

2. When there is an energy imbalance, nature tries to bring it to balance. For a given individual (in the conventional sense), i.e., a life stream (absolute sense), the biggest imbalances are settled first.

- Thus at the death when patisandhi takes place, the biggest kamma seed with the highest imbalance comes into play and releases that energy by initiating the next birth in the corresponding "bhava"; see, "Bhava and Jāti - States of Existence and Births Therein." Thus the next "bhava" is determined by the biggest kammic seed at the end of the current "bhava" (this is a simple interpretation of a complex process).
- During a lifetime (pavutti vipāka), in addition to the energy content, the prevailing conditions also come into play for delivering kamma vipāka or releasing kamma seeds. This is why we can prevent many bad kamma vipāka from coming to fruition by acting with yoniso manasikara or "being mindful"; see, "What is Kamma? Is Everything Determined by Kamma?."
- In both cases (pattisandhi and pavutti vipāka), "matching conditions" plays a big role; see "Anantara and Samanantara Paccaya." For example, a seed does not germinate if it is in a dry place; it needs to be in the ground with water and sunlight to germinate.

3. Getting back to the issue of coming to equilibrium, a stone is in equilibrium when it stays on the ground. If we pick it up and throw it up it goes up because we gave it some energy. But now, it is not in equilibrium and will fall to find its equilibrium position on the ground. The only difference with kammic energy is that the kammic energy could be released much later; it has to find suitable conditions to release that energy; see "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka," and "Paticca Samuppāda - Overview"; Thus the release of kammic energy is more akin to the process of germination of a seed; there is a time lag until suitable conditions appear.

- When placed in the ground, a seed germinates and becomes a tree according to the "blueprint" in the seed. The energy for the tree's growth comes from the soil (through the roots) and the Sun (through the leaves.) But the tree, like any other sañkhata, has a finite lifetime.
- Unless the tree made more seeds during its lifetime, that tree is the only "result" of that original seed.

4. Through numerous lives in the past, we have accumulated innumerable numbers of both good and bad kammic energy packets, or kamma bïja, or kamma seeds and we keep producing them in this lifetime, too; some are big, and some are small (actually, those done beyond 91 mah $\bar{a}$ kapp $\bar{a}$ have lost their energy; like everything else in this world, kammic energy is not permanent either). The small kammic seeds bring in results (vipāka) during any lifetime, and the really big ones (kamma patha) are the ones that determine "bhava" for a new life at the cuti-patisandhi moment.

- Does that mean we must remove all kamma seeds to stop rebirth, i.e., to attain Nibbāna? No. A new "bhava" is grasped at the "upādāna paccayā bhavo" step in the Pațicca Samuppāda cycle; see "Akusala-Mūla Paticca Samuppāda." If one has removed ignorance (avijjā) and understood the true nature of the world, then there is no "taṇh $\bar{a}$ " and thus there is no upa$d \bar{a} n a$ at the "taṇh $\bar{a}$ paccay $\bar{a}$ upādāna" step, and thus no "bhava," and no "jāti" or rebirth.
- However, to remove ignorance (avijjā), we must purify our minds. For that we need to understand the true nature of "this world," i.e., anicca, dukkha, and anatta. We need to eliminate the five hindrances (pañca nīvarana) that cover our minds and not let the mind comprehend anicca, dukkha, and anatta. That is where the removal of bad kamma seeds and the accumulation of good kamma seeds (i.e., doing good deeds and avoiding bad deeds) become important; of course, "deeds" include actions, speech, and thoughts.

5. The point is that every time we do a moral or an immoral act, we generate a kamma seed that embeds the "javana power" of the thought that led to the act; see, "Javana of a Citta - The Root of Mental Power." The kammic power associated with a moral act can be considered surplus in one's "account" that can be used to enjoy things in life; an immoral act leads to debt, i.e., it appears on the negative side of the ledger. If one acts immoral against another living being, one is in debt to that being until it is paid off, see "Kamma, Debt, and Meditation."
6. Nature tries to keep things in balance: the good kamma brings good results, and bad kamma brings bad results when nature implements this balancing act. We can take advantage of both by arranging conditions for good kamma seeds to germinate and not letting bad kamma seeds germinate; see, "What is Kamma? Is Everything Determined by Kamma?." The development of good habits and getting rid of bad habits go along with this process; see "Habits and Goals" and "Sansaric Habits and Āsavas." Please review these links carefully. All these tie up together.
7. Thus we are bound to this samsāra or the cycle of rebirths because we do things to make an "imbalance" either via moral or immoral deeds: good deeds lead to good rebirths and bad ones to bad rebirths. They both extend the sansāric journey. However, it is essential to engage in moral deeds to avoid birth in the four lowest realms (ap $\bar{a} y \bar{a}$ ), where the suffering is great, AND there is no opportunity for moral deeds. Thus one MUST do moral deeds until one attains Nibbāna.

- Moral deeds WILL have consequences (they add up in the "plus side of the ledger"), whether or not one wishes for anything in return, i.e., nature will pay back. However, if one does a moral deed AND wishes for something other than Nibbāna, then that is done with greed, and thus one is simultaneously doing an immoral act.
- Only Arahant does not do any moral or immoral deeds with kammic consequences that are potent enough to bring rebirth. All an Arahant does is low-level sañkhāra or "kiriya" (like walking and talking) and is "in equilibrium" with nature.

8. When one goes "off the equilibrium," greed and hate intensify and one is likely to do immoral acts to become indebted. On the other hand, when one is in some kind of samādhi, the mind is close to equilibrium,
and thus greed and hate are under control. If one attains $r \bar{u} p \bar{v} v a c a r a$ and then arūpāvacara jhān $\bar{a}$, the mind gets even closer to equilibrium. Samādhi attains perfection when one becomes an Arahant.

- This is why one needs to avoid doing immoral acts if one wants to get results in meditation. A purified mind can easily get to samādhi; see "The Basics in Meditation."
- One becomes indebted via greed, hate, or ignorance (here, ignorance means not knowing the true nature of the world or anicca, dukkha, anatta); thus, there is lobha Vinaya, dosa Vinaya, and moha Vinaya.

## III Key Dhamma Concepts

Within thousand years of the Buddha's Parinibbāna (passing away), certain key concepts became distorted. For many years, I had nagging questions on the compatibility of certain concepts that are widely published in "Buddhist literature", including Theravāda literature. For example, explanations of anicca, anatta, sunyata, did not make sense to me. Furthermore, I got lost in a myriad of explanations for terms like sañkhāra; there are three different meanings for that word in standard Theravāda texts.

When I started listening to the desanās by Waharaka Thero in Sri Lanka, it became immediately apparent to me that "this was the true Dhamma"; see, "Parinibbāna of Waharaka Thero." Furthermore, concepts like samisāra, sammā, sañkhāra became crystal clear while I was just listening. I hope I will be able to convey this information as clearly below.

This main section has the following sub-sections:

- Subsection: Basic Framework of Buddha Dhamma
- Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana
- Noble Truths, Paticca Samuppāda, Tilakkhana - Key Relationships
- Anicca Nature, the First Noble Truth, and Paticca Samuppāda

Tilakkhana - Introduction

- Anicca and Anatta - Two Characteristics of the World
- Anuloma Khanti and Sammattaniyāma - Pre-requisites for a Sotāpanna
- Anicca Nature - Not Possible to Overcome Suffering in This World
- Dukkha in Tilakkhana Is a Characteristic - Not Dukkha Vedanā
- Attachment to Things with Dukkha Lakkhana Leads to Dukkha
- How Does Anicca Nature Lead to Dukkha?
- Anatta is a Characteristic of the World, not About a "Self"
- Anatta in Anattalakkhana Sutta - Part 1
- Anatta in Anattalakkhana Sutta - Part 2

Correct Meaning of Vacī Sañkhāra

### 3.1.1 Buddha Dhamma - Noble Truths, Paṭicca Samuppāda, Tilakkhaṇa

July 2, 2021; revised \#8 on March 24, 2022

## Noble Truths, Paṭicca Samuppāda, Tilakkhaṇa - Interrelated

1. Buddha Dhamma is about eliminating suffering associated with the rebirth process. Before following the Noble Eightfold Path, one must understand the First Noble Truth. The First Noble Truth says that EACH AND EVERY birth ( $j \bar{a} t i$ ) in the rebirth process only perpetuates samisāric suffering, i.e., unimaginable suffering associated with the rebirth process.

- That critical step of "seeing AND fully comprehending" the First Noble Truth REQUIRES the following steps:
a. "Worldly things" are of unsatisfactory nature, meaning that we will NEVER be able to keep any worldly thing to our satisfaction IN THE LONG RUN. [Anicca]
b. All our efforts to pursue such "lasting happiness" only lead to more suffering. [Dukkha]
c. Therefore, all such efforts are in vain; they are unfruitful. [Anattta and Asubha]

Those three characteristics of our world of 31 realms are summarized as Tilakkhana: anicca, dukkha, and anatta.

- Paticca Samuppāda describes how we create our future births among the 31 realms. Moral actions (puñña abhisañkhāra) lead to "good births," and immoral actions (apuñña abhisañkhāra) lead to "bad births" in the apāyās. See, "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."
- Just living a "moral life" is not enough to stop suffering. It is necessary to realize that we MUST see the dangers in remaining in the rebirth process. That means we must see that our tendency to value and crave "mind-pleasing things" in this world keeps us trapped in the rebirth process.

Need to "See" Nibbāna Before Following the Path to Attain Nibbāna
2. When one comprehends the dangers of remaining in the rebirth process (i.e., the First Noble Truth) by grasping the concepts of Tilakkhaṇa and Paticca Samuppāda, one would also "see" how to stop the rebirth process and be completely free of suffering, i.e., one would comprehend the other three Noble Truths as well. It is ONLY THEN one can follow the Noble Eightfold Path and attain Nibbāna, i.e., Arahanthood.

- Therefore, there are two major steps. The first is to "see" this new worldview and become a Sotāpanna/ Sotāpanna Anugāmi. With this step, one will be free of future births in the apāyās (where suffering is worst). This step is "dassanena pahātabbä" or "remove defilements with clear vision."
- Once one understands the broad picture, one will realize how to Follow the Noble Eightfold Path (which is the Fourth Noble Truth.) That path is covered in three more steps Sakadāgāmi, Anāgāmi, and Arahant. That removes the remaining defilements via Bhāvanā (loosely translated as meditation.) This second step is "bhāvanāya pahātabbā."
- Those two categories are discussed in the "WebLink: suttacentral: Sabbāsava Sutta (MN 2)." We will discuss that sutta and a few more key suttas in the upcoming posts.

## The First Noble Truth

3. The foundation of Buddha Dhamma was laid out in the first discourse of the Buddha, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)" The First Noble Truth stated there succinctly:
"Idamं kho pana, bhikkhave, dukkhaì ariya saccaim:
jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maraṇampi dukkhā̀ं, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaì na labhati tampi dukkhā்̀-sañkhittena pañcupādānakkhandhā dukkhā."

Translated: Bhikkhus, What is the Noble Truth of Suffering?
"Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering. Having to associate with things that one does not like is suffering, and so is separation from those things one likes. If one does not get what one likes, that is suffering - in brief, the origin of suffering is the craving (upādāna) for the five aggregates of $r \bar{u} p a$, vedan $\bar{a}$, sañ̃̄̄ $\bar{a}, ~ s a n ̃ k h \bar{a} r a$, viññāna (pañcakkhandha).

- As we have discussed, pañcakkhandha means "the world of 31 realms." Thus the origin of samisāric suffering is craving for (and attachment to) this world.
- This is the "deep Dhamma" that the Buddha said is difficult for most people to understand!

## Connection to Tilakkhana

4. Why did the Buddha say that we should not crave any rūpa or any mental aggregate (vedan $\bar{a}$, sañ $\tilde{n} \bar{a}$, sañkhāra, viñ̃̄̄̄na)? This is what we will be discussing over several posts initially.

- One of the remaining original Commentaries, Patisambhidāmagga, explains this. It starts with the following succinct verse in Section "WebLink: suttacentral: 3.1. Mahāpañn̄ākathā (KN Ps 3.1)"
"Rūpaì at̄̄tānāgatapaccuppannaì aniccaì khayatṭhena dukkhaì bhayatṭhena anatt $\bar{a}$ asārakaṭthenāti tulayitvā tīrayitvā vibhāvayitva vibhūtaì katva rūpanirodhe nibbāne khippaì javatīti-javanapañ̃̄̄̄. Vedanā ...pe... sañ̃n̄a ... sañkhārā ... viññānaì ... cakkhu ...pe... jarāmaranaì atītānāgatapaccuppannaì aniccai் khayaṭthena dukkhai் bhayaṭthena anatt $\bar{a}$ asārakaṭthenāti tulayitvā tīrayitvō vibhāvayitvā vibhūtaì katvā jarāmaraṇanirodhe nibbāne khippaì javatīti-javanapaññā."
Translation: "Any $r \bar{u} p a$ that ever existed will exist in the future, or that is being experienced now has the following 3 characteristics: Any such rūpa is of anicca nature because one's hopes for enjoying rūpa
will only lead to one's demise ("aniccam khayatthena.") It will eventually lead to sufferings that one should be afraid of ("dukkham bhayatthena.") Therefore, such cravings are unfruitful and will make one helpless in the rebirth process ("anattā asārakatṭhenāti.")
- (Note that "khaya" is commonly translated as "destruction." It is really the "destruction of moral values" in Buddha Dhamma, especially in the lokuttara sense.)
- Then the verse is repeated for vedanā, saññā, sañkhārā, viññāna (i.e., that statement holds for the five aggregates. As we have discussed, the five aggregates encompass "the whole world."
- Then it is repeated for cakkhu, sota, ghāna, jivhā, kāya, mano, and the 6 types of rūpa (rūpa, sadda, gandha, rasa, photthabba, dhamma) we experience using them. These are the $12 \bar{a} y a t a n \bar{a}$ that also encompass the "whole world."
- Finally, it is repeated for the 11 terms in Paticca Samuppāda (avijjā, sañkhāra, viññāna, nāmarūpa, saḷāyatana, samphassa, vedanā, taṇhā, upādāna, bhava, jāti.) These 11 terms also define our world.
- Therefore, those three characteristics are associated with ANYTHING to do with this world of 31 realms.

5. The same summary is stated a bit differently in another section of Pattisambhidāmagga. Section "WebLink: suttacentral: 1.1. Nānakathā (KN Ps 1.1)" has the following verse:

Kathaì "sabbe sañkhārā anicca, sabbe saǹkhārā dukkha, sabbe dhammā anattā"ti

 "Vedanā ... saññā ... sañkhārā ... viññạnaì ... cakkhu ...pe... jarāmaraṇam aniccamं khayaṭthena, dukkhamं bhayatṭhena, anattā asārakaṭ!henā"ti sotāvadhānaì, tamipajānanā pañn̄ā sutamaye ñānaì. Taì ñātatṭhena ñānam̀, pajānanaṭthena paññā. Tena vuccati-"sabbe sañkhārā aniccā, sabbe sañkhārā dukkhā, sabbe dhammā anattā"ti sotāvadhānaí, tampajānanā paññā sutamaye ñānà̀.

- It says the same little bit differently. We will discuss this also in future posts. All these are interrelated and self-consistent.

## Connection to Paṭicca Samuppāda

6. It basically says that our tendency to value and thus have upädāna for the five aggregates (i.e., pañcupādānakkhandha) leads to various types of $j \bar{a} t i$. All $j \bar{a} t i$, WITHOUT EXCEPTION, end up in old age, decay, and death.

- Pațicca Samuppāda describes the mechanism by which that takes place, i.e., starting with "avijjā paccayā sañkhāra" that cycle ALWAYS ends up with "bhava paccayā jāti, jāti paccayā jarā, marana, soka-parideva-dukkha-domanassupāyasā sambhavan'ti."
- To expand that a bit more: Average humans (puthujjana) who have not comprehended the Noble Truths (and thus have avijj $\bar{a}$ ) engage in deeds that lead to future bhava and jāti, perpetuating/lengthening the suffering-filled rebirth process.
- Mano, vacī, and kāya (abhi)sañkhārā generated with avijjā lead to such pāpa/akusala kamma. Most apāyagāmi pāpa kamma are induced by a strong attachment to a worldly entity. Many of them are done on impulse, without thinking about the consequences of such actions. The whole idea of engaging
 gradually by contemplating the consequences of actions on a regular basis.
- It is necessary to understand what is meant by sañkhāra. See, "Sañkhāra - What It Really Means" and "Correct Meaning of Vacī Sañkhāra."

## Summary

7. It is a good idea to understand the key message of the Buddha before start reading deep suttas and getting confused. In most discussion forums on Buddha Dhamma (Buddhism), people keep discussing the same questions they asked many years ago. The reason is the lack of clarity of basic concepts.

- Some people question the validity of some suttas in the Tipitaka because those suttas don't fit into their narrative. Some people question the validity of Abhidhamma for the same reason, and also because Abhidhamma is not easy to understand. However, the Tipitaka is fully self-consistent. I discussed these issues in the post, "Preservation of the Buddha Dhamma."
- This is why it is good to see how the three major concepts - Four Noble Truths, Pațicca Samuppāda, Tilakkhana - relate to each other. They clarify and strengthen each other. Abhidhamma is not necessary to grasp those concepts, but it can help clarify "knotty issues."

8. The Four Noble Truths are discussed in many suttas, but many of the key suttas are in the "WebLink: suttacentral: Sacca Sainyutta (SN 56)," where there are 131 suttas. The latter part of that section is devoted to many analogies on the high rate of rebirths in apāyās. See, "Introduction - What is Suffering?"

- There are about 250 suttas concentrated in the "WebLink: suttacentral: Vedanā Samiyutta (SN 35)" on Tilakkhaṇa (anicca, dukkha, anatta.)
- The "WebLink: suttacentral: Nidāna Saminyutta (SN 12)" has about 90 suttas related to Paṭicca Samuppāda. However, Pațicca Samuppāda is analyzed in great detail only in the "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Abhidhamma Vb 6 [Book of Analysis]]" in the Vibhañgapakaraṇa of the Abhidhamma Piṭaka.
- Of course, many other key suttas and sections spread over the whole Tipitaka on all three of those topics because they are the essence of Buddha Dhamma. For example, "WebLink: suttacentral: Mahānidāna Sutta (DN 15)" is a key sutta on Paṭicca Samuppāda. A new series of posts based on that at "Paticca Samuppāda During a Lifetime."

## Noble Truths, Paṭicca Samuppāda, Tilakkhaṇa - Key Relationships

July 14, 2021

## Noble Truths - Deeper Aspect of Buddha Dhamma

1. Most Buddhists today follow the "superficial" or "mundane" version of the Buddha Dhamma, which is to live a moral life. "Secular Buddhists" -who don't believe in rebirth - fall into this category.

- However, Buddha Dhamma is better rationalized within the rebirth process. As I have emphasized many times, Buddha Dhamma is about stopping future suffering in the rebirth process. Of course, one can live a moral life by following the basic precepts in Buddha Dhamma.
- Any suffering that we may experience now results from previous actions (kamma.) They may only be managed by seeking medical advice and managing the diet, exercise, etc. The "suffering" that the Buddha emphasized was that in the rebirth process, which can extend billions of years to the future.
- "Living a moral life" is certainly a good thing to do. But this human life (and access to Buddha Dhamma) is a rare occurrence. It would be a huge mistake not to try at least to understand the key message of the Buddha that there is unimaginable suffering in this rebirth process. See, "Introduction - What is Suffering?"

## Three "Pillars" of Buddha Dhamma

2. As we discussed in the previous post, Buddha Dhamma stands on "three legs or pillars": Four Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda. See, "Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana."

- In this post, I will try to provide further clarification of the interconnections among those three pillars.
- It is critical to understand those inter-relationships to understand the meanings of keywords like anicca and anatta and understand what is meant by Nibbāna.
- Before we start discussing the "three pillars," we need to get the pronunciations right.

## Pronunciation of Pāli Words - "Tipiṭaka English"

3. When the early Europeans started writing the Pāli Tipitaka using the English alphabet (which originated from the Latin alphabet), they realized the necessity to represent the original sounds in an "unambiguous and efficient" way.

- We will call the convention they adopted "Tipiṭaka English."
- That "Tipiṭaka English" convention is DIFFERENT from "Standard English." See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1."
- The following audio file provides pronunciation of Paticca Samuppāda, Tilakkhaṇa, icca, iccha, nicca, niccha, anicca, aniccha, anatta, and anattha in that order.

WebLink: Listen to the Pronunciation of Paticca Samuppāda, Tilakkhana, icca, iccha, nicca, niccha, anicca, aniccha, anatta, and anattha

- More pronunciations/definitions at "Pāli Glossary - (A-K)" and "Pāli Glossary - (L-Z)."

## The First Noble Truth

4. With the famous verse - samkhittena pañca upādāna khandhā dukkhā - in the Dhammacakkappavattana Sutta (DN 56.11), Buddha stated that future suffering arises due to our tendency to try to keep certain entities "close to us" (upād $\bar{a} n a$.) Those "entities" are rūpa and any mental entity associated with those rūpā, i.e., vedanā, saññ̄a, sañkhāra, viñ̃ñanna.

- Why do we have "upādāna" for certain $r \bar{u} p a$ and associated mental entities? We do that because we like them and think that they will provide us with happiness. That liking/craving is "icca"/ "iccha."
- Those 5 aggregates (pañcakkhandha) encompass "the whole world" as experienced by a given person. However, any person attaches (upādāna) only to a tiny fraction of It (pañca upādāna khandhā.)
- All three "pillars" explain that all our future suffering arises due to pañca upādāna khandhā. In the same verse, Buddha explained the connection to "icca": "yam pi iccham na labhati tampi dukkhā̀ंㅎ" OR "If one does not get what one likes/craves, that is suffering."

## Connection to Tilakkhana

5. Anicca is the first of the Three Characteristics of Nature (Tilakkhana.) "The world is of anicca nature" means that "it is not possible to maintain those things that we like in the rebirth process. We may hold onto certain things all our lives, but we definitely will have to give them up when we die. The worst, and the deeper aspect, is that our efforts to "keep those things close to us" will lead to much more suffering in future lives.

- Of course, the things that we most like are the parts of our physical body. We take great care of the body and would like it to function well. However, as we get old, the body degrades, and the performance of all body parts, including the brain, will diminish. Eventually, we lose the whole physical body at death. That is why even any thought of death brings sadness and despair. This type of suffering comes under the category of "viparin̄āma dukkha."
- Let us discuss a simple extreme case that is easy to understand. A King in the old days was able to keep any woman that he desired in his harem. But as he got old, no matter how many women he had, he would not be able to "enjoy them." Of course, he would have to leave them when he died. That is
another example of "viparin̄āma dukkha." But the worst is that because of those actions, he would be reborn as an animal and would suffer for millions of years. That comes under "dukkha dukkha."
- Think about anything that brings you happiness now. You would make every effort to keep them in good shape, whether a person or an inert material thing like a house or a car. The suffering associated with such efforts falls under the category of "sañkhāra dukkha."

6. Those three types of suffering are discussed in "Introduction - 2 - The Three Categories of Suffering."

- The point is that the root cause for all three types of suffering is our inability to maintain things to our liking. That is anicca nature. That is stated as "yam pi icchaí na labhati tampi dukkhā̀m" ( If one does not get what one likes, that is suffering.) in the First Noble Truth.
- The above verses are discussed in detail in "Essence of Buddhism - In the First Sutta."

## Iccha, Nicca, Anicca - Connection to the First Noble Truth

7. Note that the Pāli word for "like" is "icca" (sometimes written as "iccha" to emphasize "strong liking or craving.")
"WebLink: suttacentral: Icchā Sutta (SN 1.69)" states "Icchāya bajjhat̄̄ loko, icchāvinayāya muccati; Icchāya vippahānena, sabbaì chindati bandhanan"ti.

Translated: "Desire is what binds the world. By the removal of desire, one is freed from this world. With the giving up of craving, all bonds to this world are severed." (Note that most translations don't say it is to this world that one is bound!)

- Of course, that "desire/craving" cannot be removed just by willpower. It HAPPENS through the understanding of the broader worldview discerned by the Buddha. That worldview (and the associated logical analysis) is embedded in the Four Noble Truths, Tilakkhana, and Paṭicca Samuppäda.
- We desire worldly things because we think (or perceive) that worldly things are beneficial to us and will bring us everlasting happiness. If that is the case (i.e., if those things can be maintained to one's satisfaction), that is expressed by "nicca" (or "niccha" to emphasize.)
- While it may be possible to keep such things to our satisfaction over short times, or even until we die, such cravings lead to suffering in the rebirth process. The key here is to understand what is involved in acquiring such things and in maintaining them. This is the hardest to understand.
- But the consequences are clear in cases where one needs to act with greed or anger. Such actions involve immoral deeds, and everyone should know that such immoral actions can lead to "bad rebirths." But we will discuss this in more detail soon.

8. On the other hand, if it is NOT possible to maintain something to one's satisfaction (i.e., it will eventually bring more suffering), then it is of "anicca" nature, the opposite of "nicca nature."

- I hope now you can see why "anicca nature" expresses the same underlying fact as the First Noble Truth. This world of 31 realms is of anicca nature. Whatever things that we perceive to lead to happiness (and thus, we "upādāna" or "attach/keep close") will only lead to long-term suffering, that suffering arises because "anicca nature" is a universal truth.

9. The ultimate goal of anyone is to stop any possibility of future suffering completely. In Pāli, "nicchāto" denotes that attainment, and that is Parinibbāna (even an Arahant will be subjected to physical suffering until the death of the physical body; that is Parinibbāna.)

- The verse "nicchāto parinibbuto" appears in many suttas; see, "WebLink: suttacentral:search with 31 results for nicchāto."
- That verse means "an Arahant attains the status of niccha upon the death of the physical body."
- Until then, any living being can be subjected to various types of suffering.
- Summary: This world of 31 realms is of anicca nature. Nibbāna is of nicca (or niccha) nature.

## Connection to Paṭicca Samuppāda

10. Next, let us see how the same idea is embedded in Paticca Samuppāda.

- If we like something, we would like to "get possession of it." Then we think about it, plan accordingly, and do bodily work as well. Those efforts are based on mano, vacī, and kāya sañkhāra.
- It is critical to understand the meaning of "sañkhāra" and not just say they are "mental formations." See, "Sañkhāra - What It Really Means" and "Correct Meaning of Vacī Sañkhāra."
- The point is that our minds generate sañkhāra based on things that we crave/like. This is the connection of the First Noble Truth and Tilakkhana to Paṭicca Samuppāda.
- That is why the first step in Paticca Samuppāda is "avijjā paccayā sañkhāra." Until the Noble Truths/TilakkhanalPaticca Samuppāda are understood fully, there is the possibility to generate sañkhāra with avijjā. Thus avijija is the ignorance of Noble Truths/Tilakkhana/Paṭicca Samuppāda.
- Once we start generating sañkhāra, a corresponding viñnāṇa is established. That viññạ̄a is a kamma viññāna and is MORE THAN just consciousness. That viññāṇa in PS has a "built-in expectation" or an "expected outcome" based on something that one craves!

11. It is easier to explain that with an example. Let us say person $X$ meets a beautiful woman and likes her very much; this is "iccha," and that leads to tanhhā and upādāna.

- He would keep thinking about her, talk about her, and tries to meet her as much as possible. All those involve the three types of sañkhāra. A kamma viññāna then takes root in his mind to "have a relationship with her."
- The more he engages in generating such sañkhāra, the stronger that viñ̃āạa grows: "sañkhāra paccayā viññāna."
- Furthermore, because of that viñ̃ān̄a that has now taken root in X's mind, he would often think about her, generating more sañkhāra. Here PS steps go backward too, "viñ̃n̄ạa paccayā sañkhāra."
- We have discussed such examples in more detail in the Paṭicca Samuppāda section. See, "Paticca Samuppāda in Plain English."
- Now, if X finds out that the woman has a boyfriend, he would suffer immediately. If he tries to break them up, he will take "bad actions" based on "bad sañkhāra." Those would be akusala kamma, and thus, can lead to future suffering.
- Even if he can get his wish fulfilled and marry her, that will also lead to future suffering. This needs more discussion, but the following is clear. Both of them would be subjected to mental suffering at the death of the other.

## Summary

12. There are "mind-pleasing things" in this world. When we get attached to them, with liking/craving (iccaliccha), we will make every effort to "own them" or at least to "enjoy them."

- If such efforts involve harming others, they will lead to "bad kamma vipāka," including "bad rebirths." Even if those efforts (based on sañkhāra) don't harm others, they will still bound one to "this world of 31 realms." We will discuss this in detail.
- What is wrong with "continue to live in this world of 31 realms"? The short answer is that most rebirths are in the suffering-filled flour lowest realms (apāyās.) See, "Introduction - What is Suffering?" This message is embedded in the First Noble Truth.
- The root cause of that suffering, its removal, and the way to remove those root causes are described in the remaining three Noble Truths.
- A systematic analysis of how that suffering arises via the generation of sañkhāra is described by Paṭicca Samuppāda.
- This underlying message (unsatisfactory and dangerous nature of this world) is expressed by the Three Characteristics of Nature (anicca, dukkha, anatta.) Here we briefly discussed anicca. Next, we will discuss how anicca nature leads to dukkha and anatta.

### 3.1.3 Anicca Nature, the First Noble Truth, and Paṭicca Samuppāda

July 19, 2021

## Anicca Nature - Connection to the First Noble Truth

1. In the previous post we started a discussion to look into the inter-relationships among the "three pillars of Buddha Dhamma," i.e., the Four Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda. If you do not recall the pronunciation of the words paṭicca Samuppāda, Tilakkhaṇa, icca, iccha, nicca, niccha, anicca, aniccha, anatta, and anattha go back and listen to the audio file in the previous post "Noble Truths, Paticca Samuppāda, Tilakkhana - Key Relationships."

- The key verses on suffering in the First Noble Truths are, "yam pi iccham na labhati tampi dukkhā$\dot{m}$ " and "samkhittena pañca upādāna khandhā dukkhā" both say that future suffering arises because of our attachment/craving (iccha) for things in this world.
- As we discussed, IF IT IS POSSIBLE to tailor our future to be free of the suffering that would be our liking (icca or iccha,) then we can say that our world is of "nicca" or "niccha" nature, where there would be no suffering.

2. The Buddha pointed out that this world is of "anicca nature," i.e., the opposite of the "nicca nature"

- That means craving/striving for ANYTHING in this world WILL NOT lead to a future absent of suffering. Instead, the more attachment we have for anything in this world WILL lead to more suffering.
- The fundamental reason for this is that ANY sañkhata (rūpa, vedanā, sañnā, sañkhāra, $v i \tilde{n} \tilde{a} n a)$ in this world is inherently subject to unexpected changes and destruction. We will discuss that in the next post.
- It is only in Nibbāna that there is no suffering. Therefore, it is Nibbāna that is of nicca nature. See \#9 of the previous post.

3. Craving/striving (icca/iccha) for ANYTHING in this world leads to suffering in two ways.

- When one struggles to get possession of things in this world, that effort itself is suffering and the end result is suffering. Even if one gets it, one will lose it at death.
- The more serious second type of suffering is due to "bad rebirths" that will arise due to any immoral deeds done while trying to get possession of worldly things that one craves. Let us discuss that now.
- (However, this craving CANNOT be removed without comprehending the "core" of Buddha's teachings: the Four Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda.)

## Anicca Nature - Connection to Paṭicca Samuppāda

4. Our efforts to "own and enjoy" things in this world ALWAYS lead to more suffering than any short period of happiness. That explanation comes via Paticca Samuppāda, the "third pillar" of Buddha Dhamma. We got started on that in the previous post. Let us continue that discussion.

- Humans do morally acceptable deeds with puñña abhisañkhāra and morally corrupt deeds with apuñña abhisañkhāra. The former leads to births in the human, Deva, and rūpāvacara Brahma realms and the latter type leads to births in the $a p \bar{a} y \bar{a} s$.
- Some humans cultivate arūpa jhāna. Those involve $\bar{a} n e n ̃ j a \bar{a}$ abhisañkhāra and lead to births in the arupāvacara Brahma realms. More on the types of puñña abhisañkhāra below.
- In the absence of a Buddha, that is all humans can do. None of those lead to a "state without suffering." All those births end up in death. The worst aspect is that due to the craving for sensual pleasures humans frequently engage in immoral deeds with apuñ̃na abhisañkhāra and end up in suffering-filled apāyās.
- The reason becomes clear when we examine what is meant by "avijja paccay $\bar{a} \operatorname{san} k \boldsymbol{a} \bar{a} r \vec{a} "$ " in the akusala-mūla Paticca Samuppāda.

## Births That End With Suffering Are Initiated by "Avijjā Paccayā Saǹkhārā"

5. WebLink: suttacentral: Paticcasamuppāda Vibhañga (Abhidhamma Vb 6), explains the term "avijjā paccayā sañkhārä" in akusala-mūla Paṭicca Samuppāda (that leads to suffering) as follows: "Tattha katame avijjā paccayā sañkhārā? Puññābhisañkhāro, apuñn̄ābhisañkhāro, āneñjābhisan்khāro, kāyasañkhāro, vacīsañkhāro, cittasañkhāro."

Translated: "What is avijjā paccaȳ̄ saǹkhārā? Apuññābhisañkhāra, puñ̃̄̄̄bhisañkhāra, äneñjäbhisañkhāra, kāyasañkhāra, vacīsañkhāra, cittasañkhāra." It is quite clear that apuñn̄ābhisañkhāra are due to avijj $\bar{a}$. But why are the other two are said to be done due to avijj $\bar{a}$ ?

- Puñnāabhisañkhāra are, of course, Moral and good deeds AND also the cultivation of rūpāvacara jhāna.
- Āneñjābhisañkhāra involve cultivating arūpāvacara jhāna.
- When a person who has NOT comprehended anicca, dukkha, anatta engage in those two types of "good sañkhāra," they are still done with avijjā! That is because one has not yet grasped the dangers in remaining in the rebirth process. Thus, avijjä is the ignorance of the Four Noble Truths, Tilakkhana, and Paticca Samuppāda.
- Some examples are discussed in "Vacī Sañkhāra - Sańkappa (Conscious Thoughts) and Vācā (Speech)." It is a good idea to read that post to really understand this point.

6. We can summarize the above analysis in simple words as follows.

- ANYTHING that we do without understanding the concepts of the Four Noble Truths, Tilakkhaṇa, and Paticca Samuppāda involves three types of sañkhāra: apuñnābhisañkhāra, puññābhisañkhāra, āneñjäbhisañkhāra.
- Immoral deeds or pāpa kamma done with apuññābhisañkhāra lead to rebirths in the apāyās. Moral deeds or puñña kamma done with puññābhisañkhāra give rise to births in human, Deva, and rūpāvacara Brahma realms (good births.) Those who cultivate arupāvacara jhāna with $\bar{a} n e n ̃ j a ̄ b h i s a n ̃ k h a ̄ r a ~ a r e ~ r e b o r n ~ i n ~ a r u p a ̄ v a c a r a ~ B r a h m a ~ r e a l m s . ~$
- All those births end up in death. None of those will lead to a cessation of suffering.
- That is why all those three types of sañkhāra are done with avijjā!
- So, what type of sañkhārā lead to Nibbāna?

## Difference Between Puñña Kamma and Kusala Kamma

7. Puñña kamma are "good deeds" done with puññābhisañkhāra with a mundane version of alobha, adosa, amoha. Those SAME DEEDS would be kusala kamma if done with the comprehension of the Four Noble Truths, Tilakkhaña, and Pațicca Samuppāda.

- While puñ̃na kamma leads to rebirths in the "good realms," kusala kamma leads to Nibbāna.
- Thus, while puñña kamma are done with "avijjā paccayā sañkhāra" in the akusala-mūla Pațicca Samuppāda process, kusala kamma are done with "kusala-mūla paccayā sañkhāra" in the kusalamūla Paticca Samuppāda process.
- For details wee, "Akusala-Mūla Uppatti Paticca Samuppāda" and "Kusala-Mūla Paticca Samuppāda."
- That is a brief explanation of the difference between puñ̃a kamma and kusala kamma. Those who don't understand that difference should read the post "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma." It is critical to see the difference.

## Puñ̃̃a Kamma Result With the Wrong View of a "Nicca Nature" [ $\rightarrow$ Vipallāsa]

8. This is the CRITICAL point to understand. In the absence of a Buddha, humans have the innate idea that happiness can be attained by owning things that one likes. As a child grows he/she would strive to keep friends and "things" that he/she likes. As an adult, he/she would strive to learn skills, get a good job, marry the person of his/her choice and live a "good life." In the absence of a Buddha, not many people would even think beyond that.

- Some people do worry about what would happen after death, especially when they get old. The world's major religions teach that this world was created by an everlasting Creator and that one can "go to him" or "merge with him" at death to have a permanent existence of happiness.
- Of course, there is no way to prove or disprove the existence of such a Creator. One would pledge allegiance to that Creator and promise to live a moral life. But there are many problems with this hypothesis. For example, any immoral deed, no matter how grave, can be forgiven by just praying!
- In comparison, Buddha Dhamma is a complete worldview. It is not a faith-based religion. In fact, it is not a religion! One cannot get to Nibbāna by just praying or pledging to be a faithful follower of the Buddha. One needs to comprehend the worldview of the Buddha on how suffering arises, and then it would become clear how to be free of any future suffering.

## It Takes a Paradigm Shift to Understand the Anicca Nature

9. We went off in a tangent there, but the point is that most people today fall into two categories. Atheists believe that life ends at death and one should try to "enjoy life" while it lasts. Those who belong to major religions believe in a Creator and expect that Creator will secure them a happy, permanent existence after death.

- Thus, either way, there is a sense of a "nicca nature." That is why most people don't even bother to examine the teachings of the Buddha in detail. That takes a considerable effort. Who would want to spend that much time while there is much fun to be had by watching a movie, going to a party, or just having a day out with the family/friends?
- But if one makes an effort to study the deep teachings of the Buddha, one would be able to see that it is a fully self-consistent worldview that is based on the Principle of Causality. It is deeper than modern
science because science only deals with material phenomena. That is why science is unable to make any progress on the issue of consciousness. I have discussed this in detail in the series on "Origin of Life."
- By the way, from the discussion so far, it should be quite clear that translating "anicca" as "impermanence" is way off the mark! As explained, "anicca" is intrinsically connected to "icca/iccha" and "upādāna."

## "Nicca" Worldview Leads to the Generation of Sainkhāra with Avijjā̆!

10. We don't just start acting with avijjā and initiate Pațicca Samuppāda (PS) processes with "avijjā paccayā sañkhāra." Instead, PS processes start with an ārammaṇa that comes to the mind via one of the six sensory inputs or (eyes, ears, nose, tongue, body, mind.)

- If that ārammana is "mind-pleasing" we attach to it and start thinking about enjoying it more. Thus, the PS processes start at "salāyatana paccayā phasso." For example, if we see a mind-pleasing rūpa via eyes, then it is the cakkhāyatana that is "activated" and this step is really "salāyatana paccay $\bar{a}$ samphassa (san + phassa)." Of course, it is essential to read the post, "What is "San"? Meaning of Sansāra (or Samisāra)."
- Immediately the mind goes through the "samphassa paccaya $\bar{a}$ samphassa-j $\bar{a}$-vedan $\bar{a} "$ step, which is normally stated as "phassa paccay $\bar{a}$ vedana $\bar{a}$." This "samphassa-j $\bar{a}$-vedan $\bar{a} "$ is a MIND-MADE vedanā that arises due to attachment with liking/craving (icca/iccha.)
- More information in "Difference between Phassa and Samphassa."
- The key point here is that PS cycles start when we attach to an ārammana with liking/craving (icca/iccha) based on greed, anger, and ignorance of the Four Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda.

## Suffering - Not Getting the Desired (and Getting the Undesired)

11. As we have discussed many times, a passage in the "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)" is "yampicchain na labhati tampi dukkhām" meaning "If one does not get what one likes, that is suffering."

- Even in the mundane sense, there is more to it than people perceive. For example, you work very hard to at your job and get a promotion. So, the ultimate outcome is a happy one. But you WORKED HARD to get there. That is "sañkhāra-dukkha" as we discussed in "Introduction-2 - The Three Categories of Suffering." That "sañkhāra-dukkha" is present in ALL our activities, including breathing. We don't feel breathing is difficult because we are used to it. An asthma patient knows how difficult it can be.
- The above succinct statement is true at a deeper level in the rebirth process, as we briefly mentioned in \#3 above.

12. Our desire is to have a "good birth." Some want to be reborn humans with good health and wealth. Others want to be born Devas so that they can enjoy higher levels of sensual pleasures. There are also those who cultivate jhāna so that they can be born in Brahma realms with "jhānic pleasures."

- However, our future rebirths do not work out according to our wishes (iccaliccha). The world is of "anicca nature."
- Anicca nature naturally - and inevitably - leads to dukkha. This is stated as "yad aniccaim taín dukkham." We will discuss that in the next post.

### 3.1.4 Tilakkhaṇa - Introduction

July 27, 2021
Anicca and Anatta - Two Characteristics of the World
Anuloma Khanti and Sammattaniyāma - Pre-requisites for a Sotāpanna
Anicca Nature - Not Possible to Overcome Suffering in This World
Dukkha in Tilakkhana Is a Characteristic - Not Dukkha Vedanā
Attachment to Things with Dukkha Lakkhana Leads to Dukkha
How Does Anicca Nature Lead to Dukkha?
Anatta is a Characteristic of the World, not About a "Self"
Anatta in Anattalakkhana Sutta - Part 1
Anatta in Anattalakkhana Sutta - Part 2

### 3.1.4.1 Anicca and Anatta - Two Characteristics of the World

## August 2, 2021

Anatta is a characteristic of this world and not about a "self." While impermanence is a part of anicca nature, it does not describe the full meaning of anicca.

## It is Time to Settle the Issue of Mistranslations of Anicca and Anatta

1. Incorrect translations of"anicca" as "impermanence" and "anatta" as "no-self" have been engraved in the minds of many people. This is a serious issue that needs to be discussed and settled.

- We need to realize that mistranslations of anicca and anatta are two serious issues. It is not possible to understand the message of the Buddha with those incorrect translations. By the way, my analysis below CANNOT be categorized as just an "interpretation." There could be several interpretations if the definition of a word is not clear. In this case, there is no room for ambiguity.
- In addition, this clarification will help easily understand the meanings of several other key Pāli words as well. These include sakkāya diṭthi and "māna samiyojana." As we know, sakkāya diṭthi is a key samyojana that needs to be dispelled to attain the Sotāpanna stage, while "māna samyojana" is removed at the Arahant stage.

## Tilakkhana - Three Characteristic of the World

2. A "lakkhaṇa" means an intrinsic "characteristic" or a "quality." For example, the "WebLink: suttacentral: Lakkhana Sutta (DN 30)" describes the 31 unique qualities/characteristics of a Buddha.

- Anicca, dukkha, and anatta are collectively called Tilakkhaṇa or "three characteristics" of this world.
- Sometimes "asubha" is shown to be another characteristic of the world, among a few more. In fact, I have not seen the word "Tilakkhana" specifically mentioned in the Tipitaka. Those who compiled commentaries may have introduced the term. The reason could be that anicca, dukkha, anatta are closely related to each other. Many suttas in the Tipiṭaka describe those relationships.
- Therefore, it is logical to reserve the word Tilakkhaṇa for anicca, dukkha, anatta. We will discuss the relationships among them in the next few posts.

## What Does Anicca Apply to?

3. What entities have the anicca characteristic? The "WebLink: suttacentral: Kalattayaanicca Sutta (SN 22.9)" says: "Rūpaì, bhikkhave, aniccaì atīt̄̄nāgataì; ko pana vādo paccuppannassa."

- Translated: "Bhikkhus, rūpa of the past (atīta) are of anicca nature, rūpa of the future (anāgata) are of anicca nature. Rūpa that we experience at present (paccuppanna) are also of anicca nature."
- Then the statement is repeated for vedanā, saññā, sañkhāra, viññāna.

4. Those are profound statements. The translators at the Sutta Central site translate them without taking time to reflect on their meanings.

- For example, if anicca really means impermanence, what is the need to specifically say, "rūpa of the past are impermanent"?
- That is like saying, "all those people who lived at the time of the Buddha are now dead." That would be a trivia/foolish statement to make!
- It is even worse to emphasize that any vedanā, sañ̃̄̃a, sañkhāra, viñ $\tilde{n} \bar{a} n a$ that one experienced in the past were impermanent." That would be a childish statement. All of them would have perished just after arising!
- Rather, those statements express a profound idea: "Any rūpa, vedanā, saññ̄, sañkhāra, viññäna of the past, future, or present are of $\operatorname{ANICCA}$ NATURE. I have discussed that in many posts, but we will discuss that in detail in upcoming posts.

## Characteristic of Dukkha Applies to What?

5. The "WebLink: suttacentral: Kalattayadukkha Sutta (SN 22.10)" says: "Rūpaim, bhikkhave, dukkhain atītānāgataim; ko pana vādo paccuppannassa."

- Translated: "Bhikkhus, rūpa of the past are of dukkha nature, rūpa of the future are of dukkha nature. Rūpa that we experience at present are also of dukkha nature."
- Then the statement is repeated for vedanā, sañ $\tilde{n} \bar{a}, \operatorname{san} k h a \bar{r} a, ~ v i n ̃ \tilde{n} \bar{a} n a$.
- Those statements express a profound idea: "Any rūpa, vedanā, sañ̃̄̄a, sañkhāra, viññāna of the past, future, or present are of DUKKHA NATURE.

## Characteristic of Anatta Applies to What?

6. The "WebLink: suttacentral: Kalattayaanatta Sutta (SN 22.11)" says: "Rūpaim, bhikkhave, anatt $\bar{a}$ atītānāgataì; ko pana vādo paccuppannassa."

- Translated: "Bhikkhus, rūpa of the past are of anatta nature, rūpa of the future are of anatta nature. Ruppa that we experience at present are also of anatta nature."
- Then the statement is repeated for vedanā, saññā, sañkhāra, viññāna.
- Those statements express a profound idea: "Any rūpa, vedanā, saññā, sañkhāra, viññāña of the past, future, or present are of ANATTA NATURE.
- Therefore, the characteristics of anicca, dukkha, anatta apply to the five aggregates (pañcakkhandha.)

## Many More References

7. For simplicity I picked the above three suttas. They are short suttas with direct verses.

- But there are many more conveying the same meanings. For example, the following references in the Tipiṭaka state that the five aggregates (pañcakkhandha) have the anicca nature: "WebLink: suttacentral: 17 results for pañcakkhandha AND anicca."
- Another relevant set of references in "WebLink: suttacentral: 13 results for rūpakkhandha AND anicca."

## Characteristics of Anicca, Dukkha, Anatta Applies to the Five Aggregates!

8. We need to understand that when the Buddha refers to "rūpa" (unless specifically mentioned, as in some cases) it refers to "rupakkhandha," the aggregate. In the same way, vedanā, saññā, sañkhāra, viññāna refer, in many cases, to vedanākkhandha, saññākkandha, sañkhārakkhandha, viññānakkhandha.

- Altogether there are $\mathbf{1 1}$ types of rūpa included in rūpakkhandha. The WebLink: suttacentral: Khandha Sutta (SN 22.48) (among many other sutt $\bar{a}$ ) summarizes what is included in rūpakkhandha. "Yaì kiñci, bhikkhave, rūpaì atīt̄āāgatapaccuppannaì (atīta, anāgata, paccuppanna)
 $v \bar{a}$, ayam vuccati rūpakkhandho."
- You may want to refresh your memory by reading the post, "Difference Between Physical Rūpa and Rūpakkhandha."
- A crude translation of the 11 types: past, future, current, internal, external, coarse, subtle, good, bad, far, and near.
- However, all 11 types are included in the rūpa of past, future, current. Therefore, what is meant by " $\overline{u p} a$ " in the above 3 suttas is really the "rūpakkhandha." R $\bar{u} p a k k h a n d h a$ are "mental impressions of physical rūpa."
- Then there are "physical rūpa" made of suddhatthaka, like our physical bodies.
- We need to be able to differentiate between a "rūpa made of suddhāṭthaka" and "rūpakkhandha."

9. In the same way, the above 3 suttas refer to vedanākkhandha, saññäkkandha, sañkhārakkhandha, viññānakkhandha. Thus all 3 suttas refer to the five aggregates or pañcakkhandha.

- Now, we know that the five aggregates of rūpakkhandha, vedanākkhandha, sañ̃̄ākkandha, sañkhārakkhandha, viññāṇakkhandha include (mental impressions of ) EVERYTHING in this world for a given person. It includes all past, present, and future experiences in this world!
- That means those 3 characteristics apply to everything in this world!
- That is why they are called " 3 characteristics of nature."
- It is necessary to understand these critical concepts. It is not possible to understand the true message of the Buddha without understanding these fundamental and critical concepts.
- As you can see, these are not "interpretations." The suttas specifically say that ru$p a$, vedan $\bar{a}$, sañ̃̄̄̄, sañkhāra, viññāna of the past, present, and future ALL have the characteristics of anicca, dukkha, anatta!

10. Another short sutta, "WebLink: suttacentral: Ānanda Sutta (SN 22.21)" states: "Rūpaì kho, ānanda, aniccaì sañkhataì paticcasamuppannaì khayadhammaì vayadhammaì virāgadhammaì nirodhadhammaì. Tassa nirodho 'nirodho'ti vuccati."

Translated: "Ānanda, rūpa are of anicca nature, originated with sañkhāra (sañkhataì) via Paṭicca Samuppāda (paṭiccasamuppannaì), leading to the decay of moral qualities (khayadhammaì) and thus to one's future suffering (vayadhammaim.) But that can be overcome by losing attachment for them ( virāgadhammaim.) Thus, they can be stopped from arising (nirodhadhammaí), leading to their cessation. (that is Nibbāna!)

- Then the statement is repeated for vedanā, saññā, sañkhāra, viññāna.
- This sutta also refers to the five aggregates or pañcakkhandha or the "whole world."
- As you can see, this sutta — with those succinct verses — packs even deeper concepts.
- Simply put, the sutta says that we prepare our own future births via our own sañkhāra generated via $a v i j j \bar{a}$. But we can stop that process by cultivating pañ $\tilde{n} \bar{a}$ (i.e., comprehending the Four Noble Truths, Tilakkhaña, and Paṭicca Samuppāda)!
- This is what we will be discussing in this series of posts. We have recently discussed the essential concepts in Pațicca Samuppāda. You may want to review that section, "Paticca Samuppāda - Essential Concepts" and "Paticca Samuppāda in Plain English."
- Another brief point needs to be made so that some of you can make the connections and understand the above fourth sutta.

## Connection to Pañcupādānakkhandhā

11. We crave not only $r \bar{u} p a$ that we see at this moment (that is the meaning of paccuppanna rūpa.) Even a rūpa that we saw a minute ago has gone to the past (atīta rūpa.) Furthermore, we wish for a certain rūpa in the future (anāgata rūpa.) We may form attachments to all three types!

- Therefore even though rūpakkhandha is infinite, we attach only to a small part of it, and that is rūpupādānakkhandha.
- Rūpakkhandha is infinite because it includes all rūpa that we have seen in our past lives. In contrast, we mostly crave rūpa that we have seen in this life! Thus, rūpupādānakkhandha (or rūpa upādāna $k h a n d h a$ ) is a tiny part of $r \bar{u} p a k k h a n d h a$. See, "Rūpakkhandha and Rūpa Upādānakkhandha."
- Thus, even though all rūpa are of anicca nature, we only need to overcome our attachment to those we crave!
- That is why the Buddha said, "sam்khittena pañcupādānakkhandhā dukkhā." [sañkhittena means being overthrown by defilements]

## Carrying the "Burden" or "Pañcupādānakkhandha"

12. Therefore, even though all of pañcakkhandhā has the characteristics of anicca, dukkha, anatta, we get into trouble only if we get attached to parts of it.

- The next sutta, "WebLink: suttacentral: Bhara Sutta (SN 22.22)" specifically says that pañcupādānakkhandha is a "load" or "burden" carried by each person. One can put down that "load" by losing attachment (taṇhā/upādāna) for worldly things.
- The sutta ends with the following verses:
"Bhārā have pañcakkhandhā, bhārahāro ca puggalo; Bhārādānaì dukhaì loke, bhāranikkhepanaì sukhaì.
Nikkhipitvā garumं bhāraì, aññaì bhāraì anādiya; Samūlaiं taṇhamabbuyha, nicchāto parinibbuto" $t i$.
- That ties up what we have discussed so far in this series about Nibbāna being the only nicca (niccha) state.

## Translation of those verses:

"The five aggregates are truly burdens; burden-carrier is the person. Taking up the burden is suffering in the world; laying the burden down is happiness.
Having laid the heavy burden down, without taking up another burden, having rooted out tanhh $\bar{a}$ with its roots, one is free from suffering, and reaches the niccha state (Nibbāna.)."

- As we discussed before, "nicca/niccha" is the opposite of "anicca."

## No Excuse Anymore to Translate Anicca/Anatta as Impermanence/"NoSelf"

13. If you read the English translations at Sutta Central you can see how badly they have translated all of the above suttas. However, if you re-read them with the correct meanings, those suttas WILL make sense.

- It is no wonder why many people have not made ANY significant progress over many years by reading those incorrect translations. In discussion forums, people keep posting those incorrect translations and point out certain inconsistencies among deeper suttas. Of course, there WILL BE inconsistencies IF keywords are translated incorrectly!
- The fourth sutta (Ānanda Sutta (SN 22.21)) has deeper meanings and requires more discussion, even though I am sure some of you can grasp those meanings.
- However, ANYONE should be able to see that anicca and anatta DO NOT mean impermanence and "no-self."
- If there are still people who cannot comprehend at least that, it is doubtful that they will be able to understand future posts.
- In future posts, I will expand this analysis. Hopefully, this will settle the issue of mistranslations of the key Pāli words starting with anicca and anatta.

### 3.14.2 Anuloma Khanti and Sammattaniyāma - Pre-requisites for a Sotāpanna

## August 9, 2021

To attain the Sotāpanna stage, two conditions must be met. One must get to Anuloma Khanti, i.e., one must see that suffering hugely dominates the rebirth process. One must also get to Sammattaniyāma, i.e., realize that the ultimate bliss is in Nibbāna (reached via stopping the rebirth process.) [Here, "anu" means "through the understanding of Tilakkhana," "lo" means "craving for worldly things," and "ma" means "removal," and thus "anuloma" means "removal of craving for worldly things to some extent via the comprehension of Tilakkhana."]

## Anuloma Khanti and Sammattaniyāma

1. If you have been reading my posts for a while, you know the points listed below. Here I will introduce two new terms - Anuloma Khanti and Sammattaniyāma - but the same concepts. These two terms are used in Tipitaka references that point out the necessity of comprehending the meanings of anicca, dukkha, and anatta nature to attain magga phala, as we discuss below.

- Complete cessation of suffering cannot be achieved while in the rebirth process. While some births may have less suffering than others, death is inevitable for ANY birth.
- Understanding Tilakkhana or the Three Characteristics of Nature is essential to reach that conclusion. That understanding comes with the simultaneous comprehension of Paticca Samuppāda (the process that leads to new births.) That is the Noble Truth ABOUT suffering. That realization gets one to Anuloma Khanti.
- Closely related to that issue of the dangers of remaining in the rebirths process is another critical issue. That is to realize that Nibbāna is the only refuge. That conclusion comes with understanding the Four Noble Truths, i.e., liberating from the rebirth process via the Noble Eightfold Path. That is when one gets to Sammattaniyāma and gets to the Sotāpanna stage.

2. Thus, it is CRITICAL to start with understanding Tilakkhaṇa and Paṭicca Samuppāda, i.e., understanding why craving for worldly pleasures will INEVITABLY lead to suffering.

- However, as I have mentioned many times before, it is impossible to give up cravings for worldly pleasures with just willpower. It has to come through understanding WHY and HOW cravings for worldly pleasures lead to future suffering.
- Here is an analogy. An alcoholic CANNOT get rid of his addiction just by willpower. He has to investigate the bad consequences of drinking and comprehend - without any doubts - that drinking is bad for health and can lead to death!
- In the same way, one needs to realize the dangers in the rebirth process first. With that understanding, the generation of the worst types of sañkhāra (leading to rebirth in the apāyās) will stop. But a Sotāpanna's mind will still crave sensual pleasures. Those cravings will be gradually lost in three more stages and will disappear at the Arahant stage.
- Thus, a Sotāpanna has the "roadmap" (same as Sammā Ditthi) to reach the Arahant stage. Therefore, only a Sotāpanna can truly start cultivating Satipatthāna/Ānāpāna/Satta Bojjhañga/Noble Eightfold Path to get to the Arahant stage via the intermediate Sakadāgāmi and Anāgāmi stages.

## Getting to Anuloma Khanti Requires Comprehending Anicca/Dukkha Nature of Sañkhāra

3. The "WebLink: suttacentral: Anicca Sutta (AN 6.98)" states: "..sañkhārain niccato samanupassanto anulomikāya khantiyā samannāgato bhavissatī'ti netaì ṭhānaí vijjati. 'Anulomikāya khantiyā asamannāgato sammattaniyāmaì okkamissatī'ti netaì ṭānaì vijjati. 'Sammattaniyāmaì anokkamamāno sotāpattiphalamं $v \bar{a}$ sakadāgāmiphalaì $v \bar{a}$ anāgāmiphalaiं $v \bar{a}$ arahattaim $v \bar{a}$ sacchikarissatī'ti netaì ṭhānamं vijjati."

Translated: " ..anyone who regards sañkhāra are of nicca nature cannot get to Anuloma Khanti. Without getting to Anuloma Khanti, it's impossible to get to Sammattaniyāma. Without getting to Sammattaniyāma, it's impossible to realize ANY magga phala (sotāpatti, sakadāgāmi, anāgāmi, arahatta.)

- The next sutta, "WebLink: suttacentral: Dukkha Sutta (AN 6.99)," makes a similar statement, "..anyone who regards sañkhāra are of sukha nature cannot get to Anuloma Khanti." The rest of that verse is the same, i.e., unless one gets to Anuloma Khanti, it's impossible to get to Sammattaniyāma and magga phala.

## Getting to Anuloma Khanti Also Requires Comprehending Anatta Nature of Dhammā (Created via Sañkhāra)

#### Abstract

4. Then the next sutta "WebLink: suttacentral: Anatta Sutta (AN 6.100)" states: ".. dhammain attato samanupassanto anulomikāya khantiyā samannāgato bhavissatīti netaì thānaì vijjati. Anulomikāya khantiyā asamannāgato sammattaniyāmaí okkamissatīti netaì thānaí vijjati. 'Sammattaniyāmaí anokkamamāno sotāpattiphalaín vā sakadāgāmiphalaín vā anāgāmiphalaí vā arahattaì vā sacchikarissatī'ti netaì thānaì vijjati."

Translated: "..anyone who regards dhammā are of atta nature can not get to Anuloma Khanti. Without getting to Anuloma Khanti, it's impossible to get to Sammattaniyāma. Without getting to Sammattaniyāma, it's impossible to realize ANY magga phala (sotāpatti, sakadāgāmi, anāgāmi, arahatta.)

## Anicca, Dukkha, Anatta Are Characteristics of Anything in the World But We Need to Focus on Sañkhāra and Dhammā

5. Before discussing the critical implications of grasping the anicca, dukkha, anatta nature to make any progress on the Noble Path, let us clarify something that stands out in the above verses.

- You may have noticed that the first two suttas in \#3 explicitly refer to the anicca, dukkha nature of sañkhāra. On the other hand, the third sutta in \#4 refers to the anatta nature of dhammā.
- As we have discussed, anicca, dukkha, anatta characteristics apply to ANYTHING in the world. See, "Anicca and Anatta - Two Characteristics of the World."
- So, why be specific about the anicca, dukkha nature of sañkhāra, and the anatta nature of dhammā?

6. The reasons will become clear when we realize that the sañkhāra generation initiates the Paticca Saтиррāda process and is the starting point for all future suffering.

- Pațicca Samuppāda process starts with "avijjā paccayā sañkhāra" specifically due to the expectation of a nicca outcome, i.e., not realizing that anicca nature is a "built-in" feature of the world!
- Dhammā (with a long-a) are the seeds that result when sañkhāra are cultivated. "Dhammä" means to "bear things in this world." But anything thus generated will not lead to a "nicca outcome," and all those efforts are fruitless. Thus, all "dhamma" generated are of "anatta nature."

7. That is a summary. We will discuss that in detail. However, it is to be noted that those 3 suttas state the same as the following famous verses in Dhammapada verses 277 through 279:
"Sabbe sañkhārā aniccā"ti, yadā paññāya passati; Atha nibbindati dukkhe, esa maggo visuddhiyā."
"Sabbe sañkhārā dukkhā"ti, yadā paññāya passati; Atha nibbindati dukkhe, esa maggo visuddhiyā."
"Sabbe dhammā anattā"ti, yadā paññ̄aya passati; Atha nibbindati dukkhe, esa maggo visuddhiyā."

- Those 3 verses state that to reach ultimate release from suffering (nibbindati dukkhe) via the purification of mind (visuddhi), one must see the futility and dangers in (abhi)sañkhāra generation (because that only leads to accumulation of dhamma $\bar{a}$ bearing more future existences.)!

## Only Nibbāna Has the Characteristics of Nicca, Sukha, Atta!

8. The "WebLink: suttacentral: Nibbāna Sutta (AN 6.101)" completes the description. The following is the first verse in the sutta:
"'So vata, bhikkhave, bhikkhu nibbānain dukkhato samanupassanto anulomikāya khantiyā samannāgato bhavissatī'ti netaì thānami vijjati. 'Anulomikāya khantiyā asamannāgato sammattaniyāmaì okkamissatī’ti netaì thānaì vijjati. 'Sammattaniyāmaì anokkamamāno sotāpattiphalaì v $\bar{a}$ sakadāgāmiphalaì $v \bar{a}$ anāgāmiphalaì $v \bar{a}$ arahattaì $v \bar{a}$ sacchikarissatī'ti netaì thānaì vijjati.

## Translated:

"Bhikkhus, it is impossible for anyone who regards Nibbāna to be suffering to get to Anuloma Khanti. Without getting to Anuloma Khanti, it's impossible to get to Sammattaniyāma. Without getting to Sammattaniyāma, it's impossible to realize ANY magga phala (sotāpatti, sakadāgāmi, anāgāmi, arahatta.)

- Most people think that to attain Nibbāna would be to "give up all the pleasures in this world." They cannot even imagine why anyone would want to stop the rebirth process. They think, "Life is good; how can anyone even think about not living in this world?"
- That is because they equate "living" to live the life of a human. But the Buddha explained that all animals were humans in the past, and MOST present-day humans will end up with animal births. Furthermore, there are even worse births than those in the animal realm.
- When one comprehends Tilakkhaṇa/Paṭicca Samuppāda/Four Noble Truths, one will logically conclude that the rebirth process is filled with suffering.

9. Then the second verse of the sutta says: "'So vata, bhikkhave, bhikkhu nibbānain sukhato samanupassanto anulomikāya khantiyā samannāgato bhavissatīti thānametaín vijjati. 'Anulomikāya khantiyā samannāgato sammattaniyāmaì okkamissatī'ti thānametaì vijjati. 'Sammattaniyāmaì okkamamāno sotāpattiphalaì vā sakadāgāmiphalaì vā anāgāmiphalaì v $\bar{a}$ arahattaì vā sacchikarissatī'ti ṭhānametaì vijjatī"ti.

## Translated:

"Bhikkhus, it is possible for anyone who regards Nibbāna to be blissful to get to Anuloma Khanti. After getting to Anuloma Khanti, it's possible to get to Sammattaniyāma. After getting to Sammattaniyāma, it's possible to realize ANY magga phala (sotāpatti, sakadāgāmi, anāgāmi, arahatta.)

- Thus, here one will realize that ultimate bliss is not in sporadic sensual pleasures. Rather it is to stop any possibility of future suffering by stopping the rebirth process and merging with Nibbāna.

## Summary

10. It is necessary to understand TilakkhanalPaṭicca Samuppāda/Four Noble Truths to become a Sotāpanna and start on the Noble Eightfold Path to attain the Arahanthood (if one understands one of them, one will simultaneously understand the other two).

- That understanding comes in two parts: (i) One will realize the dangers in remaining in the rebirth process, and (ii) One would see that ending the rebirth process and attaining Nibbāna is the ultimate bliss.
- Thus it is critical to understand what is meant by anicca, dukkha, anatta.
- Before discussing anicca, dukkha, anatta further, I wanted to point out the importance of those 3 words. Dukkha does not mean just any suffering that we experience now. Anicca and anatta cannot be just translated into two English words as impermanence and "no-self."
- There are deeper meanings in all three terms, AND they are related to each other.

11. Another point is that the translation of anicca as impermanence and anatta as "no-self" does not lead to a sensible translation of the suttas in \#3 and \#4 above.

- Sañkhāra are obviously impermanent. They arise and disappear. If the requirement to attain the Sotāpanna stage is to see the "impermanent nature of sańkhāra", then anyone would be a Sotāpanna!
- Can anyone still believe that "anicca" means "impermanence"? As the Buddha advised in the "WebLink: suttacentral: Kälām $\bar{a}$ (Kesamutti) Sutta (AN 3.65)" we should not blindly follow others.
- As I pointed out many times, impermanence is just a small part of "anicca nature." To understand the "anicca nature" one MUST understand Patticca Samuppāda, i.e., how those things that we perceive to bring us happiness eventually lead to suffering!
- In other words, all actions started with "avijjā paccayā sañkhāra" will ALWAYS end up with "jāti paccay $\bar{a}$ jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti" See, "Idappaccayatā Paticca Samuppāda."

## Reference

12. A complete analysis of Anuloma Khanti and Sammattaniyāma concerning Tilakkhaṇa is in one of the original commentaries (Pațisambhidāmagga) included in the Tipitaka. See, "WebLink: suttacentral: Patisambhidāmagga - 3.9. Vipassanākathā (KN Ps 3.9)." There is no English translation at Sutta Central, but there is a Sinhala translation: "WebLink: suttacentral: 3.9 B̨6P

### 3.1.4.3 Anicca Nature - Not Possible to Overcome Suffering in This World

July 27, 2021; revised August 2, 2022
This world is of "anicca nature," meaning there is no refuge from suffering anywhere in this world. The translation of "anicca" as "impermanent" is wrong.

## Difference Between "Living a Moral Life" and "Pursuing Nibbāna"

1. When I hear the common statement, "all religions are the same; they teach you how to live a MORAL LIFE," I cringe. I think about all those people unaware of the Buddha's actual message. In particular, this is the mindset of those who follow "secular Buddhism."

- Most religions indeed teach how to live a moral life. And there is also evidence that atheists may be as moral as religious people are; see, "WebLink: PDF Download: Morality in everyday life-Science-2014Hofmann."
- However, Buddha Dhamma goes beyond that. The Buddha said that would not help in the LONG TERM no matter how well we live this life.
- Yet, to understand the deep message of the Buddha, living a moral life is necessary.

## The Perfect Mind of a Buddha

2. When a human mind loses greed (lobha) and anger (dosa), it gains wisdom (pañ̃̃̄. ) In other words, a mind not burdened with greed, anger, and ignorance can "see" things more clearly.

- We can verify that for ourselves. People do foolish/immoral things when greed takes over (think bribes, rapes, etc.) Anger can lead to even harsher offenses like bodily injuries or even murder.
- The tendency to be "triggered" by greed or anger will reduce with the cultivation of wisdom. Here wisdom (pañña $\bar{a}$ is to see the harsh consequences of such actions in this life and in the rebirth process.
- That wisdom is in the Four Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda.

3. Even without a Buddha appearing in the world, some people can SUPPRESS greed/anger and attain "higher mental states" or "jhānic states. As one gets to higher jhānic states, one may be able to perform supernormal tasks. One of such capabilities is to be able to "look back" at SOME of one's previous lives. But since they had not removed greed/anger permanently, those ancient yogis had only limited capabilities.

- But a true disciple of a Buddha would attain the same jhāna while PERMANENTLY removing defilements. Some would be able to attain many more supernormal powers as well. This is described in detail in the "WebLink: suttacentral: Samaññaphala Sutta (DN 2)." See "Whānic Experience in Detail Samaññaphala Sutta (DN 2)."
- It is also a good idea to read the following English translation of the whole sutta: "WebLink: suttacentral: The Fruits of Recluseship (DN 2)." It describes in detail the process of attaining Ariya jhānās via gradually getting rid of greed and anger by understanding the Four Noble Truths, Tilakkhana, and Paṭicca Samuppāda.

4. A Buddha is unique because he has cultivated pañña to the maximum possible and thus figured out how to REMOVE lobha and dosa completely without a trace. He gained that knowledge the night he attained Enlightenment or Buddhahood.

- With that perfect mind, a Buddha gained the highest supernormal powers that allowed him to personally verify the existence of 31 realms. He is able not only to see selected previous lives but as many as he wishes. Thus, he has provided detailed accounts of his past lives. Not only that, but he can also see HOW any given past life arose due to causes and conditions. That is how he figured out the Paticca Samuppāda process.
- That is a brief account of how a Buddha discovers that "this world" is very complex with 31 realms. Of course, we can see only two of them, the human and the animal realm.

## Buddha Was Able to Verify the "Anicca Nature"

5. There are many accounts in the Tipitaka where the Buddha visited various realms. There are also many accounts where Devas and Brahmas came to the Buddha to ask questions.

- For example, we all know about the account of Brahma Sahampati requesting the Buddha to teach his new-found Dhamma to the world. There is an account of how the king of a Deva realm, Sakka Deva, attained the Sotäpanna stage during one of his visits.
- An interesting account in the WebLink: suttacentral: Brahmanimantanika Sutta (Majjhima Nikaya 49) provides a good background on the "anicca nature" of the Brahma realms. Let us briefly discuss that account.

## Brahmanimantanika Sutta (MN 49)

6. The sutta describes that one day the Buddha, with his abhiññā powers, could see the following wrong idea came to Baka Brahma's mind. Now, all Brahmas in the Mahā Brahma realm consider Baka Brahma to be their leader and their "Creator."

- The wrong view of Baka Brahmā was the following: "My existence is of nicca nature, it is permanent, it is eternal, it is whole, it is imperishable. Here there's no more birth, growing old, dying, passing away, or being reborn. And there's no other higher release beyond this."
 acavanadhammà̇, idañhi na jāyati na jīyati na mīyati na cavati na upapajjati, ito ca panañnaì uttari nissaranam natthī'ti."
- Note that "dhuva" is the Pāli word for "permanent." The word "nicca" (as well as the opposite "anicca") CANNOT be translated to ANY language as a single word.
- As we have briefly discussed, "nicca nature" guarantees a suffering-free future. That means the recurring cyclic process of "birth, old age, death, birth, old age, death..." would be absent.

7. To correct the wrong view of the Baka Brahmā, vanishing from near the great sāl-tree in the Subhaga Grove at Ukkatṭhā, the Buddha appeared in that Brahma-world.

Baka Brahmā saw the Buddha coming, welcomed him, and told him: "Idañhi, mārisa, niccaím, idamं
 na cavati na upapajjāti. Ito ca panaññà் uttari nissaranam̀ natthī'ti."

Translated: "This existence, good sir, can be maintained to my liking; it is stable, it is eternal. It encompasses all, not liable to passing away; it is not born, nor does it age or die or pass away. No further release is necessary from this existence."

The Buddha replied: "You are ignorant. You say your existence can be to your liking, but that is not so. It is not permanent as you say..." (yatra hi nāma aniccamyeva samānaím niccanti vakkhati, addhuvaìyeva samānai் dhuvanti vakkhati).

- Again, it is important to note that the Pāli word for "impermanent" is "addhuva" (or opposite of "dhuva") and not "anicca."
- The Buddha added, "..although you say there is no need for a further release, there is indeed a permanent release you are not aware of" ("santañca panaññam uttari nissaraṇamं "natthaññam uttari nissaraṇan" ti vakkhatī'ti."

8. Baka Brahmā then replied: 'But, good sir, I say "nicca" because it is so, I say "stable" because it is stable, I say "eternal" because it is eternal. There is no more suffering,...I have escaped from the cravings for pathavi, āpo, tejo, vāyo dhātu..". (Meaning he has overcome taṇhā for sensual pleasures available in the kāma loka comprised of the four mahā bhūta).

- The Buddha told the Baka Brahma that he knew that Baka Brahma had transcended the kāma loka and was fully aware of his powers.
- The Buddha added that there were things in this world that Baka Brahma was not aware of. (1) There are higher Brahma realms, (2) Baka Brahma himself was in the higher Abhassara Brahma realm, died there, and was now reborn in this lower Brahma realm. The Buddha told the Baka Brahma: "you neither know nor see those higher realms, but I know and see them."

Here is the relevant part of the Sutta where the Buddha tells Baka Brahma: "Pathavim kho ahaim, brahme, pathavito abhiññāya yāvatā pathaviyā pathavattena ananubhūtaì tadabhiññāya pathavim nāpahosim, pathaviyā nāpahosim, pathavito nāpahosim, pathavim meti nāpahosim, pathavim nābhivadim...."
Translated: "Brahma, knowing pathavi to be just pathavi (devoid of life), knowing the true nature of pathavi, I do not take pathavi to be me either. (No attachment to things in the kāma loka made from the four mahā bhūta)."

- Then he repeated the same verse for the other three mahā bhūta of which the bodies of beings in $k \bar{a} m a$ loka are made of, i.e., āpo, tejo, vāyo.
- But that itself is not enough to be free from suffering. One has to cleanse the "defiled consciousness" or "kamma viññāna." (That requires comprehension of the Four Noble Truths, Tilakkhana, and Paṭicca Samuppāda.)

9. The Buddha summarized it all in the following verse, which we discussed in the post "Pabhassara Citta, Radiant Mind, and Bhavañga": "Viññāạamim anidassanaì anantaì sabbato pabhaì, taì pathaviyā pathavattenaananubhūtam், āpassa āpattena ananubhūtaì, tejassa tejattena ananubhūtam், vāyassavāyattena ananubhūtamं, bhūtānaì bhūtattena ananubhūtaím, devānaì devattenaananubhūtaì, pajāpatissa pajāpatittena ananubhūtaì, brahmānaì brahmattenaananubhūtaì, ābhassarānaì ābhassarattena ananubhūtaì, subhakiṇhānaì subhakiṇhānaì subhakinhhattena ananubhūtaì, vehapphalānaì vehapphalattena ananubhūtaì, abhibhussa abhibhuttena ananubhūtà̀, sabbassa sabbattena ananubhūtaì.."

Translated: "Viññāna is unseen, infinite, and leads to the rebirth process for all. With viññāna (defiled consciousness), one cannot comprehend the real nature of pathavi, āpo, tejo, vāyo, bhūta, deva, pajapati brahma, abhassara brahma, subhakinha brahma, vehapphala brahma, etc., i.e., everything in this world (sabba)."

- Also, see "Bhūta and Yathābhūta - What Do They Really Mean."

10. Then, the Buddha concluded: 'Thus, Brahmā, I am not equal with you. I am indeed higher in knowledge."

- The Baka Brahma then challenged the Buddha, saying that he would disappear, and If the Buddha is of higher knowledge, try to find him. But he was unable to hide from the Buddha.
- Then the Buddha said, "Now I am vanishing from you, Brahmā. Find me if you can." Of course, Baka Brahma could not find the Buddha and thus had to concede defeat.

That is the essence of that long sutta relevant to this discussion.

## Summary

11. Baka Brahma thought he had overcome all suffering when he transcended the kāma loka.

- But he was unaware that his existence - even though very long - was not permanent. There are higher Brahma realms with even longer lifetimes and still not permanent. Even more importantly, he could still be born in an apaya in the future.
- Thus, any existence in the 31 realms is of anicca nature. Anicca nature inevitably leads to dukkha (suffering.) Thus any efforts seeking release from suffering WITHIN this world of 31 realms are useless, which is the third characteristic, anatta nature. There is no refuge from suffering anywhere in this world!
- Therefore, those three characteristics of this world (anicca, dukkha, anatta) are interrelated. We will discuss those connections in the next few posts.

### 3.1.4.4 Dukkha in Tilakkhaṇa Is a Characteristic - Not Dukkha Vedanā

August 16, 2021

## Dukkha - An Inherent Characteristic of This World and Not the Dukkha Vedanā

1. The most misunderstood aspect about Tilakkhana (anicca, dukkha, anatta) is the idea that dukkha means the "suffering that we experience." Most meditation programs focus on the physical discomforts during a session. That is a complete misunderstanding. We need to focus on the "dukkha nature" of this world.

- A "lakkhana" means an intrinsic "characteristic" or a "quality." For example, the "WebLink: suttacentral: Lakkhana Sutta (DN 30)" describes the 31 unique qualities/characteristics of a Buddha.
- Someone may live a happy life for many years. Yet, old age and eventual death is an intrinsic lakkhaṇa of any life. Even though that person may not be suffering right now, they WILL face suffering without any doubt.
- Therefore, the "dukkha lakkhana" refers to one of the 3 intrinsic characteristics (Tilakkhana) of Nature, i.e., of this world.
- Before you get all pessimistic about Buddha Dhamma, the Buddha also explained how to get out of that cycle of suffering. But we need first to understand the "dukkha nature" of this world. To solve a problem, one first needs to realize that there is a problem and then find its root causes. Only then will one be able to remove those root causes and eliminate the problem!

## Anything In This World Has Those Three Characteristics!

2. In recent previous posts, we discussed the fact EVERYTHING in this world (i.e., not only living beings) has those 3 characteristics. HOWEVER, we will be subjected to suffering ONLY IF we attach to those things. In other words, pañcakkhandha has the dukkha lakkhaṇa, but we will be subjected to suffering ONLY DUE TO pañcupādānakkhandhā, a tiny fraction of pañcakkhandha that we attach to. See "Anicca and Anatta - Two Characteristics of the World" for discussion and sutta references.

- Many more suttas state the same in different ways; see Ref. 1 and Ref. 2 below.

3. Think about that carefully. Anything in this world has the dukkha (and anicca and anatta) characteristics "built-in."

- There is no way to avoid future suffering as long as one uses those 6 internal sensory faculties to "enjoy" the 6 types of external entities with greed, hate, and ignorance of the Noble Truths!
- However, giving up cravings for worldly things is hard to do. It would be impossible without knowing HOW and WHY suffering would be the result.
- That is why it is essential to understand the Four Noble Truths, Tilakkhana, and Paṭicca Samuppäda. They are interrelated and explain HOW and WHY such attachments lead to future suffering.
- Here is an analogy. An alcoholic will not be able to give up drinking without fully comprehending HOW and WHY alcohol consumption leads to suffering.

## This World Is "Anchored on Suffering"

4. The primary message of the Buddha is that there is unimaginable suffering in the rebirth process among the 31 realms. Most births are in the four lowest realms (ap $\bar{a} y \bar{a} s$ ), where suffering dominates any temporary relief.

- As long as there is existence in this world of 31 realms, that existence WILL encounter both sukha and dukkha.
- However, since living beings are tempted to engage in akusala/pāpa kamma, most rebirths are in the apāyās. We have discussed this "vast imbalance" as pointed out by the Buddha in many suttas. We discussed a few of them in the post "Introduction - What is Suffering?"

5. That is why the Buddha said, "Мaccunā pihito loko,dukkhe loko patittthito; Taṇhāya uddito loko,jarāya parivārito" "ti. See, "WebLink: suttacentral: Pihita Sutta (SN 1.68)."

Translated: "The world is inhabited by death, the world is anchored on suffering; Craving/attachment has trapped the world, it is enveloped by decay and old age."

- A series of short suttas (SN 1.61 through SN 1.81) provides the basis for deeper suttas in Samyutta Nikāya. Just read through those starting with the "WebLink: suttacentral: Nāma Sutta (SN 1. 61)."
- We can end that "long-term suffering" by understanding the root causes for births among the 31 realms. In particular, births in the apāyās are caused by immoral deeds (akusala kamma) done while seeking sensory pleasures.

## Not Possible to Reach a State with "No Suffering" in This World

6. Understanding the Three Characteristics (Tilakkhaṇa) helps to understand the Four Noble Truths.

- The Nature of this world is such that no matter how hard we try, it is not possible to get to a place free of suffering.
- Let us start with the assumption that there is no rebirth process. Some people have made enough money not only to sustain their families but to even fund the economy of a small country for a year! But would they not be subjected to suffering? We all get old and die one day!
- No matter how successful one becomes, that cannot be said to have led to a "state free of suffering."
- Those people who commit suicide hope that their suffering will end at death! Unfortunately, that is not the case either. Rebirth is inevitable for anyone below the Arahant stage, and births in the apāy $\bar{a} s$ are possible for anyone who has not at least started to understand the Four Noble Truths, Tilakkhana, and Pațicca Samuppāda. That is why one should not waste any time and try to understand them!

## Understanding "True Suffering" - It Is in the Rebirth Process

7. in the post "Rebirth - Connection to Suffering in the First Noble Truth"" we discussed references in the Tipiṭaka that MOST rebirths are in the four lowest realms (apāyās.) We can only see the suffering in one of them, the animal realm.

- The Buddha has discussed, in detail, the types of suffering in the other three apāyās. For example, in the "WebLink: suttacentral: Bālapandita Sutta (MN 129)" and "WebLink: suttacentral: Devadūta Sutta (MN 130)" the Buddha explains, in detail, the kind of suffering encountered in various lower realms.
- English translation of the first one: "WebLink: suttacentral: The Foolish and the Astute (MN 129)." That sutta explains that a person who engages in immoral activities ("bālo" or a "fool") can expect the consequences (kamma vipāka) both in this life and in future existences in the apāyās. The account of the experiences in the niraya (lowest realm) is terrifying.

8. A related sutta is the "WebLink: suttacentral: Pāyāsi Sutta (DN 23)." It is about the wrong views that there is no rebirth process, etc. See the English translation there: "WebLink: suttacentral: With Pāyāsi (DN 23)." For those who have doubts about the validity of the rebirth process or the existence of apāyās, it is a good idea to read the above suttās.

- As mentioned in the first post, "Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana," in this series of posts we discuss anicca, dukkha, anatta with the focus on the summary statement, "aniccam khayatṭhena dukkham bhayatthena anattā asārakat!̣henäti." It can be stated as follows:
- "Anything in this world (rūpa, vedanā, sañña, sañkhāra, viññāna) is of anicca nature because one's hopes for enjoying them will only lead to one's demise ("aniccam khayatthena.") It will eventually lead to sufferings that one should be afraid of ("dukkham bhayatthena.") Therefore, such cravings/efforts are unfruitful and will make one helpless in the rebirth process ("anatt $\bar{a}$ asārakatthenāti. ")
- One would not become serious about learning Buddha Dhamma until realizing the unimaginable suffering associated with the rebirth process!

## What Is Nibbāna?

9. A key point here is that there are many instances where one can experience "periods of happiness" even for long times. Life is mostly of "sensual pleasures" in the 6 Deva realms. In the 20 Brahma realms, it is mostly "jhānic pleasures" that they experience. Even some humans experience high levels of "sensual pleasures" for most of their lives.

- However, all those "periods of happiness" or "pleasures" are VERY SHORT in the time scale of the rebirth process, which is effectively infinite. See, "Infinity - How Big Is It?"
- Furthermore, all humans, Devas, Brahmas will end up in the 4 lowest realms unless they get to the Sotāpanna stage!
- Without a Buddha, we would be totally unaware of this issue of the rebirth process AND the fact that births in the apāyās are much more frequent than births in the "good realms."

## Nibbāna Is About Cessation of Suffering

10. This is why the First Noble Truth is about the CESSATION of suffering and NOT about a kind of happiness or even jhānic experiences. Since NOTHING in this world exists in Nibbāna, all vedan $\bar{a}$ (dukkha or sukha, AS WE KNOW) are absent in Nibbāna.

- Even though suttas discuss Nibbāna as "Nibbānic bliss," the term "bliss" indicates the bliss associated with the TOTAL absence of suffering. It is indeed bliss to be free of suffering forever!
- The closest analogy is the following. Suppose someone has had a migraine headache for years. If it goes away one day, they would be free of that horrible suffering. That would be a great relief to get rid of all that suffering.
- We should think of Nibbāna the same way, not as a paradise with sensual or jhānic pleasures. We can only say for certain that there is not even a trace of suffering in Nibbāna. See, "Nibbāna "Exists," but Not in This World."

## References

1. 12 suttas are beginning with the "WebLink: suttacentral: Ajihattānicca Sutta (SN 35.1)" and ending with the "WebLink: suttacentral: Bāhirānattātītānāgata Sutta (SN 35.12)" state that our 6 internal sensory faculties (eyes, ears, nose, tongue, body, mind) AND the 6 types of $r \bar{u} p a$ experienced by those faculties all have the Three Characteristics (Tilakkhaṇa.)

- For example, they say, "cakkhu, sota, ghāna, jivhā, kāya, mano" all have the anicca, dukkha, anatta qualities or characteristics. That means all six sensory faculties have "built-in" anicca, dukkha, anatta nature.
- The same is true for the 6 types of external rūpa that we experience: rūpa, sadda, gandha, rasa, photṭhabba, dhammā.
- But we will be subjected to suffering only if we attach to them!

2. There are 9 suttas "WebLink: suttacentral: Aniccādisuttanavaka (SN 43-51)" that state "everything (all) in this world is of anicca, dukkha, anatta nature."

- MANY other suttas state the same in different ways: 138 suttas say the five aggregates all have anicca, dukkha, anatta nature: " 138 results for vedanā AND viñ̃n̄̄nain AND aniccā̄." Of course, the five aggregates encompass everything in this world.
- To state the same differently, five aggregates (pañcakkhandha) are all "subject to suffering." Even an Arahant is subject to suffering until the death of the physical body (Parinibbāna.) The Buddha himself had bodily ailments.
- However, all that suffering ends at Parinibbāna.

3. Each person creates their own future suffering from their own actions based on (abhi)sañkhāra that arise due to the ignorance of this "big picture."

- When a mind grasps this "big picture," one attains the Sotāpanna stage. No matter how strong temptation is, it will NEVER trigger the mind to commit "apāyagāmi actions" (those lead to rebirth in the $a p \bar{a} y \bar{a} s)$. That is the meaning of "dassanena pahātabba"" or "remove defilements with clear vision" that we briefly mentioned in the first post in this series: "Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana."
- That is the same as getting to the first step in the Noble Eightfold Path, Sammā Ditthi.

### 3.1.4.5 Attachment to Things with Dukkha Lakkhaṇa Leads to Dukkha

## August 23, 2021

Dukkha usually means suffering. That is dukkha vedan $\bar{a}$. But things that appear to bring happiness have the "dukkha lakkhana." The Buddha explained that in the First Noble Truth, Dukkha Sacca (the Truth about suffering.)

## Dukkha Sacca (Truth About Suffering)

1. We encounter the word "dukkha" in different contexts:
(i) Dukkha vedanā (a feeling that can range from unpleasantness to painful feelings such as being burned or cut by a knife.
(ii) Dukkha lakkhana is a characteristic of suffering) in Tilakkhaṇa and NOT dukkha vedanā.
(iii) Dukkha Sacca (First Noble Truth), which is again not dukkha vedanā but to point out that dukkha lakkhaña is inherent in this world, i.e., suffering CANNOT be avoided (in the long run) if one attaches to things in this world. Since we tend to attach to "mind-pleasing things," Dukkha Sacca says that "suffering is hidden in those "mind-pleasing things." This is not easy to understand unless one spends time to understand.
(iv) Dukkhakkhandha (which includes all types of suffering that can result from acting with avijjā due to the ignorance of Dukkha Sacca. Patticca Samuppāda describes how that happens. The Paticca Samuppäda sequence ends with the statement, "Evametassa kevalassa dukkhakkhandhassa samudayo hoti" or "that is how the whole mass of suffering arises." As we know, "khandha" means "aggregate."

## Different Types of Dukkha Vedanā

2. Vedan $\bar{a}$ is what one feels: happy/pleasant, sad/unpleasant, or neutral feelings (sukha, dukkha, or adukkhamasukha vedanā).

- Dukkha vedanā can be of several different types. Some are felt by the physical body (like injuries or sicknesses.) Some others are mind-made (like depression), and these are "samphassa $j \bar{a}$ vedanā" (vedanā generated by "sañ"). As we know "sañ" means "greed, anger, ignorance." An Arahant feels the first kind but not the second. See, "What is "San"? Meaning of Sansāra (or Samsāra)."
- That second category can arise due to our personal biases. For example, unpleasant feelings may arise when we see someone we dislike (say person X.) But X could be a friend of a third person (Y), and pleasant feelings may arise in Y upon seeing X. Therefore, such "mind-made feelings" depend on the situation. If we ever become friendly with X , then after that, when we see X , pleasant feelings may arise in us too.

## Dukkha Lakkhaṇa (characteristic of suffering) in Tilakkhaṇa

3. Dukkha lakkhana is not a feeling. It is an intrinsic characteristic or quality that is "hidden" in worldly things. It is a bit difficult to understand at first.

- Let us look at a couple of simple examples to get an idea.
- Glass has the "characteristic of breaking," i.e., it can break if dropped on a hard surface. But until it breaks, a glass only has the "characteristic of breaking."
- A drink with a bit of poison in it has the "characteristic of inducing sickness or even death." But one will be subjected to sickness/death only if one drinks it.
- In the same way, worldly things (especially those mind-pleasing things") have the "characteristic of suffering." But one will be subjected to such suffering only if one attaches to them. Let us take a simple example. Suppose we hear that person X has died. We will become sad and suffer only if X is someone close to us, say a parent. If we don't even know who X is, we will not suffer hearing that X has died. The stronger the attachment to X , the stronger the distress/sadness (dukkha vedana $\bar{a}$ ) that we feel.
- Everything in this world has dukkha lakkhaṇa, as we have discussed. There are two aspects to this:
(i) We are born with a body that has dukkha lakkhaṇa. We have to live with whatever dukkha that comes to it, for example, getting injured or sick),
(ii) People (friends, relatives, etc.) and things (houses, cars, etc.) have dukkha lakkhaṇa too. We can limit suffering due to that by having attachment to fewer people and things. However, losing attachment comes naturally with understanding and should not be forced. One MUST pay attention to one's responsibilities too. We will discuss this later.
- We started discussing dukkha lakkhaṇa in the previous post, "Dukkha in Tilakkhana Is a Characteristic - Not Dukkha Vedanā." We will go into details in upcoming posts.

## Dukkha Sacca (First Noble Truth)

4. Dukkha Sacca (First Noble Truth) points out unimaginable suffering in the rebirth process. Rebirth can happen among 31 realms (including the human and animal realms.) We can see the suffering of animals and also in humans. But the suffering is much harsher in the other 3 lower realms.

- Dukkha Sacca also explains that the root cause of suffering is greed for (or attachment to) worldly pleasures. There is suffering hidden in sensory pleasures. Only a Buddha can discover that hidden suffering and can explain how such suffering takes place via Paṭicca Samuppāda.. In simple terms, that can be stated as follows:

We tend to do immoral deeds to acquire such pleasures, and their consequences will bear fruit mostly at later times, in many cases in future lives.

- Only a Buddha with a highly cleansed mind can figure out hidden dangers (suffering) in sensory pleasures. Like a fish can not see the hidden suffering in a bait, we cannot see the suffering hidden in sensory pleasures unless explained by a Buddha.

## Physical Suffering and Death - Hard to Understand?

5. Some people seem to pretend they don't understand suffering. Others seem to think they are not going to die. To quote from a discussion forum: "Birth and death are only a view of self." Are these people hallucinating? This kind of thing happens when people "bury their heads in the sand," i.e., try to avoid a particular situation by pretending that it does not exist.

- Suffering is real. Try pinching yourself. Does not that hurt? Imagine the suffering when someone dies of a bullet wound or a knife attack.
- Even though animal videos like the following are viral and are made for entertainment, they provide vivid examples of unimaginable suffering experienced by animals in the wild. They are not killed and eaten; rather, they are eaten while still alive. Imagine being subjected to that kind of suffering!
WebLink: youtube: 15 Wild Animals Hunting Mercilessly!!
- All those animals had been humans in the past. Furthermore, most people living today will be born in the animal realm in the future.
- Even though we cannot see the unimaginable suffering in the other 3 lower realms, we can at least see the harsh suffering in the animal realm. Of course, there is suffering in the human realm too, but animals in the wild undergo much more suffering.
- There are no "old animals" in the wild; as soon as they start slowing down, they are eaten by stronger animals.

## Discovery of Paṭicca Samuppāda Sequence

6. The above video explains what dukkha vedanā (specifically, bodily suffering) is.

- But such dukkha vedanā do not arise without causes. If the past lives of such an animal are traced back, it would be possible to see that there was a corresponding "bad kamma" committed, which resulted in such a bad outcome.
- In fact, that is how the Buddha figured out the steps in Pațicca Samuppāda. Bad actions (based on abhisañkhāra) are done with avijja and lead to future existence (bhava) and births (jāti). He figured that out by tracing back previous lives. That discovery happened during the night of his Enlightenment. Let us briefly discuss that.
- He first attained the "pubbe nivāsānussati ñanna" to look back at previous human births. Here, "pubbe" means "previous," "nivasa" means "house," and "anussati" means "recall", i.e., the knowledge to recall successive residences of a given gandhabba. In a given human bhava, a gandhabba could have many different "houses," i.e., physical bodies. Thus with this $\tilde{n} \bar{a} n a$, one could look at human births in the past, in multiple human bhava going back to very long times.

7. The second ñāṇa, cutupapāda ñanna, extended Buddha's capability to see all previous rebirths in any realm for any living being. Here cutupapāda (cuti means the end of a bhava and upapāda means birth) refers to all types of rebirths in various realms (niraya, animal, deva, etc.) in the past.

- That allowed him to clearly see how different types of kamma lead corresponding existences (bhava) and births ( $j \bar{a} t i$ ) within them, i.e., how "avijjā paccayā sañkhāra" lead to "bhava" and "jāti" ending with "jāti paccayā jarā, marana, soka-parideva-dukkha-domanassupāyasā sambhavan'ti."
- With that knowledge, he then attained the third and final "āsavakkhaya ñāna." That clarifies how cravings ("āsava," another word for attachment) lead to future rebirths. We generate sañkhāra with avijjā because of tanhā/āsava.
- It is the āsavakkhaya ñāṇa that led to the Buddhahood; see, "The Way to Nibbāna - Removal of Āsavā" and "Antarābhava and Gandhabba" for further details.
- The Buddha himself described that process in various suttas; for example, AN 8.11, MN 4, MN 85, and MN36. The "WebLink: suttacentral: Verañja Sutta (AN 8.11)" is a short one. The English translation at Sutta Central: "WebLink: suttacentral: At Verañja (AN 8.11)."

## The essence of Buddha Dhamma - Suffering Is Hidden in Sensory Pleasures

8. Average humans are astonished to hear that the root cause of suffering is attachment to all those mindpleasing things they value so much.

- It is hard to "see" this because there is a time lag between causes and their results (effects). While some kamma bring their vipāka during the same life, most kamma vipāka materialize later in life or even in future births.
- However, if one spends time and carefully examines the teachings of the Buddha, one will be able to "see" the truth of that statement: 'there is unimaginable suffering hidden in sensory pleasures." That is a bit easier to see for immoral actions based on such attachments (e.g., killing, stealing, taking bribes, etc.)
- In fact, for those engaging in such immoral deeds (and those who do not believe in the rebirth process), it is much harder to grasp this deep Dhamma. Of course, if one has done such "bad kamma" in the past it does not matter. We know that Angulimāla killed almost 1000 people and still was able to attain Arahanthood within weeks of meeting the Buddha.

### 3.1.4.6 <br> How Does Anicca Nature Lead to Dukkha?

August 30, 2021
Both physical rupa (objects we see, sounds, particulates that lead to odors, physical food, objects we touch), AND our memories/hopes based on past, present, and future physical rūpa (i.e., rūpakkhandha) have the anicca nature. Craving/attachment for either kind will eventually lead to suffering (dukkha.) However, giving up such attachments must come through naturally via comprehension of Noble Truths/Tilakkhaṇa/Paṭicca Samuppāda.

## Rūpakkhandha and Physical Rūpa

1. As we have discussed, rūpakkhandha consists of our MENTAL IMPRESSIONS of such physical rūpa.

- But suttas may refer to "rūpa" for either kind. But depending on the context, it is not hard to figure out which kind it is or whether the reference is to both kinds.
- Both physical rūpa and rūpakkhandha have anicca, dukkha, anatta characteristics.
- But rūpakkhandha originates due to physical rūpa.
- Note that most English translations (including Sutta Central translations) do not make this distinction. They simply don't understand the difference!

## How Did the Buddha Characterize Physical Rūpa?

2. Any "physical $r \bar{u} p a$ " has a finite lifetime AND undergoes deformation/stress during existence!

The word rūpa is DEFINED in the "WebLink: suttacentral: Khajjanīya Sutta (SN 22.79)" as follows: "Kiñca, bhikkhave, rūpaì vadetha? Ruppatīti kho, bhikkhave, tasmā 'rūpan'ti vuccati. Kena ruppati? Sìtenapi ruppati, uṇhenapi ruppati, jighacchāyapi ruppati, pipāsāyapi ruppati, ḍamsamakasavātātapasarīsapasamphassenapi ruppati. Ruppatīti kho, bhikkhave, tasmā 'rūpan'ti vuccati."

Translated: "Bhikkhus, why do we call it 'form'? 'It is subject to deformation/stress,' bhikkhus, therefore it is called form. Deformed by what? Deformed/stressed by cold, deformed/stressed by heat, deformed/stressed by hunger, deformed/stressed by thirst, deformed/stressed by flies, mosquitoes, wind, Sunlight, serpents, etc. 'It is deformed/stressed,' bhikkhus, therefore it is called form (rūpa)."

- Of course, the above verse specifically refers to our physical bodies. But characteristics of unexpected deformation or change hold for any $r \bar{u} p a$.
- Therefore, the "bodies" of Devas and Brahmas are also subjected to the same principle. Even inert rūpa like a house or a car is subject to the same principle. They all can undergo unexpected change during existence, and then death is inevitable!
- Rūpakkhandha also has an anicca nature. For example, craving memories of past experiences with rūpa also leads to dukkha.

## "Yad Aniccaì taì Dukkhaì" - Anicca Nature Leads to Dukkha

3. The following verse embeds many foundational aspects of Buddha Dhamma: "Rūpaín aniccaim. Yadaniccaì tain dukkhain; yaì dukkhaì tadanattā; yadanattā taì 'netaì mama, nesohamasmi, na meso attā'ti evametaỉ yathābhūtaì sammappaññāya datṭhabbaí" This verse appears in many suttas. See " 20 results for "yadaniccam AND tam AND dukkham.""

- We will be focusing on that whole verse in this series of posts: "Basic Framework of Buddha Dhamma."
- This post is on the part of that verse: "Yadaniccain tain dukkhaỉ" or "Yad aniccain taim dukkhamं" or "whatever is of anicca nature will lead suffering."

4. Our minds get attached to "mind-pleasing $r \bar{u} p a$ " in this world with a "nicca view." We think that by accumulating "material wealth," we can become happy. We have both wrong ditṭhi and saññā that such rūpa can keep us away from suffering. See, "Vipallāsa (Ditthi, Saññ̄a, Citta) Affect Sañkhāra." We will discuss more on that in this series.

- But as mentioned above, the Buddha pointed out that this whole world is of anicca nature. All rūpa change unexpectedly during existence, and they all end up in destruction. For example, we cannot keep our body parts in good condition as we age. Eventually, the whole body dies.
- Science has confirmed that too for inert things as well. Science agrees that NOTHING in this world is eternal. Furthermore, the Second Law of Thermodynamics says that things tend to become "disorderly even during existence."

## A Simple Analogy

5. Little children take immense satisfaction and joy building sandcastles. They spend hours building them and enjoy looking at the finished product.

- However, their joy turns to sadness if a strong wave or a running dog destroys that sandcastle. They may even go home happily but would be sad to see their sandcastle destroyed when they come back the next day.
- This is why adults don't build sandcastles. As that same child grows, understanding slowly takes place that "building sandcastles is a waste of time" even though a "pleasurable activity."
- Yet, fully grown and intelligent adults do the same all their lives. They work tirelessly in hopes of a better life. But only at the moment of death do they realize that all those efforts have gone to waste. Furthermore, if they had cultivated an "immoral mindset" by engaging in immoral thoughts and activities, they are not only going to be disappointed but could be subjected to much suffering in future lives.
- A sandcastle is of anicca nature. Getting attached to it is inevitably going to lead to disappointment (dukkha). Thus engaging in that activity is unfruitful and non-beneficial to anyone (anatta.) We will discuss "anatta" in detail soon.

## Connection to the Second Law of Thermodynamics

6. The Second Law of Thermodynamics confirms the unstable/unpredictable (not only impermanent) nature of $r \bar{u} p a$. You may skip this part. But it is about the tendency of worldly things towards disorder. So, it is not hard to understand.

- The second law of thermodynamics says that the disorder of any isolated system always increases. In simple terms, that means "disorder increases," and we need to make an effort to maintain order.
- That, in essence, is a manifestation of the anicca nature! See, "Second Law of Thermodynamics is Part of Anicca!"
- A simple way to think of the second law of thermodynamics is that a room will invariably become messy and disorderly with time if not cleaned and tidied regularly. You have to make an effort to clean the room, and that is part of "sañkhāra dukkha." See, "Introduction -2 - The Three Categories of Suffering."
- Those who only focus on the "impermanent" nature miss this critical part. Furthermore, such sañkhāra often become abhisañkhāra and lead to much more suffering with "bad births." This is why anicca means much more than "impermanent nature."

## Mental Aggregates Are Also of Anicca Nature!

7. All those suttas referred to in \#3, and MANY more, state that all five aggregates (r $\bar{u} p a$, vedan $\bar{a}$, sañña $\bar{a}$, sañkhāra, viñ̃̃āna) are of anicca nature. We cannot maintain any of those to our expectations OVER LONG TIMES.

- For example, the "WebLink: suttacentral: Yadanicca Sutta (SN 22.15)" states (in addition to rūpa), "Vedanā aniccā. Yadaniccaì taì dukkhaì; yaì dukkhaì tadanattā; yadanattā taì 'netaì mama, nesohamasmi, na meso attā'ti evametaì yathābhūtaì sammappaññāya daṭthabbaì. Saññā aniccā ...pe...saṅkhārā aniccā ...viññāṇamं aniccàm.."
- It is foolish to translate "Vedanā aniccā, saññā aniccā, saṅkhārā aniccā, viñnāạaain aniccaỉ" as "Feeling is impermanent ...Perception is impermanent ...Choices are impermanent ...Consciousness is impermanent."
- Does a Buddha need to arise in the world to teach people that all those are not permanent? Even the dumbest person would see that none of those are permanent!
- They are not only impermanent, but attachment to them WILL lead to suffering! Of course, part of that suffering is when something of liking is destroyed. But the DEEPER POINT is that our actions to keep them the way we like lead to kamma generation and, eventually, bad births.
- This is why it is important to understand how (abhi)sañkhāra generation leads to (undesired) births starting with "avijjā paccayā sañkhāra." We will discuss that in \#10 below.

## Obvious Contradictions in SuttaCentral Translations

8. When we include the next part of the verse, it reads, "Vedana aniccā. Yad aniccain taim dukkhaim" According to the incorrect translations, that means, "Feeling is impermanent. What's impermanent is suffering." See the translations at Sutta Central in the above link. Not only at Sutta Central, but many translations have those obvious contradictions.

- While the ending of sukha vedanā may lead to suffering, the ending of dukkha vedanā, rather, leads to happiness, like in the case of getting rid of a bad headache. To put it another way, the impermanence of a dukkha vedanā WILL NOT lead to suffering.
- Just because vedanā are impermanent, that DOES NOT necessarily lead to suffering! In some cases, it leads to happiness.

9. Again, that should be obvious to any person! So, why do these translators make such huge mistakes?

- I guess that they don't really try to understand the suttas. They just mechanically translate using the "standard incorrect English translations" for key Pāli words like anicca and anatta (as impermanent and no-self) without even bothering to see whether they make any sense!
- Those same people complain about "Waharaka's interpretations." But simple and obvious issues like these do not need any "interpretation." They should be self-evident (at least once explained)!
- I have pointed out several such obvious issues. When are these SERIOUS issues going to be corrected? At some point, enough people will hopefuilly start asking questions; they will have to correct these glaring inconsistencies.

## Paṭicca Samuppāda Explains How Anicca Nature Leads to Dukkha

10. ALL types of abhisañkhāra (that can have kammic consequences, especially rebirth) belong to 3 categories: apuññäbhisañkhāra, puññābhisañkhāra, āneñjäbhisañkhāra. All those are sañkhāra generated via "avijjā paccayā sañkhārā" as we discussed in the previous post "Anicca Nature, the First Noble Truth, and Paticca Samuppāda" and "Sañkhāra - What It Really Means."

- In other words, the akusala-mūla Pațicca Samuppāda (that leads to suffering) process is operational for ALL humans who have not comprehended the Four Nobel Truths, Tilakkhana, and Paṭicca Samuppāda.
- Kamma generation takes place starting with "avijjā paccayā sañkhāra." Thus the need to fully understand the two posts mentioned above.
- Therefore, no matter how moral a person is, they will not stop future suffering until comprehending the Four Nobel Truths, Tilakkhaṇa, and Paṭicca Samuppāda.
- Furthermore, the generation of those types of abhisañkhāra is due to an innate view/perception of a "nicca nature." That is avijjā!
- It is impossible to make any more progress until one understands these critical aspects. Please feel free to ask questions because this is critically important!

11. Let me try to make the point in another way. The akusala-mūla Paṭicca Samuppāda (that leads to suffering) will be operational for anyone who does not comprehend the Four Nobel Truths, Tilakkhana, and Paticca Samuppāda.

- To put it another way, until one understands that the true nature of this world is anicca nature (and NOT nicca nature), the rebirth process among the realms in the kāma loka, rūpa loka, and arūpa loka will continue.
- As we have discussed many times, the problem is that MOST of those rebirths will not be higher realms (at or above the human realm) but will be in the apāyās (the 4 lowest realms.)

12. This is why the Buddha explained, "aniccain khayat!thena dukkhain bhayatthena anatta asārakaṭ! henāti."

- As we discussed, that means (attachment to) anything of anicca nature will only lead to the demise of one's moral qualities ("aniccam khayat!thena.")
- It will eventually lead to sufferings that one should be afraid of ("dukkham bhayatthena.") Therefore, such cravings are unfruitful and will make one helpless in the rebirth process ("anatt $\bar{a}$ asārakaṭ!henāti.")
- Please read the discussion of two posts back in "Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana" I suggest printing these posts and keeping them ready to be consulted.
- We will discuss the third aspect of the anatta nature ("anattā asārakatthena") in upcoming posts. That means "craving things of anicca nature leads to dukkha, thus such cravings (and efforts based on such cravings) are in vain/not beneficial."

## Nibbāna - The Absence of Suffering

13. Most people don't even think in terms of such "long-term" happiness or the "absence of suffering." They get into the "rat race" and keep working hard to "earn money to enjoy life and have a happy retirement."

- That is especially true for those who believe that the physical body defines a person, i.e., mental phenomena arise in the brain. So, when the brain dies together with the physical body, that is the end of "me." There is nothing to worry about an "afterlife."
- The other extreme is the wrong view of an eternal soul or àtman. There is a permanent state of happiness (or misery in hell.)
- The Buddha taught the "middle way." A living being exists based on the causes and conditions that led to it. The arising of existence due to causes and conditions is explained in detail in Pațicca Samuppāda (conventionally translated as "Conditional Arising." That translation leaves out the relevance of causes, and thus it is better to use the Pāli term.)
- How can someone decide which of those 3 views is correct? It is always up to each individual to decide that. But it is wise to spend time examining the basis of each of those "theories carefully."
- The Buddha never asked anyone to accept his teachings based on "blind faith." He asked the bhikkhus to raise questions about any doubts or knotty issues. For example, see "WebLink: suttacentral: Kālāma Sutta or Kesamutti Sutta (AN 3.65)."

## Proposed Draconian Laws in Sri Lanka

14. In this series of posts, I will try to provide a systematic analysis based solely on the Tipitaka. As far as I have examined, there are no contradictions with anything in the Tipitaka. I would be happy to discuss any logical objections if one is willing to discuss them rationally and logically.

- As I have pointed out, there is no point discussing Sanskrit texts or later commentaries such as Buddhaghosa's. See "Buddhaghosa's Visuddhimagga - A Focused Analysis" and "Preservation of the Buddha Dhamma."
- The second post, "Preservation of the Buddha Dhamma," discusses Buddha's admonition not to translate his teachings to Sanskrit.
- Unfortunately, now there is an effort within the Sri Lankan government to enforce such "Sanskrit-based" interpretations and to ban any other interpretation. They may ban printed publications in Sri Lanka but cannot shut down websites like this one.
- The main issue I have is the following: How do we know those on the "committee" overseeing this enforcement have a true understanding of Buddha Dhamma? Have they attained magga phala? If not, they have no real "authority."
- In the "WebLink: suttacentral: Mahāparinibbāna Sutta (DN 16)" the Buddha allowed anyone to declare magga phala if there is a need. If they do have such attainments, they need to publish that to build public confidence. However, if you ask them, they will admit that they do not have such attainments. Instead, it may turn out that they may be banning publications by people with magga phala!
- I hope that level-headed people in the government will stop this short-sighted process. See, "WebLink: PureDhamma: Proposed Tipitaka Conservation Bill in Sri Lanka."

### 3.1.4.7 Anatta is a Characteristic of the World, not About a "Self"

September 13, 2021
Anatta is a characteristic of this world, not about a "self." The translation of anatta as "no-self" is a serious error. Instead, it is Sakkāya Ditṭhi that deals with the issue of whether anything in this world can be/should be considered to be "mine."

## The Sense of a "Me" Is There Even Though There is no "Soul"

1. It is difficult to decide whether the word "self" means just a "sense of me" or a deeper "soul."

- That is why it is best to avoid using "self" in discussing "anatta/anattā."
- The Buddha denied a "soul" in Abrahamic religions or an "ātman" as in Hinduism. But he taught that the sense of a"me" is real and WILL BE THERE until one attains the Arahanthood.
- To avoid confusion, let us not use the word "self." We will use "me" for the "temporary self" and "soul" for an "everlasting self." The Buddha accepted the use of a temporary "me" but denied the existence of a permanent "soul/ātman."
- Now we all understand that "me" is DIFFERENT from a "soul." If someone thinks that "self" is the same as "soul," then the Buddha denied the existence of such a "self."
- I hope this point is crystal clear. Otherwise, we can get into many arguments wasting precious time.

## Even the Buddha Used the Word "Me"

2. As long as one lives in this world, it will be impossible not to use the words "me" and "I."

- Even the Buddha freely used the words "me" and "I" daily and even referred to previous births. He has given accounts of "his" previous lives. Such usage is not possible to avoid.
- Furthermore, even a living Arahant, for example, would have their own habits. Of course, they would not have any habits even remotely related to lobha, dosa, moha.
- For example, Ven. Mahā Monggallāna was a bit strict. One time he dragged a bhikkhu out of a gathering. Ven. Pilindavaccha addressed others with words like "vasala" ("one of low birth"), which was not due to anger but because of the way he was used to speaking. As long as one lives in this world, there are unique characteristics regarding physical appearance and how one speaks and thinks.
- This is why the Buddha rejected both extreme views:
(i) It is not correct to say that someone does not exist, since obviously a person is living and doing things in their own way.
(ii) It is also not correct to associate a "permanent soul" with any person. A "living-being" exists due to causes and conditions (Paṭicca Samuppäda) and will cease to be reborn in this suffering-filled world when avijj $\bar{a}$ is removed.
- However, the concept of anatta is not about a temporary or permanent "self." It is a characteristic of anything in this world (rūpa, vedanā, sañn̄̄a, sañkhārā, viññāna.)

## Anicca, Dukkha, Anatta - Three Characteristics

3. In recent posts, I cited many Tipiṭaka references that clearly state anicca, dukkha, anatta are 3 CHARACTERISTICS of this world. See, "Tilakkhana - Introduction."

- Furthermore, those 3 characteristics are related to each other via, "Yad aniccaím taim dukkhaí; yam dukkhaì tad anattā."
- The above verse says that anything that belongs to this world (rūpa, vedanā, sañ̃̄̄a, sañkhārā, viññāna) are ALL of anicca nature, and thus has dukkha nature; whatever is of dukkha nature has anatta nature.
- If one attaches to things of anicca nature, one will be subjected to dukkha. Because of that, ALL worldly things are not fruitful (anattā.)
- It should be quite clear that anatta/anattā is NOT about a "self" or "me."

4. That is succinctly stated in the verse, "Rūpaim (vedanā, sañ $\tilde{n} \bar{a}$, sañkhārā, viñnāna) atīt̄̄̄āgatapaccuppannam்aniccamं khayaṭthena dukkham bhayatṭhena anattā asārakatthenāti."

Translation: "Any rūpa ( or vedanā, sañ̃̄ā, sañkhārā, viññạ̄a) that ever existed will exist in the future, or that is being experienced now has the following 3 characteristics: Any such rūpa is of anicca nature because one's hopes for enjoying rūpa will only lead to one's demise ("aniccamं khayaṭthena.") It will eventually lead to sufferings that one should be afraid of ("dukkhamं bhayatthena.") Therefore, such cravings are unfruitful and will make one helpless in the rebirth process ("anattā asārakatṭthenāti.")

- We discussed that in a recent post: "Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana."

5. From the above verse, it is quite clear that anatta is a characteristic of not only our physical body, but ANY rūpa existing now, ever existed, or will exist in the future! That means anatta is a characteristic of the rūpa aggregate (rūpakkhandha.)

- Furthermore, as explained in that post, the anatta characteristic applies to all 5 five aggregates. As we have discussed, the five aggregates encompass "the whole world."
- Thus, anything in this world has the anatta characteristic!
- How can these translators say "anatta" means "no-self"?
- It is alarming to see the efforts in Sri Lanka to ban any interpretation of "anatta" other than "no-self." See, "Proposed Tipitaka Conservation Bill in Sri Lanka."

## Simple Examples

6. Little children take immense satisfaction and joy building sandcastles. They spend hours building them and enjoy looking at the finished product.

- However, their joy turns to sadness if a strong wave or a running dog destroys that sandcastle. They may even go home happily but would be sad to see their sandcastle destroyed when they come back the next day.
- This is why adults don't build sandcastles. As that same child grows, understanding slowly takes place that "building sandcastles is a waste of time" even though a "pleasurable activity."
- Yet, fully grown and intelligent adults do the same all their lives. They work tirelessly in hopes of a better life. But only at the moment of death do they realize that all those efforts have gone to waste. Furthermore, if they had cultivated an "immoral mindset" by engaging in immoral thoughts and activities, they are not only going to be disappointed but could be subjected to much suffering in future lives.
- A sandcastle is of anicca nature. Getting attached to it is inevitably going to lead to disappointment (dukkha). Thus engaging in that activity is unfruitful and non-beneficial to anyone (anatta.)

7. However, anatta nature means unfruitful (as in the above example) and dangerous.

- An alcoholic consumes alcohol because it gives him pleasure. But he has not comprehended that heavy drinking can lead to sicknesses and even death.
- Therefore, heavy consumption of alcohol is of anicca nature. It will lead to dukkha (suffering). Therefore, that activity is of an anatta nature.

## The Same Principle Applies to All Sense-Pleasing Activities

8. It is hard to believe first, but craving sensory pleasures is not unlike craving alcohol!

- The truth of the above statement can be seen only within the long-term rebirth process. This is why it is difficult for many people to understand the deeper aspects of Buddha Dhamma about suffering. In particular immoral activities seeking short-term pleasures WILL lead to much suffering in future rebirths.
- We discussed the example of \#6 above in "How Does Anicca Nature Lead to Dukkha?" As explained there, all five aggregates (rūpa, vedanā, saññā, sañkhāra, viññāna) are of anicca nature. Therefore, per \#3 above, all five aggregates are of the anatta nature too!
- That is specifically stated in the "WebLink: suttacentral: Yadanatt $\bar{a}$ Sutta (SN 22.17)": "Rūpaì, bhikkhave, anattā ...Vedanā anattā ...sañ̃̃̄a anattā ...sañkhārā anattā ...viññānaỉ anattā."
- That is why NONE of the things in this world (rūpa, vedanā, sañ̃n̄a, sañkhārā, viññāna) can be considered beneficial.

9. Here, it is important to realize that we accumulate kamm $\bar{a}$ (more correctly kammic energies) not only by our actions but also with speech and even thoughts (via $k \bar{a} y a, ~ v a c \bar{c}$, and mano sañkhāra.) See, "Sañkhāra What It Really Means."

- Furthermore, such kamma accumulation can be based on recalling past events or thinking about future events.
- And all those involve not only rūpa but associated vedanā, saññā, sañkhārā, viññāna. For example, one may recall a good time with friends in the past. That means he would recall who was present and what types of activities he enjoyed, and associated mental aspects.
- That is why the Buddha always referred to aggregates. For example, as we discussed, rūpakkhandha includes physical rūpa and our mental impressions of past and future rūpa. Similarly for vedanākkhandha, sañ̃n̄̄kkhandha, sañkhārakkhandha, viññānakkhandha.
- Therefore, in \#8 above, "R̄̄upaì, bhikkhave, anatt $\vec{a} "$ means any rūpa experienced in the past, experiencing now, or expected to experience in the future are ALL of anatta nature.

## Summary

10. The concept of anatta is not about personality, a self, or a "me."

- Anicca, dukkha, anatta are characteristics of anything belonging to this world. Thus, anatta nature applies to anything of this world!

### 3.1.4.s Anatta in Anattalakkhaṇa Sutta - Part 1

September 19, 2021; revised August 25, 2022

## Introduction

1. "WebLink: suttacentral: Anattalakkhana Sutta (SN 22.59)" was the second sutta delivered by the Buddha after his Enlightenment (attaining the Buddhahood.) He taught the first two suttas to the famous five ascetics. The first one, Dhammacakkappavattana Sutta (SN 56.11) - delivered and discussed over several days - led to all five ascetics attaining the Sotāpanna stage.

- Then the Buddha delivered the Anattalakkhaṇa Sutta to the same five ascetics who reached Arahanthood.
- In the previous post, I explained that anatta is a characteristic of the world of 31 realms and not about a "self." See, "Anatta is a Characteristic of the World, not About a "Self."
- Here we will discuss the Anattalakkhana Sutta, specifically about that "characteristic of anatta" or "anatta lakkhaṇa." As we know, lakkhaṇa means "a characteristic."

## Outline of the Sutta

2. If you look at the first half of the sutta, it points out the anatta nature of rupa, vedan $\bar{a}$, sañ $\tilde{n} \bar{a}$, sañkhāra, viññāna, or the five aggregates (pañcakkhandha.)

- The Buddha points out that those aggregates CANNOT be under one's control in that first part. They evolve according to pațicca Samuppāda.
- The second part of the sutta starts with the verse, "Taï kimं mañ̃atha, bhikkhave, rūpaim niccaín $v \bar{a}$ aniccaim $v \bar{a} ' t i$ ?" Here, he points out why they cannot be under one's control. The key reason is that all five aggregates have the anicca nature, i.e., they evolve according to nature's laws and NOT according to one's wishes or hopes. As we have discussed, anicca nature leads to dukkha, and that is why all efforts to "get control" will not be successfiul, and one will lose control and become helpless (anattā): "Yad aniccamं taì dukkhaì; yaì dukkhamं tad anattā."
- The final third part of the sutta, starting with the verse, "Evaiं passam, bhikkhave, sutava ariyasāvako rūpasmimpi nibbindati, .." states the conclusion: A Noble Person (Ariya Sāvaka) who comprehends the above two facts about the nature of this world would not crave those five aggregates (nibbindati). Once that wisdom (pañña $\bar{a}$ takes hold in mind, that mind liberates from this world. That mind will NOT grasp (upādäna) anything in this world; thus, the rebirth process will cease, and one will get to Parinibbāna at the death of the physical body.
- To get the full impact of the sutta, we need to fully understand what those five aggregates mean (pañcakkhandha.)

## What Is an Aggregate (Khandha)?

3. Anattalakkhana Sutta (SN 22.59) is one of 159 suttas in the Khandha Samyutta (SN 22.) All those suttas are related to the five aggregates or collections (pañca khandha which rhymes as pañcakkhandha.)

- What is a khandha or a collection/aggregate? One of those 159 suttas in the Khandha Samyutta, the "WebLink: suttacentral: Khandha Sutta (SN 22. 48)," clarifies that.
- "Katame ca, bhikkhave, pañcakkhandhā?" OR "Bhikkhus, what are the five aggregates?"
- "Yaì kiñci, bhikkhave, rūpaì at̄̄t̄ānāgatapaccuppannamं ajjhattaì vā bahiddhā vā oḷārikami vā sukhumaiं vā hīnaì vā panītaì vā yaí dūre santike vā, ayaì vuccati rūpakkhandho" OR "Bhikkhus, the rüpa aggregate consists of the following 11 types of rūpa: past, future, or present, internal or external, gross or subtle, inferior or superior, far or near. This is called the rūpa aggregate.
- The other four aggregates have the same 11 types. For example, the viññāna aggregate has the same 11 types: past, future, or present, internal or external, gross or subtle, inferior or superior, far or near.

## Five Aggregates Encompass the Whole World!

4. As we can see from the definition of the $r \bar{u} p a$ aggregate, it includes any $r \bar{u} p a$ that one has ever seen, one is seeing now, and expects to see in the future. Those are the three main categories.

- For example, suppose I saw the World Center Towers before their destruction in the terrorist attack in 2001. Those towers are in my rūpakkhandha. Of course, those towers physically do not exist now. But my rūpakkhandha has its "mental impressions." I can recall how they looked before the terrorists destroyed them.
- But if another person had not seen those towers before their destruction, they are not in that person's rūpakkhandha. One's pañcakkhandha is one's own!
- Furthermore, any type of vedanā that I experienced looking at those towers is in my vedanākkhandha. I recognize them as "World Center Towers" in my saññäkkhandha. Any sañkhāra that my mind generated while looking at the Towers are in my sañkhārakkhandha. Any types of viñ̃ñạ̄a that arose are in my viññānakkhandha.
- Therefore, most of the five aggregates consist of one's past experiences. As we know, there is no traceable beginning to each of our "lifestreams." We have been going through an infinite number of rebirths in our past. The present moment goes into the past within a blink of an eye. Future rūpa, vedana $\bar{a}$, etc., are associated with our expectations/hopes.
- Please take time and think about the above. There is a lot of information there. It is critical to understand these fundamentals.
- I have discussed these concepts in "The Five Aggregates (Pañcakkhandha)."

## Role of Pañcakkhandha in a Sensory Event

5. When we are attracted to a sensory event that involves not only the ruppa one is experiencing at that moment but also one's memories about similar rūpa experienced in the past and one's hopes for experiencing similar $r \bar{u} p a$ in the future as well.

- That is better explained with an example. Suppose person X meets person Y on the street. Suppose X is an enemy of $Y$, and the moment $X$ sees $Y$, thoughts of anger arise in his mind.
- But to trigger anger in $X$, he must first realize that $Y$ is his enemy. For that to happen, his mind must have instantly recalled past events involving Y. Therefore, that sensory event of "seeing Y" involved recalling past events with not only Y's figure (rūpa) but also types of mental factors (vedanā, saññ̄a, sañkhāra, viññāna) associated with some "bad encounters with Y " in the past.
- That is why capturing a "snapshot" of Y (like with a camera) is not enough. The mind MUST recall previous encounters with Y , which are in pañcakkhandha! In other words, those cittas not only "see" Y but also incorporate past sights of Y AND associated vedanā, saññ̄a, sañkhāra, viññāṇa.
- Now, based on the sight of Y, X has generated anger and has "gotten attached" to that sight of Y. Therefore, sensory information associated with 'seeing Y " is now in X's pañcupādānakkhandhā!

## Khandha Sutta Also Defines Pañcupādānakkhandhā ("Five Grasping Aggregates")

6. At the latter part of the Khandha Sutta defines pañcupādānakkhandhā, conventionally translated as "the five grasping (or clinging) aggregates."

- "Katame ca, bhikkhave, pañcupādānakkhandhā?" OR "bhikkhus, what are the five grasping aggregates?
- "Yaí kiñci, bhikkhave, rūpaì atītānāgatapaccuppannaì ...pe... yaín dūre santike vā sāsavamं upādāniyaì, ayaì vuccati rūpupādānakkhandho" OR "Whatever kind of rūpa there is, whether past, future or present ... far or near, that can induce āsava (sāsavaì), that can induce attachment (upādāniyain): this is called the rūpupādānakkhandha.

## How Do We Attach to Past and Future Rūpa (Vedanā, Saññā, Sañkhāra, Viñ̃āạa)?

7. Now, someone may ask: "How do we attach to past and future $r \bar{u} p a$ ? I thought we attach to the $r \bar{u} p a$ that we are seeing, hearing, etc., now."

- That is a CRITICAL point to understand. We do attach to a given rūpa that we are experiencing at present. However, that attachment is based on the past rīpa and future rūpa of a similar type (that we had thought about).
- For example, seeing a friend cannot be compared to just taking a snapshot of him. We not only "see" but also recognize who it is and generate certain feelings about him. All that happens in a split second. That rapid process involves all five aggregates (pañcakkhandha.)

8. Let us take another example. Suppose person X meets a person Y on the street. Suppose Y is an enemy of $X$ and the moment $X$ sees $Y$, thoughts of anger arise in his mind.

- But to trigger anger in $X$, he must frrst realize that $Y$ is his enemy. But for that to happen, his mind must have recalled past events involving Y. Therefore, that sensory event of "seeing Y" involved recalling past events with not only Y's figure (rūpa) but also types of mental factors (vedanā, saññā, sañkhāra, viññanal associated with some "bad encounters with Y " in the past.
- That is why capturing a "snapshot" of Y (like with a camera) is not enough. The mind MUST recall previous encounters with Y , which are in pañcakkhandha! In other words, those cittas not only "see" Y, but also incorporate previous sights of Y AND associated vedanā, sañ̃n̄a, sañkhāra, viññāṇa.
- The "past component" of pañcakkhandha is the same as nāmagotta or our memories. Even though we cannot recall nāmagotta from the distant past, we can easily recall nāmagotta of significant events from this life.
- I have discussed this issue with examples in the post, "The Amazing Mind - Critical Role of Nāmagotta (Memories)."

## Our Attachments Are Based on Our Habits/Character (Gati)

9. There is another way to understand the above point. Each person has a set of cravings/attachments. The Pāli word to represent this idea is "gati" (pronounced "gathi.") Gati are also related to āsava and anusaya.

- For example, X may be attracted to a type of woman that Y may not be attracted to. X may like to eat chocolates, but Y may not. Each of us has a set of gati that have evolved, most times going back to
recent previous lives. There are neutral gati (like being left-handed) and also bad gati (like the tendency to become angry), and moral gati (like being kind).
- I have discussed this issue in many posts, including how gati are related to āsava/anusaya. See "WebLink: puredhamma.net: Search Results for gati gathi āsava."
- It is essential to read and understand some of those posts. Then you will see why the Buddha explained rūpupādānakkhandha in terms of āsava and upādāna:, "Yaí kiñci, bhikkhave, rūpai̇ atītānāgatapaccuppannaím ...pe... yaím dūre santike vā sāsavaì upādāniyaì, ayaín vuccati rūpupādānakkhandho"
- As I keep emphasizing, one must spend time understanding these fundamental issues. Just reading mindless word-by-word translations is of no benefit.
- Just reading these posts will also not be good enough. These posts will provide the necessary material to make progress. However, it will take a significant effort even for those interested. I am willing to answer questions to the best of my ability.

## Summary

10. In this post, we have discussed two critical concepts needed to understand the content of the Anattalakkhaṇa Sutta.

- Pañcakkhandha (five aggregates) includes records of our deep past even if we remember mostly the significant events in this life. However, it is possible to cultivate $j h a \overline{n a}$ and recall past lives. Some small children can recall their previous life (if it was a human life).
- Pañcupādānakkhandhā (five "grasping" aggregates) represents our gati/anusaya/āsava that have evolved over our past lives. We can change our pañcupādānakkhandhā or the types of attachments (that arise out of greed, anger, and most importantly, ignorance of TilakkhanalPaṭica Samuppāda/Noble Truths.)
- Now we have sufficient background to understand the Anattalakkhaṇa Sutta. We will finish the discussion in the next post.
- The sutta says that our struggles to seek a permanent solution to suffering within this world are vain. That is the anatta nature. Once one starts understanding that, one will begin to lose big chunks of upādāna in pañcupādānakkhandhā. After the Arahant stage, there will be no trace of pañcupādānakkhandhā. Thus, only a living Arahant will be free of all defilements. They have fully understood the anatta (and, of course, anicca and dukkha) nature.

The discussion continues in "Anatta in Anattalakkhana Sutta - Part 2."

### 3.1.4.9 Anatta in Anattalakkhaṇa Sutta - Part 2

September 26, 2021; revised August 25, 2022

## Summary of the Previous Post

1. In the previous post "Anatta in Anattalakkhana Sutta - Part 1," we reached the following conclusions:

- Anattalakkhaṇa Sutta describes the NATURE of the five aggregates: rūpa, vedanā, sañ̃̄ $\bar{a}$, sañkhāra, and viññāna. It specifically addresses the anatta nature. To make it easier, we divided the sutta into three parts. You may want to print the previous post for reference.
- In the middle of the sutta (second part), the Buddha makes the connection to the anicca and dukkha nature, as we will discuss below.
- In the third part of the sutta, the Buddha explains that a Noble Person who understood the world's real nature to be anicca, dukkha, and anatta would not attach to the five aggregates. Thus an Arahant, who has completed the Path, does not have pañcupādānakkhandha.
- That is because a Noble Person would have understood the verse, "samkhittena pañcupādānakkhandh $\bar{a} d u k k h \bar{a}$ " OR "in brief, the origin of suffering is the craving for the five aggregates of rūpa, vedanā, saññ̄a, sañkhāra, and viñ̃n̄ạa. See "Essence of Buddhism - In the First Sutta." That is the post where we discussed the essence of the Dhammacappavattana Sutta, the first sutta delivered to the five ascetics. As we have seen icch $\bar{a}$ (craving/liking) is related to anicca; see "Icca, Nicca, Anicca - Important Connections."
- Therefore, in this second sutta to the five ascetics, the Buddha wraps up the discussion on Tilakkhaṇa. Attachment to things of anicca nature leads to dukkha. Thus, one should refrain from taking worldly things as "mine" because they do not have any essence or substance, i.e., worldly entities (pañcakkhandhā) are without essence or of anatta nature.

## First Part of the Anattalakkhaña Sutta

2. At the beginning of the sutta, regarding rūpakkhandha, the Buddha says:
"Rūpaì, bhikkhave, anattā. Rūpañca hidamं, bhikkhave, attā abhavissa, nayidamं rūpaì ābādhāya saìvatteyya, labbhetha ca rūpe: 'evaì me rūpaì hotu, evaì me rūpaì mā ahosī'ti. Yasmā ca kho, bhikkhave, rūpaì anattā, tasmā rūpaì ābādhāya saìvattati, na ca labbhati rūpe: 'evaím me rūpaì hotu, evaì me rūpaì mā ahosītti."

- First, as discussed in the previous post, "Rūpaì" refers to rūpakkhandha (the rūpa aggregate and NOT just one's body) as some people perceive.
"Rūpaim, bhikkhave, anatt $\bar{a} "$ means "rūpa aggregate is no use because it has no essence." See "Anattā A Systematic Analysis."
- The rest of the above verse explains WHY the $r \bar{u} p a$ aggregate is of no essence: 'If $r \bar{u} p a$ aggregate is of essence (and is under one's control), my body (which is a part of the rupakkhandha) would not have ailments, and it would be possible to have: 'Let my body (or any other rupa) be the way I like; let it not be the way I don't like.' But because the rūpa is not under my control, it can face unexpected changes, and it is impossible to have: 'Let my rūpa be thus; let my rūpa not be thus."

Here the verse seems to focus on one's physical body. But it could also mean any rūpa that one likes/dislikes. As we will see, whether it is one's own body or any other external rūpa, they evolve according to Paṭicca Samuppāda (PS.) A rūpa does not evolve according to anyone's wishes, but ONLY according to PS. That has been true for any rūpa that ever existed, any rūpa existing now, and any rūpa that will ever exist i.e., it is true for rūpakkhandha!

- Then that verse is repeated for the other four aggregates: vedanākkhandha, sañ̃̃ākkhandha, sañkhārakkhandha, and viññānakkhandha.
- Here the words "anatta/anatta"" refer to the unfruitful nature of any rūpa, vedanā, sañña, sañkhāra, viñãāṇa (i.e., one's world).

## Second Part of the Anattalakkhana Sutta

3. The second part of the sutta starts with the verse, "Taím kim maññatha, bhikkhave, rūpaim niccaì $v \bar{a}$ aniccaì $v \bar{a} t i$ ?" Here, the Buddha points out why they cannot be under one's control.

- The key reason is that all five aggregates have the anicca nature, i.e., they evolve according to nature's laws and NOT according to one's wishes or hopes. As we have discussed, anicca nature leads to dukkha, and that is why all efforts to "get control" will not be successful and one will lose control and become helpless (anattā): "Yad aniccaì taì dukkhaín; yaím dukkhaì tad anattä."
- Then the Buddha asks the CRITICAL question: "Yain pana aniccain dukkhain viparināmadhammamं, kallà் nu taì samanupassituì: 'etaì mama, esohamasmi, eso me $a t t a \bar{a} " t i$ ? OR
- "If something evolves according to its intrinsic nature (and not according to my wishes) and can lead to suffering should one regard it thus: 'This is mine, this I am, this can be of benefit/refuge to me'?" The answer is no. [intrinsic : belonging to a thing by its very nature; situated within or belonging solely to the organ or body part on which it acts]
- To look at the verse 'etain mama, esohamasmi, eso me attā' a bit more closely, esohamasmi is shortened form of "eso ahaì asmi." And "mama" means "mine," "ahaì asmi" is "I am," and "me" means "to me." That is how we get the translation above.

4. That last verse is of critical importance. It helps clarify the current misconceptions about a "self." As I have pointed out previously, it is better to talk about "me" rather than a "self" because some people may interpret "self" to mean a "permanent entity" like a soul.

- As we can see, the Buddha freely used the word "me." That is because, AS LONG AS a living being is in the rebirth process it has the perception of a "me." That could be called a "self," too, if one understands that such a "self" is not associated with a permanent "soul."
"On the other hand, the words "atta/att $\vec{a}$ " do not refer to a "me" or a "self" in this sutta. As we saw, this sutta is about the five aggregates (pañcakkhandhā), which encompass everything in this world.
- Those who have not understood the Four Noble Truths consider the world (pañcakkhandhā) to be of nicca/sukha/atta nature. Therefore, they attach to certain worldly things or pañcupādānakkhandhā, and that is the origin of future suffering: "saṃkhittena pañcupādānakkhandhā dukkhā." See, "Essence of Buddhism - In the First Sutta."

5. The Buddha explained what is meant by a "satta" or a "living being" to Rādha in the "WebLink: suttacentral: Satta Sutta (SN 23.2)." "Rūpe kho, Rādha, yo chando yo rāgo yā nandī yā tanhhā, tatra satto, tatra visatto, tasmā sattoti vuccati. Vedanāya ... saññāya ... sañkhāresu ... viññāne yo chando yo rāgo yā nandī yā taṇhā, tatra satto, tatra visatto, tasmā sattoti vuccati"

- Translated (just the meaning): "Rādha, when there is desire (chanda), rāga, and a perception of high value (nandī) of material form ( $r \bar{u} p a$ ), there is clinging (satto), strong clinging (visatto) for form, and then an ignorant living-being (satto) is spoken of. Similarly, when there is desire (chanda), rāga, and a perception of high value (nandī) of vedan̄ $\ldots$... saññ̄̄ $\ldots$.. sañkhāra ... viññānana, then a living-being is spoken of."
- We discussed that in the introductory post, "Five Aggregates and Tilakkhana - Introduction."
- This is why any living being in any of the 31 realms (except those who have attained magga phala) is a "satta" ("satva" in Sanskrit.) Even the Buddha before Enlightenment is a "Bodhisatta" or a "satta destined to attain the Buddhahood."
- The present body of even a living Arahant arose due to past kamma done with the perception of a "me." That body results from that past kamma and will be there even after attaining Arahanthood. A new life/body will not arise at the death of an Arahant. Until that time, Arahant will use the words "I" and "me" but with the understanding that those words need to be used as long as one lives in this world. That is what the Buddha did too.

## Third Part of the Anattalakkhaṇa Sutta

## 6. The final third part of the sutta states:

"Evaì passaì, bhikkhave, sutavā ariyasāvako rūpasmimpi nibbindati, vedanāyapi nibbindati, saññāyapi nibbindati, sañkhāresupi nibbindati, viññānasmimpi nibbindati. Nibbindaí virajjati; virāgā vimuccati. Vimuttasmimं vimuttamiti ñānaà hoti." OR

- "Seeing thus, Bhikkhus, a noble disciple (who has understood the above truths) would not attach to rūpa, vedanā, saññā, sañkhāra, and viññāna. The mind sees that those mind-pleasing things have no value and becomes liberated (from this world.) Once liberated, he realizes that he is liberated:

## 

- He understands: 'Destroyed is rebirth, the holy life has been lived, what had to be done has been done, there is no more for this state of existence ( n the suffering-filled world)."

## Summary

7. The above is a summary of the Anattalakkhana Sutta. Let us summarize the conclusions.

- The first thing to note is that the analysis is on the five aggregates (pañcakkhandhā.) Since pañcakkhandh $\bar{a}$ represents one's world, the sutta is about the anatta nature of the world of 31 realms.
- In the second part, the Buddha states that the anatta nature results from anicca nature. In simple terms, that means any rupa (whether internal or external) or mental impressions due to rūpa (i.e., vedana $\bar{a}$, sañ̃n̄a, sañkhāra, viññ̄ạa) arise NOT due to the way one wants/wishes. Rather they arise due to a natural process that takes place because of one's ignorance of that natural process. That process is Paṭicca Samuppāda. We can easily see that vedanā, sañkhāra, and viññāna arise in Paṭicca Samuppāda starting with "avijjā paccayā sañkhāra." The "bhava paccayā jāti" step describes the arising of the internal rūpa. We will get to those details soon.
- Finally, the Buddha says that the world is unfruitfiul, and there is nothing that can be considered to be valuable. However, an average human thinks highly of the "pleasures" to be had in this world! That is why the Buddha said his Dhamma had never been known to the world. Only a Noble Person who has understood the anicca, dukkha, and anatta nature of this world can cultivate the Eightfold Noble Path and be "fully liberated" from this suffering-filled world, i.e., attain the Arahanthood.
- As you can see, this sutta is highly condensed. Translating the sutta word-by-word makes it impossible to understand its embedded message. Deep suttas like this need to be explained in detail; see "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- We will look deeper into the sutta in the upcoming posts, especially to make the connection between anicca and Paṭicca Samuppāda.

## 3.2 <br> San

- What is "San"? Meaning of Sansāra (or Samisāra)
- Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka
- Sañkhāra - Life is a Bundle of Sañkhāra
- Difference Between Dhamma and Sañkhāra
- Kamma are Done with Sañkhāra - Types of Sañkhāra

### 3.2.1 What is "Saŋ"? Meaning of Saysāra (or Samsāra)

## Revised May 17, 2018; revised December 18, 2018; February 16, 2020; July 19, 2021

[This article is not found in the Pure Dhamma post. It is meant for the understanding of why san is written in difference form $(s a \dot{n}=s a \tilde{n}=s a n=s a n=s a \eta=s a m=s a \dot{n})$ for those with san words. Niggahīta is the name for the symbol " $\eta$." The reason is to suit the consonants for the particular row as shown below. \{niggahīta : (nt.) the nasal consonant ' $\dot{m}$ ' or ' $\eta$ ' or ' $m$ '.\}

Consonants Words formed with the consonants after $\operatorname{sax}(x=\dot{n}, \tilde{n}, n, n, m, \dot{m}$ [ $\boldsymbol{\eta}]$ )

| k | kh | g | gh | ñ | sañkara, sañkhāra, sañgara, sañgha |
| :---: | :---: | :---: | :---: | :---: | :--- |
| c | ch | j | jh | $\tilde{n}$ | sañcara, sañchindati, sañjāyati, sañjhā, saññā |
| t | ṭh | ḍ | dh | ṇ | sanṭhapesi, saṇ̣āso |
| t | th | d | dh | n | santoso, santhāra, sandita, sandhana, sannata |
| p | ph | b | bh | m | sampāda, samphassa, sambala, sambhava, sammā |
| y, r, | l, v, | s, h, | l, | min (y) | samiyutta, samirāga, sallahuko (san + lahuko) samivega, samsāra, <br> samihata |

]
"San" is a keyword in Buddha Dhamma, the meaning of which has been hidden for thousands of years. It is closely related to dasa akusala.

1. A key Pāli word, which has been hidden for thousands of years, is "say" (pronounced like son). "Say" is the term for "good and bad things we acquire" through our moral/immoral deeds.

- Understanding this root allow one to easily see the meanings of many important Pāli words without looking for roots in Sanskrit.

2. There is a reason for calling what we "acquire or add" to be "saŋ." In Pāli and Sinhala, the word for numbers is "sañkhy $\bar{a}$," and sañkhy $\bar{a}=$ "san" + "khy $\bar{a}$," meaning add and subtract. Addition and subtraction involve sañkhy $\bar{a}$. [ $\boldsymbol{s a n} \boldsymbol{k} \boldsymbol{h} \boldsymbol{y} \overline{\boldsymbol{a}}$ : [f.] enumeration; calculation; a number; definition.]

- From this, "say" suggests "acquiring or adding (to this world, or to stay in the rebirth process)."
- In the same way, "khya"" implies "removal or subtraction."

3. Therefore, "say" indicates things we do to lengthen our samisāric (or saysāric) journey. See below for examples.

- These "san" are nothing else but dasa akusala (that lead to rebirth in the apāyă) and also puñña kamma (that lead to rebirths in the "good realms"); see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma."
- One may wonder why "say" includes moral deeds or puñ̃a kamma. That is because they also lead to rebirths ("add" to the samināric journey).
- However, one MUST do puñña kamma to avoid rebirth in the apāyā.

4. Similarly, "khya" or "khaya" indicate the shortening of the samsāric journey.

- Removal of defilements (rāga, dosa, moha) leads to Nibbāna. Thus Nibbāna is "rāgakkhaya,"
"dosakkhaya," and "mohakkhaya."
- Those three words have roots in "khaya" or "subtraction or removal." For example, rāgakkhaya comes from "rāga" + "khaya," which combines to pronounce as rāgakkhaya.
- Thus it is quite clear that rāgakkhaya means "removing rāga." Same for "dosakkhaya," and "mohakkhaya." Removal of rāga, dosa, and moha leads to Nibbāna.

5. Just by grasping these key ideas, it is possible to understand the roots of many common words, such as sañkhāra, sainsāra, sañ̃n̄a, sammā, etc. Let us analyze some of these words.

- We "add to" our rebirth process when we do "say." The Pali word for "doing" is "khāra" (the Sinhala word is "kāra" or $\mathbf{\infty}$ ) 6 ). That is the origin of the word "sañkhāra" ("say" + "khāra"); the Sinhala word

6. From Pațicca Samuppāda, all sufferings start with, "avijjā paccayā sañkhāra." Thus, when one gets rid of avijjā completely, all sañkhāra are stopped and one attains Nibbāna. That is accomplished at the Arahant stage.

- From the WebLink: suttacentral: Manasikāra Sutta (AN 11.8): " 'etaì santaì etaì paṇìtaìm, yadidamं sabbasañkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti." ["It is peaceful, it is serene, the expelling of all sañkhāra, breaking of bonds, removing greed and hate; Nibbāna.'"]
- Translated: "It is peaceful, it is serene, the expelling of all sañkhāra, breaking of bonds, removing greed and hate; Nibbāna." So, it is quite clear that by stopping all sañkhāra, one attains Nibbāna.

7. However, a distinction needs to be made between sainkhāra and abhisañkhāra. The prefix "abhi" means "stronger" or "coarse."

- Sañkhāra involves EVERYTHING that we do to live in "this world" of 31 realms; these include breathing, walking, eating, and pretty much everything. Even an Arahant has to be engaged in sañkhāra until Parinibbāna or death.
- Sañkhāra becomes abhisañkhāra by engaging in the "wheeling process"; see, "Nibbāna - Is it Difficult to Understand?." The samiā̈ric process or the rebirth process is fueled by abhisañkhära.

8. The bad things we acquire - with lobha (greed), dosa (hate), moha (delusion) - contribute to rebirth in the lower four realms; these are apuñãābhisaṅkhāra (or apuñ̃a abhisaǹkhāra). Here "apuñña" means "immoral."

- Good things we acquire via the mundane version of alobha, adosa, and amoha help us gain rebirth in the human realm and above; these are puñnābhisañkhāra (or puñ̃̃a abhisañkhāra). Here "puñña" means "moral."
- Thus, both kinds contribute to lengthening the rebirth process. Still, we DO need to do puññābhisañkhāra for two reasons: (i) it prevents us from doing bad things, (ii) done with the right intention, puññābhisañkhāra will help purify our minds, i.e., puñ̃̃a kamma can become kusala kamma; see \#18 below.
- To attain Nibbāna, one must comprehend the deeper version of alobha, adosa, and amoha. See "Kilesa - Relationship to Akusala, Kusala, and Puñña Kamma."

9. Another important term is "sammä" which comes from "say" + "mā," which means "to become free of say." Here "m $\bar{a}$ " means "becomes free of." For example:

- "Mā hoti jāti, jāti" means "may I be free of repeated birth."
- "mā me bāla samāgamo" means "may I be free of association with those who are ignorant of Dhammā."

10. The keyword sanditṭhiko comes from say + ditthi (meaning vision), i.e., the ability to see "san" or defilements.

- One becomes sandittthiko (one who can see "saŋ" clearly) at the Sotāpanna Anugāmi stage.
- Most texts define sanditthiko with inconsistent words like self-evident, immediately apparent, visible here and now, etc.

11. Another critical word is sañ $\tilde{n} \bar{a}$, which comes from $\operatorname{sa\eta }+\tilde{n} \bar{a}$ (meaning knowing) $=$ knowing or understanding "say." This happens when one attains Nibbāna. Until then, one has a distorted perception (saññā) of this world. See "Saññā - What It Really Means."

- For example, when we see people, we identify them according to our familiarity with them or based on our perceptions of them. We do not "see" the true nature of anything until Nibbāna is attained. Thus it is said that until we attain Nibbāna, we have distorted (vipallāsa, Sinhala is vipareetha) saññ̄a.
- Don’t worry about some of these deeper meanings if you are unfamiliar with them. At least one can see a connection to the root word "say."

12. Saimvara (or saŋvara) $=$ say + vara, where vara means "remove." Therefore, samivara means removing "say" via moral behavior, also called "sīla."

- "Yaín samādānaì taín vataim. Saìvaraṭthena sīlaï" means just trying to live by set precepts would not work. Moral behavior comes automatically upon one becoming a Sandiṭthiko (a Sotāpanna Anugāmi or a Sotāpanna.)
- Saimvara sila will be automatically enforced 24 hours daily, not just on specific days. That is because it comes naturally, with understanding.
- On the other hand, "Yam samādanaí taí vatamं" means observing the five precepts or eight precepts on specific days is just a ritual, or "vata." Such rituals are good starting points but will be "upgraded to" Saìvara sīla when one gains wisdom (pañña $\overline{)}$.

13. Another keyword is samisāra or saysāra which means "rebirth process."

- That, of course, comes from say + sāra, where "sāra" means fruitful. We do "say" willingly because we perceive them to be good ("sāra"). Then we get trapped in the rebirth process.
- Note that sometimes it is natural to pronounce with the " m " sound; that is why writing it as "samisāra." See more examples in \#15 below.
- We have the wrong perception that "say" is good and fruitful. Thus one continues in the long rebirth process by doing sañkhāra (and especially abhisañkhāra) with the wrong perception that those are fruitful.

14. A nice example to illustrate the significance of "san" is to examine the verse that Ven. Assaji uttered to Upatissa (the lay name of Ven. Sariputta, who was a chief disciple of the Buddha):
"Ye dhammā hetupabbavā, Tesaì (te sam்) hetum Tathāgato āha; Tesañca (te say ca) yo nirodho, Evaì vādī mahāsamaṇo"

Te $=$ those, hetu $=$ cause, pabbava $=p a+$ bhava or "repeated birth" (see, "Pabhassāra Citta, Radiant Mind, and Bhavangga," nirodha $=$ nir $+u d \bar{a}=$ stop from arising.

- The translation is now crystal clear:
"All dhamma that give rise to the rebirth process arise due to causes arising from the "say"s: rāga, dosa, moha. The Buddha has shown how to eliminate those "san"s and thus stop such dhamma $\bar{a}$ from arising"
- "Dhamma" here does not mean Buddha Dhammā, but dhammā in general; see, "What are Dhammā? A Deeper Analysis."

15. Knowing the correct meaning of such terms leads to a clear understanding of many terms:

- Sangāyana $=\operatorname{sa\eta }+$ gāyana (meaning recite) $=$ recite and categorize "say" (and ways to remove them) in organizing Dhammā for passing down to future generations. The first Sangāyanā took place just three months after the Parinibbāna of the Buddha.
- Saimyutta Nikāya of the Tipitaka contains suttā that explain "say": "saך" + "yutta", with "yutta" meaning "connected with" (it rhymes as "samyutta"). Most English translations refer to Samimutta Nikāya as "Connected Discourses, but do not say connected to what.
- Sanvega (or "samvega") $=$ say + vega $($ meaning speed $)=$ forcefil, strong impulses arising due to "say."
- Sanyoga (or "samyoga") = say + yoga (meaning bond) = bound together via "say."
- Sansindheema $=$ say + sindheema (meaning evaporate, remove) = removing say, for example, via the seven steps described in the Sabbāsava Sutta. This leads to nirāmisa sukha or Nibbānic bliss.
- Sansun = say + sun (meaning destroy) = with the removal of "say" ("sun" rhymes like soup), one's mind becomes calm and serene.
- Sancetan $\bar{a}=\operatorname{sa\eta }+\operatorname{cetan} \bar{a}=$ defiled intentions.
- Samphassa $=\operatorname{sa\eta }+$ phass $a=$ defiled sense contact.

## Over 70 Pāli words with the "saŋ" root are given in "List of "San" Words and Other Pāli Roots."

16. We will encounter many such instances, where just by knowing what "say" is, one could immediately grasp the meaning of a certain verse. Most of these terms are easily understood in the Sinhala language.

- Contrary to popular belief, Sanskrit is not closely related to the māgadhi language that the Buddha spoke. It is Sinhala (or Sinhalese) that is closely related to māgadhi (māgadhi= "maga" + "adhi" = Noble path).

17. The Tipituaka is in Pāli with Sinhala script (Pāli does not have its alphabet). Pāli is a version of māgadhi suitable for writing down oral discourses in a summary form suitable for transmission; see, "Preservation of the Dhamma." More posts on that at "Historical Background."

- Many Pāli words have complex meanings and need to be explained in detail. That is the reason for many commentaries. However, most early commentaries no longer exist, and those recent ones have many errors; see "Misinterpretation of Anicca and Anatta by Early European Scholars."
- A good example is the key Pāli word "anicca." That word got confused with "anitya," a Sanskrit word. That Sanskrit word does mean "impermanence," but the Pāli word "anicca" has a very different meaning.
- The actual meaning of anicca becomes clear when one realizes that the Pāli word "icca" (pronounced "ichcha") means "this is what I like." Thus anicca has the opposite meaning ("na" + "icca") or "cannot keep it the way I like"; see, "Anicca, Dukkha, Anatta."
- Pāli words are written not with "Standard English" but with "Tipitaka English." See, "TTipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars - Part 2."

18. One's tendency (i.e., gati) to do dasa akusala gets one bound to this world of 31 realms. Until one removes such "bad gati," one will have the following characteristics: āsava, anusaya, samyojana, etc; see , "Conditions for the Four Stages of Nibbāna."

- As long as one has any type of gati, āsava, anusaya, or samyojana, one can pile up more "say" or do dasa akusala.
- Once one removes the strongest of the dasa akusala (and especially the 10 types of micchā dittthi), one will be able to grasp the Tilakkhaṇa.
- Then one's puñña kamma will become kusala kamma, leading to the four stages of Nibbāna. This is a subtle point but is explained in simple terms in the post, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

3.2.2 Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka

## Revised May 12, 2016; February 23, 2019; May 27, 2022; August 27, 2022

There is much confusion about these words. These are key Dhamma concepts, and one needs to sort them out to understand other key concepts like rebirth and Paticca Samuppāda. Please read the post, "What is "San"? - Meaning of Sansāra (or Samsāra)" before reading this post.

## Sañkhāra (what we accumulate)

1. "Puññābhi sañkhāra, apuñn̄ābhi sañkhāra, āneñjābhi sañkhāra ayaí vuccathi avijjā paccayā sañkhāra." This is how the short verse of "avijjā paccayā sañkhāra" in akusala-mūla paticca samuppāda is explained in detail.

- Thus only abhisañkhāra ("abhi" means higher or stronger), such sañkhāra with avijjā, leads to the rebirth process.
- Note that puññabhi sañkhāra is puñña+abhisañkhāra, and similarly, the other two are also abhisañkhāra. Also, "apuñ̃ñ" means immoral"" puñña" means moral, and "āneñja" means "higher jhānic." All three modes lead to rebirth in one of the 31 realms (lowest 4 realms with apuññābhi sañkhāra, realms 5 through 27 with puññābhi sañkhāra, and realms 28 through 31 with āneñjäbhi sañkhāra, respectively).
- Thus any kind of abhisaǹkh $\overline{\boldsymbol{a}} \boldsymbol{r} \boldsymbol{a}$ is done with ignorance (avijj $\bar{a}$ or not knowing the real characteristics of this world of 31 realms: anicca, dukkha, anatta).
- However, we will see below that we do need to accumulate puññābhi sañkhāra strategically, mainly to avoid rebirth in the apāya (lowest four realms) until we attain Nibbāna.

2. As we saw above, "san" is what one acquires when one does anything with sañcetana ("san" + "cetanā"). Sañkhāra (san+kāra) is simply actions that lead to acquiring "san." However, it is only
"abhisañkhāra" or sànkhāra that arises through avijjä that can lead to rebirth. There is a difference between sañkhāra and abhisañkhāra: [kāra, (m. ), deed; service; act of homage]

- When deeds are done to live in this world, one has to do sañkhāra. They become abhisañkhāra when they are done with greed, hate, and/or ignorance. Sañkhāra becomes abhisañkhāra when one starts generating further thoughts ("wheeling process") about the sense experiences (pictures, sounds, tastes, etc.) ; see \#9 on "Nibbāna - Is It Difficult to Understand?."
- Thus an Arahant does sañkhāra to live; even breathing is kāya sañkhāra. But Arahant has stopped the "wheeling process" or formed an attachment to what is seen, heard, etc. It is that "wheeling process," which is detailed in the Paticca Samuppāda section, that leads to abhisañkhāra.
- When those sañkhāra become strong, they are called "abhisañkhāra" or "strong sañkhāra" that can lead to rebirths.

3. Abhisañkhāra are three kinds, as mentioned above:

- Some actions lead to bad consequences during life and also to bad rebirths in the four lowest realms (apāyā). These are "apuññābhi sañkhāra" or immoral deeds: apuññā abhi sañ khāra..
- Actions that lead to good consequences in life and also to good rebirths are called "puññābhi sañkhāra" or meritorious deeds; these lead to birth in good realms (human, deva, and the rūpa lokas), thus avoiding rebirth in bad realms where one could get trapped for many eons. Thus it is important to accumulate puñ̃̄ābhi sañkhāra: puñña abhi sañ khāra.
- When one cultivates "lokiya jhāna" or mundane higher meditative states (arūpa jhāna leading to rebirth in the highest four arūpa loka realms), via breath meditation, for example, one can be reborn in the four higher Brahma worlds. These also prolong saìssāra, and are called "āneñjābhi sañkhāra": āneñja abhi sañ khāra.
- It is interesting to note that "āneñja" means "no more rebirths" and thus "permanent": the ancient yogis (including Ālāra Kālāma and Uddaka Rāmaputta) thought these realms have infinite lifetimes and equated the births there to the "ultimate release." Of course, the Buddha discovered that those also have finite lifetimes, even though extremely long, lasting eons (billions of years).
- Here those yogis can temporarily suppress all desires for kāma loka or rūpa loka existences. However, since they had not comprehended the anicca nature, they still have "hidden avijja" or "avijja anusaya."

4. Therefore, it is easy to remember abhisañkhāra as those actions that lead to prolonging sam̈sāra (or sainsāra), the cycle of rebirths. There is a "latent energy" produced by each such action (abhisañkhāra) that will give fruits later.

- Such "actions" can be done via the mind, speech, or the body; these lead to mano sañkhāra, vacī sañkhāra, and kāya sañkhāra, respectively. The "defiled actions" are abhisañkhāra.

5. Does this mean one should not do meritorious deeds (with puññābhisañkhāra) because those also prolong sainsāra? No. The Buddha emphasized that one should not shy away from doing meritorious deeds.

- There is a way to do meritorious deeds without prolonging samisāra, and that is detailed in the "KusalaMūla Paticca Samuppāda," an important part of the Buddha's Paṭicca samuppāda doctrine that has been hidden for thousands of years. But one must avoid wishing for "things in return" for such meritorious deeds as much as possible because such thoughts are based on greed.
- In the Abhidhamma language, one should generate "ñāna sampayutta, somanassa sahagata citta" (thoughts generated with wisdom and joy), which is the highest moral (sobhana) citta. Here wisdom means comprehension of the true nature; it starts with getting rid of 10 miccha dittthi and then grows as one understands anicca, dukkha, and anatta to higher levels. Wisdom culminates at the Arahant stage.
- Any good deed will have good consequences whether one wishes it or not. By wishing for "material things" or "jhānic pleasures," one turns a meritorious action into either a less potent "ñaña vippayutta" (devoid of wisdom) moral citta or even an apuññābhi sañkhāra. We will discuss that below.

## Kamma (Actions to Prolong Sainsāra)

Kammic energy is generated when one turns sañkhāra to abhisañkhāra by the "wheeling process"; see above. For example, when one sees an object that is just sañkhāra due to a kamma vipāka. However, if one then starts thinking about how good it is, or thinks about how to acquire it, then it becomes abhisañkhāra; here one now has INTENTIONS about that object, one is hoping to get something.

- That is why the Buddha said, "cetanā ham Bhikkhave kammaí vadāmi," i.e., "I say that intention is kamma."
- So it is important to remember that kamma is the intention, and even though it can be done by the mind, speech, or the body, all those have their root in mind. We cannot say anything or do anything without a thought in our mind to do so (see the Abhidhamma section for details).
- For example, the intention to go for a walk is a kamma that does not have any power to generate a good or bad vipāka in the future. That kamma will only get that task done.
Thus the key to Nibbāna is to stop valuing and thinking about kāma assāda (sense pleasures; āsvāda in Sinhala). This cannot happen until one sees the fruitlessness of sense pleasures in the long run (anicca, dukkha, anatta); see the section "Assāda, Ādinava, Nissarana". [assāda:[m] "mind-made pleasures"; taste; enjoyment; satisfaction.]

## Kamma Bīja (Kamma Seeds) or Kamma Bhava

When a kamma (abhisañkhāra) is committed, the kammic potential of that kamma is deposited in a kamma bïja (kamma seed); kamma seed is NOT a physical entity, it is an "energy" or "potential" to bring about an effect in the future. It can also be called a "kamma bhava."

- A kamma seed can be compared to a normal seed, say, for example, a seed of an apple tree. The potential to bring about a fully grown apple tree is in the apple seed. However, if the seed is kept in a dry place with no contact with soil, it does not get to germinate. It will germinate if placed under the soil and fed with water and nutrients. Then it can grow into an apple tree which can yield thousand more seeds.
- Similarly, a kamma seed has the POTENTIAL to germinate or come to fruition if suitable conditions appear; but a kamma seed is an energy lying below the suddhatthaka stage. It can then yield results with an impact corresponding to the original deed (this holds for both good and bad.) Results are the kamma vipāka; see, "What is Kamma? - Is Everything Determined by Kamma?."
- It is also possible to remove many of one's bad kamma seeds. When we acquire a "bad kamma seed" we get indebted to another being. Just like one can be debt-free by paying off existing loans, one can "pay back" old debts that have been accumulated in the cycle of rebirths by "transferring merits" when one does good deeds and also by doing the Ariya Metta Bhāvanā; see, "Transfer of Merits (Pattidāna)- How Does that Happen?" and "5. Ariya Metta Bhāvanā (Loving Kindness Meditation)."

Nothing in this world is permanent (but that impermanence is not anicca); kammic energy in a kamma seed also eventually loses its power, and the "staying power" depends on the strength of the particular kamma. For example, those seeds corresponding to "änantariya akusala kamma" such as killing one's parents or an Arahant, will bring fruits without delay (i.e., in the very next birth) before they lose their power.

## Kamma Vipāka (Results of a Kamma Seed or Kamma Bhava)

So it is important to distinguish between kamma and kamma vipāka: the first is the action, second is the consequence. When someone laments "this is my kamma" when he/she faces a bad situation, what is meant is that this happens "because of what I had done in the past." It is a kamma vipāka.

When one does something good or bad, kammic energy is deposited as a kamma bīa (seed), also called a kamma bhava. Then that kammic energy can give rise to kamma vipāka in the future when suitable conditions materialize. There are two ways to avoid kamma vipāka:

- Just like a seed will not germinate until the right conditions appear (soil, water, sunlight), kamma vipāka cannot materialize until suitable conditions appear. Thus by acting mindfully (not getting into "bad situations"), one can avoid them; see, "Anantara and Samanantara Paccaya."
- Most importantly, we can remove many kamma seeds by doing Metta Bhāvanā. When we acquire a bad kamma seed, we become indebted to another being; we can get rid of that kamma seed by paying off that debt. The best way to do that is to ask for forgiveness and transfer the merits of one's good deeds to all beings (since we have become indebted to an uncountable number of beings); see, "Kamma, Debt, and Meditation."

Kamma vipāka (from the germination of seeds) leads to two main consequences:

- They can lead to consequences during a lifetime (either the present or a future life). These are called "pavutti kamma bhava."
- Some strong kamma vipāka give rise to new existence (in the rebirth process). These are called "uppatti kamma bhava."

In either case, kamma vipāka is NOT deterministic. Both types can be reduced in strength or even be made ineffective. This can be done in several ways:

- When one becomes an Arahant since there is no more rebirth, all kamma seeds that do not get to come to fruition before the death of an Arahant become ineffective in producing a rebirth: Because an Arahant has removed avijjā, the "akusala-mūla paticca samuppāda cycle" becomes ineffective and thus "bhava paccayā jāti" does not get to initiate a new birth.
- However, even an Arahant is subjected to any kamma vipāka that gets a chance to emerge during the current life, especially the strong ones. Even the Buddha suffered from physical pains during the last years of his life. Even if one transfers merits to other beings (as Arahants do) if the other being cannot accept those merits, then those debts do not get paid off; see "Transfer of Merits (Pattidāna) How Does it Happen?." Thus even the Buddha had a few "unpaid debts" left.
- We all have done innumerable kamma in this long sainsāra. Thus many kamma seeds are waiting to "bear fruit" under the right conditions. This is a key point one needs to digest. Just like a seed can lay dormant for long times, and germinate only under the right conditions (soil, water), a kamma vipāka bears fruit only when the conditions are right.
- Thus most kamma vipāka can be suppressed and avoided (not letting them germinate) by acting with mindfulness (yoniso manasikāra). This is where a calm mind helps. An agitated mind is not able to make rational decisions. See "Key to Calming the Mind." Working on the Five Hindrances (pañca nīvaraṇa) that cover the mind is important.

## How to do Meritorious Deeds without Accumulating Abhisañkhāra

Most people, even born Buddhists, do not get this right. They think Nibbāna can be attained by just doing meritorious deeds. Here are some key points to consider:

1. One needs to avoid apuñ̃̄ābhi sañkhāra (unmeritorious deeds) that will lead to bad life events and/or rebirths, i.e., the four lower realms; see, "The Grand Unified Theory of the Dhamma." They are "akusala" by definition, but ones of the worst kind; these are called " $p \overline{a p a "}$ in Pāli and Sinhala and "paw" (rhymes like "cow") in Sinhala. One needs to avoid this in leading a moral life; see "Moral Living and Fundamentals."
2. Puñ̃ābhi sañkhāra (meritorious deeds) may be accompanied by apuññābhi sañkhāra if one's intention is not good. If one does a good deed AND wishes for something in return, that wishing is done with greed. Any good deed WILL produce good results whether one wishes it or not. They lead to good life events and good rebirths (at or above the human realm). Thus puñn̄ābhi sañkhāra can help in pursuing Nibbāna and should be done without greedy intentions. A Sotäpanna automatically does meritorious deeds with such understanding; we will discuss this in the "Kusala-Mūla Paticca Samuppāda." Thus the

Aryan way is to do a good deed and share the merits of that deed with all beings, instead of wishing for something in return.

- Thus one needs to be careful here because one may be acquiring apuñ̃̃ābhi sañkhāra at the same time. This is a bit complex and is best illustrated with an example. Suppose one donates a meal to a hungry person. That act is inherently one that will produce a good outcome. However, if the person "makes a wish" such as "may I get delicious foods in the future because of this good deed", that is a greedy thought, a greedy intention (cetana $\bar{a}$. Thus while this does not negate the good deed, it also could produce ANOTHER kamma vipāka leading to bad life events.
- This pitfall can be avoided by doing the good deed with a pure intention that is not associated with greed, hate, or ignorance. One gives a meal to a hungry person out of compassion, to quench the hunger. That is all. Here one does not lose any possible benefits of the act.
- When one starts comprehending anicca (that one cannot maintain anything to one's satisfaction over the long run), one AUTOMATICALLY stops wishing for "good things."
- Furthermore, one can reap more benefits by additionally doing a mental act to quench the potential of previous bad kamma seeds. This is called "giving of merits" or "pattidāna" which is mislabelled as "puñña anumodana" frequently; see, "Puñ̃̃a Kamma - Dāna, Sīla, Bhāvanā." One could wish that the merits of this good deed be shared with all other beings. We have built-up debts with all the beings in this long sainsāra, that needs to be paid off (see "Kamma, Debt, and Meditation"). Thus, sharing the merits becomes a "visañkhāra" or "unwinding the power of the previous sañkhāra." This is thus one way to lessen the impact of previous bad kamma vipāka.
- The Buddha said that one always needs to do good, meritorious deeds. Giving is especially encouraged. One could turn these deeds to visañkhāra by sharing the merits. By the way, sharing merits does not remove any possible good outcomes for oneself. Those were already acquired in the original act itself. The key here is not to wish for "profits in return" because such thoughts are associated with greed (of course, this cannot be stopped by sheer willpower until one comprehends anicca).

3. The third kind of abhisañkhāra, "āneñjābhi sañkhāra" is associated with higher (arūpāvacara) jhānic states attained via Samatha Bhāvanā, such as breathing meditation or kasiṇa meditation. They are pursued to achieve higher meditative states and thus are pursued with a greedy thought (pleasure).

- These meditation techniques do not help with the cleansing of the $\bar{a} s a v \bar{a}$; see "Sansaric Habits, Character (Gati) and Cravings (Āsava)" and "The Way to Nibbāna - Removal of Āsavas."

4. Jhānic states may be attained automatically when pursuing Nibbāna (not anāriya jhānā but Ariya $j h \bar{a} n \bar{a})$. The goal here was to achieve Nibbāna, and thus no sañkhāra are accumulated in this process. This raises another question: Is seeking Nibbāna another type of craving ( $\bar{a} s a v a$ )?

- Nibbāna is attained via removing craving for everything in this world: "rāgakkhayo Nibbānan, Dosakkhayo Nibbānan, Mohakkhayo Nibbānan."
- "Craving" for Nibbāna is called chanda (one of The Four Bases of Mental Power (Cattāro Iddhipāda). This "liking for Nibbāna" is the key factor that fuels the other three: viriya (effort), citta (thoughts), and vīmaìsā (investigations).
- Thus in seeking Nibbāna, one is not craving for anything in this world. One is thinking and working diligently to comprehend the true nature of the world (vīmaimsā), and with that wisdom gained, the mind automatically gives up craving for anything.

Kāya, Vac̄̄, and Mano Saǹkhāra

1. Sañkhāra can lead to body movements, speech, and thoughts; they are respectively called Kāya, Vacī, and Mano Sañkhāra. If those are not done with greed, hate, or ignorance, they are merely sañkhāra. But if they are done with greed, hate, or ignorance, they become abhisañkhāra.

- The recent post, "Sañkhāra - What It Really Means," for a detailed description.

2. Briefly, mano sañkhāra are automatically generated based on our gati. All our thoughts that make body parts move (except speech) are kāya sañkhāra. Vacī sañkhāra are generated when we move our mouth, lips, tongue, etc. to speak.

- When we think about doing something, we "play it out" in our mind (for example, reciting something silently in mind). That is also vacī sankkhāra and are called vitakka and vicāra; when we think and contemplate Dhamma concepts, they are savitakka and savicāra, with the prefix "sa" denoting "good."
- Thus 'talking to oneself' is done with $v a c \bar{\imath}$ sañkhāra; see "Correct Meaning of Vacī Sañkhāra."
- Mano sañkhāra are feelings (vedanā) and perceptions (sañ̃̃ $\bar{a}$ ) that arise automatically due to a sensory input that comes via a kamma vipāka.

3. Thus, it is clear that most enjoyments that we experience come through vacī sañkhāra. We can be sitting in one place quietly and generating enormous amounts of vacī sañkhāra, thoroughly enjoying the experience. Most people do this when they go to bed at night while waiting to fall asleep.

- It is a good idea to try to keep the mind away from defiled thoughts while falling asleep; this can be done by getting into the habit of thinking about a Dhamma concept, or listening to the chanting of sutta (pirith), keeping the volume low (like playing background music); see, "Sutta Chanting (with Pāli Text)." It will be easier to fall asleep and have a restfil sleep too.
For more details, see "Kamma are Done with Sañkhāra - Types of Sañkhāra."

### 3.2.3 Sañkhāra - Life is a Bundle of Sañkhāra

## Revised November 26, 2017

In the previous introductory post, "What is "San"?", we introduced the term "sañkhāra", and in the next post sañkhāra was discussed in somewhat technical terms. Since it is such an important term, in this post I will discuss it in a bit more detail.

1. Buddha Dhamma is based on the fact that all "sañkhāra" are done in vain: "sabbe sañkhāra aniccā."
 (thought, speech, bodily actions) done while living in "this world" of 31 realms. This includes breathing, walking, or thinking about the chores for the day.

- All sañkhāra arise in the mind. We cannot utter a word or lift a finger without generating sañkhāra in the mind. It happens very fast, so it feels like we just speak or do things; see, "Sañkhāra - What It Really Means" and "Difference Between Dhammā and Sañkhāra."

2. So, all sañkhāra involve thinking (some could be manifested as speech or bodily actions), but some actions like breathing happens without CONSCIOUS thinking. Those are just sañkhāra that do not have kammic consequences.

- However, sañkhāra become abhisañkhāra when they involve conscious thinking with lobha, dosa, moha (or alobha, adosa, amoha) coming to play roles. Those abhisañkhāra have bad (or good) kammic consequences.
- Thus even an Arahant keeps doing sañkhāra until death. But an Arahant does not do abhisañkhāra, a "stronger version" of sañkhāra that will lead to accumulating mental energy (kamma) for future repercussions (kamma vipāka) until that kammic energy is exhausted.
- In order for a sañkhāra to become an abhisañkhāra, one of the six root causes (greed, hate, ignorance, generosity, kindness, wisdom) need to be involved.

3. If the "bad roots" of greed, hate, and ignorance are involved, then those thoughts, speech, actions will create kamma bïja (or energy seeds) that either lead to bad outcomes during a life or to rebirth in the lowest four realms (apāyā). These are apuññābhisañkhāra ("apuñña" + "abhisañkhāra" where "apuñña" means non-meritorious).

- On the other hand, abhisañkhāra done with the "good roots" of generosity, kindness, wisdom either lead to good outcomes during a life or to rebirth in the realms at or above the human realm. These are puññābhisañkhāra ("puñña" + "abhisañkhāra" where "puñña" means meritorious).
- If no roots are involved, they are just sañkhāra, and their kamma seeds are duds; there is no energy in them. Basically one can say, sañkhāra (that are not abhisañkhāra) do not generate kamma seeds.

4. Let us take some examples. When we see someone is walking with a knife in hand, we cannot come to a conclusion about what kind of sankkhāra is that person is generating.

- He may be just taking the knife from one place to another, in which case, it is just sañkhāra.
- If he is planning to stab someone, then he is generating apuññābhisañkhāra.
- If he is planning to rescue an animal who got entangled in a trap, then he is generating puññābhisañkhāra.
- In any type of speech or bodily action, what really matters is the INTENTION behind the speech or action.

5. In another example, we may see two people have built and donated two hospitals for the poor. Even though both seem to be "good actions", we cannot say both had puññābhisañkhāra. One could have had an ulterior motive of getting elected in an upcoming election, rather than thoughts of loving kindness for poor people. In that case, he would be generating mostly apuñ̃̄ābhisañkhāra, even though there may be some puñ̃̄ābhisañkhāra involved too.

- This is why sorting out kamma is impossible for anyone but a Buddha. Some of our actions could involve both kinds of abhisañkhāra. For example, if we see a bird digging up a worm and chase the bird away, we would have done both kinds of abhisañkhāra: Saving the life of the worm is a puññābhisañkhāra, but we also did an apuññabhisaṅkhāra because we denied the bird of its meal. Both types of abhisañkhāra can bear fruits (vipāka) in the future.

6. There is this famous "trolley problem" in ethics, where one could save five people from death by sacrificing the life of a single person; see, WebLink: WIKI: Trolley problem

This "thought experiment" has been debated for many years. We can make the following observations based on Buddha Dhamma:

- If one decides to take action (i.e., save five by sacrificing one), then one will acquire "good kamma" for saving the five lives, and "bad kamma" for killing the other person. Both types can bear fruits in the future.
- But it goes even deeper. What if the person that we sacrificed was an Arahant or at least a Sotāpanna, and the other five were normal people or even criminals? Then we would have acquired much more bad kamma than good kamma.

7. When someone is talking or doing some bodily action, we can at least try to guess what kind of sañkhāra are involved. But if a person is just sitting down quietly, he/she could be generating any kind of sañkhāra ranging from just thinking about whether or not to go out for a walk (just sañkhāra) to planning a murder (worst kind of apuñ̃̄ābhisañkhāra).

- We generate more abhisañkhāra via thinking than via speech or actions.
- When we have disagreement with other people, we normally do not hit the person or even refrain from saying anything. But depending on the purity of our minds, we may be generating a little to unimaginable amounts of apuñ̃̄̄abhisañkhāra. This is a key factors that most people tend to disregard.
- If someone's outward actions/speech seem to be "disciplined", we automatically assume that he/she is a good person; and the person may be trying to fool himselfherself by displaying that outward appearance. But if the mind is impure, there could be a lot of hateful/greedy thoughts in that mind. Whether or not any verbal or bodily actions are committed, those thoughts still accumulate kamma seeds.

8. Therefore, it is utterly useless to judge other people. Each person has true awareness AND control only over one's own thoughts, speech, actions, which are ultimately based on the intentions.

- But we know exactly what our own intentions are. And that is what really matters. We may be able to fool a court of law by hiring a good lawyer, but we will have to reap the results of what we sow in the future at some point.

9. This is the basis of ānāpāna meditation, to be aware of the types of sañkhāra involved in a given action; see, "7. What is Ānāpāna?." If someone asks us to join in fishing trip, we need to think what kind of kamma will be associated with killing fish for our pleasure; this is the basic form of "k $\bar{a} y \bar{a} n u p a s s a n \bar{a}$." Contemplate on any bodily action one is about to do and abstain from doing it if it involves apuñnābhisañkhāra (in this case taking the lives of several fish for our pleasure).

- Bodily actions are easier to prevent, because they take time and we have time to contemplate.
- Speech is a bit more tricky, because speech comes out faster than carrying out bodily action. Still one can stop oneself even after uttering a few sentences.
- Thoughts are the hardest, and that is why "cittānupassana" comes after one has practiced "kāyānupassanā."

10. If one wants to start doing ānāpāna meditation, one should first control one's bodily actions, and the more one does it, the easier it becomes. And then it also becomes easier to control one speech. When both actions and speech are brought under control, one's thoughts will be easier to control too.

- Furthermore, willfully engaging in puññābhisañkhāra also helps to keep apuññābhisañkhāra at bay. By concentrating on meritorious deeds, one's mind is automatically turned away from thinking about unmeritorious deeds.
- This is why real Buddhist meditation is much more than just formal sitting meditation. The key is to purify the mind, and avoid defiling the mind at anytime. One could be doing the breath meditation for a lifetime, but may not get anywhere in purifying the mind.
- This is explained in detail and how to start practice in the "Living Dhamma" section. One does not even need to believe in rebirth in the beginning.

11. Nibbāna is attained not by abstaining from both puñ̃n̄abhisañkhāra and apuñ̃ābhisañkhāra as some suggest. On the way to Nibbāna, one needs to do puññābhisañkhāra AND also engage in learning Dhamma so that one could comprehend the true nature of all types of sañkhāra, i.e., that all sañkhāra are
 enough to purify the mind.

- Ultimately, just by doing puññābhisañkhāra is not enough to purify the mind. However, one MUST start there before being able to comprehend anicca, dukkha, anatta; see, "Living Dhamma."

Next, "Difference Between Dhamma and Sañkhāra",

### 3.2.4 Difference Between Dhammā and Sañkhāra

Revised March 22, 2017; April 17, 2017; November 5, 2017; July 19, 2018; August 9, 2019; January 11, 2020; June 7, 2022 (\#8)

## Introduction

We will discuss the difference between sañkhāra, sañkhata, and dhamm $\bar{a}$. Some of the descriptions given here are not compatible with meanings given in many current Theravāda texts. However, they are fully compatible with the Tipitaka. Please send me a comment (lal@puredhamma.net) if you find evidence to the contrary.

- First, it is essential to remember that the word "dhamma" can mean somewhat different things in different contexts. In "Buddha Dhamma", it means the "Buddha's teachings."
- Dhamma (with a long "a" at the end) is mostly used to indicate energy created by the mind. It is also called a kamma bïja.
- But "sabbe dhamm $\bar{a}$ " in "sabbe dhamm $\bar{a}$ anatt $\bar{a}$ " includes everything, all phenomena belonging to this world of 31 realms. Nibbāna is not in this world, as discussed below.
- I always give links to other posts. If one needs more information or clarification, one should read them. That will make the concept "really sink in."

## Famous Dhammapada verses

1. There is confusion about the terms sañkhāra and dhammā in the Dhammapada verses 277, 278, and 279; the first lines in those three verses are:

- "Sabbe sañkhāra anicca" or "all sañkhāra are anicca (they give rise to sañkhata that we cannot maintain to our satisfaction in the long run)." A better way to say it is that it is futile to seek a "permanent happy existence in the rebirth process. Of course, we must make necessary plans to live this life.
- "Sabbe sañkhāra dukkhä" or "all sañkhāra eventually lead to dukkha (suffering)."
- "Sabbe dhammā anattā" or "all dhammā are without substance (not fruitful) at the end."

## Sañkhārā̄ Are Our Thoughts

2. Sañkhāra are involved in thinking, speaking, and acting based on our intentions, hopes, and dreams. It is essential to realize that sañkhāra are our current thoughts.

- "Sañkhāra" include all three types (kāya sañkhāra, vacī sañkhāra, mano sañkhāra) that lead to any action, speech, or just thought (in that order). They all arise in citta (our thoughts).
- We say "Hello" to someone with vacī sañkhāra. If we walk from the living room to the kitchen to get a drink, that is done with kāya sañkhāra. But those do not initiate kamma vipāka and are kammically neutral. But if we verbally abuse someone, that is done with strong vacī sañkhāra (abhisañkhāra), and that will have kamma vipāka.
- More on sañkhāra at, "Sańkhāra - What It Really Means."

## Sañkhāra Give Rise to Sañkhata

3. Strong sañkhāra (or abhisañkhāra) that we generate may lead to the arising of an inert object or a living form. It leads to the arising of a sanikhata (sankata in Sinhala).

- If someone comes up with the idea of building a house, then the following steps may happen. He will carefully think about it (mano sañkhāra, vacī sañkhāra), and may talk about it with others (vacī sañkhāra). If he decides to do it, then he may take action (kāya sañkhāra) to make it happen. In this case, our sañkhāra gave rise to a house, and that house is a sañkhata (sankata in Sinhala).

4. When we do something with the body (i.e., body movement), that is controlled by kāya sañkhāra that arises in our minds.

- We are not robots (most lower animals are like robots). We can control our thoughts, speech, and actions. Sometimes we may do things automatically. But if we want to, we can change our speech or actions. Just try it out.
- When we speak or talk to ourselves, that involves vacī sañkhāra; those also arise in our minds; see, "Correct Meaning of Vacī Sañkhāra."
- Mano sañkhāra are thoughts that arise automatically (due to kamma vipāka and our "gati").

5. Building a house in \#3 above may not involve moral/immoral intentions. One may not generate strong sañkhāra (called abhisañkhāra) that can create kamma bïja (dhammā), that can bring kamma vipāka in the future. Building a house is just a kammically-neutral action.

- However, planning to kill a human, for example, involves mano sañkhāra and vacī sañkhāra (in the planning stage) and then doing it with kāya sañkhāra.
- In this case, all those sañkhāra are abhisañkhāra, that can bring future bad kamma vipāka, in the form of rebirth in the $a p \bar{a} y \bar{a}$, which includes the animal realm.

## Abhisañkhāra Are Strong Sañkhāra

6. Abhisañkhāra (potent or strong sañkhāra) give rise to kamma bīja, which are also part of dhammā. These are energies created by javana citta; see, "Javana of a Citta - The Root of Mental Power." They can bring kamma vipāka.

- At the moment of death, such a strong kamma bïja or a dhammā comes to the mind via "manañca paṭicca dhamme ca uppajjati manoviññāṇamं." That new viñ̃n̄̄ṇa is the paṭisandhi viññāṇa for the new life; see, "What are rūpa? - Dhammā are rūpa too!."
- Therefore, now a new life is formed as a result of that abhisañkhāra. This new life-form is also a saǹkhata because it arose due to that abhisañkhāra.

7. That sañkhata (sankata in Sinhala) came into existence because of that abhisañkhāra during that immoral act. It came to life at a later time via kamma vipāka.

- Moral abhisañkhāra or puñña abhisañkhāra lead to good kamma bīja/dhammā that will lead to good rebirths (in human, deva, and Brahma realms).
- Immoral abhisañkhāra or apuñña abhisañkhāra lead to bad kamma bīja/dhammā that will lead to unfortunate rebirths (in the apa $\bar{a} \bar{a}$ ).
- That is the link between mind and matter. An abhisañkhāra that arose in the mind led to the sañkhata (sankata in Sinhala), which is a rūpa (made of inert matter).
- That house in \#3 was built using existing rūpa. But it is also possible to "create" new matter if one has abhiñ̃̄̄a powers. Both are called sañkhata (sankata in Sinhala).

## All Rūpa Are Sañkhata (Sankata in Sinhala)

8. Any rūpa (including visible objects, sounds, smells, tastes, and body touches) that we experience in this world is a sañkhata (sankata in Sinhala), and they all undergo unpredictable change and eventually are destroyed.

- The point is that we make our future via our actions, speech, and thoughts; these are (abhi) sañkhāra.
- However, any of these new sañkhata (sankata in Sinhala) will not last forever. Even if one is born in deva or Brahma realms, kammic energy will run out one day. Then one will be directed to the next birth depending on the most potent kamma bīja/dhammā present at that time.
- The only difference is that one will be subjected to much suffering in the $a p \bar{a} y \bar{a}$, while one will get to enjoy a "good life" in a higher realm. We all have been going through this "unending journey through most of the 31 realms," which does not have a traceable beginning.

## No Rūpa (Sañkhata) Can Be Maintained in the Way We Like

9. Another critical point is that the net result of all these "journeys through various realms" is suffering. We tend to do more immoral things in "seeking pleasure" and are born mostly in the apāy $\bar{a}$.

- Any sañkhata (sankata in Sinhala) that we make for ourselves (whether it is a house or a new life in the deva realm) cannot be maintained to our satisfaction in the long run. The home will need repairs and may even get burned down or flooded. A new life in the deva realm will end one day, and one will be back to square one.
- That is why it is said that "Sabbe sañkhāra aniccā." It is there because any sañkhata (sankata in Sinhala) (that arise due to abhisañkhāra) has a finite lifetime and is subjected to unexpected changes (viparināma) during that existence.

## That Anicca Nature Leads to Suffering

10. When we don't get to maintain things to our satisfaction we suffer. Even if one makes a billion dollars and has a lovely family, one will have to leave all that behind when one dies. But even before that there could many other instances where one suffers (deaths of friends/family, diseases, loss of property, etc). That is the viparināma nature that arises due to anicca nature.

- And the root cause of that suffering is sañkhāra (more correctly abhisañkhāra). That is why it is said, "Sabbe saǹkhāra dukkhā."
- Again, sañkhārā are our CURRENT thoughts; as soon as those thoughts go past, they become nämagotta or memories.

11. The only thing not destroyed is nāmagotta, which are just records of "all events" (sañkhāra and abhisañkhāra) of any given lifestream; see, "What Reincarnates? - Concept of a Lifestream."

- All these different terms could be confusing at first. They will all make sense eventually because they are all pieces of a big puzzle.

## Nibbāna Not Included in $\operatorname{dhamma} \bar{a}$

12. Ven. Walpola Rahula Thero, in his famous and otherwise excellent book, "What the Buddha Taught," did not get it right when he interpreted those verses. He included Nibbāna in dhammā (p. 57 of 1974 edition). He took the difference between dhammā and sañkhāra to be Nibbāna.

- But as you can see, sañkhāra and dhammā are two different entities. Sañkhāra is what we generate in our minds.
- Strong sañkhāra or abhisañkhāra lead to the creation of kammic energy, and that is a dhammā or a kamma bīja.
- However, there are many dhammā other than kamma bīja, and the only abhisañkhāra lead to kamma bïja. But both sañkhāra or abhisañkhāra lead to memory records or nāma gotta. Also, dhammā includes concepts and even Buddha Dhamma.

13. Furthermore, Nibbāna does not belong to this world. Therefore, to say Nibbāna is anatta is a terrible mistake. There are four ultimate realities (paramattha): Thoughts (citta), mental factors (cetasika), matter (rūpa), and Nibbāna.

- The first three can describe everything "in this world." Nibbāna does not belong to "this world."
- Furthermore, anatta is also mistranslated as just "no-self." The problems with the traditional interpretation of anicca, dukkha, anatta are discussed in "Anicca, Dukkha, Anatta - Wrong Interpretations."

## Nāmagotta are Permanent

14. When we do abhisañkhāra (strong types of sañkhāra), that lead to the formation of good or bad kamma bīja, or dhammā. That strong kamma bïja can lead to the arising of a sañkhata (sankata in Sinhala) (living beings and even inert things).

- And nāmagotta (pronounced "nāma goththā") are just records of what happened.

15. Unlike sañkhāra, kamma büja, and sañkhata, nāmagotta are PERMANENT (they are only records). As stated in the "WebLink: suttacentral: Najīrati Sutta (SN 1.76)": "Rūpaí jīrati maccānam், nāmagottaì na jīrati," or "material things decay and get destroyed, but nāmagotta do not decay."

- That is why someone with abhiñ̃n̄̄ powers can go back at any point in time to recall past events; also see, "Recent Evidence for Unbroken Memory Records (HSAM)."
- Whenever we do something (a sañkhāra), a "record" ("nāmagotta") of it is made. Thus for a given sentient being, a record of all activities from the beginning-less time survives and is one's nāmagotta. All previous lives and all activities of past lives are in that "record stream," like a movie reel (not physical, of course).
- Someone who has developed abhiññ̄a through anāriya jhānā can trace back that nāmagotta for several past lives. But with well-developed abhiññā powers, one can probe a much deeper history. A Buddha can trace back as far back as he pleases with astonishing speed. (Yet he could not see "a beginning' to any sentient being's nāmagotta). That is why there is no traceable beginning to the rebirth process.)

16. It is easier to explain this "nāmagotta" with an example. Let us take two popular US presidents, John Kennedy and Ronald Reagan. Their "physical bodies" are no longer with us, i.e., their " $\overline{\bar{u} p a " ~ o r ~ p h y s i c a l ~}$ bodies (which were sankhata (sankata in Sinhala)) decayed long ago. But their nāmagotta are with us to a certain extent. How much of their memories or "nāmagotta" remains with a given person depends on how closely they are associated with them. The moment we say "John Kennedy" or "Ronald Reagan," their picture comes to mind. Not only that, those who met them may remember that vividly and probably can recall that event just like watching a movie.

- Similarly, we can recall many of the "events" of our lives or parts of our "nāmagotta"; some young children can remember some events in their "nāmagotta" in their previous lives.
- What can be done with abhiñña powers is very similar. The abhiñ̃̃̄ $\bar{a}$ capabilities enormously stretch the memory or the ability to "look back" at past events in one's nāma gotta.

## Anatta Nature

17. We are subjected to suffering because we make sañkhāra (or plans,) and since they do not work out in the LONG RUN. Therefore, those sañkhāra lead to dukkha at the end, and thus to helplessness in the long run (anatta).

- But nāma gotta or other types of dhamm $\bar{a}$ does not lead to suffering. Therefore, dhamm $\bar{a}$ do not have the characteristics of anicca and dukkha.
- But there is nothing substantial to be had with dhamma $\bar{a}$, too; they are also anatta.

18. The Buddha's last words were, "vaya dhammā sañkhāra, appamādena sampādeta." Everything in this world (including sañkhāra) is dhammā. Only "sañkhāra are vaya dhammā", i.e., those that lead to one's demise (i.e., lead to adverse outcomes). Therefore, the Buddha instructed us to "sort out such 'san' without delay" ("san" "pādeta," which rhymes as "sampādeta").

- "Vaya" means destruction; here, it means leading to the destruction of one's future: sañkhāra are vaya dhammā.
- Sañkhāra are those these three types (mano, vacī, and kāya sañkhāra) that lead to "san" for extending saysāra; see, "What is "San"? - Meaning of Sansāra (or Samssāra)."
- Thus the Buddha was admonishing the bhikkhus that all sañkhāra are "vaya dhammä" (those leading to adverse outcomes), and therefore to comprehend what sañkhāra are.

19. In the "WebLink: suttacentral: Najirati Sutta (SN 1.76)," the nature of nāma gotta is clearly stated:

- "Rūpaì jīrati maccānaì, nāmagottaì na jīrati," or, "material things are subject to decay or jirati (pronounced "jeerathi") and death or destruction (maccanam; pronounced 'machchānam"), but nāmagotta do not decay.
- The "rūpa" of those two US presidents we mentioned earlier have decayed and gone. But their nāmagotta remain with us. We can access our nāmagotta with memory. Someone with abhiñ̃̃̄̄a powers can look at a complete nāmagotta not only spanning a current life but also going back to many lives. All of our nāmagotta, back to beginning-less time, are there whether accessed or not.

20. Dhammā are causes (energies) that we create with our minds with javana power (via abhisañkhāra.) Dhammā means "to bear." In fact, we create things that will bring NET suffering. Thus, they are without any substance. Nāmagotta and paññāti or concepts are also without any substance. They are all anatta. There is no point in "hanging on to them."

- Even Buddha Dhamma, which enables us to attain Nibbāna, should ultimately be abandoned (at Arahanthood). The Buddha compared Buddha Dhamma to a raft that one uses to cross a river. Once one crosses the river, there is no point in carrying the raft on one's back. So, even Buddha Dhamma is of value only until one reaches Nibbāna.
- Only Nibbāna, which is attained by "giving up EVERYTHING in this material world" is atta or "of value"; see, "Anatta - the Opposite of Which Atta?" and "Dasa Akusala and Anatta - The Critical Link."

More information on the connection between dhammā, kamma bīja, and paṭisandhi viññāna is at, "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections."

### 3.2.5 <br> Kamma are Done with Sañkhāra - Types of Sañkhāra

May 13, 2019; revised May 14, 2019; August 27, 2022
This replaces an old post in this section entitled, "Sañkhāra and Kammā, Viññāṇa and Kamma Bīaa." I have re-written it with a new title.

## Origin of the Words Sañkhāra and Sansāra

1. All kamma are done with sañkhāra. However, only abhisañkhāra leads to strong kamma that can fuel the rebirth process.

- It is important to realize that sañkhāra involves everything we do, to live in "this world" of 31 realms. These include breathing, walking, eating, and pretty much everything we do; see "Complexity of the Mind - Viñ̃̃āna and Sañkhāra."
- Anything anyone does, needs to start as a thought in one's mind. For example, to lift a leg, one's mind must decide on that first, even though it appears automatic. Anything one does, starts with a thought of "san," i.e., something to do with "this world"; see "San" and "List of "San" Words and Other Pāli Roots." All these belong to sañkhāra ("san" + "khāra" or action).
- Even an Arahant has to be engaged in sañkhāra until Parinibbāna or death of the physical body.

2. Sañkhāra becomes abhisañkhāra when acting with greed, hate, and ignorance; see, "Nibbāna - Is it Difficult to Understand?."

- The sansāric process or the rebirth process is fueled by abhisañkhāra. The prefix "abhi" means "strong."
- An Arahant does not generate abhisañkhāra, i.e., thoughts of greed, hate, and ignorance.
- It must be noted that an Arahant would not generate puññābhisañkhāra (puñña abhisañkhāra) but can do puñña kiriya; see, "Kilesa - Relationship to Akusala, Kusala, and Puñña Kamma."
- Kiriya means "actions" or "deeds" without the involvement of greed, hate, and ignorance.
- One's puñ̃n̄abhisañkhāra turns to puñña kiriya when one fully comprehends Tilakkhaṇa (anicca, dukkha, anatta).

3. Therefore, the sansāric process - or the rebirth process - is fueled by abhisañkhāra.

- The word saysāra comes from "san" + "sāra" where "sāra" means"beneficial"; see, "What is "San"? Meaning of Sansāra (or Samisāra)."
- One will have the perception that "this world is beneficial or fruitful" as long as one cannot grasp that most births in this world are filled with suffering.
- Even though some realms (like human, deva, and Brahma) may have long stretches of "pleasures", those are negligible compared to long stretches of suffering in the ap $\bar{a} y \bar{a}$ (the four lower realms including the animal realm).
- Sansāric process is fueled by (abhi)sañkhāra. This is why an Arahant will not be reborn in the 31 realms of this world. $\mathrm{He} /$ she would not generate abhisañkhāra.

## Connection Between Sañkhāra and Kammā

4. Kamm $\bar{a}$ is any action by us via body, speech, and thoughts (k $\bar{a} y a, v a c \bar{c}$, and mano kamm $\bar{a}$ ). Those three types of $k a m m a \overline{a r e}$ initiated by our thoughts, i.e., $k \bar{a} y a, v a c \overline{\text { a }}$, and mano sañkhāra.

- We can see that kammā and sañkhāra are closely related.
- The Buddha said, "cetanā hain, bhikkhave, kammain vadāmi", i.e., "Bhikkhus, I say kammā is intention." [WebLink: suttacentral: AN 6.63. Nibbedhikasutta] As we will see below, that intention is in sañkhāra, embedded in the types of cetasika (mental factors) as we will see below.
- "Intention" depends on the types of cetasika in a thought (citta). For example, in a thought with "greedy intention", will have the lobha cetasika, but it may also have other cetasika like issa (jealousy).

5. Let us take some examples to illustrate this relationship. If you swing your arm, that is a $\bar{a} y a \operatorname{kamm} \bar{a}$, i.e., that action involves moving a body part. That was initiated by kāya sañkhāra generated in mind.

- Now, if you swung your arm to get hold of a cup, that is a kammically neutral action (kammā) or just a sañkhāra. You did not do either a moral or immoral act. The intention was to grab a cup, which did not involve any sobhana or asobhana cetasika. That is called a kiriya (kriya in Sanskrit). [kiriya :[nt.] action; deed; performance.]
- On the other hand, if you swung your arm to hit someone, it was done with anger. So, the dosa cetasika (an asobhana cetasika) was in your thoughts. So, it was an apuññäbhi sañkhāra. It can also be called an akusala/apuñña kammā or an immoral deed.
- If you put your arms together to pay respects to the Buddha at a temple, that was done with saddh $\bar{a}$ cetasika (a sobhana cetasika), and thus it was a puñ̃āahhisañkhāra. It can also be called a kusala/puñña kammā or a moral deed.

6. We can see that all kamma involve the mind; they are initiated by sañkhāra.

- Mano sañkhāra are thoughts that come automatically to the mind when a sense object is experienced.
- Then if that object is of interest, we start generating conscious thoughts (speaking to ourselves)without talking and then we may speak out; both are vacī sañkhāra.
- If we then start moving body parts to respond, those are initiated by kāya sañkhāra.
- Also see "Sañkhāra - What It Really Means" and "Correct Meaning of Vacī Sañkhāra."

7. Thus it is important to note that kāya sañkhāra are also thoughts. They are responsible for body movements, i.e., kāya kammā. They are also responsible for making "bodily gestures" or "kāya viñ̃natti."

- In other words, all sañkhāra are generated by the mental body (gandhabba). It commands the brain to move body parts or to move lips and tongue to speak; see "Our Mental Body - Gandhabba" and other posts on gandhabba.
- Furthermore, k $\bar{a} y a \operatorname{kamma}$, vacī kammā, and mano kammā are all initiated by the respective types of sañkhāra: kāya, vacī, and mano sañkhāra.
- More information on these terms can be found at, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."

## Saǹkhāra and Kammā Can be Good or Bad

8. Therefore, sañkhāra can be understood in a deeper sense by realizing that types of sañkhāra generated are defined by the types of cetasika (mental factors) in one's thoughts.

- Some citta (thoughts) do not have either good (sobhana) cetasika or bad (asobhana) cetasika. Such a citta is said to have kammically neutral sañkhāra. Such kammically neutral sañkhāra involve only the types of cetasika like vedanā, sañ̃ña, and viriya that do not belong to either sobhana or asobhana categories.
- Kammically relevant sañkhāra (or abhisañkhāra) involve either sobhana cetasika (for kusala kammā) or asobhana cetasika (for akusala kammā).
- Therefore, it is easy to see that abhisañkhāra that involve sobhana cetasika are puñña abhisañkhāra or puñn̄ābhisañkhāra. Those that involve asobhana cetasika are apuñn̄̄bhisañkhāra; see, "Cetasika (Mental Factors)."

9. Knowing a bit of Abhidhamma can help clarify certain key dhamma concepts. It is not hard to learn. Since Abhidhamma was finalized after the Parinibbāna of the Buddha (see, "Abhidhamma Introduction"), these details are not in the Sutt $\bar{a}$.

- Now we can get a new perspective on cetasika, in terms of "san." As we know, "san" is what keeps us in the rebirth process or saimsāra; see, "What is "San"? Meaning of Sansāra (or Samisāra)."
- We can see that such asobhana cetasika are what give rise to "san" in apuññābhi sañkhāra, which leads to rebirth in the bad realms.
- On the other hand, sobhana cetasika are what give rise to "san" in puññābhi sañkhāra, which leads to rebirth in the good realms.

## Puññābhisañkhāra Are Also Done With Avijjā

10. In WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb6), the term "avijjā paccayā sañkhārä" in akusala-mūla Paṭicca Samuppāda (that leads to suffering) is explained as follows: "Tattha katame avijjā paccayā sañkhārā? Puññābhisañkhāro, apuññābhisañkhāro, āneñjābhisañkhāro, kāyasañkhāro, vacīsañkhāro, cittāañkhāro."

Translated: ‘What is avijjā paccayā sañkhārā? Puññābhisañkhāra, apuñn̄ābhisañkhāra, āneñjābhisañkhāra, kāyasañkhāra, vacīsañkhāra, cittāañkhāra." (Here, cittāsañkhāra is the same as manosañkhāra).

- It needs to be noted that these are all abhisañkhāra, even though the verse is simplified as "avijjāa paccayā saǹkhārā."
- There are two categories of sañkhāra mentioned there: one category refers to types of kamma accrued. The other refers to whether they are done by the body, speech, or the mind.
- Therefore, sañkhāra has a much deeper meaning than just "mental formations", even though that is better than the translation for viñãāna as consciousness.

## 11. A question may arise about how puñ̃ā̄̄hisañkhāra (or meritorious thoughts) arise with avijjā.

A simple answer is that until one FULLY comprehends anicca, dukkha, and anatta (i.e., that anywhere in this world of 31 realms is not devoid of suffering), one does even meritorious deeds with expectation of "good outcomes/ good rebirths" in this world.

Therefore, until one FULLY comprehends anicca, dukkha, and anatta, one WILL have avijjā even when engaged in "meritorious deeds".

## Do We Need to Avoid Good Sañkhāra (Puñña Abhisañkhāra)?

12. However, this does not mean we should stay away from puññābhi sañkhāra. We MUST engage in puñ̃ābhi sañkhāra to avoid rebirth in the bad realms and also to cultivate morality, and also to prepare the necessary environment (especially to be healthy and to avoid poverty).

- The Buddha has emphasized the need to engage in meritorious deeds (puñ̃āabhi sañkhāra) in many Suttā; see, for example, "WebLink: suttacentral: Sumana Sutta (AN 5.31)."
- Nibbāna is attained via realizing the fruitlessness in rebirth anywhere in the 31 realms. For that, one needs to comprehend anicca, dukkha, and anatta, and for that one needs to attain the correct mindset by engaging in puñ̃na kammā (puññābhi sañkhāra).
- Once one FULLY comprehends anicca, dukkha, and anatta (i.e., when one becomes an Arahant), one's puññābhi sañkhāra will turn into puñña kiriyā. This is a subtle point.

## Instead of Puñ̃āābhisañkhāra an Arahant will do Puñña Kiriyā

13. Once one FULLY comprehends anicca, dukkha, and anatta (i.e., when one becomes an Arahant), one's puññäbhi sañkhāra will turn into puñna kiriyā without kammic consequences. Thus one will do meritorious deeds without any expectations (this is what is meant by "viññạna nirodha" too).

- Then those meritorious actions will not lead to rebirth even in the "good realms." An Arahant does not wish to be reborn in any realm, because he/she has seen the "anicca nature" of all 31 realms. This is a subtle point.
- This last part may not be clear to everyone. This is the "previously unheard Dhamma" that is hard to grasp ("pubbe ananussutesu dhammesu" that the Buddha mentioned in the Dhammacakkappavattana Sutta).

### 3.3 Nibbāna

- Nibbāna - Is it Difficult to Understand?
$\circ$ The Four Stages in Attaining Nibbāna
- What Are Rūpa? (Relation to Nibbāna)
- Nirāmisa Sukha
- Does the First Noble Truth Describe only Suffering?
- Nirodha and Vaya - Two Different Concepts
- Nibbāna "Exists", but Not in This World

### 3.3.1 Nibbāna - Is it Difficult to Understand?

Revised December 6, 2016 (\#9); Re-revised December 20, 2016; November 22, 2018; January 3, 2019; June 5, 2022; September 17, 2022
Our distresses and sufferings are due to our defiled minds. As one purifies one's mind, one starts experiencing Nibbāna.

- I advise reading through any post one time without clicking on the links first. Once you get the main idea, the links can clarify the other related key concepts.
- Nibbāna may not be easy to attain, but it is easy to figure out what it is. You don't need complex concepts like emptiness (sunyātā) and Bodhi citta to describe or understand Nibbāna.

1. The Buddha said we suffer because of the defilements we have in our minds: greed, hate, ignorance, and other mental qualities that arise from them. Nibbāna has many synonyms, and "Nivana" ("cooling down") is one that conveys the above idea better; Nivana, which is also called "niveema" (子ిలోఅ) in Sinhala, conveys the same idea as nirāmisa sukha.

- As one moves away from hate, greed, and ignorance, one can feel oneself "cooling down" INSIDE. Nibbāna ("Nib"+"bāna", where "bāna" means bonds) and thus Nibbāna means to break free of bonds that make one bound to the 31 realms.
- I like the word Nivana or niveema because it conveys the benefits of the Path as one experiences gradual "cooling down" until it becomes complete at Nibbāna; see,"Three Kinds of Happiness - What is Nirāmisa Sukha?," "How to Taste Nibbāna," and "Learning Buddha Dhamma Leads to Nirāmisa Sukha."

2. To "cool down", we first need to know what is "burning" ("tāpa" in Pāli; pronounced "thāpa"); our minds are constantly burning due to greed, hate, and ignorance, and we don't even realize this; see the "Living Dhamma" section and specifically the post, "Satipatthāna Sutta - Relevance to Suffering in This Life."

- This "burning" is worse in the lowest four realms or the "ap $\bar{a} y \bar{a}$." Thus one needs to understand the first Noble Truth about suffering, to realize the value of Nibbāna. There are several posts at various levels on the real, deeper meaning of what the Buddha meant by "suffering in this world of 31 realms."
- Our sufferings are masked by the apparent sensory pleasures, which do not last. A Sotāpanna understands suffering better than a normal person, and as one gets to the higher stages of Nibbāna one will be able to see the meaning of the First Noble Truth even more clearly.

3. The key point is that one CAN start feeling "nivana" RIGHT NOW. Nivana is experienced by giving up the ten defilements (see, "Ten Immoral Actions (Dasa Akusala)"). One does not have to get rid of all of them at once, which is not advised either. One should get rid of the BIGGEST ones that can be easily removed.

- Killing, stealing, lying (and gossiping, slandering, verbally abusing), engaging in sexual misconduct, and being intoxicated (not just with alcohol or drugs, but also with wealth, power, etc.) are the first to be considered.
- Just abandon the relatively easy ones for a few weeks and experience the "nivana," the ease of mind, the "inner peace", that comes from that. That is the biggest incentive to continue on the Path.

4. One also needs to understand the relative kammic weights associated with dealing with animals and humans (and even among humans.) For example, it is very difficult to be born human; thus even saying a hurtful thing to a human (especially to an Ariya or a Noble One), could have a thousand-fold kammic weight compared to killing an animal; see, "How to Evaluate Weights of Different Kamma."

- Another key concept is that one does NOT need to worry about the past kamma. The role of kamma has been exaggerated; see, "What is Kamma? Does Kamma Determined Everything?." Nibbāna is not attained via the removal of kamma, but the removal of $\bar{a} s a v a \bar{a}$ or cravings; see "The Way to Nibbāna Removal of Āsavā."
- The main thing is not to repeat the same mistakes. The more one stays away from the ten defilements, it automatically BECOMES easier. It is like pushing a stalled car: initially hard, but it becomes easier when it starts moving.

5. Nibbāna is NOT removing everything from the mind, just removing the defilements: Nibbāna is rāgakkhaya (greed elimination), Nibbāna is dosakkhaya (hate elimination), Nibbāna is mohakkhaya (delusion elimination); those three are more synonyms for Nibbāna.

- Thus one sees Nibbāna with a thought (citta) that is devoid of rāga (greed), dosa (hate), and moha (delusion). This PURE MIND does not want to be burdened with a "material existence" anywhere in the 31 realms; see, "What are Rūpa? Relation to Nibbāna."
- By the way, citta is pronounced "chiththa"; see, "Pāli Glossary - (A-K)" and "Pāli Glossary - (L-Z)."

6. The suffering is a direct result of having a "material aspect" associated with the mind: that material body is subject to decay and death. The mind gets associated with a body that it gets "attached" to with greed, hate, and ignorance. If you look at the 31 realms of "this world" (see, "The Grand Unified Theory of Dhamma‘):

- It is clear that suffering is there in the lowest five realms - including the human realm - where all three (greed, hate, ignorance) can be present; the bodies of beings in these realms are generally denser and subject to decay and diseases. Of course, there is unimaginable suffering in the lowest four realms.
- However, the human realm (\#5) is unique, because one COULD attain Nibbāna as a human, even though they are also subject to bodily pains, decay, and diseases.
- In the deva lok $\bar{a}$ (realms 6-11), hate is not there and suffering is less. And the bodies of dev $\bar{a}$ are less dense and not subject to physical ailments (until death of course).
- In the Brahma lokā (realms 12-31), hate and greed are absent, and suffering is even less. They have very fine (less-dense) bodies and no physical ailments.

7. However, since ignorance is there in all 31 realms, a complete, absolute state of happiness is absent anywhere in the 31 realms. Even if one is born in a deva or Brahma world, one will eventually end up in the lowest four realms (unless one has attained the Sotāpanna or a higher stage of Nibbāna).

- The suffering is of course unimaginably intense in the lower realms.
- This is the key message of the Buddha: He said that suffering never ends as long as one returns to "this world of 31 realms" when one dies (i.e., unless one attains Nibbāna).
- Suffering ends withArahant's death; no more births in this world of 31 realms.
- However, one could get depressed thinking that Arahanthood is "annihilation"; but that is not true. One just needs to follow the Path step-by-step; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?" and "Mahā Cattārisaka Sutta (Discourse on the Great Forty)."

8. Therefore, one could visualize a gradual decrease in suffering as one gets rid of hate, greed, and ignorance in that order.

- And one CAN experience this happiness called nirāmisa sukha in this human life itself, all the way up to Nibbāna; see, "Three Kinds of Happiness - What is Nirāmisa Sukha." That is the uniqueness of human birth.

9. When the mind "starts thinking" about a given thought object (arrammana), say a visual object, it starts as "just seeing"; this is the citta stage. But within a fraction of a second, the mind starts adding defilements (based on greed, hate, ignorance), if that object is "of interest."

- It develops further thoughts defiled by greed, hate, and ignorance (possibly a combination) by going around and around that thought object and ends up in the "defiled thought" (viñ̃̄̄ana) stage even before one realizes it; see, "Amazingly Fast Time Evolution of a Thought (Citta)."
- This is also described in Paticcca Samuppāda; see, "Paticca Samuppāda - "Pati + ichcha" + "Sama + uppada"," and the links below that. Viññāna is a citta that is defiled by rāga (greed), dosa (hatred), and moha (ignorance).
- Pațicca Samuppāda, which is Buddha Dhamma, is discussed in detail in the series, "Paticca Samuppāda in Plain English."

10. When rāga, dosa, and moha are removed from the mind, cittā (plural of citta) become pabhassara (bright); there is no more defilements there clouding the citt $\bar{a}$. At this stage, it is said that the pure citta "sees Nibbāna"; see, "Pabhassara Citta, Radiant Mind, and Bhavanga."

- After one attains Nibbāna with one citta, the cittā fall back to the "normal state" and the person lives like a normal human (but without doing anything with greed, hate, and ignorance) until the kammic energy of the kamma seed that started the present life is exhausted.
- At death (called Parinibbāna), the mind of an Arahant does not grab (upādāna) another kamma seed (even if there may be many kamma seeds), and thus there is no further rebirth. The mind becomes free of a "body" that can be subjected to decay and death. That is Nibbāna, "complete Nivana" or "complete cooling down."

11. We are bound to this rebirth process due to two causes: $a v i j j \bar{a}$ and tanhh $\bar{a}$. The first version of tanhh $\bar{a}$ is lobha, the strong greed, which could easily turn to dosa (strong hate) when someone else gets in the way. Thus those two causes of $a v i j j \bar{a}$ and taṇha effectively become three: lobha, dosa, and moha.

- Even though dosa arises due to lobha, dosa brings about the worst vipāka: rebirth in the niraya (hell), where the suffering is optimum. Thus dosa has origins in the four greed-based "somanassa sahagata, dițthi sampayutta citta."
- When dittthi is removed at the Sotāpanna stage, all four greed-based citta stop arising. Thus at that stage, lobha and dosa become rāga and patigha, which are removed successively at the Sakadāgāmī and Anāgāmī stages. Avijjā keeps reducing at each stage of Nibbāna and is removed at the Arahant stage.

12. When rāga, dosa, and moha cannot arise in the mind, that mind (and thus cittā) are devoid (suñna) of them. That is the purified state of a citta, or a pabhassara viñ $\tilde{n} a ̄ n a$ (consciousness devoid of defilements,) i.e., pañ̃̃̄ā (wisdom). See, "Pabhassara Citta, Radiant Mind, and Bhavañga."

- Anidassana implies something that is not visible. Thus, anidassana viñ̃ñaña means "viññāṇa cannot be seen." See, "Anidassana Viññāna - What It Really Means."
- The forefathers of Mahāyāna Buddhism could not grasp the concept of Nibbāna, so they came up with misleading descriptions including that of Sunyata: see, "What is Sunyata or Sunnata (Emptiness)?."
- Even among the current Theravāda Buddhists, there are many debates about what is meant by Nibbāna. That is sad to see.

13. When rāga, dosa, and moha are removed, a citta stops going around and around a given thought object (ārammaña). This "wheeling" is what fuels the samisāric journey. Thus stopping this process is called "taking off the wheels of the samisāric vehicle."

- The Pāli (and Sinhala) word for a vehicle is "riya," and stopping of the "riya" is called "Ariya"; one who has taken the wheels off the vehicle for the samsāric journey is called an "Ariya." Thus contrary to popular usage, "Aryan" (with racial implications) has nothing to do with a Noble Person; it is Ariya.
- Therefore, it is clear that "Ariya" has nothing to do with a race, "Arryan."
- Furthermore, "viriya" (" $v i$ " + "riya") means staying away from the "wheeling process" (and the effort to do so). Therefore, viriya means actively engaging in Satipaṭthāna and $\bar{A} n \bar{a} p a \overline{n a s a t i}$; see, "Satipatthāna Sutta - Relevance to Suffering in This Life."

14. Anyone who has at least attained the first stage of Nibbāna, i.e., Sotāpanna, can be called an Ariya, or a Noble Person. This is because the "āsava" or deep-seated cravings that a Sotāpanna have been permanently removed.

- All the $\bar{a} s a v \bar{a}$ are removed at Nibbāna; thus "Āsavakkhaya" (elimination of $\bar{a} s a v \bar{a})$ is another synonym for Nibbāna. People who had been on the lowest social ladder or lowest caste at the time of the Buddha could become Ariyā or Noble Persons.

15. When one sees Nibbāna, one's mind does not crave anything "in this world" of 31 realms. There is nothing for the last citta (cuti citta, pronounced "chuthi chiththa") of this life (at death) to grab (nothing to upādāna) and to start a new birth in "this world", and the mind becomes free.

- The mind becomes PERMANENTLY pure and permanently detached from any type of physical body, dense or fine.

16. Thus, an Arahant will not be reborn in "this material world" of 31 realms (see "The Grand Unified Theory of Dhamma"), i.e., one attains Parinibbāna. He/she is simply "gone" from "this world" of 31 realms. The suffering stops permanently.

- Thus, it is quite clear WHAT Nibbāna is: it is stopping the rebirth process. What is hard to understand is WHY stopping the rebirth process can relieve one of all suffering.
- No matter how much hardship one has endured, one likes to live. This is true for a human or a lowly worm. For any living being, the most precious thing is its life. When one starts understanding the "big picture of the Buddha," one will slowly start seeing the dangers of staying in this endless rebirth process.

Other analyses of Nibbāna can be found in, "Nirodha and Vaya - Two Different Concepts" and "Difference Between Giving up Valuables and Losing Interest in Worthless",

Continue to "What is "San"? Meaning of Sansāra (or Samisāra)."

### 3.3.2 The Four Stages in Attaining Nibbāna

## Revised February 4, 2016; revised October 25, 2017; August 28, 2022

1. The 31 realms discussed in " 31 Realms Associated with the Earth" are divided into three main categories based on the sense faculties and the level of suffering:

- The lowest eleven realms belong to the "kāma loka" where all five physical sense faculties are present; "ka$m a$ " is indulging in the five senses.
- Beings in the next sixteen realms have only two physical senses: vision and hearing. They have less-dense bodies, and this subset of realms is called the rūpa loka. In rūpa loka, there are mainly jhānic pleasures
corresponding to the first four mundane $j h \bar{a} n \bar{a}$ that are attainable by humans. There is relatively less suffering in the rūpa lok $\bar{a}$.
- The highest four realms correspond to the higher arūpa jhānic states (jhānic levels five through eight) that are also attainable in the human realm. Thus there is mainly jhānic bliss in these realms and relatively less suffering. These realms are commonly known as arūpa loka, because those beings have only a trace of matter with no physical senses and only the mind.

2. The lifetimes of the beings in the rūpa loka are very long, and those in the arūpa loka are even longer. The lifetime in the highest arūpa lok $\bar{a}$ is so long ( 84,000 eons or maha kapp $\bar{a}$ ) that it is beyond comprehension to us.

- The ancient yogis mistakenly thought that such realms correspond to Nibbāna. The Buddha (or rather Siddhartha Gotama) attained the eighth jhāna months after leaving the palace as an ascetic. But he realized that it would only lead to rebirth in a Brahma realm that still has a finite lifetime.
- Even though very long in the number of years, that lifetime is insignificant in the samināric time scale (see, "Samsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory,") which is infinite (see, "Infinity = How Big Is It?.")

3. One in the human realm can experience the jhānic pleasure of both rūpa and arūpa lok $\bar{a}$ by attaining such jhānic states via Samatha meditation.

- Furthermore, it is possible to gain access to both rūpa lok $\bar{a}$ and arūpa lok $\bar{a}$ in the next birth by developing the corresponding $j h \bar{a} n \bar{a}$ and by being in a jhānic state at death. As I understand, this is the goal of most Hindu practices.

4. The Buddha pointed out that even the highest jhānic state is temporary (even though long), and once that kammic energy is exhausted, it is possible to be born in any of the 31 realms. Unless the being has attained at least the Sotāpanna stage, it is guaranteed that rebirth in one of the lowest realms is inevitable at some point in the future.

- He said that many of the beings still in the rebirth process (saimsāra), i.e., we all, are likely to have been born in the higher arūpa lok $\bar{a}$, as well as the lowest realm (niraya) in the past. The samisarra is that long.

5. From this discussion, it is clear that the actual suffering is mostly in the ka $\bar{a} a$ lok $\bar{a}$. But the problem is that beings spend the most time in $k \bar{a} m a$ lok $\bar{a}$ in their beginning-less journey in the samsāra.

- The Buddha gave a simile to describe this situation. We leave home only to go on short, or may be even extended, trips; but we always come back home. The Buddha said that the four lowest realms (the $a p \bar{a} y \bar{a}$ ) are the home base for most living beings.

## Suffering in the Kāma loka

6. Suffering in the kāma lok $\bar{a}$ ranges from unfathomable suffering in the lowest realm, the niraya (hell), to relatively little suffering and the highest sensory pleasures in the deva lok $\bar{a}$ (the highest six realms in the ka $\bar{a} a$ loka).

- Just below the deva lok $\bar{a}$ is the human realm with both suffering and sense pleasures at about equal levels.
- Below the human realm, there is peta loka (hungry ghosts), asurā, animal realm, and the nirayā, and the level of suffering generally increases in that order.

7. The lowest four levels in the $k \bar{a} m a$ loka are collectively called the $a p \bar{a} y \bar{a}$ (the undesirable realms). More than $\mathbf{9 9 \%}$ of the beings are trapped in these four realms. The problem is that once born in any of those four realms, it is virtually impossible to get out.

- This is because these realms are such that one is forced to commit apuñ̃̄ābhi sañkhāra or evil actions (see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka") by the very nature of that existence. For
example, in the animal realm, most animals have to kill others for survival. In the niraya, virtually every thought is of hate because of the incessant suffering.
- Still, when we analyze Abhidhamma, we can see that the javana of the citta are much less potent for animals. Thus the kammic power of those actions is relatively small compared to the kammic power of such actions by humans. This is an important point that I wish to discuss in the future.

8. Just as it is likely that we have been born in the higher rūpa lok $\bar{a}$ in the past, it is even more certain that we ALL have been in the $a p \bar{a} y \bar{a}$. Luckily we do not remember those past lives.

- But beings in certain realms (particularly the peta realm) remember their past lives, increasing the level of suffering.

## Why We Need to Strive Now

9. From the above discussion, it is clear that most suffering is in the four lowest realms, below the human realm, which is the fifth realm. Essentially, there is relatively less suffering above the human realm, starting with the deva loka, which is the highest realm in the kāma loka.
10. Even though the suffering is highest in the lower four realms, the beings there are helpless to do anything about the suffering. Their limited minds cannot grasps the causes that lead to suffering.

- Many people wrongly believe that one needs to feel suffering to understand it and to get an incentive to seek Nibbāna. But when one suffers (say, when one gets too old) it is NOT possible to contemplate the deep concepts of Dhamma.
- The Noble truth on suffering needs to be seen with wisdom (pañ̃̃̄), not via feelings (vedanā), i.e., by understanding the complete worldview AND the Three Characteristics of this "wider world": anicca, dukkha, anatta; see, "Anicca, Dukkha, Anatta."

11. Beings in the realms above the human realm, the 26 realms starting with the deva realms, do not even feel much suffering. This is the other extreme; there is no incentive for them to be concerned about suffering.

- But when they approach the end of their lives, they realize that and become distraught and fearful.

12. Thus, it is only in the human realm that one is at least exposed to suffering, even if one may not be subjected to much suffering. Furthermore, the human mind is the best suited for grasping the true nature of "this world of 31 realms", i.e., the Three Characteristics (see, "Anicca, Dukkha, Anatta").

- This is why the Buddha said that a human should not miss this opportunity to attain Nibbāna.

## The Four Stages of Attaining Nibbāna

13. The first stage of Nibbāna is attained by "seeing" (not just reading about, but grasping) the true nature of existence: anicca, dukkha, and anatta.

- Thus one needs to first learn from someone (like from this website) the nature of existence with the 31 realms, the aimless wandering of a being through endless rebirths (saimsāra), the reasons for the rebirths, etc.
- Thus the key areas to understand are the Three Characteristics, the Four Noble Truths, and the Noble Eightfold Path. No one but a Buddha is capable of finding these, and this is why it is important to have exposure to the PURE DHAMMA.

14. At the first stage (Sotāpanna or Stream Enterer), one partially comprehends the validity of the Buddha's world view. This is called attaining Sammā Ditṭhi (elimination of defilements through clear vision/understanding) to a significant extent.

- He/she understands the "true nature" of existence: significance and the true meaning of the Three Characteristics of Existence (see "Anicca, Dukkha, Anatta").

15. The realization that it is not worthwhile or fruitful to stay in any of the 31 realms, in the long run, makes one morally conduct oneself. One's mind decide it is not worthwhile or beneficial to do those actions that destine oneself to birth in the lower four realms.

- This realization leads to a Sotāpanna phala citta (one thought -moment of realizing the Sotāpanna stage). When that is achieved, one will never again be reborn in the lower four realms ("free of suffering in the apāy $\bar{a}$ forever.") That is explained in "Akusala Citta - How a Sotāpanna Avoids Apayagami Citta."

16. At this stage, one has realized the First Noble Truth of suffering (dukkha), and one earnestly starts on the Noble Eightfold Path. He still has greed and hate left in him to some extent, but at the next stage (Sakad $\bar{a} g \bar{a} m \vec{l}$ ), he loses more of the strength of such greedy or hateful thoughts.

- A Sakadāgāmī is not fully released from the kāma loka since he/she will be born in the deva loka (but not in the human realm).
- In the deva loka (and in the Brahma realms above that where a Sakadāgāmī can be born subsequently), the bodies are not subjected to diseases. Thus a Sakadāgāmī is said to be "healthy forever."

17. When the third stage of $\operatorname{An} \bar{a} g \bar{a} m \bar{\imath}$ (Non-Returner) is attained, one loses any desire to be born in the kāma loka. Then greedy or hateful thoughts belonging to the kāma loka cannot arise.

- Thus, he/she will be born only once more in a higher Brahma world reserved for the Anāgāmis.

18. All through these three stages, avijj $\bar{a}$ or ignorance gradually diminish. But it is completely removed only at the Arahant stage.

- Once the Arahant stage is reached, the mind becomes pure and is incapable of desiring anything "in this world of 31 realms." Thus there is no more rebirth, and one attains the perfect happiness at the peak of nirāmisa sukha.

Also, see "Nibbāna - Is it Difficult to Understand" and "The Way to Nibbāna - Removal of āsavas."

## Why Living a Moral Life Would Not Prevent a Birth in the Four Lower Realms

19. We desperately cling to "things in this world" because we perceive that lasting happiness can be achieved. We crave sensory pleasures. As mentioned before, nothing or no one is holding us in this world of 31 realms. We cling to existence in these realms like an octopus grabbing its prey with all eight legs.
20. Many Buddhists (who have not yet comprehended the anicca nature) like to stay in this world a bit more. They do not realize the level of happiness associated with the Nibbānic bliss; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?."

- Some Buddhist monks even today give a popular blessing like the following. "May you be reborn in prosperous (deva or human) realms and then attain Nibbāna." Even they do not understand the permanent happiness associated with Nibbāna or the possibility of much suffering in the next birth.

21. The danger in such thinking is due to the following reason. We all have done good and bad deeds in our lives before and have acquired uncountable kamma seeds, both good and bad. See, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."

- At death, any of those seeds can bear fruit. If it is a good kamma seed, one will get a good birth, but if it is a bad kamma seed one will get a bad birth.

22. Our future births are not necessarily determined by how we live this life because we have done many good and bad kamma in previous lives.

- This is why the Buddha said that even if one lives a perfectly moral life he cannot say that one will get a good rebirth UNLESS one has attained at least the Sotāpanna stage. A Sotāpanna has made ineffective all those bad kamma seeds that could give birth in the lower four realms.
- The Buddha also said that even if one lives immorally, that does not necessarily lead to a bad life in the next birth unless it is an anantariya kamma. (Ānantariya kamma is an extremely bad kamma, like killing one's parents.)
- However, those bad acts will bear fruit at some point in the future. It is just that there are many good seeds as well as bad seeds with any lifestream. See, "What is Kamma? Is Everything Determined by Kamma?."
- Thus the goal of this life should be to attain at least the Sotāpanna stage of Nibbāna.

A different analysis of Nibbāna can be found in "Difference Between Giving up Valuables and Losing Interest in Worthless",

Next, "Nirāmisa Sukha (Happiness Arising from Dissociating from the 31 realms)", ......

### 3.3.3 What Are Rūpa? (Relation to Nibbāna)

## Revised May 25, 2018; February 19, 2020; February 16, 2022

1. In Buddha Dhamma, everything in "this world" of 31 realms can be put into two categories: mana or mano (mind) and rūpa (material form).

- The mind is citta (thoughts) and the mental properties in the thoughts, cetasika.
- Everything else is $r \bar{u} p a$ (material forms).

2. Now let us look at $r \bar{u} p a$ : Many people think $r \bar{u} p a$ is just the body or "material things." A better translation for rupa is "matter and energy." As stated in \#1 above, everything else in the 31 realms that is not citta or cetasika is rūpa.

- There are five types of $r \bar{u} p a$ that we experience with our five senses: With the eye (cakkhu), we experience vanṇa rūpa (whatever that is visible.) We experience sounds (sadda) with ears (sota) and smells (gandha) with the nose (ghāna.) Taste (rasa) is experienced with the tongue (jivhā) and the touch (photthabba) with the body (kāya.)

3. We can see that smells are due to tiny material particles that enter the nose. The taste is also due to food and drinks that touch the tongue; touch is also contact between "material things."

- But what about visible objects? We need light to see any objects; without light, we cannot see. Thus "seeing" involves matter and energy. Same for sound. Thus vanṇa rūpa (or varna rūpa) are really "matter and energy", which in the end is just energy. Since the turn of the 20th century, science has confirmed that matter is just energy: they are related by Einstein's famous formula of $\mathrm{E}=\mathrm{mc}^{2}$.
- It is important to realize that what is meant by "cakkhuñca paticca rūpe ca uppajjati cakkhu viññanam." That means the light impinging on the eye indriya to give us the sensation of vision. Thus, in vaṇ̂na (also called varna or rūpa rūpa), sadda, gandha, rasa, and phoṭthabba (the five senses), rūpa are really types of energy or particles.
- Modern science now agrees that there is no distinction between matter and energy. However, matter/energy is created by the mind (as "dhammā.") See, "Manopubbangamā Dhammā..."
- Matter above the bhūta stage will eventually be destroyed in the "loka vināsa" in a supernova type explosion. See, "Sansāric Time Scale, Buddhist Cosmology, and the Big Bang Theory."

4. Thus the rūpa can vary in "density" from almost pure energy to the solid objects that we can see with our eyes.

- They go through three stages: At the "gati" stage, they overlap with energy; in the "bhūta" stage, they are more solidified but the human eye still cannot see (this is why some beings that the humans cannot see are called "bhūta" in Pāli or Sinhala); it is only in the "dhātu" stage that the human eye can see; see, "The Origin of Matter - Suddhatthaka."
- At Parinibbāna (death of an Arahant), the mind is not attached to a rūpa in any of the three forms: dhātu, bhūta, or gati.

5. When one is born anywhere in the 31 realms, it is the viññāna (impure consciousness) that keeps the mind bound to a material body. As the purity level of the mind goes higher one moves up from the lower realms with dense bodies to higher realms with less dense bodies.

- In the lower realms (at or below the human realm, which is the fifth realm), the mind is normally attached to a dense body that the human eye can see. This is dense dhätu form.
- In the deva lok $\bar{a}$ (realms 6-11), the bodies are finer (subtle.) Their minds are devoid of hate and thus are purer. In the realms 6-11, the bodies are made of $r \bar{u} p a$ still in the "dhātu" form, but less dense.
- The minds are devoid of both hate and greed, and are thus, are purer in the rūpa loka and arūpa loka.
 the "bhūta" form.
- In arūpa lok $\bar{a}$ (realms 28-31) there is no rūpa even in the sense of bhūta. But the four mahā bhūta are still associated with those being's "gati" (see, Kevaddha Sutta in Dīgha Nikāya.) In those realms, $r \bar{u} p a$ can be thought of as indistinguishable from energy.
- When the mind becomes purified, which is the viññāna of an Arahant (also called paññ̄a). Here there is no association of the mind with even fine rūpa associated with "gati." The mind completely detaches from $r \bar{u} p a$. The mind becomes pure and free. When one attains Aranthood, one still lives with the "solid body" of a human being until death. At Parinibbāna, the mind becomes completely free of rūpa. See, "Pabhassara Citta, Radiant Mind, and Bhavanga."

6. At a deeper level, the anicca nature, i.e., our inability to maintain anything to our satisfaction, is based on the fact that any $r \bar{u} p a$ is subjected to not only decay (impermanence) but also to unexpected change (viparinama nature).

- This fact is embodied in the Second Law of Thermodynamics; see, "Second Law of Thermodynamics is Part of Anicca."

7. Thus to attain Nibbāna is to attain the perfectly purified mind, which refuses to be burdened with a physical body that leads to decay and rebirth repeatedly (and thus to dukkha).
8. In the 31 realms, one is born with a dense body ( $k \bar{a} m a ~ l o k a$ ), fine-material body (rūpa loka), or only a trace of "matter" in the form of "gati" (arūpa loka). When the mind becomes free of a "body" anywhere in the 31 realms, that is Nibbāna. This is another way to understand Nibbāna.
9. In Buddha Dhamma, any given thing or concept can be looked at from many different angles. They are all consistent. It is a complete "world view." Some people think, why do we have to worry about 31 realms, etc., but the world is very complex. Scientists are just beginning to appreciate this complexity.

- The amazing fact is that the Buddha discerned all this with his mind. Furthermore, he was able to present it all in a coherent manner.

10. Please re-read and contemplate the above. In the long run, it will be very helpful. If you do not really understand it now, do not worry. You will be able to understand more when you become familiar with other concepts discussed in other posts. Everything at this site is inter-connected. It may take some time to "fill in the blanks."

More details at, "Nāma \& Rūpa to Nāmarūpa."

## Nirāmisa Sukha

Revised September 15, 2017; July 1, 2018; June 15, 2020; September 17, 2021; rewritten October 15, 2022

Sāmisa, nirāmisa, and nirāmisatara are qualities associated with kāma loka, above kāma loka, and Nibbāna.

## Sāmisa, Nirāmisa, Nirāmisatara

1. Those three terms describe various qualities associated with kāma loka, above kāma loka (Brahma loka), and Nibbāna.

- The basic concepts can be understood by looking at the three types of sukha. See "Three Kinds of Happiness - What is Nirāmisa Sukha?"
- Thus sāmisa sukha is the pleasure that arises while enjoying all five sensory inputs, particularly those associated with taste, smell, and body touch. Those are present only in kama loka, which includes the six Deva realms.
- There is better happiness in giving up sensory pleasures and getting to jhāna. That is nirāmisa sukha experienced in rūpāvacara Brahma realms. Those are temporary for anāriya versions and permanent for Ariya (Noble) versions.
- The ultimate nirāmisa sukha is nirāmisatara. It is reached at the Arahant stage.
- The "WebLink: suttacentral: Nirāmisa Sutta (SN 36.31)" describes various aspects of the three terms in detail. Let us go through the sutta.

## Nirāmisa Sutta (SN 36.31)

2. Nirāmisa Sutta discusses several aspects of sāmisa, nirāmisa, and nirāmisatara. Those are pīti (joy,) sukha (happiness,) upekkhā (neutral mindset,) and vimokkha (freedom/liberation.) Let us quickly discuss what these entities mean.

- As discussed in "Three Kinds of Happiness - What is Nirāmisa Sukha?" pīti and sukha are two mental factors (cetasika.) Sukha is a type of vedanā.
- Upekkhā means neutrality.
- Vimokkha means transcending some state or overcoming that state, i.e., freedom/liberation from that state.
- In general, Nibbāna is the release from this world, and the world consists of kāma loka, rūpa loka, and arūpa loka. But pīti and sukha are not present in certain higher realms, particularly in arūpa loka.
- I will translate the descriptions of each category.

## Sāmisa, Nirāmisa, and Nirāmisatara Categories for Pīti and Sukha

3. Pīti and sukha are fully experienced in the kāma loka and are associated with the five types of kāma guña. They are associated with sights, sounds, tastes, smells, and bodily contacts. See "Kāma Guna - Origin of Attachment (Tanhā)" and "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda." [guna : [m.] virtue; quality; a cord or string; a bow-string; (with numerals: diguṇa = twofold).]

- Thus, pīti and sukha arising due to contacts with eyes, ears, tongue, nose, and the body are sāmisa pīti and sukha.
- When one transcends the $k \bar{a} m a$ loka and enters the first or the second $j h a \bar{a} n a$, a different kind of $p \bar{t} t i$ is experienced in those two jhānās. They are jhāna factors (jhānañga) and are of "higher quality." That is nirāmisa pīti.
 sukha experienced in the first three $j h a \bar{a} \bar{a} s$.
- The ultimate versions of pīti and sukha (nirāmisatara pīti and sukha) are reached at the Arahant stage.

## Sāmisa, Nirāmisa, and Nirāmisatara Categories for Upekkhā

4. When sensory contacts with eyes, ears, tongue, nose, and the body lead to a "neutral state of mind" that is sāmisa upekkhā.

- When a "neutral state of mind" is reached at the fourth jhāna (after overcoming nirāmisa pīti and sukha; see \#3 above) that is nirāmisa upekkhā.
- The ultimate version of upekkhā (nirāmisatara upekkhā) is reached at the Arahant stage.

## Sāmisa, Nirāmisa, and Nirāmisatara Categories for Vimokkha

5. When one transcends the kāma loka and enter rūpa loka (i.e., rūpāvacara jhāna) that is liberation from the kāma loka. In the sutta this is expressed by "Rūpappatisaminutto vimokkho sāmiso vimokkho" or "entering the rūpa loka is sāmiso vimokkho."

- Nirāmisa vimokkha is attained when one overcomes the rūpa loka and enters arūpa loka (i.e., arupāvacara jhāna.) That is liberation from the rūpa loka and entering the higher arūpa loka. Suffering is even less there.
- But the "ultimate release from all suffering" is with the Arahanthood. That is nirāmisatara vimokkha.
- What we discussed above is the essence of the Nirāmisa Sutta (SN 36.31.)

## Discussion

6. The Nibbānic bliss (nirāmisatara pīti, sukha, or upekkhā) is the absence of both $\bar{a} m i s a$ and nirāmisa sukha.

- There are no words to describe the "state of an Arahant" after Parinibbāna. They will not be reborn in ANY realm of this world. All we can say is that there will be absolutely no suffering after Parinibbāna. Ven. Sāriputta explained that in the "WebLink: suttacentral: Nibbānasukha Sutta (AN 9.34)."
- The status of an Arahant is not understandable to those just starting on the Path. It is better not to think that far at the beginning because that could lead to confusion.
- Further information is in "WebLink: suttacentral: Pathamavibhañga Sutta (SN 48.36)."

7. The Buddha never said there is no sāmisa sukha/pīti (sensory pleasure/joy) to be had in this world. The only reason people cling to this world is BECAUSE of the sensory delights available.

- Buddha taught that such sensory pleasures are short-lived and lead to harmful consequences in the future. Even if one inherits a fortune and lives in luxury the whole life, suffering is inevitable in the next life or the next life. The real suffering (dukkha) is in the four lowest realms (apāy $\bar{a}$ ).
- We all live with a baseline "chronic headache" that we don't even realize. We have gotten used to it and don't even realize we have headaches. Only when that ever-present "stress" goes away, that one starts feeling the "reduced stress" of nirāmisa sukha. That is the real inspiration for trying to attain the higher stages of Nibbāna.

8. It is essential to realize that nirāmisa sukha cannot be attained by "just giving up things" or by leaving everything behind and going to seclusion. Some yogis (even today) cultivate $j h a \bar{n} a$ by "hiding from sensual pleasures in jungles." But any jhāna cultivated without comprehension of the Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa are mundane (anāriya) jhāna.

- Such yogis will be born in a Brahma realm and will enjoy nirāmisa sukha/pīti until the end of that existence. After that they can be reborn in any realm, because they are not released from even the apāyās.
- Only when one gets to the Sotāpanna stage by comprehending the Four Noble Truths/Paticca Samuppāda/Tilakkhaṇa that one will be free from the apāyās.
- Thus, "giving up worldly things" needs to come through a proper understanding of the fundamental nature of "this world." Many people gave up worldly things and became bhikkhus, but only after seeing the fruitlessness of craving for material things.

9. The mind's nature to see the benefit or pleasure of something before embracing it.

- One may force the mind to "forcibly give up" some sensory pleasures, but one cannot sustain that effort. "Giving up" happens automatically with the realization of anicca/anatta nature. See, "
- The mind has to "see" that there is a better option than the sāmisa sukha or sensory pleasures. When one starts on the Path and living a moral life, one will gradually see the nirāmisa sukha emerge.

10. The Buddha gave a simile to explain this effect. When people took to the oceans to look for new lands in the old days, they took caged birds. When they got lost, they released a bird. The bird would fly around and return to the ship if it did not see land.

- The same is true for the mind. It will not latch on to something new (nirāmisa sukha) unless it is better than the one it already has (sāmisa sukha).
- The points in \#9 and \#10 are discussed in the "WebLink: suttacentral: Cūladukkhakkhandha Sutta (MN 14)".

### 3.3.5 Does the First Noble Truth Describe only Suffering?

Revised October 24, 2018; re-written August 5, 2019; revised July 28, 2022

## Difference Between Dukkha and Dukkha Sacca

1. Buddha Dhamma describes nature's laws. Many think that dukkha Sacca (the First Noble Truth, pronounced "dukkha sachcha") says everything is suffering. That is not true; there is a lot of apparent happiness, which makes people unaware of the hidden suffering until it is too late.

- The key is to develop pañ̃̃̄̄ or wisdom to see the suffering hidden in sensory pleasures.
- That is why Noble Persons consider sensory pleasures as suffering and painful feelings as acute suffering! I highly recommend reading the "WebLink: suttacentral: Verses of the Elder Sumedhā" utterances by an Arahant bhikkhuni. The following verse is among many insightful verses:
"Sensual pleasures are like the stake of a spear, a disease, an abscess, a calamity, an affliction; Like a fire pit, the root of calamity, fear, and destruction."
- One does not necessarily need to feel pain/suffering to understand the dukkha sacca, even though that may motivate one to investigate.

2. There is a difference between suffering (the feeling or vedan $\bar{a}$ ) and the ability to understand the causes for it (pañ̃̃̄̄ or wisdom.) The latter can lead to future suffering, and that is what the First Noble Truth explains.

- Pāli word for suffering is dukha. On the other hand, dukkha is $d u k h a+k h a$ or the "removal of dukha" in the sense that there is dukha in the world, but it can be overcome. Thus, in most places in the Tipitaka, dukkha conveys "suffering" but implies that it can be overcome. [khaya or kha means removal]
- Dukha (suffering) is the opposite of sukha (pleasure). That is in several sutt $\bar{a}$. For example, in the "WebLink: suttacentral: Bhāra Sutta (SN 22.22)":
"Bhārā have pañcakkhandhā,
bhārahāro ca puggalo;
Bhārādānamं dukham loke,
bhāranikkhepanaì sukhaì."
Translated: "The five aggregates are burdens,
The burden-carrier is the person; Carrying the burden is suffering in the world, Laying the burden down is blissful."
- Of course, the word dukkha appears in most sutta because that is what Buddha Dhamma is all about, i.e., the removal of suffering.

3. We do not realize that the five aggregates are burdens. We like our bodies and mind-pleasing objects in the world (rūpakkhandha). We crave what we experience with the mind (aggregates of vedana, sañ $\tilde{n} \bar{a}$, sañkhāra, and viññāna).

- There are bouts of happiness everywhere. If everything FELT LIKE suffering, everyone will be seeking Nibbāna. It is hard for people even to see the real suffering out there.

4. Apparent pleasures mask the pain and suffering we experience. In the HUMAN REALM, suffering and happiness exist; one can experience both.

- In the realms higher than the human plane, suffering is relatively much less, which is why it is hard for devās to even think about Nibbāna. However, even those devās and Brahmā end up in the lowest four realms. Of course, each birth in any realm ends with death, which is unavoidable as long as one is in the rebirth process.
- Beings in the lowest four realms (apāy $\bar{a}$ ) are the ones who experience a lot of dukha. Of course, they have no idea about the Dukkha Sacca. The key point is that each living being spends a lot of time in the ap $\bar{a} y \bar{a}$ compared to other realms in the rebirth process, see, "Rebirth - Connection to Suffering in the First Noble Truth."
- That is why the rebirth process is filled with suffering. The good news is that suffering can be stopped.

## What is the Noble Truth of Dukkha?

5. Let us see how the Buddha described the First Noble Truth on suffering in the Dhamma Cakka Pavattana Sutta:
"Idaì kho pana, bhikkhave, dukkhamं ariyasaccami-jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maraṇampi dukkham், appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampiccham na labhati tampi dukkhai்-saìkhittena pañcupādānakkhandhā dukkhā." [sañkhittena means being overthrown by defilements]

- Let us go through this "definition" of dukkha step-by-step.

6. In the first part, it says, "jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maraṇampi dukkhamं..."

Translated: "birth is suffering (that can be overcome). Getting old is suffering (that can be overcome). Sickness is suffering (that can be overcome). Death is suffering (that can be overcome)..."

- Other than "birth," the others (getting old, sickness, and death) are associated with suffering.
- However, the other three types of inevitable suffering are attached to every birth.
- Furthermore, the other three types of suffering cannot be eliminated without stopping birth, i.e., the rebirth process.
- Even though this is easy to see logically, understanding requires much more contemplation.

7. The Buddha clarified dukkha in the next verse, where he explicitly said: "appiyehi sampayogo dukkho, piyehi vippayogo dukkho." That means, "it brings sorrow to associate with persons/things one does not like. It also brings sorrow when one dissociates from people/things that one likes."

- We all know the truth of this first hand. It is unpleasant to associate with people one does not like and have a job that one does not like, etc.
- Of course, the reverse is true too: "it brings sorrow when a loved one has to depart, and it also to lose a job or an object that one likes."

## Dukkha Arises Due to Anicca Nature

8. Then comes "Yampicchaim na labhati tampi dukkhaï" which is shortened for "yam pi icchaím na labhati tampi dukkhaì."
Here we see "iccha" (same as "icca") that we encountered in both anicca, dukkha, and anatta, and also in Paticca Samuppāda ("pati+icca" "sama+uppāda"). And "labhati" means "get", and "na labhati" means

- Translated: "If one does not get what one wants or likes, that leads to suffering."
- We also note that anicca comes from "na" + "icca" or "not getting what one desires." Of course, anicca is the first of the three characteristics of Nature (Tilakkhana).
- Therefore, this statement of the anicca nature, i.e., it is a natural law that one WILL NOT get what one desires in the long run. That is why it is not possible to eliminate suffering in the long term within the rebirth process.
- Suffering ends only with the ending of the rebirth process.

9. That same concept is in the WebLink: suttacentral: Yadanicca Sutta (SN 22.15) as, "yadaniccaim taim dukkhaim, yaì dukkhaím tadanatt $\bar{a}$." That is the abbreviated version of "yad aniccaim taim dukkhaim, yaì dukkhaím tad anattā." Translated: "if something is anicca, dukkha arises, and one becomes helpless (anatta)."

- Of course, the verse, "Yampicchaim na labhati tampi dukkhaï" corresponds to just the first part of that verse: "yad aniccam tam dukkham."

## Sensory Pleasures are the Cause of Future Suffering

10. The Buddha never said there is only suffering in this world. These bouts of "apparent happiness" keep the real suffering hidden. We always try to look at the bright side, and our societies also try to "cover up" most of the pain and suffering that is out there.

- Both suffering and happiness are out there. The key is to see the pain and suffering masked in apparent joy.
- The Buddha described an analogy in the "WebLink: suttacentral: Hook/Balisa Sutta (SN 17.2)."When a fish bites the bait, it sees only a bit of delicious food and does not see the hook, the string, and the man holding the fishing pole. It cannot understand that "whole picture," with the suffering hidden (the hook). In
the same way, humans cannot see the pain and suffering hidden in the apparent sensory pleasures until a Buddha comes into the world and reveals it.
- There is suffering hidden in ALL sensory pleasures, but that can be seen/realized only via stages. At the Sotāpanna stage, one willingly gives up only the intense greed and strong hate; ALL cravings are removed only at the Arahant stage.

11. On television, we see mostly glamorous people. You can see what happens to such beautiful people when they get old: WebLink: RANKER: Celebrities Who Have Aged the Worst.

- We must realize that we all will undergo such inevitable changes as we age. No matter how hard we try, it is not possible to maintain ANYTHING to our satisfaction in the LONG-TERM.
- Furthermore, there is suffering and happiness in the broader world of 31 realms. There is much more happiness in the planes above the human plane (but that happiness is temporary). And there is unimaginable suffering in the lower four, especially in the lowest one, the hell (niraya).

## The Necessity of the Rebirth Process in Comprehending Anicca

12. The verses discussed in \#8 through \#10 above describe anicca nature. In the long run "we cannot maintain things to our satisfaction, and that leads to suffering"; This is "ya da niccam taim dukkahaï"" that was discussed in "Anicca, Dukkha, Anatta - Wrong Interpretations."

- Later in the sutta, it says, ".....dukkho anariyo anatta samhito." One becomes anatta or helpless because of that. That is "tam dukkhaì tad anatta" part of the verse in \#9.
- These concepts were further detailed in the Anatta Lakkhaṇa Sutta (the second sutta delivered after the Dhamma Cakka Pavattana sutta); see "Anatta - No Refuge in This World."
- Anicca, dukkha, and anatta are thus the foundational "vision" that can be achieved only by a Buddha. It is "pubbe ananussutesu dhammesu..." as emphasized at the beginning of the Dhamma Cakka Pavattana sutta.

13. That is why it is imperative to understand the "big picture" of "this world" with 31 realms, the process of rebirth, laws of kamma, and most importantly, Paṭicca samuppāda. Then we realize that most beings, due to their ignorance, are trapped in the lower four realms.

- There are only about 7 billion people on Earth, but each carries millions of living beings in our bodies. See, "There are as many creatures on your body as there are people on Earth!"
- A household may have 4-6 people, but how many living beings are in that house and the yard? Millions, possibly billions. In a single scoop of dirt, there are thousands of tiny creatures.

14. The concept of $d u k k h a$ (dukha that can be stopped) is seen only in the context of the rebirth process. It is all about removing suffering associated with FUTURE births.

- One's current life has already started (which is a result of past kamma) and WILL go through until the kammic energy for the physical body runs out. We can only MANAGE any suffering associated with sicknesses, injuries, etc. Those are associated with a life that has already started.
- However, those future sufferings can be stopped by stopping the rebirth process. That is the Dukkha Sacca.

## Five Aggregates - What We Like to Maintain to Our Satisfaction

15. Finally, the last line of the verse in \#5 summarizes it all: "saìkhittena pañcupādānakkhandh $\bar{a}$ dukkha." [sañkhittena means being overthrown by defilements]

Translated: "The suffering that can be stopped arises because of the craving for the five aggregates."

- What we crave in this world can be divided into five groups: rūpa, vedanā, sañña, sañkhāra, and viññān̄a. We want to maintain our bodies and other inert or live bodies to our satisfaction. We want to keep our vedanā, saññā, sañkhāra, and viññāna (our thoughts) to our satisfaction.
- In other words, what we crave (icca) - and thus have upādāna for - are the five aggregates (pañcakkhandha). The "portion" of pañcakkhandha that we desire is called pañcupādānakkhandha (pañca + upādāna + khandha).

16. Therefore, dukha (suffering or the vedanā felt) arises BECAUSE we crave things in this world and do "san" to acquire such things.

- Again, we crave rūpa, vedanā, saññ̄ā, sañkhāra, and viññāna, ONLY because we believe those will bring us happiness. But the reality is that those cravings will inevitably bring suffering as the net result. We can stop suffering by stopping those cravings via understanding the real nature of this world, i.e., anicca nature leads to dukkha.
- This truth (dukkha sacca) is realized by cultivating wisdom (pañ̃ $\tilde{\boldsymbol{a}}$ ), i.e., by comprehending anicca, dukkha, and anatta. Please re-read this until you get the idea. That is the "pubbe ananussutesu dhammesu ..." or the message only a Buddha can discover.

## A Living Arahant has Pañcakkhandha but not Pañcupādānakkhandha

17. The realization of the actual characteristics of nature leads to giving up craving (upādāna due to tanhhā), which in turn leads to the release from the 31 realms, i.e., Nibbāna.

- Thus, one becomes an Arahant when pañcupādānakkhandha becomes just pañcakkhandha (i.e., no attachments even if the "world exists as before"). Of course, when the physical body dies, that Arahant will not be reborn in this world, and all suffering will stop.
- It is essential to realize that this craving cannot be removed by force. The mind needs to see the benefits of that through the cultivation of wisdom (pañ̃̄̄a) via comprehending anicca, dukkha, and anatta; see "Anicca - True Meaning" and "Anattā - A Systematic Analysis."
- Another critical concept to understand is the benefits one gets by the removal of craving for worldly things; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?."

## Nirodha and Vaya - Two Different Concepts

1. I know of several "Buddhist" groups who try to "stop" thoughts, believing that is what happens at the Arahant stage of Nibbāna, i.e., they believe that the Buddha spent 45 years of his life trying to teach people how to stop thoughts, which is an even worse interpretation of Nibbāna than the Mahāyānists.

- When we are in deep sleep or are unconscious, we do not 'think thoughts." Does that mean we attain Arahanthood during such times?
- What the Buddha advised was to stop immoral thoughts, and to ENCOURAGE moral thoughts; that is how one purifies the mind. This is what one does in the correct annāpana meditation too; see, "7. What is Ānāpāna?."
- The reality is that an Arahant‘s thoughts are crystal clear (and pure), because they are devoid of defilements. Their memory is actually enhanced.
- Stopping all thoughts can lead to loss of perception and memory.

2. Many misconceptions about Nibbāna arise because the true meanings of some key Pāli words that the Buddha used are misunderstood. We have discussed how Mahāyāna forefathers twisted the concept of sunyata (emptiness) because they could not understand the concept of Nibbāna; see, "What is Sunyata or Sunnata (Emptiness)?."
3. There are several key words in Buddha Dhamma that need to be comprehended without even the slightest change. Most of these misconceptions arise because such key Pāli words are misinterpreted and also mis-
translated. Buddha's teachings were delivered in Mäghadhi language and made to a form suitable for verbal transmission in the Pāli language ("Pāli" means "lined up"). Many times problems arise when people try to use Sanskrit translations as originals and try to interpret those Sanskrit words.
4. Three such words are anicca, dukkha, anatta: see, "Anicca, Dukkha, Anatta - Wrong Interpretations." Three more such words are nirodha, khaya, and vaya. In this case the three words have apparently similar, but very different meanings. Let us look at the origins of these words:

- Nirodha comes from "nir"+"udaya", where "nir" means stop and "udaya" means "arise." Thus nirodha means stop something from arising. In Buddha Dhamma anything happens due to one or more causes. Thus if one does not want something to happen, one should remove the causes for it, and thus stop it from arising.
- "San" causes anything in this world to arise via "sankkhāra"; see, "What is "San"? - Meaning of Samsāra." However, anything that arises is subjected to the natural law of decay; this "khaya."
- "San" and "khaya" go together: As explained in "What is "San"? - Meaning of Samisāra", "sankhya" in Pāli or Sinhala means numbers, and "san" means adding (or multiplying) thus contributing to "building or arising" and "khaya" means subtracting (or dividing) and thus leading to "decay or destruction."
- Things that undergo this "arising" and "destruction" are called "sä்khata." Everything in this world is a sañkhata.

5. Anything that arises in this world (a sañkhata) starts decaying ("khaya") from the moment it starts arising. For example, when a baby is born, all the cells in the baby's body would have died in a couple of months, but more cells are born than those died; until that baby becomes a young person of around twenty years of age, more cells arise in a given time than decayed. Thus the baby "grows" into a young person, and then things are sort of in balance until about forty years of age, and then the "khaya" process starts dominating and person slowly starts to get weaker. Eventually, that person dies or destroyed; this is "vaya."

- Once starts arising, a sañkhata cannot be stopped; it needs to undergo its natural process of growing, come to an apparent stationary state (but not stationary even momentarily), and eventually is destroyed. If someone commits suicide, this life may end, but that unspent energy starts a new life right away. Thus all one can do is to stop something from arising. This stopping of a sankhata via removing its causes is called "nirodha."

6. A "sañkhata" is anything in this world that arises due to "san" and decayed inevitably (khaya), and is eventually destroyed (vaya). Any living being is a sañkhata and arises due to "san." We acquire "san" via "sañkhāra" because we do not comprehend the true nature of the world (avijja or ignorance) and thus cling to things in this world with "taṇh $\vec{a} "$; see, "Tanhā - How we Attach via Greed, Hate, and Ignorance."

- We can begin to see with clarity when we get rid of taṇhā and avijjā via removing lobha (greed), dosa (hatred), and moha (delusion) from our minds gradually; this is also a "khaya" process for such defilements ("āsava"), where we gradually remove these three defilements ( $\bar{a} s a v a$ ) from our minds; see, "The Way to Nibbāna - Removal of Āsavā." When a mind is pure (i.e., all āsava are removed), it does not do any sanjkhāra and thus no "sankkhata" can arise. At that stage, one has attained "nirodha" of any future "arising", i.e., one has attained Nibbāna.

7. Now let us take some famous verses from the Tipitaka and see how the meanings come out naturally, without effort:

- The third Noble truth is "dukkha nirodha sacca" (here "sacca" is pronounced "sachcha"; sacca is truth), i.e., that suffering can be stopped from arising. Most people misinterpret "dukkha nirodha sacca" as "existing suffering can be stopped." Our current life is a sañkhata that was caused by PREVIOUS causes; this life and any associated suffering CANNOT be stopped, and need to undergo its natural cause until death. That is why an Arahant (or even a Buddha) feels suffering due to past kamma (old causes).
- However, an Arahant has stopped FUTURE suffering from arising. This is indicated by another meaning of nirodha: "ni" + "roda", where "roda" means wheels; this nirodha also means "taking the wheels off of the sansäric (rebirth) process." There is no rebirth with a physical body that could result in old age, sickness, and death. Thus Nibbāna is removal of the causes that could lead to future suffering.

8. This is why the Nibbāna is of two kinds: "saupadisesa Nibbāna" and "anupadisesa Nibbāna."

- When a person attains Nibbāna, it is called saupadisesa Nibbāna because that person is still "in this world of 31 realms"; he/she still has a body that needs to undergo its natural destruction; but one can still experience the Nibbānic bliss by getting into nirodha samāpatti for up to 7 days at a time.
- When that person dies, there is no rebirth and Nibbāna is "complete"; this is called anupadisesa Nibbāna. Suffering ends permanently.

9. Finally, not absolutely everything in this world of 31 realms is sañkhata or sañkhāra. Absolutely everything is denoted by "dhamma", which includes sañkhata (sañkhāra) AND nāmagotta. Here nāmagotta are the "records" of all events of all beings in the mental plane that are truly permanent; see, "Difference Between Dhamma and Sańkhāra (sanikhata)."

- This is why the Buddha's last words were, "vaya Dhamma sañkhāra, appamādena sampādetha," or "All perishable Dhamma are sañkhāra (or sañkhata); thus strive diligently and identify "san" ("san" + "p $\vec{a} "$ "detha")."
- From beginningless time, we all built a new sañkhata each time the old sañkhata got destroyed. We do this uncountable times DURING each lifetime and also at death: we have been brahmā, devas, and humans countless times, but we have spent much more time in the four lowest realms. Thus in his last words the Buddha advised us to stop this senseless rebirth process which is filled with so much suffering, and to attain the permanent happiness of nirāmisa sukha in Nibbāna.
- By the way, Nibbāna is the only "entity" that does not ARISE due to causes; it is "asankata" ("a" + "sañkhata" or "not sañkhata" or "not conditioned") because it does not have causes. It is reached via ELIMINATING THE CAUSES for everything that arise due to causes, i.e., nirodha of sañkhata automatically leads to Nibbāna.

### 3.3.7 Nibbāna "Exists", but Not in This World

September 2, 2016; Revised November 24, 2016 (\#9); Revised April 17, 2017; re-written March 22, 2020; revised \#4 May 20, 2021; June 26, 2022 (revised \#14 ); August 10, 2022

## Introduction

1. Misconceptions about Nibbāna arise because its true meaning has been hidden for hundreds of years. In the previous posts in this series, I have described what Nibbāna is. See, "Nibbāna."

- Many people ask, "what happens to an Arahant upon death?". One is not reborn anywhere in the 31 realms of this world. It is called Parinibbāna ("pari" + Nibbāna"; meaning "full Nibbāna").
- Until Parinibbāna, an Arahant lives like a normal person and is subjected to kamma vipāka. However, "stressful thoughts that arise due to greed, anger, and ignorance" do not arise in a living Arahant. Until the death of the physical body, an Arahant has saupadisesa Nibbāna, i.e., Nibbāna is not complete.

2. It is not possible to "describe" Nibbāna (or more precisely what happens after Parinibbāna) in terms of the terminology rooted in "this world." Not a single word that we use in this world can be used to describe what Nibbāna is like.

- We do not have any "data" or "concepts" or "terminology" that pertain to Nibbāna because those would be foreign to us living in "this world."
- One crude analogy would be trying to explain to a fish what life is like outside the water. A fish would not understand the need to breathe air instead of water.
- Another would be trying to explain how radio or television works to a person who has time-traveled from thousands of years ago. He would not have sufficient "data" to comprehend how radio or TV works.

## Suttā on Nibbāna

3. But Nibbāna "exists" because one can attain it. But it does not exist in this world of 31 realms.

- There are four suttā in the Udāna section of the Ańguttara Nikāya that explain Nibbāna (Udāna 8.1 through 8.4).
- Once you open a sutta at the Sutta Central website, click on the left-most drop-down to choose one of several languages. This is a good resource; consider donating if you find it useful. Note: I am not associated with Sutta Central.
- The translations are frequently incorrect for key Pāli words, as in many websites/books. But at least one can see the correct Päli version.

## Paṭhama Nibbāna Paṭisamyutta Sutta - Nibbāna Exits

4. Let us look at the first one, "WebLink: suttacentral: Pathama Nibbāna Patisaminutta Sutta (UD8.1)." It says, "Atthi, bhikkhave, tadāyatanaì, yattha neva pathavī, na āpo, na tejo, na vāyo, na ākāsānañcāyatanaì, na viññānañcāyatanaín, na ākiñcañ̃̄āyatanaì, na nevasaññānāsaññāyatanam̀, nāyaì loko, na paraloko, na ubho candimasūriyā. Tatrāpāhaí, bhikkhave, neva āgatim vadāmi, na gatim, na thhitim, na cutim, na upapattim; appatiṭthamं, appavattaì, anārammanamevetaì. Esevanto dukkhassā"ti.".

- The first part is "atthi, bhikkhave, tadāyatanamं." Here "atthi" means "exists," and "tadāyatana" is another word for Nibbāna. Tadāyatana comes from "tath" + "āyatana," where "tath" (pronounced "thath") means "perfect." Since Nibbāna is something that we cannot define in terms of words, the closest English word for "ayatana" is something like "dimension" or "sphere." This "āyatana" is not to be confused with the six āyatana referring to the six sensory faculties in "Nāmarūpa Paccayā Salāyatana."
- Phonetically, the combined word is "tadāyatana" (pronounced "thadayathana").
- We need to be familiar with how to spell Pāli words with the "Tipitaka English" convention. It is DIFFERENT from "Standard English." See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1 and "Tipitaka English" Convention Adopted by Early European Scholars - Part 2
- Thus the translation of "Atthi, bhikkhave, tadāyatanaí" is, "Bhikkhus, Nibbāna exists (where everything is perfect)."

5. The second part in the blue says what can be said about Nibbāna. First, "appatitṭhaí, appavattaim, anārammañamevetaì" means, "It is without support (causes), unmoving, without any ārammaṇa (thought object)." The last part in the blue, " 'Esevanto dukkhass $\bar{a} t i$," means, "it is the end of suffering."

- Therefore, those sentences in the blue state ALL that one can say about Nibbāna.
- The rest of that verse (in the red) says what is ABSENT in Nibbāna.

## Paṭhama Nibbāna Paṭisaminutta Sutta - What is Absent in Nibbāna

6. The first part marked in deep red is, "there is no pathavi, $\bar{a} p o, t e j o, ~ v \bar{a} y o ~(m a h a \bar{a} b h \bar{u} t a)$ there; there is no ākāsānañcāyatana, no viñ̃̃ānañcāyatana, no äkiñcaññāyatana, no nevasañ $\bar{n} \bar{a} n \bar{a} s a \tilde{n} \tilde{n} \bar{y} y a t a n a ;$ furthermore, there is no "this world (that we experience), there is no
para loka (where gandhabbā live, see, "Hidden World of the Gandhabba: Netherworld (Para loka)"; and the Moon or the Sun would not arise there" (candimasūriyā is Moon and the Sun).

The second part marked in red says, "Bhikkhus, I say there is surely no coming and going between ayam loko and para loko, no living in either of those, no passing away (cuti), no birth."

- The absence of pathavi, āpo, tejo, and vāyo means NOTHING made of matter that we see around us (people, animals, trees, other planets, or stars) is there in Nibbāna.
- So, all we experience (including jhāna) will not be there after Parinibbāna, as discussed in \#2 above.
- And, of course, there is no gandhabba going back and forth between "ayam loko" and "para loko."
- Our terminology regarding ANYTHING AT ALL does not apply there.

## Without Nibbāna There Would Not Be an End to Suffering

7. The Tatiya Nibbāna Paṭisamiyutta Sutta (Udāna 8.3) has the following key verse: "Atthi, bhikkhave,
 asañkhataì, na yidha jātassa bhūtassa katassa sañkhatassa nissaranaim paññ̄yetha. Yasmā ca kho, bhikkhave, atthi ajātaì abhūtai் akatai் asañkhataí, tasmā jātassa bhūtassa katassa sañkhatassa nissaranàm pañ̃̄āyatı̄"ti.

Translated: "Bhikkhus, "not born," "not formed," "not made," "not conditioned" exists. For Bhikkhus, if there had not been that which is "not born," "not formed," "not made," "not conditioned," an escape here from the born, become, made, and conditioned cannot be discerned. But Bhikkhus, since there is a "not born," "not formed," "not made," "not conditioned," an escape from the born, become, made, and conditioned is evident."

- The "not born", "not formed", "not made", "not conditioned" is Nibbāna. It is reached by eliminating all that is formed, made, and conditioned.
- In other words, "this world" comes to existence (for a given person) because of the bhava and jāti built via defiled thoughts (sañkhāra) generated due to avijjā (in the Paṭicca Samuppāda process.) With the cessation of avijja, that mechanism or process stops, and no more rebirths will be possible. That results in Nibbāna.
- There are two more companion suttā that describe Nibbāna: "WebLink: suttacentral: Dutivanibbānapatisaminutta Sutta (Ud 8.2)" and "WebLink: suttacentral: Catutthanibbānapatisaminutta Sutta (Ud 8.4)." The translations available there are good enough to get further insights.

## The Fire Analogy

8. One time, the inquisitor Vacchagotta (there is a whole series of sutta in the Vacchagottavagga of the Saimyutta Nikāya about his probing questions put forth to the Buddha) asked the Buddha what happens to an Arahant upon death: "Where would he/she go?."

- The Buddha showed him a burning fire and asked, "when this fire is extinguished, can you say where it went?." Vacchagotta understood. When the fire is extinguished, it simply is not there anymore. That is all one can say. In the same way, when an Arahant dies, he/she is not reborn and thus cannot be "found" anywhere in the 31 realms.
- On the other hand, someone with abhiññ̄̄ powers (with the cutūpapāda ñāna) can see where a normal person is reborn upon death. That lifestream exists somewhere in the 31 realms.

## Rāgakkhayo Dosakkhayo Mohakkhayo-Idaỉ Vuccati Nibbānan

9. The Buddha could only explain how to attain Nibbāna by relinquishing our desire for worldly things based on this world's unsatisfactory nature (or the anicca nature).

- The Buddha said, "rāgakkhayo dosakkhayo mohakkhayo-idaì vuccati nibbānan" ti," i.e., one attains Nibbāna via getting rid of rāga, dosa, moha in one's mind. Thus cleansing our minds is the only way to Nibbāna. See, for example, WebLink: suttacentral: Nibbānapañhā Sutta (SN 38.1) and WebLink: suttacentral: Sämandaka Sutta (SN 39.1.)
- However, it is impossible to even start on "rāgakkhaya" until one reaches the Sotāpanna stage. "Rāgakkhaya" attained partially at the $A n \bar{a} g \bar{a} m \bar{\imath}$ stage (via removal of $k \bar{a} m a$ rāga) and fully at the Arahant stage (via removal of rūpa rāga and arūpa rāga). A Sotāpanna reduces dosa to patigha level (removed at the Anāgāmī stage), and moha to avijjā level (removed at the Arahant stage).
- In the new section, "Living Dhamma," we discuss these points and start from a basic level, even without referring to deeper concepts like that of rebirth.

## Nibbāna Reached In Stages

10. The point is that Nibbāna is to be comprehended in stages.

- The first stage of Nibbāna, or "Niveema" or "cooling down," can be experienced even before getting to the Sotāpanna stage. In fact, skipping this step is impossible to get to the Sotāpanna stage.
- To attain the Sotāpanna stage, one MUST comprehend the anicca nature of this world to some extent. For the mind to grasp that concept, it must be free of the "five hindrances" ("pañca n̄̄varaṇa") or "five factors that cover one's mind."
- For that one MUST live a moral life, start contemplating Buddha Dhamma and experience the "cooling down" that results.

11. Many people try to attain or comprehend Nibbāna by reading about deep concepts about what it is. There are so many books explaining what Nibbāna is by people who may not have experienced even the basic "cooling down" or "nirāmisa sukha."

- They try to explain concepts like suñyata or "emptiness" and bodhicitta; see, "What is Suñyata or Suññata (Emptiness)?". That is a complete waste of time because, as we saw above. It is not possible to describe Nibbāna with words that we know.
- Rather, one starts experiencing Nibbāna in stages. One can start experiencing the RELIEF or COOLING DOWN that results when one starts living a moral life and discarding dasa akusala in STAGES.
- Furthermore, it is important to understand that one does not start on the Path by first comprehending the anicca nature; the anicca nature will gradually become clear.
- The Buddha clearly stated the importance of following a gradual Path in the "Mahā Cattārīsaka Sutta (Discourse on the Great Forty)." Also, see "Buddha Dhamma - In a Chart."
- Even a person who does not believe in rebirth can start from this level: "Living Dhamma."

## Nibbāna Is Not a Dhamma - It Is a Paramattha Dhamma

12. In the post, "The Grand Unified Theory of Dhamma - Introduction", we saw that everything that EXISTS could be put into four ultimate constituents (paramattha dhamma):
(i) Thoughts (citta)
(ii) Thought qualities or mental factors (cetasika)
(iii) Matter (rūpa)
(iv) Nibbāna

- Any dhamma in this world is normally a COMBINATION of ALL THREE of the first three paramattha dhamma. Note that Dhammā "bear" things in this world.
- The fourth paramattha dhamma in the list above, Nibbāna, does not exist within the 31 realms. But Nibbāna exists, and one can attain it. An Arahant merges with Nibbāna at the death of his/her physical body.
- Nibbāna is NOT dhamma. It does not "bear" anything in this world.

## Nibbāna Can Be Experienced in Nirodha Samāpatti

13. Let us discuss some relevant characteristics of an Arahant, i.e., one who has attained Nibbāna. He/she cannot experience Nibbānic bliss (experience of full Nibbāna) unless getting into Nirodha Samāpatti . An Arahant can experience Nirodha Samāpatti for a maximum of seven days at a time.

- When an Arahant is in Nirodha Samāpatti, no citta or thoughts flow through his/her mind. There is no breathing, and it is not very different from a dead body (other than the fact that the body of the Arahant will have normal body temperature.) The point is that Arahant will not be able to explain to us "the experience of Nibbāna." In our terminology, all he/she can say is that he/she did not experience any "worldly thoughts."
- At other times, an Arahant will be experiencing "this world" just like another human: he/she will recognize people/things, sounds, smells, etc. The only exception is that thoughts burdened with rāga, dosa, and moha cannot arise: Asobhana (non-beautiful) cetasika are absent in those thoughts; see, "What Are Kilesa (Mental Impurities)? - Connection to Cetasika."
- But he/she will be engaged in puñña kriya (meritorious deeds like delivering discourses), just like the Buddha did; they are just "actions" and are not puññābhisañkhāra or puñña abhisañkhāra.

## Nibbāna and Parinibbāna

14. Here is another interesting point. Some Arahants may have kammic energy for the "human bhava" left when he/she dies; see "Bhava and Jāti - States of Existence and Births Therein." But still, there will not be another rebirth for any Arahant in this world of 31 realms.

- The reason is that the "status of the Arahanthood" could not be borne (or sustained) by any other "finer body" than a dense human body. Thus, at the death of the physical body of an Arahant, the gandhabba that comes out of the dead body will perish. Since Arahant's mind will not grasp existence within the 31 realms, so the rebirth process will stop.
- What happens to the "gandhabba kāya" of an Arahant is similar to the burning of a heater coil removed from a water bath. The heated coil will survive as long as it is immersed in water:

WebLink: youtube: How to use immersion water heater? | How to Boil water for Bathing

- Thus, the fine body (trija kaya) of the gandhabba cannot "bear" the energy associated with an Arahant. See, "Gandhabba (Manomaya Kāya)."
- In the same way, the fine, subtle "bodies" of a Deva or a Brahma also cannot sustain the mind of an Arahant. Thus, if a Deva or a Brahma attains the Arahanthood, they will immediately attain Parinibbāna. In other words, there are no living Arahants in Deva or Brahma realms.

15. We can consider the following analogy to make clear what happens. A heater-coil is immersed in water, and can "bear" the current that passes through it while immersed in boiling water. But if we take a coil out of the water, it will burn. The heater coil cannot "bear" the current passing through it unless immersed in water.

- In the same way, the "Arahanthood" can be "borne" or "sustained" only with a solid human body. Once the gandhabba comes out of that body -upon the death of that physical body - the "Arahanthood" cannot be "borne" by that gandhabba body. The "Arahanthood" cannot be "borne" by even a
layperson for more than seven days. Once attaining the "Arahanthood," one must become a Bhikkhu within seven days, or one will die because a layperson cannot "bear" the "Arahanthood."
- With Parinibbāna (death of an Arahant), "the Nibbāna is complete." The Sinhala word is "pirinivana," where "nivana" is Nibbāna, and "piri" means "full" or "complete."
- Therefore, Nibbāna exists. But one who has attained "full Nibbāna" or Parinibbāna will no longer be in this world of 31 realms. One would be free of any sufferings in this world, including harsh sufferings in the apāyā.

### 3.4 Anicca, Dukkha, Anatta

- Anicca, Dukkha, Anatta - Wrong Interpretations

## Introduction

1. No other factor has contributed to helping keep Nibbāna hidden in the past many hundreds of years than the incorrect interpretations of anicca as just "impermanence" and anatta as just "no-self." If one can find even a single instance in the Päli Tipitaka (not translations) that describes anicca and anatta that way, please let me know at lal@puredhamma.net. Also, before quoting English translations of the Tipitaka, please read the post, "Misinterpretation of Anicca and Anatta by Early European Scholars."

- I consider this series of posts on "anicca, dukkha, anatta" to be the most important on the website. Reading the posts in the given order could be very beneficial.
- A Buddha comes to this world to reveal three words and eight letters (in Pāli). "Attakkarā thīnapadā Sambuddhena pakāsithā, na hī sīla vatan hotu uppajjati Tathāgatā." That means "a Buddha (Tathāgata) is born NOT just to show how to live a moral life, but to reveal three words with eight letters to the world." So far, I have not seen this verse in the Tipitaka. It is likely to have been in an old commentary.
- These three words with eight letters are anicca, dukkha, and anatta. (when written in Sinhala/Pāli:

 see how four letters become three there).

Anicca is pronounced "anichcha," which rhymes with "picture."

## WebLink: Listen to pronounciation of : anicca

Dukkha pronounced similarly, duk+kha.

## WebLink: Listen to pronounciation of: dukkha

Anatta is pronounced "anaththa."

## WebLink: Listen to pronounciation of: anatta

See "Pop-up Pāli Glossary with Pronunciation" for more meanings of Pāli terms and sound files on pronunciations.
2. Asubha ("non-auspicious" or "unfruitful" nature) is another characteristic of nature. It appears with anicca, dukkha, and anatta in several suttā, for example, "WebLink: suttacentral: Vipalläsa Sutta (AN 4.49)."

- Furthermore, the word, Tilakkhana, does not appear in the Tipitaka to my knowledge.
- However, as discuss below, anicca, dukkha, and anatta appear as a group in many sutt $\bar{a}$. Thus it is justifiable to clump them together as Tilakkhana.

## Why Are Tilakkhana so Important?

3. The Buddha clarified these "three characteristics of this world" in his first sutta; see, "Does the First Noble Truth Describe only Suffering?."

- These are the three primary characteristics of "this world." Buddha comes to the world to reveal the true nature of the world.
- Any moral person instinctively knows (and most religions teach) how to live a righteous life; see, "Buddha Dhamma - In a Chart."
- The Buddha stated that if one comprehends the true nature of "this world," as codified in these three words, then one would attain the Stream Entry (Sotāpanna) stage of Nibbāna; see, "Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?."

4. Therefore, a good understanding of the words anicca, dukkha, and anatta is critical. If one sticks to incorrect interpretation of these three words, no matter how much effort one exerts, there is no possibility of attaining the Sotāpanna stage. Even in most Theravāda English texts, these three words have incorrect translations: impermanence, suffering, and "no-soul" or "no-self." The correct meanings are the following.

- Nothing in this world can be maintained to one's satisfaction (anicca).
- When one strives to achieve that, it leads to suffering (dukkha). However, many people try to gain "happiness" by resorting to immoral deeds, ending in the apa$y \bar{a}$. That is how one becomes genuinely helpless.
- Striving to achieve the impossible (i.e., seeking happiness in worldly things) only leads to suffering. Thus, one's efforts are not only unfruitful, but one becomes helpless in the rebirth process (anatta).

## Pāli Words for Impermanence Are "Adduvain" or "Aniyata"

5. The Pāli word for impermanence is NOT anicca; it is addhuva or aniyata. For example, " $\bar{\imath} v i t a \dot{n}$ aniyatami, Maranaim niyatam" means, "life is not permanent, death is." [addhuva :[adj.] unstable; impermanent. aniyata :[adj.] uncertain; not settled.]
"addhuvaì jīvitaì, dhuvaì maraṇam̀" means the same thing.

- Therefore, the critical mistake was in translating the original Pāli word anicca to Sanskrit as "anitya," which does mean impermanence.
- This term, "dhuva" comes in the Brahmanimantanika Sutta (Majjhima Nikāya 49), where the Baka Brahma says his existence is permanent; see \#12 of "Anidassana Viññāña - What It Really Means."

## Anatta Is Not "Self" or "No-Self"

6. Now let us examine the damage done by translating the original Pāli word anatta to Sanskrit as "anātma."

- At the time of the Buddha, there were two opposing views on the idea of a "self." One camp believed in an unchanging "soul" (ātma) associated with a being. This camp thus corresponds to the world's major religions today with the concept that when one dies, one's soul goes to heaven or hell.
- The opposing camp argued that there is "no-soul" (anātma) and that when one dies, there is nothing that survives the death. This view is the materialistic view today that our minds arise from matter, and thus, there is nothing that survives death.

7. The Buddha said it was neither. There is no "self" permanently associated with a living being: both the mind and the body are in constant flux (see the Section on "The Grand Unified Theory of Dhamma"), and thus there is no "soul" or an "unchanging self." See "What Reincarnates? - Concept of a Lifestream."

- However, one can choose how to respond to an external stimulus. Therefore, it is also incorrect to say there is "no-self."
- Furthermore, there is continuity at death based on cause-and-effect (paticca samuppāda; see, "Paticca Samuppāda - Introduction").
- The new living being is a continuation of the old living being, just as an older man is a continuation of the process from the baby stage. Change is there at every MOMENT, based on cause-and-effect. The "new" is dependent on the "old."
- That is also why it is incorrect to say that an Arahant is annihilated at death (i.e., at Parinibbāna). See "Yamaka Sutta (SN 22.85) - Arahanthood Is Not Annihilation but End of Suffering."

## They Are Related to Each Other

8. The Buddha stated that the three characteristics of "this world" are RELATED to each other:
 tad anattā"), i.e.,
"if something is anicca, dukkha arises, and one becomes helpless (anatta)." Note that "yam" and "yad" have the same meaning and are used interchangeably. In the same way, "yadidamं" comes from "yad idam.".

- (In the Samiyutta Nikāya (Anicca Vagga), many suttā including WebLink: suttacentral: Ajjhattanicca Sutta (SN 35.1), WebLink: suttacentral: Bahiranicca Sutta (SN 35.4), and WebLink: suttacentral: Yadanicca sutta (SN 22.15) have the above verse.)

9. Now, let us see what happens if we take anicca to be impermanent and anatta to be "no-soul." Then the above verse reads, "if something is not permanent, suffering arises, and because of that one becomes "no-self."

- Many people think since one's body is impermanent, suffering arises. But the sutt $\bar{a}$ mentioned above describe this for all six internal senses (Ajjhattanicca or Ajjhatta Anicca Sutta) and for everything external sensed by the six sense faculties (Bāhiranicca or Bāhira Anicca Sutta). Therefore, that verse holds for anything and everything "in this world."
- Thus if a headache becomes impermanent (i.e., if it goes away,) that will lead to happiness. Thus, impermanence does not necessarily lead to suffering. But if we cannot handle a headache the way we want (i.e., cannot get rid of it), then that will lead to suffering!
- As we will show in the next post ("Anicca - True Meaning"), the correct translation holds for any case.

10. The opposite of the above statement must be correct, too (in mathematical logic, this is not correct generally, but in this particular case, it can be shown to be right. It is due to the assumption that "dukkha" depends only on "nicca" or "anicca" and no other factor).

Let us consider the incorrect interpretations that say:
"if something is permanent, suffering does not arise, and because of that, it implies a "self."

- How can one stop suffering if one has a permanent headache or a sickness? And in what sense does a "self" arise?
- There are many things in this world, if it becomes permanent, would lead to suffering: a disease, poverty, association with someone disliked, moving away from a loved one, etc.

Thus we can see that anicca and anatta do not mean impermanence and "no-self."

- However, if we take the correct translation, we can show that the reverse statement also holds. as discussed in the next post: "Anicca - Inability to Keep What We Like."

## Everyone Knows Anything in This World is Impermanent

11. Permanence and impermanence are inseparable PROPERTIES of living beings, objects, and events. On the other hand, niccalanicca are PERCEPTIONS IN ONE'S MIND about them.

- In the long run, we cannot maintain anything to our satisfaction (including "our" own body), which is anicca. And because of that, we become distraught, and that is dukkha. And since we cannot prevent this sequence of events, we are truly helpless in the long run (nothing of real substance left in the end.) That is anatta.
- Here is a video that illustrates the concept of anicca clearly:
- We must realize that we all will undergo this inevitable change as we get old. No matter how hard we try, it is not possible to maintain ANYTHING to our satisfaction. It is the nature of "this world": anicca.
- Of course, any of these celebrities (or their fans) will be saddened to see that comparison in the video above. They have not been able to maintain their bodies to their satisfaction. However, a person on bad terms with any of these celebrities could be happy to see those pictures since he/she would like to see something terrible happen to that celebrity.

12. Thus, "impermanence" is inevitable; it is a property of anything in this world. But "anicca" is a perception in someone's mind. That perception CAN be changed; that is how one gets rid of suffering.

- In the above case, celebrities' bodies ARE impermanent; but that did not necessarily cause suffering to ALL. It caused pain to only those who did not like them getting old. If they had any enemies, those would be happy to see them losing their "good looks."
- Impermanence is a fact; see "The Grand Unified Theory of Dhamma." But impermanence is NOT the MEANING of anicca.
- These pictures provide the visual impact that we do not usually get. We don't see changes in ourselves because the change is gradual.

13. A Buddha is not needed to show that impermanence is an inherent characteristic of our universe. Scientists are well aware of that, but they have not attained Nibbāna. Anicca is a profound concept with several meanings, and they are all related. Here are three ways to look at it:

- "Anicca - Inability to Keep What We Like" (listed above).
- "Anicca - Repeated Arising/Destruction."
- "Anicca - Worthlessness of Worldly Things."

## Anicca - The Incessant Distress ("Pillana")

14. Finally, the Buddha said, "Sabbe Dhammā anattā." So, what does "all dhammā are "no-self" mean (if anatta meant "no-self")? Dhammā means "to bear" and includes those kammic energies that can bring in the future vipāka including future rebirths. We strive to make such Dhamma $\bar{a}$ which will only bring NET suffering in the future. Nothing in this world is of any real value in the end. That is anatta nature.

- This is systematically explained in "Origin of Life" and specifically in the post, "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections."
- Another keyword that has lost its true meaning is "san"; see, "What is "San"? Meaning of Sansara (or Samsara)."

## Possible Historical Reasons for Mistranslations

15. We can see the origins of some of these incorrect translations by looking at how Buddha Dhamma was transmitted over time. For details, see "Historical Background."

- For about 500 years after the Parinibbāna of the Buddha, the Pāli Tipitaka was transmitted orally from generation to generation of bhikkhus, who faithfiully passed down the Pāli Canon. Of course, it had been DESIGNED for easy oral transmission.
- See "Preservation of the Dhamma" for a discussion on this aspect. The original teachings of the Buddha are still intact.

16. Then, it was written down in Sinhala script for the first time in 29 BCE in Sri Lanka. Pāli is a phonetic language that does not have an alphabet.

- The Tipitaka was never translated to any other language until the Europeans discovered "Buddhism" in the late 1600 s; see "Background on the Current Revival of Buddha Dhamma."
- Tipitaka was not translated to even the Sinhala language until 2005.

17. When Rhys Davis and others started doing those English translations, they were heavily influenced by Sanskrit Mahāyāna sutras and Vedic literature. Think about it: when the Europeans first started discovering all these different Pāli and Sanskrit documents, they must have been overwhelmed by the complexities.

- It took them some time to separate Buddhism from Hinduism, and in the process, some concepts got mixed up; see "Misinterpretation of Anicca and Anatta by Early European Scholars."
- For example, They ASSUMED that "anatta" was the same as "anātma," which is a Sanskrit word, with a different meaning, i.e., "no-self." Similarly, they took "anicca" to mean the same as Sanskrit "anitya," which does mean "impermanent."

## It Will Take Time to Untangle These Issues

18. The worst was that even contemporary Sinhala scholars like Malasekara (a doctoral student of Rhys Davis) "learned" Buddhism from the Europeans and thus started using wrong interpretations. Other Sinhala scholars like Kalupahana and Jayathilake also learned "Buddhism" at universities in the United Kingdom.

- Following the original translations by Rhys Davis, Eugene Burnouf, Olcott, and others, those Sinhala scholars also write books in both English and Sinhala. Of course, scholars in other Buddhist countries did the same in their languages, and the incorrect interpretations spread worldwide.
- To correct this grave problem, we must go back to the Tipitaka in Pāli and start the process there.
- Pāli suttā should not be translated word to word. Most of the suttā are condensed and written in a style conducive to oral transmission; see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- Commentaries were written to explain critical concepts in the Tipitaka, and only three of those original commentaries have survived. We need to rely heavily on Paṭisambhidāmagga, Peṭakopadesa, and Nettippakarana.
- Instead, most people rely on incorrect commentaries written in more recent years, especially Buddhaghosa's Visuddhimagga. For details, see "Buddhaghosa and Visuddhimagga - Historical Background." However, Buddhaghosa did not change the meanings of the words anicca, dukkha, and anatta. That is likely to have happened in more recent times, as I explained above). But he incorporated many other Hindu concepts like breath and kasina meditation; see, "Buddhaghosa's Visuddhimagga - A Focused Analysis."

19. It is also important to note that mass printing was not available until recent years and became common only in the 1800 s; see, "WebLink: newworldencyclopedia.org: Printing press."

- Thus mass production of books became possible only with the new printing presses in the 1800s. By that time, key concepts had been mistranslated.
- In the early days, Tipiṭaka was written on specially prepared leaves and needed to be re-written by hand every 100-200 years before they degraded. So, we must be grateful to the bhikkhus in Sri Lanka who did this dutifiully for almost 2000 years.
- Sinhala language (both spoken and written) changed over the past 2000 years. The need to re-write the Tipitaka every 100 or so years made sure that any changes in Sinhala script were taken into account; see \#21 of "Misinterpretation of Anicca and Anatta by Early European Scholars."

## Other Related Issues

20. I came across another problem in a recent online forum. People are debating the meanings of the words
 added to the latter word.

- So, most people write it as "anatta." It does not matter how one writes it, as long as one understands the meaning as "with no refuge" or "without essence," and NOT "no-self."
- But it does mean "it is not fruitful to take anything in this world to be mine."

21. Two more main misconceptions are prevalent today. They not only block the path to Nibbāna but are micch $\bar{a}$ ditṭthi that could be responsible for rebirth in the apayy $\bar{a}$. I am not trying to scare anyone, but "making adhamma to be dhamma is a serious offense."

- Misinterpretation of breath meditation as Ānāpānasati: "Is Ānāpānasati Breath Meditation?."
- Insisting that the gandhabba (manomaya kāya) is a Mahāyāna concept: "Gandhabba State - Evidence from Tipitaka."

22. All these misconceptions are not the fault of current Theravādins; they have been handed down hundreds of years, as explained in the "Historical Background." However, it makes no sense to adhere to them when substantial evidence is presented against them, per the above posts, and many others on this website.

- Of course, no one should be able to insist, "this is the only truth, and nothing else is the truth." But the truth can be verified to one's satisfaction by critically examining the evidence. I am open to discussing any valid contrary evidence. We need to sort out the truth for the benefit of all.

23. Finally, it may not be possible to comprehend anicca, dukkha, and anatta. One must first follow the mundane path to learn basic concepts like kamma and rebirth.

- More details in "Transition to Noble Eightfold Path."
- A systematic approach at "Living Dhamma."

24. Anicca and anatta are complex Pāli words that cannot be translated into English directly. No English word can convey the meaning of anicca (or anatta). The following subsections discuss those two complex Pāli words:

Anicca - True Meaning

## Anattā - A Systematic Analysis

July 10, 2020: A new series of posts on "Origin of Life" systematically explain Tilakkhaṇa and Paṭicca Samuppāda and also makes the connection between them.

### 3.4.2 Anatta and Dukkha - True Meanings

What really matters in the end is one comprehends, not words. The way different people interpret "no-self" could be different, even though the concept of a "self" is very clear.

- If anatta means "no-self", then there is nothing that can distinguish person A from person B. So, if A takes something belongs to B, he can say, "there is no "me" and there is no "you"; what is wrong in me using "your" stuff?." If B believes in "no-self" can he argue with A?
- Similarly, there are many other contradictions: If there is "no-self", (i) who attains Nibbāna?, (ii) who does moral or immoral acts?, etc.
- Instead one needs to comprehend that "one is really helpless in this rebirth process" or "one is not in control over the long run"; that is the concept of anatta, as we discuss below.

1. Let us look at the two words the Buddha used: "àthma" and "anāthma." In the Brahmajala sutta, the Buddha definitely said both those are not correct. The best translation of those two terms to present day, I believe, are "soul" and "no-soul":

- "Soul" in the sense of an unchanging entity; for example, most religions believe one's soul goes to hell or heaven and then that "soul" is forever in that state.
- "No-soul" in the sense interpreted by a materialist, i.e., "a person" is just the body (with thoughts arising from the material brain), and when one dies that is end of story; nothing survives physical death.
- Those were the two extremes rejected by the Buddha as "athma" and "anathma."

2. The real confusion arose when the Pāli word "anatta" was translated to Sanskrit as "anathma." Subsequently, the Sanskrit word "anathma" was translated to English as "no-self." This was done at the same time when "athma" was translated as "soul."
3. The real question is when one says, "there is "no-self"", does one imply that there is no "soul", i.e., no "athma"? There are two possibilities. Let us look at them carefully:

- If one means by "no-self" that when one dies that is the end of story, i.e., there is no rebirth process, then this is same as "no-soul."
- Or, it is possible that some people may have the idea of a "changing personality" rather than the above materialistic view of nothing surviving the death, i.e., one believes that a human can be reborn an animal. Then one has the right concept of "no-self" or what I call a "ever-changing personality."
- One needs to contemplate on this and clearly distinguish between the two possible interpretations.

4. But I have seen many people just use the phrase "no-self" in the wrong way.

- Some say, 'The Buddha told us that there is "no-self." So, what is the point of going through learning Dhamma etc., because there is no "me."
- Others say, "Even if I die and get reborn as an animal, it will be not "me", because there is "no-self."
- They are both wrong by talking about a "no-soul." What I ask them is, "If there is no "me", would it be OK if someone hits you hard with a stick or worse?." Then of course they realize that there is a "me." That is the "me" who learns Dhamma or who could be reborn an animal.

5. We can take a simple simile to get an idea of these two extremes of "soul" and "no-soul." We have all seen shapes and colors created by water fountains.

- We all know those structures created by water are not real. But we cannot say they do not exist.
- In the same way, since we cannot say that a person does not exist. However, there is nothing that exists permanently, it is just transitory. Thus both "self" and "no-self" are wrong perceptions.
- Just like we can create different shapes and figures using that water fountain, we all go through various lifeforms in the rebirth process.
- However, the suffering (or the intermittent happiness) is real.

6. This is a deep concept. We cannot deny that we have the inner perception (sañ̃̃̄ $\bar{a}$ ) of a "me" (unless one is an Arahant). That is also THE reason that we go through this rebirth process. But that sañ̃̄ $\bar{a}$ CANNOT be gotten rid by forcing the mind to accept that there is no "me." THAT DOES NOT WORK. When one starts learning the true nature of the world by understanding the real meanings of anicca, dukkha, anatta, the mind gradually realizes that there is no real "me", but just an ever-changing "lifestream."

- Thus one could meditate for thousand years muttering to oneself, "it is anāthma" or "there is no-self", or anything equivalent with the meaning "there is no "me'", and would not get anywhere close to the Sotāpanna stage or even any nirāmisa sukha, because deep inside one does not really believe in that.
- Instead one needs to comprehend that "there is nothing fruitful to be had in this world in the long run", or "one is really helpless in this rebirth process"; that is the concept of anatta.
- Another word for anatta is "anātha" (this is the Sinhala word), which means "utterly helpless." That is the status of a human being who is unaware of the perils of the rebirth process. The opposite is "nātha,"
which is actually also used in Pāli to refer to the Buddha (as in one becomes " $n \bar{a} t h a$ " when one embraces the message of the Buddha).

7. In other words, "there is a 'me' as long as one craves for things in this world." Denying that perception is not the solution. One craves for things in this world because one believes there is happiness to be had by seeking "things" in this world. That tendency to seek things will not reduce until one understands that it is fruitless to strive for such things in the long term; even though one may not know it, one is truly helpless. And that is a real meaning of anatta.

- But that cannot be grasped just by reading about it. One needs to contemplate (meditate) using real examples from one's life. One will know that one is starting to get the concept when one starts realizing that one's cravings for things in this world is gradually waning.

## Why Dukkha is not Merely Suffering?

1. There is confusion about what the Buddha said about suffering because most cannot distinguish between dukha and dukkha. But the Pāli word for suffering is dukha. Dukkha (dukha+khya) means there is hidden suffering AND that suffering can be eliminated (khya is removal); see, "What is San? - Meaning of Samsāra (or Samsāra)."

- And dukkha sacca (the first Noble Truth) is the knowledge on seeing that those things we value as "sense pleasures" are in fact the CAUSE of this "hidden suffering."

2. Dukha is a vedanā (feeling). Anyone, and even animals feel dukha. No one has to convince anyone there is $d u k h a$ in this world. If anyone can attain Nibbāna by realizing $d u k h a$ in this world, then animals would attain Nibbāna first, because they know dukha very well.

- However, dukkha (or the dukkha sacca) is the First Noble Truth. It says there is "hidden suffering" behind all this apparent happiness or the illusion of a future happiness that can be achieved by "working hard."
- Dukkha Sacca is comprehended not by contemplating on suffering, but contemplating on the causes for suffering, i.e., the immoral things we tend to do because of the lack of understanding of anicca, dukkha, anatta.
- In order to comprehend dukkha, one needs to understand the wider world view of the Buddha and see that most suffering will be in future rebirths unless one attains at least the Sotāpanna stage of Nibbāna.
- That is why it takes a lot of time and effort to gain wisdom (pañña $\bar{a}$ ) and truly start on the Path. Since our senses cannot sense other realms, including the suffering-filled lowest 4 realms (except the animal realm), it is not a trivial matter to understand and truly believe the message of the Buddha.

3. This wrong conception has also led to the popularity of "breath meditation" (the incorrect $\bar{a} n \bar{a} p \bar{a} n a$ meditation) as a way to remove "suffering."

- It is true that one could get 'temporary relief' and even jhānic experiences using the breath meditation. But that does not solve the problem of "long-term sansāric suffering" emphasized by the Buddha.
- When one cultivates the true "ānāpāna meditation" (see, " 7 . What is Ānāpāna?"), one can achieve temporary relief AND work towards "long-term happiness" of Nibbāna.

4. Most people have the perception that Buddha Dhamma is pessimistic, because it emphasizes suffering. Actually, it is quite the opposite.

- The Buddha was just the messenger of the bad news. He DISCOVERED the true nature of this world: No matter where we are reborn within the 31 realms, we will not find happiness and in the LONG RUN, suffering prevails; see, "The Four Stages in Attaining Nibbāna."
- A world which is based on constant change, or more correctly constant disorder, (impermanence) is inherently incapable of providing stability (thus anicca is not impermanence, but anicca arises out of impermanence); see, "Second Law of Thermodynamics is Part of Anicca!."
- Yet, we have the PERCEPTION that we can somehow "beat the system" and find happiness. That is the wrong perception of nicca. Once we truly realize dukkha, we will see that anything in this world has the anicca nature; nothing in this world can provide long-lasting happiness in the long term.

5. The Buddha not only discovered that "this world" cannot provide us with stable and lasting happiness. He also found the way to get out of this inherently unstable, and thus unsatisfactory nature of existence. This is the Noble Eightfold Path.
6. Thus it is important to realize that dukkha has embedded in it the only optimistic message anyone can deliver: That we can overcome this inevitable suffering.

- When one truly realizes the true nature of "this world", one voluntarily gives up struggling in vain to achieve the impossible, and that automatically leads to a state of happiness in one's mind even before the Sotäpanna stage.
- This particular happiness, nirāmisa sukha, is different from the sense pleasures and one can experience it more and more as one follows the Path, and culminates in Arahantship or unconditioned happiness; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?." One can experience this nirāmisa sukha all the way up to its peak at Nibbāna during this very life.

7. Another important thing to realize is that there are only two ways that anyone's destiny works out:

- One waits until one gets really old to EXPERIENCE the suffering even in this life itself. It does not matter how much money one has: One will NOT be able to enjoy the sensual pleasures as one used to in the younger ages: all sense faculties degrade including culinary pleasures, visual, auditory, sex, etc. And if one gets a major illness it will be worse. The absolutely worse thing is that by that time it will be too late, because even the mind starts to degrade (it is actually the brain that degrades), and one will not be able to make any spiritual progress.
- The other and the ONLY reasonable option is to develop insight NOW. The Buddha had revealed the true nature of 'this world" of 31 realms. At least one should examine the big picture laid out by the Buddha to see whether that picture makes sense, and if it does to work towards getting out of "this world."
- People commit suicide thinking that it will end the suffering. It does not. The only way to stop suffering is to stop rebirth. There is nowhere to be found in the 31 realms that will end the suffering. One may find relatively long periods of happiness in the higher realms, but in the sansäric time scale that will only be a blip; see, "Sansāric Time Scale, Buddhist Cosmology, and the Big Bang Theory" and "Infinity - How Big Is It?."
- And one can test the path prescribed by the Buddha. As one experiences the nirāmisa sukha by removing greed, hate, and ignorance, one can start feeling the "cooling down", the early stages of Nibbāna; see, "How to Taste Nibbāna." This will accentuate one's liking of Dhamma (chanda), enhance one's determination (citta) and effort (viriya) to seek insight (vīmainsā); see, "The Four Bases of Mental Power (Cattāro Iddhipāda)."

### 3.4.3 Anicca, Dukkha, Anatta - According to Some Key Suttas

## Revised: January 20, 2016; December 3, 2017; January 26, 2018; July 2, 2020

The key to understanding the First Noble Truth (Dukkha Sacca; pronounced "dukkha sachcha") is to understand the Three Characteristics or Tilakkhana of "this wider world of 31 realms", i.e., anicca, dukkha, anatta. Let us discuss a few key sutta.

## Dhamma Cakka Pavattana Sutta (SN 56.11)

1. How suffering arises from anicca is explicitly described in the very frst sutta, WebLink: suttacentral: Dhamma Cakka Pavattana Sutta (SN 56.11). Here is the text from the sutta:

Idam kho pana, bhikkhave, dukkham ariyasaccam:
jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maranampi dukkhā̀̇, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaì na labhati tampi dukkhāंㅁ-saïkhittena pañcupādānakkhandhā dukkhā. [sañkhittena means being overthrown by defilements]
2. Bhikkhus, What is the Noble Truth of Suffering?

- "jātipi dukkhä" means "birth causes suffering" (all births end up in suffering and death.) "Jarā pi $d u k k h \vec{a} "$ means, "decay of something that is liked causes suffering." And "maranamim pi dukkhä" means, "Death of a liked causes suffering."
- Then comes, "..appiyehi sampayogo dukkho, piyehi vippayogo dukkho" meaning, "it brings sorrow when a loved one has to depart, and it also brings sorrow to be with a hated person."

3. And then the summary of all that: "Yamp'icchaín (yam pi icchaí) na labhati tam'pi dukkham.". Here we see, "ichcha" that we encountered in both anicca, dukka, anatta and also in Paticca Samuppāda ("pati+ichcha" "sama+uppada"). And "labhati" means "get."

- Thus, "If one does not get what one likes, that leads to suffering." This phrase has everything condensed. That is anicca. It does not say suffering arises because of impermanence.
- For detail, see, "Does the First Noble Truth Describe only Suffering?."
 different sutt $\bar{a}$, as you can see below. The word "iccha" with the emphasis on the last syllable indicates "strong icca" or "strong attachment."
- For correct pronuciations see, "Tipitaka English" Convention Adopted by Early European Scholars Part 1."

## Anatta Lakkhana Sutta

4. The Buddha delivered WebLink: suttacentral: Anatta Lakkhana Sutta (SN 22.59) to the five ascetics within a fortnight of the first sutta. The following are some questions that the Buddha asked the ascetics.
"Taï kimं maññatha, bhikkhave, rūpaì niccam̀ vā aniccaì vā"ti?

- "Aniccami, Bhante."
"Yaim panāniccaín dukkhain vā taín sukhaín vā"ti?
- "Dukkham, Bhante."
"Yaì panāniccain dukkhaì viparināmadhammaì, kallaì nu taì samanupassitumi: 'etaì mama, esohamasmi, eso me atta'" ${ }^{\prime} t i$ ?
- "No hetamं, Bhante."

5. The first question was, "Bhikkhus: is any rūpa nicca or anicca?" or "Bhikkhus: can any rūpa be kept to one's satisfaction or cannot be kept to one's satisfaction?"

And the bhikkhus answer: "It cannot be kept to one's satisfaction, Venerable Sir."

- Here it is to be noted that "r $\bar{u} p a$ " can be either internal or external. There are many $r \bar{u} p a$ in this world that are "permanent," at least compared to our lifetimes. For example, an item made of gold or a
diamond can last millions of years. But neither can be kept to "our satisfaction" since we will have to give them up when we die.

6. The second question: "Will such an entity lead to suffering or happiness?" And the bhikkhus answer: "Suffering, Venerable Sir."

- Here it is essential to see that if an entity is not permanent, whether that will lead to suffering: How many people suffered when Bin Laden got killed? Only those who liked him to live! Many people rejoiced in his demise. See details in "Does the First Noble Truth Describe only Suffering?."
- The third question: "Will such an entity that cannot be kept to one's satisfaction, that leads to suffering, and is a viparināma dhamma, should be considered as "myself or mine, or has any substance?" And the bhikkhus answer: "No reason to think so, Venerable Sir."

Then the Buddha explained that those characteristics of anicca, dukkha, anatta also hold for vedanā, saññā, sañkhārā, viññ̄ạna.

## Anicca, Dukkha, Anatta Are Related and Universal

7. Here we need to pay attention to the sequence of the three questions. The Buddha was pointing out that no "rūpa" can be kept to our satisfaction. Forming attachment to such rūpa will lead to suffering. Therefore, there is no reason to consider them having any substance. Anicca leads to dukkhāand anatta because we have nicca sañña about such (anicca) rūpa.

- Of course, the same holds for vedanā, saññ̄a, sañkhārā, viññāṇa.
- This relationship among anicca, dukkha, anatta was pointed out as "Yad aniccaím taím dukkhaím, yaim dukkhaim tad anatta." in the WebLink: suttacentral: Ajihattānicca Sutta (SN 35.1) in the Samyutta Nikāya. See, "Anicca, dukkhā, Anattā - Wrong Interpretations."
- Therefore, anicca, dukkha, anatta are UNIVERSAL characteristics applicable to anything in this world.

## Impermanence Does Not Always Lead to Suffering

8. It is essential to realize that the Buddha was not referring to just one's body. Anicca applies to all sañkhāra and sankata. Nothing in this world can be kept to our satisfaction: "Sabbe sañkhārā aniccā." By the way, it is superfluous to say, "all sañkhāra are impermanent." Of course, all sañkhāra arise and fall. How can sañkhāra be permanent anyway?

- Furthermore, "impermanence" does not ALWAYS lead to suffering. When Osama bin Laden died, most people were happy.
- However, bin Laden's death caused suffering to his followers. In both cases, the statement, "if something cannot be maintained to one's satisfaction, that causes suffering" holds. The death of bin Laden caused suffering only to his followers.
- If we have a headache/injury/disease, and if it became permanent, would we not suffer? It is a good thing that those conditions are impermanent so that we can get rid of them with medical treatment.

9. We strive to accumulate "good stuff," but will have to leave them all behind at death. When we go through the rebirth process, we just repeat this process in each life.

- In most rebirths, the suffering is great, and in some, there is happiness (human, deva, and Brahma realms.) But such "good rebirths" are encountered very rarely. The Buddha said that the lowest four realms are the "home base" for the living beings; they may visit other realms once-in-a-while, but always have to come back and spend the most time in the home base.
- That is why the Buddha said this never-ending process of the cycle of rebirths, where we suffer so much, is fruitless and one is truly helpless. That is anatt $\bar{a}$.
- It does not make sense to say because of anicca and dukkha, we have "no-self" or "no-soul." Instead, as long as we have the wrong perception of anicca about anything in "this world", we are subject to suffering, and thus we are truly helpless, anatt $\bar{a}$.

## Girimananda Sutta

10. WebLink: suttacentral: Girimananda Sutta (AN 10.60) is another critical sutta in the Tipitaka that describes anicca in the most profound sense. The Buddha delivered this sutta to Ven. Ānanda (for him to recite to Ven. Girimananda, an Arahant, who was in pain due to an ailment). Here is a key phrase (in the middle of the sutta):

Katamā cānanda (ca Ānanda), sabbasañkhāresu aniccha sañña??
Idhānanda (Idha Ānanda) bhikkhu sabbasañkhāresu atttīyati harāyati jigucchati.
Ayaì vuccatānanda (vuccati Ānanda), sabbasan̉khāresu aniccha saññā.

## Translated:

## "Ānanda, What is the (correct) perception of all sañkhāra?

Ānanda, all sañkhāra are like meatless bones, without substance, to be rejected like urine and feces. [atṭi : wounds. yati : [aor. of yatati] exerted oneself; strived. (m.), a monk. attityati : wounds inflicted by oneself. harāyati :[deno. from hiri] is ashamed, depressed or vexed; worries. jigucchati: [gup + cha; gu is doubled and the first gu becomes ji] shuns; loathes; is disgusted at.]

## That is Ānanda, how one should perceive all sañkhāra."

11. Here the Buddha is describing the characteristics of all sañkhāra ("sabba" is "all").

- "Attic" is "bone." A dog enjoys chewing a bone. But a bone has no nutrition or taste. Most of the time, the dog's gum starts bleeding and that is what it tastes. But the dog does not realize that and values a bone very highly.
- "Hara" is "substance", and "harāyati" is without substance.
- Furthermore, " $J i$ " and " $g u$ " (pronounced "jee" and "goo") are the Pāli and Sinhala words for "urine" and "feces." As we already know, "icca" (Pronounced "ichcha") means "like." Thus "jiguccati" pronounced "jiguchchathi" means "it is no different than liking urine or feces." Note that "jiguccati" is "ji" + "gu" + "icchati" means "a liking for urine and feces."
- All (abhi)sañkhāra should be avoided (but this applies only at the Arahant stage).

12. Another critical point here is to note that the Buddha was talking about the "anicca sañ $\tilde{\boldsymbol{a}}$," where saññā or perception is one of the main mental factors or cetasika. Anicca is a perception in our minds as we pointed out in the discussion on the Anatta Lakkhana Sutta above.

- Impermanence is a physical reality of things in the universe. Scientists know quite well that nothing in our universe is permanent. But that does not provide them with the perception of anicca. No scientist can attain Nibbāna via comprehending impermanence.

## Anicca Does Not Mean Impermanence

13. Thus it is quite clear that anicca does not mean "impermanence." The Pāli words for impermanence are aniyata and addhuva. Once one understands the true nature of the world, one will realize that any sañkhāra (thought, speech, and action that is focused on attaining pleasurable things) is not to be valued. None can be maintained to one's satisfaction and will only lead to suffering at the end.

- The fruitlessness of ALL sañkhāra is perceived only at the Arahant stage. We cannot even begin to comprehend that yet. That is why an Arahant is said to see the burden associated with even breathing (which is a kaya sañkhāra). Anything we do to live in this world is a sañkhāra.
- Initially, we should try to comprehend the unsuitability of apuñnabhi abhisañkhāra, those associated with immoral actions. Since we can grasp the consequences of such sinful actions, we CAN get our minds to reject them. That is enough to get to the Sotāpanna stage.
- Once we do that, our cleansed minds can begin to see the fruitlessness of puññabhi abhisañkhāra, and then even the pleasures of arūpāvacara jhānic states (āneñjābhi abhisañkhāra).

## Icca Sutta (Saminutta Nikāya)

14. The "WebLink: Suttacentral: Icca Sutta (SN 1.69)" clearly describes what "icca" (and thus what anicca) is:
"Kenassu bajjhat̄̄ loko, kissa vinayāya muccati;
Kissassu vippahānena, sabbaì chindati bandhanan"ti.
"Icchāya bajjhatı̄ loko, icchā vinayāya muccati;
Icchāya vippahānena, sabbaì chindati bandhanan"ti.

## Translated:

"What binds the world together? How does one get released? How can one gain release?
The world is bound by iccha; one becomes free by losing iccha, one becomes free of all bonds by losing iccha"

The word "icca" means "liking" and is closely related to "nicca." Of course "nicca" means the perception that one can maintain those things to one's satisfaction (and "anicca" implies the opposite: "na +icca"). The perception of nicca leads to icca, i.e., one believes that worldly things can provide everlasting happiness and thus one likes to hold on to them. Just like an octopus grabs stuff with all its eight legs and will not let go, humans (and other beings too) grab onto to worldly things with the hope of enjoying them.

- Note that in this sutta, the word "iccha" is used instead of "icca" to emphasize that "strong attachment" as in the Dhamma Cakka Pavattana Sutta discussed above.

## The Key Problem with Sutta Interpretations

15. There are many, many suttā in the Tipiṭaka that describe anicca, dukkha, anatta. But if one starts with the wrong interpretations, some of those sutt $\bar{a}$ can be interpreted the wrong way. Many sutta do not describe the relevant concepts in detail. Instead, a suttā provides a brief description or the niddesa version. The commentaries (Sinhala Atthakath $\bar{a}$ ) were supposed to give the detailed (patiniddesa) explanations; see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

- The root cause for the confusion has been the acceptance of the Visuddhimagga by Buddhaghosa as THE key commentary by Theravāda tradition.
- Nowadays, most bhikkhus do not read the Tipitaka or the remaining three original commentaries that are in the Tipitaka. They just follow what is in the Visuddhimagga. That has been the single-most obstacle for people attāining Nibbāna for the past many hundreds of years.
- Luckily, we have three of the original commentaries (even earlier than the Sinhala Atthakathā) preserved in the Tipiṭaka. See, "Misinterpretations of Buddha Dhamma" and "Preservation of the Dhamma."

Then there is the following sutta which clearly states that the Buddha rejected both "self" and "noself", even according to conventional translations.

## Channa Sutta - Anatta Does Not Mean "No-Self"

16. The "WebLink: suttacentral: Channa Sutta (SN 22.90)" clearly says anatta does not mean "no-self," even in a "traditional" English translation: "WebLink: accesstoinsightŏrg: Channa Sutta: To Channa (SN 22.90)":
"Everything exists": That is one extreme. "Everything doesn't exist": That is a second extreme. Avoiding these two extremes, the Tathagata teaches the Dhamma via the middle: From ignorance as a requisite condition come fabrications. From fabrications, consciousness. Similarly, to name-\&-form, the six sense faculties, contact, feeling, craving, clinging/sustenance, becoming (bhava), and birth. From birth as a requisite condition, then aging \& death, sorrow, lamentation, pain, distress, \& despair come into play. Such is the origination of this entire mass of stress \& suffering."

- "Everything doesn't exist" in the above translates to "no-self" when applied to a "living being." As far as a "person" is concerned, "self" is one extreme, and "no-self" is the other extreme. Therefore, it wrong to say either "a person exists" or "a person does not exist."
- Most Theravāda websites (including the above sites) and texts today translate "anatta" as "no-self." But, it is clear from their translations (especially of the Channa Sutta) that the Buddha rejected this "noself' view.
- Whether it is a living being or the whole world, it is not correct to say they "exist" or "do not exist." Things exist when suitable causes and conditions (per Patticca Samuppāda) are there.
- Also, see, "Atta - Two Very Different Meanings."

Next, "If Everything is Anicca Should We Just give up Everything?",

### 3.4.4 Anicca - True Meaning

Anicca is commonly translated as "impermanence." But it is a fundamental concept in Buddha Dhamma, which has many related - but somewhat different - meanings. Some are discussed in the following posts:

```
O Anicca - Inability to Keep What We Like
O Anicca - Repeated Arising/Destruction
O Anicca - Worthlessness of Worldly Things
O Anicca - The Incessant Distress ("Pilana")
o How to Cultivate Anicca Sanna
O How to Cultivate the Anicca Sanna - II
O Three Marks of Existence - English Discourses
O If Everything is Anicca Should We Just give up Everything?
```

### 3.4.4.1 Anicca - Inability to Keep What We Like

## Re-written May 26, 2019; revised June 13, 2020; August 23, 2022

This post originally had the title, "Anicca - Inability to Maintain Anything." I have re-written it with a new title to emphasize the meaning in the Dhammacakkappavattana Sutta (SN 56.11); for more details: "Dhammacakkappavattana Sutta."

1. The First Noble Truth clearly states that anicca nature is the root cause of suffering. Let us look at how the Buddha summarized the First Noble Truth about suffering in that very first sutta he delivered.

Idaì kho pana, bhikkhave, dukkham ariya saccaí:
jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maranampi dukkhā$\dot{\mathbf{m}}$, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaím na labhati tampi dukkhā $\dot{\boldsymbol{m}}$-saimkhittena pañcupādānakkhandhā dukkhā. [sainkhittena means with being overthrown by defilements]

Translated: Bhikkhus, What is the Noble Truth of Suffering?
'Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering. Having to associate with things that one does not like is suffering and having to separate from those things one likes is suffering. If one does not get what one likes, that is suffering - in brief, the origin of suffering is the craving for the five aggregates of rūpa, vedanā, sañña, sañkhāra, viñṇ̣̃̄̄a (pañcupādānakkhandha). Pañcupādānakkhandha (upādāna or the "tendency to keep close" to pañcakkhandha) includes all that we crave in this world.

- Note that "Yampiccham"" is "yam pi icchaṃ" or "what one likes."

## Analysis of the First Noble Truth

2. The first part in bold indicates what we consider to be forms of suffering: Birth, getting old, getting sick, and dying.

- We also DO NOT LIKE to get old or get sick, and do not like to die. If we have to experience any of them, that is suffering.
- We WOULD LIKE to stay young, not get old, not get sick, and not die ever. If we can have those conditions fulfilled we will be forever happy.
- Stopping (re)birth is the only way to avoid sicknesses, old age, and death. Even births in Deva and Brahma realms will end up in death. All births end up in old age and death.
- Therefore, the suffering that the Buddha taught in his first discourse was associated with the rebirth process.

3. That is what the second part of the verse in \#1 (not in bold) says: Having to associate with things that one does not like is suffering, and having to separate from those one likes is suffering.

- We all have experienced sorrow when separating from those who we like. We also feel distressed when we have to associate with those who we do not like.
- If we can be born instantaneously at a young age (say, 15 to 25 years) and stay at that age without getting old or sick and never die, that is what we WOULD LIKE. But no matter how much we would like to associate with such a life, we will NEVER get it.
- Instead, we have to suffer through each life. Each birth ends up in death. Furthermore, we suffer when getting old, when getting sick/injured, and finally when dying. There is no way to dissociate from those four things that we do not like.
- But that is not the end of it. We keep doing this over and over in the rebirth cycle. Furthermore, things can worsen in the lowest four realms, including the animal realm.

## We Suffer When We Do Not Get What We Desire

4. Both those parts are combined into one succinct statement in the third part of the verse in \#1 (in bold):
"Yampiccaì na labhati tampi dukkham.".
"Yampicchaí na labhati tampi dukkhaí" is a shortened version of the verse (that rhymes).

The full sentence is "Yam pi icchaì na labhati tam pi dukkhaim."

- "Yam pi iccham" means "whatever is liked or craved for." "Na labhati" means "not getting." "Tam pi dukkhaì" means "that leads to suffering."
- Therefore, that verse simply says: "If one does not get what one craves or likes, that leads to suffering."
- This is a more general statement and applies in any situation. We can see that in our daily lives. We like to hang out with people we like, and it is stressful to be with people we do not like.
- Furthermore, the more one craves something, the more suffering one will endure in the end. But this requires a lot of discussion.

## Anicca - The Inability to Fulfill Our Desires

5. The negation of the word "nicca" is "anicca" ("na" + "icca"), just like the word Anāgāmi comes from "na" + "āgāmi." Therefore, even though we would like Nature to be "nicca," in reality, it is "anicca," i.e., it is not possible, in the long run, to have, to be with, what we like, and that is the root cause of suffering. One may live most of one's life happily, but one must leave all that behind when one dies.

- A deeper point is that we all like to be born in good realms, but most future births will NOT be to our liking but are based on "Paticca Samuppāda."
- By the way, Pāli words "icca" and "anicca" are pronounced "ichcha" and "anichcha."
- Not getting what one desires or craves is the opposite of "icca" or "na icca" or "anicca." This is the same way that "na āgami" becomes "Anāgāmi" ("na āgami" means "not coming back"; but in the context of Anāgāmi, it means "not coming back to kāma loka or the lowest 11 realms. These are examples of Päli sandhi rules (connecting two words).

6. Therefore, "yampiccam nalabhati tampi dukkham" is the most important verse in the first sutta delivered by the Buddha, Dhammacakkappavattana Sutta. It provides the key to understanding the Buddha's message and led to the attaining of the Sotāpanna stage by the five ascetics.
 word "iccha" with the emphasis on the last syllable is used to indicate "strong icca" or "strong attachment."

- The word "icca" (liking) is closely related to "taṇhä" (getting attached). Taṇhā happens automatically because of icca.
- The intrinsic nature of this world is "anicca," i.e., we will never get what we crave for, and thus, in the end (at least at death) we will leave all this behind and suffer, that is dukkha.

## Nicca - The Wrong Perception We Have

7. It is important to realize that nicca is the PERCEPTION that one can maintain things one likes to one's satisfaction.

- If this is the case, one is happy, i.e., sukha arises, or at least suffering does not arise. In that case, one is in control, and something fruitful to be had, i.e., att $\bar{a}$. Thus even if one needs to work hard to get something that can be maintained to one's satisfaction, in the end, one can find permanent happiness, and one is in control of one's destiny.
- Humans normally have that nicca sañ̃ña and work hard to gain material things. But at death, one has to leave behind all those possessions, and thus one's life ALWAYS ends in despair and suffering (in addition to suffering due to old age).
- When one realizes the true "anicca nature," one will see that one will be trapped in the rebirth process and be subjected to much suffering in the rebirth process. The Buddha advised cultivating the anicca sañ̃n̄a by constantly thinking about that reality.
- More information on anicca as the opposite of "nicca": "Three Marks of Existence - English Discourses."

## Root Cause of Suffering Is Anicca Nature

8. Thus, the root cause of suffering is NOT impermanence, even though it does play a role.

- The world is inherently impermanent (see "The Grand Unified Theory of Dhamma"). However, impermanence by itself does not lead to suffering. If that is the case, since no one can change that fact, no one will be able to end the suffering (and attain Nibbāna).
- The wrong PERCEPTION (sañña) of nicca leads to suffering. We struggle to find lasting happiness in a world that intrinsically has the anicca nature.
- That wrong perception CAN BE changed by learning and contemplating Dhamma, i.e., by cultivating the anicca sañ̃̃̄a.
- The CORRECT PERCEPTION of anicca (once accepted by the mind), will lead to cessation of suffering (via the four stages of Sotāpanna, Sakadāgāmi, Anāgāmi, Arahant).

Also see, "Does Impermanence Lead to Suffering?",

## Things We Like Cannot Be Kept That Way for Too Long

9. The above point can be illustrated with the following video:
"WebLink: ranker.com: Celebrities Who Have Aged the Worst"

- We must realize that we all will undergo such inevitable changes as we age. No matter how hard we try, it is not possible to maintain ANYTHING to our satisfaction. It is the nature of "this world."
- Now, of course, any of these celebrities (or their fans) would be saddened to see the comparison. They have not been able to maintain their bodies to their satisfaction.
- However, a person on bad terms with any of these celebrities could be happy to see these picture, because they wish to see something bad to happen to the celebrity (in this case, to lose their "looks").
- Thus "impermanence" is inevitable; it is a property of anything in this world. But the perception of "anicca" is in someone's mind. In the above case, bodies of celebrities ARE impermanent; but that did not necessarily cause suffering to ALL. Even those celebrities, if they realize that anicca nature cannot be avoided, would not undergo additional suffering by subjecting themselves to plastic surgeries, botox treatments, etc. Most of all, depression can be avoided.
- Anicca nature leads to suffering for ALL. But many go through added suffering by trying to "overcome it." More importantly, one can stop future suffering by comprehending the anicca nature.

## Root Cause of Depression

10. When one realizes that one cannot maintain something that is desired after a long struggle, one becomes distraught, depressed, and unsatisfied ("yam pi icchain na labati tam pi dukkhaim", where "na labati" means "not get"). Thus the wrong perception of nicca (or a sense of fulfillment of one's desires) ALWAYS leads to dukha or suffering in the end.

- The mindset is that even if something is not permanent and breaks down, one can always replace it with a new one and feel a sense of fulfillment one desires. It is not the impermanence that gives a sense of
invincibility but the mindset that one can always find a replacement for it and maintain one's happiness.
- But if one carefully examines the wider world view of the Buddha, one can easily see that this mindset of the possibility of "long-lasting happiness in this world" is an illusion.
- No matter what we achieve in this life, we HAVE TO leave it all behind when we die.
- And in the new life, we start all over; this is what we have been doing from beginning-less time.
- And, of course, we make it worse by doing immoral things, "trying to maintain things to our satisfaction," and thus generating bad kamma vipāka, leading to immense suffering in the four lowest realms (apāy $\bar{a}$ ).

## Anicca Nature Leads to Suffering and Helplessness

11. In the Samiyutta Nikāya (Anicca Vagga), many suttā, including WebLink: suttacentral: Ajjhattanicca Sutta (SN 35.1), WebLink: suttacentral: Bahiranicca Sutta (SN 35.4), and WebLink: suttacentral: Yadanicca sutta (SN 22.15), the Buddha stated that the three characteristics of "this world" (anicca, dukkha, anatta) are RELATED to each other:
 taín dukkhaì tad anatta"), or,

- "if something cannot be maintained (or managed depending on the case) to one's satisfaction, suffering arises, therefore, one is helpless in the end."

## Impermanence Does Not Always Lead to Suffering

12. Let us consider the examples in bullet \#6 of the introductory post "Anicca, Dukkha, Anatta - Wrong Interpretations."

- If we take a "headache" as the "something," the statement now reads as follows. "If a headache cannot be managed to one's satisfaction (i.e., if one cannot get rid of the headache), suffering arises. Therefore one is helpless."
- Similarly, you can substitute anything we considered in the previous post and see that it will hold.
- On the other hand, if anicca means "impermanence," the statement reads: "If a headache is impermanent, suffering arises. Therefore one is helpless." That is not correct. Suffering would arise only if the headache becomes permanent!

## Anicca Nature Is There in All the Realms of This World

13. No existence in "this world" is exempt from these three characteristics. It applies to all 31 realms. Even though one may be able to find happiness at certain times, nothing we do can get us out of the realities of getting old, sick, and finally dying. Then the cycle repeats in the next life, and next, ....

- Furthermore, any such "happy times" are insignificantly small in the sansāric time scale; see "The Four Stages in Attaining Nibbāna," and "Rebirth - Connection to Suffering in the First Noble Truth."

14. But the good news is that we can gain a kind of happiness that will not go away by comprehending the anicca nature, especially if one attains at least the Sotāpanna stage of Nibbāna; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?," and "Nibbāna - Is it Difficult to Understand?."
15. The Tipitaka describes the concept of anicca in many different ways. Two more are discussed in "Anicca - Repeated Arising/Destruction" and "Anicca - Worthlessness of Worldly Things."

### 3.4.4.2 Anicca - Repeated Arising/Destruction

1. Anicca has been analyzed in several different ways in the Tipitaka. In the Patisambidhā Magga Prakarana in the Tipitaka, it is explained as,

## "uppāda vayattena anicca",

which means "(this world is) anicca because we just keep going through the birth (arising)/ death (destruction) process."

- Of course, in between birth and death there is mostly suffering (in the realms at and below the human realm, where most beings spend time). This is the dukkha characteristic.

2. This is what we have been doing for an unimaginably long time (beginning-less), there is no break from it until one attains Nibbāna.

- We see some people committing suicide hoping to end it all; but ending this life does not solve the "problem." In fact, it may lead to a birth in a lower realm, which will only increase the suffering.
- Thus continuing this ceaseless birth/death process is anatta, i.e., it is fruitless, burdened with suffering, and thus one is truly helpless.

3. We can see the Three Characteristics (Tilakkhana) of this world by carefully examining the fate of anything that arises in this world, which goes by the name sañkhata.

- Whether it is a living being or an inert thing any sañkhata arises, lasts for a certain time, and then perishes.
- For an inert object, the process stops at the destruction step, and it does not feel anything as it goes through the process.
- But for a living being, there is (mostly) suffering during arising/living/death, even though there may be spurts of "happiness" if one is fortunate enough to be born in human realms or the realms above it.
- And the process does not stop at death unlike for an inert object. It just keep repeating.

The arising/destruction of a sañkhata is described in "Nirodha and Vaya - Two Different Concepts."
4. A living being's suffering is also enhanced by the "sañkhata characteristics of inert objects" too. We work hard to acquire "things" but either they get run down/destroyed (houses, cars, furniture,....) or we die leaving them behind. Then if we are lucky to be born human in the next birth we just start this "accumulation process" and get distraught at death again....

- If we think through logically (and this is real meditation), we should be able to grasp this main concept of anicca, dukkha, anatta.
- Through the ages, philosophers (as well as most people) have wondered, "What is the meaning of life?." And they normally think about just this present life; see, "Why Does the World Exist?" by Jim Holt"

5. Someone who has accomplished something significant may think otherwise at the moment of that accomplishment. But it lasts only a short time; at death, it is all gone. If he/she wanted to accomplish something significant in the next life (provided one is lucky to be reborn human), then one has to start all over.

- This point becomes poignantly clear, if one takes a little time and think about the life of any famous personality (emperors, kings, politicians, movie stars,...from times past to the present). Most of them are bound to be born in lower realms because of the heinous acts they did to get some of those positions.
- If one knows the "big picture" about the wider world and the beginning-less journey we have made, it becomes clear that all through uncountable number of lives we have struggled in vain "seeking an elusive happiness." There is no meaning to life in the long run, AND it makes one suffer, and this is the nature of this world: anicca, dukkha, anatta.

6. If there is a birth, there MUST be a death. There is no exception, other than Nibbāna.

This is the "akālika" or "timeless" quality of Nibbāna.

- All sañkhata operate on the basis of kamma vipāka, which normally take time to bring their fruits. This is why people are unable to "see" the working of kamma. There may be drug dealers who live like kings, but they will be paying with interest in the future.
- Nibbāna brings fruits instantaneously, there is no time gap involved (it is "akalika"), unlike a sañkhata. Furthermore, once attained there is no time duration after which it is destroyed; it is forever.
- The magga phala (Sotāpanna, Sakadāgāmī, Anāgāmī, Arahant) are attained in one citta (lasting less than a billionth of a second). And since they were attained via ELIMINATION OF CAUSES, there is no destruction associated with them. i.e., they are forever.
- In comparison, a living being arises DUE TO CAUSES, and when the underlying cause or the fuel is spent, the living being dies. But the process does not stop, because the being had acquired NEW CAUSES (new kamma) during that life or in the previous lives.

7. In the Dhamma Vandana:
"Svākkhato Bhagavatā Dhammo Sandiṭthiko Akāliko Ehi-passiko Opanāyiko Paccattam
veditabbo vinnuhiti",
the quality of Dhamma that is described by "akālika" is that it leads to effects that do not depend on time.

- And that is achieved via the quality listed before that: "sandiṭthiko" ("san" + "ditṭhiko"). Dhamma explains and clarifies "san" that are the causes (avijjā and taṇhā) for arising of sañkhata (whether they are living or inert); see, "What is "San"? Meaning of Sansāra (or Samsiāra)."
- "Bhagavatā Dhammo" can be taken as "Buddha's Dhamma," but it has a deeper meaning too (This Dhamma was only DISCOVERED by the Buddha Gotama, as had countless other Buddhas before him. "Bhagavata"" ("bhaga" + "vata" where "bhaga" means divide and "vata" means "the process" that looks like a "living being"") means this Dhamma, by analyzing a "person" in terms of "actions", illustrates that there in no enduring entity in a "living being."
- And this process leads to "svakkhata" ("sva" for "self" and "+ "akkata" or "akrutha" or "akriya" means putting out of action) meaning it leads to getting rid of the concept of a "me" (āsmai māna) which happens at the Arahant stage. It is not about whether a "self" exists or not; it is rather to realize that nothing in this world is worth to be considered "mine."

8. Some people erroneously interpret "uppāda vayattena anicca" as "things are IMPERMANENT because EVERYTHING is formed and destroyed within 17 thought moments."

- This serious misconception is discussed in the post, "Does any Object (Rūpa) Last only 17 Thought Moments?."
- Each sañkhata that arises has its own lifetime: a fly lives only for a few days, a human lives for about 100 years.
Next, "Anicca - Worthlessness of Worldly Things",

### 3.4.4.3 Anicca - Worthlessness of Worldly Things

August 20, 2017; revised June 8, 2020

## Different Meanings of Anicca

1. Anicca (pronounced "anichcha") is a profound concept that has several meanings (impermanence is only a small part of it). We discussed one interpretation as "it is not possible to maintain anything in this world to one's satisfaction"; see, "Anicca - Inability to Keep What We Like."

- Another interpretation is the following. Whatever that seems to provide lasting happiness arises and destroyed. Anything is subjected to unpredictable changes (viparināma) while it lasts. See, "Anicca Repeated Arising/Destruction."
- Here we discuss another: There is nothing in this world that is valuable and can provide lasting happiness. Not only that, but more craving can only lead to more suffering!

## We Like to Get Hold of Things That We Like (Crave)

2. The desire (icc $\bar{a}$ or $i c c h \bar{a}$; pronounced "ichchā") for any object depends on the value that one places for that object. If one realizes that the object does not have any significant value, then one would not have any desire for that object.

- One has iccā for a given object which one perceives it to be of "nicca" (pronounced "nichcha") nature, i.e., that one thinks has value and can provide happiness.
- If one realizes that a given object does not have a real value, one loses craving for that. The anicca nature means NOTHING in this world has real value. Of course, full comprehension comes only at the Arahant stage. The starting point is to see that immoral actions MUST BE avoided regarding even "seemingly high-value things."

## The Perception of "Value" Depends on One's Level of Understanding

3. Suppose you give the following choices for a five-year-old. A giant chocolate bar or the title to a brand new house (written to his/her name so that the child will be the owner of the house).

- What will the child choose? Of course, the child will want chocolate, and he/she will have no idea how a piece of paper can be more valuable than tasty chocolate! Thus the child has the perception of nicca for the chocolate, i.e., that it can bring happiness whereas the happiness from the house is hard to be grasped by the child.
- However, when that same child grows up and becomes an adult, he/she will choose the title to the house without hesitation. By that time, he/she would have realized that a house is much more valuable than a bar of chocolate. The adult will recognize the "anicca nature" of the chocolate: it can only bring happiness only for a few minutes!
- Did anyone have to explicitly tell that adult that the title to the house is much more worth than chocolate? No. One would realize that when one learns more about the world.
- Just the same way, when one learns Dhamma, one will AUTOMATICALLY realize that nothing in this world has real value. But that realization comes gradually.

## The Tendency to Do Immoral Deeds Based on Cravings

4. All immoral deeds (dasa akusala) are done because of the "value" that one places on worldly things. A child may hit another over that chocolate. An adult may be willing to lie, steal, or even kill to get possession of a house.

- When that adult grasps the critical message of the Buddha, he/she will realize the "anicca nature" of the house too. That even craving for a house is not worth compared to the "cooling down" one can gain by getting rid of the cravings associated with the house. Of course, one does not need to get rid of the house.
- He/she would realize that collecting "valuables" like houses, cars, etc. or making a lot of money (much more than one needs) can bring only suffering at the end (and lose precious time one could have spent on learning Dhamma and making progress towards Nibbāna).

## Adverse Consequences of Cravings

5. Craving for sense objects can have adverse consequences in a wide range. At a lower level, just enjoying sense pleasures without harming others will make one bound to the kāma loka (via "paṭi icca sama uppāda" or "what one likes is what one gets"); see, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda."

- However, if one does immoral deeds (dasa akusala) to get such "valuables," then one will be subjected to dukkha dukkha (direct suffering) in the apāy $\bar{a}$ in future lives; see, "Introduction -2 - The Three Categories of Suffering." That is the worst kind of future suffering, and one would not be able to comprehend that if one does not believe in rebirth or that kammā vipāka, i.e., if one has micchā ditthi.
- Once one gets rid of micch $\bar{a}$ dittthi, it will be easier to see one aspect of the anicca nature. That is "aniccam khayatthena," which means "anicca nature leads to one to the downside," i.e., to do immoral acts and to end up experiencing unimaginable suffering (dukkha dukkha) in the apayy.
- Thus anicca nature not only means that one cannot maintain things to one's satisfaction in the long run but ALSO, it can lead to much suffering in the future.

## The Understanding Leads to the Sotāpanna Stage

6. One can get to the Sotāpanna stage by comprehending the above harsh consequences of anicca nature.

- Buddha also said, "dukkhamं bhayatthena" or "one should be fearful of the dukkha nature" when describing the characteristic of dukkha. At the Sotāpanna stage, one can see that not comprehending the anicca nature can lead to suffering in the apāya. But he/she may still not realize that much suffering (even though less than in the $a p \bar{a} y \bar{a})$ can also arise due to just being attached to sense pleasures, i.e., kāma rāga.
- The full impact of "dukkhamं bhayatthena" is realized only at the Anāgāmi stage (having seen a glimpse of it at the Sakadāgāmi stage). That is when one realizes the dukkha associated with just the craving for sensual pleasures.
- Craving for sense-pleasures lead to sañkhāra dukkha and vipariṇāma dukkha, as explained in detail in the post, "Introduction - What is Suffering?."

7. At the Sotāpanna stage, one comprehends the "anicca nature" at a preliminary level and grasps the dukkha dukkha. Even though one can see the truth of the other two types of dukkha (sañkhāra dukkha and viparin̄āma dukkha), one does not "truly grasp their effects." Those two aspects of dukkha are present in the higher realms of kāma loka (human and deva realms).

- One truly starts comprehending sañkhāra dukkha and vipariṇāma dukkha at the Sakadāgāmi stage, and it will be completed only at the Anāgāmi stage. That leads to further strengthening of "dukkham bhayatthena." One can see the danger in the types of dukkha arising from attachment to sense pleasures (even without engaging in immoral acts).
- Comprehending the bad consequences of sensual pleasures is much harder than seeing the dangers associated with immoral deeds. That is why a Sotāpanna is still "not free" from rebirths in kāma loka.

## Cravings for Sense Desires Lost Only at the Anāgāmi Stage

8. By the time one gets to Anāgāmi stage, one would have removed the lower five types of bonds (orambhagiya samyojana) that bind one to the realms in the kāma loka; see, "Dasa Samyojana - Bonds in Rebirth Process."

- There are five higher samiyojana associated with higher rūpa and arūpa realms. First one removes rūpa rāga (attachment to rūpa jhāna) and then arūpa rāga (attachment to arūpa jhāna).
- The $r \bar{u} p a$ and arūpa realms (highest 20 realms) mostly have rūpa and arūpa jhānic pleasures. In those realms, dukkha dukkha and sañkhāra dukkha are mostly absent, and only the vipariṇāma dukkha (death at the end) is present. One lives with jhānic pleasure until the end when one becomes helpless and could end up even in the apāy $\bar{a}$.

9. In comprehending the Three Characteristics of nature, the critical step is in realizing that collecting "valuables" (houses, money, etc.) as an adult is as foolish as collecting candy wrappers as a child.

- To make that step of "higher wisdom" per Buddha Dhamma, one needs first to understand the "world view of the Buddha," that the world is of anicca nature, i.e., CRAVING for those "valuables" only lead to suffering in the long run. "Long-run" involves not only this life but future lives.
- That is why belief in rebirth is an important requirement to even start on the mundane Path.

## The World is of Anicca Nature, Not Nicca Nature

10. It is an illusion to believe that ANY object in this world will have the "nicca" nature. That there are things in this world that have real, lasting value. The reality is the opposite expressed by the word "anicca." One meaning of "anicca" is that there is nothing in this world of value that can bring lasting happiness.

- However, it is challenging for one to comprehend this "anicca nature" unless one believes in the laws of kamm $\bar{a}$. That one's actions will have consequences. A natural extension of the laws of kamm $\bar{a}$ is the validity of the rebirth process.
- Many actions committed in this life do not bring their results in this life. But they will appear in future lives. Therefore, the laws of kamm $\bar{a}$ necessarily REQUIRE the rebirth process.
- One has more "icc $\bar{a}$ " (or more attachment) for an object that one perceives to be of high value. Then one would have the perception of "nicca" nature for that object. He/she thinks that it can provide happiness.
- But the reality is that either that object loses its value OR one dies, making any perceived value zero at the end. One of those two outcomes is inevitable.

## It is Impossible to Comprehend Anicca Nature Without Belief in Rebirth Process

11. If one does not believe in the rebirth process, then one could be compelled to do immoral deeds to get possession of valuable objects. That is a hidden defilement (anusaya) that may not manifest unless the temptation is high.

- For example, one may not steal anything for a lifetime but could be tempted to take a bribe of a million dollars.
- Or, a drug addict could say, "I am just going to enjoy inhaling drugs until I die from it," thinking that there will not be any consequences after the physical body dies.
- However, one's outlook on such things will dramatically change if one can see the reality of the rebirth process. Most people just believe what "science says" and do not even bother to look at the everincreasing evidence for the rebirth process. See "Evidence for Rebirth."
- Science agrees that causes lead to corresponding effects. Any action has a reaction. However, since science does not know much about how the mind works, it is unable to provide answers to issues that involve the mind. Kammā and kamma vipāka are causes and corresponding effects.

## Greed Comes from the Perception of Nicca Nature

12. Lobha (abhijjhā) is the greed generated in a mind that puts a "very high value" for an object. One is willing to do immoral acts to get possession.

- One with just kāma rāga (desire for sensual pleasures) has the desire to enjoy sensual objects but would not hurt others to get them. Most "moral people" belong to this category UNLESS the temptation becomes high. A Sotāpanna has kāma rāga but will not succumb to ANY temptation to do apāyagāmi deeds.
- A Sakadāgāmi has lost the desire to "own" such sensual objects but still likes to enjoy them.
- Any desire for sensual pleasures goes away at the Anāgāmi stage.

13. In other words, one starts losing the value that one places for "mind-pleasing" objects as one progresses to higher stages of Nibbāna.

- But the critical point to understand is that one LOSES such desires AUTOMATICALLY. One does not need to, and one CANNOT, lose such desires by sheer will power. One needs to "see" the dangers of such cravings by developing the "dhamma eye," or pañ̃̃̄̄ (wisdom) by learning and contemplating on the Tilakkhanna.
- Even if one forcefully keeps such desires SUPPRESSED, such desires will just stay dormant (remain as anusaya.) Those anusaya WILL resurface later in this life or future lives. They can only be removed by comprehending Tilakkhaṇa. See, "Āsava, Anusaya, and Gati (Gathi)."
- With gradual cleansing of the mind, one will start seeing the worthlessness of worldly things.

Also, see, "Anicca, Dukkha, Anatta - According to Some Key Suttā."

### 3.4.4.4 Anicca - The Incessant Distress ("Pīlana")

Revised July 14, 2018; June 15, 2019; re-written with the new title June 1, 2020; revised July 3, 2022
[Old Title: The Incessant Distress ("Pīlana") - Key to Dukkha Sacca]

## Key Verse in The Girimānanda Sutta

1. In the "WebLink: suttacentral: Girimananda Sutta (AN 10.60)", the Buddha stated key features of the anicca nature of "all sañkhāra": "Katamā cānanda, sabbasañkhāresu anicchāsaññā? Idhānanda, bhikkhu sabbasañkhāresu aṭt̄̄yati harāyati jigucchati. Ayaì vuccatānanda, sabbasañkhāresu anicchāsaññā."

Translated: "Ānanda, what is the anicca saññā associated with all sañkhāra? One is subjected to stress, one should be ashamed of engaging in such useless activity, and liking sañkhāra is like embracing urine and feces. That is the anicca saññā associated with all sañkhāra." [at! $t i$ : wounds. yati : [aor. of yatati] exerted oneself; strived. (m.), a monk. attityati : wounds inflicted by oneself. harāyati :[deno. from hiri] is ashamed, depressed or vexed; worries. jigucchati: [gup + cha; gu is doubled and the first gu becomes ji] shuns; loathes; is disgusted at.]

- We will briefly discuss the "att!īyati" nature. "Atti" means "bones" ( 2 z O in Sinhala ). A dog thinks that a bone is precious. It spends hours and hours chewing it and becomes tired in the end. Sometimes, the bone would scrape the gum, and the dog would taste its own blood thinking that the taste it from the bone.
- In the same way, we only get tired and stressed out (pīlana) by generating all types of sañkhāra. However, we do not realize that while making that effort. That is why sañkhāra dukkha remains hidden.
- We engage in mano, vacī, and kāya sañkhāra; see, "Sañkhāra - What It Really Means."

## The Mental Suffering (Pīlana)

2. Most people think that the first Noble Truth on suffering (dukkha sacca) is the physical suffering itself, i.e., they associate it with dukha vedan $\bar{a}$, which is part of the vedana cetasika. However, the Buddha said, "This Dhamma is unlike anything that the world has ever seen." The real truth about suffering is the following. It is the suffering hidden in what everyone perceives to be happiness. That needs to be seen with the pañ̃̃ $\bar{a}$ (wisdom) cetasika

- Thus, "seeing dukkha sacca with wisdom" means "seeing the suffering hidden in sensory pleasures."
- It is difficult to understand the first Noble Truth on suffering for someone who is feeling too much suffering. When someone is hurting from an ailment or when someone's mind is too weak at old age, it is not possible to contemplate the profound message of the Buddha, as we will see below.

3. Dukkha sacca (pronounced, "sachcha") is the Truth of Suffering; sacca is the truth.

- "Pịlana" (pronounced as "peelana") is the Pāli word for distress or hardship. That is part of the suffering we undergo, even without realizing it.
- "Peleema" (зఠக্C७) is the Sinhala word for distress, or hardship, where the first part "pe" rhymes like "pen."
- The spelling of Pāli words is according to an adopted convention that is different from "standard English." See, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars - Part 2."

That is the kind of meditation (contemplation) one needs to do initially, even before starting on the Ariya $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ b h a \bar{a} v a n \bar{a}$. I cannot emphasize enough the importance of understanding the real message of the Buddha first.

## Incessant Distress/Depression (Pīlana)

4. Even though we do not realize it, we are stressed out ALL THE TIME. Constant work is necessary to keep our physical body in good condition. Anyone who has had temporary relief from this constant distress (pìlana) via a good meditation program (even the mundane "breath meditation") knows this; it is called nirāmisa sukha. It is even more apparent if one can have a jhānic experience. Only when one gets into a jhānic state that one realizes that one had been under incessant stress all life.

- We do not realize this because this is the "baseline" for existence (our "comfort zone"); this is what we have done over innumerable rebirths.
- To get some relief from this constant distress, we strive to bring about periods of happiness. We keep thinking of ways to get a better house, car, or zillions of other "things" that are supposed to provide us with joy. Thus, we are ALWAYS stressing out to adjust this "baseline comfort zone." We move to a bigger house, buy a set of new furniture, work harder to get a better job, etc.
- Furthermore, when we go a little bit below the current "comfort level," we need to do work (kāya sañkhāra) to remedy that. For example, when we get hungry, we may have to prepare a meal or walk/drive to a restaurant to get a snack.
- Or, we may be sitting at home, satisfied after a meal, but then all of a sudden, we again go "below the comfort level" for no apparent reason; we just become "bored" sitting at home and think about going to a movie. So, we get in the car and drive to a movie theater.
- I am sure you can think about zillion such things we do all day long.

## Dukkha Dukkha - Doubling the Suffering

5. We have to endure injuries and various forms of sicknesses because of the physical body that we have. That physical body had origins in past kamma. Then, based on such physical ailments, we also suffer mentally.

- Such "distresses" belong to one type of dukkha. That is dukkha dukkha. Thus, on top of physical suffering, we double that suffering by such "mental suffering. That mental suffering is part of "samphassa-j $\bar{a}$-vedanā." See, "Vedanā (Feelings) Arise in Two Ways."
- In addition to direct ailments, we have other forms of suffering associated with the physical body. We get hungry, thirsty, lonely, bored, etc. Thus, we need to attend to the needs of our physical bodies continually. It is like taking care of an invalid. These are all part of dukkha dukkha.

## Sañkhāra Dukkha

6. Our senses continually ask for enjoyment. We want to see beautiful things, hear pleasurable sounds, smell sweet fragrances, and taste sumptuous foods. The body wants luxurious touches, and the mind likes to think about pleasant thoughts.

- Then we have to do things (via kāya sañkhāra) to satisfy these "urges." That is "sañkhāra dukkha" mentioned in \#1 above.
- In addition to doing work going to a restaurant, traveling to a cinema, etc., we also need to do a job to make money for all those activities. Constant work (sañkhāra) is required to keep us afloat.
- Most times, we get one urge on top of another: we may want to eat and drink, we may want to watch a movie, but also may want company (gather friends).
- We do not realize this suffering because our minds are focused on THE RESULT, the pleasure we MIGHT have after doing all that work. That "made-up mental pleasure" is another part of "samphassa-j $\bar{a}$-vedana $\bar{a}$ " mentioned above.
- You may be thinking, "What is he talking about? Isn't this what life is supposed to be?". Exactly! We do not even realize this because this is our "baseline" of existence. We have done this over and overextending to beginning-less time, and we PERCEIVE this to be "normal."

## Dukkha Dukkha and Sañkhāra Dukkha Go Together

7. What we perceive as happiness comes from the relief we get when the distress level decreases due to our efforts. All we do is to suppress "imbalances" or "take actions to bring it to balance." We get relief from that. But the same imbalance keeps coming back and we will have to go over the same "balancing act" again! Let us consider an example.

- We naturally get hungry and thirsty, which are two main "pillana" that we cannot avoid as long as we have this physical body.
- However, when we eat and drink, that leads to a sense of happiness. But we never think that this "happiness" actually arose due to inevitable distress.
- If we cannot find water when we get thirsty, that will lead to real suffering. At that point, a glass of water will taste heavenly. However, after drinking a glass or two, we will not be able to enjoy drinking any more water.
- That "happiness" actually arose when getting rid of the pillana due to thirst.
- The problem is that hunger/thirst keeps coming back!

8. The reality is that no matter what we do to please the senses, those delightfil moments are limited. They do not arise without "pillana" or inherent distress associated with the body. Even if we can maintain that sensory fulfillment for a long time, we become tired after a while. Then the mind asks for a different kind of experience. Let us look at some examples.

- When we are in a warm climate, we are thrilled to be in an air-conditioned room. But we would not like to be in an air-conditioned room in the middle of winter in Alaska, where we would like the place to be warmed up. "Happiness" is not associated with cold or hot air. We will feel happy when we remove "pillana" or the discomfort/distress for the body by cooling or warming the environment.
- We can be lying in the most comfortable bed, but sooner or later, we start shifting and rolling, trying to find a better posture, and eventually cannot stay in bed anymore.
- The most beautiful scenery can be watched only for so long and would get bored. The joy of sex is gone once satisfied, and that urge will not arise until at a later time again.

## Viparināma Dukkha

9. Then there is a third type of suffering called viparināma dukkha. That is also associated with the body but is due to "unexpected changes" and eventual death. That is called "vipariṇāma" dukkha.

- For example, an accident can cause injury. We may come down with a major illness like cancer anytime.
- Death cannot be avoided in ANY realm and is "built-in" suffering. That WILL NOT be stopped until Parinibbāna.
- All three types of suffering are associated with anicca nature. Because of the anicca nature, dukkha arises inevitably. That is why we are helpless (anatta) in the rebirth process!
- Thus, anicca, dukkha, and anatta are inter-related. See, "Anicca, Dukkha, Anatta."

## The Three Types of Suffering

10. In summary, out of the three types of suffering, we notice (and worry about) only the viparināma dukkha.

- One may not even notice the other two types of suffering (dukkha dukkha and sañkhāra dukkha). They are masked by our perceived "happiness." Especially those of us who are born with a reasonable level of wealth can overcome both easily.
- Most of us get to eat before we become starving, and it becomes a "suffering." Furthermore, we don't need to go hunting and kill an animal to eat; we can go to a restaurant and have a nice meal.
- Therefore, those two types of suffering are hidden from us. But we know that many people feel such suffering.

11. The worse part is that in the lowest four realms, beings become truly helpless (anatta). There is little one can do (sañkhāra) to make amends for the incessant dukkha dukkha in those realms.

- For example, a wild animal has very few choices when it gets hungry. It may go hungry for days with much suffering.
- In the wild, you do not see any old, sick animals. When they become weak, they are eaten by bigger, stronger animals. That is the true meaning of anatta. There is absolute helplessness, especially in those lower realms.

## Suffering Is Present in All Realms

12. There is nowhere in the 31 realms where $d u k k h a$ is absent. The three types of $d u k k h a$ are present in the 31 realms in varying degrees:

- In the lowest realm, the niraya, dukkha dukkha is predominant; there is only suffering, and no way to get relief by doing sañkhāra. Even in the animal realm, there is relatively little sañkhāra dukkha; they just suffer directly, as pointed out above.
- In the higher realms (above the human realm), there is very little dukkha dukkha because those are "good births" that originated due to meritorious kamma. In these higher realms, it is the viparināma dukkha that ends the life there. Also, any Brahma has not overcome suffering in the lowest four realms in the future, unless they have attained magga phala.
- It is in the human realm that all three types of dukkha are present at significant levels. The sañkhāra dukkha is highest in the human realm compared to all the realms.

13. What we discussed is the First Noble Truth, Dukkha Sacca. There is hidden dukkha, even in bouts of apparent happiness. There is no place within the 31 realms where dukkha can be overcome. See, "Essence of Buddhism - In the First Sutta."

### 3.4.4.5 How to Cultivate the Anicca Saññā

Revised November 26, 2017; major revision June 28, 2022; revised August 25, 2022 (\#1)
It takes an effort to get the anicca saññā and get to the Sotāpanna stage. Reading about the anicca nature is not enough.

## Acquiring Anicca Sañ̃̄̄̄ Requires an Effort

1. Many people tell me, "I think I understand what anicca means. But then what?".

- If one gets at least a glimpse of what is meant by anicca, that goes a long way. And that is not hard if one spends some time contemplating it. A Sotāpanna fully comprehends the anicca nature and the anatta nature. The next step is to fully comprehend dukkha and asubha nature. See, "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."
- A Sotāpanna Anugāmi may not have diṭthi vipallāsa about anicca and anatta, but may have saññ̄a and citta vipallāsa. Thus, it is important to spend time cultivating anicca sañña.
- Reading and learning about anicca and experiencing anicca sañña are two different things. First, it is a good idea to figure out what sañ̃̃̄a is; see "Saññā - What It Really Means."
- One needs to contemplate the anicca nature with real examples from one's life to get that anicca sañña $\bar{a}$ to sink in one's mind.

2. A Buddha must first point out the essential truth about this world, i.e., "that we cannot maintain anything in this world to our satisfaction." But once told, it is not difficult to see the truth by critically evaluating that statement.

- If one CAN maintain ANYTHING to one's satisfaction, that HAS TO BE one's own body and mind: "This is my body, and these are my thoughts." Therefore, one should start by contemplating one's own body and mind.

## The Mind - Can We Keep It the Way We Want?

3. Close your eyes and try to fix your mind on your wife, husband, friend, house, or anything else. Can you keep your thoughts on that one subject for any significant time?

- It is not possible to do that. Our minds wander off, seeking "more enticing thought objects." You will notice that it becomes even more challenging when one's mind is excited, for example, when one has seen an attractive object or done something strenuous. In the first case, kāmacchanda n $\bar{v} v a r a n ̣ a ~ i s ~$ strong. In the latter, one is breathing hard. In both cases, the "excitability" is high).
- Thus when one's mind is calm, it is a bit easier to keep the mind on something, but still not for too long.

4. It is essential to verify for oneself these examples. Buddha Dhamma is to be experienced, not just read.

- One can cultivate wisdom only by "verifying for oneself that what the Buddha said is indeed true." Blind faith will not get anyone close to the truth. Thus true meditation is to learn the true and pure Dhamma and critically evaluate it based on one's own experiences.

5. Once we confirm that one cannot keep one's mind to the way one wants, the next step is to consider whether one can maintain one's body the way one likes.

- We cannot change our basic body features like height, the color of the skin or the hair, etc. Furthermore, if one is born blind or without a limb, there is nothing one can do about that. Thus to a significant extent, we have to live with the body we were born with.

## The Body - Can We Keep It to Our Liking?

6. Next, consider our body and see whether we can maintain it like that if we like that appearance.

- Of course, we can do that for a while, especially if one is young. But there inevitably comes a time when one will not be able to do that. One can verify that by looking at one's parents and grandparents: look at their old pictures and see how young and vibrant they were back when they were your age.
- Therefore, we need to see that we cannot even maintain things that we consider "our own" to our satisfaction in the long run. That is to help cultivate the "anicca sañña" to a large extent.

## The Truth Will Set You Free!

7. Contrary to those who believe that thinking along these lines is "depressing," it can be liberating to realize the truth. Those who keep trying to "patch up one's losing body assets" by artificial means end up "highly depressed" and even commit suicide. It is better to have thought about the "inevitabilities of life" ahead of time.

- If one contemplates deep enough, one realizes that no matter how much money one can throw at such problems, in the end, one will become helpless. Just think about any old movie stars, beauty queens, bodybuilders, politicians, kings, emperors, etc., and see how they died helplessly at the end.
- Each person dies helplessly at old age or dies unexpectedly of an accident or a significant illness. There is nothing that can be called "graceful death." It may seem to outsiders that "one is aging gracefuilly," but that person knows how hard it is, even if at average health. One cannot do things the way one did once, and one cannot enjoy any sensory pleasure at the same level. All our sense faculties degrade with time.

8. This was the basic message of the Buddha, and it is not something he made up. He just revealed the truth about the nature of this world, which any average person would not think about themselves. We are too busy enjoying sensory pleasures (or trying to acquire enjoyable objects) even to think about it.

- The Buddha also showed that unless we do something about it, this is what we will be doing forever in the future. We will be reborn and will go through the same cycle over and over. It is much worse since most births in this cycle of rebirths are in the lower four realms, where the hardships and sufferings are much higher.
- More importantly, he revealed a way to eliminate this cycle of births wrought with suffering.

## We Have a Distorted (Viparīta) Sañ̃̃̄̄ About the World

9. The Buddha explained that we keep returning to this world because we don't realize "this unsatisfactory nature." No matter how much suffering we go through, we always think we can overcome them (and sometimes we do, but in the end, we all die). We have the wrong perception that somehow we can "beat the system," i.e., attain happiness and MAINTAIN that happiness. We have the incorrect "nicca sa $\tilde{n} \tilde{n} \vec{a} "$. It is not real nature. The Buddha called it "viparīta saññ̄a."

- He said as long as we have this "nicca saññā," we can never escape future suffering. The solution is in that first truth about suffering (Dukkha Sacca, the suffering that we can eliminate): What we need to do is to fully realize the "anicca nature" of this world, that "we cannot maintain anything to our satisfaction in the long run."
- Most people do not realize that the mere change of perception can lift a heavy load that one has been carrying. That is the basis of "nirāmisa sukha"; see "Peace of Mind to Nibbāna - The Key Step."
- That does not mean one will give up trying to give up everything and go to a forest; see, "If Everything is Anicca, Should We Just give up Everything?". One needs to spend time in actual meditation, which means always trying to "see the anicca nature" around.

## Sainsāric Suffering Maintained With Nicca Sañ̃̄̄̄

10. When we have this wrong "nicca sañña," we willingly embrace this world, and that is "Pațicca" ("pati" + "icca," where "pati" is bind and "icca" means willingly). When that happens, "sama uppāda" (where "sama" is similar and "uppāda" means birth) follows inevitably; see, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda"."

- Thus, we will be born into whatever type of existence we crave.
- But that does not mean if we crave a human rebirth, we will get that. Instead, rebirth is, according to "gati," the critical aspect of one's mindset. If one is excessively greedy, one may be born in the realm of "hungry ghosts"; if one is excessively angry or hateful, one will be born where that mindset prevails, i.e., in the niraya (hell).
- In other words, when one has the wrong "nicca saññā," one tends to do immoral things to get what one perceives to provide sensory pleasures. Then vipäka of those kamma $\bar{a}$ will lead to worse existences in the future, both in this life and, more importantly, in future lives.

## Necessary Background to Cultivate Anicca Sañ̃̄̄̄

11. As one cultivates the "anicca sañ̃ $\bar{n}$," one begins to stay away from the ten immoral actions more and more due to clear comprehension that such efforts are unfruitful.

- What is the point of stealing money at the expense of others and acquiring a "good lifestyle" that will last only 100 years? And one will have to pay that with interest?
- What is the point of verbally abusing someone for a momentary satisfaction if that will only hurt oneself in the end (even just by leaving oneself agitated, let alone such kamma vipāka that will come down later)? If one can stop such an incident, one can look back and see the "cooling down" resulting from that effort. That is what "Ānāpāna" or "Satipatṭhāna" is all about.
- What is the point in hitting back even if someone physically hurts you? Will you feel PHYSICALLY better by hurting that person? Will your bodily pain go away? That also did not happen without a cause; it resulted from a bad kamma done sometime back (a kamma vipāka).
- By the way, kamma vipāka are not deterministic. One can avoid many kamma vipāka by not allowing conditions for them to take place; see, "What is Kamma? - Does Kamma determine Everything?". Thus, when living with "sati," many such kamma vipāka can be avoided.

## Mindfulness - Be Mindful About the Anicca Nature

12. It may take some contemplation to sort these out, but one must look at the broader picture. Ignorance is not being aware of the "whole picture." We tend to act impulsively by reacting to events. But that tendency will diminish when one cultivates the "anicca sañ̃̃ā."

- Acting with "sati" or "being mindful" is being mindful of the "anicca nature of this world." That is the basis of both "Ānāpāna" and "Satipaṭthāna."
- Nibbāna or "cooling down" can be experienced in this very life by cultivating the "anicca sañ̃̃̄̄" and thus be motivated to strive harder; see, "Living Dhamma."

Next, "How to Cultivate the Anicca Sañ̃ña - II",............

### 3.4.4.6 How to Cultivate the Anicca Saññā - II

## Revised November 26, 2017; June 27, 2022; June 29, 2022

Saññā is normally translated as "perception", but it has a much deeper meaning. Learning about anicca is the first step, but cultivating anicca saññ̄ $\bar{a}$ is critical.

## Sañ $\tilde{n} \bar{a}$ - What Is It?

1. Saññ̄ $\bar{a}$ is normally translated as "perception", but it has a much deeper meaning; see, "Sañ̃̃̄̄ - What It Really Means." Anicca saññ̄̄ $\bar{a}$ has many different aspects, and in this and the next post, we will discuss some of these deeper aspects; see the link at the end of this post.

- When reading about it, it may make sense that anicca means, "that we cannot maintain anything to our satisfaction." And from the examples given, one can see the truth of that statement. But that is just the start. One just has just been informed of what anicca is. Now one has to "see it with wisdom", in order to get to the Sotāpanna stage. This is what is called "dassanena pahātabba" or "start seeing things as they are" or "Yathābhūta Ñāṇa."
- One needs to develop the "anicca sañ̃̄ $\bar{a}$ "; the mind needs to grasp the essence of the correct perception of what anicca implies. Book knowledge is one thing, and "grasping it with the mind" is much deeper.
- Getting rid of both distorted views (diṭthi) and distorted sañ̃̃̄ $\bar{a}$ is required to get to the Sotāpanna stage; see, "Vipallāsa (Ditthi, Sañ̃ña, Citta) Affect Sañkhāra."
- This is the second of two posts on that issue. In the previous post we determined that it is not possible to keep to our satisfaction what we think of as ours, our bodies, and our thoughts. See, "How to Cultivate the Anicca Sañ̃ñ.."

## Knowing About Something - Different Levels

2. When contemplating external objects, there are many "levels of sañña": the more one KNOWS about a given object, one tends to cultivate a "better sañ $\tilde{n} \bar{a}$ " about it.

- Let us take an example to illustrate this important difference. Suppose a person from a remote region in the Amazon forest, who has never seen an apple, is shown an apple. He would not know what it is. If we give him the apple to hold and teach him the word "apple", now he knows what an apple is, but only in the sense that if he is shown an apple again, he will say "that is an apple." But he would still not know how it tastes. He will have to eat some apples to get an idea of their flavor. He may still not know how to identify a "ripened apple" that will taste better, etc. All that comes when he gets to experience apples at various stages of "ripeness" and even different varieties.
- All those different aspects of an apple need to be experienced in order to really get the sañ̃̄̄̄about an apple. Only then that one can picture an apple, know what it feels like to hold it, how it tastes, etc. At the mention of the word "apple" all that instantly comes to that person's mind.

3. In another example, if we see someone at work regularly at a distance, we can recognize him as $X$ if we meet him at the market. But we would not know much ABOUT him. However, if we get to associate with him and start doing things together, pretty soon we will know much more about him.

- At that point, when we even catch a glimpse of him, everything about him comes to our mind. If we wanted, we can recall how many kids he has, where he went to school, etc.
- Thus "sañ̃̃̄"" can be at different levels. The more one gets to associate with someone or something, then our "sañ̃$\tilde{\tilde{a}}$ " on that person or concept will grow.
- However, it is possible that our "sañ $\tilde{n} \overline{\boldsymbol{a}}$ " about person $X$ may not be really correct. One day, police find video evidence that X is a child molester, and it becomes clear that there is no doubt about it. At that moment, our "sañ̃̃̄"" or perception of X is altered permanently. We will no longer let him even come close to our children.

## Viparīta Saññ̄ - Distorted Perception of This World

4. The Buddha said our "sañ̃ $\bar{a} "$ " about "this world" - that it can provide happiness — is a "viparīta sañña" (pronounced "vipareetha"), i.e., it is a distorted or wrong perception. If one carefully examines the rebirth process in the 31 realms, that wrong perception has provided us with the most suffering in the long run.

- When we realize the "anicca nature" of this world to some extent, our wrong perception will change. That is when one really sees "Sammā Ditthi" or "correct vision" about this world. One becomes a Sotāpanna.
- Just like a fish does not see the "hidden hook" and that it will undergo unbearable suffering by biting the tasty worm, we normally do not "see" the suffering hidden in the "tasty materialistic things." A fish will never be able to figure that out, and as normal human beings we cannot figure it out ON OUR OWN either. Only a Buddha can figure it out, and a Buddha can TEACH us, and we can figure it out by spending some time contemplating it.

5. Therefore, one should not be discouraged if one does not even realize "what the big deal is" about anicca. Like everything else, understanding comes with repeated application and thinking about it. If one can see that "it makes sense" to say, "anicca describes the inability for us to maintain anything to our satisfaction in the long term" that is a good start. Then one should start checking the validity of that concept at every opportunity in real life.

- Also, anicca is not merely, "the inability for us to maintain anything to our satisfaction in the long term." There are many other implications that arise because of this characteristic of anicca. Another way the Buddha described anicca was to use the term attiyati ("atṭeeyathi"); i.e., "it is like a dog chewing on a meatless bone." The dog thinks very highly of the bone and values its 'taste." But there is not even any real taste in that bone. It is taste that is made up by the mind, but sometimes, its gums start bleeding and it may taste its own blood.
- Various aspects of anicca are discussed in: "Anicca - True Meaning."

6. Just like a dog will spend hours and hours chewing its "highly valued" bone, we also give much value to sense pleasures that are fleeting in nature. We do get brief instances of real pleasure, but we do not realize the effort and suffering that we go through to get that brief sense of pleasure. Most of the time, the pleasure is a "pleasure of anticipation." We trudge through hard work with the mind cheering on showing the "possible pleasures to be had."

- The Buddha likened this to oxen (in the old days) who drags a heavy bullock cart with eagerness to get to the pile of straw being held in front of it by a pole. It does not realize the futility of its efforts because it is only thinking about the "prize" being held in front of its eyes. It does not even feel the burden of the heavy load, or even if feeling it, just disregards that pain in anticipation of the "reward that is only a few steps away." The average human's mindset is not that different.
- Most of our pleasures are short-lived and arise just out of putting down the "fires" or distresses. The water tastes best when we are thirsty. Think about how you felt when you were very thirsty; the first sip
of water was heavenly. But as the thirst went down with drinking more water, the "sense of pleasure" went down as well. After at most two glasses, the "feeling of pleasure" turns to discomfort.

## Unseen Drawbacks [Ādīnava] of Sensory Pleasures

7. The same thing applies to any of the sense pleasures. We are constantly under pressure from the mind to "provide relief to one or another sense faculty"; this is "dukkha dukkha" that we discussed elsewhere. If we have not eaten anything for a while, we get the urge to eat something tasty. If we have not listened to some good music for a while, that urge kicks in. If you think about any sensory pleasure, this is true.

- Many people value sex very highly. But how long can one keep that pleasure going? Most of the sexual pleasure is gained by just thinking about it; it is mostly mind-made. One needs to think about this carefully. How much time does one spend "fantasizing" versus "actually having sex"?
- Even if we eat the most delicious food in the whole world, it will not taste good after the stomach gets full. But we keep thinking about that "great experience" of eating that meal many times afterward. Then we form an urge to do it again.
- This "feeling of unsatisfactoriness" or even feeling of "something is missing" is "attiyati." The dog may get tired of chewing the bone and may leave it alone, but after a while, the urge comes back and he is at it again.

8. Even if we are fully content and lying on a comfortable couch, we may get a "feeling of unfulfillment", that something is "missing." We then get the idea, "to go and watch a movie" or to "drop by a friend's place to chat." Then we have to get in the car and drive there. We do not even feel the burden associated with getting dressed and driving because our minds are focused on the pleasure of "watching the movie" or "having a good time with a friend." And after that session, we have to drive back and if it was a bad movie we might even get a bit depressed.

- This is "attiyati." Just like a dog that incessantly is chewing on a dry bone to get mental satisfaction and eventually gets tired doing it, this is what we have been doing life after life (if born in the human realm). Many people eventually realize this at old age, but then it could be too late to do anything about it. [atṭiyati, \& atṭiyati [denom. fr. atṭa3, q. v.] to be in trouble or anxiety, to be worried, to be incommodated. atț̄yati \& atțita] distressed, tormented, afflicted; molested, plagued. attita : [pp. of ardayati] distressed; grieved; afflicted with.]
- As one gets old, the ability to derive pleasure from such activities goes down. If you have friends, relatives, parents, or grandparents who had enjoyed life at a younger age, but now are in distressful situations it is easy to see what happened to them over the years. Now they do not have the energy to try to do all those activities and even if they do to some extent, their sense faculties have degraded to the point of not providing much sensory pleasure.
- But most people still keep thinking back about the pleasures they had when they were young. This may even prompt them to seek ways to "somehow get those experiences back." And when that fails depression sets in.

## Yathābhūta Nāṇa - Removal of Viparīta Sañ $\tilde{n} \bar{a}$

9. As the mind realizes the burdens of the "incessant distress", and that one has endured all that for no real benefit, it will gladly give up those burdens and the mind will start losing those cravings automatically. This is the key to "giving up unnecessary attachments"; see, "Anicca - The Incessant Distress ("Pilana")."

- That post discusses how we encounter suffering when anicca inevitably leads to unexpected "changes" in things we value; this is viparināma dukkha. We encounter more suffering by trying to overcome the effects due to viparināma dukkha by doing more sañkhāra, and that is sañkhāra dukkha. And if we do "bad types of sañkhāra" or apuññäbhi sañkhāra, they lead to rebirths in realms where direct suffering or dukkha dukkha is unbearable. Thus all types of suffering eventually arise due to anicca.

10. Those are key concepts to meditate on (or contemplate). This is real vipassanā bhāvanā.

- However, it is important to make sure one starts abstaining from at the least the conventional five precepts and possibly the "BIG EIGHT" discussed in the " 2 . The Basics in Meditation." Otherwise, the mind will not be calm enough to grasp these concepts. The difference between "book knowledge" and "developing anicca sañña" will become slowly clear as one proceeds.
- That is why reading, listening and contemplating Dhamma concepts are so crucial. This is one component of the Satta Bojjhañga (dhamma vicaya) and one of the Cattāro Iddhipāda called vīmaìssā. When concepts become clear, one will automatically develop anicca sañña. [vicaya: [m] investigation. iddhipāda: [m.] basis of psychic power.]
- And with time, one will be able to grasp it better. One will "start feeling" things in one's own body; see, "11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojihhanga."
- This is a process that goes all the way to Arahanthood. It is said that one truly understands anicca only at the Arahant stage. But our goal here is to at least get to the Sotāpanna stage. And that CAN BE DONE in this very life, as I discussed in my own experience in the above post.

## Not Just Impermanence - Anicca Is Much Deeper

11. Finally, if anyone has spent long times - may be years - meditating on "impermanence" without results, it would be worthwhile to spend some time meditating on the "anicca" nature. I know by experience that will make a big difference if one does it right.

- I spent 4-5 years contemplating on wrong anicca, dukkha, and anatta (and a few other things like the wrong ānāpāna sati bhāvanā). I really believe that the very first desanā that exposed me to the correct interpretation of anicca, dukkha, and anatta changed my progress instantaneously. It was a profound effect.
- It is also important to realize that what ultimately matters is not just a "good feeling" or even getting to $j h \bar{a} n \bar{a}$, but whether one has removed "gati" suitable to be born in the apa$y \bar{a}$. Thus one should be able to look back at one's life and see significant improvements in getting rid of greed, hate, and ignorance; see, "Transition to Noble Eightfold Path."

### 3.4.4.7 If Everything is Anicca Should We Just give up Everything?

## Revised February 11, 2020; June 27, 2022

## Introduction

1. Anicca means "we cannot maintain anything to our satisfaction in the LONG RUN." The time scale of existence is an important factor when we contemplate the significance and implications of this fundamental characteristic of nature.

- So, the question is, "if nothing can be maintained to our satisfaction, what is the point in spending so much time in learning, getting a decent job, making plans for businesses, etc.?."
- We do need to pursue those short-term goals while keeping the "bigger picture" in mind. The "big picture" is the non-existence of a future birth without suffering. Since investigating that "big picture" takes time, we need to make sure we have the means to live a comfortable life that leaves time for such contemplation/investigations.

Short-Term Goals Are Necessary to Comprehend the "Big Picture"
2. During life, we do see many instances where we can attain certain things (pass exams, get jobs, initiate successful businesses, have a comfortable life, etc.) and be happy about such achievements. Of course, there are many times we encounter unexpected things too (coming down with health problems, traffic accidents, floods, hurricanes, loss of jobs, etc.).

- That is the nature of existence as a human. It is a mixed bag, at least until we get to old age; then it becomes increasingly difficult to maintain things (especially our bodies) to our satisfaction, and of course, at death, we have to leave everything behind whether we like it or not.
- In the realms above the human, in fact, life is even more predictable and enjoyable, that is of course until death comes calling.
- But the real problems are encountered in the four realms below the human realm. It is increasingly difficult to "maintain things to one's satisfaction" in lower realms. Animals are truly helpless, especially the vast majority that live in the wild. There are no "old animals" in the wild; they either get sick and die or even worse: they get eaten up as soon as they slow down a bit.
- There is no happiness at all in the lowest realm, the niraya ("ni"+" $r a$ " means without ANY happiness).

## The "Big Picture"

3. Thus the main reason why "we cannot maintain things to our satisfaction in the LONG RUN" is that all beings spend most of their lives in the lower four realms; see, "Rebirth - Connection to Suffering in the First Noble Truth."

- It may take time to convince oneself that this "big picture" about the rebirth process is correct. See, "Evidence for Rebirth."
- When one truly understands that, one will see the dangers of living an immoral life first. Then one will start getting rid of wrong views. Only then one would be able to "see" the bigger picture clearly. It is a step-by-step process. See, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"
- Then one will see that one's own actions decide one's future rebirths. See, "Origin of Life."
- The above is a very brief summary. It will require a real effort to go through them and the references therein.

## Some Implications of the "Big Picture"

4. Then we can examine the question in terms of this "big picture" while keeping in mind the need to attend to "short-term goals."

- If we do give up everything, we will probably die a miserable death (because we will be poor, unhealthy, etc. because we would not be able to even support ourselves,) and be born most likely in a lower realm. That it will make the situation much worse.
- We do need to contemplate this situation. If one thinks through this line of thoughts, one can see that one is really helpless in this cycle of rebirths, which is the third characteristic of existence, anatta. Until a Buddha comes to this world and shows humans this "big picture", AND shows how to get out of it, no one is able to escape this trap.
- The only solution is to at least attain the Sotāpanna stage of Nibbāna in this life. We MAY have some kammic energy left for one or more human lives (see, "Bhava and Jāti - States of Existence and Births Therein"'), but this COULD BE the last for a long while, which could be billions of years. Even if we get another human birth, we do not know under what circumstances; it could be somewhere Buddha Dhamma is not readily accessible.

5. There is another point that we need to consider when tackling this issue. We have become indebted to numerous beings in this journey of rebirths, and thus we have debts to pay back. Having all these debts is a hindrance to attaining any stage of Nibbāna; see, "Kamma, Debt, and Meditation."

## Short-Term Actions

6. Therefore, instead of abandoning our families (to whom we owe the most), we need to do our utmost to make sure they are well-off. We also need to make sure that we do not become dependent on society (and thus accumulate more debt). Even in this life, we depend on others for so many things: we are indebted to our teachers, friends, as well to many unknown people who contribute to providing us with essentials to sustain life; we all are interconnected and have responsibilities for each other. We have "to do our part" to live in a society.

- Therefore, part of the solution is to first prepare oneself (or one's children if one is a parent) with a good education so that supporting oneself (and a family) is possible. Furthermore, a good education helps with understanding Dhamma too. And if one can make a lot of money (by honest means) then one can do many meritorious deeds too, thereby helping oneself spiritually as well.
- In any case, giving up everything and hiding in a forest will not solve the problem of existence. But there are some who have a sansäric tendency to abandon the "householder life." What I am saying here is for the majority of people, not for everyone: Of course, we need to sustain the bhikkhus who spend all their time for the benefit of others as well as themselves.

## Coping With Both "Long-Term" and 'Short-Term" Concerns

7. Therefore, what needs to be done is to understand the true nature of existence and realize that the ONLY solution is to try the best to attain at least the Sotāpanna stage of Nibbāna. Then one becomes free of rebirths in the lower four realms forever. This is THE solution to the problem.

In order to do that we need to,

1. Fulfill our obligations to our families, friends, and society in general,
2. Make our best effort to learn pure Dhamma and attain the Sotāpanna stage of Nibbāna.

When one does this, one will become happy, not depressed, about the outlook. One has understood the problem and knows what to do about it. And when one starts working on it, one's confidence will grow because one can feel the difference in oneself. One will become even more determined AND energetic, not just to save oneself, but also to help out the others.

### 3.4.5 Anattā - A Systematic Analysis

## December 12, 2018

The Pāli word anatt $\bar{a}$ has a mundane meaning and a deeper meaning. The deeper meaning is discussed in a series of posts in a systematic manner.
Anattā in Anattalakkahana Sutta - No Soul or an Ātma
Anatta - No Refuge in This World
Dasa Akusala and Anatta - The Critical Link
Anatta - the Opposite of Which Atta?
Anattā (Mundane Interpretation) - No "Unchanging Self"

### 3.4.5.1 Anattā in Anattalakkahana Sutta - No Soul or an Ātma

## May 31, 2019; revised August 25, 2022

1. Attā is a Pāli word with two primary meanings that vary and depend on the context.

- In the conventional sense, "att $\bar{a} "$ means "a person," like calling someone "John." In rural Sri Lanka, to refer to someone, one could say "this $a t t a "$ " (0ఠ \& \&
- The deeper meaning of "atta" is "fiull control" and "with substance."
- If one is in complete control of SOMETHING, that THING can be called their att $\bar{a}$. If something is not under full control, that is anatt $\bar{a}$.
- That is related to the fundamental concepts of "anatt $\bar{a}$ " and "anatta" (one of the three characteristics of Nature or Tilakkhaṇa); see "Anicca, Dukkha, Anatta." "Anatta" is having "no control" and "without substance" or "without essence."

2. Therefore, we need to determine the meaning of "att $\bar{a}$ " based on the context where the word is used.

- For example, "bear" refers to the large animal in "I saw a bear," but in "to bear a burden," it has an entirely different meaning.
- Let us clarify those two meanings of attā directly using the Tipitaka.

3. The usage of "att $\bar{a}$ " in the ordinary sense is seen in the famous Dhammapada verse; see, "Attā Hi Attano Nātho." There, "att $\vec{a} "$ refers to "any person." It just says that each person has strived for their salvation (Nibbāna). Even the Buddha can only teach the way.

- Another is "attānam damayanti paṇ̂itā," which means, "a wise person would control/discipline oneself." That is in Dhammapada verse 80. [udakam hi nayanti nettik $\bar{a}$; usukārā namayanti tejanaì; dārumं namayanti tacchakā; attānai் damayanti paṇ̣itā̄.]

4. Buddha describer the second and deeper meaning of "att $\vec{a}$ " in his second discourse delivered after attaining Buddhahood.
"WebLink: suttacentral: Anattalakkhana Sutta (SN 22.59)" starts with the verse: "Rūpaï, bhikkhave, anattā. R̄̄pañca hidam், bhikkhave, attā abhavissa, nayidaì rūpaì ābādhāya saìvatteyya, labbhetha ca rūpe: 'evai் me rūpaì hotu, evaì me rūpaì mā ahosītti. Yasmā ca kho, bhikkhave,
 me rūpaì mā ahosì ti.

- Translated: "Bhikkhus, form (physical body) is anattt (or not att $\bar{a}$ ). For if, bhikkhus, if one's body is att $\bar{a}$, one would have full control over it, and it would be possible to say: 'Let my body be like this; let my body not be like this.' But because the body is anatta, it is subjected to decay and disease, and it is impossible to have it the way one desires: 'Let my body be this way; let my body not be this way."

5. The verse in \#4 is critical because it clearly describes what is meant by att $\bar{a}$ and anatt $\bar{a}$ in the more profound sense: Att $\bar{a}$ would be one in complete control. If one has full control of something, one would be able to maintain it the way one wants.

- For example, we like to think that if we "own" something, we should be able to "have full control" over it. But we know that is not the case (cars, houses, anything we own evolves in their way. Even though things like gold jewelery are stable, we will lose control over them when we die).
- Specifically, if one's body is $a t t \bar{a}$, one should be able to make it the way one would like it to be: say, strong, healthy, and handsome/beautiful; one would be able to maintain it without catching any disease or injuries; furthermore, one would be able to make it live forever. But our bodies evolve in their way. No matter how hard we try, they age, decay, and die.

6. This is emphasized in the another verse in that sutta: "Taí kim mañnatha, bhikkhave, rūpaï niccam $v \bar{a}$ aniccaím vā"ti? "Aniccamं, bhante." "Yaím panāniccaì dukkhaím vā taì sukhaím vā"ti? "Dukkham̀, bhante."

Translated: "What do you think, bhikkhus, can one's body be maintained to one's liking or not?"-"not possible, bhante."-"Does that lead to suffering or happiness?"-"Suffering, bhante."

- As we have seen before, the anicca nature (inability to satisfy one's desires/expectations) leads to suffering; see, "Anicca - Inability to Keep What We Like."
- We suffer when something we own breaks down (houses, cars, etc) and when people we love get sick or die. However, the worst suffering is when we get ill or face death. That is expressed in the next part of the above verse.

7. The verse continues: "Yaì panāniccaì dukkhaì viparināmadhammaí, kallaì nu taì samanupassitum: 'etaì mama, esohamasmi, eso me atta’" $t i$ ? "No hetami, bhante."

Translated: "If something cannot be maintained to one's liking, if it undergoes unexpected change, and lead to suffering, is it appropriate to say: ‘This is mine, this I am, this is my atta (my essence)'?"-'No, bhante."

- Now we are getting to the deeper aspect. If X owns a car, X would say, "this car is mine." If that car breaks down, X will become unhappy (suffer).
- However, X will never say, "this car is me; this is my attā (my essence)."
- On the other hand, X is likely to say, "this body is me; this is my att $\bar{a}$ (my essence)."

8. Then, the Buddha pointed out that the statement also holds for one's physical body. One's body cannot be maintained to one's liking; it undergoes unexpected change and leads to suffering. Thus, is it NOT appropriate to say: ‘This (body) is mine, this II am, this is my att $\bar{a}$ (my essence)."

- Understanding that will remove sakkāya diṭthi.

9. Furthermore, it is not only our body but any $r \bar{u} p a$ (family, friends, cars, houses, etc) that is not under our control. In our deep past, we never had that control over any external or internal $r \bar{u} p a$, and we will never be able to have such control in the future either. Therefore, the whole rūpakkhandha is anattă.

- The sutta now repeats the same argument for the other four khandhās or aggregates: vedanākkhandha, saññ̄̄kkhandha, san̉khārakkhandha, viññānakkhandha.
- Those are our thoughts, experiences, hopes and dreams. We do not have much control over them, and whatever control we have will be lost at death. We have no idea where we will be born next.
- We are helpless in this beginning-less rebirth process, which is the anatta nature.

10. Anything rellated to a "living being" (or a given lifestream) is in the five aggregates. There is not even a single entity we have control over, i.e., none of them can be called one's $a t t \bar{a}$.

- Therefore, there is NOTHING that can be called one's own and thus can be maintained to one's liking. For example, one has no control over WHERE one will be reborn.
- Anything in the five aggregates arises via Paticca Samuppāda. We only have control over two types of sañkhāra (vacī and kāya sañkhāra) and have no control over mano sañkhāra. It is essential to understand the types of sañkhāra: "Sañkhāra - What It Really Means."
- Furthermore, most rebirths are the lower realms with much suffering. Thus one is helpless or anatt $\bar{a}$.

11. Thus, there is "no real intrinsic essence" like a soul. Also, "one is helpless in the long run" and "all struggles for permanent happiness will go to naught," etc. Even if one lives a perfect and healthy life, one WILL become helpless at death, with the future uncertain.

- Note that "rūpaim anattā" refers to the fact that one's body cannot be one's attā, and also, anatta (without the long "a") is a characteristic of nature.
- Realizing this particular aspect of anatta nature, i.e., that any part of one's five aggregates can not be taken as "one's own" is the removal of sakkāya ditt!hi. We get attached to small parts of pañcakkhandha (i.e., pañcupādānakkhandha) because we think those are our own. See "Essence of Buddhism - In the First Sutta."

12. Now, we can see how this concept of anatt $\overline{\boldsymbol{a}}$ is opposite to the concept of a "soul" in Abrahamic religions or the concept of an "ātma" (pronounced "āthma") in Hinduism. Thus, according to those religions, there is an att $\bar{a}$, the "soul" or the "ātma."

- In the case of Abrahamic religions, one's goal is to "purify" one's soul and make it go to heaven where one will live forever.
- In the case of Hinduism, the goal is to merge one's $\bar{a} t m a$ with the Mahā Brahma, and again be in that Brahma realm forever.
- However, the Buddha stated that no realm in this world has a permanent existence like that.
- This concept of an "everlasting identity" or a "soul" or an "ätma" is referred to as the "sassatavāda" in the Tipitaka. [sassatavāda :[m.] eternalism.]

13. Those who do not believe in rebirth say that a "person" exists only as long as his/her body is alive. When one dies, that identity is terminated. Most scientists today seem to believe in this idea: There is nothing that is "carried over" to the next life. This concept (or argument) is called the "uccedavāda" in the Tipiṭaka. [uccheda: :[m.] cutting off, perishing; annihilation.]

- But the Buddha explained that the fundamental nature lies between those two extreme views. Any "living being" exists as an ever-changing lifestream and that "lifestream" is carried over to a new life. But there is NOTHING that remains the SAME in that lifestream. The next life could be VERY DIFFERENT from the current life; see, "What Reincarnates? - Concept of a Lifestream."
- The next life is determined by the root causes and conditions when leaving the current existence (cutipatisandhi moment) based on Paticca Samuppāda.

A second fundamental meaning of anatta is in "Anatta - No Refuge in This World."
Anattalakkahaṇa Sutta discussed in detail: "Anatta in Anattalakkhana Sutta - Part 1."

### 3.4.5.2 Anatta - No Refuge in This World

June 7, 2019; revised June 12, 2021; August 29, 2022

## Recap of First Meaning of Anatta - No "Soul" or "Atma"

1. In the previous related post, we discussed one aspect of anatta - that there is no everlasting "essence" in a living being like a soul or an $\bar{a} t m a$; see, "Anattā in Anattalakkahana Sutta - No Soul or an Ātma."

- However, life does not come to an end at death. There is a continuation at death with birth in one of the realms "in this world of 31 realms"; see, "What Reincarnates? - Concept of a Lifestream."
- When life as human ends, one does not control what the next existence will be. It happens according to the prevailing causes and conditions, i.e., via the Patticca Samuppāda process.

2. Therefore, there is no "unchanging essence" in a given "person"; he/she is just a collection of the five aggregates that keep evolving according to the principle of cause and effect (Paticca Samuppāda).

- Vedanā, sañ̃̃̄a, sañkhāra, and viññāna all arise due to conditions present at a given time, i.e., they arise on Paṭicca Samuppāda ("avijjā paccayā sañkhāra," "sañkhāra paccayā viññāṇa" lead to sañkhāra and viññāna; "phassa paccayā vedanä" leads to vedanā (and saññā since vedanā and
sañ̃̃̄̄ arise together; see, "Citta and Cetasika - How Viññāna (Consciousness) Arises"). Furthermore, our bodies (rūpa) arise via "bhava paccayā jāti").
- A "person" is no more than the five aggregates: rūpakkhandha, vedanākkhandha, sañ̃̄̄̄̄kkhandha, sañkhārakkhandha, viññānakkhandha.
- Those aggregates evolve moment-to-moment according to Paticca Samuppāda or the principle of cause and effect, where conditions play a major role.
- There is no "att $\vec{a}$ " or a "soul" or an " $\bar{a} t m a$ " that can cause these entities to arise when a new
 "Kamma are Done with Sañkhāra - Types of Sañkhāra."

3. We can see that the Buddha explained the deep concepts of anicca, dukkha, and anatta in his first two suttā (Dhammacakkappavattana Sutta and Anattalakkhana Sutta that were delivered to the five ascetics just after attaining the Buddhahood.

- In the post, "Anicca - Inability to Keep What We Like" we discussed the first discourse of Dhammacakkappavattana Sutta, in which the Buddha described what anicca means, and how the inherent anicca nature leads to dukkha or suffering.
- As we discussed in that post, the key verse in that sutta is, "yampicchaim nalabhati tampi dukkhamं," which is shortened version (that rhymes) of the full verse "yam pi icchaí na labhati taim pi dukkhamं," and that the word "anicca" is the opposite "icca" that is hidden in that key verse (then dukkha arises because of the inability to satisfy one's expectations (icca).
- In the same way, Anattalakkhana Sutta introduced the term anatta, which highlights the fact that one is unable to maintain even things one perceives to be "one's own" like one's physical body or one's mental faculties (vedanā, saññā, sañkhāra, and viñ̃̃̄̄ṇa); see, "Anattā in Anattalakkahana Sutta - No Soul or an Ātma."
- Of course, those two aspects are related. Since one does not have complete control over ANYTHING, one will become helpless and will inevitably be subjected to suffering in the rebirth process. Of course, we are only talking about long-term consequences in the rebirth process, and NOT short-term ones. One MUST have short-term goals.

## Anatta - Becoming Helpless in the Rebirth Process

4. In this post, we will discuss another aspect of the anatta nature: how one becomes helpless (anatta) in the long term. That is another meaning of anatta, sometimes written as anattha. (The Tipitaka was written down in Pāli, but with Sinhala script; see "Historical Background." The word "anatta" was written as
 q20s3'J and that we write here as "anattha").

- The Pāli word "attha" could mean "the truth" or "having a refuge" or "meaningful," depending on the context. The opposites of "untruth," "helpless" or "meaningless/unprofitable" are indicated by the word "anattha."
- When one does not comprehend the anicca nature (that it is impossible to get what one wants AND keep it that way), one would be tempted to try to get one's wants by any means necessary. This is when one starts engaging in immoral deeds.
- This is when one sets up causes and conditions to bring so much suffering in the future that will lead to becoming truly helpless (anattha) via bad rebirths due to bad kamma.
- Therefore, knowing the first meaning of anatta is not enough; one needs to comprehend the second related meaning and work diligently to avoid dasa akusala. This is discussed below.

5. In the "WebLink: suttacentral: Pathama Adhamma Sutta (AN 10.113)," the Buddha succinctly states what dhamma/adhamma and attha/anattha are:
＂Katamo ca，bhikkhave，adhammo ca anattho ca？Micchādiṭthi，micchāsañkappo，micchāvācā， micchākammanto，micchāāj̄̄vo，micchāvāyāmo，micchāsati，micchāsamādhi，micchāñāṇamं， micchāvimutti－ayamं vuccati，bhikkhave，adhammo ca anattho ca，＂AND
＂Katamo ca，bhikkhave，dhammo ca attho ca？Sammādittthi，sammāsañkappo，sammāvācā， sammākammanto，sammāāj̄̄vo，sammāvāyāmo，sammāsati，sammāsamādhi，sammāñānaín， sammāvimutti－ayaì vuccati，bhikkhave，dhammo ca attho ca．＂
－＂Dhamma＂are those thoughts，speech，and actions that benefit oneself．One who engages in those is engaged in fruitfiul／meaningful things and will lead to one＇s refuge（＂attha＂）．As we can see，this encompasses the Noble Eightfold Path followed by sammā ñāna and sammā vimutti（i．e．， Arahanthood）．
－The opposites or＂adhamma＂are those thoughts，speech，and actions that lead to much future suffering． Those who engage in those are engaged in unfruitful／immoral things，leading to becoming helpless in the rebirth process（＂anattha＂）．

6．Another way to express the same idea is to say that one who is engaged in dasa akusala（adhamma）will become helpless in the rebirth process（anattha）；see，＂Dasa Akusala and Anatta－The Critical Link．＂

One who is engaged in the opposites of dasa kusala（i．e．，Buddha Dhamma）will have refuge in the rebirth process（attha）and become free of future suffering by becoming an Arahant．
－Many key suttā stating these＂core facts＂about Buddha Dhamma is listed in＂Anguttara Nikāya－Suttā on Key Concepts．＂

7．Therefore，we see that the first meaning of anatta states that one will never have full control over one＇s affairs in the long run，and thus one is bound to become helpless in the rebirth process．
－The second meaning provides a practical way out of this dangerous outcome：Only a Buddha can discover this special way to avoid future suffering；it is the Noble Eightfold Path．
－In other words，one should follow Buddha dhamma to have refuge（attha）instead of following adhamma to become helpless（anattha）．
－In the＂WebLink：suttacentral：Pathamanātha Sutta（AN 10．17）＂and＂WebLink：suttacentral： Dutivanātha Sutta（AN 10．18），＂the Buddha advised bhikkhus to live a moral life to avoid becoming anātha：＂Sanāthā，bhikkhave，viharatha，mā anāthā．＂

## Yadaniccam tam dukkham，tam dukkham tadanatta

8．With this second interpretation，It is easier to see how the anicca nature leads to suffering（dukkha）and eventually to helplessness（anatta）．
－Any human who has not heard and comprehended to some extent what anicca nature is called an ＂assutavā puthujjano．＂One who has is called a＂sutavā ariyasāvako．＂Here sutavā means＂has heard about the true teachings of the Buddha（and comprehended），＂and assutava $\boldsymbol{a}$ ，is of course，one who has not heard／comprehended．［sutavā ：已聞，have heard；assutavā ：Not learned，ignorant，無聞的，無知的］［See WebLink：suttacentral：AN 5．48 Alabbhanīyathānasutta］
－If one does not realize that all struggles to achieve＂permanent happiness＂are not possible，one would be doing one＇s best to achieve such a state of happiness．This is done by merging one＇s soul with a Creator God in heaven or one＇s ātma with Mahā Brahma in a Brahma realm．But the Buddha explained that those efforts would be in vain．

9．It is，of course，necessary to have goals for certain achievements while one is living in this world－even mundane achievements．For example，one needs to get a good education and employment（and that one＇s children will do the same）．This is necessary to avoid suffering in this life．

- But then one would need to hear about the true nature of this world on a long-term basis: That life continues after the death of this physical body, and one needs to work towards attaining some spiritual goals. That will lead to stopping suffering in the rebirth process.
- It is only when one contemplates this "long-term picture" that one can comprehend the anicca (and $d u k k h a$ and anatta) nature of this world: No matter how many mundane achievements one may achieve, one would have to leave all that behind when one dies and then - if fortunate enough to be born human - re-start the whole process again.

10. Therefore, ignorance of anicca nature leads to suffering (dukkha).

- If one tries to attain happiness by doing dasa akusala (which is very likely to happen when the temptations become high), one would be born in the lower four realms, and the suffering will be much higher. That is when one becomes helpless (anatta).

This fact is stated repeatedly in many sutt $\bar{a}$ with the succinct statement: "yadaniccain tain dukkhaim, tain dukkhamं tadanatta."

- That is a condensed version made to rhyme for easy oral transmission. The complete verse is: "yad aniccaì taì dukkhaì, taì dukkhaì tad anatta",
- "If we cannot maintain things to our satisfaction, suffering arises; that makes us helpless in the end."
- For more details see, "Anicca - Inability to Keep What We Like."

11. The above important verse appears in many suttā in the Saimyutta Nikāya (Anicca Vagga), including WebLink: suttacentral: Ajihattanicca Sutta (SN 35.1), WebLink: suttacentral: Bahiranicca Sutta (SN 35.4), and WebLink: suttacentral: Yadanicca sutta (SN 22.15), the Buddha stated that the three characteristics of "this world" (anicca, dukkha, anatta) are RELATED to each other:

- This statement is applicable in this life. No matter how many achievements/accomplishments/victories we make in this life, we will have to leave all that behind when we die.
- However, the Buddha's key message was regarding this statement's implications in the rebirth process. If one engages in dasa akusala (unavoidable if the temptation is high enough), one is bound to be subjected to much suffering via rebirths in the four lower realms. That is when one becomes helpless (anatta).
- This is why one would need to remove the ten types of micchā dittthi first (mundane Eightfold Path) to understand the fundamentals like the laws of kamma and the validity of the rebirth process. Only then can one start comprehending the anicca, dukkha, and anatta nature and start on the Noble Eightfold Path; see, "Buddha Dhamma - In a Chart"" and "Mahā Cattārisaka Sutta (Discourse on the Great Forty)."

## All Meanings of Anicca/Anatta Self-Consistent

12. All meanings/interpretations of anicca and anatta are interrelated.

- The first meaning of anatta says that there is no "unchanging essence" in a living being, controlling its destiny. Everything happens due to causes and conditions even moment-by-moment Idappaccaya $\bar{a}$ Pațicca Samuppāda. Then the rebirth process takes place according to Uppatti Paṭicca Samuppāda; see, "Paticca Samuppāda." Once the basic idea is grasped, one can follow the steps in "Paticca Samuppāda - Overview" to understand things better.
- This is related to the anicca nature of not being able to maintain anything to one's liking. One does not have that ability because one does not control anything one perceives to be "one's own."
- When one goes against nature (i.e., do adhamma) and tries to maintain things to one's liking, one may do dasa akusala and then be subjected to their bad kamma vipāka. One critical aspect of this is to be
born in the four lower realms where suffering is high. One can avoid much suffering by grasping this meaning of anatta.

13. There is something under our control, even though one has to be really disciplined to make it to work. This is one's own gati. One's own gati controls one's destiny.

- Since one's gati can change at any time, those are not fixed. Anyone can decide to change one's gati and work towards a better outcome by rejecting adhamma and adhering to dhamma, i.e., by following the Noble Eightfold Path; see, " 9 . Key to Ānāpānasati - How to Change Habits and Character (Gati)."
- But first, one must fully grasp the fundamentals embedded in anicca, dukkha, and anatta (and sometimes asubha is added to the list).
- Even before that, one must get rid of those ten types of micchā ditthi. For example, one can never grasp the aniccalanatta nature if one does not believe in rebirth. The whole point is to stop suffering in future rebirths. Current life has already arisen due to past causes/conditions and will inevitably lead to decay and death.

### 3.4.5.3 Dasa Akusala and Anatta - The Critical Link

April 2, 2017; revised November 10, 2017; August 30, 2018; September 1, 2018; June 6, 2019; June 12, 2021; re-written June 13, 2021

## Atta/Anatta - Various Meanings

1. This important post will help connect the deeper teaching of the Buddha Dhamma (anicca, dukkha, anatta) and the practice, i.e., cleansing one's mind via abstaining from dasa akusala and cultivating dasa kusala.

- The Tilakkhana (three characteristics) represent the "theory side" or the "nature of this world" and dasa akusala are associated with the practice. Thus the connection between the two is important.
- I have not seen this addressed directly, outside of the Tipitaka.

2. We discussed in the previous post, "Anatta - the Opposite of Which Atta?" why the Pāli words "atta/anatta" do not convey "self/no-self" but rather "with essence/no essence" or "truth/untruth" or "useful/not useful" or "protected/helpless."

- We also discussed how "atta/anatta" is closely related to the Sanskrit words

- Finally, we touched on the fact that anatta (and thus $d u k k h a$ and anatta) nature is a manifestation of engaging in dasa akusala.

3. Recently I realized that many suttā in the Anguttara Nikāya (AN) express various concepts in brief. Many suttā are just a paragraph, providing the key idea; see "Anguttara Nikāya - Suttā on Key Concepts."

- Here we will discuss three short suttā in the A $\dot{n} g u t t a r a$ Nikāya that can clarify the connection between dasa akusala and Tilakkhaṇa.

## Kusala and Akusala

4. First, the (WebLink: suttacentral: Kusala Sutta (AN 10.180; in the Sadhuvagga) has just one verse defining dasa akusala:

- "..katamanca bhikkhave, akusalam? pānātipāto, adinnādānaim, kāmesumicchācāro, musāvādo, pisunā vācā, parusā vācā, samphappalāpo, abhijjhā, vyāpādo, micchādiṭthi akusalaí.."
- Conventionally translated: "killing, stealing, sexual misconduct, lying, slandering, harsh talk, empty talk, greed, hate, and wrong views." These are discussed in "Ten Immoral Actions (Dasa Akusala)."
- In the next and last paragraph of the sutta, dasa kusala are defined as the opposites of dasa akusala (veramani means "abstain from"): "..katamanca bhikkhave, kusalam? pānātipātā veramani, adinnādānā veramani, kāmesumicchācārā veramani, musāvādā veramani, pisunā vācā veramani, parusā vācā veramani, samphappalāpā veramani, abhijjhā veramani, vyāpāda veramani, sammādițthi kusalain 'ti.
- Therefore, kusala and akusala are stated clearly and succinctly in that sutta.

## Engaging in Akusala Lead to Anattho (One Who Has Become Anatta or Without Refuge)

5. Then in the very next sutta, WebLink: suttacentral: Attha Sutta (AN 10.181; in the Sadhuvagga) anattho is defined in terms of dasa akusala:

- "..katamo ca bhikkhave, anattho? pānātipāto, adinnādānaim, kāmesumicchācāro, musāvādo, pisunā vācā, parusā vācā, samphappalāpo, abhijjhā, vyāpādo, micchādiṭ̣thi - ayam vuccati, bhikkhave, anattho.."
- This means dasa akusala are "not the real nature." When one goes against nature, one gets into trouble; see, "Anatta - the Opposite of Which Atta?."
- In the next and last paragraph of the sutta, attho is defined as the opposite of that: panatipat $\bar{a}$ veramani, adinnādānā veramani, kāmesumicchacārā veramani, musāvādā veramani, pisuṇa vācā veramani, parusā vacā veramani, samphappalāpā veramani, abhijjhā veramani, vyāpāda veramani, sammaādiṭthi - ayam vuccati, bhikkhave, attho. 'ti.
- That means one will have refuge (and thus will NOT be helpless) if one refrains from such akusala kamma.
- Here are more short suttā that confirm this point: "Angiguttara Nikāya - Suttā on Key Concepts."

## The Wrong View of a "Me" Is in Sakkāya Dițthi

6. Those two short suttā make crystal clear the following important facts:

- Anatta has nothing to do (directly) with whether a "self" exists. Note that the wrong view of a "me" is Sakkāya Dițthi.
- Anatta is all about being helpless in the rebirth process due to one's engagements with dasa akusala.
- Therefore, getting to Nibbāna is about avoiding dasa akusala, i.e., cleansing one's mind.

## Confirmation in Other Suttā

7. Now, several suttā in the Anguttara Nikāya put it all together. The first verse in the Patama Adhamma Sutta (WebLink: suttacentral: AN 10.113 in the Paccorohanivagga) states it nicely:

- "Adhammo ca, bhikkhave, veditabbo anattho ca; dhammo ca veditabbo attho ca."
- I will write another post explaining other verses in that sutta. Still, we can easily translate that verse: "Bhikkhus, it is to be comprehended that adhamma leads to |anatt $\bar{a} \mid$ (helplessness), and dhamma leads to $|a t t \bar{a}|$ (refuge in Nibbāna)."
- Furthermore, those who are still clinging to the incorrect interpretation of "anatta" as "no self," should be able to clearly see that it leads to the foolish statement: "Bhikkhus, it is to be comprehended that adhamma leads to no-self, and dhamma leads to self."
- Even Sakkāya Ditthi is not about a "self." It is deeper. It says that nothing in this world can be OR should be taken as "me" or "mine." In ultimate reality, not only is there no everlasting "soul," there is no "me" or "I" either. But the PERCEPTION (saññ̄a) of a "me" goes away only at the Arahant stage. See, "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."
- The root cause of this misinterpretation is explained in "Misinterpretation of Anicca and Anatta by Early European Scholars."

## Dhammā and Adhammā

8. Dhamma is what one should bears, i.e., what principles one should lives by. But it is normally used in the sense of "good dhamma."

- Adhamma (or adhammā) is the opposite, i.e., immoral living. If one engages in dasa akusala, one engages in adhamma, i.e., one bears adhamma $\overline{\text {. }}$
- Consider the following similar situation. We normally use the word "smell" to mean "bad smell." However, we specifically say "good smell" to indicate a good smell.
- In the same way, dhammā can be good or bad ("what one bears"). However, we normally use the word dhammā to indicate good dhammā. Bad dhammā are adhammā.

9. Normally the word dhamma indicates teaching or a principle, as in Buddha Dhamma. The word dhamm $\bar{a}$ (with a long "a") is used to indicate what one bears as a result of past kamma; see, "What are rūpa? Dhammā are rūpa too!." Dhammā are the same as kamma bīja.

- We need to determine the meaning depending on the context and how the word is used in a given verse.

## Consistency Within the Whole Tipiṭaka

10. When examining ANY sutta in the Tipitaka, they will be consistent with the above explanation.

- Those three suttā make the key connection between the deeper Tilakkhaṇa ('theory") and the practice (cleansing the mind via sīla, i.e., staying away from dasa akusala). We don't need to analyze hundreds of suttā to see the connection.
- When I go to online discussion boards, I get baffled. People quote suttā from different sites, and normally they have incorrect meanings of key Pāli words. It is a waste of time to read all those long posts providing "evidence" from different places, and of course, there are usually inconsistencies among them.
- This was a major reason that I decided to start this website because I can show that everything is consistent if one uses the true meanings of key Pāli words.

11. It is also good to remember that a major problem with many texts is that they take conventional meanings of keywords and apply them incorrectly.

- Unless one knows the true meanings of such keywords and where to use a given meaning, it is easy to veer off in a wrong direction; see, "Pāli Dictionaries - Are They Reliable?." Also see, "Buddha Dhamma: Non-Perceivability and Self-Consistency."

12. In the previous post, "Anatta - the Opposite of Which Atta?," we briefly mentioned that anatta is closely related to dasa akusala. I hope the connection is much clear now.

- Engaging in dasa akusala can only lead to suffering and thus helplessness in the long run. Therefore, engaging in actions, speech, thoughts associated with dasa akusala is pointless and dangerous.
- This idea is quite clear in the Sinhala word for anatta. It is "anārtha" that we discussed in that previous post. It means "doing useless things and can only bring harm."

## Kamma Vipāka Can Materialize at any time - When Conditions Are Right.

13. Those who believe that doing dasa akusala can bring "bad vipāka" only in future lives are mistaken. Many people do not realize that even having immoral thoughts can bring us stress in this life itself.

We discussed this in detail in the beginning posts in the "Living Dhamma" section. That section is important in two aspects:
a. While abstaining from dasa akusala, one can experience a definite sense of relief - also called nirāmisa sukha - and that should be the initial focus.
b. When one starts experiencing this nirāmisa sukha, one also starts comprehending deeper aspects of Dhamma like the anicca and anatta nature. Only with those insights can one start to "see" the longterm kamma vipāka due to dasa akusala - like those leading to births in the apāyā (lowest four realms).

## Attha Could Also Mean "Truth"

14. Note that atta is sometimes spelled out as "attha" (with an "h") in many texts, and each may imply a mundane or deeper meaning. For example, the old Sinhala commentaries are called "atthakathā." It means "accounts about the truth" ("kathă" means "story").

- Those are the reliable commentaries in the Tipitaka:Patisambhidamagga, Petakopadesa, and Nettippakarana. Of many Sinhala atthakathā, those three are the only ones surviving.
- On the other hand, commentaries by Buddhaghosa and others do not belong to atthakath $\bar{a}$. Visuddhimagga is a popular but erroneous commentary; see, "Buddhaghosa's Visuddhimagga - A Focused Analysis."

## One Will Live by Dhammā When One Grasps Noble Truths/Paṭicca Samuppāda/Tilakkhana

15. Finally, we can now see the truth in verse, "Adhammañca viditvā anatthañca, dhammañca viditv $\bar{a}$ atthañca yathā dhammo yathā attho tathā patipajjitabbaí," that is also in the Patama Adhamma Sutta of \#7 above.

- That means, "Knowing that adhamma leads to anattha and dhamma leads to attha, you should practice accordingly (following yathā dhammo will lead to yathā attho.)
- If one bears dhamm $\bar{a}$ and stays away from adhamm $\bar{a}$, that will help one grasp the Noble Truths/Pațicca Samuppāda/Tilakkhana. Then one will not become |anattā| or helpless in this rebirth process. Instead, one will have "attā|" or refuge.
- Once grasping the Noble Truths, one will never live by adhamma.
- This important post provides a simple but critical link between "theory and practice." It is a good idea to read those relevant other posts and come back and re-read this post, until this connection is grasped.

### 3.4.5.4 Anatta - the Opposite of Which Atta?

March 17, 2017; revised November 4, 2017; June 1, 2021

## We can see how the word "anatta" got mistranslated as "no-self" by carefully examining the different usages of the word "atta."

- There is "atta," which is different from "lattā|" (with a "long a" at the end). Anatta is the opposite of "atta," not of "|attā|." [atta : [m.] soul; oneself. $|\boldsymbol{a t t} \overline{\boldsymbol{a}}|:$ Self, body, person, individuality; life, mind soul.]
- The Sanskrit word anātma has been misinterpreted as anatta. That Sanskrit word anātma does mean "no-soul," but the Buddha NEVER used it. Similarly, anitya (meaning "impermanence") is a Sanskrit word, but that is not what is meant by the Pāli word anicca.
- We will discuss these in detail below.

1. In the previous post, "Sakkāya Ditthi is Personality (Me) View?," we discussed how the term sakkāya ditthi gets incorrectly translated when the word "atta" in a key verse in the Culavedalla Sutta is misinterpreted. Atta has two meanings:

- One meaning is mundane: "I" or "myself" as in the first verse of "|attā| hi attano nātho" ("only I can be of salvation to myself'), and that is the meaning implied in the above verse.
- The other deeper meaning of "atta" is "in control" or "has essence", and the opposite of that ("na" + "atta") is the anatta in Tilakkhana: "one is helpless in this rebirth process."
- Those two meanings are explained in "'Attā| Hi Attano Nātho" and in detail in, "Pāli Dictionaries - Are They Reliable?."

2. Comprehension of a concept is very different from memorization of the definition of a word. All one needs to do is understand the meaning of the word saññ̄̄ ; see, "Saññ̄̄ - What It Really Means."

- Atta/anatta are key Pāli words concerning the Tilakkhaṇa, so it is essential to get the correct sañña $\bar{a}$ or the idea. In future posts, we will discuss several other critical usages of atta/anatta.

## A. Atta as "a Person" versus "Essence" or "Truth"

3. Many of the misconceptions about "self" and "no-self" can be understood by taking a systematic look at how the Pāli word "atta" is used in the conventional sense and in the more profound sense (to give different meanings in different places).

- "|atta|" (pronounced with a "long a at the end") is used to denote a person: There is no word for the negation of that $|\boldsymbol{a t t} \overline{\boldsymbol{a}}|$.
- In Sinhala, it is written as "eqる"Bo" That is how it appears in the Pāli Tipitaka that is written in Sinhala.
- Even though $|a t t \bar{a}|$ has this meaning as a "person", anatta is never used as the opposite of that $|a t t \bar{a}|$.
- Pronunciation:

## WebLink: Pronunciation - attā

4. The word "atta" (pronounced with a "short a at the end") is "the essence" or "the truth that is timeless." The negation is "anatta."
 is written in Sinhala.

- Pronunciation of the two words:

## WebLink: Pronunciation - atta and anatta

- There is a third meaning too (mainly when it is written as "attha," with an emphasis at the end), which is closely related to the second meaning above:
- The Sinhala word for attha is "artha" which means "rruth" or "that which makes sense." The opposite in Sinhala is "anartha," which emphasizes that "anartha" is not worth doing.

- Pronunciation of the two words:

## WebLink: Pronunciation - artha and anartha

I hope you can catch the differences in pronunciations.

- Anatta is the negation of the latter two meanings: "na" + atta" (which rhymes as "anatta"): there is no substance/ does not hold any ultimate truth.

5. One who is engaged in things that are "anatta" or "anartha" will become "anātha" (helpless), the opposite of " $n \bar{a} t h a$." As was mentioned in the post "" $\mid$ Attā| Hi Attano Nātho," "nātha" is another word for Nibbāna.

- One who is trying to find refuge in this world will become truly helpless in the long run. On the other hand, the only refuge (" $n a \bar{t} h a^{"}$ ) is Nibbāna, i.e., overcoming the rebirth process.
- Therefore, atta/anatta in Pāli can be translated to Sinhala as artha/anartha, and both usages convey the more profound meaning that represents the following ideas: "essence/no essence," "truth/false", "useful/useless," etc.

6. On the other hand, the word "atta|" (pronounced with a "long a at the end") is used as "me" only in the conventional sense. To communicate with others, we have to say things like, "one needs to defend oneself." Here "one" exists only in the conventional sense.

- There is no single Pāli word to express the negation of that, i.e., "not |attā|"; If there were to be such a word that would be "non-person." It just cannot be used that way.
- As we see below in \#11 and \#12, other words to denote "me" or "self" are "mama," "asmi" or "me."

7. Therefore, the critical mistake was made by trying to translate anatta as the opposite of "|att $\bar{a} \mid$ " with the conventional meaning of "a person" or "self."

- The word anatta was ALWAYS used with the deep meaning of "no truth or no essence." Anatta is a fact indicating there is no essence or truth to be had in this world of 31 realms.
- $|\boldsymbol{A t t} \bar{a}|$ (in the conventional sense) is used to indicate "a person." There is no single Pāli word to give the opposite meaning to that.

8. Concerning anatta in Tilakkhaṇa, "atta" can also be described as "ultimate truth" ("sathya" in Sinhala and Sanskrit). That truth is anicca nature: "this world cannot bring happiness anywhere in the 31 realms."

- Therefore, this whole world is of anatta nature, having no "essence" and lacking anything worth pursuing. Therefore, if one tries to do that impossible task, one will only get exhausted, i.e., subjected to suffering.
- Anyone who is struggling to achieve this impossible task is truly helpless.
- All the above statements convey the meaning of the word "anatta"; that is the saññā that one needs to absorb.

9. When one pursues "pleasurable things in this world," assuming that nature is nicca (i.e., can lead to happiness), one will be subject to suffering or dukha and thus one is anatta (becomes helpless). This is explained in the key post, "Anicca, Dukkha, Anatta - Wrong Interpretations."

- When one pursues worldly things assuming that the world is of "nicca" and "atta" nature, one tends to do dasa akusala.
- When one realizes that nature is anicca and anatta, one will try to stay away from dasa akusala even when pursuing worldly things. It is fairly easy to see potential problems with the three types of akusala done with the body and the four types of speech. This is the first stage in the path (mundane path).
- When one follows the mundane path (i.e., live a moral life), one starts to cleanse one's mind and discard many micchā diṭthi.
- At that stage, when one is exposed to the true meanings of anicca, dukkha, anatta, one can comprehend them and start on the lokuttara (Noble) Path.
- One would seriously start tackling the akusala done by the mind when one becomes a Sotāpanna and starts on the Noble Path. All dasa akusala are removed only at the Arahant stage. That is the "atta" or the "nātha" state; one is no longer anatta.

10. One will be subjected to much suffering (dukha) until one realizes that it is fruitless to pursue "valuable things" by engaging in dasa akusala.

- The Noble Truth of dukkha sacca (or dukkha sathya) is to see that relief from suffering comes only by rejecting dasa akusala and engaging in "good and moral activities," i.e., dasa kusala.
- When one reaches Nibbāna, that is the state of nicca, sukha, atta. It is the opposites of anicca, dukkha, anatta, that are characteristics of this world of 31 realms.

## B. Discussion of the Anatta Lakkhaṇa Sutta

11. There are several Pāli (and Sinhala) words (mama, asmi, and me) that are used to indicate "mine," "I," "to me." $|\boldsymbol{A t t} \overline{\boldsymbol{a}}|$ is also used to mean "self" in the conventional sense and "having essence" in the more profound sense. It is important to note the difference in all those usages.

- These terms are in the Anatta Lakkhaṇa Sutta [SN 22.59], which is the key sutta that discussed the concepts of atta and the opposite, anatta in the more profound sense. Here are the key verses that are relevant to our discussion here:
"Taín kim maññatha, bhikkhave: rūpaì niccaì vā aniccaín vā ti? "Bhikkhus: is any rūpa (material entity) nicca or anicca?" or "Bhikkhus: can any rūpa be kept to one's satisfaction, or can one keep it to one's satisfaction?" [mañnati :(man + ya), imagines; is of opinion: deems.]
- Aniccaì , Bhante "It cannot be kept to one's satisfaction, Venerable Sir."

Yaì pana aniccaím dukhaím vā taì sukhaiं vā ti? "Will such an entity lead to suffering or happiness?"

- Dukhami, Bhante. "Suffering, Venerable Sir."
 eso hamasmi, eso me attā 'ti? "Will such an entity that cannot be kept to one's satisfaction, that leads to suffering, and is a viparin̄āma dhamma, should be considered as "myself or mine, or can be taken as my attā?"
- N' hetaì, Bhante." "No reason to think so, Venerable Sir."

12. Now, that last verse also clearly states what words were used by the Buddha to mean "me," 'I," "myself."

- This key verse with these words is, "Etaim mama, eso'ham asmi, eso me attāti," which means, "That is mine, it is me, or my $\boldsymbol{a t t} \overline{\boldsymbol{a}}$ (my essence)."
- It is interesting to note that even today, the Sinhala word for "me" or "myself" is "mama," and "asmi" is the sense of "me" or "mine" as in asmi māna, which is one of the last samiyojana removed at the Arahant stage; see, "Päli Dictionaries - Are They Reliable?."
- Also see, "Anattā in Anattalakkahana Sutta - No Soul or an Ātma."

13. The first type of "wrong ditṭhi" or the idea that "I am my physical body" (and "I am my vedanā," etc.) are removed at the Sotāpanna stage by removing Sakkāya Ditṭhi. The much deeper-embedded saññ̄a of "a me" is removed only at the Arahant stage; see, "Sakkāya Ditthi is Personality (Me) View?."

- Anatta - on the other hand - is the correct saññā that, (i) this world of 31 realms cannot offer any "essence" or "true happiness" and, (ii) therefore, one who is struggling to find such "ultimate truth in this world" is helpless.
- This is why a qualified person explaining Dhamma must have the patisambhidā $\tilde{n} a \underline{n} a$ to at least some extent, to figure out the correct meaning of keyword in the sutt $\bar{a}$. We discussed another important example in last week's post: "Sakkāya Ditthi is Personality (Me) View?."
- One cannot just consult a Pāli dictionary and use the meaning given there; see, "Sutta Interpretation Uddesa, Niddesa, Patiniddesa" and "Pāli Dictionaries - Are They Reliable?."
- Of course, that seems to be the origin of the incorrect translation of anatta as "no-self", i.e., choosing the wrong (conventional) meaning of " $|a t t \bar{a}|$ " (with a long "a" at the end).

## C. What About Āthma/Anāthma?

14. The final piece of this puzzle are the words ātma/anātma. These are Sanskrit words and NOT Pāli words. Pronunciation:

## WebLink: Pronunciation - athma and anathma

- The confusion came when people started translating atta/anatta as ātma/anātma in Sanskrit and Sinhala (many Sanskrit words have been adopted as Sinhala words is unfortunate; because that makes things more confusing).

- In Sanskrit, atma basically means "soul," an indestructible entity that survives death and eventually merges with the "Mahā Brahma" equivalent of the "Creator God" in Abrahamic religions. This is different from both Pāli words of atta and |attā| that we discussed above.
- Atta/anatta are deep concepts with several underlying concepts. One meaning of anatta is that there is no unchanging soul $\bar{a} t m a$. Therefore, anatta INCLUDES anātma (the opposite of $\bar{a} t m a$ ); see, "Anattā in Anattalakkahana Sutta - No Soul or an Ātma."

The connection between dasa akusala and anatta is discussed at, "Dasa Akusala and Anatta - The Critical Link." That will complete this discussion, and will help to cultivate the "anatta sañ̃̃̄̄."

### 3.4.5.5 Anattā (Mundane Interpretation) - No "Unchanging Self"

## December 5, 2018; revised March 6, 2021; August 29, 2022

## Anatta is Not About a "Self"

1. These days, most people translate the key Pāli word "anatta" simply as "no-self." However, just by looking at a few occurrences of "anatta" in the Tipitaka, we can see that it needs to be interpreted differently, depending on the context.

- The words "attha," "atta," and "att $\vec{a} "$ can have many different meanings depending on the context.
- Even in English, there are cases like this: The word "right" can mean two different things "you are right" and "turn right." Even though it is pronounced the same way, "write" means something entirely different from those meanings of "right."
- An easy way to remember the true meaning of anatta is to understand what is meant by "sabbe dhammā anatt $\bar{a} "$ " in the "Uppād $\bar{a}$ Sutta (AN 3.136)." Here, "dhammä" refers not to Buddha Dhamma but to "dhamm $\bar{a}$ " (plural) that bears everything in this world. This is the dhamm $\bar{a}$ in "Ye dhamm $\bar{a}$ hetuppabhavā, Tesaì hetumं tathāgato $\bar{a} h a$ " or "any dhammā giving rise to this world arises due to "three "san" of lobha, dosa, moha as explained by the Buddha." See \#6 below. Thus, all such dhammā are without essence (anattā.) ["Ye dhammā hetuppabhavā, Tesaí hetum tathāgato āha; Tesañca yo nirodho, Evaìvādī mahāsamaṇo"ti.]

2. Even though this is a bit deep sutta, "WebLink: suttacentral: Ananda Sutta (SN 44.10)," provides an excellent basis to start a discussion on anatta. Just as now, many people in the days of the Buddha wondered whether a "self" or a "soul" (att $\bar{a})$ exists. That is, of course, the ordinary meaning of att $\bar{a}$.

- Vacchagotta comes to the Buddha asked "kim nu kho, bho gotama, atthattä" ti?" OR "Master Gotama, is it correct to say that there is a "self"?."
- Note that "atthatt $\vec{a} "$ is "atthi att $\bar{a} "$ where "atthi" means "exists" and (as Vacchagotta meant in this case) "att $\bar{a} "$ to be "self." Thus, by saying "atthatt $\bar{a}$, ," Vacchagotta meant: "correct to say an att $\bar{a}$ exists."

3. The Buddha remained silent, and Vacchagotta asked the question in the negative form. The second time, he asked: "Kim pana, bho gotama, natthatt $\overline{\boldsymbol{a}}$ " ti?" or, "Master Gotama, is it not correct to say that there is a "self"?." Seeing that the Buddha refused to answer his question, Vacchagotta got up and left.

- Note that "natthatt $\bar{a} "$ " is made up of three words: "na atthi att $\bar{a}$," which negates "atthatt $\bar{a}$."
- I have discussed some of these word combinations in Pāli: "Kāmaccandha and Icca - Being Blinded by Cravings."

## Buddha Rejected Both "Self" and "No-Self"

4. When Vacchagotta left, Ven. Ānanda asked why the Buddha did not answer the question.

- The Buddha explained that if he answered positively (i.e., there is a "self"), then he would agree with those who had the wrong view that such a "self" exists. This view is called sassatavāda or the belief that there is an "everlasting entity" (these days also called "a soul"). [sassatavāda: [m.] eternalism.]
- If answered in the negative (i.e., there is "no-self"), then he would agree with those who had the wrong view that such a "self" does not exist. That is called ucchedavāda or the belief that the body's death is the "end of a person," i.e., no re-birth. [ucchedavād̄$:[\mathrm{m}$ ] one who professes the doctrine of annihilation.]
- The Buddha rejected both views of "self" (sassatavāda) and "no-self"(ucchedavāda).

## A Rare Correct Translation of Anatta at Sutta Central

5. Just from that verse, it is clear that if one takes "anatta" as "no-self," one has the wrong view taken by one faction of brahmins in the days of the Buddha: that of ucchedaväda.

- I was surprised that the Sutta Central English translation says precisely what I explained in \#4 above; see, "WebLink: suttacentral: A$n a n d a$ Sutta (SN 44.10)." Directly quoting from that translation:
- 'If, Ānanda, when I was asked by the wanderer Vacchagotta, 'Is there a self?' I had answered, 'There is a self,' this would have been siding with those ascetics and brahmins who are eternalists. And if, when he asked, 'Is there no self?' I had answered, 'There is no self.' That would have been siding with those ascetics and brahmins who are annihilationists."
- So, the translation of this verse is the same as mine. But the Sutta Central translation of the next verse uses the same meaning of "no-self' in 'sabbe dhamma $\bar{a}$ anatt $\bar{a}$ ' and gets into a contradiction, as we discuss now.

## Sabbe Dhammā Anattā

6. Then the Buddha told Ven. Ānanda that any discussion on this topic would confuse Vacchagotta because he would then get mixed up with the deeper meaning of "anatta" in 'sabbe dhamma anattā.' That refers to "anatta nature": "Ahañcānanda, vacchagottassa paribbājakassa 'atthattā’ti puṭtho samāno 'atthattā'ti byākareyyaì, api nu me taì, ānanda, anulomaì abhavissa ñānassa uppādāya: 'sabbe
dhammā anattā'"ti?." "No hetaim, Bhante." [See What are Dhamma? - A Deeper Analysis and What are rūpa? - Dhamma are rūpa too!]

- That is the confusion most people have today. They equate "anatta nature" in "sabbe dhamm $\bar{a}$ anatt $\vec{a}$ " with the "no-self" meaning of "anattā."
- "Sabbe dhamma anatta" needs to be translated as "all dhammā are of anatta nature," i.e., of "without essence," and that one would become "anatt $\vec{a}$ " or "without refuge" if one does not comprehend the "anatta nature." [Anattā meaning 1. without essence, 2. without refuge or not in control.]

7. In the Sutta Central translation, the same mundane meaning ("no-self") is used for anatta in "sabbe dhamma anattā."

- The verse in \#6 in the Sutta Central translation is: "If, Ānanda, when I was asked by the wanderer Vacchagotta, 'Is there a self?' I had answered, 'There is a self,' would this have been consistent on my part with the arising of the knowledge that 'all phenomena are nonself?."
- First, "all phenomena are non-self," does not make sense. Dhammā cannot have a "self" anyway. Here, the correct translation is, "all phenomena are of no essence." We will discuss this in detail later.
- Furthermore, that translation, "all phenomena are non-self," is self-contradictory to the Sutta Central translation of previous verses in \#5 above, where both "self" and "no-self" were shown to be rejected by the Buddha.

## The Danger in Translating Suttā Word-by-Word

8. That is the danger in translating sutt $\bar{a}$ word-by-word, without grasping the real meanings of Pāli words and understanding that meanings depend on the context.

- Therefore, it should be quite clear that Vacchagotta's confusion is not different from the misunderstanding that many people have today.
- However, Vacchagotta could grasp that distinction later on and became a bhikkhu. Ven. Vacchagotta became an Arahant.
- I sincerely hope those with the wrong understanding will also be able to see the truth at some point.

9. The deeper meaning of "anatta" will become clear as we discuss this in detail. See, "Paticca Samuppāda - Essential Concepts." Without understanding those more basic concepts, it is dangerous to translate a given key Pāli word like anatta using a generic English word(s).

- For now, we will postpone the discussion on the deeper meaning of "anatta" and focus on "att $\vec{a}$ " and "anatt $\vec{a} "$ in the sense of "self" and "no-self."

## Which Realm Correspond to an Unchanging "True Self"?

10. A given living being can be born in any of the 31 realms (a few realms are reserved for Anāgāmis); see, " 31 Realms of Existence" and " 31 Realms Associated with the Earth."

- But the point is that a human could be born a deva or an animal in the next life. Would a dog have the same "self" as a human?
- So, it is quite clear that there in no "unchanging self."

11. On the other hand, a human does not just become a deva or an animal or a preta in the next life without underlying causes. It is not a random process.

- There is a continuation of the "lifestream" from this life to the next. One's gati, and one's kamma vipāka play key roles. I have discussed the critical and forgotten keyword gati (or gathi) in many posts.
- That is why it is incorrect to say there is "no-self." There are "personality attributes" that flow from this life to the next.
- That is explained in Paṭicca Samuppāda (PS) or Dependent Origination. As we know, PS cycles start with "avijjā paccayā sañkhāra" and go through "bhava paccayā jāti." That explains how avijjā leads to future births ( $j \bar{a} t i)$.
- Roughly speaking, high levels of $a v i j j \bar{a}$ (or moha) leads to births in the $a p \bar{a} y \bar{a}$.

## Summary

12. Therefore, from \#10 and \#11, we can see why the Buddha rejected both views of "an unchanging self" and "no-self."

- Instead, there is a next life (birth) according to the principle of Paticca Samuppāda, which is cause and effect, just like in modern science. We will discuss PS later. However, it is easy to see this with an understanding of kamma and kamma vipāka.
- Dasa akusala (and pāpa kamma or immoral deeds) lead to bad births, and dasa kusala (and puñña kamma or moral deeds) lead to good births.
- This was discussed in: "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma."

### 3.4.6 Tilakkhaṇa - English Discourses

## February 3, 2018; revised February 11, 2020; July 28, 2022 (note on Discourse 4)

Tilakkhaṇa or Three Marks of Existence or Three Characteristics of Nature (anicca, dukkha, anatta) are discussed in detail in a series of five discourses. These are based on the first two suttā (Dhammacakka Pavattana Sutta and the Anatta Lakkhaṇa Sutta) that the Buddha delivered to the five ascetics right after attaining Enlightenment.

- Only an essential outline is provided in these discourses. There will be five topics (for each discourse) in the "discussion forum" under the forum Three Marks of Existence Discourses, where one can ask any questions/ express opinions.
- No question is too simple or too hard. We can find more details in other suttā or in Abhidhamma.
- However, these discourses are not recommended for those who are not familiar with basic concepts in Buddha Dhamma. They might get discouraged. They may want to first get familiar with the basic concepts in "Moral Living and Fundamentals," "Working Towards Good Rebirths," and "Bhāvanā (Meditation)" sections.
- In-Depth analysis at, "Origin of Life."

Note: @34:00 minutes, I said, "Immoral deeds or dasa akusala are done with apuññābhisañkhāra or bad thoughts in our minds. Good deeds or kusala kamma are done with puñ̃nābhisañkhāra."

- That should be corrected as, "Immoral deeds or dasa akusala are done with apuññābhisañkhāra or bad thoughts in our minds. Good deeds (or puñ̃äbhisañkhāra) done with the comprehension of the Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa become kusala kamma due to that understanding."
- See, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma" for a detailed explanation.

### 3.4.7 The Way to Nibbāna - Transcription of a Discourse by Waharaka Thero

July 6, 2020
This was one of the first discourses by the late Venerable Waharaka Abayarathanalankara Thero. Janith Boniface Fernando has made it into a youtube video with transcription in Sinhala and English languages.

## 

1. This discourse is an introduction to Tilakkhaña (anicca, dukkha, anatta) that is critical for one to start on the Noble Eightfold Path.

- I have revised and expanded the English transcript that can be downloaded as a pdf file: Waharaka Thero Discourse - The Way to Nibbāna
- This is an updated version of the document that I posted in the discussion forum (see \#3).

## 2. A few comments:

- As I mentioned, this was one of the early discourses, soon after Waharaka Thero started explaining the correct meanings of the Pali words anicca and anatta.
- At that time, Waharaka Thero was also used to the incorrect interpretation of "anicca" and "anatta" as "anitya" and "anātma" in the Sinhala language (and "impermanence" and "no-self" in English.)
- Therefore, even while describing the correct interpretation, he also inadvertently referred to "anicca" as "anitya" and "anatta" as "anātma" once-in-a-while. I have corrected those, of course.
- Furthermore, I have expanded the original text and also referred to a few relevant posts at puredhamma.net.

3. Any comments/questions can be discussed at the discussion forum: WebLink: Pure Dhamma Forum: Waharaka Thero English Subs Discourse

- Janith Fernando has transcribed a few more of Waharaka Thero's discourses and both English and Sinhala transcripts (from him) are available under my entry at that forum on June 19, 2020. As he transcribes more discourses, I will add them there. I do not plan to work on other discourses (than the one posted above in \#1) any time soon.
- Many merits to Janith and several readers at the discussion forum who contributed to this effort.

4. I just finished updating the section on "The Five Aggregates (Pañcakkhandha)."

- It has a subsection on "Five Aggregates - Connection to Tilakkhana."
- There is a new section on "Buddhahood Associated Controversies" Most people are not aware of the qualities of a Buddha and the capabilities of a Buddha.

### 3.4.8 Sotāpanna Stage and Tilakkhaṇa

## Sakkāya Ditthi and Tilakkhana

Sakkāya Ditthi - Getting Rid of Deeper Wrong Views
Associations (Sevana) - A Root Cause of Wrong Views

### 3.4.8.1 Sakkāya Diṭ̣̣hi and Tilakkhaṇa

June 14, 2019; revised October 23, 2019; May 25, 2022

## Sakkāya Dițṭhi - Wrong Views of a "Self"

1. When one gets rid of sakkāya ditṭhi (together with vicikicchā and silabbata parāmāsa), one becomes a Sotāpanna and will never be reborn in the four lowest realms (apāy $\bar{a})$.

- It is a change in one's world view (dassanena pahātabb $\overline{\boldsymbol{a}}$ ) that leads to this enormous change.
- It cannot be attained by just doing moral deeds. (In fact, sīlabbata parāmāsa is the wrong belief that living a righteous life by itself can liberate oneself).
- Getting rid of sakkāya ditṭhi requires a deep understanding of how nature works. Tilakkhaṇa or the Three Characteristics of Nature encompasses those basic principles: anicca, dukkha, anatta.
- Here we will examine this relationship, which will help get rid of sakkāya diṭthi.

## Definition of Sakkāya Ditṭhi

2. Sakkāya ditṭhi is defined in the Dhammasañgañ̄ of the Abhidhamma Piṭaka: WebLink: suttacentral: 2.3.2.13.1. Dassanenapahātabbaduka.
"Katame dhammā dassanena pahātabbā? Tīni saññojanāni-sakkāyadiṭthi, vicikicchā, sillabbataparāmāso.

- Translation: "What are those dhamma removed via correct vision? Three saññojanā (samiyojana as commonly called today) - sakkāyadiṭthi, vicikicchā, sīlabbataparāmāso.

Tattha katamā sakkāyadițthi? Idha assutavā puthujjano ariyānamं adassāv̄̄ ariyadhammassa akovido ariyadhamme avinīto sappurisānaì adassāvī sappurisadhammassa akovido sappurisadhamme avinīto rūpaí attato samanupassati, rūpavantaì vāattānaim, attani vā rūpaím, rūpasmim vā attānami. Vedanaì ... pe ... saññam ... pe ... sañkhāre ... pe ... viñ̃ñạnam attato samanupassati, viññānavantaí vā attānaim, attani va viñ̃n̄ṇaí, viññānasmim vā attānam். Yā evarūpā dițthi ditṭhigataì ... pe ... vipariyāsaggāho-ayaì vuccati sakkāyadiṭthi."

- Translation: "What is sakkāya dittthi? A person uninstructed in Dhamma, who has not associated with Noble ones, who is not well-versed or disciplined, has the following wrong views. 'I am my body; my body is me; my body is in me; I am in my body.' He perceives vedanā..sañña $\bar{a}$..sañkhāra,..viññanna in the same four ways (e.g., I am my viññāna, my viññāna is me, my viññāna is in me, I am in my viñ $\tilde{n} \bar{a} n a)$ - that is sakkāya diṭthi.

That is the same definition given in the "WebLink: suttacentral: Cūlavedalla Sutta (Majiima Nikāya 44)" that we discussed in the post, "Sakkāya Ditthi is Personality (Me) View?." This definition of sakkāya diṭthi is in many more suttā, including "WebLink: suttacentral: Dutivaisidatta Sutta (SN 41.3)."

## Twenty Types of Sakkāya Diṭ!hi

3. The key is to understand the meaning of "rūpaím attato samanupassati, rūpavantaim vā attānaím, attani $v \bar{a}$ rūpaì, rūpasmim vā attānamं, vedanaím attato samanupassati." Similarly for vedana, sañña, sañkhāra, and viññāna. Thus, when one has sakkāya ditṭhi, one has four wrong perceptions each for the five aggregates.

- That is called the 20-types of sakkāya diṭthi (vīsativatthukā sakkāyaditṭhi).
- In the Brahmajāla Sutta (DN 1), the Buddha discusses 60 more wrong views, but those are variations of the above two. Therefore, getting rid of sakkāya ditt thi leads to the removal of all wrong beliefs about this world.
- Tipiṭaka description of uccheda diṭthi and sāssata diṭthi is "Sakkāya Ditthi - Getting Rid of Deeper Wrong Views."

## Sakkāya Is Pañcupādānakkhandhā

4. A definition of sakkāya is in the "WebLink: suttacentral: Sakk $\bar{a} y a p a n ̃ h \bar{a}$ Sutta (SN 38.15)": "'Sakkāyo, sakkāyo'ti, āvuso sāriputta, vuccati. Katamo nu kho, āvuso, sakkāyo"ti? "Pañcime, āvuso, upādānakkhandhā sakkāyo vutto bhagavatā, seyyathidaim-rūpupādānakkhandho, vedanupādānakkhandho, saññupādānakkhandho, sañkhārupādānakkhandho, viññānupādānakkhandho. Ime kho, āvuso, pañcupādānakkhandhā sakkāyo vutto bhagavatā"ti."

Translated: "sakkk̄ya is pañcupādānakkhandhā: rūpupādānakkhandha, vedanupādānakkhandha, saññupādānakkhandha, sañkhārupādānakkhandha, viññānupādānakkhandha."

- Therefore, we can deduce that sakkāya ditthi is the wrong vision that the five aggregates (pañcakkhandha) are excellent and beneficial.
- The word "sakkāya" comes from "sath" + "kāya," which rhymes as "sakkāya." "Sath" means "good" and "kāya" means "a collection" or "an aggregate" (it could also mean "physical body," which is also a collection of parts). Thus "sakk $\bar{a} y a "$ " means those five aggregates (including one's own body) are fruitful.
- Our world consists of 12 types of $k \bar{a} y a$ or "collections": cakkhu kāyalrūpa kāya, sota kāya/sadda $k \bar{a} y a$, etc. for the six sense faculties.
- That vision or mindset - sakkāya diṭthi - is what leads to a craving for them (upādāna).

5. When one has the wrong view of sakkāya ditṭhi, some parts of pañcakkhandha become pañcupādānakkhandh̄̄ (pañca upādāna khandha). Those are the parts that one likes based on one's gati,

Therefore, one needs to comprehend that one gets attached to things based on one's gati AT THAT TIME. One's gati keeps changing and can be very different, especially in one who is reborn. If one is reborn into a bad environment (conditions), one is likely to develop "bad gati."

- Such bad kamma were done with bad gati AT THAT TIME. They can bring bad vipāka much later, even in future lives, when one may be living a moral life. The opposite is correct too. One's good kamma in a previous life can bring good vipāka even while one lives an immoral life in this life.
- That is why we experience both good and bad kamma vipāka.
- That is also why we cannot speak about an "unchanging attā/soul/ātma." A living being is a "lifestream" that encounters good/bad vipāka based on what had been done in the past based on one's gati at that time. Under suitable conditions, both kinds (good/bad kamma) bring vipāka.

## There Are Only Causes and Effects

6. What is discussed in \#5 is succinctly stated in the "WebLink: suttacentral: Catutthaabhabbatthāna Sutta (AN 6.95)."

Translation: "A Sotāpanna (or one with higher magga phala) accomplished in view (ditthisampanno puggalo) is unable (abhabbo) to fall back on the idea that pleasure and pain are made by oneself (sayaimkataí). Or that they are made by another (parainkataí). Or that they are made by both (sayamikatañca paraimkatañca). Nor can they fall back on the idea that pleasure and pain arise by chance, not made by oneself, by another, or by both. (Asayamikārai் adhiccasamuppannam், aparañkāraì adhiccasamuppannà், asayañkārañca aparañkārañca adhiccasamuppannaì).

- Why is that? It is because a person accomplished in view has seen that phenomena arise due to causes and conditions (according to Paṭicca Samuppāda). Those are the six things that a Sotāpanna (or one with higher magga phala) accomplished in view will not fall back to."
- There is no "attā" or a "soul" or a "ātma" doing those things that will lead to pleasure or pain (sooner or later).
- Such kamma vipāka (pleasure or pain) materialize due to two factors. (i) Causes were created in the past based on the "gati" of the lifestream AT THAT TIME, and, (ii) Corresponding vipāka materialize when suitable CONDITIONS become available (at a later time).
- Patticca Samuppāda describes that process.
- That is why understanding "gati" is so important. One may have had "bad gati" in the past, and those can bring "bad vipāka" now, EVEN IF one has "good gati" now.
- That is why even the Buddha had to bear bad kamma vipāka. Even though he had "no gati left," he had to endure the results of past kamma done when he had "bad gati."

## Deeper Aspects of Sakkāya Diṭthi

7. In the "WebLink: suttacentral: Sakkāyaditthi Sutta (SN 22.155)" it is stated how sakkāya ditṭhi arises:
"Kismim nu kho, bhikkhave, sati, kim upādāya, kim abhinivissa sakkāyadiṭthi uppajjatī"ti?" rūpe kho, bhikkhave, sati, rūpaì upādāya, rūpaì abhinivissa sakkāyaditthi uppajjati. Vedanāya sati ... saññāya sati ... sañkhāresu sati ... viññāne sati, viññānàm upādāya, viññāṇam abhinivissa sakkāyadiṭthi uppajjati."

Translated: "Bhikkhus, because of focusing on what, attaching to what, and clinging to what leads to the arising of sakkāya ditṭhi? It arises due to focusing on rūpa (forms: things and people), attaching to forms, and clinging to forms. It arises similarly due to vedanā, sañ̃ña, sañkhāra, and viññān̄a."

Buddha explains: "Tai் kimं maññatha, bhikkhave, rūpaín niccaì vā aniccaín vā" ti? "What do you think Bhikkhus, can $r \bar{u} p a$ be maintained to one's satisfaction?'.
"Aniccamं, bhante." "They cannot be, bhante."
"Yaì panāniccaì ... pe ... api nu taì anupādāya sakkāyaditthi uppajjeyyā"ti? "Understanding that if something cannot be maintained to ones' satisfaction, if it undergoes unpredictable change and is destroyed, would one get attached to it and generate sakkāya ditṭhi?
"No hetaim, bhante." "No reason for that, bhante."
and the same for the other four aggregates: "Vedanā ... saññ̄ ... sañkhārā ... viññ̄ạamं niccamं v $\bar{a}$ aniccamं $v \bar{a} " t i$ ?
"Aniccaì, bhante." "Yaì panāniccaì ... pe ... api nu taì anupādāya sakkāyaditṭhi uppajjeyyā"ti? "No hetaì, bhante." "Evaì passaì ... pe ... nāparaì itthattāyāti pajānātī"ti."
8. Thus, one gets attached to the five aggregates and considers them to be one's own, ONLY IF one does not see the anicca (and dukkha and anatta) nature of those entities. When one understands that such attachments invariably (without exception) lead to suffering (because none of them can be maintained to one's satisfaction), one loses the craving for them.

- That understanding by itself first leads to "loss of cravings" to the extent that one would NOT be able (abhabbo) do immoral kamma that makes one suitable for rebirth in the ap $\bar{a} y \bar{a}$. When one loses such upādāna, one would also not grasp such thoughts at the cuti-patisandhi moment.
- The word abhabbo is commonly mistranslated. It does not just mean "one would not do," but one "is incapable of doing." The enforcement is AUTOMATIC; one does not need to think about whether such an action is immoral. When certain types of gati are removed PERMANENTLY (with magga phala), one's mind WOULD NOT be CAPABLE of doing such sinful actions.
- When one cultivates such "bad gati," one would upādāna (and be born) to bad births; that is what is meant by "needing suitable conditions to bring kamma vipāka in," In the "WebLink: suttacentral: Kukkuravatika Sutta (MN 57)" (English translation there: "WebLink: suttacentral: The Dog-Duty Ascetic (MN 57)"), the Buddha explains how those "dog gati" that Seniya was cultivating would lead to him to be born a dog.
- On the reverse, when one permanently gets rid of such "bad gati," one would NOT be born in such unfortunate realms. That is what is meant by the verse, "Catūhapāyehi ca vippamutto, Chaccābhithānāni abhabba kātum" ("(an Ariya) is free from the four apāy $\overline{\boldsymbol{a}}$ because he/she is incapable of doing six highly immoral acts") in the "WebLink: suttacentral: Ratana Sutta (Snp 2.1)."

## What is $\operatorname{Att} \bar{a}$ ?

9. Now, it is important to figure out what is meant by "att $\bar{a} "$ " in the description of sakkāya dittthi.

The "WebLink: suttacentral: Patipadā Sutta (SN 22.44)" describes the way to get rid of sakkāya diṭthi: "Katamā ca, bhikkhave, sakkāyanirodhagāmin̄̄ patipadā? Idha, bhikkhave, sutavā ariyasāvako ariyānaì dassāv $\bar{\imath}$ ariyadhammassa kovido ariyadhamme suvinīto, sappurisānaì dassā$v \bar{\imath}$ sappurisadhammassa kovido sappurisadhamme suvinīto, na rūpaì attato samanupassati, na rūpavantaì vāattānaí; na attani vā rūpaì, na rūpasmim vāattānam. Na vedanaím attato ... na saññam் ... na sañkhāre ... na viññạnamं attato samanupassati, na viñnāṇavantaí vā attānai்; na attani vā viñãāṇam̀, na viññāṇasmimं vā attānaì. .."

- Translated: "And what, bhikkhus, is the way leading to the cessation of identity with the five aggregates (sakk $\bar{a} y a$ ditṭhi)? Here, bhikkhus, the instructed noble disciple ... does not regard form [rūpa] as attā ...n nor vedanā as attā ... nor sañ̃̃ā as attā ... nor sañkhāra as attā ... nor viñ̃̃āna as attā ... nor attā as in viññāna.."
- See \#2 above for the full translation of the verse.

## Anattalakkhaṇa Sutta (SN 22.59)

10. Let us compare the above definition to the following verse in the "WebLink: suttacentral: Anattalakkhana Sutta (SN 22.59)": "Rūpaì, bhikkhave, anattā. Rūpañca hidamं, bhikkhave, attā abhavissa, nayidaì rūpaiं ābādhāya sainvatteyya, labbhetha ca rūpe: 'evaì me rūpaì hotu, evaì me rūpaì mā ahosītti. Yasmā ca kho, bhikkhave, rūpaí anattā, tasmā rūpaí ābādhāya samंvattati, na ca labbhati rūpe: 'evaì me rūpaì hotu, evai் me rūpaì mā ahosī'ti.

- Translated: "Bhikkhus, form (physical body) is anattā (or not att $\bar{a}$ ). For if, bhikkhus, if one's body is att $\bar{a}$, one would have full control over it, and it would be possible to say: 'Let my body be like this; let
my body not be like this.' But because the body is anatt $\bar{a}$, it is subjected to decay and disease. And it is not possible to have it the way one desires: 'Let my body be this way; let my body not be this way."
- The recent post, "Anattā in Anattalakkahana Sutta - No Soul or an Ātma" explained the reality. That there is no att $\bar{a}$ or a "soul" or a " $\bar{a} t m a$ " that can be associated with either one's physical body or its four mental aggregates.

11. Again, from the "WebLink: suttacentral: Anattalakkhana Sutta (SN 22.59)": "Taim kim maññatha, bhikkhave, rūpaí niccaì vā aniccaì vā" ti? "Aniccaí, bhante." "Yaím panāniccaì dukkhaím vā taím sukhaì v $\bar{a} " t i$ ? "Dukkhaì, bhante." "Yaì panāniccaì dukkhaì vipariṇāmadhammaì, kallaì nu taí samanupassitum: 'etamं mama, esohamasmi, eso me atta'" $t i$ ? "No, hetaí, bhante..."

Translated: "What do you think, bhikkhus, can form be maintained to one's satisfaction?"-"No, bhante"-"Would something of such nature lead to suffering or happiness?"-"Suffering, venerable sir."-"Is it prudent to regard such a thing thus: ‘This is mine, this I am, this is my self?"-'No, bhante."

AND
"Tasmātiha, bhikkhave, yaì kiñci rūpaì atītānāgatapaccuppannaì ajjhattaỉ vā bahiddhā vā
 nesohamasmi, na meso attā'ti evametaì yathābhūtaì sammappaññāya daṭthabbaï."

Translated: "Therefore, bhikkhus, any form ( $r \bar{u} p a$ ) whatsoever, whether past, future, or present, internal or external, gross or subtle, inferior or superior, far or near, all form (these are 11 types of rūpa in rūpakkhandha) should be seen as it really is, with correct wisdom. Thus: ‘This is not mine, this I am not, this is not my self.'

- The same argument would hold for the other four mental aggregates as well.

## Sakkāya Diț̣hi and Anatta Nature

12. Therefore, sakkāya ditţhi permanently disappears when one comprehends the real nature of this world. That is the anicca nature (inability to maintain rūpa, vedan̄ $\bar{a}$, sañ̃ $\bar{a}$, sañkh $\bar{r} a$, and viñ̃ $\bar{n} n a$ in the way one likes to). Much suffering (including in the apa $\bar{y} \bar{a}$ ) will result because of not realizing the anicca nature. That is when one becomes helpless (anatta); see "Anicca - True Meaning."

- Therefore, one is truly helpless in this rebirth process (anatta); see, "Anatta - No Refuge in This World." That is the same as not having full control ("na" + "att $\vec{a} "$ or anatt $\bar{a}$ ); see, "Anattā in Anattalakkahana Sutta - No Soul or a Ātma."
- The existence (bhava) in this world and corresponding births ( $j \bar{a} t i$ ) filled with suffering arise because one tries to go against the true nature and generates sañkhāra (due to avijjā). That is Paṭicca Samuppāda.
- When one comprehends that, one would stop generating sañkhāra, starting with the worst kind: apuñña abhisañkhāra (leading to immoral deeds). That is how a Sotāpanna starts on the Noble Path.

### 3.4.8.2 Sakkāya Ditṭhi - Getting Rid of Deeper Wrong Views

June 22, 2019; revised October 23, 2019; March 1, 2021 (\#7, \#8); June 20, 2022

## Introduction - Two Types of Wrong Views

1. In the "Mahā Cattārisaka Sutta (Discourse on the Great Forty)," the Buddha explained that there are two eightfold paths; also see, "Buddha Dhamma - In a Chart" and the post referred to therein. Therefore, there are two types of sammā ditṭhi, attained via the removal of two types of micchā diṭthi.

- First, one needs to follow the mundane eightfold path and get rid of the ten types of micchā ditthi. That is the necessary foundation needed to comprehend the nature of a broader world of 31 realms. One
must realize the truth of kamma/kamma vipāka, rebirth process, that there is a paraloka where gandhabba lives, etc.; see, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- The more profound wrong views of nicca, sukha, atta can be removed, and one can then comprehend the real nature of this world of 31 realms (only after one gets rid of the ten types of micchā ditt?hi); see, "Three Marks of Existence - English Discourses."
- When that happens, one becomes a Sotāpanna Anugāmi and starts on the Noble Eightfold Path.

2. Removal of sakkaya ditthi is the basis of one's start on the Noble Eightfold Path. It is really about getting a "new vision" about the true nature of this world of 31 realms.

- That requires getting rid of the more in-depth wrong views (nicca, sukha, atta) about the nature of this world.
- In this post, we will discuss how " 20 types of sakkāya diṭthi" is reached by getting rid of 5 types of wrong views on the five aggregates based on uccheda ditthi and 15 types of wrong views on the five aggregates based on sassata diṭthi. [uccheda :[m.] cutting off, perishing; annihilation. sassata :[adj.] eternal.]

## Sakkāya as "Sath" + "Kāya"

3. In the previous post, "Sakkāya Ditthi and Tilakkhana," we discussed how sakkāya dițthi is related to one's cravings. Those cravings (upādāna) are for one's own body and other material things of perceived value ( $r \bar{u} p a k k h a n d h a$ ). They also include one's mental constituents that define those cravings (khandha or aggregates of vedanā, sañ̃̄̄a, sañkhāra, and viññāṇa).

- As we saw in that post, The word "sakkāya" comes from "sath" + "kāya," which rhymes with "sakkāya." "Sath" means "good" and "kāya" means "a collection" or "an aggregate" (it could also mean "physical body," which is also a collection of parts). Thus "sakkāya" means those five aggregates (including one's own body) are fruitful. Mental entities are also "collections" or "aggregates."
- These cravings for the five aggregates arise because of the wrong views of uccheda ditthi or sassata ditthi or views in between those two (with different combinations), as we discuss below.

## Two Main Diṭthis (Deeper Wrong Views)

4. There are two main "ditthis" or "wrong views" about the world discussed in the "WebLink: suttacentral: Brahmajāla Sutta (DN 1)." Note that I always provide the Pāli version of a sutta, because sometimes the commonly available English translations have errors. I usually give a link to the Pāli version at Sutta Central. One can get translations to English - and even a few more languages - there by clicking on the "hamburger icon" (represented by three short parallel lines) at the top left. Keep in mind that some translations there are incorrect.

- One is the uccheda ditthi, which says a "person" exists only until the death of the physical body; a "person" is nothing more than a collection of physical matter (molecules). When the "person" dies, that is the end of the story (uccheda means "cut off").
- The second is sassata ditthi - which is the exact opposite of the first (sassata means "eternal.") It is the view that a "person" has a "mental body" that survives the death of the physical body: In Abrahamic religions (Christianity, Judaism, and Islam), it is called the "soul," which goes to either heaven or hell at death and will stay there forever. In Hinduism, it is called " $\bar{t} t m a$," which merges with Mahā Brahma at some point and remains there forever.
- In the Brahmajāla Sutta (DN 1), the Buddha discusses 60 more wrong views, but those are variations of the above two. We can see that most scientists have the uccheda ditthi (that one's physical body with its brain is all that is there.) Most religious people (in Abrahamic religions and Hinduism) have the sassata ditṭhi that one's soul or àtma lives forever.

5. If uccheda ditthi is the actual reality of the world, then suffering will end with the death of the physical body. Thus one may seek to "enjoy worldly pleasures" without paying attention to the harmful consequences of doing immoral deeds (when the temptation gets high enough).

- If sassata ditṭhi is the actual reality of the world, then suffering will never end, because there is an "unchanging essence" that will survive the death of the body at any time. Even though the premise there is of a "suffering-less, joyful realm" (merge with the Creator), the Buddha said that there is no such existence. All existences are subject to suffering, simply because matter ( $r \bar{u} p a$ ) is unstable. Any life with even a trace of the tangible matter is inherently unstable. Modern science has confirmed this fact; see, "Second Law of Thermodynamics is Part of Anicca!."
- In Buddha Dhamma, there is a monomaya kāya (gandhabba, mostly "mental" with just a few suddhatthaka or smallest units of matter) that survives the death of the physical body. Any existence in this world is associated with such a "mental body." The mental body of a human or an animal is a gandhabba. However, that gandhabba also has a finite lifetime. See, "Bhava and Jāti - States of Existence and Births Therein."
- Buddha Dhamma says a living being (with monomaya kāya) comes into existence due to six root causes, but all six disappear with the removal of three root causes (lobha, dosa, moha). As long as those root causes are present there will be an associated life. And any being in this world has much more suffering than any short-lived happiness; see, "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)" and "The Grand Unified Theory of Dhamma."

6. Therefore, the concept in Buddha Dhamma is in between those two extremes of uccheda ditthi and sassata ditṭhi.

- There is a mental-body with a trace of matter (gandhabba) that survives the death of the physical body, but that mental body is ever-changing, according to Paticca Samuppāda.
- Therefore, there is no everlasting "self" or a " $\bar{t} t m a "$ " or an "att $\bar{a}$." The denial of an eternal "att $\vec{a}$ " is called "anatt $\bar{a} " ~(" n a "+~ " a t t \bar{a} ")$. That is the meaning of anatt $\overline{\text { }}$; see, "Anattā in Anattalakkahana Sutta - No Soul or a Ātma."
- Since the death of the physical body is not the end of suffering, one will become helpless (anatta) in the rebirth process since births in the four lowest realms (apāy $\bar{a}$ ) are unavoidable. That is another meaning of anatta ("na" + "atta") or "without refuge or becoming helpless); see, "Anatta - No Refuge in This World." Here, atta means "with refuge.."
- When one understands this world view of the Buddha, one removes sakkāya ditthi (together with vicikicca and silabbata parāmāsa) and attains the Sotāpanna stage.

## Two Main Types of Character (Carita)

7. A revealing analysis of sakkāya diṭthi in terms of one's character qualities (carita, pronounced "charitha") is in the "WebLink: suttacentral: Nayasamutthāna section (NE 36)" of the Nettippakarana (a Commentary in the Tipitaka). It defines the Four Noble Truths in terms of "sakkāya": "Tattha ditṭhicaritā rūpaì attato upagacchanti. Vedanaì ... pe ... saññaiं ... sañkhāre ... viññānaì attato upagacchanti. Taņācaritā rūpavantaì attānaí upagacchanti. Attani vā rūpaí, rūpasmim v $\bar{a}$ attānai், vedanāvantaì ... pe ... sañn̄āvantai் ... sañkhāravantaì ... viñ̃n̄ạavantaì attānaì upagacchanti, attani vā viññāṇaim, viññānasmim vā attānamं, ayam vuccati vīsativatthuk $\bar{a}$ sakkāyadiṭ!thi."

Translated: "A person with "characteristic wrong views" (ditṭhicaritā) perceives "I am my body," "I am my vedanā," "I am my saññā," "I am my sañkhāra," and "I am my viññāna." A person with "characteristic cravings for sense pleasures" ( $\tanh \bar{a} c a r i t \bar{a})$ perceives my body is me; my body is in me, I am in my body. He sees vedanā..saññā..sañkhāra..viññāna in the same four ways (e.g., my viññāna represent me, my viñnäṇa is in me, I am in my viñ̃näna) - that is twenty types of sakkäya diṭ!̣hi.

- Thus, there are five types (one view for each aggregate) of sakkāya dițthi due to uccheda dițthi and 15 types (three views for each aggregate) of sakkāya ditṭhi due to sassata diṭthi.

## Dițṭhicaritā With Ucceda Diṭthi and Taṇhācaritā With Sassata Diṭthi

## 8. From the same section of WebLink: suttacentral: Nayasamutthāna (NE 36) of the Nettipakarana, we

 have two definitions for uccheda ditṭhi and sassata diṭthi."Tattha ye rūpaì attato upagacchanti. Vedanai் ... pe ... saññaं் ... sañkhāre ... viñ̃n̄ạamं attato upagacchanti. Ime vuccanti "ucchedavādino"ti."
"Ye rūpavantaì attānaì upagacchanti. Attani vā rūpaì, rūpasmimं vā attānaim. Ye vedanāvantaì ... pe ... ye saññāvantaiं ... ye sañkhāravantaì ... ye viññānavantaì attānaì upagacchanti, attani $v \bar{a}$ viññānaì, viññānasmim vā attānaì. Ime vuccanti "sassatavādino"ti, tattha ucchedasassatavādā ubho antā, ayain samisārapavatti."

Translated: "One with uccheda ditṭhi (ucchedavādino) perceives 'I am my body," "I am my vedanā,"
"I am my sañ̃̄̄ $\bar{a}$," "I am my sañkhāra," and "I am my viññạna."

- In other words, One with uccheda ditthi attributes all five aggregates to the physical body. Thus, when the physical dies, that is the end of all five aggregates. No rebirth.
"One with sassata dittthi (sassatavādino) perceives 'my body is me; my body is in me, I am in my body.' He also perceives vedanā..saññā.. sañkhāra.. viññāna in the same four ways (e.g., my viññāna is me, my viñ $\tilde{n} \bar{a} n a$ is in me, I am in my viñ $\tilde{n} \bar{a} \underline{a} \boldsymbol{a}$ )." Those with such extreme views are bound to the cycle of rebirths (samisāra).
- In other words, One with sassata dittthi attributes all five aggregates to the mental body. Thus, even when the physical dies, the five aggregates will continue.

9. This verse introduces dividing anariyas (puthujjano) into two categories: (1) ditthicarita or those with personalities dominated by the wrong vision of uccheda diṭthi. (2) tanh ācarita or those with characters dominated by the wrong view of sassata ditṭhi. If you look at the definitions in \#7 above, you will see that a diṭthicarita is one with uccheda ditṭhi, and a taṇhācarita is one with sassata diṭthi.

- The last part says that the 20-types of sakkāya ditthi is the combination of uccheda and sassata ditthis. Since all other 60 ditthis or wrong visions about the world are different combinations or variations of uccheda and sassata ditṭhis, 20-types of sakkāya diṭthi includes all the wrong views about "this world."

## Sotāpanna Stage - A New World View

10. Now we look at the last of the verse in \#8 above, which gives another clue: "..tattha ucchedasassatavādā ubho antā, ayain saminārapavatti."

- Here, "ucchedasassatavādā" results from the combination of uccheda sassata vād $\bar{a}$, i.e.,uccheda vād $\bar{a}$ and sassata vādā, where vāda means "argument or theory," or in this case "view." It says those two are the two extreme views. [ $\boldsymbol{v} \overline{\boldsymbol{a}} \boldsymbol{d a}:[\mathrm{m}$.$] theory; saying; creed controversy.]$
- Then it says, "ayain sainsārapavatti." That means those two extreme views lead to the continuation of the rebirth process! (sainsāra pavatti, where "pavatti" means to "continue or sustain").
- That makes perfect sense. One removes sakkāya ditṭhi (and get to the correct world view) by getting rid of the two main wrong views about the world of 31 realms, i.e., uccheda ditṭhi and sassata dittthi, and any combination of them.

11. If a living being does not cease to exist at the death of the physical body (uccheda ditthi does not hold) AND if there is no "permanent essence of a being" like a soul or a a atma (sassata ditṭhi does not hold), then what is the explanation?

- Continuation of a lifestream NOT ONLY at the death of the physical body but at ANY MOMENT is explained via the principle of causes and conditions (Paticca Samuppāda).
- One who gets to be a Sotāpanna comprehends this fact and realizes that there is nothing to be called "mine" because, in reality, there is absolutely nothing that can be under control of "oneself"; see, "Anattā in Anattalakkahana Sutta - No Soul or an Atma."
- As long as one does not comprehend that, one will become helpless in the future, especially when one is reborn in an apāya; see, "Anatta - No Refuge in This World."
- That is why getting rid of Sakkāya ditṭhi REQUIRES one to get rid of any trace of uccheda dittthi or sassata diṭthi.
- That is not possible until one first gets rid of the 10 types of micchā ditthi and gets basic understanding of the broader world with 31 realms, laws of kamma, existence of a paraloka with gandhabba, and of course the validity of the rebirth process; also see, "Buddhism without Rebirth and Nibbāna?."

12. However, this is only a change of ditthi vipallāsa (getting rid of muddled or distorted vision). There are two more vipallāsa (saññā vipallāsa and citta vipallāsa or "distorted perceptions and thoughts.") Their removal happen at higher stages of Nibbāna; see, "Discourse 3 - Distorted Perceptions or Sañ̃̄̄a Vipallāsa" in "Three Marks of Existence - English Discourses."

- Therefore, getting rid of ALL wrong views starts at the Sotāpanna Anugāmi stage, and established at the Sotāpanna stage.
- However, all types of vipallāsa wear out step-by-step and ultimately go away only at the Arahant stage; see the forum discussion "Sakkāya Ditthi and Tilakkhana."

### 3.4.8.3 Associations (Sevana) - A Root Cause of Wrong Views

## June 29, 2019; revised July 1, 2019 (comment added at the end)

1. Our world views are first formed by our families. Most people just keep those views during their whole lifetimes. A good example is one's religion.

- With the advent of the internet, this is changing. Now, people are exposed to many world views, and can learn about different world views and decide for themselves which one(s) make more sense.
- Still, the basic mindset instilled at a young age can have a long-lasting effect. This is why it is important to make sure that our children are not exposed to "bad influences", especially bad friends.

2. In the terminology of the Buddha, one's "gati" (habits/character qualities) are determined by one's world views and vice versa. Furthermore, whether one acts with avijjā (ignorance) at any given time depends on one's gati. In simple terms, "good gati" are associated with Sammā Ditthi (correct views) and "bad gati" are associated with micchā dittthi (wrong views).

- This is why Sammā Ditṭhi comes first in the both the mundane and Noble Eightfold Paths.
- The basic concepts are discussed in, "Gathi (Gati), Anusaya, and Āsava" and the posts referred to there.
- This is also true at the deeper level; see, \#8 of "Sakkāya Ditthi and Tilakkhana"" and "Sammā Ditthi Realization, Not Memorization." One's gati can lead to specific future births.

3. Gati are carried from from life-to-life. However, gati are FORMED mainly during human lives.

- If a human cultivates an "animal gati," that human is likely to be born as that animal in the next life (or a future life). This is explained clearly in the "WebLink: suttacentral: Kukkuravatika Sutta (MN
57)" (English translation there: "WebLink: suttacentral: The Dog-Duty Ascetic (MN 57)"). There the Buddha explains how those "dog gati" that Seniya was cultivating would lead to him to be born a dog.
- Similarly, a human who cultivates "deva gati" by cultivating sañkhāra that are good and moral (puññābhisañkhāra) - and thus engages in such thoughts, speech, and actions - that human is likely to be born a deva.
- A human is born with a certain set of gati acquired in past lives as a human. But a human CAN change those gati by WILLFULLY cultivating different types of sañkhāra (and thus one's actions). In particular, a human can cultivate "Ariya gati" by cultivating the Noble Eightfold Path (which means cultivating puññābhisañkhāra AND by comprehending Tilakkhana).

4. A human baby has similar gati to his/her parents. That is not an accident. Normally a gandhabba with gati similar to those of the parents can take possession of the zygote in mother's womb that was formed by the union of mother and father; see, "Buddhist Explanations of Conception, Abortion, and Contraception."

- This is another reason that a child would likely to maintain the gati (and thus world views, religion, behavior patterns) of the parents.
- However, if the child comes under strong influence of a bad set of friends, those gati can change for the worse. We discussed an example of a teenager transforming to a drug addict/gang member in our discussion of Paticca Samuppāda; see, "Phassa paccayā Vedanā....to Bhava."
- In the same way, that teenager could have been pointed in the right direction if, for example, the parents themselves started following the Noble Path, and encouraged the teenager to do the same.
- Therefore, one's environment (whom one associates with) can have a major impact on one's gati. This is true for adults too, but children can be easily influenced. This is why one MUST associate with people with "good and moral gati."

5. In the "WebLink: suttacentral: Mangala Sutta (Snp 2.4)," a deva comes to the Buddha and asks, "what are the highest auspicious deeds to be cultivated ("brūhi mañgalamuttamaí"); here, "mañgalamuttamaì" is "mangalam + uttamam", where "mangala" means "auspicious" and "uttama" means "highest").

- The very first auspicious deed listed by the Buddha is: "Asevanā ca bālānamं, paṇditānañca sevanā.." OR, "not to associate with ignorant people (bāla) and to associate with the wise (panditita)."
- In the above I have translated "sevana" as "to associate" and "asevana" as "not to associate." A better description would be, "to get advice from and to follow" and "not to get advice from or to follow." Sometimes it is not possible to stop "associating" with a group of people, even if they have bad character qualities. For example, such people may be there at one's workplace, and it is not possible to stop interacting with them. However, one does not have to follow their bad opinions/world views.
- In the same way, just by "associating with an Ariya" does not necessarily qualify as "paṇ̣itānañca sevanā." For example, there were many people who associated closely with the Buddha himself (Devadatta and King of Kosala, for example), who did not profit from that association: Devadatta was born in the apayy $\bar{a}$, and the King of Kosala failed to become a Sotāpanna.

6. Of course it is prudent to minimize interactions with those with micchā ditthi. However, this again depends on the context.

- For example, many prominent scientists have "uccheda ditṭhi," that the physical body is all one has, and life ends at the death of the physical body. This is one of the two major wrong views associated with sakkāya ditṭhi (that blocks the Sotāpanna stage); see, "Sakkāya Ditthi-Getting Rid of Deeper Wrong Views."
- It is fine to listen to them and even learn from them about MUNDANE things like science. Most of them have never been exposed to true Buddha Dhamma, and all of them are "moral people." I discussed a good example recently (June 27, 2019 at 9:48 am post) at the discussion forum, "Sakkāya Ditthi and

Tilakkhana." As I explained there, Dr. James Tour is correct when he explains why there is more to life than just the physical body. Furthermore, he explains with clear evidence why life could not have evolved from "inert matter."

- However, since he apparently has not been exposed to true Buddha Dhamma, he cannot think of a good explanation other than to say that life must have been created by God, and that there is an everlasting "soul" (i.e., he has sāssata ditthi). I do not blame him; as he firmly believes (and he is right), life is very complex and it is NOT possible to explain the origins of life by the theory of evolution.
- What he has not been exposed to is Buddha's explanation that life has ALWAYS existed (no traceable beginning to life) and evolves according to causes and conditions (Paticca Samuppāda); see, "Buddhism and Evolution - Aggañña Sutta (DN 27)."

7. Among the four conditions that must be fulfilled to attain the Sotāpanna stage of Nibbāna, "Sappurisasamsevo" or "Association with "sappurisa (sath + purisa or "Noble friend", i.e., an Ariya)" is the first condition; see, "Four Conditions for Attaining Sotāpanna Magga/Phala."

- Since Buddha's teachings are unique, the true message has to come from a Buddha or someone "who can be traced back to the Buddha", as explained in the above post. The teachings can be explained accurately only by an Ariya who has GRASPED those unique teachings that have never been known to the world: "pubbe ananussutesu dhammesu.." (see \#8 of "Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa").
- But it is not necessary to "hang out" or "directly associate" with an Ariya. The key is to "to get advice from and to follow" such Noble Persons, as explained above. That can be done by listening to their desanās (discourses) and/or by reading their writings.
- One cannot attain the Sotāpanna stage while having sakkāya dittthi (i.e., uccheda diṭthi or sāssata ditṭhi or some combination of the two): see, "Sakkāya Ditthi-Getting Rid of Deeper Wrong Views."

8. Now we can look into the term "sappurisa" in more detail to get a better picture of the whole situation. There are many suttā that describe sappurisa/asappurisa in different ways (all related to each other).

- For our discussion here, the description given in the "WebLink: suttacentral: Atthañgika Sutta (AN 4.205)" is more relevant: "Katamo ca, bhikkhave, asappuriso? Idha, bhikkhave, ekacco micchādiṭthiko hoti, micchāsañkappo hoti, micchāvāco hoti, micchākammanto hoti, micchāāj̄̄̄o hoti, micchāvāyāmo hoti, micchāsati hoti, micchāsamādhi hoti. Ayaì vuccati, bhikkhave, asappuriso."
- Translated: "An asappurisa is one who follows micchā ditṭhi, micchā sañkappa, micchā vācā, micchā kammanta, micchā àj̄̄va, micchā vāyāma, micchā sati, and micchā samādhi.
- In other words, when one has wrong views (micchā ditthi), one thinks in wrong ways, speaks in wrong ways, acts in wrong ways, follows a wrong livelihood, makes efforts in accomplishing wrong (or useless) goals, gets to the wrong mindset, and thus ends up with a perturbed state (and thus is prone to act unwisely).

9. Of course, a sappurisa is one who is on the correct pat with samm $\bar{a}$ diṭthi, samma $\bar{a}$ sañkappa hoti, sammā vācā, sammāka mmanta, sammā ājīva, sammā vāyāma, sammā sati, and sammā samādhi.

- Furthermore, the sutta explains that there is a worse asappurisa, who in addition encourages others to follow the wrong path.
- Similarly, there is a better sappurisa, who encourages others to follow the correct path.

10. Another definition of a asappurisa is given in the "WebLink: suttacentral: Patipadā Sutta (SN 22.44)," which is relevant to the present discussion: "Sakkāyasamudayagāminiñca vo, bhikkhave, paṭipadam desessāmi, sakkāyanirodhagāminiñca paṭipadaì.

Taì sunātha. Katamā ca, bhikkhave, sakkāyasamudayagāmin̄̄ pațipadā? Idha, bhikkhave, assutavā puthujjano ariyānai் adassāvī ariyadhammassa akovido ariyadhamme avinīto, sappurisānamं adassāvī sappurisadhammassa akovido sappurisadhamme avinīto, rūpai் attato samanupassati, rūpavantaì vā attānaì; attani vā rūpaì, rūpasmim vā attānaì. Vedanaì attato ... saññaì ... sañkhāre ... viññānaì attato samanupassati, viñn̄ạnavantaì vā attānaì; attani vā viññ̄ānaí, viññānasmim vā attānamं."

Translated: ""Bhikkhus, I will teach you the way leading to the origination of sakkāya (dittthi) and the way leading to the cessation of sakkāya (ditṭhi). The description in blue is exactly same as discussed in \#2 of the post, "Sakkāya Ditthi and Tilakkhana."

- The next verse in the sutta states that a sappurisa is one who has removed sakkāya ditthi.

11. Two more relevant terms are "sutavā ariyasāvako" (a Noble person who has comprehended Buddha Dhamma) and "assutava puthujjano" (who has not heard/comprehended Buddha Dhamma).

- The "WebLink: suttacentral: Ānandatthera Sutta (SN 55.13)" describes a "sutavā ariyasāvako" as one who has "buddhe aveccappasādena samannāgato," "dhamme aveccappasādena samannāgato," "sanghe aveccappasādena samannāgato," "ariyakantehi sīlehi samannāgato." That means one who has "unbreakable faith in the Buddha, Dhamma, Sañgha, and unbreakable moral mindset that would not do an apāyagāmi deed."
- Those are actually the four qualities of a Sotāpanna; see, "Sotapatti Anga - The Four Qualities of a Sotāpanna." The key term "aveccappasädena" and "ariyakānta sīla" are discussed in that post.
- Again, there are many suttā describe these terms in different (but related) ways. For example, "WebLink: suttacentral: Dutiyaarivasāvaka Sutta (SN 12.50)" describes a "sutavā ariyasāvaka" as one who has comprehended Paticca Samuppāda.
- Therefore, a "sutavā ariyasāvako" is a Noble Person or an Ariya.
- On the other hand, "assutava puthujjano" is one who who has not heard/grasped those.

12. Therefore, even a person who may be considered highly moral by mundane standards (like famous philanthropists, scientists, etc) is likely to be an "asappurisa" or an "assutava puthujjano." That is IF they have micchā diṭthi (10 types of micchā dițthi which include sakkāya diṭthi). As we have discussed, sakkāya dittthi is uccheda dittthi or sāssata ditṭhi or a combination of the two. Such persons would not be able to guide one on the Noble Eightfold Path.

- Again, that does not mean one cannot learn other useful (mundane) concepts from them.
- One really needs to avoid those who are engaged in immoral deeds: drug use, excessive alcohol use, sexual misconduct, etc.
- In order to make progress on the Noble Path, one should associate (follow and take advice from) a pandita (wise person) in the context of Buddha Dhamma, i.e., a sappurisalsutavā ariyasāvaka. A pandita is not determined by age, educational degrees, or other metrics, but only based on whether one has removed sakkāya ditṭhi.

July 1, 2019: Regarding \#5 above, it is important to note that asevana is different from asevana.

- Sevana is association. Āsevana ( $\overline{\mathrm{A}}+$ sevana) is "came to associate with"; see, "Āsevana and Aññamañña Paccayā."
- Asevana ( $\mathrm{A}+$ sevana) is "not to associate with", the negation as discussed in \#5 above.

It is very important to see the difference, which illustrates how Pāli words combine (sandhi) to produce other words with very different meanings. Thanks to Tobias Große for bringing this distinction to our attention at the discussion forum today.

## Why are Tilakkhana not Included in 37 Factors of Enlightenment?

April 1, 2016; revised June 30, 2021

1. It is possible that one may ask, "If anicca, dukkha, anatta are so important, why are they not included in the 37 Factors of Enlightenment?." After all, one attains Nibbāna via cultivating the 37 Factors of Enlightenment (also called 37 Bodhipākkhiya Dhamma, or the Dhamma concepts that takes one to Bodhi or "bhava" + "uddha," i.e., to Nibbāna; "päkkhiya" means "on the side of").

- The key to the answer is that there are two 37 Factors of Enlightenment, one is mundane (lokiya) and one is transcendental (lokuttara). We have previously discussed that there are two eightfold paths as well: one mundane and one transcendental; see, "Mahā Cattārīsaka Sutta (Discourse on the Great Forty."
- The mundane versions are followed by those who do not comprehend the Tilakkhaṇa (anicca, dukkha, anatta). Thus Tilakkhana are preconditions (prerequisites) to be able to follow the Noble Path.

2. This is related to the fact that the 37 Factors of Enlightenment were there when Prince Siddhartha was born. The existence of the mundane version of the 37 Factors of Enlightenment or eightfold paths is possible only if there has been a previous Buddha in the same mahā kappa, where a mahā kappa is the time span of an "Earth system" or more precisely a solar system with an Earth-like planet supporting human life (an eon).

- All Buddhas discover the Tilakkhana, the Four Noble Truths, the Noble Eightfold Path, etc by their own efforts. But since these Dhamma concepts encompass Nature's laws, all Buddhas keep rediscovering the same Dhamma.
- However, like anything else in this world, a "Buddha Sāsana" or the "original Dhamma preached by a Buddha" lasts only for a certain time. For Buddha Gotama, his Sāsana is supposed to last only 5000 years (when the human lifespan is about 100 years), and we are halfway through.
- There have been four Buddhas on this Earth (which formed about 4.6 billion years ago), and Buddha Gotama was the fourth. The three Buddhas preceding him were: Kakusandha, Konagama, and Kassapa; one more Buddha, Buddha Maitreya, is supposed to appear long after the Gotama Buddha Sāsana disappears.

3. It is said that a Buddha comes to this world to reveal three words and eight letters (in Pāli): "Attakkarā theenapadā Sambuddhena pakāsithā, na hi sīla vataỉ hotu uppajjanti Tathāgatā," which means, "a Buddha (Tathāgat $\bar{a}$ ) is born NOT just to show how to live a moral life, but to reveal three words to the world. "

- These three words are anicca, dukkha, anatta.

4. When a given Buddha Sāsana fades away, it does not disappear abruptly. What happens is that the true meanings gradually get lost, and are replaced by easier to grasp, mundane meanings; the first to lose the true meanings are anicca, dukkha, anatta. Without them, all other concepts remain there with mundane meanings.

- When the Kassapa Buddha Sāsana faded away, most of the concepts survived only with mundane meanings and that is why most terms like kamma and even Satta Bojjhañga survived up to the time of Prince Siddhartha's birth.
- In fact, even during a given Buddha Sāsana, the true meanings of Tilakkhaṇa get lost for periods of time but are revived by Jāti Sotāpannas (when one attains the Sotāpanna stage, it is not lost in future lives; so, if one is reborn human, they will be a Jāti Sotāpanna). Thus during a given Buddha Sāsana, such as Jäti Sotāpannas, keep bringing back the true Dhamma until the end of that Buddha Sāsana.
- After that, no more Jāti Sotāpannas are born, and true Dhamma disappears from this world (or, more correctly, from this Earth). Again, the mundane versions may survive for a long times.
- Then the world has to await the appearance of a new Buddha to reveal the true meanings of anicca, $d u k k h a$, anatta. But a mahā kappa with five Buddhas (like ours) is a rare event, and it is called Mah $\bar{a}$ Badda Kappa.
- More common is to have no Buddhas or just a single Buddha in a given mahā kappa. For example, there were 30 mah $\bar{a} k a p p \bar{a}$ before this mahā kappa where there was not even a single Buddha present.

5. This is why the Buddha emphasized that there is a very brief window of time to attain Nibbāna (at least to attain the Sotāpanna stage).

- The time span of each Buddha Sāsana is different because the average lifetime of humans keeps changing. Gotama Buddha Sāsana is supposed to be 5000 years long, with the average lifetime of a human being about 100 years. During the Buddha Säsana of Buddha Kassapa, the human lifespan was about 20, 000 years. Thus, we can guess that Sāsana lasted about $20,000 \times 50=$ about a million years.
- Therefore, even though there will be one more Buddha appearing in this mahā kappa, the total time one could be potentially exposed to Buddha Dhamma would be only a few million years.
- Our Earth (i.e., the Solar system) may last a few more billion years, so we can say that the lifetime of this mahā kappa is roughly $8-10$ billion years or 8000 to 10,000 million years. Only a few million years, at most, is the "short window" that is available to work towards Nibbāna.
- Of course, one needs to be fortunate enough to be born human on this Earth during the Maitreya Buddha Sāsana to get the next opportunity to work towards Nibbāna. This is an improbable event for any given person.
- Also see, "Rebirth - Connection to Suffering in the First Noble Truth." Even when one is born human, most mahā kappā (eons) will have no Buddhas present to teach the way to Nibbāna.

6. Going back to our main discussion, when Buddha Kakusandha appeared first in this world (i.e., on this Earth), there was no previous Buddha on this Earth. Therefore, concepts like the eightfold path, Satta Bojjhanga, 37 Factors of Enlightenment (or terms like kamma and rebirth) were not there even by name.

- It is clear why those concepts were there before Buddha Gotama (i.e., when Prince Siddhartha was born). After Buddha Kassapa's Sāsana faded away, mundane interpretations of key concepts were passed down through generations (initially through vedic traditions, which then transitioned to the Hindu religion; of course, most concepts survived only by the name).
- Therefore, not only concepts like kamma, rebirth, the five (and eight) precepts were there when Prince Siddhartha was born, but also Satta Bojjhañga and ways to attain jhānā. Of course, those meanings were mundane and the jhānā were anāriya jhānā. Without Tilakkhaṇa, it is not possible to attain Ariya jhānā.

7. The difference that the Buddha Gotama made was to bring back the true Dhamma based on the true nature of this world, i.e., anicca, dukkha, anatta. But even during a given Buddha Sāsana, the true Dhamma starts to fade away from time to time (people tend to embrace the easy and mundane version) and needs to be revived by a $j \bar{a} t i$ Sotāpanna.

- And that is what is happening even at present. The true Dhamma of Buddha Gotama had again started to fade away, and a jāti Sotāpanna in Sri Lanka is bringing back the correct or lokuttara version now. Within the past 2500 years, it happened at least once before, and we will discuss that when the time is appropriate.

8. The difference between the two versions of the 37 Factors of Enlightenment or the eightfold paths is that the Noble versions are based on Tilakkhana: anicca, dukkha, anatta. Their true meaning is that it is fruitless, tiring, and often dangerous to keep struggling to attain happiness in this world; that is the real meaning of dukha or suffering. And Dukkha Sacca (First Noble Truth) is that this dukha (suffering) can be overcome; see the second part of the following post: "Anatta and Dukkha - True Meanings."

- The mundane versions can be grasped by a normal human who is unaware of the true Tilakkhaña or the true nature of this world. The transcendental or lokuttara versions can be comprehended only with an understanding of anicca, dukkha, anatta.
- Without an understanding of the anicca nature, we perceive that sense pleasures are good, and are worth striving for. But when one starts comprehending the anicca nature, one realizes that suffering is actually rooted in sense pleasures; see, "Assāda, Ādīnava, Nissarana - Introduction."

9. But the Tilakkhaṇa (starting with anicca nature) are hard to comprehend. It helps to understand and follow the mundane versions of Dhamma concepts first; see "Buddha Dhamma - In a Chart" and the post "What is Unique in Buddha Dhamma?" referred to in that chart.

- Not everyone can grasp the deeper meanings of the anicca, dukkha, anatta right way. It takes a significant effort. After all, a Sotāpanna is better off than an Emperor or a King (see, "Why a Sotāpanna is Better off than any King, Emperor, or a Billionaire"). One should not think it can be done easily (even though it may be easier for those who happen to have cultivated the Path in recent previous births).

10. To summarize, the critical difference between the two types of 37 Factors of Enlightenment is the following:

- The mundane (lokiya) 37 Factors of Enlightenment are cultivated to live a "moral life" and to seek "good rebirths" in future lives.
- The transcendental (lokuttara) 37 Factors of Enlightenment can be cultivated only after realizing that this world of 31 realms has nothing but suffering to offer in the long run.
- The 37 factors are the same in both versions, but each term has a deeper meaning in the lokuttara version since it has Nibbāna as the goal.
- As one starts to grasp the meanings of Tilakkhana, one will automatically transition over to the lokuttara version. There is no need to worry about which version one is cultivating. The difference is not in terms but in grasping the anicca (and thus dukkha and anatta).
- Furthermore, it is not necessary to cultivate (or even to memorize) all 37 factors. When one cultivates even one factor, all 37 grow together; but it is good to know the factors and how they work together. The 37 factors are listed in " 37 Factors of Enlightenment."

11. There are many things to contemplate in the above material to continue this discussion on the 37 factors in a follow-up post. Some of the ideas discussed above may seem surprising (but also illuminating to those who may have wondered how terms like kamma and Satta Bojjhañga were in usage before Buddha Gotama). They will turn out to be supported by future evidence and also by the inter-consistency that I always try to emphasize.

- Even though we may not have all the evidence of historical facts (they keep emerging slowly), there is no need to wait for fool-proof archaeological evidence.
- One can analyze and examine the "bigger picture" of the Buddha, the soundness of Abhidhamma, and the solid inter-consistency of Buddha Dhamma to realize that the above explanation must be correct. Of course, we will discuss much more detail in future posts.
- In many areas, I have published only a small fraction of material due to time limitations. I will not publish anything that I have doubts about. It is immensely satisfying to figure out a "missing piece" and be able to "see the bigger picture" with more clarity. It is also amazing how deep, consistent, and wonderful Buddha Dhamma is.

### 3.4.10 <br> Two Versions of 37 Factors of Enlightenment

April 8, 2016; revised July 1, 2021; July 21, 2021 (\#3); August 20, 2022

1. In the previous post, we discussed two versions of 37 Factors of Enlightenment (Bodhipākkhiya Dhamma) and two versions of eightfold paths. See, "Why are Tilakkhana not Included in 37 Factors of Enlightenment?" Here, we continue that discussion.
2. Throughout the website, I have tried to make the case that there are three broad categories that people can be divided into :

- Some have one or more of the ten types of micchä ditṭhi; see, "Three Kinds of Ditthi, Eightfold Paths, and Samādhi."
- Those who have been exposed to some form of Buddha Dhamma, have removed micchā dittthi and thereby have the mundane (lokiya) version of sammā ditṭhi.
- Then some have transcendental (lokuttara) Sammā Diṭthi, i.e., they comprehend the true nature of the 31 realms (anicca, dukkha, and anatta), i.e., that there is hidden suffering in what we perceive to be enjoyment.

3. When one is exposed to Buddha Dhamma, one can understand the need for the wider world view with 31 realms and that living beings are born in all those realms due to their actions (kamma). This leads to getting rid of micchā ditṭhi; see, "Buddha Dhamma - In a Chart" and "What is Unique in Buddha Dhamma?."

- When one gets rid of micchā ditṭhi, one has the mundane sammā ditthi: One knows that to avoid future births in the apayy (four lowest realms), one needs to avoid immoral deeds (akusala kamma) and to cultivate moral deeds.
- With mundane samma dittthi, one also strives to accumulate kusala by doing puñña kriya or good deeds; this leads to FOUR benefits of $\bar{a} y u$ (long life), vaṇ̣a (healthiness), sukha (mundane happiness), bala (wealth/strength) in future lives. Note that this "bala" is different from the "Pañca Bala;" see, "Pañca Indriya and Pañca Bala - Five Faculties and Five Powers."
- The "mundane bala" appears in the Dhammapada verse 109:
"Abhivādanasìlissa
niccaí vuḍ̣̣hāpacāyino
cattāro dhammā vaḍ̣hanti àyu vaṇno sukhaì balaìn."
- Translation: "For one who always respects and honors those older and more virtuous, four benefits of longevity, beauty, happiness, and wealth/strength will increase."
- That enables one to grasp Tilakkhaṇa in future lives if one fails to do so in this life. Normally, those who are born with tihetuka patisandhi will have those qualities in this life. See "Patisandhi Citta How the Next Life is Determined According to Gatti."

4. Now let us talk specifically about the mundane 37 Factors of Enlightenment, tied to the mundane samm $\bar{a}$ ditthi. There is no specific order because they are all interrelated. But for convenience, we could use the following guide:

There are four obvious things to do when one knows what is right (moral or kusala) and what is not (immoral or akusala). These are called cattāro sammappadhāna, conventionally translated as Four Supreme Efforts. One exerts to:

- 00 prevent immoral qualities that have not yet arisen from arising
- 01 abandon immoral qualities that have arisen
- 10 initiate moral qualities that have not yet arisen to arise
- 11 maintain and cultivate moral qualities that have arisen
[compare 37 Factors of Enlightenment item 4]

1. Not to let an unwholesome thought arise which has not yet arisen.
2. Not to let an unwholesome thought continue which has already arisen.
3. To make a wholesome thought arise which has not yet arisen.
4. To make a wholesome thought continue which has already arisen.

They can briefly be expressed as "avoiding," "overcoming," "developing," and "maintaining," and are called the four supreme efforts.

By the way, these are intimately related to viriya in some other categories in the 37 factors: Cattāro Iddhipada, Pañca Indriya, Pañca Bala, Satta Bojjhañga, and the Noble Eightfold Path.
5. One could make much progress (mundane or lokuttara) by focusing on the Cattāro Sammappadhāna. The word sammappadhāna comes from "san" + "ma" + "padhāna." We have previously discussed "samm $\vec{a} "$ or "san" + "ma" means getting rid of defilements; see, "What is "San"? Meaning of Sansāra (or Samsāra)." In Pāli or Sinhala, "padhāna" or "pradhāna" means dominant or leading. Cattāro is, of course, four.

- Therefore, Cattāro Sammappadhāna means four key methods for eliminating defilements, i.e., cleansing the mind.
- If we can get to the habit of following the four guidelines listed in \#4, then we will be cleansing our minds with time.

6. Cattāro Satipatthhāna (Four Foundations of Mindfulness) helps one with the four tasks listed in \#4 by being vigilant. These are discussed in detail in several posts in the "Mahā Satipatthāna Sutta."

- One keeps vigilant about committing immoral deeds with the body ( $k \bar{a} y \bar{a} n u p a s s a n \bar{a})$ and becomes good at not reacting automatically to feelings (vedanānupassanā) or thoughts (cittānupassanā), and when in doubt about the suitability of a given action one is about to do, compare with what is in the Dhamma (dhammānupassanā).
- We have not discussed dhammānupassanā in the Mahā Satipatṭhāna Sutta yet, and we can go to great depths. But we can get a simple idea from what "dhamma" means: Dhamma is what one bears. If one engages in activities that lead to great suffering to another (say, rape or murder), then one has accumulated a "bad Dhamma" that will yield corresponding results (Paṭicca Samuppāda) in future lives in the four lowest realms. Similarly, if one acts with kindness one grows Dhamma to be born in human or higher realms.
- Thus one should think about the consequences of bad actions one is about to do and stop such an action. On the other hand, one can be joyful about a good act that one is about to do or has done, and acquire many merits that will lead to $\bar{a} y u$, vaṇ̣na, sukha, bala, and pañ̃̄ $\bar{a}$ as discussed in \#3 above.

7. Then there are Cattāro Iddhipāda or the Four Bases of Mental Power; see, "The Four Bases of Mental Power (Cattāro Iddhipāda)." When someone has a firm goal, one develops chanda (liking for it), citta (thinking about it always), viriya (making efforts on it), and vīmains $\bar{a}$ (finding out all relevant information).

- That completes the "three sets of fours" in the 37 Factors of Enlightenment. Next there are "two sets of fives."

8. The Pañca Indriya (Five Mental Faculties) are: saddhā (faith based on knowledge), viriya (effort), sati (mindfulness), samādhi (calming of the mind), and pañ̃̃ $\bar{a}$ (wisdom).

- These five factors help one move forward on the Dhamma path. It is like a vehicle with two sets of wheels with a driver: Sati is in front and can be compared to the driver; saddh $\bar{a}$ and paññ $\bar{a}$ are the two front wheels, and viriya and samādhi are like the back wheels.
- All five need to be cultivated together; in particular, those sets need to be balanced: one cannot move forward with saddh $\bar{a}$ without pañña $\bar{a}$, or just by sheer effort (viriya) without feeling the benefits in samādhi.

9. When the Pañca Indriya is cultivated, they grow and become Pañca Bala or the Five Powers.

- These "two sets of five" are discussed in detail in "Pañca Indriya and Pañca Bala - Five Faculties and Five Powers."

10. Next is Satta Bojjhañga or the Seven Factors of Enlightenment.

- These seven factors are dhammavicaya (which is closely related to vīmamisā and paññā), viriya (effort), pīti (joy), passaddhi (tranquility), samādhi (one-pointedness), and upekkhā (equanimity).
- Here again, sati should be in front, and the other six are better cultivated in two sets; see, "11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojihañga." In that post, the Satta Bojjhañga are those for the lokuttara Path, but as I mentioned before, the procedures are the same with deeper meanings.

11. Finally, there is the Ariya Atthangika Magga or the Noble Eightfold Path.

- Of course it has been discussed in many posts throughout the site. One could enter "Noble Eightfold Path" in the Search box on the top right and get a list of relevant posts.
- A table in the post "37 Factors of Enlightenment" shows how many factors in different categories overlap.
- Therefore, there is no need to try to cultivate each factor. It is much better to concentrate on one category: Cattāro Sammappadhāna or Cattāro Satipatṭhāna are common ones. When further along the Path, one could cultivate Satta Bojjhañga. Of course, the Noble Eightfold Path encompasses all.

12. The cultivation of the mundane samm $\bar{a}$ dițthi together with contemplation of "Anicca, Dukkha, Anatta" gradually moves one to transcendental (lokuttara) sammā ditthi.

- Then one will gradually switch over to the lokuttara 37 Factors of Enlightenment. Like a train smoothly switching railway tracks at a railroad switch, one will move over to the lokuttara track at some point; it happens in one citta vīthi, and one may not even realize it for a while. There is no need to worry about which one to be followed. As the meanings of anicca, dukkha, and anatta sink in, one will start seeing the deeper aspects of the 37 Factors of Enlightenment.

13. One will truly comprehend the Four Noble Truths starting from that point. One truly starts grasping the First Noble Truth (Dukkha Sacca), only when comprehending anicca, dukkha, and anatta.

- Again, this is why the first three Noble Truths are also not listed under the 37 Factors of Enlightenment. In the previous post we discussed why the Tilakkhana are not included; see, "Why are Tilakkhana not Included in 37 Factors of Enlightenment?."
- Comprehension of anicca, dukkha, and anatta, at least to some extent, at the Sotāpanna stage, helps one grasp the first Noble Truth, i.e., that this world is filled with suffering and that it can be overcome.
- The lokuttara version of the 37 Factors of Enlightenment - which describes ways to get to Nibbāna or Enlightenment - requires the comprehension of the Tilakkhaṇa and the first three Noble Truths first.
- Even before grasping anicca, dukkha, and anatta, one can see the dangers of a defiled mind and be motivated to follow the mundane Path with mundane sammā ditṭhi.

14. Therefore, it is better not to think much about which version of the 37 Factors of Enlightenment one follows.

- The key is to purify one's mind gradually: "rāgakkhayo Nibbānan, dosakkhayo Nibbānan, Mohakkhayo Nibbānan," i.e., Nibbāna or Niveema or "cooling down" is achieved by getting rid of greed, hate, and ignorance in steps. Moral behavior helps with the first two, and reading and listening to Dhamma helps with the third.
- Knowingly or unknowingly, one will be completing the 37 factors with time.
- It happens with even the mundane Path but accelerates when switching to the lokuttara Path.
- The "Bhāvanā (Meditation)" section could be useful in following a systematic path. But it is essential to read different posts on varying subjects, starting with the "Moral Living and Fundamentals" section. It could be harder to grasp advanced topics on "Anicca, Dukkha, Anatta," without grasping the fundamentals.

### 3.4.11 Types of Bodies in 31 Realms - Connection to Jhāna

December 12, 2018

1. Even before the Buddha, people had three different basic ideas about "the essence" of a living being and specifically a human.

- Just like today, many people believed that the current physical body is all that is there. When one dies, that is the end of the story. One's body would decompose and be absorbed into the Earth. Nothing at all will be leftover, either physical or mental. The physical body is called "karaja kaya" in Buddha Dhamma.
- However, there was another view that there is something that survives the physical death of the body. This is the same as the concept of a "soul" in major religions today. In Abrahamic religions today, it is believed that upon death, the soul will either go to heaven or hell and will forever remain there.
- So, those are the two main views about "the essence" of a human being today.

2. However, at the time of the Buddha, those with the second view of a surviving "mental body" were split into two camps. In order to understand that, we need to remember that there were yogis who were able to get into jhānā and also had some supernormal (abhiñña $\bar{a}$ ) powers.

- There are three kinds of "pleasures", as we discussed in the post, "Three Kinds of Happiness - What is Nirämisa Sukha?." Two of these are "mundane pleasures", associated with the 31 realms of this world.
- One is of course the "physical sense pleasures": those associated with pictures, sounds, food, smells, and touches. That is what most humans experience. In fact, these are the pleasures associated with the 11 realms in the kāma loka (four lowest realms, human realm, and the 6 deva realms).
- The second are the jhānic pleasures, and those are of two varieties: rūpāvacara jhāna and arūpāvacara jhāna.

3. If one can cultivate $j h \bar{a} n \bar{a}$, one can experience "jhānic pleasures." Unlike the pleasures associated with the physical senses, jhānic pleasures are associated with less and less with the dense physical body as one gets to higher jhāna.

- Of course, jhānic pleasures have nothing to do with seeing nice objects, hearing nice music, eating tasty foods, smelling nice odors, or physical touching.
- In the first four $\boldsymbol{j} \boldsymbol{h} \overline{\boldsymbol{a}} \boldsymbol{n} \overline{\boldsymbol{a}}$, one just experiences fine bodily feelings (lightness in the body, etc.) as well as mental happiness. By the time one gets to the fourth jhāna, almost all "bodily sensations" fade out and only "rūpa" that is left is a "white soothing light." So, by the fourth jhāna, one loses any awareness of one's own physical body, i.e., the only "matter" one experiences is that of light.
- We must remember that light is a $r \bar{u} p a$ in Buddha Dhamma, even though it is a "very fine $r \bar{u} p a$." In fact, in quantum mechanics, photons (light) and electrons (matter) are treated on the same footing.

4. The four rūp $\bar{a} v a c a r a ~ j h a \bar{a} \bar{a}$ correspond to mental states of the $r \bar{u} p \bar{a} v a c a r a b r a h m a \bar{a}$, i.e., those brahma in the rūpa loka realms. Now we can see why those rūpāvacara brahmā do not have dense bodies.

- They do not need dense bodies! Brhamas do not eat, smell nice fragrances, or engage in sex.
- Those humans who can get to the fourth jhāna can cultivate the ability to separate the "brhama-like mental body" from the solid physical body. That means the "mental body" - called manomaya kāya - can come out of the physical body.
- This manomaya kāya essentially has the seat of the mind (hadaya vatthu) and the five pasāda rūpa for sensing vision, sounds, smells, taste, and touch.
- As we mentioned above, the physical body is called the karaja kaya.

5. The Buddha gave several analogies to describe this separation of the manomaya kāya from the karaja kaya. In the WebLink: suttacentral: Sāmaññaphala Sutta (DN 2):
"..Seyyathā vā pana, mahārāja, puriso asim kosiyā pavāheyya. Tassa evamassa: 'ayamं asi, ayamं kosi, añño asi, aññā kosi, kosiyā tveva asi pavālho'ti. Seyyathā vā pana, mahārāja, puriso ahim karaṇ̂ā uddhareyya. Tassa evamassa: 'ayà̇ ahi, ayam̀ karaṇ̣o. Añ̃̃o ahi, añño karaṇ̣̣o, karaṇ̣ā tveva ahi ubbhato 'ti."

- Translated: "..suppose a man were to draw a sword out from its scabbard (sheath). He would think: "This is the sword; this is the scabbard. The sword is one thing, the scabbard another, but the sword has been drawn out from the scabbard." Or suppose a man were to pull a snake out from its old outer skin. He would think: "This is the snake; this is the old skin. The snake is one thing, the old skin another, but the snake has been pulled out from the old skin."
- Therefore, separating the manomaya kāya from the karaja kaya is just like pulling out a sword from its sheath: sword is the "active element" and the sheath is like the karaja kaya. In the analogy: "A snake shedding its old skin", snake is like the manomaya kaya and old skin is like the karaja kaya."
- Manomaya kaya is the "active or important element."
 get to those rūpāvacara jhāna.
- The only difference is that the manomaya kāya of the rūpāvacara brahmā do not have the three pasāda rūpa for smelling, tasting, or touch.
- Rūpāvacara brahma's fine bodies have just the hadaya vatthu (seat of the mind) and two pasāda $r \bar{u} p a$ for seeing and hearing.
- Of course, they do not need eyes. They see and hear using a different method. Seeing by those brahmā is similar to how we see dreams with our eyes closed.

7. This manomaya kāya is the same one that enters the womb at conception.

- We remember that a gandhabba has a manomaya kāya as well as fine, misty-like body due to inhaling aroma. When a gandhabba enters a womb, this "extra bit of matter" is shed and only the manomaya $k \bar{a} y a$ (of the size of a few suddhaṭthaka) enters the womb.
- We also remember that these five pasäda rūpa are the actual sensing elements. When the manomaya kāya is inside a physical body, they get the signals THROUGH the five physical senses: eyes, ears, nose, tongue, and the body. Those signals are analyzed by the brain and transmitted to the manomaya kāya inside the physical body.
- That can be compared to a human sitting inside a totally enclosed military tank seeing the outside with aid of cameras mounted on the body of the tank. This is discussed in "Our Mental Body - Gandhabba."

8. When a yogi cultivates the fourth jhāna and perfects it, he/she will be able to come out of the physical body or the karaja kaya at will.

- Just like a rūpāvacara brahma, these yogis who come out of the physical body with just the manomaya kāya can "see" and "hear" over great distances.
- Of course, we have a hard time imagining that. But it can be compared to what happens when we see a dream. There is no need for eyes or light to see dreams; we see dreams when it is pitch black at night with our eyes closed; we do not "see" dreams with our eyes.

9. In some stressful situations (like heart operations), the manomaya kāya can separate from the physical body, and that is what is called the "out-of-body experience (OBE)."

- It also happens to some who had almost died, but "manage to come back to life." These are also called Near-Death Experiences (NDE).
- There are many books written on OBE and NDE. "Consciousness Beyond Life", by Pim van Lommel (2010) gives detailed accounts of case studies of OBE experienced by people undergoing heart operations.

10. This manomaya kāya (with a hadaya vatthu and five pasāda rūpa) that can be separated from the karaja kaya was called " $r \bar{u} p i$ manomaya k $\bar{a} y a$ " by those yogis at the time of the Buddha.

It is called "rūpi manomaya kāya" because it has all five pasāda rūpa and thus essentially has all five senses. Even though one cannot move solid objects with the fine body, one will be able to "touch." Just like vision is not with physical eyes, all five "physical senses" are different than with physical body.

- There is a second type of manomaya kāya discussed by the Buddha in the WebLink: suttacentral: Potthapāda Sutta (DN 9). This was called "arūpi saññ̄āmaya kaya." We will discuss that in the next post. These bodies or "kaya" are associated with arūpāvacara brahmā (and thus arūpāvacara $j h a ̄ n \bar{a})$.
- It could be a good idea to get refresh the memory on what is meant by sañ̃̄̄̄: "Sañ̃ñā - What It Really Means."
- Basically, when one recognizes an object or understands a concept, then one has "an understanding" of what it is. That is what saññā is. So, an "arūpi sañ̃ñ̄maya kaya" basically means a "body (almost) devoid of matter but has the ability to recognize/understand."

### 3.4.12 <br> Finest Manomaya Kāya of an Arūpāvacara Brahma

## December 19, 2018

1. As we discussed in the previous post, we can get some insights on "what survives the death of a physical body" by analyzing jhānic experiences; see, "Types of Bodies in 31 Realms - Connection to Jhāna."

- As discussed there, one can experience for oneself that life is possible without a heavy, solid physical body. This can be experienced for oneself by cultivating jhāna.
- There are many people even today who can experience $j h a \bar{a} a$, especially up to the fourth $j h a \bar{a} a$.

2. When one gets to the first jhāna, one "transcends" (or go beyond) the kāma loka or "sense sphere." Our human realm is one of 11 realms in the kāma loka as we discussed before.

- There are 16 realms in "rūpa loka" where rūpāvacara brahmā live and there are 4 realms in "arūpa loka" where arūpāvacara brahmā live. Those are the 31 realms.
- In the WebLink: suttacentral: Anupubbanirodha Sutta (AN 9.31): "Paṭhamaim jhānaì samāpannassa kāmasañ̃̄̄̄ niruddhā hoti" OR ""When one has attained the first jhāna, perceptions of sensuality (kāma sañ̃̄̄ $\bar{a})$ stop from arising."
- That means kāma sañkappa (or sensual thoughts) would not arise in the yogi. However, the yogi still feels his/her physical body. Those "bodily sensations" decrease as the yogi attains from the first to the fourth $j h a ̄ n a$.
- Those jhānic levels one through four correspond to the 16 rūpāvacara brahma realms.

3. If the yogi can advance above the fourth jhāna, he/she next gets into the fifth $j h a \bar{n} a$ which has a different mental experience. Jhānās fifth through eighth are called arūpāvacara jhāna.

- The fifth $j h a \bar{n} a$ or the first of the arūpāvacara jhāna is called the $\bar{a} k \bar{a} s a \overline{n a n c} \bar{a} y a t a n a$.
- Even though those arūpāvacara jhāna are labelled as fifth through eighth jhāna these days, in suttō they are just called by their names: ākāsānancāyatana, viññannañcāyatana, ākiñcaññāyatana, nevasaññānāsaññāyatana.
- The experiences of yogis in arūpāvacara jhāna are similar to those of arūpāvacara brahmā in the highest $\mathbf{4}$ realms in the $\mathbf{3 1}$ realms.

4. Those arūpāvacara brahmā cannot even see or hear, unlike the rūpavacara brahma $\bar{a}$.

- Those arūpāvacara brahmā have just a trace of matter: a hadaya vatthu, which is the seat of the mind. However, unlike rūpāvacara brahmā, they do not have pasāda rūpa for seeing and hearing.
- They only have an awareness (saññā) of existence. In the WebLink: suttacentral: Potthapāda Sutta (DN 9) (and other suttā) this "third type of body" is called an "arupi saññāmaya kaya."
- Arupi means "without rūpa" (it actually has a trace of rūpa, just the hadaya vatthu). Saññ̄āmaya means "with sañña", i.e., one can still experience that one is still alive, one has perception (sañ̃$\tilde{a} \bar{a}$ ).

5. It may be a good idea to re-read the following posts in this series just to firmly grasp these key ideas. Then it would be easier to follow the upcoming discussions. The first was, "Anattā (Mundane Interpretation) - No 'Unchanging Self."

- We discussed in the second post that the manomaya kāya (with a hadaya vatthu and five pasāda rūpa) that can be separated from the karaja kaya was called "rupi manomaya kāya" by those yogis at the time of the Buddha:'Types of Bodies in 31 Realms - Connection to Jhāna."
- With that extremely small manomaya kāya, a rupavacara brahma or a yogi who can come out of the physical body can hear and see. Since this manomaya kāya is much smaller than an atom, this is something that is hard for us to even imagine.
- However, those who experience out-of-body experiences, that is exactly what happens. So, this effect has been experienced by many people; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

6. Now we can summarize what we have figured out so far: Any living being is born with a basic manomaya kāya that comes in three basic varieties:

- Those in kāma loka have a manomaya kāya with hadaya vatthu and five pasāda rūpa (i.e., all six "sensing elements." That manomaya kāya is "enclosed in" in a solid physical body (karaja kaya) that allows one to experience "sense pleasures."
- In the 16 rūpāvacara brahma realms, the manomaya kāya has two pasāda rūpa (for vision and hearing), in addition to the seat of the mind (hadaya vatthu).
- The finest manomaya kāya is in the arūpa loka (4 arūpāvacara brahma realms), which only has the hadaya vatthu. They can only think.

7. There are 11 realms in $k \bar{a} m a ~ l o k a ~(f o u r ~ a p \bar{a} y \bar{a}$, human realm, and 6 deva realms).

- The six deva realms belong to the kāma loka, and all those devas have "physical bodies" (karaja kaya) but they are finer than those of humans.
- Of course, a solid physical body (karaja kaya) is not there for either a rūpāvacara or an arūpāvacara brahma.

8. By the way, we can now see how suffering decreases as one starts at the lowest realms (apāyā) and move up to human, deva, and brahma realms. Human realm is where both suffering and happiness are present. Sense pleasures are optimum in deva realms.

- However, sense pleasures are not available in brahma realms. But the jhānic pleasures in those brahma realms are much better than sense pleasures.
- Thoughts of greed and hate/anger cannot arise in any brahma, including rūpāvacara brahmā. This is why their minds are at peace.

9. That is also true of those who can get into the corresponding jhānā. While in those jhāna, thoughts of greed or hate/anger do no arise.

- This is as close as one can get to Nibbāna, without even comprehending Buddha Dhamma. As we know, yogis were able to get to those jhānā even before the Buddha by using breath or kasina meditations.
- If those yogis do not lose the ability to get into jhāna until death, they will be born in the corresponding brahma realms. However, since they have only SUPPRESSED greed and hate, they will come back down to the human realm at the end of "brahma bhava." Subsequently, they can eventually end up in the lowest four realms (apāyā).

10. So, now we can see that there are two types of jhānic pleasures, and that those two varieties give rise to "two types of mental bodies or manomaya kāya" (in addition to the dense body or the karaja kaya that we are familiar with).

- However, a human who cultivates jhāna and even get to the highest arūpāvacara jhāna (8th jhāna), will still have the human manomaya kāya that he/she was born with.
- If a yogi comes out of the physical body with that manomaya kāya, it would have five pasāda rūpa and a hadaya vatthu.

11. Therefore, that manomaya kāya that can be separated from the physical body of a human would have all five pasāda rūpa that are the actual "sensing elements" for seeing, hearing, tasting, smelling, and touching. Of course the "seat of the mind" - or the hadaya vatthu - would also come out with those five pasāda rūpa.

- This is because it is not possible to separate any pasāda rūpa form the manomaya kāya that is born at the beginning of the human bhava.
- In fact, it is that manomaya kāya that lives as a gandhabba in between two adjacent human births ( $j \bar{a} t i$ ) until a suitable womb becomes available for it to enter.

12. In Buddha Dhamma, the closest equivalent of a "soul" is the "manomaya kāya" or the "mental body."

## However, it is not the same an unchanging soul.

- As we saw, manomaya kāya will take fundamentally different forms in the three types of loka that encompasses the 31 realms: kāma loka, rūpa loka, and arūpa loka.
- Furthermore, even during the human bhava, the manomaya kāya can undergo drastic changes. When one attain jhāna or magga phala, it will undergo significant changes. In the case of magga phala, those changes are permanent.

13. In the next post, we will summarize the information that we have discussed so far with reference to key sections in the WebLink: suttacentral: Potthapāda Sutta (DN 9).

- In that sutta, the Buddha explained those three types of "kaya" to Potthapāda, who was asking whether there exists an "absolute, unchanging, self" or an attā in the deeper sense (just like a
"soul" that would have a "permanent existence" in heaven or hell in Abrahamic religions today).
- It must be kept in mind that the above descriptions provide only the basic framework of the three types of loka (kāma loka, rūpa loka, and arūpa loka), that encompass the 31 realms.
- However, that is sufficient to get a good idea about the key differences among the 31 realms.
- Furthermore, it explains a deeper meaning of "attā."

### 3.5.1 <br> Namagotta, Bhava, Kamma Bīja, and Mano Loka (Mind Plane)

## Revised September 1, 2018; Mar2, 2020; September 10, 2022

1. A strong kamma can bring vipāka in the future. The mind releases a bit of energy, which is a kamma büja (or kamma bhava.) Where are those kamma bïjalbhava "located"? That is difficult to explain because we have no "feel" for mental phenomena. We have difficulty connecting with anything that is not discernible to our five physical senses. We need to see, hear, taste, smell, or touch to feel confident that "something is real."

- Yet, if one makes an effort, it is quite possible to get a good idea of what these are. Modern science helps here too.
- If someone is serious about figuring this out, I would recommend reading the posts, "Difference between a Wish and a Determination (Pāramitā)" and, mainly, "Recent Evidence for Unbroken Memory Records (HSAM)" first.

2. It is impossible to "store" records of ALL our past activities in the brain. Some people can remember EVERYTHING that happened to them over many years in minute detail, as we saw in the second post above. In addition, how can memories of past lives be stored in the brain? It has no connection to past lives!

- The Buddha said those memories are in mano loka ("nāma thalaya" in Sinhala) which could be called the "mind plane"; those memories in the mano loka come to our mind via mana indriya in the brain: "WebLink: suttacentral: Indriyakathā (Kv 19.8)" (no details given in this link).
- The "storage" is not in a physical device like a tape. Mano loka is devoid of material things; it is all " $n \bar{a} m a$ " and no matter.
- The closest analogy we have to the mental plane is the "dream world." When we dream, we can "hear", "see" and "do" things but it is all "nāma." When we "playback" memories, it is like seeing a dream.
- We can recall our memories (whatever we can remember) very quickly. If we have a strong memory of some event, even from many years ago, we can instantly recall it in our minds. We just think about it and can "see" it playback with sounds and the background just like it happened. Our minds can connect to the "mind plane" and recall things without delay; see "Amazingly Fast Time Evolution of a Thought (Citta)."
- In this "recall process", the brain acts as the intermediary; the brain (actually the mana indriya in the brain) acts like a "transmitter" and a "receiver" in communications with the mental plane. As we age, the brain gets weaker and thus the "recall power" diminishes. Meditation (especially dhamma vicaya or contemplation on dhamma concepts) helps keep the brain healthy.
- It is just that some (few) people are born with the ability to recall ANYTHING from this life, as that post on memory records (HSAM) described. As I discussed in another post, this ability can be also cultivated by developing abhiññā powers.

3. When we "wish or hope for something" that thought will also have a record of that in the mano loka; later, we can recall that we made such a "wish."

- While a "nāmagotta" (I have written this as nāma gotta too) is just a record, a wish has certain energy in it, but if not cultivated by further thinking and doing things relevant to that wish, that energy will soon fade away.
- When we make a "determination" that has more "javana power" than just a "wish" such records are stronger, i.e., they do not fade away quickly.
- Our wishes, determinations, cravings for things, plans, etc are all sañkhāra (moral and immoral). Some of them are strong and become abhisañkhāra. They all lead to "kamma bīja (seeds)" or varying strengths. Some are strong enough to lead to rebirths; others bring vipāka during a lifetime. They can be good or bad.
- Thus "Dhammo have rakkhati dhammacārim" or "dhamma will guide those who live according to dhamma" applies to both "good" and "bad" dhamma. Moral people will be guided upwards, and immoral people will be guided downward. Mother nature is neutral; each one chooses which way to proceed. However, the results are ALWAYS according to kamma or actions; see, "Paticca Samuppāda - "Pati+ichcha"+"Sama+uppāda"."

4. Records of both past "nāmagotta" and the mental energies associated with "plans for the future" ("kamma bīja") are in the mind plane. The difference is that past "nāmagotta" are permanent and have no energy to do anything. On the other hand, the energies for "future plans" ("kamma $b \bar{i} j a ")$ are in flux and can get stronger or fade away.

- However, even a determination (whether or not fulfilled yet) will be recorded in the mind plane, because just after passing away it is in the past and that thought becomes a record in "nāmagotta." For example, if one determines to kill another person, that thought will be recorded in the mental plane as a nāmagotta. In addition, there will be a tentative record of a "kamma bïja" associated with the future. The more he thinks and plans, the stronger the "kamma bīja" gets. Suppose, somehow, he comes to his senses and discards that thought. In that case, the "future" imprint (and associated energy) will fade away, and there will not be a "kamma bïja" associated with it anymore.
- Note: A record of any sensory event gets added to nāmagotta in viññāna dhātu - via the mana indriya in the brain. Thus, our memories are "store d" in viñ̃āāna dhātu (or nāma loka) and not in the brain.
- When thinking about a good or a bad act, it has not acquired the "full kammic potential", i.e., it is said that the "kamma patha" is not complete. Suppose that person ended up killing the other person. In that case the "kamma patha" is complete and there will be a "kamma bïja" established that will be there up to 91 mah $\bar{a} k a p p \bar{a}$ (a mahā kappa is the lifetime of a universe, roughly 30 billion years).
- If that strong "kamma bīja" brings about a bad rebirth thus depleting its energy, at that point, that result (new birth) now becomes a "nāmagotta" or just a record.
- This is a simple overview of what happens; if one contemplates it, one should be able to get an idea of the concept.

5. Depending on the nature of the deed, a "kamma bïja" may be in different types of"bins," called "kamma bhava."

- For example, if someone cultivates rūpa samāpatti, the associated kamma bīja will be in the "rūpa loka bhava" or simply, "rūpa bhava." Suppose another cultivates arūpa jhānā (one of the highest four
$j h a \bar{n} \bar{a}$ ). In that case, the associated kamma bīja will be in "arūpa bhava" and when that kamma bīja releases its energy, he/she will be born in the arūpa loka.
- All other (abhi)sañkhāra will bring about vipāka in the kāma loka (deva, human realms, and the four lowest realms). We will discuss this in more detail in the next post.
- To summarize: When we do a kamma (abhisañkhāra), we generate certain energy called a kamma $b \bar{y} j a$. Those energies will be in the appropriate "bhava" in the mind plane. That energy is spent when the vipāka associated with a kamma bīja is experienced. Only a record of that (nāmagotta) survives in the mind plane.

6. Here is a chart that summarizes the above:

We have been trapped perpetually in the cycles indicated by the pink arrows.

## Mind Plane Drawing

Click to open and print the above chart:WebLink: Mind Plane Drawing

- As the chart shows, we make "kamma bīja" of varying strengths in various "bhava" during a lifetime that will lead to more rebirths and uncountable kamma vipāka during those rebirths.

6. Another important point is that there are two ways to "bypass" a strong "kamma bïja" associated with such a "kamma patha" of, say, killing of a human.

- He could realize the enormity of the deed, ask for forgiveness in his mind (genuinely), and start engaging in moral deeds, then he may be able to "wear out" some of the energy of that "kamma bïja." More importantly, if he can cultivate Ariya Mettā $\operatorname{Bh} \bar{a} v a n \bar{a}$, he may be able to wear it out completely (unless it is one of the ānantariya kamma, like killing a parent); see, "5. Ariya Mettā Bhāvanā."
- The other way is of course to attain Arahanthood. Unless that particular "kamma seed" brings about the vipāka before that Arahant passes away, it will become null at the death of the Arahant.
- Furthermore, if that "kamma seed" is not that strong and does not bring vipāka within 91 mahā kapp $\bar{a}$, it will become null and void too. Only the "nāmagotta" are permanent, "kamma bīja" are waiting for appropriate conditions to bring vipāka and are changing with time. However, "nāmagotta" just records, but "kamma bīja" have the energy to bring about results (vipāka).

7. There are special cases where a "kamma bīja" (and associated "kamma bhava") WILL NOT change. An ānantariya kamma establishes a "kamma bïja" (and "kamma bhava") that WILL bring about vipāka at the end of the current life without exception.

On the immoral side, five $\bar{a} n a n t a r i y a ~ k a m m a ~ W I L L ~ b r i n g ~ r e b i r t h ~ i n ~ t h e ~ a p a \bar{y} \bar{a}$ at the end of this life (i.e., when one dies). These are, killing mother, father, or Arahant, injuring a Buddha, and causing a schism in Sañgha. See, "WebLink: suttacentral: Parikuppa Sutta (AN 5.129)."

- On the "moral side," all stages of Nibbāna are "anatariya kamma." For example, when one attains the Sotāpanna stage, he/she WILL be born only according to that "Ariya bhava" or that special kammic energy; thus, a rebirth in the lowest four realms WILL NOT happen.
- Another interesting point is that when a Bodhisattva cultivates "paramita" to become a Buddha, what he is doing is establishing a very strong "kamma bïja" over innumerable lives. But at some point that "kamma bïja" gets fully established. At that point, the Bodhisattva gets "niyata vivarana" (confirmation of attaining the Buddhahood or "Buddha bhava") from a Buddha at that time.

The above concepts are looked at differently in, "Memory, Brain, Mind, Nāma Loka, Kamma Bhava, Kamma Vipāka." Of course, they are consistent!

In the next post, we will discuss how different types of "bhava" are fueled by our actions: "Gati and Bhava Many Varieties",

### 3.5.2 Gati and Bhava - Many Varieties

Revised February 27, 2019; July 16, 2022; September 10, 2002 (\#11)
Humans have many gati (gathi) or character qualities. These character qualities lead to one's future existence (bhava). It is that important.

1. We see that there are three major "bhava" or existence corresponding to the three major levels of existence that the 31 realms can be divided into: kāma bhava, rūpa bhava, and arūpa bhava.

- Each can now be subdivided into the 31 realms; see " 31 Realms of Existence."
- These living beings with kāma bhava live in kāma loka: four apāy $\bar{a}$, one human, and six deva realms. Those with rūpa bhava live in rūpa loka made of 16 rūpāvacara brahma realms. Those with arūpa bhava live in the four arūpāvacara brahma realms in the arūpa loka.

2. The following chart shows the division of the 11 k $\bar{a} m a$ loka realms into the four $a p \bar{a} y \bar{a}$, the human realm, and six deva realms.

3. Ultimately there are infinite number of "bhava" according to one's "gathi".
4. Within each bhava, there are numerous kamma beeja (seeds). Within "unhealthy bhava" there may be a kamma beeja for cancer, back pain, etc.
5. Same person may have different bhava (e.g., rich/poor) at different times.

Click to open and print the above chart: "WebLink: PDF Download: Bhava, Gati, Kamma Bija Chart."

- The human realm (or bhava) can now be subdivided into an infinite number of smaller subdivisions, corresponding to the vast number of varieties that "human gati" can give rise to: healthy/unhealthy, rich/poor, happy/angry, etc. as shown in the chart. Now we are getting into personal gati. We inherit most major ones (rich/poor, healthy/unhealthy, etc.) from the kamma $b \vec{y} a$ responsible for this birth.

3. Most human activities are associated with the enjoyment of sensual pleasures in the kāma loka. Instead of enjoying jhānic pleasures like a few of us (see below), most of us normally enjoy sensual pleasures associated with the five physical senses.

- We like to see eye-pleasing views, hear ear-pleasing sounds, taste tongue-pleasing flavors, smell nosepleasing odors, and touch body-pleasing objects.
- All five sense faculties are there only in the kāma loka.
- Rūpa loka Brahmā do not have noses or tongues, and in arūpa loka there is only the mind.

4. When we are unable to satisfy some sense desires, we as humans tend to do immoral things to fulfill such sense desires; these are the apuñ̃̄ābhisañkhāra associated with strong "kamma patha" that will generate "bad kamma bīja" to bring about bad consequences or vipāka that could lead to rebirth in the lowest four realms of kāma loka; see the previous post, "Namagotta, Bhava, Kamma Bija, and Mano Loka (Mind Plane)."

- For example, a married man, not satisfied with sex with his wife, may have sex with another woman or, even worse, with a child. His tendency to do that may even come from previous lives, or he may have slowly built up that "gati" over time, increasingly engaging in sexual activities outside the marriage. Either way, such acts are done by animals; they engage in sex without discrimination. Thus such activities will generate kamma bïja (or kamma bija) in the animal bhava; see the above chart.
- Or, one may be engaging in fishing or hunting both for the pleasure of it or even to make a living. Either way, it is an "animal gati"; animals kill for food. Thus one is building up kamma seeds in animal bhava.

5. If one is greedy, one may build up kamma bīja appropriate for "hungry ghosts" in the peta loka. If one is lazy and depends on others for their livelihood, one may build up kamma seeds in the asura bhava; see the chart. We can thus think about how the desire for sense pleasures can lead to the generation of "bad kamma $b \vec{j} a$ " in three of the four lowest realms.

- "Bad kamma bīja" in the lowest realm of niraya (hell) are generated by strong hate or $v y \bar{a} p \bar{a} d a$. As we have discussed, attachment to sense pleasures (greed) can turn to hate when someone else gets in the way. Most heinous crimes, including killing other humans, are done with a such strong hate.
- As one follows the Path, one will gradually lose an animal, peta, asura, and niraya gati, and one day will attain the Sotāpanna stage.
- Thus birth in the lowest realms of the kāma loka is not just due to kāma rāga, but strong versions of greed (lobha) and hate (dosa); see "Sorting out Some Key Pāli Terms (Tanhā, Lobha, Dosa, Moha, etc.)."

6. If you think about it for a minute, you will realize that most of the abhisañkhāra that we do, are done targeting one or more of those sense-pleasing activities (and they are normally not even immoral, i.e., but they are still apuñ̃̄äbhisañkhāra, but with less kammic energy). But these do not lead to births in the apāyā.

- Since we crave those things, we are attached to those things, and according to "pati+ichcha" (or bonding with liking or desire), leading to "sama + uppāda" (births accordingly).
- Thus the more we engage in these activities with zest (Arahant does some of these too, but without any cravings), we make kamma bīja in the kāma bhava; we keep strengthening "kāma gati."

7. On the other hand, some people get dissatisfied with the sensory pleasures and cultivate $j h \bar{a} n \bar{a}$ to enjoy "mind pleasures" either in the rūpa loka or arūpa loka.

- Thus, those who have kāma rāga will generate kāma bhava;
- Rūpa rāga and arūpa rāga (in \#2 above) lead respectively to rūpa bhava and arūpa bhava.
- Thus we can see how "bhava" are prepared and strengthened by habitually doing things one likes according to one's gati.
- Doing things involve kāya sañkhāra; speaking and thinking about them involve vacī sañkhāra. This is why sañkhāra lead to a "defiled mindset" or viññāna, which in turn leads to the corresponding bhava via those steps in Paticca Samuppāda.

8. Thus, "bhava" is an energy that we build up ourselves through our actions. Even if someone does not like to be born a dog, if one keeps doing things normally done by dogs, then one is preparing bhava to be born in the "dog bhava."

- One time I heard over the radio on the news that a person was arrested for engaging in sex with a female dog. Even though he was still in the human realm, he got "born" in the "dog bhava" for a while. Since he is willingly does that, he will likely be born a dog at death. This is a good example for both "pavutti kamma bhava" and "uppatti kamma bhava."
- This is also a good example of how one can become morally blind (kāmacchanda nīvaraṇa) when greed or lust rises to a high level.

9. One thing that should have become clear is that even if we do not do any immoral deeds, we are bound to be reborn in the k $\bar{a} m a$ loka (sense realms of the four apa$y \bar{a}$ and the human and Deva realms) as long as we crave sense pleasures. But such sensual cravings, by themselves, do not lead to birth in the ap $\bar{a} y \bar{a}$; birth in the apāyā is due to apuññābhisañkhāra or immoral sañkhāra (see \#5 above).

- As long as we like sense pleasures (and do not realize the dangers in them), we will have "kāma gati," and thus we will have "kāma bhava," i.e., we will keep generating both good and bad kamma bïja that belong to the kāma bhava.
- So, what are the dangers of remaining in kāma loka? Even though we may not do immoral deeds in this birth (because of our circumstances of being born in a good family, good country, etc.), we are bound to be reborn in a bad environment where we may have to do immoral deeds to survive. Then we will make kamma bīja suitable for rebirth in the $a p \bar{a} y \bar{a}$.
- We all likely already have such bad kamma bïja, because we have no idea what kind of deeds we have done in our past lives.

10. The mundane way to escape from the $k \bar{a} m a \operatorname{loka}$ is to cultivate anāriya jhānā (either rūpa jhānā or arūpa jhānā), and seek rebirth in rūpa or arūpa loka. But the problem is even then we will not be "really free" from rebirth in the kāma loka in the future. This is because after the kammic energy of that rūpa bhava or arūpa bhava is worn out, that anāriya person will be reborn in kāma loka again.

- This is why the Buddha admonished the bhikkhus to strive hard to attain at least the Sotāpanna stage of Nibbāna. He said if we knew the dangers of rebirth in the kāma loka, we would make haste like a person who will try to find a way to put out a fire that is engulfing oneself.
- Some people think these are depressing thoughts. But the facts cannot be avoided by not thinking about them. When one realizes the true nature of this world and makes some progress to be free from that predicament, one will start feeling relieved and happy; this is the nirāmisa sukha of Nibbāna.

11. Generally, as we have referred to before, "bhava" means existence somewhere in "this world." It is even better to say that "bhava" means the "potential for existence" somewhere "in this world of 31 realms."

- When someone cultivates "rūpa loka" jhānā, one generates a kammic energy in a kamma bïja that can lead to "existence in the rūpa loka." That means, even while in the human realm, he/she can get into a $j h a \overline{n a}$ and "effectively live in the rūpa loka," because that is what a being (a Brahma) in the rūpa loka experiences; this is called "pavutti kamma bhava" (NOT "kāma bhava," which we will discuss below).
- Furthermore, the more one practices that jhāna, the one makes that kamma bīja strong, and when one dies, one will be born in that rūpa loka, because that kamma bïja will be the one he/she will "upādāna" or grasp at the moment of death; this is "uppatti kamma bhava." Note: If one loses the ability to get into (anāriya) jhāna before death, they will not be grasping a Brahma birth. That happened to Devadatta.
- Thus, that kamma bīja is said to be in "rūpa loka bhava."

12. Similarly, another person practicing arūpa jhānā will be cultivating a kamma bīja in "arūpa loka bhava." Furthermore, he/she is likely to display qualities or "gati" of an "arūpa Brahma" even while leading a human life.

- Therefore, when one has a certain bhava, one has the potential to be born in that bhava for a short time during the current life (called pavutti kamma bhava) or to be born in that realm at death (uppatti kamma bhava).

13. The strength of a kamma bīja comes from the javana of the citta while one is engaging in the activity. The worst consequences and strong kamma bïja are generated by a mind that enjoys the evil act. This is why the "somanassa sahagata ditthi sampayutta citta" or the "thought (act) done with pleasure and with wrong views that arises automatically" is the strongest immoral citta. Such a thought arises automatically when one has "gati" compatible with such acts.

- For example, when one engages in unlawful and immoral sexual activities, the more one enjoys such acts, and "gets used to such activities" by building up that habit or "gati." The likelihood of such a thought arising automatically will be higher. Then one will have higher and higher levels of kāmacchanda (one of the five $n \bar{v} v a r a n a$ that covers the mind); thus, one will not think twice before committing such an act. The only way to break out of that vicious cycle is to contemplate the consequences (possible rebirth in the animal or worse realms) and commit to stopping such activities.
- The danger in building up bad habits (gati) is that one could progressively get into worse habits. A teenager who starts drinking could start using drugs; that could lead to hanging out with even worse friends and getting into drug dealing or even killings. As we saw in the previous post, "Dhammo ha ve rakkati dhammacāri" or "Dhamma will guide one in the direction of the type of dhamma one associates with" can work both ways, moral or immoral.

14. To break away from bad gati, one needs to decide not only to stop such bad activities but also to build up the opposite good gati, and start heading in the right direction. We must follow the mundane Eightfold Path and Noble Eightfold Path in that sequence; see "Buddha Dhamma - In a Chart."

- Once firmly on the mundane eightfold path, the next steps are to do the correct $\bar{A} n \bar{a} p a \bar{n} a \quad b h \bar{a} v a n a \bar{a}$ (" $\underline{6}$. Ānāpānasati Bhāvanā (Introduction)") and the Satipatṭhāna bhāvana ("Mahā Satipatthāna Sutta").

15. Also, it is impossible to grasp all this with a mind that is not purified. As I emphasized many times, what matters in making progress is not the "book knowledge" but cleansing the mind and grasping the key Dhamma concepts.

- No matter how intelligent or educated, any person cannot grasp the dangers of the rebirth process UNTIL the mind is cleansed of defilements to a certain extent by both staying away from highly immoral acts AND learning Dhamma.

16. Some people worry about whether they can get rid of certain bad habits they have. They just try to suppress them quickly by sheer willpower. That does not work most of the time. One has to be patient and follow the Path while learning and grasping the key Dhamma concepts.

- The Buddha gave the following example: When a farmer cultivates his plot, he just needs to make sure to provide enough water, get rid of weeds, fertilize, etc. There is no point in worrying about "when am I going to get the harvest?." The crop will grow in time and bring a good harvest IF the necessary work is done.
- In the same way, if one follows the Path by leading a moral life and learning Dhamma, one will be guided in the right direction. And just like the farmer could see that the crop is growing well, one will be able to experience the progress, but not the result in a single step.

17. In the previous post, "Namagotta, Bhava, Kamma Bīa, and Mano Loka (Mind Plane)," we discussed how both nāma gotta, and kamma büja (and bhava) are "located" in the mind plane. Nāma gotta are just records without any embedded energy; when one thinks, speaks, and bodily acts, a trace of those thoughts, speech, and actions are recorded (like a tape) in the mind plane.

- On the other hand, the kammic energies associated with those activities are also recorded in the mental plane as kamma bi $\bar{j} a$, and those have kammic energies associated with them. Those kamma bīj $\bar{a}$ are in different "bins" or "categories" called bhava.

### 3.5.3 Gati to Bhava to Jāti - Ours to Control

## Revised November 15, 2018

## Introduction

One's character (gati) determines one's future births. The ability to figure that out is called the "nāmarūpa paricceda ñāna."

1. We have discussed the background material in the previous two posts: 'Namagotta, Bhava, Kamma Bija, and Mano Loka (Mind Plane)" and "Gati and Bhava - Many Varieties." Now I want to bring it all together and show that "bhava" is actually something that we create AND maintain on our own with the way we think, speak, and act with our ingrained habits (gati).

- If you have not read the previous two posts, I highly encourage reading them. It is important to get the basic concepts right, and then to rehash them in different (and yet consistent!) ways, so that the ideas sink in.
- We will use those ideas and use the Paticca Samuppāda sequence to trace how we make "bhava" OURSELVES, which in turn give rise to $j \bar{a} t i$ (births) not only in future lives but also during this life.
- There is no one else, or even a "super being", that can either help or hurt you in the long run. One's destiny is up to oneself. The Buddha said, "attā hi attano nātho, ko hi nātho parosiyā" or "One is indeed one's own refuge; how can others be refuge to one?." Even the Buddha could only teach the way.

## What Are Gati?

2. "Gati" is a key word in Buddha Dhamma. There is no perfect English translation but habits, tendencies, and biases convey similar meaning. Gati has a deeper meaning because sometimes one's samsäric gati (habits and tendencies from previous lives) may lie dormant.

- For example, a teenager may not have a "habit" of drinking, but after a few drinks may get "hooked" easier than others if he had a corresponding gati from past lives.
- Also, I get messages from people who never even paid attention to "Buddhism" getting to samādhi (state of calmness) just reading these posts; that is also a "gati" from past lives. They are likely to have been exposed to Buddha Dhamma in previous lives.
- Most of the time we do inappropriate things (immoral abhisañkhāra) because we have a gati or tendency to do so. This is what is embedded in the "avijjā paccayā sañkhāra" step most of the time. Our avijja in such a case is not knowing that we have such gati or knowing about it but does not know why or how to get rid of it.
- As I pointed out in "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa," "avijjā paccayā sañkhāra" is just a condensed or "uddesa" version. We need to analyze it ("niddesa" and "patiniddesa") to get the idea, depending on the context.

3. When we (repeatedly) do such abhisañkhāra (thoughts, speech, actions), we build-up a viññāna for it. For example, if someone likes to watch porn, the more one does it, the more that " $v i \tilde{n} \tilde{n} \bar{a} n a$ for watching porn" will grow. It will be in the subconscious ready to "pop up." In other words, that "gati" gets more established.

- Then comes "viññāna paccayā nāmarūpa," i.e., it becomes easier to think about clips from previous views or fantasize about them. Here nāmarūpa are the memories (mental pictures) of past activities or "blueprints" for future plans. It is important to realize that nāmarūpa for patisandhi viññāna will be somewhat different; see, "Akusala-Mula Paticca Samuppada."

4. Now the next step is hard to resist: "nāmarūpa paccayā saḷāyatana." Here salāyatana means not all six senses, but the appropriate one(s) for the activity. Here they are cakkayatana (based on the eye) and manayatana (mind).

- It is important to realize that "āyatana" does not mean the sense faculty like the eye; it is rather "using the sense faculty for this purpose", for doing abhisañkhāra (for watching porn and enjoying it, in this particular example). An Arahant has eyes and can see, but will not use them as "āyatana" to "acquire 'san'."
- Then comes, "salāyatana paccayā phasso." Here of course it is not just "phassa" but "samphassa," i.e., generate "san" (according to one's gati) in the process; see, "Difference between Phassa and Samphassa."
- Because it is not just "phassa" but "samphassa," then one generates feelings: "phassa paccayā vedanā." For example, an Arahant watching a porn movie will not generate any joyful feelings, because that would only involve "phassa" and NOT "samphassa."

5. Now comes the last few steps. Because of the sukha vedana $\bar{a}$ (in this particular example), one will get attached to it: "vedanā paccayā tanhhā"; see, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."

- And then, "taṇhā paccayā upādāna," i.e., one grasps whole-heartedly because one really enjoys it, and would like to do it again. "Upādāna" means one likes to keep it close.
- Thus one makes "bhava" for it; one has plans to do it again, and it is a "reality" or future existence at some point: "upādāna paccayā bhava."

## Connection Between Gati, Bhava, and Jäti

6. As we can see, all this is going in our minds. The bottom line is that we just keep thinking and doing things (also called cultivating sañkhāra) that we have become "attached to" or we have formed "gati" for. Each time we go through this series of steps we just make that "bhava" grow stronger.

- Then it becomes easier to be "born in that bhava," i.e. jāti (pronounced "jāti"). Most people think " $j a \bar{a} t i$ " means rebirth; but it is not restricted to rebirth.
- Just like one can be born in a certain realm (animal, human, etc) at death, one can be born in the "drunken state" when one has "bhava to get drunk." If one makes a "bhava" to watch porn, then each time one does it, it becomes easier the next time to be "born in that bhava," i.e., to watch again.
- And it is easy to extend this to any other misdeed. If one forms a habit to drink without control (i.e., "get drunk to the point that one cannot think clearly"), then each time one does it one makes that bhava stronger, if not controlled, one day one could be an alcoholic. And it does not stop in this life. If a strong bhava is formed it can affect future births. In a new birth, one is born to a mother (and to a lesser extent father) with similar gati. Thus an alcoholic in this life is LIKELY to be born to an alcoholic mother if the next birth is in the human realm.
- It must be pointed out that "hateful bhava" for certain things or even for a certain person, also can be carried from life-to-life. There are many mentions in the Tipitaka of how Devadatta clashed with the Buddha (or rather the Bodhisattva) in previous lives.
- One's physical body will change (most of the time drastically) from life-to-life, but one's gati, āsava, and bhava are carried from life-to-life; of course those keep changing all the time too, but significant changes happen when one is human with the most ability to change one's destiny.

7. Thus "bhava paccay $\bar{a} j \bar{a} t i$ " applies both in this life and also for future rebirths. This is the difference between "Idappaccayatā Paticca Samuppāda" and that for paṭisandhi to a new life: "Akusala-Mula Paticca Samuppāda."

- As explained in \#6 above, one's future births are due to one's gati. The realization that one's future births are determined by one's gati - and the ability to figure out the bhava and $j \bar{a} t i(j \bar{a} t h i)$ according one's gati - is called "nāmarūpa paricceda ñāna" or "nāmarūpa paricceda ñāna." This basically means "rūpa" are according "nama" (literally, one's body is according to one's thinking).

## What Are $\bar{A} \boldsymbol{s} a v \bar{a} \bar{s}$ (Cravings)?

8. To make the final connection to Nibbāna, we see that one's gati are intimately connected to one's $\bar{a} s a v \bar{a} s$ (cravings). Just like gati, $\bar{a} s a v \bar{a} s$ are deep-seated and ingrained in one's lifestream and most can be traced back numerous lives in the past; see, "Āsava, Anusaya, and Gati (Gathi)."

- While there can be an infinite number of gati, there are four basic categories of $\bar{a} s a v a \bar{s}: ~ d i t ̣ t h a \bar{s} a v a$, kāmāsava, bhavāsava, avijjāsava; see below.
- This logical connection is clearly shown in the Sammā Ditthi sutta. It was Ven. Sariputta who delivered that sutta after being asked by the Buddha to explain "Sammā Ditthi" to other bhikkhus on one occasion. He went through the steps of the Paticca Samuppäda backwards and eventually the
bhikkhus asked, "Is there a cause for $a v i j j \bar{a}$ ?." He explained that indeed $\bar{a} s a v a \bar{s}$ contribute to $a v i j j \bar{a}$, and vice versa.
- In fact, as we see in the Abhidhamma section, four of the eight "basic units of matter" in a suddhatthaka arise due to $a v i j j \bar{a}$ and the other four due to tanh $\bar{a}$ (which arise due to $\bar{a} s a v a$ ). Avijj $\bar{a}$ and taṇhā are called "bhava-mūla" for this reason.

9. One way to explain Nibbāna or "complete cooling down" is to say that it is attained by getting rid of all $\bar{a} s a v \bar{a} s$. When one follows the Noble Eightfold Path, "āsavakkhaya" is achieved in steps.

- At the Sotāpanna stage, the first component of āsava or diṭthāsava (craving for various ditṭhis or wrong worldviews) is removed. This all important component of ditthāsava is solely due to not knowing the true nature of this world of 31 realms: anicca, dukkha, anatta. Most people carry certain dittthis all their lives, most even coming from previous lives. The most prevalent ditthi is the belief that there is no rebirth process.
- When one truly comprehends that consequences of immoral acts can be much harsher than we normally believe (birth in the $a p \bar{a} y \bar{a}$ ), that itself removes the causes for rebirth in the apa$y \bar{a}$.

## Connection to the Four Stages of Nibbāna

10. A Sotāpanna would still have the other three āsavās: kāmāsava (craving for sense pleasures), bhavāsava (craving for living somewhere in the 31 realms), and avijjāsava (cravings due to not knowing anicca, dukkha, anatta fully).

- Kāmāsava is reduced at the Sakadāgāmi stage and is removed at the Anāgāmi stage.
- Bhavāsava and avijjāsava are removed only at the Arahanthood.
- Of course, all four āsavās keep getting reduced at each stage of Nibbāna. Thus a Sotāpanna, for example, would have reduced the other three $\bar{a} s a v a \bar{s}$ to some level.
- It is also clear that comprehension of anicca, dukkha, anatta gradually increases at each stage and is complete only at the Arahant stage.

11. It is nice to see the self-consistency, and the fact that one can analyze a given situation in different ways.

- One may have a Ph.D. or one may be able to recite the whole of the Tipiṭaka; yet one would not be even able to get to the Sotāpanna magga without comprehending anicca, dukkha, anatta to some level.
- Ditṭhāsava cannot be removed until one is well on the way on the mundane eightfold path, because one's mind needs to be cleared of the strongest defilements. As I keep saying, this is not about "book knowledge"; it is all about cleansing one's mind.
- Of course, ditthāsava gives rise to various gati, and thus removal of such gati is the key to attacking diṭthāsava. The foremost is the tendency to "cling to a certain belief' and not even willing to consider the counter arguments.
- If one has the ditṭhi that there is no rebirth, one needs to carefully examine the evidence for and against.
- Another is the refusal to believe anything "that cannot be proven" by a "scientific method." Thus, just over 400 years ago, people looked around and asked "where are those infinite number of universes and infinite number of living beings that the Buddha was talking about?." Even now, science is only aware of a minute fraction of our physical universe, not to mention pretty much nothing about the mind; see, "Dhamma and Science" for details.

12. The bottom line is that whether one will be a human, a deva or an animal in the next life will depend on what kind of gati we develop, and NOT what we wish/pray for. Furthermore, one can become a Sotāpanna in this very life by cultivating the "gati of a Sotāpanna" or "Ariya gati." The key is to develop Sammā Dittthi by learning and comprehending Dhamma (the correct world view).

Next, "Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka", ........

### 3.5.4 <br> Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka

There are many confusing terms like citta and mano which have been differently interpreted in different books. In order to clarify these concepts, I am writing a few posts in "Dhamma Concepts" section under "Mind and Consciousness" starting with: "1. Thoughts (Citta), Consciousness (Viññāna), and Mind (Hadaya Vatthu) - Introduction."

1. Think about a past event that is still vividly there in your mind. You can visualize the whole "event" just like watching a movie; you can recall what those people looked like, what they said, etc.

- Suppose a 40 -year old recalls an event where she was a 10 -year old playing with her mother. She will recall the event just as it happened 30 years ago: she was young and her mother was 30 years old; it took place in her parents' house which does not even exist now. But in the "playback" that exact same time sequence is played back with the 10 -year old playing with her 30 -year old mother in the same house that they lived in. It is not just a "summary" of what happened, rather an exact playback showing her young mother's features at that time, what she said, etc.
- Recently, it has been reported that some individuals have an astounding capability to instantly recall past events (during this life) in vivid detail; see, "Recent Evidence for Unbroken Memory Records (HSAM)."

2. Most scientists and philosophers believe that the memories are kept in the brain. Is this a realistic picture? They do not have any evidence to back this claim.

- How can all those details be "stored" in a biological membrane, ready to be retrieved at a moment's notice? No one has explained a plausible mechanism yet.

3. Whatever we do with body, speech, and mind, a "record" (nāma gotta) gets established ("bihiwelā pihitanava" in Sinhala) in the kamma bhava: In the word "bhava", "bha" means "appear and gets established"; thus the act we did, i.e., kamma, gets recorded in the kamma bhava exactly the same way it happened. We cannot "see" bhava but we can see the results of bhava as "jāti."

- Not only potent kamma, but ALL memories are stored intact in the nāma loka. Basically, the thought stream is recorded continuously like a movie recording and thus can be "played back"; see, "What Reincarnates? - Concept of a Lifestream."
- Thus while the "fruits of kamma" are embedded in kamma bīja (seeds) in the nāma loka as kamma bhava, the movie like sequence is recorded in the nāma loka as nāma gotta.
- Therefore, while kamma seeds in the kamma bhava can bring their results in the future, the nāma gotta are just records without substance: see, "Difference Between Dhamma and Sañkhāra (Sankhata)." Thus unlike anything else in this world (sañkhāra or sañkhata (sankata in Sinhala)), nāma gotta are PERMANENT.
- This is why the Buddha Gotama could recall the exact scene that happened billions of years ago, when he received the first confirmation ("niyata vivarana") of his future Buddhahood by the Buddha Deepankara. At that time he was an ascetic by the name of Sumedha and the Buddha Gotama described the whole event that took place in detail; see, WebLink: WIKI: Dīpankara Buddha.
- In the same way, the kamma bïja stored in the nāma loka are instantly activated when proper conditions are realized; see, "Anantara and Samanatara Paccaya." However, unlike nāma gotta, kamma seeds fade away with time unless brought to bear fruit under right conditions.

4. Thus, memories (whatever the portion that is remembered) are played back in a "movie-like" manner, like in a dream. It is like a segment of a "movie recording." It is not just a "gist" or a summary; we can recall the whole "sequence of events" like in a movie.

- This is why when someone describes an event by memory he/she always tends to tell the story sequentially: The person listening may not want to hear the whole story and could become impatient waiting for the narrator to "get to the point", but for the narrator recalling the event, it is easier to go sequentially as the event is "played back" in his/her mind.

5. We cannot say where that memory is "located", because they are not stored in the "physical space" or the "material world"; they are in the "nāma loka" or "mental world." In contrast what we experience through our five senses is the "rūpa loka" or the "material world" that consists of 31 realms.

- This is also why scientists will not be able to describe the mind in terms of matter; see, "The Double Slit Experiment - Correlation between Mind and Matter?." Mind and matter belong to two distinct domains.
- As I will clarify in detail in the future, this is related to the fact that there are six fundamental entities (six dhātus): pathavi (hardness), āpo (cohesiveness), tejo (vitality), vāyo (motion), ākāsa (space), and viññāna (consciousness). The viññāna dhātu is associated with the "nāma loka" and the other five dhātus are associated with the "rūpa loka" or the "material world." But we don't need to worry about that right now. You will see other pieces falling into place in a "big jigsaw puzzle" as all these seemingly unrelated aspects come together to form a cohesive, complete picture of the "wider world."
- This could be related to the possibility of higher "curled up" dimensions that is being discussed in String Theory in physics; see, "What Happens in Other Dimensions?."

6. We can normally access our own "information" from this life but some people, especially some young children, have the ability to recall nāma gotta from past lives. Those who have abhiññā powers can access such "information" or "nāma gotta" of other people as well; however, even they cannot read another's "thoughts" or "kamma bī̀a" or "kamma bhava."

- We can retrieve this memory by thinking about it. There is a mechanism for that memory to be retrieved; the mind initiates the process, but the brain acts as the "receiver" for the incoming information.
- When we think about something that happened in the past, the mind sends mind rays out and they bounce off that specific target in the "nama loka" and the memory is reflected back. That retrieval process does not change the memory record, and the record stays intact. Thus one can go back and recall it again.
- When the retrieved information comes back, that signal is processed by the brain. Our whole body is prepared by the kamma seed that led to this human existence to limit/facilitate certain capabilities; thus what we can actually remember depends on the status of our brain. Our human bodies are generally setup (by kamma vipāka) to be able to retrieve only the strong memories from the early days of this life and cannot access memories of previous lives. But few people can, and so can some children. Furthermore, if the relevant parts of the brain gets damaged, then the retrieval capability may be lost.
- Some beings in preta loka can remember past lives to impart more suffering on them. They can remember the bad deeds done by them that led to the birth in the preta world, and how long they will have to suffer to "pay back the debt."

7. How much of that memory one actually recalls depends on two things: the health of the brain and the purity of the mind.

- If the brain is not functioning well, only bits and pieces of the memory will be actually experienced. When people get old, the brain's efficiency goes down and thus memory will not work well. The brain is like a playback device and if it is defective, the display will be blurry or at worst no display will result.

8. Secondly, even a person with a healthy brain, may not be able to recall memories if the mind is "covered" by the five hindrances (panca nivarana); see, "Key to Calming the Mind - The Five Hindrances."

- When there is kāmachanda or vyāpāda, the mind is too much focused on those objects of thought (ārammana). When there is thina middha, the mind is now "stuck" lazily at something (sleepy or just distracted), and will not retrieve the memory. With uddhacca kukkucca, the mind is normally
"intoxicated" with power, money, beauty etc is stuck at a "low level." With vicikicch $\bar{a}$ (which is due to micch $\bar{a}$ diṭthi or not knowing the true characteristics anicca, dukkha, anatta), one engages in inappropriate acts and thus the mind is not "sharp."
- Thus, any, some, or all of these five factors can affect the memory of even a person with a healthy brain. When we purify our minds of the pañca nivvaraṇa, its ability to pinpoint a given "memory location" is improved.
- Furthermore, when the mind is purified, that can make one's brain to function better by changing the conditions for better kamma vipāka to come to fruition; see, "Anantara and Samanatara Paccaya." This "mind effect" on the brain and the body in general is being re-discovered by scientists; see, for example, 'The Biology of Belief' by Bruce H. Lipton.

9. Most scientists and philosophers believe that our memories are stored in our brains. There are key problems with that assumption:

- If that is the case, then the "state of the mind" should not be a factor in recalling a memory, because then it is like retrieving a sound track from a disc; the playback should be good as long as the "playing device" (i.e., the brain) is in good condition.
- It is astounding how much one can recall from the memory. And it comes out like a video clip; we can visualize and even recall the conversations that took place a long time ago in case of poignant memories. Can all those details be "stored" in a biological membrane?
- Even if it is possible to encode all that information (exact features of the 10 -year old child and her 30year old mother, what they spoke at that time in the same tone, etc. in the hypothetical example of \#1 above), how can it be recalled instantaneously?

10. Here is an article which discusses these unresolved scientific issues: WebLink: VIEWZONE: Are your memories really in your brain?

- Here is a good site if you need to dig in deeper: WebLink: HUMAN-MEMORY: MEMORY STORAGE

### 3.5.5 Bhava and Jāti - States of Existence and Births Therein

Revised September 7, 2016; Revised May 7, 2017; October 25, 2018; January 18, 2020; May 28, 2022 (added \#13); re-written August 12, 2022

Bhava and jāti are related but are different concepts. Bhava is of two types: kamma bhava and uppatti bhava. There can be many $j \bar{a} t i$ (births) within a uppatti bhava.

## Introduction

1. In both Pāli and Sinhala, $j \bar{a} t i$ means birth. Bhava means "ชిద๑わ ออ" (tibena bava) in Sinhala, or "existence."

- There are two types of bhava: kamma bhava and uppatti bhava. Kamma bhava is "potential for existence." Uppatti bhava is one's current existence.
- Various types of kamma bhava are created via akusala-mūla Paṭicca samuppāda. At the patisandhi moment of grasping a new existence, one of those kamma bhava becomes uppatti bhava.
- When one gets a "human existence" or a human bhava, that can last thousands of years. Within that uppatti bhava, one can be born (jäti) with a physical human body many times.
- By the way, $j \bar{a} t i$ is pronounced " $\bar{a} \bar{t} h i$ " with "th" sound as in "three." There is a universally-adopted convention of writing Pāli words with English letters to keep the sentences short; see Ref. 1.
- First, let us clarify "bhava."

## What Is Kamma Bhava?

2. Here, "bha" means "establish." When we act with a defiled mind, we create kammic energies that lead to future existence (bhava.) That simple statement embeds the essence of Buddha Dhamma: "Manopubbangamā Dhammā.."

- When we have strong feelings about something, we generate deep desires/cravings. Those are potent abhisañkhāra; they create kammic energies or kamma bīja (seeds.) Those are different names for "kamma bhava."
- For example, craving tasty food may lead to immoral thoughts/actions. If one does not have enough money, one may resort to stealing, possibly leading to violence. Such immoral actions lead to the generation of kamma bīja (or kamma bhava.)
- Therefore, the generation of kamma bïja (or kamma bhava) happens based on our gati (habits/character). Each person likes certain kinds of experiences/activities.

## Kamma Bīja, Kamma Bhava, and Gati

3. When one develops a habit (gati) by repeatedly doing related things, that bhava or the kamma bïja gets stronger. It leads to the creation of kamma bhava via "taṇhā paccayā upādāna, upādāna paccayā bhava."

- Thus, one who started stealing may cultivate a habit of doing it. Each time they steal, kammic energy is added to that associated kamma bïja or kamma bhava.
- An innocent child may not have any desire to drink alcohol. But growing into a teenager, he may start drinking under the influence of friends. If he starts liking that experience, he will repeatedly engage in drinking and will start building up a "drunkard bhava." That is a "kamma bhava" built up with a new habit (gati) of drinking.

## Kamma Bhava Becomes Uppatti Bhava

4. All kammic energies accumulate in the kamma bhava. Some kamma bhava can get strong enough to become "uppatti bhava," leading to rebirth in a "good existence" (Deva, Brahma) or a "bad existence" (animal, peta, etc.).

- At the cuti-patisandhi moment (grasping a new bhava), the strongest kamma bhava available becomes "uppatti bhava," leading to the new existence.
- At the cuti moment, one will be presented with an ārammana compatible with that bhava. For example, suppose one had killed an enemy and thus created a kamma bhava suitable to bring a niraya birth. Then at the cuti (dying) moment, one may visualize that same past scenario where the enemy was confronted.
- If one attaches willingly to that $\bar{a} r a m m a n ̣ a ~(i . e ., ~ u p a ̄ d a ̄ n a), ~ a ~ s i m i l a r ~ n i r a y a ~ b h a v a ~ w i l l ~ r e s u l t: ~ i . e ., ~$ pati+ichcha leading to sama+uppāda or Paṭicca Samuppāda. That is the "upādāna paccayā bhava" step in grasping a new uppatti bhava. However, if that person had attained a magga phala, they would not have upād̄̄na for such an $\bar{a} r a m m a n ̣ a$. That is why anyone above the Sotāpanna Anugāmi will not be reborn in an apāya.

5. Note that the "upādāna paccayā bhava" step comes BOTH in creating a kamma bhava (in \#3 above) and grasping one of those as uppatti bhava (in \#4 above.) Let us consider a few examples.

- One who enjoys torturing animals/humans is creating a kamma bhava with those actions. They may be born in niraya (hell), where constant torture occurs via grasping that as a uppatti bhava at a patisandhi
moment. That is an example of kamma bhava contributing to a uppatti bhava. In that case, he may be born in the niraya repeatedly (many $j \bar{a} t i$ ) until the kammic energy for that niraya bhava wears out.
- An alcoholic contributes to the kamma bhava by habitually drinking and acting like an animal. That can lead to creating a kamma bhava compatible with animal existence. Thus, they could grasp that kammic energy as a uppatti bhava in a future patisandhi moment and be born an animal. For example, one who behaves like a dog after getting drunk (displaying inappropriate sexual acts, threatening others, etc.) may cultivate the disgraceful qualities of a dog and may acquire a "dog bhava."

## Good Habits Lead to Good Bhava

6. All the above is valid for "good bhava" or "good habits," too.

- Thus, one with the compassionate qualities of a Deva (i.e., deva bhava) could acquire "Deva bhava" and be born a deva. One who has cultivated jhāna may acquire "Brahma bhava" and be born a Brahma.
- (Note that Deva and Brahma bhava each have only one jāti. Once born in the final form with an opapātika birth, they live until the end of bhava. There is no "gandhabba state" as is the case for humans and animals.)
- It is the universal principle of "pati+ichcha sama+uppāda" working to yield an existence similar to the actions one willingly engages in. See "Paticca Samuppāda."

7. To cultivate a good or bad bhava, one must frequently engage in corresponding activities.

- It is easy to see from the above discussion why it is essential to instill good habits in children and break any bad habits as they grow. It is much easier to stop forming "bad" bhava or habits (gati) in the early stages; once a habit/addiction takes hold, it becomes harder to lose.
- Also, see "How Character (Gati) Leads to Bhava and Jāti."
- Modern science agrees with that too. According to modern science, repeated actions will strengthen the neural connections in the brain for that habit; see, "How Habits are Formed and Broken - A Scientific View").

## Human Bhava Is Rare - But Many Human Jāti (Births) Occur Within a Human Bhava

8. Human bhava is hard to get; see "How the Buddha Described the Chance of Rebirth in the Human Realm."

- However, a human bhava or a human existence can last thousands of years. A human birth ( $j \bar{a} t i)$ with a human body lasts only about 100 years. Therefore, within a human bhava, there can be MANY births with a human body or $j \bar{a} t i$.
- In between births with physical human bodies, a human lives as a gandhabba (with just the mental body) in the nether world or para loka. This para loka co-exists with our human loka, but we cannot see those gandhabbā without physical bodies. For details, see "Gandhabba Sensing the World - With and Without a Physical Body," "Buddhist Explanations of Conception, Abortion, and Contraception," and "Cloning and Gandhabba."
- A good visualization of gandhabba is in "Ghost 1990 Movie - Good Depiction of Gandhabba Concept." It is an "energy field" that we cannot see.

9. In rebirth stories, there is always a "time gap" between successive human births (jāti). They separate by many years or at least a few years. Between those successive lives, that lifestream lives as a gandhabba, without a physical body.

- In most rebirth stories, the previous human life was terminated unexpectedly, like in an accident or a killing. Therefore, the kammic energy for human bhava may not be exhausted. In that case, the gandhabba just came out of the dead body and waited for another womb to enter.
- The Buddha has described that it is extremely difficult to get a human existence (bhava); see "How the Buddha Described the Chance of Rebirth in the Human Realm." If "bhava" means "birth," then all those rebirth stories cannot be true.

## A Sotāpanna May Have Many Jāti, But Only Seven Bhava

10. As a Noble Person moves up in magga phala, less kamma bhava (i.e., accumulated kammic energy) will be able to contribute to uppatti bhava. There will be no uppatti bhava at the Arahant stage since an Arahant will not have any more uppatti. Even though the kamma bhava for that Arahant will still be there, it will not become a uppatti bhava.

- From the WebLink: suttacentral: Ratana Sutta (KN Kp 6); "..Na te bhavam aț̣hamamādiyanti" means, "(A Sotāpanna) will not be born in an eighth bhava." But there could be many rebirths within those seven bhava.
- For example, King Bimbisāra, a Sotāpanna, died and had 14 rebirths; see "WebLink: suttacentral: Janavasabha Sutta (DN 18)."

## A Physical Human Body Versus Manomaya Kāya (Gandhabba)

11. According to the Tipiṭaka, a full-pledged human appears via a series of steps: "jāti sañjāti okkanti abhinibbatti khandhānaṃ pātubhāvo āyatanānam paṭiläbho." See "WebLink: suttacentral: Vibhañga Sutta (SN 12.2)" and "Manomaya Kaya (Gandhabba) and the Physical Body." [sañjāti : [f.] birth; outcome; origin.]

- Here, $j \bar{a} t i$ is the patisandhi moment, when the kammaja kāya (with hadaya vatthu and pasāda rūpa) for the new bhava appears in a thought-moment. Moments later, that kammaja kaya is augmented by the cittaja kāya, meaning citta will start arising. Then kammaja kāya and cittaja kāya start generating suddhätthaka-size matter giving rise to the utuja kāya (aura,) and a manomaya kāya (gandhabba) results. That is the sañjāti moment.
- When that gandhabba goes into a suitable womb, that is the okkanti moment. In many sutta, that is described as the "viñ̃ñạa of a boy or a girl descending into a womb." Note that by the time descending into a womb, the sex is already determined.
- The following steps describe the evolvement of the human baby inside the womb to end up with the fullyformed six ayatana.
- There is no place in the Tipitaka that says patisandhi happens in a womb. Rather it says, "... gandhabba okkanti hoti." That may happen even after the birth of the gandhabba.

## Cuti and Maraṇa - Related to Bhava and Jāti

## August 17, 2022

Cuti is the end of a uppatti bhava, and marana is the end of a $j \bar{a} t i$ within a uppatti bhava. There can be many $j \bar{a} t i s$ (births) within a uppatti bhava for humans and animals.

## Introduction

1. There can be many jātis within a uppatti bhava. See "Bhava and Jāti - States of Existence and Births Therein." That holds particularly for the human and animal realms. There usually is one $j \bar{a} t i$ within a uppatti bhava in the Deva and Brahma realms.

- A uppatti bhava starts at a patisandhi moment and ends at a cuti moment. For example, if a Deva dies and gets a "human existence (bhava)," the cuti of that Deva bhava is immediately followed by a patisandhi to grasp the human bhava.
- That human uppatti bhava can last many thousands of years. At the moment of patiisandhi to the human bhava, only a manomaya kāya (human gandhabba) is born. That human gandhabba will get into many wombs during that time and will be born with physical human bodies many times. A human baby's birth ( $j \bar{a} t i$ ) ends in physical death (marana) within about 100 years.
- At the end of the human bhava, that human gandhabba's life will end (cuti), and patisandhi to a new existence will occur unless that lifestream had attained the Arahant stage. Marana (death of a physical body) usually does not end the human bhava. See Ref. 1 for details.
- If the above is not clear, please ask questions at the forum. With that summary, we can now discuss the details.

## Bhava and Gati

2. The Buddha divided all existences into five main categories based on predominant gati. The "WebLink: suttacentral: Gati Sutta (AN 9.68)" lists those five main categories: Hell (niraya), the animal realm (tiracchāna,) the hungry ghost realm (peta,) humans (manussa,) and Deva. Many suttas (including Dhammacakkappavattana Sutta) sometimes lump the Devās in the six Deva realms and Brahmās in 20 Brahma realms into one category as Devās.

- When a lifestream is in a specific existence, it will predominantly have the gati associated with that realm. While in Deva realms, that living being mainly displays "Deva gati" per their particular realm. For example, Devās in the lower six realms still crave sensual pleasures, i.e., kāma rāga. Brahmās in the higher 20 realms don't have cravings for sensual pleasures. But neither will engage in akusala kamma during their life as Deva/Brahma.
- While in a niraya realm, a lifestream will have the gati of a "hell being." During such an existence, no kind thoughts arise, for example, and mostly a painful and angry mindset will persist. This bhava has dosa (extreme anger/hate) as the base; of course, moha is there too.
- In a hungry ghost (peta) realm, the mindset/gati will be that of one constantly in hunger pains. This gati is based on lobha (extreme greed) and moha.
- The animal realm has "all three defiled gati," i.e., lobha, dosa, and moha.

3. Human (manussa) existence is unique in many ways.

- A human can cultivate gati corresponding to any of the 31 realms, not just the primary five categories mentioned in the Gati Sutta.
- We can see some humans who behave like Devās: Some engage in giving, helping others, etc., and cultivate gati to be born in the six Deva realms. Others develop (anāriyalAriya) jhāna corresponding to various Brahma realms and will be reborn in the corresponding Brahma realms.
- Some humans cultivate "apāyagāmi gati," which leads to births in the niraya, peta, asura, and animal realms. Those who develop extreme anger/hate (and thus kill, rape, and abuse others) will be born in the niraya (hell.) Some cultivate extreme greedy gati (and steal, take bribes, etc.) and become destined to the peta realms. An animal bhava has developed with both greed and hate. An animal bhava has a mixture of both. Since ignorance is also there, they will have all three "san" (that is the root of the
word "tirisan = three sans" for an animal in Sinhala.) See \#3 of "Lobha, Dosa, Moha versus Rāga, Patigha, Avijjā."
- Humans can, of course, cultivate "human gati" that will allow another human bhava in the future. "Human gati" is similar to the gati of Devās in the lower six realms but with an enhanced craving for sensory pleasures.

## Connection to Aggañ̃̃a Sutta

4. To make some connections, let us digress to the introductory post "Buddhism and Evolution - Aggañña Sutta (DN 27)".

Per "WebLink: suttacentral: Aggañña Sutta (DN 27), at the beginning of a "new Earth" (after a "loka vināsaya" or the "destruction of the existing Earth"), only the realms above the Ābhassara Brahma realm are populated. Destruction of Earth (and Sun) would have led to the destruction of lower realms. As explained in that post, all sentient beings would have moved up to or above the $\bar{A} b h a s s a r a$ Brahma realm by the time of "loka vināsaya."

- When a new Earth forms after billions of years, an uncountable number of $\bar{A} b h a s s a r a ~ B r a h m a \bar{s}$ would be at the end of their lifetimes, and they will first be reborn in the human realm with "Brahma-like" subtle bodies. Then over millions of years, those "Brahma-like" bodies will evolve into the denser physical bodies we have today.
- After millions of years (especially after evolving into denser bodies,) some will start engaging in akusala kamma when the "old habits (gati)" return. They had been hiding as "anusaya." First, some will be reborn in the animal realm; then, the other three lower realms will start populating as more humans leave the human bhava and "proceed downward." Before the arrival of the animals, plant life will gradually come into existence. See Ref. 2 for more details on gati and anusaya.

5. The point is that the human realm is the "base station." This is where the seeds (kamma bija/kamma bhava) to be born in all other realms are cultivated.

- That point can be clearly illustrated with an Abhidhamma analysis, which I hope to do. But the following is a summary.
- Only a human mind can generate all 89 (121) types of citta. On the other hand, arupāvacara Brahmās mainly generate only eight types of citta. The human realm is like a training school. Those humans taking a "downward path" by engaging in akusala kamma end up in apāyās; those who cultivate arupāvacara $j h a ̄ n a ̄ s$ are born in an arupāvacara Brahma realm, etc.
- Those uncountable number of "Brahma-like" humans at the beginning of a "new Earth" will slowly start populating all other realms, mainly the lower realms. Of course, some will even move up to realms higher than the $\bar{A} b h a s s a r a ~ B r a h m a ~ r e a l m . ~$

6. Almost all the living beings in the apāyās now had been "Brahma-like" humans at the beginning of the mahā kappa, i.e., at the beginning of this Earth when it was first formed.

- It is worthwhile to contemplate that. There are less than eight billion people on Earth right now. But in the backyard of a house, there can be more small insects, ants, worms, and other tiny creatures. Scientists estimate that there is one quadrillion (one million billion) ants on earth. There are even more living beings in the oceans compared to the land.
- Therefore, when the Earth formed several billion years ago, there must have been an accountable number of humans with "Brahma-like" subtle bodies. Most of them took "downward paths." Of course, we can see only the animals, not those born in the other realms in apāya.
- Thus, Buddha's above explanation is exactly the opposite of the currently-accepted Darwin's theory of evolution. However, the theory of evolution will be proven to be incorrect in the future.
- Of course, science's position of the whole universe coming to existence in a "Big Bang" is also not consistent with Buddha Dhamma, as I discussed in "Buddhism and Evolution - Aggañña Sutta (DN 27)." So far, several of the Buddha's original teachings - which were thought to be incorrect by science a few hundred years ago - have now been confirmed by science. See Ref. 3.

## Series of "Cuti Suttä"

7. It is informative to look at a series of suttas on what happens at the end of a human bhava, i.t, the "cuti moment" of leaving the human bhava. Remember that (per \#1 above) grasping of a new existence happens only at the "cuti moment" at the end of the human bhava, not at "marana" or the death of a physical human body.

- There is a sutta that says (upon exiting any existence) that getting a human existence is very rare; see "WebLink: suttacentral: Nakhasikha Sutta (SN 20.2)."
- Then there are a series of suttas specific to different types of originating and destination bhava.

8. The series of specific suttas start with the "WebLink: suttacentral: Manussacutinirava Sutta (SN 56. 102)" which says, ".those who die as humans (not the physical death, but cuti) and are reborn as humans are few, while those who die as humans and are reborn in hell are many ...."

- Then the following suttas say that those who die as humans and are reborn in the animal and hungry ghost realms are many: "WebLink: suttacentral: Manussacutitiracchāna Sutta (SN 56. 103)," and "WebLink: suttacentral: Manussacutipettivisava Sutta (SN 56. 104)."
- The "WebLink: suttacentral: Manussacutidevanirayādi Sutta (SN 56. 105-107)" says those who die as humans and are reborn in Deva realms are few, but born in niraya are many. Then the "WebLink: suttacentral: Devacutinirajādi Sutta (SN 56. 108-110)" states, "who die as Devās and are reborn as Devās are few, while those who die as Devās and are reborn in hell, animal realm, or the hungryghost realm are many."
- Note that "Manussacutiniraya Sutta" is "Manussa cuti niraya Sutta" and indicates a human grasping a niraya bhava at the cuti moment. The other suttas have similar names.
- Many such combinations are shown in the rest of the series. It is a good idea to click through the rest of the suttas.

## Summary

9. Cuti is the end of a uppatti bhava, and marana is the end of a $j \bar{a} t i$ within a uppatti bhava. There can be many $j \bar{a} t i s$ (births) within a uppatti bhava for humans and animals.

- Devās and Brahmās have only a single $j \bar{a} t i$ (birth) to that uppatti bhava.
- All uppatti bhava end at the cuti moment.
- It is only for humans (and animals) that "marana" takes place at the death of a physical body; that is not the end end of the human (animal) bhava. On the other hand, Devās and Brahmās are born ( $j \bar{a} t i)$ at patisandhi and reach the end of that existence at the cuti moment.
- It is extremely difficult to get a uppatti bhava at or above human bhava. Most cuti-patisandhi transitions grasp a bhava in the four lowest realms or the apāyās. It is critical to keep that in mind.

### 3.5.7 Anusaya, Gati, Bhava - Connection to Manomaya Kāya (Gandhabba)

August 21, 2022; September 12, 2002 (\#6)
The concepts of anusaya, gati, and bhava are associated with a mind, i.e., manomaya kāyalgandhabba of a lifestream.

## Kammic Energy Creates Hadaya Vatthu (Seat of Consciousness)

1. Our views and perceptions about this world are highly influenced by modern science, which has made significant progress within the past hundred years. However, that progress is limited to studying the inert (lifeless) matter.

- Modern science's materialistic worldview cannot explain the origin of consciousness. Some scientists have proposed that consciousness arises in the brain, but there is no proof for that claim. And there will NEVER be such proof.
- Consciousness arises in hadaya vatthu created by kammic energy. Kammic energy creates hadaya vatthu, the "seat of consciousness" where consciousness or citta arises.
- The Buddha declared that the "mind is at the forefront of everything in this world" or "Manopubbangamā Dhammā..."

## What Creates Kammic Energy?

2. Conversely, hadaya vatthu creates kammic energy! A specific type of cittā, javana cittā (that arises in hadaya vatthu,) creates kammic energy.

- It is a cyclical process: Kammic energy creates hadaya vatthu, and hadaya vatthu creates kammic energy! That cycle is broken only at Nibbāna.
- That is why there is no beginning to life per the Buddha. Citta creates kammic energy, which, in turn, creates future hadaya vatthu where cittā arise.
- I have a detailed analysis of it in the "Origin of Life" series.

## Cyclical Process of Rebirth - Sainsāra

3. Let us do a quick summary. A hadaya vatthu created by kammic energy has a finite lifetime, that of a given existence (uppatti bhava.) Before that hadaya vatthu dies, it creates kammic energies (kamma bhava) that can power up more hadaya vatthus, corresponding to different types of bhava in the future.

- For example, a human has a hadaya vatthu (part of manomaya kāya) that will die after many thousands of years. But within that time, that human will generate kammic energy to "power up" many more hadaya vatthus corresponding to different realms. Unfortunately, most of them correspond to the four lowest realms. That is why only a few humans will get another human or higher bhava.
- Pațicca Samuppāda explains the creation of a manomaya kāyalgandhabba (with a hadaya vatthu) via the "bhava paccaya jāti" step in a process that starts with "avijjā paccaya sañkhāra."
- Read the two posts "Bhava and Jāti - States of Existence and Births Therein" and "Cuti and Marana Related to Bhava and Jāti"' before reading the rest of this post.

## No "Soul" - Concept of a Lifestream

4. The concept of a "lifestream" explains the difference between "a soul/ātman moving from life to life" and the Buddhist explanation of a life arising due to previous causes via Pațicca Samuppāda. See "What Reincarnates? - Concept of a Lifestream." Thus, a future life is not a "reincarnation" of an "unchanging essence" (soul/ätman) associated with the current life.

- Any life among the 31 realms of this world has the following essential elements (Ref. 1): a hadaya vatthu and a set of pasāda rūpa.
- Thoughts (citta) arise not in the brain but in the hadaya vatthu in the manomaya kāya (gandhabba.)
- The hadaya vatthu is essential. There can be no "lifestream" in the rebirth process without it. The hadaya vatthu (and any pasāda rūpa) are created ONLY by kammic energy. It is a natural process.
- When a manomaya kāya (with a hadaya vatthu and a set of pasāda rūpa) dies, a new one takes over at the cuti-patisandhi moment via the "upādāna paccayā bhavo" step in "Akusala-Mūla Upapatti Paticca Samuppāda."

## Manomaya Kāya Is Primary, Not the Physical Body

5. "WebLink: suttacentral: Dhammapada Verses 33-43" in the Citta Vagga provides some critical clues.

- Verse \#37 says, "The mind travels far, wandering alone; incorporeal (not composed of matter) it hides in a cave." That verse refers to the manomaya kāya, which can travel far at high-speed, as confirmed by many NDE accounts: "Near-Death Experiences (NDE): Brain Is Not the Mind." The "cave" (where it takes temporary shelter) is the physical body.
- Verse \#41 states: "All too soon this body will die; bereft of consciousness, tossed aside like a useless $\log$." Here it says that the physical body will be a useless log upon death. The English translation in the link is good, and reading that series of verses is a good idea.
- But the death of the physical body does not end the human bhava. The manomaya $k \bar{a} y a / g a n d h a b b a$ will come out and wait to be pulled into another womb to make another material body.
- A human or animal bhava is long, even though they are less than Deva or Brahma bhava. A person with a physical body lives only about 100 years, but that human bhava will last many thousands of years. The gandhabba/manomaya kāya will make many physical bodies during that time. Same for an animal. A fly lives only a few weeks, but that "fly bhava" may last millions of years. Note that only the manomaya kāya of a human or an animal is called a gandhabba.
- In Deva and Brahma realms, the manomaya kāya is the only kāya. A birth from the womb or an egg with a separate (physical) body is not involved. See "Body Types in 31 Realms - Importance of Manomaya Kāya."

## A Hadaya Vatthu Defines a Bhava in Rebirth Process

6. Therefore, the easiest way to describe the rebirth process is as follows. A lifestream is ALWAYS an associated specific manomaya kāya (with a particular hadaya vatthu) created by kammic energy. In other words, a manomaya kāya results from one particular kamma. For example, a strong puñ̃̃a kamma can create a human or Deva manomaya kāya. On the other hand, a strong apuñña (pāpa) kamma creates a manomaya kāya of an animal, for example.

- The essential component of a manomaya kāya is hadaya vatthu, where cittta (thoughts) arise, and both will last through the end of a bhava.
- When a manomaya kāya (with a hadaya vatthu) dies at the end of a bhava, the lifestream grasps a NEW manomaya kāyalhadaya vatthu compatible with the new bhava at the cuti-patisandhi moment. The new hadaya vatthu inherits all anusaya (hidden defilements.) However, that happens via viññāna dhātu; nothing "moves materially" from one existence to the next.
- For example, suppose a Deva bhava ends, and a human bhava is grasped. At the end of the Deva bhava, the hadaya vatthu (and a set of pasäda rūpa) associated with that Deva existence will die. A moment later, a human gandhabba will appear in the human realm with a NEW hadaya vatthu (and a set of pasāda rūpa.)
- It is essential to understand the following. Nothing from the Deva bhava (hadaya vatthu/pasāda rūpa) "travels" to the human realm. Human's manomaya kāya (hadaya vatthulpasāda rūpa) is created in the human world by kammic energy.

## There Can be Many Births (with Physical Bodies) Within a Human Bhava

7. Suppose the human bhava started (with a human gandhabba) in the year 1900 in the above example. Suppose that gandhabba was born as "John Smith" in 1950, lived for 50 years, and died in 2000. During his life, he would not remember anything about a previous life since it was in a Deva realm. When John Smith dies, the gandhabba comes out and is again pulled into a womb, born in 2005 and given the name "Peter Pan." When a few years old, Peter Pan may be able to recall his past life where he lived as "John Smith."

- Thus, with the above mechanism, we can explain the phenomenon of accounts of previous lives by many children worldwide.
- How would they explain rebirth accounts if anyone does not believe in the gandhabba state? I am yet to hear back from those who say the gandhabba concept is not in Buddlha Dhamma. They should read the post "Gandhabba State - Evidence from Tipitaka."

## Two Adjacent Bhava Are Shielded from Each Other

8. Consider a lifestream transitioning from a Deva bhava to a human bhava. Deva bhava ends with the death of its manomaya kāya, and that is the cuti moment for that Deva bhava, and Deva disappears from that Deva realm.

- At the next moment, kammic energy creates a new manomaya kāya of a human (with a new hadaya vatthulpasāda rūpa), which appears in the human realm (among humans.) Now, that is a human gandhabba without a physical body. It may be several years before that gandhabba is pulled into a matching womb.
- That human gandhabba will not have any memory of the previous Deva existence. One bhava is separated from another.
- Even though some can remember previous lives within the human bhava, it is improbable that a human could recall life in a different bhava, say an animal or Deva bhava. I know of only one account discussed at the forum: "WebLink: puredhamma forums: Remembering Past Lives in the Era of Buddha."
- However, those with abhiññ̄a powers may recall lives in several bhava. A Buddha can recall as many as he wishes.

## Pubbe Nivāsānussati Nāạna and Cutūpapāta Ñāna

9. Only some people can recall their past lives; typically, it is just the previous life. In rare cases, a person may be able to recall a few past lives (in the same human bhava.)

- However, those who cultivate the (Ariya or anāriya) fourth jhāna may be able to recall several past lives. That ability varies from person to person and increases with further cultivation of the jhāna.

During the night of Enlightenment, the Buddha attained three types of higher knowledge:
i. Ability to recall past lives in human births (pubbe nivāsānussati ñāna),
ii. The ability to see any living being's cuti (end of bhava) and patisandhi (grasping of a new bhava). This is the cutūpapāta ñạna.
iii. The attainment of the Buddhahood with āsavakkhaya ñāna. That involved grasping the Four Noble Truths and the Noble Eightfold Path to Nibbāna.
10. The first one allowed him to recall past lives in the human bhava (of him or anyone else.) Note that "nivāsa" means a "house." That refers to the fact that a gandhabba needs to "build a house" (i.e., a physical body) by entering a womb; see \#5 above. The pubbe nivāsānussati ñāna allows a Buddha to see all previous human lives.

- The next $\tilde{n} \bar{a} n \boldsymbol{a}$ that he attained was the cutūpapāta $\tilde{n} a \bar{a} \boldsymbol{n}$. Here, the word cutūpapāta comes from "cuti" (death) and "uppatti" (birth.) That refers to the ending of one bhava and the start of a new bhava. The "cuti-patisandhi moment" is when a lifestream ends one bhava and starts a new bhava. This cutūpapāta ñāna allows a Buddha to look at how any lifestream evolved from bhava to bhava as far as he likes.
- Those two types of $\tilde{\boldsymbol{n}}$ āna allowed him to figure out Pațicca Samuppāda, i.e., how a lifestream moves from bhava to bhava based on the kinds of kamma done. That led to the arising of the āsavakkhaya $\tilde{n} \bar{a} n \boldsymbol{a}$ and the Buddhahood.
- The difference between the first two types of $\tilde{\boldsymbol{n}} \bar{a} \boldsymbol{a} \boldsymbol{a}$ is that the first one is ONLY about births with physical human bodies. The second one is an "expanded version" of the first one, showing the complete evolution of a lifestream. There is no need for the first $\tilde{n} \bar{a} n a$ without the gandhabba mechanism.
- Those who don't believe in the gandhabba concept can not explain the difference between those first two ñāna.

## Anusaya Gets Transferred from Bhava to Bhava

11. Any anusaya ("ingrained defilements") associated with the dying manomaya kāya gets "transferred" to the next one. We can say that the anusaya of the dying hadaya vatthu gets transferred to the new one.
Hadaya vatthu is THE critical element in manomaya kāya, the "essence of a lifestream."

- Hadaya vatthu defines a given existence as a human, Deva, Brahma, or one in an apāya.
- Thus, it is critical to understand that all anusaya associated with a lifestream gets transferred from one hadaya vatthu to the next.
- Of course, anusaya will keep changing over time. It will disappear at the Arahant-phala moment.

## Anusaya in Terms of Samyojana

11. The strength of anusaya is related to the number of samisāric bonds or sainyojana.

- An average human has all ten samyojana.
- The first three samyojana of sakkāya dittthi, vicikicchā, and silabbata parāmāsa are broken at the Sotāpanna stage.
- Two more samyojana (kāma rāga and patigha) are reduced in strength in the Sakadāgāmi stage and removed at the Anāgāmi stage.
- The last five are broken at the Arahant stage.
- See "Dasa Samyojana - Bonds in Rebirth Process"" and "Āsava, Anusaya, and Gati (Gathi)" for details.

All related posts at "Gati, Bhava, and Jāti."
Difference Between Taṇhā and Upādāna
October 25, 2018; revised November 4, 2019; December 5, 2019; March 30, 2021; September 8, 2022

## Introduction

1．The difference between taṇh $\bar{a}$ and upa$d \bar{a} n a$ is subtle，and it is critical to understand that difference．It is the key to understanding how one can get rid of bad gati and cultivate good gati．That is the way to Nibbāna．
－That understanding is also critically important to get the basic idea behind the Satipatṭhāna（and Ānāpānasati）Bhāvanā．

2．Satipatṭhāna（and $\bar{A} n \bar{a} p a ̄ n a s a t i) ~ B h \bar{a} v a n \bar{a}$ are about being mindful and catching new BAD thoughts that arise in one＇s mind．One should stop such thoughts immediately．If the thought is good（say about a Dhamma concept），one should stay on it．
－The English word＂thought＂is too simplified．It includes vedanā，saññ̄a，sañkhāra，and viññāṇa，each of which is complex；see＂Mental Aggregates＂and＂Viññāna－What It Really Means．＂
－Sañkhāra is especially crucial since kammic energy for future vipāka is created by the three types of sañkhāra：mano sañkhāra，vacī sañkhāra，and kāya sañkhāra；see，＂Sañkhāra－What It Really Means．＂
－Therefore，we will stay with those Päli words．

## Mano sañkhāra Arise Automatically Due to Gati

3．If we get interested in sight，sound，etc．，mano sañkhāra automatically arises in our minds due to sensory input，based on our gati．
－We don＇t experience those initial mano sañkhāra，and we only experience them when it comes to the next stage called vacī sañkhāra（＂talking to oneself＂）．
－That is an important point．Even if a single word is not spoken，vacī sañkhārā accumulate if one is ＇thinking to oneself＇about that object．If one gets more interested，one may speak out，and that is still a vacī sañkhāra；see＂Correct Meaning of Vacī Sañkhāra．＂Both types of vacī sañkhāra involve vitakka and vicāra cetasika．
－If the interest builds up，one may take bodily action．Such bodily actions are initiated by kāya sañkhāra．
－All three types of sañkhāra arise in mind．
－The strength of kammic energy created increases in the following order：mano，vacī，kāya sañkhāra．
4．As discussed elsewhere，we get＂attached＂to something AUTOMATICALLY based on our gati．Then mano sañkhāra arise automatically according to gati．That will happen as long as we have tanh $\bar{a}$（either via kāma rāga or patigha；avijj $\bar{a}$ is present in both cases）．We automatically get attracted；see＂Tanhā－How We Attach Via Greed，Hate，and Ignorance．＂
－As pointed out in that post，the term＂taṇh $\bar{a} "$ means getting fused or attached（＂thán＂meaning＂place＂+ ＂h $h$＂meaning getting welded or attached（Ъっ〕〇゚○ in Sinhala）．
－That initial attachment arises AUTOMATICALLY based on our gati．We don＇t have direct control over it．
－To change mano sañkhāra，we need to change our gati over time．

## Importance of Vac̄̄ Sañkhāra

5．If the attachment is strong enough，the mind will now start thinking about it consciously，i．e．，vac $\bar{\imath}$ sañkhāra arise，and we become aware of these vacī sañkhāra．
－As soon as we become aware of this＂attachment＂to something，we CAN BE mindfful，think about its consequences，and move away from it．Therefore，we can stop such thoughts at the vacī sañkhāra stage；see＂Correct Meaning of Vacī Sañkhāra．＂

- However, our minds like to enjoy such vacī sañkhāra. It is easy to do and is very tempting. Many people get their sexual satisfaction from just "daydreaming" about an event in the past or sexual encounters that might occur in the future.

6. In the "WebLink: suttacentral: Na Santi Sutta (SN 1.34)," the Buddha defined "kāma" to be this "daydreaming" or "generating more and more thoughts about it": "Na te kāmā yāni citrāni loke, Sañkapparāgo purisassa kāmo..."

Translated: "World's pretty things are not kāma, a person creates his/her kāma by thinking about those pretty things (rāga sañkappa)..."

- That is a critical point.
- Furthermore, we "daydream" about not just sex, but other sensory pleasures too. See, "What is "Kāma"? It is not Just Sex."
- Even if one did not physically do anything, one could accumulate a lot of bad kamma merely by generating such vacī sañkhāra.
- The world is full of beautifiul things, tasteful foods, sweet smells, etc. Seeing, tasting, and smelling them is not NECESSARILY kāma. For example, the Buddha accepted delicious foods but never generated mano/vacī sañkhāra about them. He had removed all gati.

## Vacī Saìkhāra Responsible for Upādāna

7. Anyone who is not yet an $\bar{A} n \bar{a} g \bar{a} m i$ is likely to generate such mano sañkhāra automatically. Then that leads to generating vacī sañkhāra or "kāma sañkappa" at some level.

- If we "go with the flow" and go along enjoying this "daydreaming" or generating vacī sañkhāra, that is what is called "upādāna."
- Upādāna means "pulling it closer (in one’s mind)" ("upa" + "ādāna," where "upa" means "close" and "ādāna" means "pull"). [ādāna: (nt.), taking up; grasping.]

8. So, we do not control the "tanh $\vec{a}$ " or "initial attachment" step. It happens with mano sañkhāra that arise due to our gati.

- And those gati cannot be removed just by abstaining from experiencing such sensory events.
- First, we need to reduce our gati to attach to that type of sensory input. Stopping vacī sañkhāra as soon as we become aware of them is the way to reduce bad gati. Vacī sañkhāra are really "nutrients" or "food/water" for cultivating those gati.
- If we keep the bad habit of generating vacī sañkhāra, that gati will only get stronger with time. It is essential to stop giving such "mental food" to those bad gati.

## Killing Bad Habits by Stopping Vacī Sañkhāra

9. The Buddha explained it this way: Humans cannot live more than seven days without food AND water. We will die.

- But if We stop taking solid food but take in just water, We can live for several weeks.
- However, one may be tempted to take in a little food. That will break the process and the clock restarts.

10. That is the analogy for killing a habit. One can kill the habit (or the addiction) relatively quickly by doing the following. Stop kāya sañkhāra (actual act, which is like solid food) and vacī sañkhāra (thinking/talking about it, which is like water).

- But if we stop doing the activities (kāya sañkhāra), but keep generating vacī sañkhāra, then it may NEVER be removed entirely.
- So, the analogy is not that good. Vacī sañkhārā are almost as bad as kāya sañkhāra, i.e., vacī sañkhāra are like "snacks" (more than just water in that analogy).
- The more times we break that discipline, the longer it takes to break that habit or gati. That is why we must always be mindful of our thoughts, speech, and actions. That is the key to $\bar{A} n \bar{a} p a \bar{n} n a s a t i$ and Satipatṭhāna Bhāvanā.

11. For example, one can break the drug addiction in a shorter time (say a month) if he has the discipline to stop taking it and also stop thinking about it.

- If he stops taking the drug but enjoys thinking about it (vacī sañkhāra), it will not work. He may go on without using drugs for months and months, but he may lose the resolve and return to drugs one day.
- That happens to many people who are addicted to different things like alcohol, smoking, or even overeating. They may temporarily stop those activities, but months later they break them. That is because they had not stopped generating vacī sañkhāra or engaging in upādāna for that activity.

## Paṭicca Samuppāda Process Starts With a Sensory Input

12. Most Pațicca Samuppāda processes start with a sensory input making one's mind attached to an $\bar{a} r a m m a n a$. The following chart illustrates the processes involved.

## Chart of Taṇhā and Upādāna

For a pdf file for printing: "WebLink: PDF File: Tanhā and Upādāna."

- As we can see, the key is to stop generating vacī sañkhāra. As soon as we become aware of "bad thoughts," we must stop them. Then, over time, that "bad gati" will reduce in strength and eventually disappear.
- Therefore, by being mindful and acting with paññā (wisdom, which is vijjā or the opposite of avijjā), one can reduce upādāna and gradually get rid of bad gati.
- In addition to contributing to bad gati, vacī sañkhāra make one grasp a new "bad bhava" at the cuti-patisandhi moment.

## Basis of Satipaț̣hāna and $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ B h a ̄ v a n \bar{a}$

13. That is the basis of the Satipatthāna (and Ānāpānasati) Bhāvanā; see, " 7 . What is Ānāpāna?" and "Mahā Satipatthāna Sutta."

- If we are mindful, we can immediately become aware of a "bad thought" at the vacī sañkhāra stage. Thereby, we CAN stop the upādāna step, i.e., we can decide not to "pull it closer."
- For example, if we see an attractive person, we may automatically start looking at him/her. But once we become aware of it, we can look away and start thinking about something else.
- In another extreme example, we may get angry with someone and may start saying something harsh. But as soon as we realize that we are going back to our "bad old habit," we can even stop in the midsentence. If we realize our mistake even after saying something bad, we NEED TO apologize for our harsh speech. That may be difficult initially, but that is the only way to eliminate such bad habits.

14. When we start controlling the CRITICAL upādāna step, our gati will slowly change. Then, with time, the first step of "tanh $\vec{a}$ " will reduce and eventually disappear.

- That is the basis of $\bar{A} n a \overline{p a} n a s a t i ~ a n d ~ S a t i p a t t ̣ h a ̄ n a ~ m e d i t a t i o n s . ~$

## Taṇhā to Upādāna to Bad Gati

15. As we have discussed before, a poison bottle sitting on a table will not harm us. It can kill someone only if he/she takes it and drinks.

- It is the same with upādāna. There could be many "pleasing things" out there in the world. But if we understand the anicca nature (that those things will only lead to suffering in the end), our minds will not crave them. That will stop upādāna.
- For example, we know that some flies who are attracted to light get burned. They don't know that even if the shiny light looks attractive, it can kill them. In the same way, a fish sees only the bait. It does not see the hook.
- We don't touch a hot stove that is glowing red because we know that it can burn us.
- But most of us don't realize that sensory pleasures only lead to suffering. Of course, one needs to take care of the extreme sense-pleasures first. As I always say, it is a step-by-step process; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

16. Gradually controlling upādāna is the way to reduce bad gati, cultivate good gati, and eventually get rid of $\tanh \bar{a}$.

- Removal of tanh $\bar{a}$ is the same as removing anusaya.
- To be more effective, one must also reduce avijjā by learning Dhamma and comprehending Tilakkhaṇa (anicca, dukkha, anatta nature).

## Cultivating Good Gati via Vacī Saṅkhāra

17. Of course, it works in reverse too. We can cultivate "good gati" by continually thinking about related things.

- For example, if a Dhamma concept comes to mind, we should continue with it. Then it will become a habit to think about Dhamma concepts.
- Nowadays, when I get up, the first thing that comes to my mind is a Dhamma concept or a problem that I had been thinking about the previous day.

## Summary

18. Finally, there are two things one must do to make progress on the Path.

- One is to reduce $a v i j j a \bar{a}$ by learning Dhamma.
- The other is to reduce upādāna by controlling vacī sañkhāra as we discussed above.
- If we do both, the progress will be much faster.

### 3.5.9 Pāpa Kamma Versus Akusala Kamma

November 14, 2018; revised November 16, 2018 (\#3 and \#6); August 29, 2022

## Difference Between Akusala and Pāpa Kamma

1. While akusala kammā are "immoral deeds," papa kamma are "highly immoral deeds." That is the main difference.

- In some English translations, I have seen that both pāpa kamma and akusala kamma are translated as, "bad deeds." However, there is a huge difference.
- It is critical to understand that if one has not removed the ten types of miccha dittthi, one can commit pāpa kamma.

2. Moha is the stronger version of avijja. If one has moha, then one also has lobha and dosa, which are stronger versions of rāga (kāma rāga, rūpa rāga, arūpa rāga) and paṭigha; see, "Lobha, Rāga and Kāmacchanda, Kāmarāga" and "Lobha, Dosa, Moha versus Rāga, Patigha, Avijiā."

- We know that akusal-mūla Pațicca Samuppāda cycles start with "avijjā paccayā sañkhāra," and NOT "moha paccayā sañkhāra."
- Before one starts focusing on understanding Paṭicca Samuppāda cycles, one must have reduced moha to $a v i j j a \bar{a}$ level.

3. Paticca Samuppāda (starting with avijjā) describes processes that lead to births in the sugati or "good realms" (human realm and above), as well as births in dugati or "bad realms" or apāyā (the four lowest realms).

- One does need to apply Paticca Samuppāda to determine births done with pāpa kamma, but it is not even necessary: they INVARIABLY lead to births in the ap $\bar{a} y \bar{a}$.
- Put it in another way, pāpa kammā done with highly potent apuñna abhisañkhāra ALWAYS leads to births in the $a p \bar{a} y \bar{a}$.
- The bottom line is that one is capable of doing pāpa kamma (which does not mean one will always do it) as long as one has one or more of the ten types of micchā ditthi. When one gets rid of all those micch $\bar{a}$ ditṭhi, one does not have moha anymore; it is reduced to avijj $\bar{a}$.

## Sutta Descriptions - What Are Pāpa Kamma?

4. Pāpa kamma are described in several sutta, but let us focus on the "WebLink: suttacentral: Pathama Pāpadhamma Sutta (AN 4.207)." I will just provide the translation to save space.
"Bhikkhus, who is a highly immoral person (pappo)? One who is engaged in the destruction of life or initiates, encourages, praises, helps destruction of life (in a habitual way) is a highly immoral person destined to be born in the apāy $\bar{a} . .$. ."

- The rest of the sutta lists six MORE deeds in the same way: Taking what is not given, sexual misconduct, immoral speech, Intoxication (drinking, taking drugs, etc), and micchā diṭthi.
- For example, the full description of the last one is: One who has micch $\bar{a}$ ditthi or initiates, encourages, praises, and encourages others to have such views (in a habitual way).
- It is important to note that just one action does not make one a "pāpo" or a "highly immoral person." There is a second related sutta: "WebLink: suttacentral: Dutiva Pāpadhamma Sutta (AN 4.208)."
(By the way, I just realized that I have been writing micch $\bar{a}$ diṭthi as micch $\bar{a}$ diṭthi in many posts. I will try to make the correction in existing posts. It is not a big error, but it is always good to follow the Tipitaka words as they are written).

5. The "WebLink: suttacentral: Duccarita Vipāka Sutta (AN 8.40)" is another sutta that state eight immoral actions that could make one born in the ap $\bar{a} y \bar{a}$. "Duccarita" means "highly immoral character" so a "duccarita puggala" means the same as "pāpo" or "a highly immoral person."

Here is the translation of that sutta.
(1) "Bhikkhus, the destruction of life, repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one will also have a short life span.
(2) 'Taking what is not given, repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one is likely to face loss of wealth.
(3) 'Sexual misconduct, repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one will also be exposed to enmity and rivalry.
(4) 'False speech (per Dhamma, not strictly lying), repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one will also be exposed to false accusations.
(5) 'Divisive speech, repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipäka, one will also be exposed to being separated from one's loved ones.
(6) 'Harsh speech, repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one will also be exposed to disagreeable sounds.
(7) 'Idle chatter, repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one will also be exposed to others distrusting one's words.
(8) 'Intoxication (drinking, taking drugs, etc), repeatedly pursued, developed, and cultivated, is conducive to rebirths in hell, to the animal realm, and the sphere of hungry ghosts; when one is born as a human after paying off most of the vipāka, one will also be exposed mental problems."

- There are many more suttā that discuss pāpa kamma and their consequences being rebirth in the ap $\bar{a} y \bar{a}$, for example, AN 10.211 through AN 10. 220.

6. There is also a set of sutt $\bar{a}$ (AN 10.211 through AN 10. 220) that state that dasa akusala (taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views or micchā ditṭhi) lead to rebirth in the apāyā.

- Therefore, pāpa kamma are the same as dasa akusala done with micchā ditthi. That means having micchā diṭthi makes one's mind "covered," i.e., one has moha.
- It is important to note that some dasa akusala can be done without micchā ditt thi, and those are done with just $a v i j j \bar{a}$.

## Description of Pāpa Kamma

7. Those immoral actions in \#4 through \#6 above are all pāpa kamma.

- It is important to note the emphasis on "repeatedly pursued, developed, and cultivated."
- For example, those who habitually go fishing and hunting would belong to this category. Also see \#14 below.
- Another way to say that is to say "cultivating (abhi)sañkhāra." One does such an action because it becomes one's gati, i.e., it becomes a habit and contributes to one's character.
- These are essentially the same as the descriptions in \#4 above.

8. I want to emphasize that all of the following four actions contribute to each of the above listed immoral actions in \#4 through \#6 above (If done regularly):

- Doing it.
- Assisting another person to do it.
- Ordering (or instructing) another person to do it.
- Praising someone who is doing it.

9. When one has moha, one can do pāpa kamma without remorse. That means one is not even close to being released from the $a p \bar{a} y \bar{a}$.

- This is a very simple fact that can save many people a lot of wasted time. It is absolutely a waste of time even to try to understand Paticca Samuppāda if one still has any of the ten types of micch $\bar{a}$ dittthi, some of which are commonly held; see "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- I know I will make many people unhappy by making these statements. But it is better to learn the truth as soon as possible. We all have been trapped in this suffering-filled rebirth process for an unimaginable time, simply because we have not been able to understand this key point.
- More information in "Kilesa - Relationship to Akusala, Kusala, and Puñ̃̃a Kamma."

## Nature's Laws, Not Buddha's Rules

10. These are not rules made up by the Buddha. Reducing moha to $a v i j j \bar{a}$ level means one is not ignorant of the wider world of 31 realms. That REQUIRES an understanding of the laws of kamma, which in turn REQUIRES an understanding of the wider view of the Buddha (existence of 31 realms) AND a belief in the rebirth process.

- That is because, without that wider worldview, the laws of kamma can't be effective: If there is no rebirth process, many things cannot be explained; see "Complexity of Life and the Way to Seek "Good Rebirths"."
- Nothing happens without causes and conditions. Explanation of what happens around us REQUIRES the wider worldview. Only a Buddha with a perfectly purified mind can discover these hidden laws of Nature.
- Many people, especially in the Western world, have difficulty believing the above. They think Buddha is just "a better philosopher" who came up with his own "worldview." However, it will become clear if one can spend time examining Buddha Dhamma, including Abhidhamma.

11. Buddha Dhamma is self-consistent. The Buddha did not make up the ten types of micchā dittthi. They go against the nature of this world: kamma (actions) have consequences (vipāka); there is a rebirth process; there is a para loka where gandhabbā live; there are instantaneous births in realms that we do not see, etc.

- Just because those are not amenable to our crude senses does not mean they are not true. As science progresses, more and more teachings of the Buddha are being confirmed; see, "Buddha Dhamma: NonPerceivability and Self-Consistency."

## Sorting Out the Priorities

12. As I have discussed, making progress is a step-by-step process. Before starting on the Noble Eightfold Path, one must complete the mundane eightfold path where one gets rid of the ten types of micchā ditthi; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

- A critical aspect of attaining the Sotāpanna stage is the comprehension of Paticca Samuppāda, how root causes lead to their effects where conditions (paccayā) play a key role.

13. These days, many people start by trying to understand deep suttā that REQUIRE an understanding of Paticca Samuppāda and Tilakkhaṇa.

- However, many of them (including many bhikkhus) do not believe in rebirth, or that the concepts of para loka and gandhabba are valid. They erroneously believe that gandhabba is a Mahayāna concept, but neither they nor Mahāyānists understand what is meant by antarabhava; see, "Mental Body Gandhabba."
- Getting to the Sotāpanna stage CAN NOT be done by just reading a few posts. One has to make a real effort to understand the key concepts, and live a moral life.

14. Making progress on the Path requires working on two fronts:

- One needs to understand the key basic concepts in Buddha Dhamma like dasa akusala and micchā diṭthi, before tackling Tilakkhaṇa and Paṭicca Samuppāda.
- One needs to live a moral life, and 'the level of morality" will automatically increase as one's understanding gets deeper and deeper.
- Therefore, those two aspects go hand-in-hand. One cannot just focus on one aspect. Both are necessary.

15. It is also a good idea to understand some key details of how the laws of kamma work.

- Just because one kills some insects when doing yard work does not contribute significantly. The intention plays a key role as discussed in: "Details of Kamma - Intertion, Who Is Affected, Kamma Patha."
- Furthermore, killing a human is much more significant than killing many, animals because human life is much more difficult to get; see "How to Evaluate Weights of Different Kamma."

### 3.6 Sorting out Some Key Pali Terms (Taṇhā, Lobha, Dosa, Moha, etc)

- Kāma Tanhā, Bhava Tanhā, Vibhava Tanhā
- Tanhā - How We Attach Via Greed, Hate, and Ignorance
- Lobha, Raga and Kāmacchanda, Kāmarāga
- Lobha, Dosa, Moha Versus Raga, Patigha, Avijijā
- What is Avijija (Ignorance)?
- Vedanā (Feelings) Arise in Two Ways
- Indriya and Āyatana - Big Difference
- Hetu-Phala, Paccuppanna, and Paticca Samuppāda
- Ditthi (Wrong Views), Sammā Ditthi (Good/Correct Views)
- Correct Meaning of Vacī Sañkhāra
- Panca Indriya and Panca Bala - Five Faculties and Five Powers
- Kāmaccandha and Icca - Being Blinded by Cravings

## Kama Taṇhā, Bhava Taṇhā, Vibhava Taṇhā

## Revised November 9, 2019; July 3, 2022

Kāma taṇhā, bhava taṇhā, vibhava tanhhā are three incorrectly translated key Pāli words.

## Tanhhā is Not Craving

1. Taṇh $\bar{a}$ is "getting attached to things in this world" via greed, hate, and ignorance. Most times, it is incorrectly translated as "craving."

- The word taṇhā comes from "thān" + "hā," where "thān" rhymes like in "thatch" and means "a place; "hā" means getting attached or fused; see, "Tanhā - How we Attach via Greed, Hate, and Ignorance." Note that "tan" in tanhhā pronounced like in "thunder."

2. We attach to things because of the ignorance that they can provide lasting happiness; this attachment first manifests in greed. But when someone or something gets in the way, we generate hate; then we attach via hatred.

- For example, a teenager wants a car, and his desire builds up with time. He is firmly attached to the idea of getting a car. If a parent refuses, then he may generate anger and even hate towards the parent. Now he is attached to two places (to the vehicle via desire and to the parent via anger.)

## Kāma Taṇhā

3. In kāma loka, all five physical sense faculties are present. Getting attach to anything via the five sense faculties is $\boldsymbol{k} \bar{a} m a \tanh \overline{\boldsymbol{a}}$.

- Furthermore, attachment arising from the desire to enjoy taste, smell, and body touch is exclusively restricted to the kāma loka. Those three require a "solid body" as we can imagine.
- In the rūpa lokas, living beings do not have "solid bodies." Yet, they can see and hear without having physical eyes or ears.
- Therefore, in rūpa lokas, taṇh $\bar{a}$ arise only due to sights and sounds. Thus an $A n a \bar{a} a \bar{a} \bar{l}$, who will be born in a rūpa loka has some rūpa taṇhā and sadda taṇhā because he/she may like to see a Buddha statue or listen to a discourse.

## Bhava Taṇhā

4. Bhava tanh $\overline{\boldsymbol{a}}$ arises from attachment to "any existence." Thus bhava taṇhā is present in kāma loka, rūpa loka, and arūpa loka, i.e., all 31 realms.

- Even in the kāma loka, there may be people who do not enjoy the "kāma" or sense pleasures; but they still want to live a quiet, peaceful life. They mostly have bhava tanh $\bar{a}$. They may like to be in a secluded place, cultivating jhāna; that is their desired "bhava." If they develop jhānā, they will be born in rūpa loka or arūpa loka due to their new "gati."
- There are other subtle forms of "bhava" too. Some like to become famous, earn a title, get a high-profile job or a responsibility, etc. These are not associated with sensual pleasures and are also due to bhava taṇh $\bar{a}$.

## Vibhava Taṇha

5. Vibhava tanh $\overline{\boldsymbol{a}}$ arises from the wrong view of materialism (uccheda ditthi in the time of the Buddha; uccheda pronounced "uchchêda"). One believes that one ceases to exist at death. One believes that the mind is a byproduct of the body (brain). And thus, when the body dies, that is the end of story.

- Therefore one believes that one needs to enjoy the pleasures of this life before dying. Such a person would normally have kāma taṇhā as well.
- It is easy to have vibhava tanh $\bar{a}$ in modern society. That is especially true if one has not heard about the Buddha's message about a more complex world with 31 realms and a rebirth process. Our human sensory faculties cannot access such "hidden" aspects of this world. One believes only what one can see.
- It takes an effort to verify that wider worldview, which is needed to EXPLAIN all that we can experience; see, "Complexity of Life and the Way to Seek "Good Rebirths"."
- Many immoral acts are done with uccheda dittthi (or materialism or nihilism) because one believes that everything in this world is for one's enjoyment.
- Even though it is evident that animals cry with pain when being killed, that is not of any consequence in their minds. The logic is that If this birth is the one and the last, there is no possibility that one could face the same fate in the future.

6. The connection of uccheda (or ucceda) ditṭhi to vibhava taṇhā is made in Section 3.2.4 Ucchedavāda in the WebLink: Suttacentral: Brahmajala Sutta (DN 1).

- It is an excellent idea to contemplate the fact that there is a difference between cutting vegetables and killing animals for food. An animal is a living being and feels pain.
- Then how is an animal different from us? The difference is only at the intellectual level. We have higher intelligence only because we have been fortunate to get this temporary human life because of a previous good deed.
- In the next birth, we could be born an animal; it depends on the types of kamma that we have accumulated. It takes time to go through such an analysis, and to convince oneself of the ability of the Buddha Dhamma to provide "good explanations." Many people do not take the needed time to do such an investigation.

## Connection to Magga Phala

7. Let us see how each type of $\tanh h \bar{a}$ decreases as one progresses on the Path.

- When one starts on the Path and makes an effort to understand the message of the Buddha, one starts losing all three types of tanhh $\bar{a}$ gradually. With time one can feel that change and the resulting nirämisa sukha that comes from it. It may take a few days, months, or even a year to see a significant difference depending on the individual.
- Vibhava taṇhā is removed at the Sotāpanna stage. It is essential to realize that one is bound to have vibhava tanha $\bar{a}$ if one does not believe in the rebirth process.
- Kāma tanhhā leads to various levels of attachment that are removed step-by-step in the four stages of Nibbāna. Kāmacchanda removed at the Sotāpanna stage. Kāma rāga is reduced at the Sakadāgām̄̄ stage and removed at the $A n \bar{a} g \bar{a} m \bar{\imath}$ stage. See the next post, "Lobha, Rāga and Kāmacchanda, Kāmarāga."
- As long as one is reborn anywhere in the 31 realms, one has bhava taṇh $\bar{a}$. Thus, bhava taṇh $\bar{a}$ is eliminated only at the Arahant stage.

## Connection to $\overline{\text { Asava/Anusaya }}$

8. Finally, two relevant points:

- It is important to note that these three "tendencies to bind" (k $\bar{a} m a \operatorname{tanhh} \bar{a}$, bhava taṇha,$~ v i b h a v a ~ t a n ̣ h ~ a ~ a ~) ~$ arise due to kāmasava (kāma āsava), bhavāsava (bhava āsava), and vibhavāsava (vibhava $\bar{a} s a v a)$. Tanhhā (attachment) arises due to āsava: One gets "attached" because one has deeplyembedded cravings for worldly things.
- Sometimes vibhavasava is split into two: ditthasava (ditthi āsava) and avijjāsava (avijjā āsava). That is because vibhavāsava arises due to wrong views and ignorance.
- Āsava/Anusaya is discussed in detail in, "Āsava, Anusaya, and Gati (Gathi)."

Next, "Lobha, Rāga and Kāmacchanda, Kāmarāga",

## Taṇhā - How We Attach Via Greed, Hate, and Ignorance

## Revised October 31, 2015; October 7, 2017; August 24, 2019

In the previous post, "Vedanā (Feelings) Arise in Two Ways," we discussed how feelings arise in two ways, and one type of feelings occur due to our own volition, i.e., due to $\tanh \bar{a}$.

## What is Tanh $\bar{a}$ ?

1. In the post, "Paticca Samuppāda - Introduction," we discussed the origin of the term "taṇhā." It means getting fused or strongly attached. The word tanh $\bar{a}$ comes from "thán" meaning "place" + "h $\vec{a} "$ meaning

- Here we will see how that happens according to the natural process of Paṭicca Samuppāda.

## What Is in the World?

2. Cha Chakka Sutta describes how we experience the world. But in standard translations, the real meaning does not come out; see, for example: "WebLink: suttacentral: Cha Chakka Sutta (MN 148)", where one can also find translations in several languages.

We get to know ANYTHING about the external world via ONLY six ways:

- We see vaṇna rūpa (visual things) with our eyes.
- Sadda rūpa (sounds) heard with our ears.
- We smell gandha rūpa (odors) with our nose.
- Rasa rūpa (food) tasted with our tongue.
- We touch phottthabba rūpa (touchable things) with our bodies.
- Finally, we contemplate or think about dhamm $\bar{a}$ (memories, concepts) with our minds.

That is what the Buddha called "sabba" or ALL. Our whole world is what we experience with our six senses. Take a moment and contemplate this. Is there anything else "in this world" other than those six listed above?
3. It is essential to realize that these INITIAL sense inputs come to us via kamma vipāka. Then based on whether we have āsavalanusaya (or corresponding gati or habits), WE MAY act with avijjā to pursue that sensory input.

- Our greedy, hateful, or ignorant thoughts arise when we make contact with the outside world with one or more of these six senses. Kamma vipäka lead to sensory inputs. But not all sense inputs lead to acting with $a v i j j \bar{a}$. (Please take time to think and contemplate on these ideas as you go along. It is critical to get these ideas to proceed further).
- That critical fact becomes apparent when we do not think along the lines of an "established self" or "noself." There is no "person" who has $a v i j j \bar{a}$ all the time. Avijja arises due to āsava/anusaya depending on the sense input; see, "'Self' and 'no-self': A Simple Analysis."

## How Do We Get Attached?

4. How we get "bonded" to something that we experience? Let us take, for example, someone listening to a new song. In this case, the sound (sadda) impinging on the ear (sota) leads to sound consciousness. Several things happen in a fraction of a second. This VERY FAST sequence is:
(i). "Sotañca paṭicca sadde ca uppajjati sotaviñ̃̃ānami," where, sota is ear; sadde is sound (song), uppajjati means gives rise to, sota viñãāna is hearing consciousness, and patticca here means just the fact that sound makes contact with the ears, and NOT "pati + icca" or "willingly getting bonded. Thus,

- "Due to the sound of the song received by the ear, gives rise to sound consciousness."
- The mind does not generate any sañkhāra in assessing that sound. It just RECEIVES the sound signal.

We need to have a liking for something to be interested in it. Every day, we see a million pictures, sounds, etc., but we remember only a selected number, and these are the ones that lead to tanhä. "Getting interested" step is next:
(ii). "Tiṇnamì san gati phasso";

Here, we need to spend a bit of time explaining the terms: "san" means defilements or fuel for sansāric journey (see, "What is "San"? Meaning of Sansāra (or Samsāra)"), and "gati" (pronounced "gathi") are sansāric habits (see, "Sansāric Habits and Āsavas"); thus "san gati" means sansāric habits; "phassa" means contact, and "tinṇaì" (pronounced "thinnan") means three. Please go back and read those two links if you do not remember those terms.

- In summary: Those three things (sound, ear, and sound consciousness) lead the mind to make contact with one's sansäric habits. If the sensory input matches with his "gati" or "likings," he will instantly be attached. Within a split second of hearing a few lines of the song, the teenager is "hooked"; his mind becomes absorbed in it.
- It is really at this step that the teenager becomes interested in the song. Then he gets attached to it (via "pati + icca") BECAUSE it matches his gati.

Then comes the next line:
(iii). "Samphassa jā vedanā" (this comes from "san phassa j $\bar{a}$ vedanā"; it rhymes as "samphassa") means this "contact with san gati" leads to feelings.

- As long as one has matching "gati," the corresponding feelings arise automatically. We cannot stop it, at least in the initial cittta or thoughts. But we can certainly stop progressing further and uttering bad speech or doing immoral acts.
- That is why it is essential to get rid of bad "gati." Satipatthāna sutta describes how one becomes a "sampajanno" by figuring out how to get rid of bad "gati"; see, "Kāyānupassanā - The Section on Habits (Sampajanapabba)."
- The way to getting rid of such "bad gati" is to be fully aware of our speech and actions and stop such unsuitable speech or actions. That is what Kāyānupassanā is.

That is a VERY IMPORTANT step. The resulting feeling depends on whether someone will get attached to the subject matter via greed or hate. If it is greed (or liking) as in the case of the teenager listening to a song he likes, he gets a sukha vedana (happy feeling). On the other hand, if it was a heavy metal song, and if his grandfather hears it, the grandfather may instantly form a dukha vedana (unhappy feeling). That is if he has a dislike for heavy metal songs (different gati than the teenager). That is the reason that different people feel differently about the same "event" (a picture, sound, smell, taste, touch, or a thought about something).

## Attachment (Tạ̣hā) Leads to Existences (Bhava)

Let us further analyze the above example:
The teenage could be walking a noisy street, but if he likes the song, he may not even hear any other sound. He will get "attached" to the song and be absorbed in it. Even after the song, he thinks about it in many ways. He may want to find the identity of the singer, may wish to see whether the singer has more albums, how he is going to tell his friends about this, etc. That is the "sansāric wheeling" process, see, "Nibbana - Is it Difficult to Understand?," where we discussed how one becomes an Ariya by taking the wheels off of the sansāric vehicle (riya).

Now the teenager is attached (i.e., forms $\tanh \bar{a}$ ):
(iv). "vedanā paccayā taṇhā, taṇhā paccayā upādāna, upādāna paccayā bhava, ..."

The song became his existence or "bhava" (i.e., total awareness, existence) while he was listening. He does not just listen, enjoy it while it lasts and moves onto something else. RATHER, he wants to hear it again, maybe hear more songs like that too. That is taṇhā. Because of that, he starts craving for it again and again, and also crave songs similar to that. Maybe he would form a liking for anything associated with the song: its composer, singer, and may join the singer's fan club. His mind spends a lot of time "wheeling around" or "thinking about" things associated with the song; temporarily, his existence or "bhava" becomes that song.
(v). Now let us go back to (i) of the sequence:
"Sotañca paticca sadde ca uppajjati sota viñ̃̄ānami," or "Due to the sound of the song received by the ear, gives rise to sound consciousness."

- That is just the ear receiving the sound. The teenage may hear many other sounds on the road. The next step is a critical one for him. Would he get interested in that song?
- "Tiṇnam san gati phasso." Out of all the sounds that come in through the ears, he will be attached only to the one that matches his "gati."

Thus we get attracted to something due to our "old habits" (see, "Habits and Goals"), which are even likely to be habits formed over many lives (see, "Sansāric Habits and Āsavas").
(vi). Now at the step \#iv above, the sequence ends with further strengthening "his tendency (gati)" to listen to this type of music; that is tanh $\bar{a}$. That is a crucial point. If we have an ingrained liking for something, we
will get attached it. Furthermore, repeated attachments will strengthen such an affection or habit or "gati." That is the law of attraction (see, "The Law of Attraction, Habits (gati), and Cravings (Āsavas)"). Thus it becomes a vicious circle. That is why it is hard to break habits (good or bad).

## Summary

5. Please spend some time contemplating the above material. It is best if you can analyze your situations and see how tanh $\bar{a}$ arises via greed (likes) and hate (dislikes). I will discuss more cases before moving on to discuss Paṭicca Samuppāda in detail. It is VERY IMPORTANT to understand these fundamental ideas.

- In the earlier post, "Paticca Samuppāda - Overview," we pointed out that Arahant experiences suffering only due to kamma vipāka. An Arahant does not generate sorrow or happiness via the mechanism discussed in this post; he/she will not have any "immoral or sense craving" gati. In this case, "samphassa $j \bar{a}$ vedan $\vec{a} "$ does not lead to sukha or dukha vedana $\overline{\text {. }}$
- We, on the other hand, generate "self-induced" suffering and happiness via this mechanism. Any happiness generated will not be not long-lasting. This mechanism is, for example, the leading cause for many "sleepless nights" or even depression. Let us discuss this next.

Next, "What is "Kāma"? It is not Just Sex",

### 3.6.3 <br> Lobha, Rāga and Kāmacchanda, Kāmarāga

## Revised April 28, 2018; November 9, 2019; February 23, 2021; October 24, 2021

There are various names for greed in Pāli. Each has a different meaning, and the differences are significant. Let us look at the two terms "lobha" and " $r a \bar{g} a$ " first.

## What is Lobha?

1. Lobha is the stronger term of the two. The word lobha comes from "lo" + "bha" where "lo" implies "strong attraction" (like that of an ant to honey) and "bha" is for "bhava" (existence). One is firmly attached to this world with lobha.

- Lobha is an extreme form of greed. One can do highly-immoral deeds or "pāpa kamma" with lobha. Such pāpa kamma could make one destined to the apāy $\bar{a}$. See, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma."
- When someone has lobha, it is exhibited in two ways:
i. One wishes that all the "riches" should come to oneself and not to others (one may be already "rich" but wants more for oneself).
ii. One is unwilling to donate even a little bit to the needy and does not share with even the family. It is said that no matter how much one has, some people want more. However, even poor people can have lobha, especially for the things others have.

2. It is hard to quantify these, but the idea is that "lobha" is the manifestation of an overbearing attachment to worldly things.

- Lobha is one of 52 cetasika (mental factors).
- Abhijjh $\bar{a}$ (extreme greed) is the same as lobha. The word abhijjh $\bar{a}$ comes from "abhi" + "icchä" or "strong liking/craving."

## Rāga is a Weaker Form of Lobha

3. Rāga also arises because one believes there are pleasures to be had in staying in Sainsāra (rebirth process). But one would NOT do highly-immoral things with just rāga. Specifically, kāma rāga needs to escalate to lobha for immoral actions to take place.

- The correct "pada nirutti" (etymology) of "rāga" comes from "ra" + "agga" where "ra" means to "travel (in the samisaric journey)" and "agga" is to "give priority." Thus, "rāga" means to "willingly engage (in the samsaric journey.) [agga : [adj.] the highest; the top-most. (m.), the end; the top.]
- When one is born rich (or acquires wealth) and enjoys life with sensory pleasures, that is not lobha; that is just rāga. Such a person is not harming others. However, that rāga COULD lead to lobha too.
- With lobha, one could do highly immoral deeds (even if one is rich). If one is willing to kill, steal, lie, etc., to gain something one desires, then those are "apāyagām $\vec{\imath}$ " kamma. One does not necessarily have to carry out these actions or speech. Just thinking about it and making abhisañkhāra (planning or even enjoying such thoughts) itself is lobha. Thus even the poorest person can have lobha. [ap $\bar{a} y a g \bar{a} \bar{m} \overline{\boldsymbol{u}}$ : [adj.] going or conveying to the state of misery.]

## What is Kāma and Kāma Rāga?

4. Pleasing things in this world are NOT kāma. Attaching to such things and generating conscious thoughts about them (sañkappa) is kāma. In other words, kāma means attachment to the sensory pleasure available in the kāma loka, i.e., those available to gratify the five senses. The word $k \bar{a} m a$ is closely related to $\tanh \bar{a}$ and icchā.

- Then giving priority to kāma is kāma rāga.
- When one has $\boldsymbol{k} \overline{\boldsymbol{a} m a} \boldsymbol{r a} \boldsymbol{a} \boldsymbol{a}$, one likes to enjoy sense pleasures, but not at others' expense. Thus when husband and wife engage in sexual activity, that is due to kāma rāga.
- Even the devas in deva loka have kāma rāga. They like to enjoy sensory pleasures, but they don't crave what others have. Thus, they do not have lobha.
- Also, see, "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda" for more details.

## Blinded by Kāma Is Kāmacchanda

5. Then there is kāmacchanda which is stronger than kāma rāga. It is like lobha but focused on kāma.

- Kämacchanda is the highest level of that attachment. Here one is willing to do abhorrent acts (killing, raping, etc.) to satisfy one's desires.
- When one has developed kāma to the kāmacchanda level, one becomes unaware of the bad consequences of one's actions. Kämacchanda comes from kāma + iccha + anda, or "being blinded by sense attractions." Here, "icch $\vec{a} "$ is liking, and "anda" is blind. [andha :[adj.] 1. blind; 2. foolish.]
- It is said that "one loses one's mind" when blinded by attachment to sense pleasures, i.e., one cannot think rationally when one has kāmacchanda.
- Thus, one needs to be mindful not to let one's kāma rāga develop into kāmacchanda, which is one of the five hindrances that "cover the mind."
- Inappropriate sexual activity (affairs outside marriage and rape) is done with kāmacchanda, i.e., when one becomes blind with kāma.
- Kāmacchanda is pronounced "kāmachchanda."

## Connection to Stages of Magga Phala

6. It is also helpful to see how these different levels of greed are removed at various stages of Nibbāna. This will give a better sense of differentiation.

- A Sotāpanna has permanently removed kāmacchanda and also does not have the worst level of lobha. Thus he/she will not engage in "apāyagām $\vec{\imath}$ " acts to gain sense pleasures. A Sotāpanna has not given up all three types of rāga: kāma rāga, rūpa rāga, and arūpa rāga.
- A Sakadāgāmī also has kāma rāga to a lesser extent; this is why he could be reborn in the kāma loka for one more time.
- An Anāgāmī has removed kāma rāga; he will not return to any of the eleven kāma loka realms, including the human and deva realms, and will be reborn in a suddhāvāsa realm in the rūpa loka, and will attain Nibbāna there.
- However, an $A n \bar{a} g \bar{a} m \bar{l}$ may still enjoy (but not attach to) sense pleasures, i.e., still has $k \bar{a} m a$; see \#3 of, "Akusala Citta and Akusala Vipāka Citta." This is a subtle point, but the point is that an Anāgāmī would still have the "four greed-based citta without wrong views," and that is kāma. Those four akusala citt $\bar{a}$ are prevented from arising only for an Arahant.

7. Finally, some have given up the desire to enjoy pleasures in $k \bar{m} m a$ loka, but like jhānic pleasures. They are born in rūpa loka and arūpa loka and have rūpa rāga and arūpa rāga.

- Rūpa rāga and arūpa rāga are removed only at the Arahant stage, as discussed in "Akusala Citta and Akusala Vipāka Citta."

February 23, 2021: I have revised the following related post as well: "Lobha, Dosa, Moha Versus Rāga, Patigha, Avijiā",

## Lobha, Dosa, Moha Versus Rāga, Paṭigha, Avijjjā

Revised January 2, 2019; revised November 8, 2019; February 23, 2021; August 11, 2022

## Lobha, Dosa, and Moha

1. Lobha is extreme greed; see, "Lobha, Rāga, and Kāmacchanda, Kāmarāga." One is willing to do any immoral act to get what one wants. One can become blind by greed, i.e., kāmacchanda can arise.

- Dosa (or $d v e s h a$ in Sanskrit) is the ANGER that arises based on initial lobha. Here, dvesha comes from
 else is in the way of getting what we want.

2. One acts with lobha or dosa because one has moha. Moha comes from "muva" + "ha" which symbolizes a vessel with its mouth closed. Thus one cannot see what is inside. Similarly, one acts with moha because one is unaware that such immoral acts will have horrible consequences. One's mind is blocked and dark (cannot "see" clearly).

- When one has not removed the ten types of micchā ditthi, one could act with moha. The ten types of micchā dittthi are discussed in "Mahā Cattārisaka Sutta (Discourse on the Great Forty)."
- In the pañca nīvaraṇa (five hindrances,) abhijjhā and vyāpāda represent lobha and dosa. Those are synonymous terms for lobha and dosa; see "Key to Calming the Mind - The Five Hindrances."
- The word abhijjhā comes from "abhi" + "icchā" or "strong liking/craving." The word vyāpāda comes from "vaya" + "pāda" or "on a downward path."

## Pāpa Kamma Done With Lobha, Dosa, and Moha

3. Actions carried out with lobha, dosa, and moha are called pāpa kamma. They are stronger versions of akusala kamma. Such pāpa kamma makes one eligible to be born in the lower four worlds.

- Actions done with dosa are the worst with niraya (hell) as the possible destination, and lobha is the cause for rebirth in the preta (peta) loka of hungry ghosts. Acts done with both lobha and dosa have all three "san" (since moha is always there) and thus lead to rebirth in the animal or "tirisan" ("tiri"+"san" or all three "san") realm.
- As one engages in moral actions and gets rid of one's tendency ("gati") to do immoral actions, one starts "cooling down," and one's likelihood of being born in the lower four realms diminishes.

## Rāga, Paṭigha, Avijjā

4. However, Lobha, dosa, moha permanently reduce to rāga, patigha, and avijja levels when one attains the Sotäpanna stage. All pañca nīvaraṇa were permanently removed at the Sotāpanna stage. [Five Hindrances are kāmacchanda, vyāpāda, thīna-middha, uddhacca-kukkucca, vicikicchā]

- Of course, one is now able to "see" the real nature of the world (anicca, dukkha, anatta) to some extent (one is not blind), and thus moha is reduced to avijja level.
- As explained in the previous post, rāga is the craving for sense pleasures. See, "Lobha, Rāga, and Kāmacchanda, Kāmarāga."
- Of course, there are different levels here too, but in general, this level of greed makes one eligible only for birth in the human and deva worlds. Patigha is a lower level of hate, more like "friction." One may get annoyed when someone even says something in return but will never do anything "horrible/drastic" that makes one eligible to be born in the lower four realms.

## Kāma Rāga is One Type of Rāga

5. At the next level of Nibbāna of the Sakadāgāmī level, kāma rāga, and patigha are both reduced to the extent that one will not be reborn in the human level but only deva or higher realms.

- Kāma rāga is the rāga or craving for sense pleasures in the kāma loka. There are two levels of kāma rāga: vatthu kāma (craving for OWNING objects that provide sense pleasures) and keles or kilesa kāma (craving for sense pleasures is there, but not necessary to "OWN THEM"). A Sakadāgāmī has lost the vatthu kāma, but still has kilesa kāma, i.e., he/she still craves for sense pleasures, but has no desire to "own them." For example, a Sakadāgāmī may still like to live in a beautiful house with comforts, but the desire to "own the house" is not there.
- Above the human realm (in Deva and Brahma realms), beings have subtle bodies. They are not "solid" bodies like ours subjected to decay or diseases. Thus they never get sick or visibly old (but of course, death is inevitable to anyone anywhere in the 31 realms). A Sakadāgāmī is said to be healthy forever (after human life).

## Kāma Rāga is Removed at the Anāgāmi Stage

6. When one attains the $\boldsymbol{A n} \overline{\mathrm{a}} \overline{\boldsymbol{a}} \overline{\boldsymbol{m}} \overline{\boldsymbol{\imath}}$ stage, both ka$m a$ rāga and patigha will no longer be present. Thus, one will not even be offended by harsh words/acts and will not retaliate. An Anāgām $\bar{l}$ will never be born anywhere in the kāma loka including the deva worlds; they are reborn only in Brahma realms.

- While a Sotāpanna may still have some tendency to give priority to sense pleasures at certain times, all such habits are reduced at the Sakadāgāmī stage and removed at the Anāgāmī stage.

7. For an $A n a \bar{g} \bar{a} m \bar{u}$, only rūpa rāga and arūpa rāga will be present. That means a desire for jhānic pleasures in the rūpa and arūpa loka (the four rūpa jhānā and four arūpa jhānā). And he/she still has avijjā left to a certain extent, together with māna (some level of pride) and uddhacca (some degree of sense of superiority).

- All these disappear at the Arahant stage. An Arahant is free from even a trace of defilements. Therefore, an Arahant will never be reborn in "this world" of kāma loka, rūpa loka, or arūpa loka (anywhere in the 31 realms).
- Meditating is not very productive before the Sotāpanna stage when one has the wrong view of an unchanging "me." Many people incorrectly interpret anatta as "no-self." Even though a Sotāpanna does not have the wrong VIEW about a "me," they would still have the perception (sañña) of a "me." The feeling of "me" is removed only at the Arahant stage, after the Anāgāmī stage. As long as māna and uddhacca are there, the sense of "me" is still there. See "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."

## Key to Getting to the Sotāpanna stage

8. To get to the Sotāpanna stage, one needs to realize the "three characteristics of nature." One is the true meaning of anicca (that there is no point in hurting others to achieve temporary sensory pleasures.) Second, one will be subjected to much suffering (dukkha) without realizing the anicca nature. The third is that until one has that mindset, one is truly helpless in this round of rebirths (anatta). Until one comprehends them, it is POSSIBLE for any of the following to happen in the rebirth process:

- One could act with extreme greed (lobha) to the extent of a hungry ghost (peta). Thus, one could get such a birth.
- Act with extreme hate (dosa) in the heat of the moment, and could even kill a human. That can lead to a rebirth in the niraya (hell).
- One may not realize the unfruitfulness of depending on others. That includes cheating/stealing (without trying to make an honest living for oneself.) Thus, a birth in the asura realm is possible.
- It is even possible to cultivate "animal gati." Those include having sex with young children or being able to kill/hurt others for one's pleasure, etc. In this case, both lobha and dosa could be present. Thus, one is not released from the animal realm.
- Those are the four lower realms. Thus one will be truly helpless (anatta) unless one removes such bad habits ("gati"). Until then, dukkha (suffering) will be there in the long-term, if not in this lifetime. Those are the true meanings of anicca, dukkha, and anatta.

## What is Avijjā (Ignorance)?

1. People engage in immoral actions because they highly value the sense pleasures, and are unaware of a better type of happiness called nirāmisa sukha; see, "Three Kinds of Happiness - What is Nirāmisa Sikha? ."

Therefore, they are willing to do even immoral things in order to gain sense pleasures. They do not realize two drawbacks associated with such actions:

- If they hurt others in trying to get what they want, they will have to pay for the consequences with very high interest (law of kamma); these are the immoral acts that could lead to rebirth in the apāy $\bar{a}$ (lowest four realms)
- Whatever enjoyment one gets from such sense pleasures are temporary.

These facts come out naturally from the true nature of the world that include the non-stop rebirth process that involves 31 realms and the law of kamma and the causal principle of paticca samuppāda. It is not possible for anyone to realize these facts by oneself. One has to learn those from a Buddha or a true disciple of a Buddha.
2. What is $a v i j j \bar{a}$ ? It is basically the ignorance of those two facts, even though there is a whole framework of a "world view" behind them. The key ingredients of this "wider world view" are:

- "This world" is much more complex than what is readily observed with our five physical senses, i.e., there are 31 realms instead of the just the two (human realm and the animal realm) that are apparent to us; see, "The Grand Unified Theory of Dhamma."
- That the true nature of existence in any of the 31 realms is anicca, dukkha, anatta; see, "Anicca, Dukkha, Anatta - Wrong Interpretations."
- That most suffering is encountered in the lowest four realms (apāy $\bar{a})$.
- And this perpetual birth/rebirth process has no beginning (see, "Infinity - How Big Is It?") and the only way to stop it is to attain the Arahant stage of Nibbāna.
- But by reaching the Sotāpanna stage of Nibbāna, one can be assured that rebirth in the apāy $\bar{a}$ (lowest four realms) is permanently stopped; see, "Why a Sotāpanna is Better off than Any King, Emperor, or Billionaire."

3. The definition of $a v i j j \bar{a}$ is not understanding the Four Noble Truths. But to understand the Four Noble Truths one needs to see the "true nature of the world", the three characteristics of this world: anicca, dukkha, anatta.

## 4. In brief, anicca, dukkha, anatta mean:

- There is NOTHING in this world that can be maintained to our satisfaction in the long run (anicca); thus, after much struggle we only end up with suffering (dukkha); thus, all these struggles are in vain and one is helpless (anatta).
- The above three characteristics are not just for the human realm: One cannot find any panacea by seeking a better rebirth (even though the realms at and above human realm have less suffering), i.e., none of the 31 realms can provide any lasting happiness, and we are truly helpless (anatta).
- In particular, if one does IMMORAL things (killing, stealing, etc) in seeking this illusory happiness, the more one gets trapped in lower realms filled with suffering.
- Unfortunately, the true meanings of anicca and anatta have been wrongly interpreted as "impermanence" and "no-self"; see, "Anicca, Dukkha, Anatta - Wrong Interpretations," and the follow up posts on the correct interpretations.

5. For anyone willing to dig deeper: anicca, dikkha, anatta, are manifestations of the impermanence nature "of this world" as described in many ways:

- In Abhidhamma, it is explained how this world is "mind based", and how both the mind and the material phenomena CHANGE with incredible speed.
- This "change" is not random, but is dictated by "cause and effect" or paticca samuppāda.
- These and others relevant material is discussed at different sections on the site.
- However, it is NOT necessary to learn all those details to achieve some "cooling down" or "niveema" or even various stages of Nibbāna. One can grasp the concepts of anicca, dukkha, anatta via meditation or contemplation on one's own life experiences.

6. When one does not comprehend this "big picture", one makes bad decisions.

- For example, a fish does not see the string or the hook, only sees the worm, and gets into trouble. If it saw the whole picture, with the string and the hook, it may realize that there is something wrong and would not try to grab the worm.
- Just like the fish in the above example, we only see the pleasures to be had in this human life, but do not realize that because of this "apparent pleasures" we are grabbing hold of a world that also include unbearable suffering in the lowest four realms, not to mention the hidden suffering in this life.
- Only a Buddha can see this "bigger picture" and he has shown us not only that bigger picture, but also the reasons why we should believe in that bigger picture. In this website, I hope to provide this evidence in a systematic way.

7. That complex world view (everything changing moment-to-moment everywhere in those 31 realms) can be grasped only by a Buddha with a highly-purified mind.Other than a Buddha, a normal human being (no matter how intelligent) is incapable of seeing that whole world view; see, "Godel's Incompleteness Theorem."

- Thus avijjā cannot be dispelled by "book knowledge." One needs to comprehend the "true nature of this complex world."
- Even when we are told about it, it is not easy to grasp it, because our minds have been covered with defilements that have been accumulating from an untraceable beginning; see, "Key to Calming the Mind."

8. Another important factor that keeps many people "in the dark" or "in ignorance"is the wrong impression that Buddha Dhamma is a pessimistic world view. With the pure Dhamma hidden for over a thousand years, several important facts about the Four Noble Truths got distorted:

- When the Buddha said "this world" is filled with suffering he meant the wider world of 31 realms. Also, he did not say, there is suffering ALL THE TIME or in all the realms of existence. In higher realms (realms 6-31), there is actually much more happiness than suffering. Even in the human realm (the 5th realm), there is more happiness than suffering for many people. That is why it is hard for many people to get motivated to examine the message of the Buddha.
- Yet most beings spend most of the time in the lowest four realms (apāyā). This is why, ON AVERAGE, the suffering in the samisāra (cycle of rebirths; see, "Evidence for Rebirth") is much higher compared to any kind of happiness that can be experienced in any realm.
- Together with the wider "world view", the concept of an unimaginably long rebirth process got lost; see, "Sansāric Time Scale." The fact that it is not possible to trace a beginning to this rebirth process is not widely known. In the scale of the sansäric time scale, this lifetime of a hundred or so years is negligible. Thus whatever "accomplishment" one achieves, it has a very short duration in the sansāric time scale.
- Also, Buddha was just the messenger who conveyed these dismaying FACTS about nature. He discovered the nature's laws, which clearly illustrate that it is not possible to find any LONG-LASTING happiness ANYWHERE in these 31 realms. But he also pointed out how to find a better and permanent kind of happiness.

9. The most important fact that has been lost for hundreds of years is that there is a happiness of a better quality that also is PERMANENT. This is the Nibbānic bliss or the nirāmisa sukha; see, "Three Kinds of Happiness," "How to Taste Nibbāna," and "Nibbāna - Is it Difficult to Understand?." And one can start experiencing this nirāmisa sukha even before attaining the Sotāpanna stage of Nibbāna; see, "Key to Calming the Mind." For more details, see, "Nirāmisa Sukha."

- Not knowing any of those (and related facts) is avijja (ignorance). If one does not know about those facts, then how can one find a solution to the problem of suffering? Also, since only a Buddha can discover these laws, without hearing the message from another person (or a website!), there is no way anyone can learn all this by oneself, no matter how intelligent one is.

10. The Buddha compared avijjā to darkness. One cannot remove darkness forcefully. The ONLY WAY to get rid of darkness is to bring in a light. In the same way, the Buddha explained, ignorance can be removed only via cultivating wisdom.

- No matter what else one does, one will not get rid of ignorance; one has to cultivate wisdom by learning Dhamma. First, one cultivates wisdom to distinguish moral from immoral, and then comprehend the true nature of the world, i.e., anicca, dukkha, anatta; see, "Buddha Dhamma - In a Chart," and "What is Unique in Buddha Dhamma."

## Vedanā (Feelings) Arise in Two Ways

Revised September 4, 2016; Revised February 9, 2017; October 17, 2017; November 5, 2018; May 5, 2020 (Same at Vedanā (Feelings) Arise in Two Ways @ Assāda, Ādīnava, Nissarana); April 28, 2021

## Introduction

 'become aware." When an ārammaṇa comes to the mind (via any of the six senses,) we become aware of it.

## Vedanā can arise in two ways:

a. One type of vedana is a consequence of a previous kamma or previous defiled action, i.e., a kamma vipāka. That kamma could have been done many lives ago.
b. The second is a direct consequence of generating sanikhāra or defiled thoughts (due to our gati at present).

- For example, when one gets a "pleasant feeling" while eating a piece of cake offered by the friend, that is a vipāka vedanā. Then, if we start thinking about how to eat that cake in the future, with such thinking, we generate "pleasant feelings" about such future experiences. Those are "mind-made" or samphassa$j \bar{a}$-vedan $\bar{a}$ associated with greedy thoughts.
- You can find further details on the two types of vedanā at, "Vipāka Vedanā and "Samphassa-jāVedanā" in a Sensory Event." But let us discuss them briefly below.

## Vedanā Arising from Kamma Vipāka

2. Vedanā (feelings) due to kamma vipāka are three kinds : Sukha vedanā (pleasant or joyful feeling), dukha vedanā (unpleasant or painful feeling), and adukkhamasukha (without being painful or joyous, just neutral.) The word adukkhamasukha is a combination of adukkhama and asukha.

- Those three types of vedan $\bar{a}$ are felt only by the body (k $\bar{a} y a$.) All vedana $\bar{a}$ initially coming through the other five sense faculties are neutral.
- Kamma vipāka leading to sukha vedanā and dukha vedanā happen to everyone, including Arahants. While everyone can live mindfully (taking necessary precautions) to avoid some of such dukha vedan $\bar{a}$, others are too strong to be able to avoid.
- For example, the Buddha himself had physical ailments later in his life as kamma vipāka. Moggallana Thero was beaten to death because of a bad kamma that he did many lives before.

3. However, kamma vipāka are not certain to happen. We can avoid some (see, "Kamma, Debt, and Meditation.") Many vipāka can be reduced in strength with time if one starts acting with mindfulness.

- We can avoid some kamma vipāka by preventing conditions for them from arising just using common sense [yoniso manasikāra or thinking according to cause]. For example, going out at night in a bad neighborhood is providing fertile ground for past bad kamma vipāka to appear. Many kamma vipāka CANNOT take place unless the conditions are right. See, "Anantara and Samanantara Paccayā."
- We all have done innumerable kamma (both good and bad) in past lives. If we act with common sense, we can suppress bad kamma vipāka and make conditions for good vipāka to arise.
- Also see the discussion on kamma bīja in, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."
- Now let us look at the second type of vedanā.

## Vedanā Arising from sañkhāra ("Samphassa-jā-vedanā")

4. These are vedana (feelings) that we generate on our own. These are the vedana that do not arise in an Arahant.

- Based on vipāka vedanā, we may generate more types of "mind-made" vedanā called somanassa and domanassa vedanā as we discuss below.
- In \#2 above, we saw that vipāka vedanā are felt only by the body (kāya.)
- Some of the vedanā coming through the other senses feel as "pleasant" or "unpleasant" NOT because of kamma vipāka, but due to another reason. Those are associated with each realm and are "kāma guñ." See, "Kāma Guna - Origin of Attachment (Tanhā)." For example, all humans taste sugar to be sweet. But some people get addicted to eating sweets full of sugar. That second category is "mindmade."
- We may generate "samphassa-j $\bar{a}$-vedana $\bar{a}$ " starting with initial vedana due to both mentioned above. But most samphassa-jā-vedanā have kāma guṇa as the cause.

## Some Examples of Samphassa-ja-Vedanā

5. Samphassa-j $\bar{a}$-vedana $a$ arise due to attachment via greed or hate, at that moment (i.e., due to one's gati); see, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."

These are the vedana (feelings) that Arahants do not feel. Since they do not have any "bad gati," they do not commit any (abhi)sañkhāra, an Arahant avoids any kind of feeling arising from sañkhāra. The easiest way to explain this kind of vedan $\bar{a}$ is to give some examples:

- Three people are walking down the street. One has an ultra-right political bias (A), the second has an ultra-left preference (B), and the third is an Arahant who does not have special feelings for anyone (C). They all see a famous politician hated by the political right coming their way. It is a given that the sight of the politician causes A to have displeasure and B to have a pleasurable feeling. On the other hand, sight does not cause the Arahant to generate any pleasure or displeasure. Even though all three see and identify the person, they produce different types of feelings. It is essential to realize that the feelings were created in $A$ and $B$ by themselves.
- Two friends go looking for treasure and find a gem. Both are overjoyed. It seems quite valuable, and one person kills the other so that he can get all the money. Yet when he tries to sell the "gem," he finds out that it was not that valuable. His joy turns to sorrow in an instant. Nothing had changed in the object. It was the same piece of colored rock. What has changed was the perception of it.
- What could happen if an Arahant found the same gem lying on the road? (He would not have gone looking for one.) He might think of donating it to a worthy cause.

## Another Example of Samphassa-jā-Vedanā

6. A loving couple had lived for many years without any problems and were happy to be together. However, the husband slaps his wife during an argument (this is a kamma vipāka). The physical pain from the slap itself did not last more than a few minutes. But for how long would the wife suffer mentally? Those feelings arise due to sañkhāra, i.e., sadness and hate. Even the husband, who did not feel any physical pain, would suffer for days if he loved his wife. In both cases, the real mental pain was associated with the attachment to each other. The wife could have dropped something on her foot and would have suffered about the same amount of physical pain. But she would not have had any lingering mental pain associated with that.

- In all the above cases, the initial sense contact was due to a kamma vipāka. That by itself did not generate any kamma energy.
- However, based on that initial contact, we tend to pursue it with our mind and thus may start generating kamma. For example, if we see our "worst enemy" that is just "seeing." But if we start thinking about how bad a person he is, then we will be generating "bad vacī sañkhāra" and thus "bad kamma."
" A deeper analysis at, "Avyākata Paticca Samuppāda for Vipāka Viñiñ̄āna."

## Samphassa-jā-Vedanā Arise Due to Taṇhā

7. Thus it is clear that in all the above examples, the "extra" happiness or suffering (other than due to kamma $v i p \bar{a} k a$ ) arose from within one's mind. And tanhhā (attachment via greed or hate) was the cause of it. See, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."

- When we generate such "mind-made vedanā," we also do kamma (via abhisañkhāra) that will bring more suffering in the future.
- The Buddha pointed out that when he described dukkha in the Dhammacakka Pavattana Sutta. See, "Essence of Buddhism - In the First Sutta."

8. Thus all these feelings arise due to $\boldsymbol{t a n h} \overline{\boldsymbol{a}}$, some form of attachment: greed (craving, liking) or hate (dislike); all these are due to mano/vaci/kāya sañkhāra. The feelings (or rather, the perceptions that give rise to feelings) reside INSIDE oneself. It does not come from outside. We use external things to CAUSE happiness or suffering by our own volition.

- There is no inherent suffering or happiness in ANYTHING external; the sensory contact with an external thing CAUSES pain or happiness depending on our gati and āsavā. An Arahant, who has removed all $\bar{a} s a v \bar{a}$, will be free of such emotional responses.

## Connection to Paṭicca Samuppāda

9. It is also clear how the accumulation of sañkhāra via Paticca Samuppāda leads to such varied feelings: If we attach to something with a "like" or a "dislike," we generate a mindset accordingly. That is Patticca Samuppāda (pati +icca leading to sama + uppāda; see, "Paticca Samuppāda - Introduction").

- If we attached to something with "greed," we act with that "greedy mindset." We will be happy if we get what we wanted. If we got "attached" to something with anger, we would have an "angry mindset" and would be happy if we remove whatever caused that anger.
- In either case, the strength of the feeling is also proportional to the strength of the "like" or "dislike": Sama uppāda or Samuppāda means both in quality and quantity; the higher the strength of "pati + ichcha," the higher the strength in "sama + uppāda."
- This is how we form habits ("gati") too. A teenager drinking alcohol with friends gets attached to that setting and looks forward to having the same experience again. The more he repeats that activity, the more he gets "bonded" and thus forms a drinking habit. See "Habits and Goals" and "Samsāric Habits and Āsavā."

The sequel to this post is at, "Feelings: Sukha, Dukha, Somanassa, and Domanassa."
A deeper discussion on vedanā at: "Does Bodily Pain Arise Only Due to Kamma Vipāka?," "How Are Paticca Samuppāda Cycles Initiated?," and "Avyākata Paticca Samuppāda for Vipāka Viññāna."

### 3.6.7 Indriya and Āyatana - Big Difference

May 7, 2016; revised December 4, 2017

1. We have lived in this world of 31 realms forever, because we like to enjoy sense contacts. By understanding how we actually experience these sense contacts, we will be able to see their true nature.

- In English language, we speak about the five physical senses of eyes, ears, nose, tongue, body. We also talk about the mind that is supposed to "reside" in the physical brain, which is supposed to process signals from the five senses and generate "consciousness" or awareness of the external world.
- Above is the conventionally and scientifically accepted theory, especially in the Western World, but mostly in the Eastern World as well.
- In Buddha Dhamma, it is important to realize that our sense faculties have two aspects: physical and mental.

2. Thus there are two versions of sense faculties in Buddha Dhamma: "indriya" and "ayatana."

- The physical sense faculties are referred to as indriya.
- But those indriya CAN BE used as āyatana depending on the situation. We will discuss the difference.
- Furthermore, we will also discuss how we literally "create our own future" by using our sense faculties as not merely as indriya but as āyatana.

3. The five physical senses or the "indriya" are simply "physical instruments" mounted on our physical bodies to extract information (vision, sounds, smells, tastes, and touches) from the external physical world.

- In addition, per Buddha Dhamma, there is another indriya (manindriya) to receive dhamma (concepts, gathi, and bhava are synonyms) from the external world. This "mana indriya" or manindriya is located inside the brain, and has not yet been identified by science.
- This has been is discussed in detail in, "What are Dhamma? - A Deeper Analysis."

4. Now let us see how these indriya can become $\bar{a} y a t a n a$. In simplest terms, indriya become $\bar{a} y a t a n a$ when we deliberately use the indriya to accumulate abhisañkhāra.

- Another way to state the difference is to say that when kamma vipāka brings us sense inputs, the sense faculties act as indriya. Following that we MAY deliberately use sense faculties to generate new kamma; then they work as ayatana.
- Let us consider some examples to illustrate the difference.

5. When we just happen to see a nice house (say, while walking), our eyes were used as cakkhu indriya. But if we like that house and stop and keep looking at it (while making an attachment for it), then we are using our eyes as cakkayatana.

- If we eat something to quench the hunger, and experience the taste of it, then we are using the tongue as jivha indriya. But if we form an attachment to it (and thinking about making some more to enjoy the taste again later), then the tongue is used as jivhayatana.
- When we walk to the bathroom to take a shower (which is something we need to do to stay clean) that involves using the body as kāya indriya. But hitting (or walking to hit) another person involves using the body as an ayatana (kayatana).
- A teacher speaking to students is using the body as kāya indriya (does not involve abhisañkhāra), but telling a lie or a gossip involves kayatana (does involve abhisañkhāra).
- When we are using the mind to remember a forgotten address, we are using the mana indriya (or manindriya). But when fantasizing about a sexual encounter, that involves mana āyatana (or manayatana).

6. Another simple way to look at this distinction is to consider the cakkhu indriya as a totally mechanical device (just like a camera) that just helps to get the image to the brain.

- Cakkhayatana could come into play when that information is sent by the brain to the cakkhu pasāda rūpa and is processed by the hadaya vatthu (mind). Based on the personal character (gati) of the
person, that person may generate greed or hate towards that visual. Then cakkayatana (and possibly more other a yatana) may be used to take further actions.
- The cakkhayatana never arises in an Arahant, because there is no anusaya or āsava (defilements) remaining that can trigger greed or hate, i.e., there are no kāma gati, rāga gati, dosa gati, moha gati, etc left.
- The same kind of analysis can be done on any other sense faculty.

7. Now we can also look at this from a different angle and see that while indriya can be considered as PHYSICAL devices that help "extract sense signals" from the outside world, āyatana are MENTAL.

- The six āyatana (the six are collectively called "salāyatana") may be created at a given moment depending on the situation and also depending on the gathi of the particular person.
- In the "Idappaccayatā Paticca Samuppāda," salāyatana arise via, "nāmarūpa paccayā salāyatana." When we trace steps backwards, we see that nāma rūpa arise via "viññāna paccayā nāmarūpa." Going further back, "sañkhāra paccayā viññāna", "avijjā paccayā sañkhāra." Thus saḷāyatana arise as a series of mental actions starting with $a v i j j \bar{a}$.
- When one of the six indriya brings in a sense input, that sense input MAY induce greed or hate due to $a v i j j \bar{a}$ and through the above series of paticca samuppāda steps to CREATE one or more of the salāyatana to arise.

8. Thus our indriya do not change from moment-to-moment, but āyatana do.

- For example, our eyes (cakkhu indriya) may not change significantly for years; of course an accident can instantly change them or they can degrade with old age.
- But cakkayatana change from moment-to-moment. We can be instantly attracted to an eye-pleasing object.

9. In another example, suppose an alcoholic is walking around inside an airport waiting for a flight. If he sees a bar, he may decide to stop and take a good look at it, think about for a minute and just go in to have a drink.

- The initial sense input (seeing the bar with cakkhu indriya), triggered his deeply-ingrained craving ( $\bar{a} s a v a$, anusaya) for a drink to come to the mind. Then acting with avijjā, at least two of the six ayatana arose in his mind: thinking about having a drink (manayatana), walking inside and ordering a drink (kāyātana).
- Many other people saw the same bar, totally disregarded it and kept walking. The sense input from the cakkhu indriya did not lead to the arising of any of the salāyatana for them.
- This is why even in a normal human, the sense faculties do not work as ayatana all the time.

10. If we live in this world, we have to use the sense faculties in order to live; here we use them as indriya.

- But when we use them as ayatana, we are in a sense making future bhava (especially if those actions are strong).

11. Now we can also figure out what is really meant by the "indriya bhāvanā." It simply means making sure that the indriya do not become āyatana.

- Of course, we need to focus on the most egregious acts first. For example, when one sees an eyecatching object in a shop, stopping there and thinking about how nice it would be to be able to take it home is making ayatana. But that is hard to avoid for a normal human who has not yet attained a magga phala.
- However, if the attraction to the object becomes strong, that could lead to ayatana other than the cakkayatana come into play: one may decide to steal it. This is of course far too dangerous. As soon as that mindset comes to play, one has to think about the consequences and forcefully stop it.
- Thus "indriya bhāvana"" is nothing but special application of the Satipatthāna bhāvanā. In fact, "indriya bhāvan $\bar{a} "$ is to be practiced not in a "sitting down" meditation session, but while one is doing normal day-to-day activities.

12. Thus only Arahants use their sense faculties as indriya ALL THE TIME. They do not form attachments to body touches, tastes, odors, sounds (music), pictures, or any type of concepts (thoughts).

- Even a normal human does not use eyes as ayatana all the time. We may see numerous things even during a short walk. Most of the things we see we just ignore, because they don't interest us. This is another way of saying that those things don't trigger any anusaya or āsava in us or we don't have the gati to form a liking for them.

13. Finally, it must be noted that there are other types of indriya that come into play in different contexts.

- For example, "pañca indriya" in 37 Factors of Enlightenment refer to very different types of indriya: sati, samādhi, paññā, viriya and saddhā; see, "37 Factors of Enlightenment" and "Two Versions of 37 Factors of Enlightenment."
- There are five indriya in "pañca indriya," whereas there are six indriya in reference to sense faculties.

These mind-made pleasures experienced with āyatana are called assāda (or āsvāda in Sinhala). For an in-depth analysis, see, "Assāda, Ādīnava, Nissarana."

## Hetu-Phala, Paccuppanna, and Paṭicca Samuppāda

July 2, 2016; Revised July 5, 2016
The existence of anything in this world (i.e., a sañkhata (sankata in Sinhala)) can be explained in a stepwise process with three "steps": (i) there must be root causes, (ii) there must be suitable conditions, and (iii) whatever that arises due to those two steps will have characteristics (gathi) that can traced back to those causes and conditions.

- The title is pronounced as :

## Weblink: Listen to the Title being pronounced

1. Nothing happens without causes in Buddha Dhamma. This is why there CANNOT be a beginning to the rebirth process. That is a logical impossibility, and is THE main argument against creation by a "Super Being" or a Creator.

- CAUSE AND EFFECT is the backbone of science. In order for a scientific theory to be accepted, that theory HAS TO have explanatory power to describe HOW a given effect takes place.

2. It may be hard to fathom initially, but there are only 6 primary causes (roots) that causes anything and everything in this world to arise: lobha, dosa, moha (three immoral roots or hetu), and alobha, adosa, amoha (three moral roots).

- The word "hetu" comes from the Sinhala words, "hayen ethu" which means "wrapped with six." Thus all causes are ultimately due to one more of the six roots mentioned above.
- Also, "phala" in Pāli and Sinhala ("pala") means "harvest" or the "result."
- Thus anything and everything in this world arises due to those six root causes.

3. The three immoral roots mainly give rise to the four lowest realms (ap $\bar{a} y \bar{a}$ ) and the three moral roots mainly give rise to the other 27 realms.

- When one cultivates the three moral roots, one stays away from the $a p \bar{a} y \bar{a}$ and be able to be born in the higher 24 realms. Furthermore, one also cleanses one's mind so that one can begin to comprehend anicca, dukkha, anatta (the true nature of the world); see, "Buddha Dhamma - In a Chart."
- However, in most cases, we can see only the "immediate causes." For example, a wet floor is the immediate cause for someone to slip and fall. But if one was mindful (aware) of the wet floor, the fall could have been avoided.

4. Such immediate causes (that derive from those six) are easier to see or to deduce. The causes for a tree to come to life are embedded in a seed. When the seed is planted that causes a tree (or a plant) to grow.

- What causes an explosion from a bomb is in the explosive material in the bomb. There will not be an explosion unless the bomb has potent explosive material in it.
- How those are connected to the six root causes is a bit more involved, and needs a good knowledge of Abhidhamma to fully explain.

5. Now, let us analyze how causes lead to corresponding effects. Just because there are causes, corresponding effects do not necessarily appear. There must be appropriate CONDITIONS present to bring out the effects.

- A seed has embedded in it the causes to bring about a full-grown tree. But if that seed is in a cool, dry place, no tree will come to life because of it.
- But if the seed is planted in a good soil with exposure to sunlight, it can germinate and grow to be a healthy tree.
- The bomb will not explode unless it is triggered but a spark. If it is laying somewhere for many, many years, the explosives may degrade and lose their explosive power.

6. This is called "paccuppanna" or "pacca" + "иррапna," where "pacca" is for "paccaya" or conditions. "Uppanna" means to come to life or birth.

- Anything in this world (i.e., a sañkhata (sankata in Sinhala)) is a paccuppanna, i.e, is born when suitable conditions become available. But, of course, the root causes MUST also be there.
- Thus even if there is a field out there with good soil and sunlight, nothing will grow unless some seeds are planted.
- Thus paccuppanna means "conditional arising." This term "conditional arising" is used today INCORRECTLY as the translation of pațicca samuppāda. As we will see below, pațicca samuppāda also describe the nature of things that arise due to paccuppanna.

7. You can put this "theory" to test by considering anything in this world.

- Any given living being is born due to a kammic energy that was created in the past. And that kammic energy was created by a good act with moral roots or a bad act with immoral roots.
- Even non-living things (vegetation, mountains, rivers, etc) are also there due to causes and conditions. The analyses are a bit deeper and we will discuss some in the future.

8. The last step (in the three-step process that we started off with) says, whatever that arises due to those two preceding steps will have corresponding characteristics (gathi). This is nothing but paticca samuppāda; see, "Paticca Samuppāda - "Pati+ichcha"+"Sama+uppāda"."

- In the example that we discussed above, a given seed will not give to rise to any tree or a plant. A rice seed will give rise to a rice plant. An apple seed will not give rise to a rice plant but an apple tree, etc.
- The same is true for living beings. A chicken will be born of a chicken egg, not a turtle. Note that the other two conditions are satisfied here too: there was a being with "chicken sañkhāra" who came into that egg as a gandhabba, and that egg needs to be incubated correctly to be hatched and for that hatchling to come out.

9. Actually, the steps paccuppanna and paticca samuppāda are not in a time sequence, but related. The necessary conditions (paccaya) in paccuppanna are analyzed in detail in the paticca samuppāda steps.

- When an animal (say a dog) is born, the conditions that led to that birth can be traced in the "akusalaMūla Paticca Samuppāda" cycle.
- First, "bhava paccayā jathi" step says, that dog was born due to a "dog bhava." The step, "upādāna paccayā bhava" says that "dog bhava" arose due to a human grasping it at the dying (cuti-patisandhi) moment; the step, "taṇhā paccayā upādāna" says that grasping was done due to craving for it, and so on.
- Note above that the human did not really crave to be a dog. Rather he/she enjoyed acts that are normally done by dog. And that process started off with "avijjā paccayā sañkhāra," where due to ignorance of their consequences, he was cultivating "dog sañkhāra": For example, thinking, speaking, and doing things that are done by dogs, for example, having indiscriminate sex (sometimes with even family members).

10. We will discuss this more depth in future posts, but I hope the main ideas can be grasped from the above description.

## Diṭ̣hi (Wrong Views), Sammā Diṭṭhi (Good/Correct Views)

## Revised April 2, 2016 and August 3, 2016; February 6, 2020

## Wrong Views About the World

1. Ditthi means dogmatic belief in something(s) in the sense of "this alone is true, and everything else is false regardless of the facts." Even though micch $\bar{a}$ ditṭhi (pronounced michchā diṭ̣hi) is the correct term ("dittthi" means "views" and "micchä" is "wrong"), in Pāli literature "ditṭhi" is used frequently instead of "micchā diṭthi"; the immoral cetasika is ditṭhi.

- In the Buddha's time, 62 such dogmatic views that were the topics of frequent discussions. They are in the Brahmajala Sutta DN 1.
- The ditthāsava (āsava for the 62 wrong views) is eliminated by ditthi vissuddhi, i.e., cleansing of the wrong views at the Sotāpanna stage.

2. Some of these dogmatic views that the Buddha had to deal with frequently were the following. There is a self, there is no-self, reincarnation, no reincarnation, things exist, things do not exist, there are no laws of kamma, there are laws of kamma, AND they are deterministic.

- The Buddha refuted those all. Unfortunately, some of those wrong views are back in most versions of "Buddhism" today, most importantly the "no-self" (anātma in sanskrit) concept.
- We have discussed some (the first four items were presented in several posts, for example, "What Reincarnates? - Concept of a Lifestream," and "Anicca, Dukkha, Anatta"), and we will discuss others in detail in the future.

## Having Wrong Views Is an Akusala Kamma

3. Dittthi (or micchā ditṭhi) is also one of the ten immoral actions or dasa akusala. Micchā ditthi arises in mind, i.e., it is an akusala done by the mind. It also leads to corrupt speech and deeds. See, "Ten Immoral Actions (Dasa Akusala)."

- You can see that such thoughts arise due to dogmatic beliefs, i.e., when one is not willing to even consider the possibility that one could be wrong and to critically examine the evidence. For example, some people refuse to even examine the existing evidence for rebirth with an open mind and that is ditthi.
- And one needs to know the "big picture of the 31 realms", concepts of kamma, anicca, dukkha, anatta, etc., to make a decision on rebirth; it is not enough to just to look at the accounts or evidence for rebirth as presented in, "Evidence for Rebirth."

## Three Levels of Micchā Ditṭhi

## 4. There are three layers in which micchāditthi is established and accumulates bad kamma:

- Suppose one kills one's parents with the ditt thi that a parent is not a unique person, and that such kamma does not have consequences. That is the coarse level. It can be compared to a fire that burns down a house.
- The second level is when one vehemently defends such a wrong view in a debate and do not even consider the facts presented by the other side. One may genuinely believe in that position, BUT that is because one is not aware of the "bigger picture" on existence. The problem is that "not knowing the facts" is not an excuse. One could jump off of a building, not knowing how gravity operates but will suffer injury/death. This middle level is analogous to a fire that ignites when the match stick strikes a hard surface.
- The third level is the anusaya level, where these views lay dormant as $\bar{a} s a v \bar{a}(d i t t t h i ~ a ̄ s a v a) . ~ T h i s ~ s u b t l e r ~$ level is analogous to a box of matches that has the potential to start a fire.

## Two Levels of Sammā Diṭthi

5. Someone is said to have micch $\overline{\boldsymbol{a}}$ ditṭhi when one has wrong views at any of the three levels in \#4 above. On the other hand, Sammā Dittthi, can be two kinds:

- One knows that bad kamma (actions) have adverse consequences and can lead to bad rebirths. One wants to live a moral life and strive for a "good rebirth." That is "mundane or conventional Sammā Ditṭhi." Thus these are still defiled views (have "kilesa" in them) since they lead to extending samisāra, and one has not yet eliminated the possibility of a future rebirth in the $a p \bar{a} y \bar{a}$ (four lower realms).
- But when one comprehends to "true nature of this world," one realizes that there can be no lasting happiness anywhere in the 31 realms of existence. This Samm $\bar{a}$ Dittthi is realized when one truly comprehends anicca; see, "Why is Correct Interpretation of Anicca, Dukkha, Anatta" is so Important? ."
- That is the "transcendental or lokuttara Sammā Ditṭhi" that leads to Nibbāna; it is free of defilements or "kilesa" (or "keles" in Sinhala). This view becomes complete at the Arahant Stage. Kilesa are discussed in, "What Are Kilesa (Mental Impurities)? - Connection to Cetasika."

## Mundane or Conventional Sammā Ditṭhi

6. Thus conventional Sammā Ditṭhi means the view to "do good things." One understands kamma and knows the consequences of evil deeds; see, "Buddha Dhamma - In a Chart."

- As we discussed in "Foundation of Dhamma," "doing good things" is better. Still, most of those things are done with the wrong intention of achieving something in return (good rebirth, winning a lottery, pass an examination, etc.). This kind of Sammā Diṭthi will perpetuate the samisāric journey, but is a required first stage to comprehend anicca.
- The danger in stopping at the conventional sammā ditthi is that we do not know what one will do in a future life (say another human birth.) One could be born under circumstances where one is not exposed to Buddha Dhamma, may associate with wrong people, and may commit kamma that will lead to rebirth in the apa $\bar{a} \bar{a}$ (lowest four realms). The other danger is that we do not know what kind of kamma we have done in previous lives, and we may already have some bad kamma seeds that could lead to a birth in the $a p \bar{a} y \bar{a}$.

## Transcendental or Lokuttara Sammā Diṭ̣hi

7. By lokuttara Sammā Ditṭhi is meant the true understanding of the nature of "this world" of 31 realms and the round of rebirths.

- For example, that 'there is a self" and 'there is no-self' are both incorrect, and things (both animate and inanimate) exist if the conditions for their existence are present (Pațicca Samuppāda).
- Even though one partially comprehends Sammā Diṭthi at the Sotāpanna stage, the understanding becomes complete only at the Arahant stage.

8. If one cultivates the "lokuttara" Sammā Dițthi and becomes a Sotāpanna, then one will be free from rebirths in the apāy $\bar{a}$.

- The four greed-based immoral thoughts that arise due to wrong views ("diṭthi sahagatha lobha citta") do not arise In a Sotāpanna, do not occur. See, "Akusala Citta - How a Sotāpanna Avoids Apāyagāmī Citta."

Next, "How do we Decide which View is Ditthi (Wrong View)?"

### 3.6.10 <br> Correct Meaning of Vacī Sañkhāra

November 8, 2016; revised September 25, 2018; October 16, 2020
July 12, 2021: It is critically important to understand what is meant by "sañkhāra." I just started a new section "Basic Framework of Buddha Dhamma" to discuss the relationship among the Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda. I am including this post in that section.

- Pronunciation of Pāli words like vacī, vitakka, and vicāra can be found in "Pāli Glossary - (L-Z)."

## Conscious Thoughts Are Also Vacī Sañkhāra

1. Many people believe that only speech involves vacī sañkhāra. However, vacī sañkhāra are defined as "vitakka vicārā vacī sañkhāra," which means "vacī sañkhāra are vitakka and vicārāa." This is in, for example, "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)."

- In the following, we will see that vacī sañkhāra are our conscious, deliberate thoughts in addition to speech.
- Furthermore, this post explains how our minds initiate all our actions and speech via javana citta.

2. Vitakka is the cetasika that points the mind to a given thought object (ārammana). Vicāra cetasika keeps the mind engaged on that thought object, i.e., generating new thoughts about it. Abhidhamma gives the following analogy. A bee flying to a certain flower is like vitakka (going to a new ārammaña) and then buzzing around that nectar is like vicāra (engaging with that ārammaṇa.)

- Similarly, when we focus the mind on a certain object, and then keep the mind there, we generate many thoughts about that object. These are conscious, deliberate thoughts, and not mano sañkhāra that arise automatically.
- For example, if we start thinking about an enemy, we could be spending a many minutes or even hours thinking bad thoughts (vacī sañkhāra) about that person. We do most of that in our minds, just talking to ourselves. But we may also get some of those thoughts out as actual words.

## Savitakka/Savicāra Are Present in "Good Thoughts"

3. However, vitakka and vicāra involve defiled thoughts or at least thoughts about getting things done to live this life.

- When one generates thoughts that specifically do not involve $\boldsymbol{k} \overline{\boldsymbol{a}} \boldsymbol{m a} \boldsymbol{a} \boldsymbol{a} g \boldsymbol{a}$ or other akusala - but the opposites (nekkhamma/kusala) - those are called savitakka and savicāra.
- That is how one gets into jhāna: By eliminating (or suppressing) vitakka/vicāra and cultivating savitakka/savicāra.
- This is clearly seen in any sutta that describes jhāna. For example, in "WebLink: suttacentral: Tapussa Sutta (AN 9.41),": "..So kho ahaì, ānanda, vivicceva kāmehi vivicca akusalehi dhammehi savitakkaì savicāraì vivekajaì pītisukhamं paṭhamaì jhānaí upasampajja viharāmi." When one is a jhāna, vitakka/vicāra with kāma rāga/akusala are absent, and only savitakka/savicāra will be present.
- In the above verse, "vivicceva kāmehi vivicca akusalehi dhammehi" means kāma rāga/akusala are absent in the mind while in jhāna.

## Mano Sañkhāra Arise Automatically Per Our Gati

4. In contrast, when we first thought about that person in the example of \#2 above, only mano sañkhāra were AUTOMATICALLY generated according to our gati. We don't have any control over mano sañkhāra other than by changing our gati over time.

- This is a key point to grasp, and is discussed in detail in the posts, "How Are Gati and Kilesa Incorporated into Thoughts?" and "Suffering in This Life and Paticca Samuppāda" as well as other posts in the "Living Dhamma" section.
- My goal in this post is to point out this critical difference between mano and vacī sañkhāra. Our nonautomatic, conscious thoughts - as well as speech - involve vacī sañkhāra.

## Kāya Sañkhāra Direct Bodily Actions

5. Kāya sañkhāra involves kamma done with bodily actions. So, one can come to the wrong conclusion that speech also is $k \bar{a} y a$ sañkhāra, since body parts (tongue, lips, and associated facial muscles) are moved during the speech.

- I automatically came to that wrong conclusion when I first analyzed these terms, without contemplating deeply on them. The key is that speech originates via types of rūpa that are different from that $r \bar{u} p a$ that lead to other bodily movements (like walking or moving arms).
- To understand this, one needs to know how our body parts move according to our thoughts.

6. Our physical body parts are really mechanical parts. There is no "life" in them unless a gandhabba controls that body. Gandhabba is an important concept in Buddha Dhamma. It has been neglected simply because it is not discussed in the infamous Visuddhimagga and other literature by Buddhaghosa, who singlehandedly distorted. Buddha Dhamma; see, "Incorrect Theravāda Interpretations - Historical Timeline."

- The concept of Gandhabba is an essential element in Buddha Dhamma; see, "Gandhabba State Evidence from Tipitaka."
- Without the concept of Gandhabba, it is not possible to explain the difference between bhava and $j \bar{a} t i$ : "Bhava and Jāti - States of Existence and Births Therein," and not believing it a micchā dittthi: "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- Tirokudda sutta is a famous sutta that describes the gandhabba as "tirokudda"; see, "Antarabhava and Gandhabba" and posts referred to there.

## Gandhabba (Mental Body) Controls the Physical Body

7. Let us briefly discuss how the mind of the gandhabba controls a physical body. The physical body comprises 32 body parts, just like a robot is made out of its various parts. What gives life to this physical body is the gandhabba, a very fine body smaller than an atom in modern science.

- Even though the gandhabba is negligibly small in "weight," it has this fine body that spreads over the physical body like a fine mesh; it is more like an energy field. A fine nervous system is associated with the gandhabba that overlaps the physical nervous system consisting of billions of nerve cells.
- Gandhabba also has the seat of the mind (hadaya vatthu) and five pasäda rūpa (that receive signals from the five physical senses via the brain) located close to the physical heart; see, "Brain - Interface between Mind and Body" for details.

## The Role of the Brain

8. How can such a negligibly small gandhabba move a heavy physical body? Gandhabba is more like a signal source that gives appropriate commands. The brain (which is a very sophisticated computer) that translates those commands into actual signals given to the physical nervous system.

- The energy to move those body parts comes from the food that we eat.
- The post, "Ghost in the Machine - Synonym for the Manomaya Kāya?," and other related posts that in more detail. But let us discuss the concept using an example, without getting into those details.

9. When someone decides to move his arm, it is actually the mind that resides in the gandhabba that makes that decision that makes that decision (and generates corresponding vacī sañkhāra). Then that signal goes to the brain, and the brain converts that "mental signal" into chemical signals. They, in turn, transmit through the nervous system to the muscles in the arm and move the arm.

- The energy produced by the digestion of our food goes into energizing the brain and moving body parts.
- So, the gandhabba uses a negligible fraction of the energy that is needed to move body parts. That is similar to keep the brain functioning. This can be compared to the tiny amount of energy spent by a computer in controlling a fighter jet. Jet fuel provides energy to move the heavy jet. In the same way, the food we eat provides the energy to move our physical bodies.
- We generate that small energy in our thoughts - via javana citta - as we discuss below.

## Kāya and Vacī Viññatti Rūpa

10. The commands from the gandhabba are signals or tiny amounts of energy, and these come in two varieties: kāya viññatti rūpa and vacī viñnatti rūpa. These are two of the 28 types of rūpa in Abhidhamma.

- The kāya viññatti rūpa control bodily movements, and vacī viññatti rūpa control speech.
- Javana citta generate these "rūpa" or "energy signals." Again, more information can be found in the Abhidhamma section.

11. Speech - done with vacī viññatti rūpa - is different from moving body parts. Speech involves complex muscle movements that are not yet understood by science. Moving body parts - done with kāya viñnatti rūpa - is simpler.

- What is behind vacī viññatti rūpa are vitakka and vicāra cetasika that are in those javana citta responsible for speech. However, when we just "talk to ourselves," the javana citta responsible are weaker than those responsible for actual speech. But those two cetasika are in both types of javana citta.
- Those javana citta that are responsible for physical action (like raising an arm or walking) involve kāya viñnatti rūpa, and the javana citta that generate those are even stronger.
- Therefore, both vacī sañkhāra (whether talking to oneself or actually speaking) and kāya sañkhāra (bodily actions) involve javana citta. All kamma that can be controlled directly by us are done via javana citta; see, "Javana of a Citta - The Root of Mental Power."

## Votthapana Citta - Decision to Take Action

12. The initial decision to generate vacī or kāya sañkhāra actually happens at the votthapana citta, which comes just before the seven javana citta in a citta vithi, which has 17 citta in total; see, "Citta Vithi Processing of Sense Inputs," and other related posts in the Abhidhamma section.

- That "initial reaction" to a sense input comes AUTOMATICALLY in the votthapana citta, and the nature of that reaction depends on one's gati. Thus, the AUTOMATIC mano sañkhāra are generated in that votthapana citta.

13. If you are not familiar with Abhidhamma, don't be discouraged by these details. This post provides undeniable evidence that vacī sañkhāra controls not only during speech but also while "talking to oneself."

- But for those who are familiar with Abhidhamma, the relationship between terminology and concepts could become much clearer with this discussion.

## Kammaṭthāna (Meditation Recital) Can Be Silent

14. Now, let us take a couple of examples to illustrate this without Abhidhamma. When one is doing a kammatthāna (i.e., meditation recita), one could either say the phrase(s) out loud or one could recite in one's head. Both involve vacī sañkhāra.

- A kammaṭthāna can be done in either of those two ways, and both involve vacī sañkhāra.
- Furthermore, the more one understands the concepts behind the meditation phrase's concepts, the more powerful those javana citta will be, and thus more effective the meditation session becomes.
- When one is starting on meditation, it is better to say the phrases out loud because it is easier to keep the mind on that topic. When one gets better at it, one could just recite it internally, without getting the words out.
- This is an example of a puññābhi sañkhāra (meritorious deed) that involves vacī sañkhāra.

## Need to Be Careful With Silent Vacī Sañkhāra

15. Now let us consider an apuññabhi sañkhāra (immoral deed) that involves vacī sañkhāra, where one starts generating bad thoughts about an enemy or a person that one dislikes. One could be generating a lot of such vacī sañkhāra internally, without saying a single word. However, when the feelings get strong, the words may just come out because the javana power of those javana citta could become uncontrollable.

- Even though the javana power involved in "silent vacī sañkhāra" are less than those involved in speech, one could be generating much more of those "silent vacī sañkhāra" and thus could be generating more kamma vipāka.
- Just like in the earlier example, the "power" behind those javana citta with vacī sañkhāra will be higher when the degree of hate associated with that person is higher. That is why it is harder to control oneself, when one is dealing with a person that one really hates.

## Sammā Sañkappa Involve Vacī Sañkhāra

16. In the Noble Eightfold Path, Sammā Sañkappa deals with only one component of vacī sañkhāra, those conscious thoughts without speech. Getting rid of all vacī sañkhāra involve both Sammā Sañkappa and Sammā Vācā.

- "Sañkappa" in Pāli or "sankappana" in Sinhala means conscious thoughts that involve "san" or things that contribute to the sansāric journey (rebirth process). Here "sankappanä" comes from "san" + "kappana," where "kappan $\bar{a} "$ means conscious thoughts. When one keeps thinking about something, those thoughts are called "sankappanā."
- Of course, "san" is a key Pāli term in Buddha Dhamma; see the subsection posts, "San." Sammā means to get rid of, as discussed in the same section.
- Therefore, Sammā Sañkappa or Sammā sankappanā means removing bad conscious and deliberate thoughts, and cultivating moral thoughts.
- Sammā vācā involves stopping immoral speech and generating moral speech.

17. The main point to be extracted from this discussion is that one needs to be very carefil about generating hateful (or greedy) conscious thoughts for long times. When one becomes aware of such thoughts, one CAN stop them. This is the basis of both Ānāpāna and Satipatṭhāna Bhāvanā.

- We always think conscious thoughts (vacī sañkhāra of the first kind) before acting on them, either via speech (vacī sañkhāra of the second kind) or via bodily actions (kāya sañkhāra)!
- This is discussed in detail in, "How Are Gati and Kilesa Incorporated into Thoughts?," "Suffering in This Life and Paticca Samuppāda," "Satipatthāna Sutta - Relevance to Suffering in This Life," as well as other posts in the "Living Dhamma" section.
- Experiencing pleasing sense objects (called kāma guna) is not kāma. Generating vacī sañkhāra (or kāma sankappanā) about them is kāma; see, "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda."

Further details at "Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra"

## Kāmacchanda and Icca - Being Blinded by Cravings

November 29, 2018

1. Kāmacchanda is a Pāli word which has roots in the key word "icca" (pronounced "ichcha"),

- There is no need to look for Sanskrit roots to find meanings hidden in Pāli words, and this is a good example.
- Kāmacchanda is one of the five hindrances (pañca n̄̄varaṇa); see, "Key to Calming the Mind - The Five Hindrances."

2. Kāmacchanda ("kāma"+"icca"+ "andha") means the POSSIBILITY to be blinded by sense desires. We will analyze it below. First let me explain the pronunciation of the key words "icca" and "anicca."

- The Pāli word that is spelled in English as "icca" is pronounced as "ichcha", and has the meaning of liking/craving.
- " $N a$ " + "icca" is "anicca," which basically means "(in the long term) it is not possible to get what one craves, likes, or wants."
- "Na" + "icca" is "anicca," just like "na" + "āgām $\vec{\imath} "$ is "Anāgāmī". [ $\overline{\boldsymbol{a} g} \boldsymbol{a} \boldsymbol{m} \overline{\mathrm{c}}$ : (adj.), coming; one who comes.]

Such "combined words" are very common in Pāli. I will just show two examples from the Dhammacakkappavattana Sutta:

- "yampiccham na labhati tampi dukkham"" is "yam pi iccham na labhati tam pi dukkham." Here "strong craving" is expressed by adding an extra " h " to go from icca to iccha.

In the present case, "Kāma"+"icca"+ "anda" becomes Kāmacchanda.

- That is similar to "ayamantimā jāti" in the Dhammacakkappavattana Sutta coming from "ayam antima jāti."

Here is an audio recording on how these words are pronounced:
WebLink: audio pronounciation of kāmacchanda Download
3. Now let us look at the meaning of the other components of the word kāmacchanda.

- Here "kāma" conventionally means indulging in sense pleasures that belong to the kāma loka: eye, ear, nose, tongue, and the body; "andha" means blind.
- If the attraction for something becomes so strong that one's mind may become "blind to rational thought." Mind can lose any control over what is sensible and what is not sensible (or immoral). Kämacchanda means "blinded by cravings for sense pleasures."
- Anyone who has not comprehending Tilakkhaṇa (for which removal of the 10 types of micchā ditṭhi is a pre-condition), would have kāmacchanda.
- However, one with kāmacchanda MAY not commit any immoral action, unless the temptation becomes "high."

4. When a strong sense input comes, one could be blinded about the possible consequences and may do something immoral.

- For example, if one gets an opportunity to rob or even kill someone without getting caught, that could become very tempting.
- We have heard about situations where well-know people who are considered to be "highly moral" are charged with rape or taking large bribes.

5. This possibility of generating kāmacchanda is removed when one attains the Sotāpanna stage of Nibbāna. Kāmacchanda will be reduced to kāma rāga for a Sotāpanna.

- Having kāma rāga means one still has cravings for sense pleasures, but WILL NOT do anything immoral to get such sense pleasures.
- For example, a Sotāpanna could a happily married person taking care of a family and engaging in sexual activities with the spouse. He/she may like to enjoy other sense pleasures too.
- Kāma rāga is removed only at the Anāgāmi stage of Nibbāna.

6. Now, let us analyze the word "kāma" in a bit more detail. The true meaning of "kāma" comes from the WebLink: suttacentral: Nibbedhika Sutta (AN 6.63):
"Sañkapparāgo purisassa kāmo, Netekāmā yāni citrāni loke; Sañkapparāgo purisassa kāmo,
Tiṭthanti citrāni tatheva loke; Athettha dhīrā vinayanti chandanti."

- Kāma is defined as "sañkappa rāga about sense pleasing material things (citrāni loke)." And "sañkappa" means "generating conscious thoughts."
- For example, Sammā Sañkappa in the Noble Eightfold Path is about "contemplating on fruitful Dhamma concepts with the Nibbāna as the goal."
- Vacī sañkhāra include BOTH sañkappa (conscious thoughts) and vācā (speech); they both depend on the cetasika (mental factors) of vitakka and vicära that arise in the mind based on one's mindset, see, "Correct Meaning of Vacī Sañkhāra."

7. The above explanation provides us with a way to start reducing kāmacchanda even before one gets rid of the 10 types of micchā dittthi.

- It is important to note that "ka$m a$ " is not just engaging in activities to fulfill sense pleasures; "kāma" includes indulging in conscious thoughts about the five sense faculties that belong to the kāma loka: eye, ear, nose, tongue, and the body.
- Most times, people enjoy just thinking about sense pleasures, for example, sex or food.
- Every time one engages in generating conscious thoughts about sense pleasures, one's kāmacchanda will increase. By cutting down on such "day dreaming", one could reduce one's kāmacchanda.
- However, it will be permanently reduced to the kāma rāga level only at the Sotāpanna stage.

8. Even when one has kāmacchanda, one may be able to SUPPRESS it temporarily by focusing the mind on a neutral object, for example, on breath or a kasina object.

- That is how ancient yogis, and even some people today are able to get cultivate $j h \bar{a} n \bar{a}$ by engaging in breath or kasiña meditations.
- Furthermore, one would need to be abstaining from akusala kamma.

9. This is why in any sutta that describes jhāna has the following verse: "..bhikkhu vivicceva kāmehi vivicca akusalehi dhammehi savitakkaì savicāraì vivekajaì pītisukhaì paṭhamaí jhānamin upasampajja viharati.."

- That means even to get to the first jhāna, one would need to be abstaining from akusala kamma (vivicca akusalehi dhammehi) and kāma sañkappa (vivicceva kāmehi).
- Therefore, it is clear from the above discussion that even a Sotāpanna is not guaranteed to be able to attain $j h a ̄ n a ̄$.
- Jhānā are different from magga phala. We all have cultivated jhānā in our deep past. It is easier to get to $j h \bar{a} n \bar{a}$ for those who have practiced $j h a \bar{a} \bar{a}$ in recent lives.
- However, one needs to attain a magga phala just once.

10. One can get an idea about that by considering the fact that such "sense pleasing things" are not there in brahma loka.

- A rūpa loka brahma (i.e., a rūpāvacara brahma) has a very fine body and does not have a nose to smell, a tongue to taste, or a solid enough body to feel touch. It can only see and hear.
- Since a brahma cannot taste, smell or touch, a brahma does not engage in those sense pleasures that are available in the kāma loka like tasting food, smelling nice aroma, or engage in sex sex. Brahmā are unisex. However, even a human female who cultivated jhān $\bar{a}$ and is born as a brahma is said to be have "purisa gati" as a brahma: WebLink: suttacentral: Bahdhātuka Sutta (MN 115). That term "purisa" is not used in the sense of "male" (Atthapurisa puggalā include women who have comprehended the Four Noble Truths, i.e., belong to the Sañgha).

## - Kämacchanda involves only those sense pleasures that are available only in kāma loka.

11. Jhānic pleasures are cultivated by at least suppressing kāma rāga; see, "Three Kinds of Happiness What is Nirāmisa Sukha?."

- That involves subsiding the "heating of the mind" due to kāma rāga.
- We don't realize it, but our minds are heated and agitated by the desire for sense pleasures. However, the desire for sense pleasures cannot be removed by sheer will power, and becomes possible normally after the Sotāpanna stage; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

12. "Tāpa" (pronounced "thāpa") means heat; when we get really stressful we feel a "fire" in the heart. When it gets really bad, people say, "I could feel my heart burn" when they hear an extremely poignant news.

- In the case of getting angry, we can definitely feel this "fire" within; see, "How to Taste Nibbāna."
- Even though we do not realize it, even engaging in kāma sañkappa ("day dreaming about sense pleasures") - let alone engaging in them - leads to a "highly perturbed state of mind."
- And "āt $\bar{a} p i$ " is to remove that "fire" from the heart and the stress from the mind, and calm the mind. This is the "cooling down", "niveema," "nivana" or early stages of Nibbāna.

13. This is actually what is meant by the verse, "āt $\bar{a} p \bar{\imath}$ sampajāno, satim $\bar{a}$ vineyya loke abhijjh $\bar{a}$ domanassam" in the Mahā Satipatṭhāna Sutta.

- It basically means: "get rid of the fire or heat in the mind by being aware of kilesa or defilements and by removing extreme greed (abhijjhā) that leads to a depressed mind (domanassa) through discipline (vineyya)."
- We will discuss this in detail later, but here is the summary: When one gets angry, that is domanassa. When one has strong sense desires that is abhijjhā.
- When one can at least suppress abhijjhā and domanassa, one's mind automatically gets to samādhi.

14. These are just basic principles. Furthermore, one cannot get rid of abhijjhā domanassa quickly just by sheer will power.

- One needs to learn pure Dhamma and understand the basic principles of WHY a mind gets heated, excited, and becomes vulnerable to doing more akusala kamma.
- First thing to realize is that one's actions (kamma) are going to have consequences (vipäka), if not in this life in future lives.
- And that is not possible without rebirth. This is why rebirth is a built-in foundation of Buddha Dhamma.

### 3.7 The Five Aggregates (Pañcakkhandha)

### 3.7.1 Five Aggregates - Introduction

## Re-written April 17, 2020; revised April 19, 2020

## Introduction

1. Five aggregates (pañcakkhandha) represent ANY given living-being. In a series of posts, I will try to explain this concept by addressing the following points.

- Most people today, including many scientists, believe that a "person" exists as long as the physical body exists. We are born (due to no apparent reason,) then we live our lives, and when we die, that is the end of the story. Enjoy life while it lasts! That is the "materialist view."
- Then there are people belonging to various religions who believe the following. At the end of this life, one will either go to hell or merge with the Creator (in heaven) for an eternity. For them, there is something in us in addition to the physical body. That is the "soul" that either goes to hell or heaven. We can call this the "soul theory" for simplicity. In Hinduism, it is a little bit different, but primarily the same result. They believe that the "mental body" or the "ātman" goes through many "re-incarnations," but the ultimate destiny is to merge with "Mahā Brahma" and to exist there forever.
- Those are straightforward concepts to grasp. But they do not have a solid "scientific" or logical foundation. Neither "theory" explains how each of us came to existence. The Buddha's explanation is very different and based on the Principle of Causality, which is Paticca Samuppāda. However, it takes a real effort to understand fully.
- This is going to be another way that I will try to explain Buddha Dhamma. It could be simpler than my previous approaches. Of course, they are all self-consistent. The most recent series of posts based on a bit deeper analysis is at "Origin of Life."

## Mind and Matter - Where Is the Connection?

2. How consciousness arises is THE critical issue that no one else but a Buddha can provide a logical and self-consistent answer. Materialists are focusing on the brain as the origin of thoughts or consciousness. However, that is a futile effort since inert matter (atoms and molecules) can NEVER give rise to "mental phenomena" like pain, joy, jealousy, greed. That should be self-evident!

- The proponents of an "unchanging soul" BELIEVE (without any evidence or a proof-of-principle) that consciousness (and thoughts) arise in a "mental body" and that mental body (soul or àtman) detaches from the physical body at death and goes to hell or heaven.
- The Buddha said that there is a "mental body" (gandhabba) that detaches from the physical body, but that mental body is not an unchanging entity like a "soul" or an "ātman." Furthermore, that mental body can take many different forms based on the existence in one of the 31 realms of existence. For example, the mental-body of a human is very different from that of an animal, a Deva, or a Brahma. There is no unchanging "soul" or an "ātman." That should be very clear since, at Parinibbāna of an Arahant, no trace of that Arahant left in "this world of 31 realms." There was NOTHING of the essence, to begin with!

## The Irrelevant Issue of a "No-Self" in Buddha Dhamma

3. So, it should be quite clear that the idea of a permanent "self" is absent in Buddha's teachings. However, the Buddha taught that it is also not correct to say a "self" does not exist for an average human. In other words, a "self" exists until one fully comprehends that the root cause of samisāric suffering is the perception (saññ̄a) of a "self" or "me." See, "An Apparent "Self" Is Involved in Kamma Generation."

- An average human has both the wrong ditṭhi of a "me" and also the sañña (perception) of a "me." It is better to use the word "me" than "self" because that is precisely how the Buddha explained it.
- The wrong ditṭhi of a "me" goes away at the Sotāpanna stage. The false perception of a "me" (or the sense of "me") goes away only at the Arahant stage. More information on ditṭhi and saññā at, "Ditthi (Wrong Views), Sammā Ditthi (Good/Correct Views)," "Sañ̃ña - What It Really Means," and "Vipallāsa (Ditthi, Sañ̃̄̄a, Citta) Affect Sañkhāra." Of course, more relevant posts can be found by using the "Search" box on the top right.
- At the end of the "Origin of Life" series, it was shown that, "Origin of Life - One Creates One's Own Future Lives." Any person creates his/her own future lives! In the present series of posts, I will try to show the same with this simpler analysis.

## A Living-Being - Body and Mind

4. Each living-being (whether we see them or not) has a body and a mind. Some of the "bodies" in other realms are so subtle that we cannot see them. Nevertheless, a living-being has at least a "trace of matter."

- Furthermore, our mind is not working at all times. While we are in a deep sleep, we are "totally out of this world." It is as if we did not exist during that time. That is especially true if one becomes unconscious. That is a critical point to understand.
- We need to realize that we do not have either an "unchanging body" or "an unchanging mind." Even during a lifetime, both those change moment-to-moment. The physical body (part of rūpa) is different from rūpakkhandha.

## Rūpa Versus Rūpakkhandha

5. The Buddha included all types of matter that one has encountered at any time in one huge "collection" or "aggregate." That is the "rūpa aggregate" or "rūpa khandha" or "rūpakkhandha."

- That means what is in the rūpakkhandha are not real (physical) rūpa. Whatever observed becomes just a mental imprint or a memory, moments after observed. I will discuss this in detail in the next post.
- The Buddha divided the mind or "mental aspects" into four categories: vedanā, sañ̃̄̄̄, sañkhāra, and viññāna. These entities arise and fade away, but a record of them exists (going back to an untraceable beginning.) Those "collections" or 'aggregates" are vedanākkhandha, sañ̃̄̄̄kkhandha, sañkhārakkhandha, and viññạ̄akkhandha.

## The Five Aggregates Describe any "Living-Being"

6. As we will see, a living being's existence, together with experiences, can be described entirely in terms of those five aggregates. The Buddha showed that those five entities arise and fade away in a manner fully explained in terms of causes and their effect. There is no hidden "soul" or an "ātman."

- However, at any given time, there is a "person" with a set of gati (habits/character) responsible for the actions done at that time. It is not an automated process. That is why we cannot say that there is no 'self' up to the Arahant stage. There is a "self" doing things on his/her own. Of course, only until seeing the futility of such "doings" or "(abhi)sañkhāra."
- That last bullet point is what we need to understand. We will discuss that systematically, this time with a little bit different approach.

## One Type of Consciousness (Vipāka Viñ̃nāṇa) Arises With an Ārammaṇa

7. We tend to think of the mind as our own. But in reality, our consciousness arises based on two conditions.

- First, we must be awake, and a sensory event must trigger one of the six senses. If someone is unconscious, no matter how loud we talk, he will not hear. No matter how hard we shake him, he will not feel, etc.
- Second, one of our six senses must be stimulated by an external sight, sound, smell, taste, touch, or a memory. The first five come through our five physical senses, and the sixth are the thoughts that come to our mind directly.
- An "external trigger" that initiates a new consciousness is called an ārammaña. Such an
 one of the six consciousness (viññanna) arise. These are vipāka viññāna. They just come in due to prior kamma, as kamma vipāka.
- These types of vipāka viññāna arise via, for example, "Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānaìm." See, "Contact Between Āyatana Leads to Vipāka Viñ̃̃āna."

## Second Type of Consciousness (Kamma Viññạ̣̄a) May Arise Based on an Arammana

8. If that external "thought object" or "ārammana" is of interest, then we start generating CONSCIOUS THOUGHTS about that ārammaṇa.

- At this point, our consciousness switches to a new type called a kamma viññanna. That is because this new consciousness is more than just "consciousness" or "awareness." Now we are interested in pursuing what we have seen, heard, etc. and to "accomplish something more."
- For example, a friend may offer a piece of cake, and the taste of that cake is a vipāka viññāna. But if we generate a craving for that cake, we may want to taste it again in the future. We may start thinking about how to either buy it or make it, and ask the friend about those two possibilities. That future expectation is in the new type of kamma viññāna generated via "avijjā paccayā sañkhāra."
- In other words, now we have gone beyond "just experiencing the taste of the cake" or the "vipāka viññāna." Now we have a future expectation to taste it again with a "kamma viññāna" generated via our conscious thoughts (vacī sañkhāra.)
- Stated in another way, we have initiated a Paticca Samuppāda process with "avijjā paccayā sañkhāra" and "saṅkhāra paccayā viññāna." That viññāna is a kamma viññạna.

## A Living-Being - Body With a Mind Interacting With the External World

9. What we discussed above in summary form is what our lives are all about. We have a physical body with a mind. The physical body gets sensory inputs from the external world. Then we think about them and pursue some sensory inputs that we like and try to avoid those we do not like.

- In that process, we create new kamma that leads to the arising of a new body when the current body dies.
- Of course, the types of bodies that arise in future lives depend on the types of kamma that we do, based on those sensory experiences. If one kills another person to acquire that person's wealth, then one will be reborn in a bad realm (apāy $\bar{a}$.) If one generates compassionate thoughts about hungry people and offer them food, one may be reborn in a good realm.
- That is how the rebirth process continues.

## Summary

10. We have laid the framework to look at the conscious life and the rebirth process from a viewpoint based on the five aggregates or pañcakkhandha.

- In this analysis, the whole world is divided into just five categories. One is the rūpa aggregate, the "collection of MEMORIES of all $r \bar{u} p a$ " or the rūpakkhandha. That includes memories of all "material
objects," including our physical bodies and all external objects that one has seen in all previous lives. We will discuss that in the next post.
- The other four aggregates or "heaps" or "collections" of four types of mental entities: vedanā (feelings), saññ̄a (perception), sañkhāra (thoughts), and viññāna (vipāka viññāna or kamma viññāna.)
- We will discuss each category in detail in future posts.
- I am re-writing the sub-section on the "Five Aggregates" and will be replacing the old posts there. Of course, now I have many recent related posts to provide more information.

### 3.7.2 Difference Between Physical Rūpa and Rūpakkhandha

Revised October 20, 2018; September 18, 2019; April 24, 2020; re-written April 3, 2021; revised August 4, 2021; August 8, 2022

## Introduction

1. Translation of rūpakkhandha as "form aggregate" may give the wrong impression that it is a "collection of solid objects." It is critical to understand the difference Between rūpa and rūpakkhandha. Innumerable rūpa exist worldwide, and only those experienced by a person are included in their rūpakkhandha.

- Therefore, one person's $r \bar{u} p a k k h a n d h a$ is different from another person's $r \bar{u} p a k k h a n d h a$.
- Instead of memorizing Pāli words, we need to understand what is meant by such Pāli words and use the Pāli words when there is ambiguity. Many key Pāli words do not have equivalent English words.

## What Is a Rūpa?

2. Before we understand the difference between a "rūpa" and "rūpakkhandha," we need to understand what the Buddha meant by a "rūpa." The Pāli word "rūpa" is customarily translated as "form."

- The definition of a rūpa is in many places in Tipitaka, for example, SN 22.56 and SN 22.57. Simply put, "A rūpa consists of the four great elements, derived from the four great elements."
- A rūpa made of the four great elements is not necessarily a solid object like a tree (those are vanṇa rüpa.) Types of energy (like light and sound) are included in the rūpa category. All sensory inputs to the five physical senses are rūpa.
- The Buddha defined rūpa as ALL those that can provide a sensory experience (viññāna.) Therefore, dhammā that we experience with the mind are also a type of rūpa. See, "What are Rūpa? Dhammā are Rūpa too!" That subject is a bit deep. Don't worry about that right now if you are not familiar with it.

3. Therefore, we can see that light, sound, odors, taste, and touch are all types of $r \bar{u} p a$. It is only within the past 100 years or so that scientists admitted that matter and energy are the same.

- In modern-day terms, physical rūpa are "solid matter" (human bodies, trees, houses, etc.) OR "energy" (light, sound, heat, etc.). With Einstein's famous equation $\mathrm{E}=\mathrm{mc}^{\wedge} 2$, modern science acknowledged that matter and energy are intrinsically the same.
- In terms of Buddha Dhamma, all those rūpa are collections of suddhatthaka, the "smallest unit of rūpa." We usually call visible objects "matter." And invisible energy forms (like heat, sound) "energy." Both types consist of suddhatthaka. A suddhatthaka is the smallest unit of energy/matter in Buddha Dhamma. It is unimaginably tiny, billions of times smaller than an atom or even an electron in modern science.
－By the way，dhammā that we detect directly with the mind are rūpa below the suddhatthaka stage（just energy．）
－The 28 types of $r \bar{u} p a$ are listed in＂Rūpa（Material Form）－Table．＂We can see that the ten types of rūpa on the right－hand side of the Table are not what we usually think of as＂matter．＂

## Khandha Is a＂Collection＂or an＂Aggregate＂of Rūpa Experienced

4．Before we discuss $r \bar{u} p a k k h a n d h a, ~ i t ~ a l s o ~ h e l p s ~ t o ~ u n d e r s t a n d ~ w h a t ~ a ~ " k h a n d h a " ~ i s . ~ I n ~ P a ̄ l i ~(a n d ~ S i n h a l a), ~$ it means a＂heap＂or a＂pile．＂In Sinhala，a hill or a＂pile of things＂is called a＂kanda＂（203＇z）．So，aggregate is not a bad translation for khandha（Dっかわin Sinhala for the Pāli word）．
－Rūpakkhandha includes all types of rūpa that one has experienced／expects to experience／is experiencing now，as discussed below．
－We see an object in a series of high－speed＂seeing events．＂Those individual＂snapshots＂don＇t register in our minds．Only the overall effect of a large number of snapshots is registered and added to rūpa khandha．It rhymes like＂rūpakkhandha．＂We have seen such a combination of words（sandhi）in Pāli terms like Dhammacakkappavattana Sutta，the same as Dhamma Cakka Pavattana Sutta．
－Another example is dhammassavana．＂Dhamma savana＂rhymes with dhammassavana．＂Dhamma savana＂is listening to the dhamma（discourse）．＂

## Rūpakkhandha is All Mental

5．It is essential to realize that rūpakkhandha is all mental．It is NOT a＂collection of material things，＂ as the term＂form aggregate＂may imply．Towards the end of the＂WebLink：suttacentral： Mahāhatthipadopama Sutta（MN 28），＂Ven．Sāriputta explains rūpakkhandha．
－Just the presence of an object，a sound，odor，taste，or touch is not enough to be included in rūpakkhandha．For example，if X is sitting in a pitch dark room， X will not see anything there，even though there may be many objects in the room．If X shines a flashlight on a chair，then X can see that chair．If the chair＇s image registers in X＇s mind，then it becomes a part of the rūpakkhandha for X．
－Let us take another example． X and Y are in a room reading books，and X is fully absorbed in reading， but Y has not had much interest in his book． Y hears a dog barking and that sound registers in his mind， i．e．，the＂dog bark＂becomes a part of his rūpakkhandha．However，even though that sound would have reached X＇s ears too，he had his attention entirely focused on the book and did not hear that＂dog bark．＂ Thus，the＂dog bark＂is NOT a part of X＇s rūpakkhandha．
－Now it should be quite clear that each person has their rūpakkhandha．

## Rūpakkhandha is Unimaginably Huge！

## 6．Let us look in more detail to see that these rūpakkhandha are＂mental impressions＂of rūpa and NOT the rūpa out there．

－The critical point is that when we experience a rūpa，that present moment is quickly gone．Most of rüpakkhandha is what one has already experienced．Everything we have experienced in all our past rebirths is in the rūpakkhandha！
－Those $r \bar{u} p \bar{a}$ that one has seen in the past are one＇s atīta ru$p \bar{a}$ ，including anything that one ever saw （including in previous births）．These cannot be physical $r \bar{u} p \bar{a}$ ．They are just memories of a $r \bar{u} p a$ that existed in the past．For example，one may remember a tree in the backyard as a child．That tree is no longer there，but one can still＂see＂that tree in one＇s mind．Same for one＇s dead parents or grandparents who may be no longer alive．

- Any $r \bar{u} p a$ about the future or an anāgata rūpa (for example, a sketch of the type of house one is thinking about building) can change with time. That does not even involve a real physical rūpa.
- Any rūpa that one sees at present (paccuppanna rūpa) goes to the category of atīta rūpa in a split second. Even if we never see that object again, that memory will remain.

## More Types of $\boldsymbol{R} \bar{u} p a$ in $R \bar{u} p a k k h a n d h a$

7. Internal (ajjhatta) rūpa are part of oneself: all body parts, including the ones inside the body. External (bahiddha) rūpa are, of course, anything outside of one's body. Coarse (olārika) rūpa are what we call "solid matter," and fine/subtle (sukuma) rūpa are "energy" (heat, sound, dhammā, etc.).

- There are rūpa that are "bad" (hīna), and there are others that are "good" (paṇīta).
- Some rūpa are far (dūre), and some are near (santike).
- Therefore, we see that there could be some overlaps between these categories.
- Many of these in the $r \bar{u} p a k k h a n d h a$ we have not even seen. For example, we have a mental impression of our hearts, but we have not seen our hearts. We may not have seen some landmarks like the Chinese Great Wall, but only pictures of them. Yet, we do have mental impressions of those.
- Altogether there are 11 types included in rūpakkhandha. The WebLink: suttacentral: Khandha Sutta (SN 22.48) (among many other suttā) summarizes what is included in rüpakkhandha. "Yaï kiñci, bhikkhave, rūpaì atītānāgatapaccuppannaì (atīta, anāgata, paccuppanna) ajjhattaìm vā
 vuccati rūpakkhandho."
- The 11 types are past, future, current, internal, external, coarse, subtle, good, bad, far, and near.

## Difference Between Rūpa and Rūpakkhandha

8. Now we can see the main difference between physical rūpa and rūpakkhandha.

- A physical $r \bar{u} p a$ is either of the following two kinds. A solid object that one sees with one 's eyes or touches with one's body (a person, a person's body or a body part, a tree, a planet, a star, etc.) Those are what we usually call "solid objects." Then, other sensory inputs come through the other three sense doors (smells, tastes, or sounds).
- Rūpakkhandha has MENTAL IMPRESSIONS of all external rūpā that one has EXPERIENCED. Rūpakkhandha is NOT tangible or has any energy in them. One's rūpakkhandha is INFINITE. It has records of ALL one has seen in ALL past lives going back and back in time without "an actual beginning."
- That is why those with iddhi (supernormal) powers can recall events that took place billions of years ago. The Buddha recalled how he received his first "niyata vivarana," or confirmation that he would become a Buddha, trillions of years ago, from Buddha Dīpañkara. See, "Pāramitā and Niyata Vivarana - Myths or Realities?" [vivarana : [nt.] expansion, uncovering, showing, clarifying.]
- Some people can recall ANY event during their current life (for example, what one ate for lunch on a particular day ten years ago.) See "Recent Evidence for Unbroken Memory Records (HSAM)." That confirms that all events are "recorded" and kept intact in viñ̃̄āṇa dhātu. See "Where Are Memories Stored? - Viññān̄a Dhātu."

9. Let us take another example to visualize this difference between actual $r \bar{u} p a$ and $r \bar{u} p a k k h a n d h a$.

- The 2001 terrorist attack destroyed the twin towers in New York.
- If someone had seen those twin towers in New York, those towers would be in that person's $r \bar{u} p a k k h a n d h a$. That person can still recall them in his mind. Those physical structures are not there anymore but are in his rüpakkhandha!
- But those physical $r \bar{u} p \bar{a}$ (twin towers) in New York are no longer there.
- Furthermore, if someone had not seen them before their destruction, those towers would not be in that person's rūpakkhandha.

## Rūpakkhandha Is Personal

10. Since we have seen very different things in our current lives (and in our past lives), our rūpakkhandha are very different. Each person's $r \bar{u} p a k k h a n d h a$ is unique.

When experiencing a rūpa through any of the six sense faculties leads to the generation of vedanā, sañ $\bar{n} \bar{a}$, sañkhāra, and viññāna. That is discussed in many suttā, and we have discussed in detail the Chachakka Sutta (MN 148). See "Chachakka Sutta - Six Types of Vipāka Viññāna."

- We can also see that each has their vedanākkhandha, saññākkhandha, sañkhārakkhandha, and viññānakkhandha.
- They are analyzed in the same way. That is how the pañcakkhandha (five aggregates) arises. Therefore, pañcakkhandha is also unique to each person.
- An important example of crystalizing the concept of rūpakkhandha in "Rūpakkhandha and Rūpa Upādānakkhandha."

## Rūpakkhandha and Rūpa Upādānakkhandha

May 1, 2020

## Introduction - What Is Rūpupādānakkhandha?

1. In the previous post, "Difference Between Physical Rūpa and Rūpakkhandha," we discussed the difference between $r \bar{u} p a$ and $r \bar{u} p a k k h a n d h a$.

- In simple terms, rūpa are the "visuals, sounds, odors, tastes, and touches due to solid bodies." Note that $r \bar{u} p a$ is a generic term. It indicates any such $r \bar{u} p a$ existing anywhere and does not pertain to any given person.
" On the other hand, Rūpakkhandha has one's "mental impressions" of ALL such rūpa that we have experienced (including in previous lives), experiencing now, and hope to experience in the future. Thus, rūpakkhandha is specific to a given person. Each person has his/her rūpakkhandha.
- The word rūpa upādānakkhandha or rūpupādānakkhandha comes from a combination of three words: rūpa, upādāna, and khandha. Therefore, rūpa upādānakkhandha is part of rūpakkhandha that we crave (i.e., would like to experience again.)
- By the way, rūpakkhandha and rūpupādānakkhandha are conventionally translated as, "form aggregate" and "clinging form aggregate."

## Meanings of Upādāna and Taṇhā

2. Taṇh $\bar{a}$ means "attaching to things in this world" with greed, hate, and ignorance. Most times, taṇh $\bar{a}$ is incorrectly translated as "craving."

- The word taṇh $\bar{a}$ comes from "thán" + "h $\bar{a}$," where "thán" rhymes like in "thatch" and means "a place and " $h \vec{a}$ " means getting attached or fused. That can happen not only with greed but also with anger and ignorance. see, "Tanh $\bar{a}$ - How we Attach via Greed, Hate, and Ignorance." Note that "tan" in taṇhā pronounced like in "thunder." There are three types of tanhha. Vibhava taṇhā is removed at the Sotāpanna stage and kāma taṇhā removed at the Anāgāmi stage. Bhava taṇhā is eliminated only at the Arahant stage. See, "Kāma Tanhhā, Bhava Tanhā, Vibhava Tanhā."
- Upādāna ("upa" + "ādāna" where "upa" means "close" and "ādāna" means "pull") means "pull and keep close." One tries to pull and keep close only things that one desires. See, "Difference Between Tanhā and Upādāna." This post will take some time to digest. But it will help one clearly understand both those terms and the difference between them.
- There are four types of upādāna. Those are diṭthupādāna (wrong views,) sīlabbatupādāna (rituals,) kāmupādāna (for sensual pleasures,) and attavādupādāna (sense of "me" or "mine.") The first two removed at the Sotāpanna stage, third at the Anāgāmi, and the fourth at the Arahant stage of Nibbāna. Note the combination of words. For example, diṭthupādāna is a combination of dittthi and upādāna.

## Upādāna - To "Keep Close"

3. Therefore, upādāna means things or memories that we tend to "keep close" (in mind.) Our way of thinking, speaking, and doing things is dictated by different types of upādāna.

- Therefore, rūpupādānakkhandha means those mental impressions of "visuals, sounds, odors, tastes, and touches due to solid bodies" that we like and would like to experience again. In other words, those are the experiences we desire or crave for. That is a small fraction of one's rūpakkhandha. A given person has no interest in most of the rūpakkhandha.
- The Pāli word that describes "desire" is icca. Sometimes the word "iccha" with the emphasis on the last "cha"" sound is used to mean a "strong desire." As we will see in a few posts, this connection will help us clarify the First Noble Truth on suffering in another way.
- As an aside, you may want to refresh the memory on the fact that Pāli words are written/pronounced differently compared to "standard English." See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1."

## Upādāna Is Different from Taṇhā

4. When an ārammaṇa (thought object) comes to our mind, we may FIRST instinctively "attach" to it. Then it is at the upādāna stage that we keep on thinking, speaking, and doing things with the expectations. Those future expectations are either to enjoy something or to avoid things that one does not like. It is at that second stage that we accumulate new kamma, as explained in "Difference Between Tanhā and Upādāna." That leads to "bhava" formation, which in turn, will lead to future rebirth ( $j \bar{a} t i$.

- What I mentioned above are four steps in Pațicca Samuppāda: "vedanā paccayā taṇhā", "tanhhā paccayā upādāna," "upādāna paccayā bhava," and "bhava paccayā jāti." See details at "Paticca Samuppāda."
- It is critical to realize that those things that we do to acquire new kamma are done with sañkhāra. Furthermore, we do sañkhāra both at "avijjā paccayā sañkhāra" AND "taṇhā paccayā upādāna." That is discussed in detail with the help of a graphic in the post, "Difference Between Tanhā and Upādāna."
- Most Paticca Samuppāda cycles start NOT with "avijjā paccayā sañkhāra," but with "taṇhā paccayā upādāna," as explained in that post.

5. We normally assign the word "form" or "rūpa" to things we see, including our bodies as well as all external objects and living beings. As I explained above, sounds, odors, tastes, and body touches also arise due to "rūpa." As we discussed in \#7 of the previous post, "Difference Between Physical Rūpa and Rūpakkhandha," the 11 types of $r \bar{u} p a$ included in the rūpakkhandha include paccuppanna rūpa or any $r u \bar{p} a$ that is being experienced at any given moment.

- One important rūpa that one experiences most of the day is one's own body (ajjhatta rūpa.)
- Therefore, one's physical body (more correctly mental impression of it) is part of rūpakkhandha.
- Even though we perceive that these are existing "things," they have momentary existence in a deeper sense. I will give a quick example. A fly lives only a few days (let us say six days.) That fly would age and die in six days. If we see that fly in three days, it would have aged, and its body would be different from that we saw six days ago. When we keep reducing the "time interval," we realize that even a moment later, it is not the same fly.
- The same argument holds for our bodies too. It changes over our lifetime, and that is the cumulative effect of momentary changes. That is why the Buddha said that you could not touch the same person twice! (If anyone remembers the sutta, please let me know: lal@puredhamma.net.)
- As we will see in future posts, "dhamma"" experienced by the mind is also a form of ru$p a$ in Buddha Dhamma. That last category is "anidassanamं, appatighaí" or "cannot be seen or touched."

## We Do Not Attach to "Physical Objects" but to Our "Mental Impressions" or "Rūpakkhandha"

6. A given object, whether it is inert or living, is NOT the CAUSE for attachment (taṇhā and upādāna.) Rather, it is the "way that we perceive that object" based on our gati, that we attach.

- Think about a person that you don't like. As you know, there are many other people, including his/her spouse, children, friends, etc. who may like that person. The reason that you don't like that person is based on your gati. By the way, both you and that person may be considered "good citizens" by most other neutral observers.
- Suppose a guest coming to dinner brings a bottle of alcohol (say, whiskey.) The husband may be happy to see it, but the wife (who may be trying to discourage the husband from having too many drinks) could be irritated. Now, if the guest brought a video game for their child, the child would be delighted. But both parents may become somewhat unhappy thinking that the child may spend too much time playing video games.
- These are the things that we need to contemplate while doing insight mediation (Vipassanā.) That is the best way to understand key concepts in Buddha Dhamma, like Paṭicca Samuppāda. We need to apply what we learn in practical situations.
- Therefore, it is not an external rūpa that makes us attach ( $\operatorname{tanhh} \bar{a}$.) It is our gati (which are related to our anusaya) that make us attach to CERTAIN TYPES of rūpa. The following example illustrates how the same $r \bar{u} p a$ may or may not lead to taṇh $\bar{a}$ even in a given person.

## Rūpakkhandha to R̄̄pa Upādānakkhandha - Instant Change

7. The following is said to have happened many years ago in Sri Lanka. A mother had to go overseas when her son was less than a year old. She had been overseas for many years and came back. She had not even seen any pictures of the boy, who was now a teenager.

- When she came home, she learned that the boy was visiting a neighbor, and she started walking there. On the way, a teenager playing with some friends on the road bumped into her. She became irritated and admonished the boy.
- But then another person on the street said, "Don't you recognize your son? Well. How can you? You have been away all this time." Hearing that, she asked, "Oh, is that my son?" and immediately ran back to hug him.
- He was "just another teenager" until she came to know that he was her son. But the moment she realized that it was her son, the whole situation changed. His figure was not another "rūpa" in her "rūpakkhandha." Now, he became a part of her rūpa upādānakkhandha or rūpupādānakkhandha.

## Summary

8. I hope you can get further clarification on the difference between " $\bar{u} p a$," "rūpakkhandha," and "rūpupādānakkhandha" from the above discussion. You may want to review the previous two posts as well: "Five Aggregates - Introduction" and "Difference Between Physical Rūpa and Rūpakkhandha,"

- Just like the concept of anicca, this again is a fundamental concept to understand, so please try to read through slowly at a quiet time and grasp the concepts. As the Buddha said, "at the end, what matters is understanding a concept, not memorizing words."
- When I first grasped this concept, it was like turning the lights on in a previously dark area that I did not even know existed! That is a good example of what the Buddha meant by "aloko udapādi. "
- We need to realize that rūpakkhandha does not arise by itself. All five khandha or aggregates rise together.
- Each person has his/her rūpakkhandha or the way he/she perceives the material rūpa in the world. That rūpakkhandha has associated with it the other four khandhā (vedanā, sañn̄̄, sañkhāra, and viññāna) and thus comprise the pañcakkhandha. And pañca upādānakkhandha, or what one has cravings for, is a small part of that.
- We will discuss that in the next post.

### 3.7.4 Arising of Five Aggregates Based on an Ārammaṇa

May 7, 2020; revised May 8, 2020

## Introduction

1. Five aggregates (pañcakkhandha) is a critical concept to understand. In the previous three posts, we discussed how the mind makes a "mental imprint" of a ru$p a$, whether it is due to sight, sound, smell, taste, touch, or a dhammā. See, "Five Aggregates - Introduction," "Difference Between Physical Rūpa and Rūpakkhandha," and "Rūpakkhandha and Rūpa Upādānakkhandha."

- Therefore, it is critical to understand that what is registered in the mind is not a $r \bar{u} p a$ but the "mental imprint" of it. That single imprint is part of rūpakkhandha. However, the mind sees not just a single "snapshot," but the whole rūpakkhandha. We will clarify that point in \#9 below.
- Furthermore, based on that rūpakkhandha, the mind generates vedanā, saññā, sañkhāra, and viññāna. Those also involve "aggregates" or "collections," as we will discuss below.
- We NEVER experience a single imprint of a rūpa or a single citta with vedanā, saññā, sañkhāra, and viññāna. The mind ALWAYS deals with all five AGGREGATES. That is a critical issue to understand. Please ask questions if not clear.

## The Role of an ATrammana

2. The mind becomes active only after getting an ārammaṇa. An ārammaṇa is an external rūpa (sight, sound, taste, smell, touch, dhammā) that comes to one of the six senses (eyes, ears, nose, tongue, body, and mind.)

- A signal representing that external rūpa is "captured" by the sense door (say the eyes) and sent to the brain. The brain processes it and passes it to the mind. That is discussed a bit more in \#5 below. The critical point is that the mind receives a "mental imprint" of that external rūpa. That "mental imprint" or the "signal" or the "image" registers in the MIND.
- The four mental parameters arise with the "image" or the "imprint" of the external rūpa. Therefore, the "mental imprint" is also in the "vipāka viññāna." That is what we "see," "hear," etc. (cakkhu viññāṇa, sota viññāṇa, etc.) We will discuss a second type of "kamma viññāna" below.
- From the above discussion, it is clear that it is not possible to separate such "mental parameters." It is not possible to separate awareness (vedana $)$ from recognition (sañ̃ $\bar{n} \overline{,}$ ) or both those from the overall cognition (viñ̃̄̄ạna) and many kinds of "plans" or 'possible actions" (sañkhāra) that arise in mind.
- The word ārammaṇa is explained in detail in "Chachakka Sutta - Six Types of Vipāka Viññāna."

## Mental Components of Pañcakkhandha (Five Aggregates)

3. Before we start discussing the four mental "aggregates," it is a good idea to review the core entities: vedanā, sañ̃̄̄̄, sañkhāra, and viññāna. They arise in a MIND when an external 'thought-object" or an $\bar{a} r a m m a n a ~ c o m e s ~ t o ~ o n e ~ o f ~ t h e ~ s i x ~ s e n s e s . ~$

- When an external rūpa (sight, sound, etc.) comes to a "sense door" (eyes, ears, etc.), we become aware of it. That is vedanā. A pleasant, unpleasant, or neutral feeling accompanies vedana $\bar{a}$.
- At the same time, we recognize what it is. Whether it is one's mother or a tree, a dog bark or voice of the mother, etc., that recognition of the "thought-object" is sañ $\tilde{n} \bar{a}$.
- Based on the recognition of the "thought-object" to the $\bar{a} r a m m a n a$, we generate our response or reaction to that $\bar{a} r a m m a n ̧ a$. Those responses/reactions are sañkhāra. The initial "reaction' is automatic and generates vedanā and sañ̃̄̄̄a (citta/mano sañkhāra.) That means we immediately feel and recognize that $r \bar{u} p a$. But if we start consciously creating more thoughts, those arise with two more cetasika called vitakka and vicāra. Such thoughts involve vacī sañkhāra. If we then take bodily actions, those require kāya sañkhāra. Therefore, we think, speak, and act with the three types of sañkhāra.
- The overall "state-of-the-mind" is viññāna. It is much more than just "consciousness." Viññanna is complicated but falls into two broad categories. Vipāka viñ̃āạa is the overall sensory experience due to an $\bar{a} r a m m a n ̣ a ~(t h a t ~ v i n ̃ \tilde{n} a ̄ n a ~ m a y ~ b e ~ c a l l e d ~ c o n s c i o u s n e s s) ~ I f ~ w e ~ s t a r t ~ g e n e r a t i n g ~ p l a n s ~ o n ~ w h a t ~ w e ~ s a w,$. heard, etc., then that becomes a kamma viññāna with future expectations. That kamma viññạ̄a is much more than "consciousness."

## What We Experience Is the Cumulative Effect of Many Citta

4. Therefore, those four entities arise together within a split-second, in the first citta.

- But the contents of citta keep changing as they arise in rapidly. Citta $\bar{a}$ (plural) always occur in packets (citta vīthi,), and many of those arise in rapid succession.
- By the time we become aware of the arammaṇa, the initial citta has evolved, and millions of citta may have run through the mind. That is how those parameters get "bundled up" and experienced as "aggregates" or "khandha."
- Let us briefly go through that process step-by-step.

## Creation of a "Mental Imprint" in the Mind

5. The mind must first re-create an image or an imprint of the $r \bar{u} p a$ that triggers the whole process. Let us first clarify how the mind first re-creates an image or an imprint of the ru$p a$ that triggers the entire process of generating vedanā, sañ̃̃ā, sañkhāra, and viñ̃n̄ạna.

- When an ārammaña comes to one of the five physical sense faculties, the brain prepares an imprint of the corresponding rupa. For example, when looking at a tree, the eyes capture an image of that tree. That image then goes to the brain, where it is processed. At that point, there is not even an "image" like a photograph. It is just a "signal" created by the brain. Even scientists do not know what kind of "signal" or "information" the brain generates or exactly how we "see" a tree.
- Similar processes happen with the other sensory inputs. A sound comes to the ear as a "pressure wave" in air. The eardrum vibrates accordingly, and that vibration is somehow "converted" to a sound. That "sound" is heard only by the mind!
- Yes. Eyes cannot see, and ears cannot hear, etc. The brain cannot see, hear either. It is the MIND that experiences all six sensory inputs. Sense faculties and the brain work together to convert those external signals to a form that can be "felt" by the mind. Kammic energy controls all that.

## The Critical Role of the Hadaya Vatthu

6. If you start thinking about it, you will realize how complicated that process is where an external $r \bar{u} p a$ can lead to "thoughts" with "feelings." That is the "hard problem of consciousness" that scientists and philosophers are trying to solve. See, "WebLink: wiki: Hard Problem of Consciousness."

- The bottom line is that it happens only in a hadaya vatthu (seat of the mind.) Only kammic energy can create a hadaya vatthu and the associated pasāda rūpa. Details at "Body Types in 31 Realms Importance of Manomaya Kāya."
- When those signals generated by the brain are transmitted to the hadaya vatthu (seat of the mind,), it can interpret those signals as visuals, sounds, etc.
- That is the solution to the "hard problem of consciousness." Abhidhamma describes the solution in great detail.
- Think about that for a while. When we see a tree, there is no trace of a "picture of a tree" inside the brain! The mind creates that picture, and it goes into rūpakkhandha. That is another way to see the difference between $r \bar{u} p a$ (a tree in the front yard) and rūpakkhandha (the mental imprint of that tree in mind.)

## All Five "Mental Impressions" Arise Together!

7. The registration of that "mental imprint of a $r \bar{u} p a$ " in mind automatically leads to the arising of four mental parameters (nāma dhamma) in mind. Those are vedanā, sañ̃̄ā, sañkhāra, and viñ̃̄āṇa.

- Therefore all five parameters ("mental imprint of a rūpa" and vedanā, sañ̃̃̄̄, sañkhāra, and viññāna) arise together!
- Now let us discuss how the evolution of these into "collections" or "aggregates" or "khandha" within a split-second.

## Those Five "Mental Impressions" Quickly Evolve into Five Aggregates

8. The citta arises and evolves in nine stages during its lifetime of less than a billionth of a second. See, "Amazingly Fast Time Evolution of a Thought (Citta)." It is not necessary to know the details. I am trying to provide the "baseline picture." Those who are interested can look into the details in that post.

- First, only mano sañkhāra arises. The Buddha defined mano sañkhāra as "vedanā and saññā," so sañkhāra in this first citta has only vedanā and saññā and no other cetasika (mental factors.)
- However, if the àrammaṇa is of interest (depending on one's gati,), the mind starts adding more "cetasika." Among the first are vitakka and vicāra. That starts the "deliberation process" in mind about
various aspects of that $\bar{a} r a m m a n ̣ a$. Now, we are at the vacī sankkhāra stage, and based on one's gati (and the specific ārammaṇa) more cetasika (good or bad) may be added in.
- Therefore, by the time we become aware of the $\bar{a} r a m m a n a$, the mind is at the initial stages of $v a c \bar{\imath}$ sañkhāra. We may speak out at this stage if we become interested in the ārammaṇa. By the way, by this time, viññāṇa has changed to a kamma viññaṇa, because, now one is doing "vacī kamma."
- If we become even more interested in the ārammaña, we may start doing things physically with kāya sañkhāra.
- As an example, think about what happens when someone is mugged while walking on the street. In an instant, he would recognize what is happening, who is attacking and may try to fight back. It is always a good idea to analyze a real-life situation to clarify.

## All Five Entities Instantly Become Five Aggregates

9. We started this post to consider what happens when a "mental imprint" registers in the mind due to an ārammaṇa (i.e., external rūpa,) However, not only that "snapshot" but the whole rūpakkhandha contributed to the arising of a citta with vedanā, sañ̃̄̄a, sañkhāra, and viññ̄ạna. Let us clarify that now.

- Let us consider the first citta that arises due to the sight of a tree. As we discussed above, the brain generates a "mental imprint" of that tree and sends it to the hadaya vatthu (seat of the mind.) As we discussed in \#2 above, the mind recognized what kind of a tree it is (to generate sañña $\bar{a}$ ) in the very first citta that received that "mental imprint" of the tree. For that recognition to happen, it must have compared that image with old "memories" of various types of trees and recognized it as an apple tree, for example.
- That means mind was not only dealing with that single "picture" sent by the brain but all of the rūpakkhandha! We remember that rūpakkhandha includes all past $r \bar{u} p a$ that one has experienced. For an average human, the mind will be able to recollect only those $r \bar{u} p a$ that one has experienced in this life.
- Thus, if one has not seen an apple tree (at least a picture of beforehand,), then one would NOT be able to recognize it as an apple tree. That is just a simple example.
- While this much detail is not necessary, it is good to realize how complicated this process of generating a citta is. And that happens in a billionth of a second! That is why the Buddha said that the mind is the fastest entity in the world. See, "Amazingly Fast Time Evolution of a Thought (Citta)."

Let us briefly review the four mental entities that arise in mind together with the "mental impression" of an external $r \bar{u} p a$. That means the arising of the five aggregates or pañcakkhandha!

## Vedanā - Registration of the Experience as "Good," 'Bad," or "Neutral"

 aware of something" when an ārammaṇa (thought object) comes to one of the six sense doors.

- When we sense something, first, we become aware of it. That is vedan $\bar{a}$.
- If the $\bar{a} r a m m a n ̣ a ~ c o m e s ~ t h r o u g h ~ t h e ~ p h y s i c a l ~ b o d y, ~ t h a t ~ c o u l d ~ b e ~ a ~ s u k h a ~ v e d a n a \bar{a}, ~ d u k k h a ~ v e d a n a ~ a, ~ o r ~$ adukkhamasukha vedanā (meaning pleasant feeling, painful feeling, and neither-painful-nor-pleasant feeling.) These are the vipāka vedan $\bar{a}$.
- An ārammaṇa coming through any of the other five senses is initially felt as "neutral." However, the mind MAY generate "samphassa-j $\bar{a}$-vedana $"$ (incorporating "san") following that. See \#11 below.
- We also need to be aware of "kāma guna." For example, humans like certain types of food. Each animal species has its own "favorite foods." Lions and tigers like to eat meat. Cows don't eat meat, and they eat grass. They are a type of vipāka vedanā (plural) that come through all six senses and "feel like"
sukha vedanā. In fact, most "samphassa-j $\bar{a}$-vedan $\bar{a} "$ have their origins in that type of vipāka vedan $\bar{a}$. That is discussed in, "Kāma Guna - Origin of Attachment (Tanhā)."

## Two Types of Vedana $\bar{a}$

11. Based on vipāka vedanā, we MAY generate "mind-made vedanä" or "samphassa-j $\bar{a}$-vedanā." This is where DEFILEMENTS (or "san") are incorporated.

- For example, a sukha vedanā COULD awaken our kāma anusaya. Then we may generate kāma sañkappa (or sensual thoughts.) These are somanassa vedanā (pleasant feelings) created by the mind.
- On the other hand, a dukkha vedana $\operatorname{COULD}$ trigger patigha anusaya, leading to domanassa vedana $\bar{a}$ (angry thoughts) generated by the mind. That could happen, for example, if one accidentally cuts his finger while chopping an onion.
- Based on an adukkhamasukha vedanā (coming through any of the six senses,) one MAY generate either somanassa or domanassa vedana out of ignorance (triggered by avijjā anusaya.) For example, one sees his enemy trip and fall, and a somanassa vedana may arise. In the above two cases also avijja anusaya is there.
- Such a "samphassa-jī-vedana"" arises due to san̉khāra generated via avijjī, i.e., "avijja paccayā sañkhāra." They do not occur in an Arahant. In all others, they may arise depending on one's gati (or types of anusaya left.)
- For details, see, "Vipāka Vedanā and "Samphassa-jā-Vedanā" in a Sensory Event."

## Sañ̃̃̄ā-Perception/Recognition

12. Saññ $\bar{a}$ is, at the very fundamental level, the recognition of an external stimulus. But it is more than that. We not only recognize that a given object is, say, a dog. But some people may be able to categorize it to be a bulldog. Thus sañ̃̄̄a about a particular object depends on the person and his/her prior experiences.

- The same is true for the other four senses. When we hear a sound, we recognize what it is, say a bird singing. Some may be able to say what type of bird it is; some may not be. Any smell, taste, or touch works the same way. Without saññ $\bar{a}$, we cannot identify things around us, and also cannot communicate with each other meaningfully.
- One of the 31 realms of existence is the "Asañ̃̃a realm." There, beings have no sañ̃̃ā or perception. Thus in principle, those beings are without any awareness. Nothing registers in mind. If anyone has attained the 7th jhāna, the "Neva saññ̄̄ Na'sañ̃$\tilde{a}$, "then that person knows what it is like to born in the Asañña realm.
- Saññā is described in more detail in, "Saññā - What It Really Means" and "How to Cultivate the Anicca Sañ̃̄ā. "

## Sañkhāra - Our Response/Reaction to the External Stimulus

13. Sañkhāra are our reaction to a given ārammaṇa. Three types of sañkhāra are defined and discussed in the "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)." Let us summarize them now.

- Cittalmano sañkhāra are saññ̄ā and vedanā. Therefore, citta/mano sañkhāra arise with ALL citta.
- Vitakka and vicāra are vacī sañkhāra because vitakka and vicāra arise before speaking can occur.
- Breathing is $k \bar{a} y a$ sañkhāra since ALL bodily activities (whether they have kammic consequences or not) depend on breathing (assāsa passāsā kāyikā ete dhammā kāyappațibaddhā).
- However, in both vacī and kāya sañkhāra what counts for kamma generation is what kind of cetasika (good or bad) arise during those activities. For example, the act of stealing involves "bad" kāya sañkhāra. Here, the greed cetasika is in kāya sañkhāra.

Further details at, "Sañkhāra - What It Really Means" "Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech)," and "Kamma, Sañkhāra, and Abhisañkhāra - What Is "Intention"?"

## Viññạna - Vipāka Viññāṇa and Kamma Viññāṇa

14. At the beginning of experiencing an ārammaṇa (external rūpa,) there is the only vipāka viñnāna. Since the ārammaña may come through any of the six sensory inputs, they can be of six types: cakkhu, sota, ghāna, jivhā, and kāya viññāna. They arise via, for example, "Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaæ̈" for "eye-consciousness" when seeing a rūpa rūpa. See, "Contact Between Āyatana Leads to Vipāka Viñ̃̃̄̄na."

- But if we then start generating vacī or kāya sañkhāra, that means we have become interested in that $\bar{a} r a m m a n ̣ a$. Then we will be making NEW kamma with kamma viññana. That takes place in the Pațicca Samuppāda steps, "avijjā paccayā sañkhāra; sañkhāra paccayā viññāna." See, "Paticca Samuppāda."
- Therefore, both those type are in the viññānakkhandha.

## Importance of Comprehending Key Pāli Words

15. Even though this post is a bit long, I hope it includes a lot of critical information that will help clarify the concept of the five aggregates (pañcakkhandha.)

- The above descriptions on vedanā, sañña, sankkhāra, and viñ̃̄̄̄ṇa are just summaries.
- But I hope one can see that it is idiotic/dangerous to use English translations for sañkhāra and viññāna as "mental formations" and "consciousness." One will never be able to understand Buddha Dhamma with such interpretations.
- If one does not understand sañkhāra (especially vacī and kāya sañkhāra,), one would NOT be sanditthhika. (or be able to "see" how one accumulates defilements or "san.") See, "WebLink: suttacentral: Pathamasanditthika Sutta (AN 6.47)" The English translations are not too bad, and one can get a good idea. However, the meaning of "sanditthika"is in the words itself: "san" + "ditthi" or the "ability to see "san."
- There is a subsection on "San" which I highly recommend.
- Furthermore, the terms "form aggregate" and "five aggregates" should be used with an understanding of what is meant by them.

### 3.7.5 Memory Records - Critical Part of Five Aggregates

May 13, 2020; revised September 10, 2022

## The Critical Role of Memories

1. Memory records (nāmagotta) are a critical component of the Five Aggregates (pañcakkhandhā.) Most people would not think of memories as a part of pañcakkhandhā. But as we will see below, we cannot live without our memories!

- As we discussed in the previous posts on "The Five Aggregates (Pañcakkhandha)," each of the past $r \bar{u} p \bar{a}$ that we have ever experienced is in the Five Aggregates. Vedanā, sañ̃̄ $\bar{a}$, sañkhāra, and viññāna - that arose with EACH of those rūp $\bar{a}$ in the past - are also in the Five Aggregates. All of them cumulatively play a critical role in the present moment.
- Let us take some simple examples to illustrate this. Suppose someone gives you a plate with a couple of pieces of pizza. How do you know that it is food and you can eat it? That it is "pizza"?
- You may think that this is a silly question. It is not. Unless you had prior experience eating pizza, you would NOT know what it is.

2. Think about leaving for work in the morning. Unless you REMEMBER where you work and how to get there, you will not be able to "go to work."

- You wake up in the morning and need to go to the bathroom. But if you don't remember where the bathroom is, or even what a "bathroom" is, what would you do?
- By the way, this is why babies need diapers. They have no perception (sañña $\bar{a}$ ) of "going to the bathroom" until their brains develop. They cannot recall their memory records.
- Our lives will be IMPOSSIBLE to live without our memories!
- You see someone coming toward you. How do you recognize that figure as a "man" or a "woman," let alone that it is your mother?
- More examples are in "Amazingly Fast Tỉme Evolution of a Thought (Citta)."

## How Our Memory Works Is a "Miracle"

3. We discussed this process to some extent in the previous post, "Arising of Five Aggregates Based on an Ārammana," You may want to read that post as needed, especially \#2 through \#9. I am not going to discuss some of that here. It is critical to understand those initial posts to get a good idea before we get to the next post. It is a good idea to print all four posts in this series and have them ready to review.

- Now we will look at exactly where these memories reside and how a mind recalls them so quickly. Any situation we considered in \#1 and \#2 above "is not a big deal."
- When we see a pizza, we know exactly what it is, without thinking. We do not stop and plan the trip when we leave for work. We just get in the car and drive or walk to the right bus stop/subway, etc. We "know" what a bathroom is and where it is in the house.

## Difference Between a Human and a Robot

4. However, a robot CAN NOT do any of the above, UNLESS it is pre-programmed in detail. For any robot to do any specific task, a HUMAN must think about all possible scenarios and write a "computer code." That is why "artificial intelligence" WILL NEVER materialize. Scientists will be able to make fancy robots to do REPETITIVE and COMPLEX tasks. But robots will NEVER be able to THINK. They will not be able to recognize anything that has not been pre-programmed into their computer memory.

- A human can recognize an object INSTANTLY. For example, it can "scan" memories of eating pizza and identify what type of pizza it is, and how it would typically taste. And it does that within a split second!
- I highly recommend re-reading the post, "Amazingly Fast Time Evolution of a Thought (Citta)."

## Mind - Hadaya Vatthu and a Set of Pasāda Rūpa

5. That fantastic accomplishment of "instant recognition of things" happens in our minds. The mind is NOT in the brain, even though the brain plays a crucial role in mental phenomena. The mind is associated with the mental body, referred to as manomaya kāya or gandhabba in the Tipitaka. Essentially, that mental body consists of a hadaya vatthu (seat of the mind) and a set of pasāda rūpa.

- That mental body cannot be seen even with the most sophisticated microscope scientists have today. As we know, they can "see" individual atoms. But a gandhabba is a million times smaller (in weight) than an atom.
- Yet, that mental body is the essence of a human (or any living-being.) The physical body is a shell that allows us to taste, smell, and touch.
- In some situations, that mental body (gandhabba) can come out of the physical body. See "Out-ofBody Experience (OBE) and Manomaya Kāya." It can see and hear better outside the physical body but cannot taste, smell, or touch.
- Furthermore, those who cultivate jhāna to the fourth jhānic state can develop iddhi powers and bring their gandhabba out of their physical body. Then they can travel anywhere (including far away Deva/Brahma realms) or go through walls and mountains as described in some sutt $\bar{a}$. See "Mystical Phenomena in Buddhism?"
- That mental body or the gandhabba has the truly ESSENTIAL parts of a human: hadaya vatthu and a set of pasāda rūpa.

## Only Kammic Energy Can Create a Gandhabba

6. Kammic energy controls the creation and function of a hadaya vatthu and a set of pasāda rūpa. We create them in our javana cittā! Each new bhava is associated with a hadaya vatthu and a set of pasāda rūpa. The number of pasāda rūpa vary from five for kāma loka, two in rūpa loka, to none in arūpa loka.

- That is why scientists will NEVER be able to CREATE life. It can only manipulate the conditions for an existing gandhabba to build a physical body. See, "Buddhist Explanations of Conception, Abortion, and Contraception" and "Cloning and Gandhabba."
- More precisely, when we do strong kamma, we create energies that will reside in the kamma bhava. Good strong kamma create energies that can lead to the creation of "mental bodies" for "good realms." Similarly, strong bad kamma makes conditions for rebirths in "bad realms."
- Our memories are also in the kamma bhava. All energies decay with time. When "kammic energies" in the kamma bhava decay, they become just "memory records." The Pāli word for such memory records is "nāmagotta."

## Rūpa Loka and "Nāma Loka"

7. There are six "dhātu" that make up our world of 31 realms: pathavī dhātu, āpo dhātu, tejo dhātu, $\boldsymbol{v a}$ yo dhātu, ākāsa dhātu, viññāṇa dhātu. See, "WebLink: suttacentral: Dhātuvibhañga Sutta (MN 140)."

- All internal (in one's body) and external rūpa (not rūpakkhandha) are made of pathavī dhātu, āpo
 (rūpa loka) is associated with the first five types of dhātu.
- We experience all rūpa with the help of our five physical sense faculties (eyes, ears, nose, tongue, body) and the five pasāda rūpa. Experience (arising of thoughts) happens in the hadaya vatthu (seat of mind), as mentioned in \#6. Of course, the hadaya vatthu, and the five pasāda rūpa are the essence of the gandhabba, our "mental body."

8. Nāma dhammā (vedanā, saññā, sañkhāra, viññanna) arise in cittā (loosely called "thoughts") at the hadaya vatthu. See \#6 and \#7 of "Arising of Five Aggregates Based on an Ārammana."

- An imprint of a rūpa (in the physical world) arises with viññāna as we discussed in the previous four posts in "The Five Aggregates (Pañcakkhandha)," Furthermore, vedanā, sañ̃n̄̄, sañkhāra, viññāna are experienced as "aggregates" or "collections" or "khandha" and NOT as individual entities.
- As soon as that thought passes through a mind, a RECORD of it gets added to nāmagotta in the viññāna dhātu (via the mana indriya in the brain.) That viñ̃n̄ạa dhātu is also called the "nāma loka." Let us discuss that now.
- It is essential to note that both the rūpa loka and the nāma loka exist in "our world of 31 realms."

## Rūpa and "Nāma"

9. The mental attributes (nāma) and physical attributes (rūpa) are DEFINED, for example, in WebLink: suttacentral: 2.3.3. Suttantikadukanikkhepa of Dhammasañgan̄̄̄ of the Tipiṭaka:

Tattha katamaì nāmaì? Vedanākkhandho, saññ̄ākhandho, sañkhārakkhandho, viññānakkhandho, asaǹkhatā ca dhātu-idà̇ vuccati nāmà்.

Tattha katamaì rūpaì? Cattāro ca mahābhūtā, catunnañca mahābhūtānaí upādāya rūpaí-idaí vuccati rūpaì.

- That means, "Vedanākkhandha, saññākkhandha, sañkhārakkhandha, viññ̄ạnakkhandha are "nāma dhamma."
- "The four great elements (pathavī, $\bar{a} p o, t e j o, v \bar{a} y o$ ) together with upādāya rūpa (those that arise due to upādāna for worldly things made of the great elements) belong to rūpa.
- Such upādāya rūpa arise in our javana citta (or in kamma viññāṇa.) Those are the "subtle rūpa," seeds for future existences (bhava.) They make up the "kamma bhava." They have energies BELOW the suddhatthaka level. See, "The Origin of Matter - Suddhatthaka."
- As we have discussed, hadaya vatthu and each pasāda rūpa is " an energized suddhatṭhaka. Therefore, kammic energies are unbelievably small, yet they have amazing power.

## Kamma Bhava in Nāma Loka

10. A record of ANY experience is captured in the four aggregates of vedanā, saññā, sañkhāra, viññāna. Those are Vedanākkhandha, saññākkhandha, sañkhārakkhandha, viññānakkhandha. That memory record in the "nāma loka" is "nāmagotta." However, if that experience involved kamma generation, then a kammic energy (kamma bhava) would be associated with it.

- Section 1 of the "WebLink: suttacentral: Paticcasamuppāda Vibhañga 6 (1. Suttantabhājanīya)" defines kamma bhava: "Tattha katamo kamma bhavo? Puññābhisañkhāro, apuñnābhisañkhāro, āneñjäbhisañkhāro-ayaí vuccati "kamma bhavo." Sabbampi bhavagāmi kammaí kamma bhavo.
- That says all kamma done with abhisañkhāra will be in the kamma bhava. They can bring kamma vipāka until that energy decays naturally, which could take billions of years.
- Those "bhavagāmi kammaí" (strong kamma that can sustain the rebirth process) will be there in the kamma bhava.

## While R $\bar{u} p \bar{a}$ Will Decay Over Time, Nāma Record (Nāmagotta) Does Not Decay

 the nāma loka. That PERMANENT memory record is "nāmagotta."

- That is stated clearly in the "WebLink: suttacentral: Najīrati Sutta (SN 1.76)" as, "Rūpaï jīrati maccānaì, nāmagottaì na jūrati" or "Physical form (bodies of living beings and inert matter) decay and die, memory records (nāmagotta) do not decay."
- Of course, we cannot RECALL all memories, especially memories from past lives. However, some children can recall their previous life. Those who have cultivated abhiññā powers can recall many past lives.

12. Don't be discouraged if you cannot grasp everything in this post. I will expand on some of them in upcoming posts. But it is necessary to read the recommended posts.

- I have spent the past ten years studying Buddha Dhamma. Even these days, I learn new things that make the "big picture" clearer. Once getting some traction, the process will become easier and more enjoyable.
- It has been an amazing experience and I hope to share it with as many people as possible.

### 3.7.6 Pañca Upādānakkhandhā - Introduction

May 19, 2020

## Pañca Upādānakkhandhā - Key Role of Upādāna

Pañca Upādānakkhandhā is normally translated as "five grasping aggregates." That does not explain much.

1. The concept of Pañca Upādānakkhandhā plays a critical role in Buddha's teachings. In his first sermon, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)," the Buddha summarized dukkha (or suffering) in a single verse. That is, "Saimkhittena pañcupādānakkhandhā dukkhā." The translation appears in most English texts as, "in brief, the five grasping aggregates are suffering." [sañkhittena means being overthrown by defilements]

- That translation does not convey the meaning of the verse until we understand what is meant by "pañcupādānakkhandhā."
- It is easy to see that the word "pañcupādānakkhandhä" comes from the combination of the three words: pañca, upādāna, and khandhā. Here, "pañca khandhā" means "five aggregates" and "upādāna" means "the tendency to keep close." As you will see, "keeping close" is a better translation than "grasping" used in most translations.
- Therefore, that verse indicates that suffering in this world arises due to our tendency to "keep close" certain parts of those five "aggregates."
- We have already discussed some features of those "five aggregates." See, "The Five Aggregates (Pañcakkhandha)."

## Upādāna - Keeping Close "in the Mind"

2. Upādāna means "pulling something closer" ("upa"+ "ādāna," where "upa" means "close" and "ādāna" means "pull").

- It is critical to realize that upādāna happens ONLY in the mind.
- Pațicca Samuppāda describes phenomena that take place in the MIND. We can summarize Paṭicca Samuppāda simply as follows. Attaching to an ārammaṇa is tanhhā (gets "bonded" to it.) That leads to upādāna (keep it close in one's mind.) That is the step, "taṇhā paccayā upādāna." Also, see, "Difference Between Tanhā and Upādāna."
- Furthermore, we saw that even the rūpakkhandha is in the mind. Many people have the perception that $r \bar{u} p a k k h a n d h a$ is "collection of rūpa." But we clarified rūpakkhandha in the post "Difference Between Physical Rūpa and Rūpakkhandha."

3. In that post, we also discussed how some parts of rūpakkhandha become parts of rūpa upādānakkhandha or rūpupādānakkhandha.

- Therefore, "pañcupādānakkhandhä" means "keeping those five aggregates (rūpakkhandha, vedanākkhandha, saññākkhandha, sañkhārakkhandha, viññānakkhandha) "close to one's mind." Then, one will be thinking, speaking, and taking actions based on particularly appealing parts of the five aggregates.
- Again, all of rūpakkhandha, as well as other four khandhā in pañca khandhā, are associated with the mind.
- Thus, ALL of pañcupādānakkhandhā is associated with the mind. Those are what one thinks about and plan accordingly. A good example is to re-create a past sexual experience and to enjoy that. Another is to create a future expected experience in mind and to enjoy that. Both those activities involve pañcupādānakkhandhā.
- As we can see, pañcakkhandhā is enormous, infinite. It has all our experiences from a beginning that cannot be discerned. But pañca upādānakkhandhā is a very small part of that.

## Diṭthi and Taṇh $\bar{a}$ - Root Causes of Upādāna

4. We tend to keep something close to us if we believe it will be beneficial for us to do so. On the other hand, if we think something will be bad for us and can bring suffering, we would try to avoid it and try to keep it far away.

- For example, if we know there is a bomb inside a beautiful object, we would try to get far away from it, even though it looks appealing.
- Sometimes, we do not see dangers hidden in "things that appear to be appealing."
- An example that I often give is a fish biting a worm on a hook. The fish cannot see the hidden hook or the fisherman holding the pole that is attached to the hook with a string. But we can see all that and we know what will happen to the fish if it bites that tasty bait.
- However, we are unable to see the hidden dangers in sensual pleasures. Only a Buddha can figure out WHY attaching to sensual pleasures is dangerous, even if no immoral actions are involved. The question is, why sense pleasures are bad even if immoral actions (dasa akusala) are NOT involved. There are "hidden dangers" in sense pleasures. See, "Kāma Assāda - A Root Cause of Suffering."
- Have you seen ants getting stuck in spilled honey? They start drinking it and get stuck. They don't see the "hidden danger" in a pool of tasty honey either.

## Monkey Not Letting Go Even When the Life is in Danger

5. In the above example of the fish biting a "tasty bait" or the ants attracted to honey at least cannot see the "hidden danger." However, look at what happens to the monkey in the following video:

## WebLink: youtube: How to Catch a monkey

- The monkey could have let go of the grains in its fist, take its hand out, and run away when it saw the hunter coming. (Note; I have set the video to stop early to show only the relevant portion for our discussion. If you play it again, you can see the whole video. The hunter wanted to find where the monkey's water source was. So, he fed the monkey with salty food and let it go, and followed it.)
- But it would not let go of the grains in its fist. It does not want to let go of its "tasty grains" even while seeing the danger. It is HOPING that it would be able to get the hand out WITH the grains.
- That is why even a Sotāpanna has a hard time getting rid of the desire for sensual pleasures, even though he/she can SEE the dangers in them.
- However, a large part of upādāna has been removed for a Sotāpanna. He/she would NOT engage in any immoral deeds to fulfill sensual desires. For example, he/she would not engage in sexual misconduct at any time. The desire for sensual pleasures will keep one bound to the kāma loka. But it is only IMMORAL DEEDS (dasa akusala) done to gain sensual pleasures that will make one eligible for rebirth in an apāya.
- In other words, a Sotāpanna has not removed "kāma upādāna."
- An Anāgāmi has removed "kāma upādāna, " but the last one of "attavāda upādāna" (perception of a "me") goes away only at the Arahant stage. Thus, the four types of upādāna need to be removed in stages.

## Five Aggregates (Pañcakkhandhā) Fall into Two Main Categories

6. From our previous posts in "The Five Aggregates (Pañcakkhandha)," we know that the five aggregates can be separated out into two MAIN categories: past and present.

- There are 11 types of entities in each aggregate. See, "Difference Between Physical Rūpa and Rūpakkhandha." However, all of them belong to three time-frames: past, present moment, and future. The "present moment" is gone in a split second. The other categories (like internal and external or near and far) belong to each time-frame. Thus, effectively we have two MAIN categories in each aggregate.
- Those two are the "past aggregates" and "future aggregates." Put in another way, the five aggregates encompass our "memories" and our "future expectations/hopes."

## Pañca Upādānakkhandhā - Reliving Memories and Making Future Plans

7. Pañcupādānakkhandhā can be thought of as mainly the following. Significant "events" that happened in the past and also a set of events that we would like to see happen in the future. Put in simple terms, pañcupādānakkhandhā or "upādāna of pañcakkhandhā" means the following two cases.

- Our tendency to constantly think, speak, and act to re-create past experiences.
- In addition, we also do the same to fulfill future plans/hopes.

Those activities are done via mano, vacī, and $k \bar{a} y a(a b h i) s a n \dot{k} h \bar{a} r a$. We will discuss that in the next post.

## Upādāna - Why Is It Easier to Recall Somethings Than Others?

8. From our discussion so far in this series of posts, it is clear that records of ALL our past actions (and speech and thoughts) are "stored permanently" in "nāma loka." You may want to refresh memory by reading "Memory Records - Critical Part of Five Aggregates."

- However, we know that it is easier to recall some of the past events than most others. In fact, we cannot recall even some things that happened just yesterday!
- That is because there are events that we tend to "keep close" in our minds. That can happen out of greed, anger, or ignorance. If we eat tasty food, we would like to taste it again. If someone did something "bad," we would like to remember that out of anger. We also tend to remember "funny things" of no significance (dirty jokes, for example) out of ignorance.
- In addition to just "a record" or "nāmagotta," such "memorable" events leave energy in the "nāma loka." Those are kammic energies and are in "kamma bhava." They originate in kamma viññāna in javana citta. Such events involve abhisañkhāra.

## The Difference Between "Nāmagotta" and "Kamma Bīja"

9. A record of any and all events go into "nāmagotta" as soon as that event is done. But some events involve "good" or "bad" strong kamma generated via abhisañkhāra. As we have noted, there are three types of abhisañkhāra: apuñña abhisañkhāra, puñña abhisañkhāra, and āneñja abhisañkhāra.

- Those are the types of $\boldsymbol{a b h i s a n} k \boldsymbol{h} \boldsymbol{a} r a$ in the "avijjā paccayā sañkhārā" step in Pațicca Samuppāda. See, "Kamma, Sañkhāra, and Abhisañkhāra - What Is "Intention"?."
- We can put it in another way by saying that such actions lead to the formation of kamma bi$\vec{j} a$. They have the potential to bring kamma vipāka. Especially strong kamma vipāka can lead to rebirth.
- However, if such kamma bīja do not get a chance to bring their vipāka, their energies run out over long times. At that point, they become just "nāmagotta" without any associated energy.
- A kamma bīja, on its own, can bring us an ārammaṇa to the mind (i.e., bring back the memory of the event) even if we are not trying to recall it.
- While a kamma bīja can bring an ārammana to the mind on its own (due to its energy,) a "nāmagotta" NEEDS TO BE recalled. We will discuss that later.
- Furthermore, it is easier to recall those events associated with strong kamma bïja. Such events are of importance to us, and thus, it is easy to recall them. Nämagotta, on the other hand, are more difficult to recall. However, there are a handful of people who can do that in amazing detail (see below.)

## Proof That All Nāmagotta Remain Intact

10. Strong evidence is beginning to emerge that there is indeed a "complete record" of one's past just like a videotape. These studies started with Jill Price, who contacted a team of scientists in the early 2000's about her ability to recall anything from 1974 onward. Here is a video of her with Diane Sawyer on an ABC News program:

## WebLink: youtube: The woman that never forgets - Jill Price First Interview!

- Note that she says she can "see" in her mind what happened on any day from 1974. It is not like she is recalling a "summary" or the gist of what happened. She can actually recall the whole episode in detail. Even the day and date come out effortlessly.
- Note that she can remember ONLY those things SHE had EXPERIENCED. That means just the portion of HER pañcakkhandhā from 1974. For example, if she had not watched the TV series "Dallas," she would not be able to say on which day "JR was shot."
- Since then more people have provided similar accounts. See, "Recent Evidence for Unbroken Memory Records (HSAM)."
- This is why some children can recall their previous life. The ability to recall a previous life means that the memories could NOT have been in the brain, and were 'stored" outside the physical body. See, "Evidence for Rebirth" and "Boy Who Remembered Pāli Suttas for 1500 Years."
- Ancient yogis who could get to the eighth jhāna could see all past lives in the present eon or kappa. But the Buddha could see numerous eons within a short time.

### 3.7.7 Five Aggregates - Connection to Tilakkhaṇa

In this section, we will look at the relationship between the five aggregates and suffering. Within this discussion, we will be able to clarify the three key Pāli words anicca, dukkha, anatta. Those terms describe the Three Characteristics of Nature or Tilakkhaṇa.

Five Aggregates and Tilakkhana - Introduction
Icca, Nicca, Anicca - Important Connections
"Me" and "Mine" - The Root Cause of Suffering
Difference Between "Me and Mine" and Sakkāya Ditthi
Sakkāya Ditthi - 'Me and Mine" View
Atta - Two Very Different Meanings

### 3.7.7.1 Five Aggregates and Tilakkhaṇa - Introduction

May 27, 2020
We start a series of posts on the five aggregates and Tilakkhana (anicca, dukkha, anatta.)

## The Five Aggregates describe any Living Being's "World"

1. The five aggregates (pañcakkhandhā) represent any living being together with its "external world." It is not correct to say that the five aggregates are in one's own "physical body." Everything about a living being, including ALL past experiences and future expectations, is embedded in pañcakkhandhā. Furthermore, one's gati, anusaya, etc., are all in pañcakkhandhā. Please read the previous posts in "The Five Aggregates (Pañcakkhandha)."

- What I summarized in those few posts is the material in many sutt $\bar{a}$ in the WebLink: suttacentral: Khandha Sainyutta (SN 22.1 ~ 22.159) in the Saimyutta Nikāya. There are also suttā in other parts of the Tipitaka.
- In those suttā, the Buddha describes any given living being in terms of pañcakkhandhā: rūpakkhandha, vedanākkhandha, sañ̃̄̄̄kkhandha, san̈khārakkhandha, viññānakkhandha.
- Those are the five aggregates loosely translated as form, feelings, perceptions, mental formations, and consciousness. As we have discussed, such translations are misleading. It is better to use the Pāli terms and learn their true BROADER meanings. For example, viññāṇa can be of two different types of kamma viñ̃̃āṇa and vipāka viññāṇa.

## Pañca Upādāna Khandhāa (Five Clinging Aggregates) Is There Until Becoming an Arahant

2. We also discussed what is meant by pañca upādāna khandhā (loosely translated as "five clingingaggregates") in the section "The Five Aggregates (Pañcakkhandha)."

- Until attaining the Arahant stage, all living beings have pañca upādāna khandh $\bar{a}$. A living Arahant has pañca khandhā but not pañca upādāna khandhā.
- An Arahant's pañca khandhā will also cease to exist at the death of the physical body. That means an Arahant will not be reborn anywhere in the 31 realms.

## The Definition of an "Ignorant Living Being" or "Satta"

3. The Buddha explained what is meant by a "satta" or a "living being" to Rādha in the "WebLink: suttacentral: Satta Sutta (SN 23.2)." "Rūpe kho, Rādha, yo chando yo rāgo yā nandī yā taṇhā, tatra satto, tatra visatto, tasmā sattoti vuccati. Vedanāya ... saññāya ... sañkhāresu ... viññāne yo chando yo rāgo yā nandī yā tanhāa, tatra satto, tatra visatto, tasmā sattoti vuccati"

Translated (just the meaning): "Rādha, when there is desire (chanda), rāga, and a perception of high value (nand $\bar{\imath}$ ) of material form (rūpa), there is clinging (satto), strong clinging (visatto) for form, and then an ignorant living-being (satto) is spoken of. Similarly, when there is desire (chanda), rāga, and a perception of high value (nandī) of vedanā ... saññā ... saṅkhāra ... viññ̄āna, then a living-being is spoken of."

- Other translations at "WebLink: suttacentral: Sentient Beings (SN 23.2)."
- Note that the Pāli word "satta" means "clinging" or "attach." A strong version of clinging is "visatta."
- In other words, as long as there is upādāna for pañcakkhandh $\bar{a}$ (i.e., as long as there is pañcupādānakkhandh $\bar{a}$ ) there is an "ignorant living being" or a "satta." That living being has not comprehended the "real nature of this world" or "yathābhūta ñāna."

## Difference Between a "Satta" and "Puthujjano"

4. We also need to see the difference between the terms "satta" and "puthujjano." The name "puthujjano" applies to a human being who has not heard and comprehended yathābhūta ñāna. The term "satta" applies to any living being (includes Devā and Brahmā who have not attained any magga phala.)

- I use the term "ignorant person" to differentiate an Ariya puggala (Noble Person) who is also a "person," but has started cultivating yathābhūta ñāna.
- WebLink: suttacentral: Assāda Sutta (SN 22.129) defines the word "puthujjano" as, "an ignorant person ("puthuijano") does not truly understand the pleasures, the drawbacks/dangers, and the liberation when it comes to the five aggregates."
- An Ariya puggala overcomes the "satta" status at eight levels (Sotāpanna Anugāmi, Sotāpanna, Sakadāgāmi Anugāmi, Sakadāgāmi, etc.)
- Also, a Bodhisatta is still a "satta," but proceeding towards "Bodhi" or the "Buddhahood." We remember that a Bodhisatta can be born even in some higher animal species, but not in the other three apāy $\bar{a}$.
- Note that "satta" pronounced "saththa.") See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and the second part referred to in there.

## Overcoming the "Satta" Status With the Comprehension of Tilakkhana

5. Using the analyses of the five aggregates and the "five clinging-aggregates," we can get some insights into Buddha's explanation of "suffering inherent in this world of 31 realms." That explanation comes via the understanding of the Tilakkhana or anicca, dukkha, anatta. We now look at the connection between the five aggregates and Tilakkhaṇa.

- The fourth characteristic of asubha appears in some suttā.
- However, in most suttā, only the three characteristics of anicca, dukkha, anatta are discussed.
- The essence of those characteristics is that craving for worldly things (rūpa) with the perception of a "me" will only perpetuate the rebirth process leading to more suffering. We will discuss that in detail in upcoming posts.
- However, we can get an idea by just looking at the key concepts that we have learned. Let us briefly discuss anatta and anicca.

## Does "Anatta" Mean "No-Self"?

6. The representation of any living being with the five aggregates makes it clear that a permanent "soul" or a "ātma" cannot exist.

- As we have discussed, none of those five aggregates has any "essence." They all keep changing, even momentarily. In particular, they all undergo drastic changes when a living being moves from one realm to another. Such transitions have taken place an uncountable times in our deep past. We all have been born in the 26 realms (out of 31 realms, only $A n \bar{a} g \bar{a} m \bar{u}$ can be born in the five realms reserved for them.)
- All of us have been born in the highest nevasaññānāsaññāyatana Brahma realm as well as in the lowest niraya realm.
- If there were an unchanging "core" or "essence" as a soul was there, an Arahant would not be able to attain Parinibbāna. As we know, there is no trace of an Arahant in any of the 31 realms after Parinibbāna.
- However, until one reaches the Arahant stage, it is also NOT correct to say that a "self" or a "me" does not exist. There is an ever-changing "lifestream" thinking, speaking, and doing things based on the view and perception of a "me" or "self" with a set of ever-changing "gati."
- Starting at the Sotāpanna Anugāmi stage, one can begin to "see" that all those actions are based on Paṭicca Samuppāda. There is still a "self" with "gati" generating "abhisañkhāra" via "avijjā." But that "avijja" will decrease with higher magga phala. "Sammā Ditṭhi" becomes complete, and the perception of a "me" goes away only at the Arahant stage.

## Does "Anicca" Mean "Impermanence"?

7. It is quite common these days to see the Pāli word "anicca" translated as "impermanence." We can see the error in such a translation by looking at a simple sutta.

- For example, the "WebLink: suttacentral: Nandikkhava Sutta (SN 22.51)," among others, state: "Aniccaññeva, bhikkhave, bhikkhu rūpaì aniccanti passati. Sāssa hoti sammāditṭhi." or "A bhikkhu who sees rūpa (form) as anicca has seen the anicca nature. He has Sammā Ditthi."
- Most English translations INCORRECTLY translate that verse as "A bhikkhu who sees form as impermanent has seen the anicca nature. He has Sammā Diṭthi."
- Any reputable scientist knows that NO MATERIAL OBJECT in this world has permanent existence. See the following Scientific American article: "WebLink: The Only Thing That Remains Constant Is Change." Does that mean those scientists all have "Sammā Ditṭhi" and have attained Nibbāna? Of course not. Therefore, it must be clear that "anicca" CANNOT mean just "impermanence."
- We will discuss the real meanings of anatta and anicca in detail in this series in future posts.

## The Need to examine the Tipiṭaka Without Biases

8. We need to be able to resolve such issues by using common sense rather than mechanically repeating such incorrect translations as "the truth." Just because such statements are in "reputable books" or are "the opinions of reputable bhikkhus/scholars" does not mean they are compatible with the Tipitaka. We need to remind ourselves that Devadatta was a bhikkhu with abhiññā powers. Nagarjuna and Buddhaghosa are considered "scholars" by those who do not even believe in rebirth (and thus have micchā ditthi.)

- Their intentions may be good, but one needs to be able to accept errors in one's thinking when clarified with substantial evidence.
- It is dangerous to teach "wrong Dhamma" which will have corresponding consequences. Ignorance of mundane laws is not an excuse in a court of law. In the same way, ignorance of "the true teachings" is not an excuse, especially when the correct teachings are clear with evidence from the Tipitaka.
- "Impermanence" is only a small part of the broad meaning of anicca. A single English word CANNOT convey the meaning of the word "anicca." One needs to understand the meaning of the Pāli word and use that word.

## Why Do Living Beings Crave Sensory Pleasures?

9. To "enjoy" sensory pleasures, the following two conditions must be met.

- There must be a "me" or a "self" to "enjoy any pleasure."
- There must be contacts with five types of external rūpa via the five physical senses. They are rūpa rūpa or "vaṇna rūpa" (material objects), sadda rūpa (sounds), gandha rūpa (odors), rasa rūpa (tastes), and photthabba (body touches.) Furthermore, those rūpa must be stable to provide long-lasting pleasures.

So, the average human makes the very best effort (and undergoes suffering) in seeking out such pleasures.

- Those struggles only lead to more suffering, since both of the above assumptions are wrong in ultimate reality.

## Both Those Assumptions Are Wrong Per Buddha

10. The Buddha pointed out the following regarding those two features.

- There is no "me" or an "unchanging self" in ultimate reality. Any living being has a limited lifetime and subject to unexpected changes during its existence. There is no "core" or "substance" to any existence (like a "soul" or a "ātma.") A given lifestream can be a Brahma, a Deva, or a human in some existences and an animal, a hungry ghost, or a "hell being" in other existences. Where is the "core"?
- Any type of external rūpa in this world also has a limited lifetime. It will also undergo unexpected changes during its existence. Thus, all those material "things" that we acquire with great effort do not last long. Furthermore, they become a burden since one needs to continually struggle to maintain them in good condition (think of houses, cars, one's own physical body, etc.)

Therefore, both requirements for perceived happiness (an "unchanging self" and "stable external $r \bar{u} p a$ ") are illusory.

- That is one way to state the "previously-unheard Dhamma" ("pubbe ananussutesu dhammesu") that the Buddha taught.

## "Self" and "External Rūpa" Have a Common Name - Saṅkhata

11. Sañkhata is a key Pāli word. It comes from "san" + "kata." As with many critically important Pāli words, the root "san" is there. A sañkhata is prepared via "san" or our tendency to "accumulate" things that only have a transient existence. A living being and what it enjoys are both sañkhata.

- Both arise (the Pāli word for "arise" is "samudaya") due to our fruitless actions based on those two wrong views about nature per \#9 and \#10 above. The key Pāli word "samudaya" comes from "san" + "udaya" or "arising due to "san." You may want to refresh memory with "What is "San"? Meaning of Sansāra (or Samisāra)" and "List of "San" Words and Other Pāli Roots."
- Both types of sañkhata arise (samudaya) via the universal process of Paṭicca Samuppāda, which starts with "avijjā paccayā sañkhāra."
- As we have discussed in many posts, the root cause of all suffering is $a b h i(s a \dot{n} k h a \bar{a} a)$ that arise in our minds due to $a v i j j \bar{a}$. Therefore, one way to explain the origin of suffering is ignorance (avijia) of real nature or Tilakkhana. That is the connection between the five aggregates and Tilakkhaṇa (and suffering.)

## A Buddha Does Not Speculate on Anything

12. A Sammasambuddha, like Buddha Gotama, does not teach anything that he had not experienced/verified firsthand.

- Several suttā in the Tipitaka discuss that. See, for example, the WebLink: suttacentral: Vimaminsaka Sutta (MN 47).
- There are many suttā in the Tipitaka that describe visits by the Buddha and some of his disciples to Brahma and Deva realms. I have discussed one of those, the "WebLink: suttacentral: Brahmanimantanika Sutta (MN 49)," in the post, "Anidassana Viññ̄ña - What It Really Means."
- There are many aspects in the teachings of the Buddha that are not discernible to an average human (puthujjano). Many of these phenomena can be verified by those who make progress on the path. They are also consistent with new findings by modern science. I have discussed some of them in "Mystical Phenomena in Buddhism?"
- Many people do not see the uniqueness of a Buddha. For them, he is just another philosopher. That assumption is wrong. A Buddha does not speculate on anything. But of course, each person needs to
verify that．That is why I make an effort at puredhamma．net to show the self－consistency within the Tipitaka and with many new findings in science．

In upcoming posts，we will continue the discussion on the connection between the five aggregates and Tilakkhaṇa（and suffering．）

## 3．7．7．2 Icca，Nicca，Anicca－Important Connections

June 2，2020；revised June 3，2020；August 25， 2022

## Icca，Nicca，Anicca

1．We will discuss the critical relationships among icca，nicca，and anicca．That will help us understand the true meaning of anicca．
－The pronunciations of those in that order：
WebLink：mp3：Icca，Nicca，and Anicca
－It is important to note that the Pāli words in the Tipitaka are NOT written how they are pronounced． See＂TTipitaka English＂Convention Adopted by Early European Scholars－Part 1＂and＂Tipitaka English＂Convention Adopted by Early European Scholars－Part 2．＂
－Very briefly，the meanings are as follows．Icca means desire．If we believe that it is possible to fulfill that desire and be happy，that is the perception of nicca．The opposite of nicca is anicca．
－Buddha taught us that our world is of anicca nature．That means we will never be content with＂any existence in this world．＂We may be able to fulfill some expectations in this life，but all that will have to be given up at death．Then we start all over in new birth．
－We note that the word＂icca＂plays a key role in Patticca Samuppāda．The word＂Pațicca＂comes from ＂pati＂＋＂icca．＂Future existences in the rebirth process have origins in＂attaching to worldly pleasures with desire（icca）．＂See，＂Paticca Samuppāda－＇Pati＋ichcha＇＋＇Sama＋uppāda＇．＂

## Icca and Anicca Sometimes Written as Iccha and Aniccha

2．The word＂iccha＂with the emphasis on the last syllable indicates＂strong icca＂or＂strong desire．＂In the same way，＂aniccha＂with the emphasis on the last syllable，emphasizes the＂anicca nature．＂
－In the Sinhala language，the words icca，anicca，and iccha，aniccha are written as ๑อも そชอもด and ๑อ题みふెอ
－In the Tipitaka，mostly iccha，nicca，and anicca appear．Note that iccha is normally used in Pāli as ＂icchā．＂Thus，the＂strong version＂is used only with iccha．But there are a few exceptions．We saw one such exception in＂icca＂in \＃1；another for＂aniccha＂in \＃14 below．
－The five words icca，anicca，iccha，icchā，and aniccha are pronounced：
WebLink：mp3：Icca，Anicca，Iccha，Icchā，Aniccha

## Icchā and Taṇhā Closely Related

3．The＂WebLink：suttacentral：Kalahavivādasuttaniddesa（Mnd 11）＂of the mahāniddesa of the Tipiṭaka states，＂Icch $\bar{a} v u c c a t i ~ t a n ̣ h \bar{a} "(s e e ~ s e c t i o n ~ S C 88) ~ o r ~ " I c c h a ̄ ~ m e a n s ~ t a n ̣ h \bar{a}$ ．＂That is because icchā leads to taṇh $\bar{a}$ ．
－When we attach（ $\tanh \bar{a}$ ）to something due to our liking for it（icch $\bar{a}$ ），we tend to keep it close in our minds（upādāna．）Paṭicca Samuppāda describes how that leads to future suffering．See，＂Icchā （Cravings）Lead to Upādāna and to Eventual Suffering．＂
－The use of many Pāli terms could be confusing to some．It may be helpful to print the relevant posts mentioned and refer to them as needed．

## What Do We Desire (Icchā)?

4. Our desires belong to two categories. First, we want a healthy and robust body (stay young forever!.) We would also like anything we own or related to us to be similarly long-lasting and not subject to unexpected calamities.

- We have that perception that such desires (icch $\bar{a}$ ) for "stability of long-lasting happiness" can be achieved. That perception is nicca.
- With that perception of a "nicca nature," we work hard to acquire "things" that we perceive to provide sensory pleasures.
- While doing our best to achieve such pleasures, knowingly or unknowingly, we engage in activities that lead to future births filled with suffering.

## Icch $\overline{\boldsymbol{a}}$ - A Root Cause of Suffering

5. The Buddha's described the Noble Truth on Suffering in his first discourse, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)."

- The complete verse in that sutta is as follows. "Idam kho pana, bhikkhave, dukkhain ariya saccamjātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maranampi dukkham, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchain na labhati tampi dukkhami-samkhittena pañcupādānakkhandhā dukkhā." [sañkhittena means being overthrown by defilements]
- I have discussed the description in plain bold in the post, "Essence of Buddhism - In the First Sutta."
- We discussed the verse, "Sainkhittena pañcupādānakkhandhā dukkhä" in recent posts in "The Five Aggregates (Pañcakkhandha)." As explained there, the Buddha succinctly attributed future suffering to "upādāna" for the five aggregates (pañcakkhandhā.) We learned that "upādāna" means "keeping close in one's mind." [saṅkhittena means being overthrown by defilements]
- Here, we will discuss how that "upādāna" relates to "icchā," simply translated as "desire." Then we will discuss the connection to anicca, which is often INCORRECTLY translated as "impermanence." That connection is in, "appiyehi sampayogo dukkho, piyehi vippayogo dukkho,yampicchain na labhati tampi dukkhaim."
- Let us discuss that verse in two steps.

## Appiyehi sampayogo dukkho, piyehi vippayogo dukkho

6. That means: "having to associate with things that one does not like is suffering, and having to separate from those one likes is suffering."

- One WOULD LIKE to keep a young person's body (say, 15 to 25 years of age), without getting old or sick, and never die. But we will NEVER get it.
- Even with human birth, we have to suffer when we get old, when getting sick, and finally when dying. There is no way to dissociate from those things that we do not like.
- We have no choice but to associate with those three things we do not like highlighted above.
- Worst of all, we will have rebirths in realms we do not like. That will happen until we comprehend anicca nature.

Yampicchaì na labhati tampi dukkhaín - Most Important Verse
7. "Yampiccam nalabhati tampi dukkham" captures the essence of anicca nature how it leads to suffering. It provides the key to understanding the Buddha's message and led to the attaining the Sotāpanna stage by the five ascetics.

- "Yampicchaí na labhati tampi dukkham" is a shortened version of the verse "Yam pi icchā̀in na labhati tam pi dukkham.".
- "Yam pi icchātio" means "whatever is liked or craved for." "Na labhati" means "not getting." "tam pi dukkhaim" means "that leads to suffering."
- Therefore, that verse simply says: "If one does not get what one craves or likes, that leads to suffering."

8. That is a more general statement and applies in any situation. What we discussed in \#6 above is summarized in the short verse, "yampicchain na labhati tampi dukkham.".

- We can see that in our daily lives. We like to hang out with people we love, and it is stressful to be with people we do not like.
- The more one craves something, the more suffering one will endure in the end. We tend to do immoral deeds to "get what we crave." But kammic energies we generate in such wicked deeds lead to rebirths that we do not like.
- Thus, we end up with two types of suffering. Our expectations are not fulfilled (whatever happiness gained is temporary.) Furthermore, we end up getting unfortunate rebirths.

## Icchā Keeps One Bound to "This World"

9. There are many suttā in the Tipitaka that discuss icchā. The "WebLink: suttacentral: Icch $\bar{a}$ Sutta (SN 1.69)" summarizes the importance of icch $\bar{a}$. One time, a deva came to the Buddha and asked:
"Nassau bajjhatī loko, "By what is the world bound? kissa vinayāya muccati;

Kissassu vippahānena, sabbaim chindati bandhanan" $t i$. By the removal of what one is freed? What is it that one must abandon To cut off all bondage?"

The Buddha replied:
"Icchāya bajjhatī loko, icchāvinayāya muccati; Icchāya vippahānena, sabbaì chindati bandhanan" $t i$.
"By cravings, one is bound to the world;
By the removal of desire one is freed
Craving is what one must give up
To cut off all bondage."

## Our Actions Based on Iccha (Taṇhā) Lead to Suffering

10. Pațicca Samuppāda process describes how our actions based on icchā (taṇhā) lead to future births and suffering. We have discussed that in detail in two main sections. See, "Paticca Samuppāda" and "Paticca Samuppāda - Not 'Self' or 'No-Self."

- In brief, the Buddha pointed out that our perception of a "nicca nature" where we can fulfill our desires is an illusion.
- No matter how much we strive, attaining long-lasting happiness in the rebirth process is impossible. If one believes that there is no rebirth process, one may not worry about such suffering beyond the present life.
- That is why one first needs to get rid of the ten types of wrong views (micchā ditthhi) before trying to comprehend that our perception of nicca nature is incorrect.
- Thus, the reality of this world is not "nicca" but the opposite. That is anicca.

## Inability to Fulfill Iccā/Icchā Means Anicca/Aniccha Nature

11. The inability to get what one desires is the opposite of "icca" or "na icca" or "anicca." That is the same way that "na āgāmi" becomes "Anāgāmi" ("na āgāmi" means "not coming back"; but in the context of Anāgāmi, it means "not coming back to kāma loka or the lowest 11 realms. Both these are examples of Pāli sandhi rules (connecting two words).

- In some suttā, like the "Girimānanda Sutta (AN 10.60)," we see the word aniccha, as we will discuss below. As mentioned above, icch $\bar{a}$ is a strong version of icca, and the words niccha and aniccha are the corresponding strong versions" of nicca and anicca.
- Other than in such specific cases, we will stick to the words nicca and anicca.
- The intrinsic nature of this world is "anicca," i.e., we will never get what we crave for, and thus the end (at least at death), we will leave all this behind and suffer, that is dukkha.

## Impermanence Is a Significant Part of Anicca

12. Anicca does NOT mean just "impermanence" is clear in the definition of anicca in many suttā. For example, the "WebLink: suttacentral: Anicca Sutta (SN 22.12)" states: "rūpaì, bhikkhave, aniccaí, vedanā aniccā, sañña aniccā, sañkhārā aniccā, viññannaì aniccaì."

- The English translation at Sutta Central "WebLink: suttacentral: 12. Impermanence" is: "form, feeling, perception, choices, and consciousness are impermanent."
- Is it not evident that especially the mental qualities (vedana, sañ̃̄̄, sañkhārā, viññanna) are impermanent? They change even moment-to-moment. That is a BAD translation. Of course, the other translation at Sutta Central and in many other texts is the same.
- The correct translation is that all five entities are of anicca nature, i.e., they cannot be maintained to one's expectations.
- No single word in English can express the meaning of anicca. Impermanence is just one aspect of anicca nature.
- The Pāli words for permanence and impermanence are dhuva and addhuva. For example, the "WebLink: suttacentral: Vepullapabbata Sutta (SN 15.20)" says, "Evaì aniccā, bhikkhave, sañkhārā; evaì addhuvā, bhikkhave, sañkhārā; evaì anassāsik $\bar{a}$, bhikkhave, sañkhār $\bar{a}$ " meaning, "sañkhārā" are anicca and impermanent (addhuvä), they should not be taken in ("na"+ "assāsikā.") By the way, this also shows that "assāsa" does NOT mean "breathing in." For details, see, "Is Ānāpānasati Breath Meditation?"

## Gimānanda Sutta - Anicca Nature of Sañkhāra

13. In the "WebLink: suttacentral: Girimānanda Sutta (AN 10.60)" the Buddha described the perception of anicca nature to Ven. Ānanada as follows. "Katamā ca Ānanda, anicca saññā? Idha Ānanda, bhikkhu araññagato vā rukkhamūlagato vā suññāgāragato vā iti patisañcikkhati: 'rūpaì aniccaìn, vedanā aniccā, sañn̄ā aniccā, sañkhārā aniccā, viñnānaín aniccan'ti. Iti imesu pañcasu upādānakkhandhesu aniccānupassī viharati. Ayaì vuccatānanda, aniccasaññā.

- The parts highlighted in bold say that all five entities "rūpa, vedanā, sañña, sañkhārā, viññāna are all anicca" and that "one lives contemplating the anicca nature of the 'five clingingaggregates' (pañca upādānakkhandha.)"
- The first part is the same as that we discussed above. The second part is even more clear. As we know, pañca upādānakkhandha is all mental. See, "Pañca Upādānakkhandhā - Introduction."
- There is nothing "permanent" there anyway. The Buddha meant to contemplate the "fruitlessness of clinging to one's memories or to future expectations."

14. In a subsequent verse in the sutta, the Buddha clarifies that "unfruitfulness" in vivid detail: "Katamā ca Ānanda, sabbasañkhāresu anicchā saññā? Idhānanda, bhikkhu sabba sañkhāresu atț̄̄yati harāyati jigucchati. Ayamं vuccati ca Ānanda, sabba sañkhāresu anicchā saññā. [atṭi : wounds. yati : [aor. of yatati] exerted oneself; strived. (m.), a monk. atțīyati : wounds inflicted by oneself. harāyati :[deno. from hiri] is ashamed, depressed or vexed; worries. jigucchati: [gup + cha; gu is doubled and the first gu becomes j$]$ shuns; loathes; is disgusted at.]

- The first highlighted part in bold says, "all sañkhāra make one tired at the end, just like a dog does not get any nutrition by chewing on a bone but only gets tired (attī̄yati.) One should be ashamed (harāyati) of engaging in such fruitless endeavors. One should reject them like feces and urine (jigucchati.) Note that the word "iccha" is in "jigucchati" which comes from "ji" +" $g u$ " + "iccha" or "liking urine and feces."
- I have discussed that verse in detail in "Anicca - The Incessant Distress ("Pilana")." Other meanings of anicca are discussed in "Anicca, Dukkha, Anatta."
- Therefore, the word anicca has a much deeper and more expansive meaning than just "impermanence." The cause of anicca is related to impermanence, but anicca means a perception that needs to be cultivated. The above verse provides further aspects associated with the key idea of the "inability to maintain anything to one's satisfaction."
- Impermanence is not directly connected to any of the three meanings of anicca in that verse.
- At the end of the verse, we see the word anicch $\overline{\boldsymbol{a}}$ used to emphasize anicca nature.

## Grasping of Anicca Removes Micchā Diṭ!hi

15. Grasping of anicca characteristic of nature requires getting rid of ALL of one's wrong views.

That is clearly stated in the "WebLink: suttacentral: Micchaditthipahana Sutta (SN 35.165)": "Cakkhum kho, bhikkhu, aniccato jānato passato micchā ditṭhi pahīyati. Rūpe aniccato jānato passato micchā diṭthi pahīyati. Cakkhuviñ̃āṇamं aniccato jānato passato micchā diṭthi pahīyati. Cakkhusamphassaì aniccato jānato passato micchā diṭthi pahīyati ... pe ... yampidaì manosamphassapaccayā uppajjati vedayitaì sukhaì vā dukkhaì vā adukkhamasukhamं vā tampi aniccato jānato passato micchādiṭṭhi pahīyati. Evaì kho, bhikkhu, jānato evaì passato micchā diṭthi pahīyatī"ti.

We can make two critical deductions from this verse.

- First, whereas only five entities are listed in \# 12, this verse enumerates many more related entities, and they all have the anicca nature. Anything and everything in this world have an anicca nature.

16. Then, the second part of the verse says the following. If one comprehends the anicca nature of all those entities, one has removed micchā diṭthi. The first level of micch $\bar{a}$ ditṭhi to be removed is the ten types of micchā ditṭhi.

- Ten types of micchā ditṭhi include not believing in the rebirth process. See, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage." Therefore, IF anicca means impermanence, THEN one would have removed all wrong views IF one has understood that everything in this world is impermanent.
- As discussed in the previous post, any scientist knows that nothing in this world is permanent. See "Five Aggregates and Tilakkhana - Introduction."
- By that definition of anicca, those scientists SHOULD NOT have any of the ten types of micchā dițthi. That is a contradiction since most scientists do not believe in rebirth.

## Summary

17. Future suffering cannot be stopped until one's cravings for worldly things (icchā, tanhhā, upādāna) are lost.

- Those cravings cannot be removed from one's mind until one realizes the futility and danger (future suffering) associated with such cravings.
- Those cravings may be TEMPORARILY suppressed by engaging in the mundane "breath meditation."
- However, by understanding the true anicca nature, one can realize the futility and danger (future suffering) associated with such cravings. A deeper analysis of, "Icchā (Cravings) Lead to Upādāna and to Eventual Suffering."
- That is why comprehending the anicca nature is a REQUIREMENT for attaining Nibbāna. Furthermore, anicca is closely related to dukkha and anatta, as we will see in future posts.
- As always, anyone is welcome to correct me (with evidence from the Tipiṭaka.)

### 3.7.7.3 "Me" and "Mine" - The Root Cause of Suffering

June 9, 2020; revised June 4, 2022; August 27, 2022

## Brief Summary of Pañcakkhandhā

1. The five aggregates (pañcakkhandh $\bar{a}$ ) are unique to each person. Yours is different from anyone else's.

- Pañcakkhandhā includes one's past experiences with rūpa in this world and anticipated future experiences with $r u \bar{p} a$ ( $r u \bar{p} a k k h a n d h \bar{a}$.)
- Those, of course, include mental qualities (vedanā, saññ̄a, sañkhāra, viññạ̄a.) They are in the four "mental aggregates" or vedanākkhandha, sañ̃̄ākkhandha, sañkhārakkhandha, viñ̃̄āṇakkhandha.
- Thus all five components of pañcakkhandhā are, in effect, our past experiences and future expectations. They are unique to each person.

## Brief Summary of Pañcupādānakkhandhā

2. We have upādāna for only a tiny fraction of pañcakkhandhā. That part is pañcupādānakkhandhā.

- Pañcupādānakkhandhā arises based on past experiences that we liked. For example, if X saw an attractive person last week, X would remember that person and have formed a particular set of feelings, perceptions, and sañkhāra about that person. Those then lead to possible expectations (asking for a date, for example) and that is part of viñ̃̃āna upādānakkhandha.
- It is critical to realize that all these are "mental." They arise BASED ON the external world, but they are one's own mental experiences/expectations.
- If another person (Y) saw the same person simultaneously, Y's mental impressions would differ from X's. Furthermore, Y may not even remember that person. If so, that event is not even a part of Y's upādānakkhandha.
- Pañcupādānakkhandhā arise based on the perception of "me" and "mine."
- It is a good idea to read the posts in "The Five Aggregates (Pañcakkhandha)" until the above facts are understood.

## Major Components of the Five "Clinging" Aggregates (Pañcupādānakkhandhā)

3. First, we need to see which parts of the five aggregates that we "cling to" (or "keep close" or upādāna.) Then we will see how that upādāna for the five aggregates CAN LEAD TO suffering.

- Something that we experience during every waking moment is our body and mind. Therefore, the physical body and all mental entities that arise contribute to the feeling of "me" or "mine."
- Then there are parents, a spouse, and children. They are precious parts of "me." Then there are relatives, friends, etc.
- Of course, one may own a house, cars, other real estate, businesses, etc.
- Then the list expands to include the neighborhood, city, country, and different things in the world.
- Each person may have their order differently, but you get the idea.

## Significant Components of Pañcupādānakkhandhā Centered Around "Me" or "Mine"

4. Think about what you mainly think, speak, and do. They all are related to what we mentioned in \#3 above. They all involve "me" and "mine."

- Of course, anger towards someone has origins in the view/perception of that person. They must have done something opposing "me" or related to "mine."
- An average human spends a significant portion of time watching useless movies, playing video games, getting drunk, etc. One would say those things, "keep me entertained." However, it is not that much different from a fish biting into a tasty bait on a hook in a deeper sense. One cannot "see" the harmful consequences of such apparently "harmless" actions.
- That last one is a more profound point that will gradually become clear as one starts comprehending Tilakkhaṇa.
- That way of "seeing" (ditthhi) and perception (sañña $\bar{a}$ ) arises because one is unaware of the true nature of this world or yathābhūta ñanna. We can express that in several different ways. Being unaware of the Four Noble Truths, not comprehending Tilakkhaṇa, not understanding Paṭicca Samuppāda, etc.

## Yathābhūta Ñāṇa - Understanding of the Reality About the World

5. All our actions based on greed, anger, and ignorance arise because we do not have the "yathābhūta $\tilde{n} \bar{a} n a . "$ That means not knowing the "true nature of this world."

- "Good and bad things" happen due to corresponding actions (kamma.) And kammā are done based on sañkhāra (the way we think.) Strong kamma (that can bring good and bad outcomes and future rebirths) happen due to (abhi)sañkhāra.
- Paticca Samuppāda describes the principle of cause-and-effect in Buddha Dhamma.
- However, the results of most kamma appear only later, sometimes in future lives. It is hard for many to believe in kamma/kamma vipāka. Also, it is impossible to progress on the path until one can see the truth of the rebirth process.
- Until that true nature (yathābhūta ñāṇa) is comprehended, there is a "satta" or a "living being" generating sañkhāra based on avijjā.
- Note that "satta" is pronounced "saththa."

## The Definition of a "Living Being" or "Satta"

6. The Buddha explained what is meant by a "satta" or a "living being" to Rādha in the "WebLink: suttacentral: Satta Sutta (SN 23.2)." "Rūpe kho, Rādha, yo chando yo rāgo yā nandī yā tanhhā, tatra satto, tatra visatto, tasmā sattoti vuccati. Vedanāya ... saññāya ... sañkhāresu ... viññāne yo chando yo rāgo yā nandī yā tanhā, tatra satto, tatra visatto, tasmā sattoti vuccati"

Translated (just the meaning): "Rādha, when there is desire (chanda), rāga, and a perception of high value ( $n a n d \bar{l}$ ) of material form ( $r \bar{u} p a$ ), there is clinging (satto), strong clinging (visatto) for form, and then a living-being (satto) is spoken of. Similarly, when there is desire (chanda), rāga, and a perception of high value (nand $\bar{l}$ ) of vedana $\ldots$.. sañña $\bar{a}$.. sañkhāra ... viññāna, then a living-being is spoken of."

- Other translations at "WebLink: suttacentral: Sentient Beings (SN 23.2)."
- Note that the Pāli word "satta" means "clinging" or "attach." A robust version of clinging is "visatta."
- Therefore, any living being (a Deva, Brahma, or a human) is a "satta" as long as the futility of craving for sensory pleasures is not understood. A "satta" has the perception of "me" and "mine."

7. In other wordls, as long as there is upādāna for pañcakkhandh $\bar{a}$ (i.e., as long as there is pañcupādānakkhandhā), there is a "living being" or a "satta."

- Also, note that one transcends the "satta" status when one becomes an Ariya puggala." A pugggala has overcome the "satta" status at eight levels (Sotāpanna Anugāmi, Sotāpanna, Sakadāgāmi Anugāmi, Sakadāgāmi, etc.)
- Also, a Bodhisatta is still a "satta," but proceeding towards "Bodhi" or the "Buddhahood."
- Note that "satta" is pronounced "saththa.") See "Tipitaka English" Convention Adopted by Early European Scholars - Part 1"and the second part referred to there.
- Let us see how what we discussed above ties up with Paticca Samuppāda.

## Paṭicca Samuppāda Process Only Depends on Avijjā

8. Paticca Samuppāda process does not care WHO is doing (abhi) sañkhāra. The results are determined by WHAT KIND of sañkhāra is involved. That sañkhāra generation is associated with pañcupādānakkhandhā or one's cravings/desires/expectations (related to anusaya, āsava, gati, etc.). Results are according to actions. Doing a particular type of action (kamma via sañkhāra) will lead to the fruits (kamma vipāka.)

- There is no need to invoke a "me" or a "self" in Paticca Samuppāda. But, of course, such (abhi) sañkhāra are generated BECAUSE there is a sense of "me" or "self." The critical step is to realize the fruitlessness of acting with a sense of "me."
- In other words, actions arise based on one's gati (habits/character.) See "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavā)."
- Instead, these days, people spend countless hours debating whether there is a "self" or not. One would better spend that time if one tried to understand WHY acting with the view and perception of a "me" will lead to suffering.
- There is a perception of a "me" and "mine" as long as one has defiled gati.

9. The ultimate truth is that there is no "self." That is easy to see because Arahant is not reborn after death. If there were an "unchanging self," they would still have to exist in one of the 31 realms after death.

- However, until one FULLY comprehends that fact (at the Arahant stage,) one does not FULLY realize that there is no "self" involved in this whole process. Until the Arahant stage, the perception of a "me" and "mine" will be there.
- Therefore, there will be a "self" generating (abhi)sañkhāra and making conditions for future suffering until the Arahant stage.
- Another way to say that is there will be a pañcupādānakkhandh $\bar{a}$ associated with any living being (satta.) An Arahant will have pañcakkhandhā until death but would have no upādāna left for it. Thus, there is no pañcup $\bar{a} d \bar{a} n a k k h a n d h \bar{a}$ for a living Arahant.

## Saǹkhāra Lead to Pañca Upādāna Khandhā (Pañcupādānakkhandhā)

10. There is nothing wrong with recalling past events. The problem arises when we attach to them and start re-creating those events in our minds to generate abhisañkhāra.

- Kammā (which lead to kamma vipāka) generated in three ways: mano kamma, vacī kamma, and kāya kamma. They are done via mano saǹkhāra, vacī saǹkhāra, and kāya sañkhāra. See "Sañkhāra - What It Really Means."
- Mano kamma (our spontaneous thoughts) arise automatically according to our gati.
- Vacī kamma ('talking to ourselves" and speech) arise due to conscious thoughts (done with vitakka/vicāra.)
- Kāya kamma also arise due to conscious thoughts and have the highest javana power because they involve moving bodily actions; see, "Javana of a Citta - The Root of Mental Power."
- Many think "talking to ourselves" or "daydreaming" is not bad because we don't physically do anything. Even though they are less potent than kāya kamma, vacī kamma can add up and lead to potent kamma vipāka, as we discuss next.

## "Thinking to Oneself" Is Vacī Sañkhāra

11. When we "talk to ourselves" (i.e., consciously think about something,) we mostly recall a significant past event. Then we analyze that event with vitakka/vicāra and either "re-live" that experience or "make plans for the future" based on that previous event. Vitakka/vicāra means analyzing it in detail and incorporating our desires. That leads to generating more and more vacī sañkhāra on that event; see, "Correct Meaning of Vacī Sañkhāra." Of course, if we "really get into it," we may do kāya sañkhāra too.

- Also, one could make up a "future event" that one would LIKE TO experience and that also becomes a part of pañcakkhandha (this is the "anāgata" or "future" component of the 11 components of any of the five aggregates).
- All the above involve "pañcupādānakkhandha" (pañca upādāna khandha). In other words, one is now "pulling that event back, close to one's mind" and consciously generating more vacī (and possibly kāya) sañkhāra.
- That is why "upādāna" is such a critical step in a Paticca Samuppāda cycle. The two stages of "taṇh $\bar{a}$ paccayā upādāna" and "upādāna paccayā bhava" really involve many, many Paticca Samuppāda cycles running inside them. See, "Tanhā Paccayā Upādāna - Critical Step in Paticca Samuppāda."

## Status of an Arahant - Wrong Point to Start

12. Many people are afraid of Nibbāna, thinking it will lead to the "extinguishment" of oneself. See "Yamaka Sutta (SN 22.85) - Arahanthood Is Not Annihilation but End of Suffering."

- We go through so much suffering in the rebirth process BECAUSE of our wrong view/perception of a "me" and "mine." Inevitable temptations lead to highly-immoral actions (pāpa kamma) that trap us in the four lower realms (apāyā) with unimaginable suffering.
- Such pāpa kamma are stronger versions of akusala kamma. See, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma."
- The first step is to see "anicca nature." Accumulating things perceived as "valuables" makes no sense in two ways. We have to struggle to maintain those and will have to abandon them at least when we die. See "Icca, Nicca, Anicca - Important Connections."
- The second point is that if we do immoral deeds to get them, those deeds will lead to bad rebirths and suffering.
- We can see only one part of the $a p \bar{a} y \bar{a}$, the animal realm. We mostly see our pets, not the unimaginable suffering that animals (in forests, jungles, and oceans) go through. There are no "old animals" there. Any old animal is eaten alive as soon as it becomes old and slow.

## Buddha Did Not Teach Anything That He Did Not Verify by Himself

13. Some of the above discussions may not be clear to everyone. It is a "previously unheard worldview" that only a Buddha can discover. However, learning Dhamma and living a moral life will gradually clarify those things.

- There are several suttā where the Buddha stated that he did not declare attaining the Buddhahood until he verified the "real nature" of this world. For example, he verified the existence of the 31 realms and how a given being dies in one realm and rebirth occurs in another. Furthermore, he saw how that happens via the natural Paticca Samuppāda process.
- As we learn Dhamma, more and more will become clear. One would have developed "unbreakable faith" in Buddha Dhamma at some point. That is when one has "saddhā." That will become solidified when one starts understanding that all suffering has roots in the perception of a "me" and "mine."
- Also, see "Mystical Phenomena in Buddhism?"

### 3.7.7.4 <br> Difference Between "Me and Mine" and Sakkāya Diṭ̣hi

June 16, 2020

## Getting Rid of "Me and Mine" Is a Step-by-Step Process

1. In the previous post, we discussed that the perception of "me" and "mine" is the root cause of suffering. See, "Me" and "Mine" - The Root Cause of Suffering."

- We discussed that one would not be able to remove that perception of "me" until attaining the Arahanthood.
- Therefore, that should not be the focus at the beginning of one's practice.
- First, one needs to get rid of the ten types of wrong views (micchā diṭthi.) Until one comprehends the truth of kamma/vipāka, the existence of the rebirth process, the creation of a "mental body" (a gandhabba in the case of a human bhava) at the cuti-patisandhi moment, etc. one cannot get on the path to Nibbāna. See, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- The second step is to remove sakkāya ditt!hi. We will discuss that in this post.

## Diṭthi, Sañ̃̃̄a, and Citta Vipallāsa - Three Obstacles in Getting Rid of Any Bad Habit

2. Vipallāsa means "distortions" in mind. If we do not have a clear understanding of the relevant concepts, we may take unwise actions based on our wrong views. Let us take an example to clarify.

- Consider an alcoholic, a person addicted to drinking. The addiction comes from the perception that it is good to have a drink to forget about any problems one may have, or just to enjoy that "drunken state of mind."
- Urged on by a good friend, that person starts to learn about the consequences of drinking. It can affect one's health adversely. Furthermore, it can make one do immoral deeds while drunk, and that can bring bad rebirth. Now he fully understands that he had wrong views about drinking, i.e., he had ditthi vipallāsa about drinking. Now diṭthi vipallāsa about drinking are absent in his mind.
- Yet, he finds that the temptation to "have a drink" is still there. While he would not get drunk as before, the desire to "have a drink" can popup once-in-a-while. For example, if a friend is having a drink, he may join in. Thus, sañ $\tilde{n} \bar{a}$ vipallāsa is still there. To get rid of that, he needs to keep contemplating the adverse consequences of drinking and also keep resisting the urge to have another drink.

3. Then, if that person keeps up with that practice, he will lose that sañña vipallāsa too. But a trace of the desire may be left as citta vipallāsa. Under extreme temptation, he may think about "having a drink." That is citta vipallāsa. Now, another effect of "continued practice" will take care of that too in a bit different way.

- With time, his body would not even tolerate a single drink. Instead of getting satisfaction from that drink, he might get a headache. That is when he would voluntarily give up even a single drink.
- That is because our bodily functions can be affected by the "state of mind." That starts happening from the very beginning, even while one is trying to comprehend Tilakkhana (anicca nature.) But the effects become clear after one has made significant progress.
- That is a simple explanation. More details at "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."

## Only Ditṭhi Vipallāsa Removed at the Sotāpanna Stage

4. At the Sotāpanna stage, one would only "see with wisdom" that it is unfruitfiul to consider anything as "me'" or "mine." As we saw in the previous post mentioned above, it is one's body that one considers being "one's own."

- The Buddha dissected what we consider to be "me" into five parts. One physical and four mental entities. That comes from our perception of "me" as "my body" and "my mind." Mind phenomena separate into four parts: we feel things happening (vedanā) and recognize them (sañ̃̃̄̄.) Based on that, we think about how to respond (sañkhāra) and act with certain expectations (viññāna.)
- We have discussed those five entities or aggregates in detail. See, "The Five Aggregates (Pañcakkhandha)."
- Our craving for those five aggregates (pañca khandhā) is pañcupādānakkhandhā.
- We crave those because we have the wrong view that those five aggregates are fruitful and provide longlasting happiness. That wrong view is sakkāya ditṭhi.

## Sakkāya Means Pañcupādānakkhandhā

5. As stated in the WebLink: suttacentral: Cūlavedalla Sutta (MN 44), sakkāya means pañcupādānakkhandhā (or pañca upādāna khandhā.)

- We can see that by looking at the meaning of sakkāya, which comes from "sath" + "kāya." Here "sath" means "good" and "kāya" means "collection."
- In the five aggregates, we have five aggregates or 'collections" or "piles." For example, as we remember, the $r \bar{u} p a$ aggregate includes one's internal ru$p a$ and external ru$p a$. Those include the present $r \bar{u} p a$, past $r \bar{u} p a$, and our visualizations of "future $r \bar{u} p a$."
- Out of them, the most important is our own body or "internal rūpa" (its present status, our memory of its past, and our expectations of its future status.) Invariably, those "internal rūpa" are in the rūpa upādāna khandhā.
- That rūpa upādāna khandhā will also include external rūpa that we like or crave for. That may include one's family, friends, possessions, etc.
- Then the other four aggregates would include our mental attributes involving $r \bar{u} p a$.
- Since we assume all five upādāna khandhā to be good for us or fruitful, i.e., they are sath kāya (which rhymes as sakkāya.)
- More details at "Tanhā Paccayā Upādāna - Critical Step in Paticicca Samuppāda."

## Sakkāya Diṭ̣̆hi Means the View That Pañcupādānakkhandhā Are Fruitful

6. Now we have a good idea of what is meant by sakkāya dittthi. It just means we like/crave those parts of the five aggregates because we have the view that they are fruitful and will bring long-lasting happiness.

- We become happy when all those that we crave provide us pleasure. That means they stay exactly as we want them to be.
- If things do not proceed the way we want, then we worry and suffer.
- The Sakkāyaditṭhi Sutta (SN 22.155) summarizes what we discussed in \#5 and \#6.

7. "WebLink: suttacentral: Sakk $\bar{a} y a d i t t h i ~ S u t t a ~(S N ~ 22.155) " ~ s t a t e s, ~ " r u ̄ p e ~ k h o, ~ b h i k k h a v e, ~ s a t i, ~ r u ̄ p a \dot{m}$ upādāya, rūpaì abhinivissa sakkāyadiṭthi uppajjati. Vedanāya sati ... sañn̄āya sati ... sañkhāresu sati ... viññāṇe sati, viññāṇamं upādāya, viññāṇaì abhinivissa sakkāya ditṭhi uppajjati."

Translated: "When one is attached to various rūpa (especially one's body), places a high value on them, sakkāya diṭthi (identity view) arises. When one attaches to vedanā, sañn̄̄, sañkhāra, and viññāna associated with such $r \bar{u} p a$, and places a high value on them, the identity view arises."

- In other words, one has sakkāya dittthi if one sees this world as fruitful and can lead to long-lasting happiness.
- With that wrong view, one is under the impression that it is possible to have total control of one's future by making sure to accumulate "enough stuff" thereby ensuring long-lasting happiness.
- That perception of "having full control" is also expressed by "atta." Note that the mundane meaning of "a person" is usually expressed by "att $\bar{a} "$ with a "long a."
- Therefore, there are two meanings of the Pāli word "atta." The ultimate or absolute (paramattha) meaning of "having full control" is expressed by "atta." The ordinary or relative meaning (vohāra) is "att $\vec{a} "$ with a "long a" that refers to a "person."
- Let us discuss this further.

## Atta Can Have a Mundane (vohāra) or an Absolute (Paramattha) Meaning

8. Even though a "person" does not exist in the paramattha sense, any living person has to use "me" and "mine" in interactions with others. Even the Buddha talked about "HIS" previous lives. He often started a discourse by saying, "let ME explain this concept."

- Furthermore, the Buddha emphasized that one should abide by the accepted standard rules of society. It is unwise to try to enforce the fact that in ultimate reality, there is no "me" or a "self."
- There were many wealthy people, and even kings, who had attained magga phala and still engaged in their mundane "householder" activities. Of course, at the Arahant stage, one has to become a bhikkhu.
- Throughout the Tipitaka, the word "atta" appears with several different meanings. It is important to be able to use the appropriate meaning in a given context.
- That is no different from using the word "right" in the following two contexts with entirely different meanings: "turn right" and "you are right." In the first, it refers to the direction, and in the second, it means "correct."

## Atta Meaning "Me" in Mundane Usage

9. There are many Tipitaka verses, where "attā" means a "person." The following are several examples.

- "Attānaim damayanti paṇ̂itā" in Dhammapada verse 6.80 means "The wise persons control themselves."
- "Attano sukhamicchati" in Dhammapada verse 21.291 means "one seeks one's own happiness." Also, note the word iccha (desire) in "sukhamicchati" is "sukham" + "icchati."
- In the Attadīpa Sutta (SN 22.43), "attadīp $\bar{a}$ viharatha" means "make an island of yourself," meaning "one has to seek one's own refuge."
- We will discuss the absolute or paramattha meaning of "attā" in the next post.

## What is in "Me" $(A t t \bar{a})$ ?

10. From ancient times, people have wondered about how to define "me" (or "att $\bar{a}$ " in Pāli.) Of course, one's body is the priority. But one's identity is also related to one's mental activities. Thoughts, feelings, perceptions are unique to each person.

- Anything that one can think of as a part of "me" or 'self" or "att $\bar{a}$ " is included in the five entities of $r \bar{u} p a$, vedanā, saññā, sañkhāra, and viññāna.
- It is only a Buddha that can do a thorough analysis and describes a person with those five "parameters." That analysis is taught by all Buddhas.
- Of course, each Buddha figures that out each time, on his own.
- Normally there is at most one Buddha in a given eon. But our current eon is a special one with five Buddhas. Remnants of the teachings of the previous Buddha (Buddha Kassapa) prevailed through Vedic teachings and were there when Buddha Gotama was born.

## That Terminology Was There Even Before Buddha Gotama - How Is That Possible?

11. Many people have the perception that Buddha Gotama "adopted" that five-fold analysis from the Vedas because those terms appeared in Vedic literature before Buddha Gotama.

- There was Buddha Kassapa on this Earth before Buddha Gotama. Buddha Kassapa's teachings (especially the true meanings of key concepts) were lost with time. But many terms, including the concepts of kamma, kamma vipāka, five aggregates, and many others, were incorporated into Vedic teachings and transmitted through many generations. Of course, the Vedic teachings used the Sanskrit language, which was derived from Pāli or Magadha language. Sanskrit means "derived from" ("san" +

- The Pāli words like kamma, Nibbāna, Paticca Samuppāda were made "more impressive-sounding" by mostly adding the " r " sound. Those three Pāli words became karma, nirvāna, and Pratītyasamutpāda, respectively, in Sanskrit.
- The same is true for the concept of five aggregates or pañca khandha. The Vedic teachings adopted them as five skandhas.

12. A full account requires possibly a whole book. But there are several instances in the Tipitaka where Buddha Gotama explained to various Brahmins that many of their teachings originated with Buddha Kassapa.

- For example, in the WebLink: suttacentral: Māgandhiva Sutta (MN 75), Buddha Gotama has a conversation with a Brahmin who quoted a verse from the Vedas. Buddha Gotama then says that verse was initially uttered by Buddha Kassapa and that it come down through generations in the Vedas without the true meaning. I have discussed that in the post, "Arogyā Paramā Lābhā.."
- When Prince Siddhartha was born, such Vedic teachings were there. We have a somewhat similar situation right now, with many vital concepts misinterpreted.
- I mentioned the above because I see in online forums many people wonder whether Buddha Gotama "adopted" Vedic concepts. Those concepts originally came from Buddha Kassapa. But any Buddha discovers them by his own efforts.
- Then the question comes up as to the "evolution of humans." There was no evolution of humans. Humans existed on Earth (with Brahma-like bodies) at the beginning of the Earth. This is why it would take a book to discuss all these things. I have given a brief account of the "beginnings" in "Buddhism and Evolution - Aggañña Sutta (DN 27)."

We will discuss the concept of sakkāya diṭthi further in the next post.

### 3.7.7.5 Sakkāya Diṭ̣hi - "Me and Mine" View

June 23, 2020

## The View of "Me and Mine"- Only For About a Hundred Years

1. An average human has the wrong view that it is beneficial to consider mind-pleasing things in this world as "me" or "mine." As we discussed in the previous few posts, the most valuable $r \bar{u} p a$ in the world is one's physical body. Then there are parents, spouses, children, friends, etc that are considered to be "mine." See,

## "Five Aggregates - Connection to Tilakkhana."

- It is critical to realize that all those things last only about 100 years.
- Upon death, even if one is reborn human, it will be a different body and a different set of humans that will become "me" and "mine." We would not even know who we were in our previous life. We would not know what happened to all those "loved ones" we had in the previous life.
- That is the "big picture" that we need to focus on. That big picture can be discovered only by a Buddha.
- It would be impossible for any other human to discover the "real nature of the wider world of 31 realms" where a given living-being goes through the birth/death process.
- But once explained by a Buddha or a true disciple of the Buddha, one can see the truth in his teachings.

## "Me and Mine" View Can Lead to Immoral Actions

2. Based on that wrong view of "me" and "mine" we are sometimes forced to do immoral actions. Think about it carefully. If we lie, steal, or hurt others, such actions can always be traced back to "taking care of me or mine."

- It is critical to understand that this wrong view of "me and mine" (sakkāya ditṭhi) is different from the perception of "me and mine." Ditṭhi means "view."
- Even after getting rid of the wrong view of "me and mine" that wrong-perception will still be there. That perception of "me" or the innate feeling of "me" will go away only at the Arahant stage.
- However, just "seeing" that it is is not fruitful to act on the basis of "me and mine" is enough for the mind to stay away from doing highly-immoral deeds. That "seeing" happens when one becomes a Sotāpanna.
- Of course, it may not be easy to comprehend. That is why the Buddha said, "this Dhamma has not been known to the world."

## "Me and Mine" View Cannot Be Removed by Will Power - It Is Lost via Understanding the "True Nature"

3. The logic of Buddha Dhamma cannot be understood without the underlying principles. Those underlying principles are the rebirth process, laws of kamma, how Patticca Samuppāda to give rise to new births, etc. For that, one first needs to get rid of the ten wrong views and learn basic concepts like gati, anusaya, etc. See, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

- It is not easy to put all that together and see the truth of the "wider world-view." Yet, without that foundation, it is not possible to see that big picture and realize the truth of it.
- It may be hard to believe, but just that "understanding of the big picture" will lead to the removal of $99 \%$ of the "gunk" that has been accumulated in our minds in a rebirth process that has no discernible beginning.
- I recommend reading the recently compiled English text of discourse on this subject by the late Waharaka Thero: WebLink: PDF file: How to Attain Nibbāna as a Buddhist Layman - Part 1

## That "Big Picture" Must be Learnt From a Buddha

4. If one has not heard the above from a Buddha or a true disciple of the Buddha, that person - no matter how intelligent - would not be able to figure that out by him/herself.

- The Buddha called such a person "assutavā puthujjano." That means "an ignorant person who had not heard this Dhamma."
- Of course, many people cannot and will not agree with that "new Dhamma." They do not have the capability to grasp it. They may not be willing to discard the wrong views that they have. There is nothing we can do about that.
- I have come this far in the rebirth process because I also had been incapable of grasping that in my previous lives.
- So, all we can do is try our best to understand. Even if one cannot understand, one needs to live a moral life and engage in meritorious deeds, so that the understanding can come in future life.

## Who Is an Assutavā Puthujjano?

5. There are many suttā where the Buddha described an "assutavā puthujjano."

For example, the "WebLink: suttacentral: Patipadā Sutta (SN 22.44)" states, "Katamā ca, bhikkhave, sakkāya samudayagāmin̄̄ paṭipadā? Idha, bhikkhave, assutavā puthujjano ariyānaì adassāvī ariyadhammassa akovido ariyadhamme avinīto, sappurisānaì adassāv̄̄ sappurisadhammassa akovido sappurisadhamme avinīto, rūpaì attato samanupassati, rūpavantaì vā attānaì; attani $v \bar{a}$ rūpaì, rūpasmìi vā attānaì. Vedanaì ...
saññaì ...saǹkhāre ...viññ̄ạnaì attato samanupassati"
Translated: "And what, bhikkhus, is the path leading to the origination of identity view? Here, bhikkhus, an ignorant person who has not heard Dhamma ... regards form as self ... vedan $\bar{a}$ as self ... saññ̄ $\bar{a}$ as self ... sañkhāra as self ... viññā $\bar{n} a$ as self ${ }^{\text {c }}$

- "Rūpaim attato samanupassati" means, "regards form (meaning one's body) as "me" in one of four ways. In the same way, that person may consider each of the other four aggregates as "me" in one of four ways.
- Thus, considering each of the five aggregates in four ways "to be mine", leads to the "self-view" or 'identity view." That is "twenty-types of sakkāya ditṭhi" or "vīsativatthukā sakkāya ditṭhi." See, "WebLink: suttacentral: Nayasamutthāna (Ne 36 / Netti 5)" of Nettipakaraṇa.
- Anyone who has not heard the correct explanation of sakkāya dittthi is an "uninformed/ignorant" human or assutavā puthujjano. That is why most people today belong to this category. Even when explained, some people have a hard time grasping this "previously unheard Dhamma."

## Sutavā Ariyasāvako - One Who Has Heard and Comprehended Dhamma

6. The opposite of an assutav $\bar{a}$ puthujjano is a sutavā ariyas $\bar{a} v a k o$, who has heard and comprehended the correct teachings of the Buddha. Such a person knows the dangers in attaching to worldly things.

- There are many sutt $\bar{a}$ in SN 35 (especially SN 35. 1 through SN 35. 12) that discuss a sutav $\bar{a}$ ariyasāvako. For example, "WebLink: suttacentral: Ajjhattāniccātītānāgata Sutta (SN 35.7)" says: "Cakkhumi, bhikkhave, aniccaì atītānāgataì; ko pana vādo paccuppannassa. Evaì passaì, bhikkhave, sutavā ariyasāvako atītasmim cakkhusmim anapekkho hoti; anāgataì cakkhum nābhinandati; paccuppannassa cakkhussa nibbidāya virāgāya nirodhāya patipanno hoti. Sotaỉ aniccaì ... ghānaì aniccaì ..."

Translated: "Bhikkhus, the eye of the past and future (let alone the present) is of anicca nature, . Seeing this, a learned noble disciple doesn't attach to the eye of the past, he doesn't look forward to enjoying the eye in the future, and he practices for non-attachment, dispassion, and cessation regarding the eye of the present. The ear ... nose ..."

- Note that translating "anicca" as "impermanent" does not make any sense. The "eye of the past" has already been destroyed. There is no need to talk about the impermanence of it. What the verse says is that it is not beneficial to recall one's past and think fondly about it, hoping to enjoy such an eye in the future.

## An Assutavā Puthujjano Has Sakkāya Dițthi

7. Thus sakkāya ditthi (identity or self-view) arises because one takes one's body as "me." Of course, one may take one's vedana $, \operatorname{san} \tilde{n} \tilde{a}, \operatorname{san} k h \bar{a} r a$, and viñ $\tilde{a} n a_{a}$ as self too. In other words, anyone who views one or more of the five aggregates as "mine" has sakkāya ditṭhi.
"WebLink: suttacentral: Sakkāyaditthi Sutta (SN 22.155)" the Buddha says, "rūpe kho, bhikkhave, sati, rūpai் upādāya, rūpaì abhinivissa sakkāya diṭthi uppajjati. Vedanāya sati ... saññāya sati ... sañkhāresu sati ... viññāne sati, viññāṇà் upādāya, viññāṇaì abhinivissa sakkāya diṭthi uppajjati.

- OR, "When one focuses on $r \bar{u} p a$ when one is "immersed" in $r \bar{u} p a$ and keep them close (in one's mind), identity view arises. The same can happen with vedanā, sañ̃̄̄a, sañkhāra, and viñ̃̄̄̄ṇa.

Then the Buddha asks, "Taí kim maññatha, bhikkhave, rūpaí niccaím vā aniccaín vā"ti?

- OR, "bhikkhus, are those rūpā of nicca or anicca nature?"
- Anicca and nicca are complex Pāli words with multiple (but related) meanings. See, See, "Anicca True Meaning."
- Those two words are related to "icca" or "icchä" meaning liking or desire. See, "Icca, Nicca, Anicca Important Connections."
- We will discuss the correct meaning of "Taï kimं mañnatha, bhikkhave, rūpaím niccaín vā aniccaìm $v \bar{a} " t i$ ? in \#9 below. First, let us look at the common INCORRECT meaning of it.

## Critical Error in Equating "Nicca and Anicca" in Pāli as "Nitya and Anitya" in Sanskrit

8. The INCORRECT translation of "Taì kim maññatha, bhikkhave, rūpaì niccaì vā aniccaì vā"ti? is, "bhikkhus, are those $r \bar{u} p \bar{a}$ permanent or impermanent?"

- That is the English translation that appears in most current English texts. It is WRONG!
- The Pāli word "nicca" DOES NOT mean "permanent" and "anicca" DOES NOT mean "impermanent."
- However, the Sanskrit words "nitya" and "anitya" DO MEAN "permanent" and "impermanent."
- That grave mistake of confusing Pāli words with wrong Sanskrit words has kept so many people from grasping the correct Buddha Dhamma.
- Pāli words for "permanent" is niyata AND dhuva. Impermanence expressed as "aniyata" or "addhuva."
- For the life of me, I do not understand why all these "learned bhikkhus and scholars" refuse to take a bit of time to go through the Tipitaka and figure this out. They should keep in mind that teaching wrong Dhamma is an offense. The Buddha admonished that dealing with Dhamma is like handling a snake. If you get hold of the wrong end, you will be in danger.

## Correct Translation of "Taím kim mañnatha, bhikkhave, rūpaín niccaín vā aniccaì $\boldsymbol{v} \overrightarrow{\boldsymbol{a}} \boldsymbol{t} \boldsymbol{i}$ ?

9. In fact, there are more suttā in this series that probe deeper into how the root causes of suffering are tied up to the view of "me" and "mine" based on the high-value for world objects.

For example, WebLink: suttacentral: Annanda Sutta (SN 22.159) further clarifies what we discussed in \#6 above. In that sutta, the Buddha explains to Ven. Ānanda how attachment to rūpa with VIEW of "me and mine" leads to suffering and, thus, is the wrong view. The conversation goes as follows.

- "Taì kimं maññasi, ānanda, rūpaì niccaì vā aniccaì vā"ti?
- "Aniccam், bhante."
- "Yaín panāniccaì dukkhaì vā taì sukhaì vā"ti?
- "Dukkham, bhante."
- "Yaì panāniccaì dukkhaì viparin̄āmadhammaí, kallain nu taì samanupassitum: 'etain mama, esohamasmi, eso me attā'" $t$ i? [kalla : [adj.] 1. clever; able; 2. healthy; sound; 3.ready; 4. proper.]
- "No hetami, bhante."

## Translation:

- "What do you think, Ānanda? Can anyone maintain rūpa to one's liking?"
- "One cannot (aniccaì), Bhante."
- "If one cannot maintain something to one's liking, does the lead to suffering or happiness?"
- "Suffering, Bhante."
- "If something cannot be maintained to one's liking, leads to suffering, and is subject to unexpected changes, is it wise to regard that as: 'This is mine, I am this, this is my self or identity'?"
- 'No, Bhante."

Then the Buddha asks about the other four aggregates (the mental aggregates) of vedanā, sañ̃̄ā, sañkhāra, and viññāna.

- Venerable Ānanda agrees that those are also unfit to be "taken as mine or my identity."

## Is It Wise to Take the Five Aggregates As "Me and Mine"?

10. The key point is that these suttā only talk about whether it is SUITABLE or WISE to take any of the five aggregates as me or mine.

- That pertains only to one's view of a "me." Getting rid of that VIEW is getting rid of sakkāya diṭthi.
- One may still have the feeling/perception of a "me." That goes away only at the Arahant stage.
- Yet many people today try to start with "I do not exist" (with the incorrect translation of anatta as "noself'). It is ridiculous to say, "I do not exist." It is obvious that we all exist.
- We will discuss the concept of anatta in the next post. That basically says one will be helpless in the rebirth process with the wrong view and wrong perception of a "me." That "me" will go through uncountable "bad births" with that wrong view/perception of a "me."

## One Could Be Reborn a Human, Deva, Brahma, Animal, Hell-Being Which One Is "Me"?

11. Think about that. Is "me" a human, animal, a Brahma, (or any of the many births possible)? This is why one cannot comprehend Buddha Dhamma without understanding the "big picture" of the Buddha about this world.

- That "big picture" is the non-stop rebirth process within the 31 realms of this world.
- It also includes the laws of kamma and Paṭicca Samuppāda. Here, Paṭicca Samuppāda explains how different existences (bhava) arise due to abhisañkhāra (strong kamma.)
- It is those abhisañkhāra (done with $a v i j j \bar{a}$ ) that lead to different existences as a human, Deva, Brahma, animal, hell-being, etc.
- Any living-being will be "preparing one's own future births" via generating corresponding abhisañkhāra (or good bad kamma) due to ignorance (avijj $\bar{a}$.) That was the conclusion of the series of posts on "Origin of Life." See, "Origin of Life - One Creates One's Own Future Lives."
- That $a v i j j \bar{a}$ will reduce by a huge fraction when one gets rid of sakkāya ditthhi. It will completely go away at the Arahant stage with the removal of "asmi māna."

### 3.7.7.6 Atta - Two Very Different Meanings

July 1, 2020
First, "atta (attā)" is pronounced with the "th" sound, as in "metta (mettā)." See, \#12 of ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1."

## Words With Double Meanings in English

1. A number of English words are spelled the same way and pronounced the same way, but have different meanings. For example, let us consider the word, "mine."

- The word mine is a possessive adjective. For example, "That house is mine" means the house belongs to me.
- Mine is also a noun. It can refer to a place where minerals (coal, gold, etc) are dug out of the earth.
- A mine (or landmine) also refers to a bomb that is buried underground. It can explode when someone steps on it or drives over it. They are used in war.
- There are many other words like that. We need to know which meaning to use based on the context (how it is used). Another simple word is right. It means a direction in "turn right at the traffic light." But it means something entirely different in, "you are right" meaning "you are correct."

## Atta (and Attā) - Two Very Different Meanings

2. Many Pāli words have double meanings. In addition, many Pāli words have a mundane meaning and a deeper meaning. We need to know which one to use depending on the situation.

- One becomes good at figuring out which meaning is relevant in a given context, only after having a good understanding of Buddha Dhamma. A good understanding comes especially with practice, not merely by reading about Buddha Dhamma.
- That is why it is not a good idea to resort to Pāli dictionaries alone. See, "Pāli Dictionaries - Are They Reliable?"
- Pāli word "atta" has two frequently used meanings. One is the mundane meaning of "person" or "self." Let us discuss that first.

## Atta Meaning "Person" or "Self" in Mundane Usage

3. There are many Tipittaka verses, where "atta" means a "person." The following are several examples.

- "Attānaì damayanti paṇ̂itā" in Dhammapada verse 6.80 means "The wise persons control themselves."
- "Attano sukhamicchati" in Dhammapada verse 21.291 means "one seeks one's own happiness." Also, note the word iccha (desire) in "sukhamicchati" is "sukham"" + "icchati."
- In the Attadīpa Sutta (SN 22.43), "attadīp $\bar{a}$ viharatha" means "make an island of yourself," meaning "one has to seek one's own refuge."

## Various Wrong Views based on "Person" or "Self"

4. Humans always wondered what it is that feels like "me." What defines a "me" or a "self" or "attā?" Based on such thinking, they come to various wrong conclusions or wrong views about a "self."

- In the WebLink: suttacentral: Brahmajāla Sutta (DN 1) the Buddha described 62 types of wrong views that people have.
- All these wrong views can be divided into primarily two categories (the other views are variations of these two.) In the terminology used today, we can list those two categories as follows.

Permanent Soul (Sassata Vāda): A given person has a permanent soul in Abrahamic religions (or ātma or atman in Hinduism.) When the physical body dies, "the soul" or "ātma" gets hold of another existence. In Abrahamic religions, that next existence is forever in either heaven or hell. In Hinduism, one may go through many "incarnations" and would finally merge with Mahā Brahma to attain a permanent existence.

Materialistic View (Ucceheda Vāda): When the present life ends, no more future lives or existences. The material body is solely responsible for generating our thoughts (in the brain.) Many scientists today belong to this category.
5. The verse describing sassata vāda: "Tatra, bhikkhave, ye te samaṇabrāhmaṇā sassatavādā sassataì attānañca lokañca paññapenti .."
means, "when those ascetics and brahmins assert that the self and the cosmos are eternal .."

- Sassata means "eternal."

The verse describing uccheda vāda: "Tatra, bhikkhave, ye te samaṇabrāhmaṇā ucchedavādā sato sattassa ucchedain vināsaì vibhavaì paññapenti .." meaning, "they assert the annihilation of an existing being.."

- Uccheda means to "break off" or "cut off." Materialists believe that we just live this life.

## With the Mundane Meaning of Atta, Anatta is Not Used as Its Opposite

6. Therefore, in ALL of the above cases, the word "atta" refers to what we traditionally call a "self."

- In simple terms, materialists have the wrong view that a "self" has only this life.
- People in the other camp have the wrong view that a "soul" is forever.
- The Buddha pointed out that both views are wrong. A "self" would come to existence as long as appropriate causes and conditions are there. But there is no "permanent self" like a soul. An Arahant would not be reborn. He/she would have removed those causes and conditions for rebirth.
- In both cases, the word "anatta (or anatt $\bar{a}$ )" is NEVER used to indicate the opposite of att $\bar{a}$. The word "anatta" is NEVER used to indicate that a "self is absent." For example, in the WebLink: suttacentral: Annanda Sutta (SN 44.10) Vacchagotta comes to the Buddha asked "Master Gotama, is it correct to say that there is a "self"?" He used the phrase, "atthi att $\overrightarrow{\boldsymbol{a}}$ " to ask whether there is a "self." Then he phrased it the opposite way and asked, " is it not correct to say that there is a "self"?" There he used the phrase, "na atthi att $\overrightarrow{\boldsymbol{a}}$ " to ask whether a "self" does not exist. See, "Anattā (Mundane Interpretation) No "Unchanging Self."

Now, let us discuss the absolute or paramattha meaning of "attā." Here, the opposite of att $\bar{a}$ (or "anatta") indicates two facts: (i) Any worldly thing does not have an essence. (ii) One would become helpless at the end if one attaches to those worldly things. These meanings need to be used in the context of the three characteristics of nature or Tilakkhaṇa.

## Anatta As a Characteristic of Nature - No Essence in Worldly Things

7. This usage of the word "anatta" indicates "no refuge" or "no essence" to refer to THINGS IN THIS WORLD. It could also mean one would become "helpless" at the end if one pursues worldly things with greed or cravings. This involves the deeper meaning of "atta" being "with refuge" or "with essence."

- One would be safe and protected by overcoming the anatta nature. That is Nibbāna. Only Nibbāna has the "atta" nature.
- In this context, the three words anicca, dukkha, and anatta describe CHARACTERISTICS of this world. They have NOTHING TO DO with the context of a "self" directly.
- In brief, anicca means that "worldly things" cannot be maintained to anyone's satisfaction in the long-run. Those "worldly things" include not only material things but also mental attributes, among them vedanā, saññā, sañkhāra, and viññāna.
- IF someone craves them and attaches to them, then that person will be subjected to future suffering. That comes in two parts. First, one would become distressed because those desires will not be fulfilled at the end. Secondly, if one does immoral actions to get them, then one will have to face bad consequences of such actions (including rebirths in bad existences.)
- Thus, in the end, attachment to worldly things will be of "no essence." Those struggles would be in vain and are fruitless. One would become helpless by pursuing such efforts.

## Anattha and Attha Are Strong Versions of Anatta and Atta

8. I have explained in a previous post that the words "iccha" and "aniccha" have the same meanings as "icca" and "anicca" but with stronger emphasis. See, "Icca, Nicca, Anicca - Important Connections."

- In the same way, "atta" and "anatta" in the present context have stronger versions indicated by "attha" and "anattha."
- In the WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11), the Buddha described a person engaged in kāmasukhallikānuyoga or attakilamathānuyoga as "anatthasamihito."
- The verse at the beginning of the sutta is, "Yo cāyaì kāmesu kāmasukhallikānuyogo hīno gammo pothujjaniko anariyo anatthasamito, yo cāyamं attakilamathānuyogo dukkho anariyo anatthasamhito."
- Here, the word "anatthasamhito" (anattha + san + hito) means an anariya or an ignorance average person is helpless because of the wrong views.

9. Furthermore, "attha" also indicates "truth" ("artha" in Sinhala) and "anattha" indicates "untruth or useless" ("anartha" in Sinhala) depending on the context. None of these words are used in the context of a "self."

- The above verse could also be explained as an anariya engaging in useless activities (either indulging in sense pleasures or going to the other extreme of self-mortification.) Either activity does not have any meaning or essence.

## Anicca, Dukkha, Anatta - Closely Related Characteristics of This World

10. Anicca, dukkha, anatta are CHARACTERISTICS of this world. The word "anatta" in that context DOES NOT mean "no-self" or anything like that. However, a given person can BECOME anatta (helpless) by attaching to things of anicca nature that lead to suffering (dukkha.) But a person with magga phala has overcome that state of "helplessness" and has become an Ariya with refuge (atta.)

- The opposites of anicca, dukha, anatta (ie., nicca, sukha, atta) are characteristics of Nibbāna. See, "Tilakkhana - English Discourses."
- One gets to Nibbāna by renouncing "this world of 31 realms."
- One attains Nibbāna by first realizing the anicca, dukkha, anatta NATURE of this world. Only then that one would have understood the Four Noble Truths.
- Only then it is possible to grasp that the Fourth Noble Truth of "the path to Nibbāna" is the Noble Eightfold Path. That Noble Path starts with Samma Ditthi, which is the "clear vision" that this world is of anicca, dukkha, anatta NATURE of the world with 31 realms.

## "Previously Unheard Dhamma" of the Buddha

11. That is a very succinct description of Buddha Dhamma, the "previously unheard teachings that can only come from a Buddha."

- The common perception is that one can find long-lasting happiness in this world. That there are so many "mind-pleasing things" in this world worth pursuing. If one makes a determined effort, one can "succeed in life" and "be happy."
- The Buddha agreed that there are many "mind-pleasing things" in this world.
- But the Buddha taught that there is suffering hidden in those apparent 'mind-pleasing" things. That hidden suffering is hard to see, and that is why not everyone can understand Buddha Dhamma. Without making a determined effort, it may not be possible.

## An Analogy - Assutavā Puthujjano Is Not Different From a Fish Biting Into a Tasty Bait

12. The Buddha gave the following analogy. A fish bites into a tasty bait, because it cannot see the hook hidden in it. The fish only see the "tasty bait" and cannot see the hook, string, fishing pole, and the person holding that pole. If it could see the "whole picture" it would not even go close to that bait.

- In the same way, it is only a Buddha who can "see" the "bigger picture" with the 31 realms with the four suffering-filled realms and the rebirth process. Due to the ignorance of that "wider worldview," livingbeings spend most of the time in those four lowest realms.
- An "assutava puthujjano" or an "ignorant average human" is unable to see that hidden suffering. That is why most living-beings spend most of their samsaric journey within the four lowest realms. They get trapped there and become helpless. They become "anatta" or "without refuge" at the end. See, "Sakkāya Ditthi - "Me and Mine" View."
- I have discussed those three words in many posts in the section "Anicca, Dukkha, Anatta" and also in the recently revised section on "The Five Aggregates (Pañcakkhandha)." It was also discussed with another approach in the "Origin of Life" section. Each person is different and one of those could be appropriate for a given person. In the end, they all converge to the same point and one would be able to see that they are all self-consistent.

## Evidence That Anatta Does Not Mean "No-Self"

13. There are many suttā in the Smayutta Nikāya that discuss anicca, dukkha, anatta, and the relationships among them. Specifically SN 22, SN 23, and SN 35.

- For example, WebLink: suttacentral: Kotthikaanatta Sutta (SN 35.164) states, "Cakkhu kho, kotṭhika, anatt $\bar{a}$; tatra te chando pahātabbo. R $\bar{p} p \bar{a}$ anatt $\bar{a} ;$ tatra te chando pahātabbo. Cakkhuviññānamin anattā; tatra te chando pahātabbo. Cakkhusamphasso anattā; tatra te chando pahātabbo. Yampidamं cakkhusamphassapaccayā uppajjati vedayitaím sukhamं vā dukkhaì vā adukkhamasukham vā tampi anattā; tatra te chando pahātabbo ..."

Translated: "The eye, sights, eye-consciousness, and eye "san-contact" (samphassa) are without essence: you should give up the desire/cravings for them. The pleasant, painful, or neutral feeling that arises conditioned by eye "san-contact" (samphassa) is also without essence. You should give up the desire for it."

- That statement is then repeated for the ear, tongue, nose, body, and mind. It applies anything and everything in this world!

## Can Eye-Consciousness Have a "Self"?

14. Most other translations state all those entities that I highlighted above are "not-self." See, "WebLink: suttacentral: With Kotthita on Not-Selp" which states, "The eye, sights, eye-consciousness, and eye contact are not-self.."

- How can eye-consciousness possibly have a "self"? How can eye contact have a "self"? What does it mean to say they have "no-self"? Even a child should be able to see that statement does not make any sense!

## Anything In This World Has Anatta Nature

15. In fact, as stated in the sutta in \#13 above (and MANY other sutt $\bar{a}$ ) ANYTHING that exists in this world is of anatta nature. They are all without any essence.

- It starts with the anicca nature of ALL worldly things. That means no one can maintain anything in this world to one's satisfaction over the long run.
- But people try to do that impossible task because they crave many things in this world. But in the end, they would only suffer. That is partly because they do immoral deeds to acquire those "things" and end
up having to face bad kamma vipāka. The verse "yad aniccaím taim dukkhaim" or the verse, "Yam pi icchamं na labhati tam pi dukkhaì" expresses that fact.
- That process will gradually move anyone to more and more suffering. One will eventually end up in the apay $\bar{a}$ with much suffering, and at that point, one would be truly helpless (anatta.) That is what is meant by, "Yaim dukkhaim tad anattā."
- That verse, "yad aniccaì taì dukkhaín, yaím dukkhaí tad anatt $\vec{a}$ " appears in numerous suttā in the Tipiṭaka. That is how living-beings become helpless in the rebirth process (by engaging in immoral deeds) in their quest of seeking "sensory pleasures."
- That is the "previously unheard Dhamma" of the Buddha.

### 3.7.8 Saññā (Perception)

Saññ̄ $\bar{a}$ is, at the very fundamental level, the recognition of an external stimulus. But it is more than that. We not only recognize that a given object is, say, a dog. But some people may be able to categorize it as a bull dog. Thus sañ̃ña about a particular object depends on the person.

Same is true for other four senses. When we hear a sound, we recognize what it is, say a bird singing a song. Some may be able to say which bird it is, some may not be. Any smell, taste, or touch works the same way. Without sañ̃n̄̄ we cannot identify things around us, and also cannot communicate with each other meaningfully.

One of the 31 realms of existence is the "Asanna realm." There, the beings have no saññ̄ $\bar{a}$ or perception. Thus in principle, those beings are without any awareness. Nothing registers in the mind. If anyone has attained the 7th jhāna, the "Nevasanna Na'sanna," then that person knows what it is like to born in the Asanna realm.

Saññā is described in more detail in, "Saññā - What It Really Means" and "How to Cultivate the Anicca Saññā."

Next, "Vedanā (Feelings)",

### 3.7. Vedanā (Feelings)

## Revised November 6, 2018; August 31, 2019

In this and follow-up posts, we will discuss six types of vedan $\bar{a}$ (feelings) and how they arise. There are other types of vedan $\bar{a}$, but these are the important ones to understand for the Sotāpanna stage. Three of these occur due to kamma vipāka, and the other three arise due to sañkhāra (defiled thoughts).
 aware of something." When we sense something via our six senses, we become aware of it; that is vedanā.

## Two Ways Vedanā (Feelings) Can Arise

$V e d a n \bar{a}$ (feelings) can arise in two ways:

1. First, as a consequence of a previous kamma (i.e., a kamma vipāka), possibly done many lives ago. Those usually are not avoidable.

- Unavoidable vedanā (feelings) are three kinds : Sukha vedanā (pleasant or joyful feeling), dukha vedanā (unpleasant or painful feeling), and adukkhama asukha (without being painful or joyful, just neutral), where we are just aware of it. This adukkhama asukha vedanā is also called upekkha vedanā.

2. Second, s a direct consequence of a sañkhāra (one could say an ongoing action or a way of thinking). These are absent in Arahants.

- Three types of other vedanā are avoidable: somanassa (pleasant), domanassa (unpleasant), and upekkha (neutral) vedanā. They are solely mind-made and are due to defiled thoughts (sañkhāra). The details discussed below.

## Vedanā Arising from Kamma Vipāka

Kamma vipāka can happen to everyone, including Arahants. While everyone can avoid some kamma vipäka, others are too strong to be able to be avoided.

- For example, the Buddha himself had physical ailments later in his life as kamma vipāka. Because of a bad kamma that he committed many lives before, Moggallana Thero was beaten to death.
- However, kamma vipāka are not sure to happen. Some can be reduced in power by Mettā Bhāvanā; see, "Karaniya Metta Sutta - Mettā Bhāvanā."
- All kamma vipāka reduce in power with time and some eventually die out if they did not get a chance to come to fruition within 91 Mahā kappas. Many can be avoided by not providing conditions for them to arise (see, the discussion on kamma bīja in, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka").
- One could also feel sukha vedanā (pleasant feelings) due to good kamma vipāka. These are also bodily feelings that arise due to "pleasant bodily contacts" like a getting a good massage or lying on a luxurious bed.
- These types of vedanā are not DIRECTLY relevant in Pațicca Samuppāda. For example, when Devadatta injured the Buddha, the Buddha did not generate "vedana paccaya a tanha $\vec{a}$ " in Patticca Samuppāda.

## Vedanā Arising from Sañkhāra

These are the vedanā that Arahants do not feel. Since they do not commit any abhisañkhāra (those strong sañkhāra done with greed, hate, and ignorance), an Arahant avoids any feeling arising from abhisañkhāra. The easiest way to explain this kind of vedan $\bar{a}$ is to give some examples:

1. Three people are walking down the street. One has an ultra-right political bias (A), the second has an ultra-left preference (B), and the third is an Arahant who does not have special feelings for anyone (C). They all see a famous politician hated by the political right coming their way. It is a given that the sight of the politician causes A to have displeasure and B to have a pleasurable feeling.
2. On the other hand, the sight does not cause the Arahant to generate any pleasure or displeasure. Even though all three see the same person, they generate different types of feelings. It is critical to realize that $A$ and $B$ created the feelings by themselves.
3. Two friends go looking for treasure and find a gem. They are both overjoyed. It seems quite valuable, and one person kills the other so that he can get all the money. When he tries to sell the "gem", he finds out that it was not that valuable. His joy turns to sorrow in an instant. Nothing had changed in the object, the piece of stone. It was the same piece of colored rock. What has changed was the perception of it (saññā).
4. A loving couple had lived for many years without any problems and were happy to be together. However, the husband slaps his wife during an argument. The physical pain from the slap itself did not last more than a few minutes. But for how long the wife would suffer mentally? Even the husband, who did not feel any physical pain, would suffer for days if he really loved his wife. In both cases, the attachment to each other led to real suffering. The wife could have dropped something on her foot and would have suffered about the same amount of physical pain. But she would not have had any lingering mental pain associated with that.

Thus all these second kind of feelings arise due to greed, hate, or ignorance. They are due to (abhi) sañkhāra. The feelings come from INSIDE oneself. They do not come from a kamma vipāka. We use external things to CAUSE happiness or suffering by our own volition.

- These types of vedana (also called samphassa j $\bar{a}$ vedan $\bar{a}$ " or "vedanā generated via samphassa") are the ones relevant in Paticca Samuppäda.

Deeper analyses can be found at Vedanā (Feelings) Arise in Two Ways
Next, "Viññ̄āna (Consciousness)",

### 3.7.10 Viññāṇa (Defiled Consciousness)

Originally written in 2014; re-written September 8, 2018; revised December 25, 2018; July 18, 2022

Viññāna is normally translated as consciousness or awareness. But it is much deeper and can be many different types. An overview is given below, and there are several posts on different types of viññāna in different sections of the website.

- Viññāna is very complex and is the key to Nibbāna. One should read the posts mentioned below; more posts can be found using the "Search box" on the top right.
- First, it is very important to get a basic understanding of Pāli terms like citta, viñãāṇa, and nāma gotta: "Amazingly Fast Time Evolution of a Thought (Citta)" and "The Amazing Mind - Critical Role of Nāmagotta (Memories)."

## Six Types of Viñnãāna

1. There are six types of viñ̃ñana corresponding to the six sense inputs (vision, hearing, taste, smell, touch, mind): cakkhu, sota, jivhā, gandha, kāya, and mano viññāna.

- When we experience a sense input (say, see an object), we get a happy, unhappy, or neutral feeling (vedanā), recognize it (saññ̄ $\bar{a}$ ), and automatically generate mano sañkhāra.
- Viññāna provides the overall sensory experience that includes vedanā, sañ̃̄ā, and sañkhāra. Those latter three combined is called "nāma."
- However, in addition to just providing a "sense experience" (which is all "nāma"), viñ̃ñ̄ṇa can also act as the bridge between "nāma" and "rūpa" to "nāmarūpa." These nāmarūpa are the seeds for the creation of matter ( $r \bar{u} p a$ ). That is a separate type of viñ̃āṇa - called kamma viññanna - as we discuss now.

## Two Types of Viññ̄ạa -Vipāka Viññāna and Kamma Viññāṇa

2. Vipāka viñ $\tilde{n} a ̣ n a ~ i s ~ a w a r e n e s s ~ o r ~ c o n s c i o u s n e s s . ~ T h e ~ f i v e ~ t y p e s ~ o f ~ v i \tilde{n} \tilde{n} \bar{a} n a$ associated with the five physical senses are ALWAYS vipāka viñ̃ñạa. Mano viññāṇa also could be a vipāka viññāna. When one "sees" something that is cakkhu viññāna and when one smells something that is a ghāṇa viñ̃̄āṇa, etc. Six types of vipāka viññāna arise when sense inputs come through the six sense doors (eyes, ears, nose, tongue, touch, and the mind). These are the six types listed above in \#1.

- The second major type is kamma viññạ̄a or defiled viññāna. Kamma viññāna are those that arise via "avijjā paccayā sañkhāra" in Pațicca Samuppāda.
- It is to be noted that kamma viññāna are always mano viññāna, i.e., kamma viññanna arise in mind without going through the five physical sense doors.
- Therefore, mano viññāṇa can be vipāka viññāna or kamma viññāna.

3. Kamma viññāna are created via our defiled thoughts (sañkhāra) which are three types: mano, vacī, and kāya sañkhāra.

- When we automatically generate thoughts due to sensory input those are mano sañkhāra; then we consciously think about it and may even talk out loud about it (with vacī sañkhāra); if we get engaged, we may physical do things (with kāya sañkhāra); see, "Sañkhāra - What It Really Means."
- It is also important to realize that "talking/thinking to oneself silently" without speaking is included in $v a c \bar{\imath}$ sañkhāra; see, "Correct Meaning of Vacī Sañkhāra."

4. We can see that what is called the "awareness" or "consciousness" is vipāka viñ̃̄āṇa; it is one's experience at a given moment.

- On the other hand, kamma viñnān̄a is what is called the "subconscious." A hope or desire lies hidden and comes to the surface from time to time. For example, if we plan to buy a car, that idea (hope/desire) remains in our subconscious. When we see a car like the one that we want to buy, that viñ̃̃āna is "awakened," and we start thinking about it. But once we buy the car, that viññāna will be gone, i.e., we will not think about it anymore.
- We are reborn mainly because we desire to live and enjoy life. But we do not get our exact wish most of the time; if we do dasa akusala to get what we want in this life, we are likely to be born in the apayy $\bar{a}$, regardless of what we wish for.

## Mechanisms for Generating Vipāka Viñ̃̄āṇa and Kamma Viññạ̣̄a

5. Kamma Viññāna are generated in Paṭicca Samuppāda cycles; see, "Paticca Samuppāda." As we saw above, kamma viññāṇa arise due to sañkhāra: "avijjā paccayā sañkhāra" and "sañkhāra paccayā viñ̃ān̄a."

- Therefore, we accumulate such kamma viññāna by doing (abhi) sañkhāra due to our ignorance (that striving to get sense pleasures can lead to long-lasting happiness), i.e., we do not comprehend the anicca nature.

6. Vipāka viñnāna arise via six ways due to sense inputs via the six sense faculties: "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānam̀", "sotañca paṭicca sadde ca uppajjati sotaviñ̃ān̄am̀,"..."manañca paṭicca dhamme ca uppajjati manoviññāṇam்."

- In English, that means we see an object when our eyes capture light coming from that object; we hear a sound that comes to our ears, ... we get a thought in our mind.
- An example of a mano viññāna is, for example, something that happened on a previous day just popping into the mind.
- This process of the arising of the six types of viññ̄ana is discussed in, "Do I Have "A Mind" That Is Fixed and "Mine"?"

## Based on Vipāka Viññāṇa, We Initiate Kamma Viññāna

7. Everything that we INITIALLY EXPERIENCE is due to a kammā vipāka, i.e., it comes to us as a vipāka viññāna. They make us see, hear, smell, taste, experience bodily sensations, and bring new thoughts to mind.

- Based on those sense inputs, we MAY initiate new kamma viññāna if those sense inputs are either attractive (leading to greed) or repulsive (leading to hate/anger). This happens via "sañkhāra paccayā viññāna" as mentioned above.

8. If we start doing sañkhāra consciously, then we start generating NEW kamma via the process, "sañkhāra paccayā viññāna." Then we would give rise to a new kamma viññ̄ṇa. If those abhisañkhāra
are strong enough, corresponding kamma viññāna can give rise to a special type of vipāka viñãāṇa called paṭisandhi viñ̃̄āṇa (responsible for rebirth).

- A paṭisandhi viñ̃ān̄na, which is the state of mind at the moment of grasping a new bhava (new existence) is a vipāka viññāna; we cannot control it.
- Paṭisandhi viññāna is A RESULT of a past kamma that we did with a kamma viññanna at the time of doing that kamma. For example, someone kills a human being with a kamma viññāna, and that gives rise to a kamma bīja (kammic energy). That kamma bïja can bring in a vipāka viññāna in the form of a pațisandhi viññaṇa in the future.

9. This vicious cycle of "vipāka" leading to "kamma" leading to more "vipāka" is the process that binds us to the sainsāra of endless rebirths, with (mostly) suffering.

- The Buddha describes this as, "kammā vipākā vaddanti, vipāko kamma sambhavo, tasmā punabbhavo hoti, evan loko pavattati."
- That means, "kammā lead to vipāka, vipāka, in turn, lead to kammā and thus to rebirth (punabbhavo), and that is how the world (existence) is maintained."
- There, "sambhava" is "san" + "bhava," or "adding more existences." Also, "loka" is the world, and "pavatta" means "maintain."

10. Breaking this vicious cycle is the key to Nibbāna, as we point out next.
"Yam kiñci dukkham sambhoti, Sabbam viññānapaccay"̈" ("Whatever suffering that arises, It
arises due to viñ̃āana")
11. Many suttā clearly state that Nibbāna is attained by stopping the arising of viññāna (defiled consciousness), i.e., via "viññāna nirodha." A clear statement can be found in the "WebLink: suttacentral: Dvavatānupassanāsutta (Sutta Nipata 3.12)":
"Yaì kiñci dukkhamं sambhoti,
Sabbaì viññānapaccayā;
Viññānassa nirodhena,
Natthi dukkhassa sambhavo."
Translated: "Whatever suffering that arises, all that arises due to viñ̃āạa; With not arising of viññạ̄a, there is no existence with suffering."

- The viññāṇa referred to here is kamma viññāna. For a discussion, see "Viññāna - What It Really Means."

12. Of course, the way to stop kamma viññāna from arising is to stop doing abhisañkhāra, i.e., stop kamma viññāna in the step, "sañkhāra paccayā viññāna." That involves two steps:

- First, one needs to cultivate paññā and get rid of avijjā, so that the "avijjā paccayā sañkhāra" step can be avoided. One needs to comprehend this world's anicca, dukkha, anatta, and asubha nature.
- Secondly, one also needs to be mindful and stop such abhisañkhāra from arising to stop the rebirth process or even to stop bad kamma vipāka in the future.
- Both of those two steps are essential; they feed on each other. The more one understands the anicca nature, it is easier to stop such abhisañkhāra, AND the more abhisañkhāra one stops, it becomes easier to comprehend anicca nature.

## Key Points to Remember

13. Kamma viññāna are sañkhata that we create ourselves; they are also called "kamma bïja." We create them by doing mano, vacī, and kāya sañkhāra due to our ignorance. That process is described by patticca samuppāda.

- We can stop generating kamma viññāna by being mindful and not doing abhisañkhāra, especially apuñña abhisañkhāra or immoral deeds.

14. The type of rebirth (or other kamma vipāka) that arise due to abhisañkhāra is described by paticca samuppāda: they are according to the type of abhisañkhāra done: "pati icca leading to sama uppāda"; see, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda"."

- Then they bring vipāka or results in the future via vipāka viññaṇa. As long as one lives, one will experience vipāka viññanna, even if one is an Arahant.
- However, an Arahant will not grasp a new bhava at the moment of death (at the cuti-patisandhi moment) because the "upādāna paccayā bhava" step will not work for an Arahant: $\mathrm{He} / \mathrm{she}$ will not grasp any bhava, i.e., no upādāna.

15. This is a highly condensed overview. Don't be discouraged if you cannot understand some things. One needs to spend some time reading relevant posts and contemplating them. Any questions can be discussed at the discussion forum: "Forums."

### 3.7.11 Rūpa (Material Form)

## Revised February 3, 2018

Please see, "What are Rūpa? Relation to Nibbāna" for an introduction.
Most people have many misconceptions about rūpa. So, we will systematically look at different kinds of rūpa. R $\bar{u} p a$ are basically everything that the five physical senses sense: we see vanṇa rūpa (physical objects that bounce light off, also called "rūpa rūpa"), we hear sadda rūpa (sounds), we smell gandha rūpa (odors), we taste rasa rūpa (food), and we touch pottabba rūpa (physical objects). Our internal senses that sense those external ru$p a$ are also fine $r \bar{u} p a$ that are controlled by the mind. Those that are sensed by the mind are dhamma (concepts), and mind is not a $r \bar{u} p a$.

- Here is a simple way to figure out the five types of rūpa: If we take a toasted slice of bread that is rūpa rūpa or a vaṇna rūpa; if it is freshly toasted, when we break it, it will make a sound, which is a sadda rūpa; the smell of that bread is a gandha rupa; when we taste it, we taste the rasa rūpa in the bread; when we touch it, we touch the pottabba rūpa in the bread.

There are many ways that $r \bar{u} p a$ can be analyzed. The basic "building blocks" of all rūpa are the four great elements (mahā bhūta): pathavi (element of extension with the characteristic of hardness), $\bar{a} p o$ (The element of cohesion with the characteristics of cohesiveness and fluidity), tejo (the element of heat or heat energy with the characteristics of hotness and coldness), and $v \bar{a} y o$ (the element of motion or kinetic energy with the characteristics of pushing and supporting).

- It must be noted that in many cases, the Buddha took existing terms and redefined them to be consistent with Buddha Dhamma. The terms pathavi (earth), $\bar{a} p o$ (water), tejo (fire), and $v \bar{a} y o$ (wind) were thought to be the basic building blocks for matter in the pre-Buddha era, including the Greeks.
- But those names have deeper meanings too; for an in-depth discussion see, "The Origin of Matter Suddhatthaka."

There are 28 types of basic rūpa, and the other 24 are derivatives (upadaya rūpa) of the four mahā bhūta.

1. Rūpa can be put into two categories regarding whether they are internal (ajjhattika) and external (bāhira). The internal rūpa are the five pasäda rūpa associated with the physical body: eye
(cakkhu), ear (sota), nose (ghāna), tongue (jivhā), and body (kāya). Internal rūpa also include our physical body (including the physical eyes, ears, etc). Here are a few things to note: [bāhira : [adj.] external; outer; foreign. (nt.), outside.]

- These five internal or pasāda rūpa are essential for experiencing the outside world. Without them, people will not be different from inanimate logs. Those internal rüpa associated with the physical body become inert (and external) when the gandhabba leaves the body.
- It must be emphasized that pasāda rūpa are NOT the physical organs that we see. These are fine rūpa (matter) that stop being regenerated at death. Thus cakkhu is NOT the physical eye.
- From the moment of death of the physical body, cakkhu is not there anymore; it is gone with the gandhabba. However, the physical eye is there and can be even used in another person's body within 24 hours or so.
- Therefore, those physical senses are internal only as long as the gandhabba is associated with the physical body. As soon as gandhabba leaves at the death of the physical body, they become external rūpa.

2. Out of all the external (bāhira or bahiddhā) rūpa, seven are called gocara rūpa or objective rūpa because those are the ones that can be sensed by the five internal (pasāda) rūpa.

- These are: visible (vaṇ̂a) rūpa, sound (sadda) rūpa, smell (gandha) rūpa, taste (rasa) rūpa, and tangible rūpa (phott $\mathrm{t} h a b b a$ ). There are no separate rūpā called photṭhabba rūpa; they are pathavi, tejo, and $v \bar{a} y o$, three of the four great elements (mahā bhūta). Thus things we see with our eyes are the visible (vanṇa) rūp $\bar{a}$; they are only part of the class of $r \bar{u} p a$.
- It is important to note that the gocara rūpa or objective $r \bar{u} p a$ are the only $r \bar{u} p a$ that we EXPERIENCE with our five physical senses. For example the remaining great essential, $\bar{a} p o$, is not experienced by our senses.
- The five pasāda rūpa and the seven gocara rūpa that are sensed by them are collectively called the olarika (gross or coarse) rūpas because they can touch (strike) each other. The other 16 rūpas are subtle or fine (sukhuma) rūpa.

3. There are several fine $r \bar{u} p \bar{a}$ that are associated with our body.

- Hadaya vatthu (heart base) - together with the five pasāda rūpa - are located close to the heart.
- Jivitindriya rūpa (vital force of kammaja rūpa) is spread throughout the body.
- There are two bhava rūpa that determine whether it is a male or a female: itthi bhava (femininity) and purisa bhava (masculinity). One kind is spread throughout a body.
- Āhāra rūpa (oja) are nutritive essence that sustains the body. It is extracted from the food we eat.

4. So far we have discussed five pasāda rūpā, seven rūpā that constitute the external rūpa (vanṇa, sadda, rasa, gandha, pathavi, tejo, vāyo) that are sensed by the pasāda rūpa, and the five other rūpa (hadaya, jivitindriya, two bhava rūpa, and oja) in \#3.
5. The remaining mah $\bar{a} b h \bar{u} t a$ or the great element is $\bar{a} p o$. It is the r $\bar{u} p a$ that holds any structure together, but it is not sensed by the body (kaya) rūpa. With the $\bar{a} p o r \bar{u} p a$, up to this point we have discussed 18 types of rūpa. These 18 types of rūpa are called nippanna rūpa (concretely produced rūpa) because they are caused and conditioned by one or more of four things: kamma, citta, utu (tejo) and $\bar{a} h \bar{a} r a$ (food); thus they are suitable for contemplation by insight.

- The five pasāda rūpa, two bhava rūpa, hadaya vatthu and jivitindriya rūpa (9 in all) are produced by kamma and kamma alone.
- Sadda (sound) rūpa are produced by citta and utu (tejo). Vocal sounds such as speech, laughter, whistling, etc are produced by citta. Non-vocal sounds, such as thunder and music from instruments are produced by $u t u$.
- The different ways that kamma, citta, utu, and $\bar{a} h a \bar{a} a$ produce the 24 types of rupa is summarized in the Tables and Summaries Section; see, "Rūpa - Generation Mechanisms."

6. The remaining 10 rūpa are more abstract in nature. They are called anippana rūpa (nonconcretely produced $r \bar{u} p a$ ).

- Akasa dhātu (space element) is not so much "space", but more like the inter-atomic space or intraatomic space. It occupies whatever is not occupied by any other $r \bar{u} p a$. Thus it is everywhere, even in the deep inter-galactic space where there is no "detectable matter." Scientists are beginning to suspect that there is much more energy in the vacuum (zero point energy) than the energy that we experience. It is like the deep ocean and what we see are only the ripples.
- We communicate using two fine $r \bar{u} p \bar{a}$ : vinnatti ru$p a$ or material qualities of communication. We use both the mouth and and the body to communicate with each other. Kāya vinnatti (bodily intimation) is gestures by hand, head, physical eye, leg, etc, to indicate one's intentions to another. Vacī vinnatti (vocal intimation) is the movement of the mouth to produce vocal speech.
- There are three vikara (mutable) rūpa that helps with the movements of the body. The lahuta (lightness or buoyancy) rūpa suppresses the heaviness of a body. This make it possible for up jump, for example. Imagine trying to toss up an equivalent weight! Muduta (elasticity) removes the stiffness in the body. Kammannata (weildiness) gives strength to hold up body parts. All these make possible our body movements.
- Finally, there are four lakkhana (material qualities) rūpa that are common characteristics of all rūpas: Upacaya and santati ruppa are associated with the arising of a rūpa, jarata rūpa is associated with the decay, and aniccata rūpa is the dissolving stage. See the lifetime discussed below.

7. The four great elements (mahā bhūta) are the primary rūpa. Each of the four has its own character: pathavi element of hardness; the $\bar{a} p o$ element of fluidity and cohesion; tejo of heat; vāyo of motion and pressure.
8. The mahā bhūta can never be detected separately. The eight rūpa of pathavi, $\bar{a} p o, ~ t e j o, ~ v \bar{a} y o$, are always found together with vaṇna, gandha, rasa, oja in inseparable units called pure octads or suddhattthaka, which are the fundamental units of matter. These eight $r \bar{u} p \bar{a}$ are inseparable and indivisible, and thus are known as avinibbhoga rūpa; for an in-depth discussion see, "The Origin of Matter Suddhatthaka"
9. It is not necessary to memorize all these details about different $r \bar{u} p a$. But it is good to have a reference base to look up if needed. Abhidhamma goes to much more detail and shows how the mental energy can form different kinds of $r \bar{u} p a$.

If you have not read about sañkhāra (the remaining one of the five aggregates):
"Sañkhāra, Kamma, Kamma Vipāka, Kamma Bīja", ......

## Pañcakkhandha or Five Aggregates - A Misinterpreted Concept

December 25, 2015; revised September 29, 2018; September 10, 2022
First, many people have the impression that rūpakkhandha is one's own body OR that pañcakkhandha is "in one's own body." The problem with this critical mistake can be seen with the description of rūpakkhandha (and the other four khandha as 11 types).

## Eleven Types of Rūpa in the Rūpakkhandha (Same for Other Khandhā)

1. This is clearly described in many sutta $\bar{a}$, even though the true meaning has been hidden all these years. In particular, the WebLink: suttacentral: Khandha sutta (SN 22.48) summarizes what is included in each aggregate.

- Eleven types of rūpa (mental impressions) are in the rūpakkhandha: past, present, future, near, far, fine (sukuma), coarse (olārika), likes (paṇìta), dislikes (appaṇīta), internal (ajjhatta), and external (bahiddha). Here internal rūpa means (mental impressions) of one's body parts, and external $r \bar{u} p a$ are (mental impressions) of external objects.
- Thus, it is quite clear that rūpakkhandha encompasses anything that we ever saw (including previous births) we are seeing now and hope to see in the future. The record of what belongs to the past is permanent and is called namagotta. Any rūpa about the future (for example, a sketch of the type of house one is thinking about building) can change with time.
- The other four $k h a n d h \bar{a}$ have the same 11 types.
- An acceptable English translation of the Khandha sutta is available online: "WebLink: accesstoinsight.org: Khandha Sutta: Aggregates."
- It does not explain the concept discussed above. But one can see the 11 components of each khandha are there. Also, note that it is NOT Skandha sutta; it is Khandha sutta. This is why I say that skandha is a WRONG TERM.

2. We can see that Buddha Dhamma has become so contaminated over the past thousands of years. Fortunately, we still have the Tipitaka in close to its original form. The Buddha stated that his Buddha Sasana would last for 5000 years, and the way he made sure that will happen, was to compose the sutt $\bar{a}$ as I described in the post, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

- Furthermore, Abhidhamma and Vinaya sections, as well as three original commentaries, are still intact in the Tipitaka; see "Preservation of the Dhamma" and other posts in "Historical Background."
- The main problem even with the Theravāda version of "Buddhism" is that instead of using the Tipitaka as the basis, the tendency is to use the Visuddhimagga written by Buddhaghosa, who had not attained any magga phala and stated that his "wish" was to become a deva in the next life from the merits he gained by writing Visuddhimagga!
- Even when using the Tipitaka, most people use the wrong interpretations of keywords such as anicca, dukkha, anatta, khandha, and Patticca Samuppāda. This problem is apparent in the Sinhala translation of the Tipitaka, which was done with the sponsorship of the Sri Lankan government several years ago.

## Rūpa and Rūpakkhandha - The Difference

1. Contrary to popular belief, pañcakkhandha or panca khandha (five aggregates) is all mental, and realizing this fact can help get rid of the "ghana sañ̃ $\bar{a}$, ," the perception that the world around us is "solid and permanent"' I will write more on this later.

- It is sometimes erroneously called pancaskhandha, and I will explain why that is incorrect.

2. For example, there is a huge difference between $r \bar{u} p a$ (material form) and $r \bar{u} p a ~ k h a n d h a$, the aggregate of material form. Rūpa khandha is commonly written as rūpakkhandha by connecting the two terms to one word, by adding an extra " k " (a common way of connecting words or "sandhi" in Pāli). The same is true for the other four aggregates. The correct interpretation makes many other concepts easier to understand.

- Rūpa is matter (and energy) and is made of the satara mahā bhūta (pathavi, apo, tejo, vāyo) and their derivatives.
- Rūpa khandha is all MENTAL.
- Similarly, there is a difference between vedanā (feelings) and vedanākkhandha (the aggregate of feelings), even though here both kinds are mental; we will discuss the difference below. The other three khandha of sañ̃̄̄a, sañkhāra, and viññanna are similar to that of vedanā.
- This is very important to understand, and I will proceed slowly to clarify the concepts.

3. The key to clarifying what rūpakkhandha is to examine why the Buddha added "khandha" to the rūpa. He could have labelled past rūpa, future rūpa, sukuma rūpa, olārika rūpa, etc. to describe the 11 types of them as discussed above. What was the need to add "khandha"? That is because rūpakkhandha is all MENTAL, and to see how it comes about we need to examine how each of us experiences "the world." Each of us does it differently.

- Each person has his/her own rūpakkhandha or how he/she perceives the material rūpa in the world. That rūpakkhandha has associated with its other four khandhas and thus comprises the pañcakkhandha. And panca upadanakkhandha, or what one has cravings for, is a small part of that.
- Just like the concept of anicca, this again is a very important concept to understand, so please try to read through slowly at a quiet time and grasp the concepts. As the Buddha said, "at the end what matters is understanding a concept, not memorizing words."
- When I first grasped this concept, it was like turning the lights on in a previously dark area that I did not even know existed! This is a good example of what the Buddha meant by "aloko udapādi."

## What is a Khandha?

1. One of the main problems we have today is that many key terms are in Sanskrit rather than the original Pāli. The meanings get distorted. A good example is paṭicca samuppāda, for which the Sanskrit term is pratittyasamutpada, which does not convey the meaning; see, "Paticca Samuppāda "Pati+ichcha"+"Sama+uppāda."
2. Similarly, the Sanskrit term "skandha" is commonly used in the place of khandha, the original Pāli term. Khandha is a heap and the Sinhala term is kanda, which is even used today to denote a heap or a pile.

- When we experience the world, we do that with our six senses, and that experience is registered as thoughts (citta). But a single citta is born and gone in a small fraction of a second. What we EXPERIENCE are the aggregates of numerous citta that go through our minds even in a fraction of a second.
- We experience a rūpa (sight, sound, smell, taste, touch, dhamma) with a citta AND based on that generate mental qualities of vedanā, sañ̃̄̄̄, sañkhāra, and viññāna. In each citta, the mind analyzes all these, and that citta is gone in a fraction of a second.
- The manasikara cetasika that is in each citta puts together the contents in all these "packets" including our past impressions - and provides us with an overall experience that includes a "sketch of what we see, hear, ..", and those feelings, perceptions etc that arise due to that sense impression.
- This can be compared to connecting individual links in a metal chain. In the old days, blacksmiths used to make chains by manually connecting one link to the next by hand. He can only see himself linking two of them at a time, but if he looks back he can see the whole chain. In the same way, the five aggregates or heaps keep building up with each passing second.

3. In another example, it is like a movie recording that keeps recording non-stop from our birth to death. And when we die it does not stop, it just starts recording the new life. And these five heaps or aggregates that have accumulated over ALL previous lives are in the namagotta, a permanent record; see, "The Amazing Mind - Critical Role of Nāmagotta (Memories)."

- Of course, we remember only a fraction of it, even in the present life. But some people remember more things than others; see "Recent Evidence for Unbroken Memory Records (HSAM)."
- But we also make plans for the future. And those heaps about the future are also in the pañcakkhandha, but not in the namagotta, which only records what has already happened. As soon as the present moment passes, more of the five heaps are added to the namagotta.
- Thus pañcakkhandha includes past, present, and future, whereas namagotta includes only that portion of the pañcakkhandha that has gone to the past.
- Even though I have discussed these concepts in the introductory posts in the Abhidhamma section, I will go through a simpler version to get the ideas across here. Those interested can then also review the posts in Abhidhamma section; see "Essential Abhidhamma - The Basics."

## What We Experience Comes in "Packets" or "Heaps" or "Khandha"

1. A simple view of how we sense the outside world is as follows: The five physical senses receive images, sounds, smells, tastes, and touches from the outside. Those sense inputs are sent to the brain via the nervous system. The brain analyzes such "signals" and helps the mind (hadaya vatthu) to extract the "meanings" conveyed by those images, sounds, smells, tastes, and touches.

- Let us take an example of looking at a cake. The eye is like a camera; it captures an image of the cake just like a camera does. That image is sent to the brain and the brain analyzes that picture and sends it to the mind (hadaya vatthu), which matches it with previous experiences (manasikāra cetasika does this) and identifies it as a chocolate cake made by grandma. The brain and mind working together this way can analyze many such pictures in a fraction of a second.
- This is basically what scientists believe happens too. Still, the difference is that scientists believe that the brain compares the current image of the cake with zillions of images "stored in the brain," which I say is an impossibility. The brain needs to scan through "its depository of images" and not only identify that it is not a loaf of bread or a piece of wood, but also what kind of a cake it is, and whether it is made by grandma or bought from a store. And this is done within a fraction of a second. Think about it! This is real vipassana meditation! What we are trying to do is to understand how nature works.

2. In Buddha Dhamma, the brain is in constant communication with the "hadaya vatthu" which is the seat of the mind. All our past experiences are "stored" in the mental plane (mano loka), and hadaya vatthu can access that information; these are what we call "namagotta." A record of each sensory event gets added to nāmagotta in viñ̃̃āna dhātu - via the mana indriya in the brain.) See, "Our Two Worlds: Material and Immaterial."

The Abhidhamma section discusses how the brain constantly communicates with the hadaya vatthu and other details. Those details are not important as long as one can picture this process in one's mind.

- This image sent by the eyes (and the brain) to the hadaya vatthu generates an imprint or a record. That record gets added to nāmagotta in viññāna dhātu - via the mana indriya in the brain. Thus, our memories are "stored" in viññāna dhātu (or nāma loka) and not in the brain.
- That record is now part of the rupakkhandha. It is not material but a record.
- If a smell is analyzed, then a record of that smell is made. Thus the rūpakkhandha here is a record of that particular smell. In this way, rūpakkhandha are just records or imprints. All five physical senses help generate $r \bar{u} p a k k h a n d h a ;$ remember that sight, sound, smell, taste, and touch are all $r \bar{u} p a$.
- The mind receives a set of static frames in a given second. Many such records for various sensory inputs go through our minds in second. The mind can make this appear as a continuous movie, with pictures, sounds, tastes, etc flowing smoothly.

## Animation Video

1. Just to give the flavor of what happens, we can look at what happens when we watch a movie. The movie is a series of static pictures or frames. When making a movie, what is done is to take many static pictures and
then play them back at fast enough speed. If the playback speed is too slow, we can see individual pictures, but above a certain "projection rate", it looks like real motion. Here is a video that illustrates this well:

## WebLink: YOUTUBE: Animation basics: The optical illusion of motion

2. When we experience (see, hear,...) the outside world, what happens is very similar to the above. At the end of the video it is stated that the "movie" we see is an illusion, and as the Buddha explained, that holds for real life as well. In real life when we see someone coming towards us, what we actually see is a series of "static pictures" or citta projected at a very fast rate in our minds, giving us the illusion of a "movie like experience."

- Even though in the above video it is suggested that the brain put together all the information from the "previous static frames," that is true only to a certain extent.
- The brain puts together the individual frames, but without actual "memories," it is impossible to get the details about what is seen.
- We not only "see" the video, but we also RECOGNIZE what is seen (we identify a given actor, we can even remember previous movies with that actor, we KNOW all about the scenes in the background, etc); to have all that information instantly available to the brain is not possible. This is a point that needs a lot of thought.
- What happens, according to Abhidhamma, is that the brain periodically sends packets of acquired data put together by the cortex in the brain to the hadaya vatthu (the seat of the mind.) Citta vith $h$ arise in hadaya vatthu accepting that information from the brain, and it is the mind that does all the compiling (with the help of the manasikāra and cetanā cetasika.) That is how we EXPERIENCE any sensory input.
- For those who are interested in more details, see, "Citta and Cetasika - How Viññāna (Consciousness) Arises."

3. When the mind analyzes those packets of information sent by the brain with citt $\bar{a}$, it generates feelings (vedan $\bar{a}$ ), perception (sañña), and follow-up thoughts (viññanna); if the mind likes/dislikes that sense input it may decide to act on it by generating sañkhāra.

- Thus we can see that depending on the nature of the sensory input, the mind will generate a "packet" of vedanā (i.e., vedanākkhandha), a "packet" of sañña (saññākkhandha), a "packet" of sañkhāra (sañkhārakkhandha), a "packet" of viññāna (viññānakkhandha), in addition to the rūpakkhandha that was involved in the sensory input. All these five khandhā are generated within the same series of citta.

## Our Experience is Stored in Those Khandhā

1. Thus, our experiences are stored in five types of "heaps" (rūpa, vedanā, sañ̃̄̄̄, sañkhāra, viñ̃̄āna) in the mental plane (mano loka). Some of these "clips" or "packets" from those five heaps or aggregates can be recalled and played back in our minds just like a movie is played on a screen. When we do that, we can recall that particular experience with sights, sounds, etc.

- It is the sum of all such packets of a given kind called a khandha, for example, a rūpakkhandha. All these are memories of what we see, hear, smell, taste, touch, and think.
- The ability to recall past experiences, we call memory. Some have better memories than others. Some people can "playback" basically one's life day-by-day for many years into the past; see, "Recent Evidence for Unbroken Memory Records (HSAM)." It is amazing to see how much they can recall.
- Yet, one can recall not only memories from this life, but also from past lives by developing abhiñ $\tilde{a} \bar{a}$ powers. Thus the Buddha Gotama vividly described the scene, eons ago, when the Buddha Dīpañkara stated that he was to become a Buddha in the future.
- But let us get back to the main discussion.

2. The brain analyzes multiple sense inputs of different kinds in a second. When we watch a movie, we see the picture, hear the sounds, and if we are eating popcorn we can smell and taste popcorn too; see, "What is a Thought?." Even if you are unfamiliar with Abhidhamma, you can get a good idea of what happens by reading that post. Just try to get the overall picture of what happens instead of trying to analyze in detail.

- Thus our perception of an object is due to the sum of many thoughts (citt $\bar{a})$ that arise per second. And each citta has "embedded in it", our feelings (vedanā), perceptions (sañña), our decisions on how to act (sañkhāra), and our overall sense experience (viññanna). In the case of a visual, auditory, ... event, we also have the corresponding "imprints of them" in our mind.
- In other words, all our sensory experiences can be described by five heaps or khandhas. The totality of our experience or "our world" is panca khandha (pañcakkhandha). And it has nothing to do with our physical bodies.
- Thus it is important to understand that "rūpa" can be used in the sense of "matter" and also in the sense of "records of such material rūpa."

3. These mental components are what the Buddha called khandhas. Rūpakkhandha does not include actual material objects, sounds, smells, tastes, or touches. Rather rūpa khandha includes only the mental records or imprints of those sense inputs.

- We continuously accumulate $k h a n d h \bar{a}$ or bundles of heaps of sense imprints during our life. Thus a ru$p a$ $k h a n d h a$ or rupakkhandha (note how the two words were connected by inserting an additional " $k$ ") is not an actual rūpa but our mental images of such $r \bar{u} p a$.
- Similarly, we keep accumulating bundles of vedanā (vedanākkhandha), saññā (saññākkhandha), sañkhāra (sañkhārakkhandha), and viñ̃āṇa (viññānakkhandha).

4. These khandh $\bar{a}$ are all that we have ever experienced, and would like to experience in the future. The five $k h a n d h \bar{a}$ encompass our (changing) identity, and our sense of the whole world out there. They have embedded in them all our past experiences and also future hopes.

- That is why pañcakkhandha (the five aggregates) represent our whole world.
- And these records can go back to beginning-less time! Some people can recall more records than others, but by gradually developing abhiññ̄a powers, one can recall more and more past lives.

## Part 2: Pañcupādānakkhandha - It is All Mental

## Pañcaupādānakkhandha - It is All Mental

January 1, 2016; revised November 2, 2017, June 28, 2019
Rupa and R $\bar{u} p a k k h a n d h a$ are two different things. There are ru$p a$ made up of "physical matter " (suddhatthaka) in the rūpa loka. Rūpakkhandha consists of each person's memories, hopes, and desires for some of the rūpa in the rūpa loka. Since the other four khandha (vedanā, sañ̃n̄̄, sañkhāra, viññāna) are all mental anyway, all five are MENTAL.

1. In the previous post, "Pañcakkhandha or Five Aggregates - A Misinterpreted Concept," we discussed a deeper meaning of the pañca khandha or the five heaps or the five aggregates that define a given living being. Each person's pañca khandha or the "world" is different from another's.

- Of course, in the 31 realms of existence there are rūpa, or material (and energy). But our experiences are all mental (which also has energy). Please read the previous post again if you think rūpakkhandha is material. Rūpakkhandha consists of our thoughts, memories, perceptions, desires, etc. on rūpa that we have experienced, are experiencing now, and hope to experience in the future. We have those "imprints of $r \bar{u} p a$ " in our minds even if we cannot recall all of them.
- We experience the "material world" only at the "present time" (in a citta vithi), then it is gone. We actually experience not a single citta - or even a single citta vīthi - but the overall effect of many citta vithi that run in the blink of an eye.

2. This "overall experience of seeing" within a short time is what we actually call seeing (ditta). Same for hearing (suta). For the other three physical senses (muta), it can be there as long as we are actually experiencing them.

- For example, when we are eating a meal, the sense contact is there until we finish eating. When we have a headache (an actual dukha vedan $\bar{a}$ ) or while getting a massage (an actual sukha vedana $\bar{a}$ ), the sense experience is there for a while.
- But thinking about them (vinnāta) — via the sixth sense, the mind - can be experienced at any time; we can recall a past experience or conjure up an enticing future experience.
- Ditta, suta, muta, vinnata include everything that we experience. They are re-categorized as rūpa, vedanā, saññā, sañkhāra, and viññāna or the five heaps.
- It is not necessary to memorize terms like ditta, suta, muta, vinnata. I am merely naming them to avoid any confusion, since those terms are in the sutt $\bar{a}$. With time, one will remember.

3. Upādāna ("upa" + "ādāna" where "upa" means "close" and "ādāna" means "pull") means "pull and keep close." One tries to pull and keep close only things that one really desires: pañca upādāna khandha or pañcaupādānakkhandha. We can translate the term, pañcaupādānakkhandha, as "five clinging aggregates."

- Thus out of an infinite variety of "things (material and mental)" one has experienced (not only in this life, but in all of existence countless rebirths) - pañcakkhandha -, those that one really have bonding with, and have the desire to "keep close" are pañca upādāna khandha or pañcaupādānakkhandha. It is important to realize that "rūpakkhandha" is mental too; see, "Difference Between Physical Rūpa and Rūpakkhandha." Same for the other four khandhas.
- Thus pañcaupādānakkhandha is what we desire, and is ALL MENTAL too. It is a small fraction of pañcakkhandha.

4. First, let us dig a bit deeper into the concept of pañca khandha (five heaps) or pañcakkhandha. Then one can see connections to other concepts at a deeper level.

- As we recall, the five heaps include everything that one has experienced (rūpa, vedanā, sañña, sañkhāra, viññāna) in the past, one is experiencing right now, and one hopes to experience in the future and in each of these three categories, they can be subdivided into other categories like paneeta (likes) and appaneeta (dislikes); see the previous post.
- Since each person's experience is unique, one's pañcakkhandha is unique, and is different from that of another living being. That is because even if the external rūpa are the same, the mental impressions are different.

5. A new born baby, does not have much of an experience in this life (other than some while in the womb). But he/she still have an infinite things from the past in those five heaps or aggregates.

- As the baby grows, its pañcakkhandha grows each day, adding to the five heaps not only with what is experienced, but also expectations and desires about the future.
- We, of course, remember only a fraction of what is in our pañcakkhandha even from our present life. Each day, we experience many things and forget most of it by the next day.

6. However, some of deeper desires and habits and character remain, sometimes even unknown to us, beneath the surface as our gathi and āsavas (by the way, those will be reflected in the cetasika that automatically arise with our citta). As that baby grows, depending on its parents, friends, and other environmental factors, some of those (good and bad) gathi resurface and even grow.

- This is why each person is good at some things. If one has musical talent from the past lives, that child can flourish in an environment that provides suitable conditions. If that baby grows in a family that does not provide "a musical environment", then that gathi is kept hidden.
- Similarly, one who had the tendency to like alcohol, may be kept out of that habit in a family environment that looks down upon drinking. We can think about zillion other character features that can be suppressed or brought to surface to flourish depending on the environment.
- This is why some people, who have not shown any talent for anything for many years, suddenly "take off and thrive" in a new venture. Stated in another way, one may not realize that "one has upādāna" for certain things, unless exposed to it.
- We all have good and bad things that we have "upādāna" for. We should stay away from bad ones (forcibly if needed to) and find and cultivate good ones. This is why parent and teachers can play a big role in a child's future.
- Eventually, we need to lose "upādāna" for everything, but that comes much later in the Path when one has attained the Anāgāmī stage, or at least the Sakadāgāmī stage of Nibbāna. First we need to lose "upādāna" for the highly immoral activities. At the Sotāpanna stage, one realizes the perils of "upādāna" for only the worst habits that makes one eligible to be born in the apa$y \bar{a}$. It is a gradual process.

7. The tendency to recreate past experiences and future desires need to be clearly distinguished from the ABILITY TO RECALL past experiences. The Buddha was able to recall things that happened trillions of years ago, but did not either enjoy them or had a revulsion to them.

- As we discussed in the section, "Assāda, Ādīnava, Nissarana," kāma (or more precisely kāma rāga) is the tendency to enjoy such mind-made pleasures from the past or future.
- Each person's set of pañca upādāna khandha has embedded in them the certain types of things and events they give priority to, i.e., one's gathi and anusaya. They automatically come out as particular set of cetasika (hate and fearlessness of doing immoral things, for example) in our citta or thoughts.
- Those kāma rāga that correspond to gathi in the apāy $\bar{a}$ can lead to rebirth in the $a p \bar{a} y \bar{a}$.
- Rūpa rāga and arūpa rāga are the tendencies to enjoy jhānic pleasures corresponding to rūpa and arūpa realms.

8. Thus now we can see Nibbāna in terms of pañcaupādānakkhandha. As one sheds "upādāna" for gathi corresponding to the apāy $\bar{a}$, higher k $\bar{a} m a ~ l o k a$, and rūpa or arūpa loka successively, one attains the Sotāpanna, Anāgāmī (via Sakadāgāmī stage), and the Arahant stage respectively.

- As one keeps shedding layers of pañcaupādānakkhandha, one proceeds to higher stages of Nibbāna, and upon attaining the Arahant stage loses all "upādāna" and thus pañcaupādānakkhandha. However, the pañcakkhandha remains, and upon the death all of it will stay in the nāma loka as nāma gotta.
- Thus anyone with sufficient abhiññā powers can examine those nāma gotta. That is how the Buddha Gotama described the lives of many previous Buddhas, and we learn about them today.

9. Unless one has attained the Sotāpanna stage, it is possible for "apāya gathi" to come to the surface (as cetasika like greed, shamelessness in doing immoral things, etc in our citta or thoughts), especially under extreme conditions. We all have been in the apāy $\bar{a}$ uncountable times, so it is not something to be speculated; we have had those gathi, and it is possible that they can resurface. This is the danger that we need to realize.

- Even if we manage to avoid such "extreme conditions" in this life because we have been fortunate to be born under good conditions, we have no idea where we will be born in the future. This is why the Buddha said, "..appamadena sampadeta" or "make haste and sort out 'san' or what to do and what not to do."

10. As we mentioned in the beginning, each one's pañcakkhandha is unique. Each has his/her own feelings, perceptions, mental attributes (good and bad), and viññāna regarding any sense event. We make our decisions accordingly. Our character (gathi) is in pañcakkhandha (the way we see and comprehend the world) and even more so in our pañcaupādänakkhandha (our desires for the worldly things).

- And ditṭhi (our world views) is a critical part of both pañcakkhandha and pañcaupādānakkhandha. Our decisions depend critically on our diṭthi. There are many posts at the site on the importance of ditṭhi. The first step to Nibbāna (the Sotāpanna stage) is sammā ditt!hi.
- Unless one comprehends the true nature of this world of 31 realms (anicca, dukkha, anatta), one cannot attain samma dittthi at least to some extent.

11. When one acts with avijja (due to not comprehending the true nature of the world), one does (abhi) sañkhāra, and keeps adding to the pañcaupādānakkhandha.

- When we start with the "avijjā paccayā sañkhāra" step, it leads to "upādāna paccayā bhava." Thus according the types of (abhi) sañkhāra one does, one makes "bonding" or "attaches to" certain types of "bhava" or existence.
- Pațicca samuppāda explains how we make bhava according to the level of avijjā (as indicated by our gathi, anusaya, etc) that is embedded in our pañcaupādānakkhandha.
- Thus, one's pañcaupādānakkhandha has embedded in it the "cravings and desires" of oneself, and where one is destined to have rebirths.

12. Therefore, we can see that no matter how we analyze things, they all converge to the same fundamentals. Before we embark on the journey to safety (Nibbāna, or at least the Sotāpanna stage), we need to figure out the "lay of the land." That is anicca, dukkha, anatta, the nature of this world.

- Only then that our minds will willingly give up the ditṭhis or wrong views.
- Only then that our minds will see the dangers of sense pleasures, starting at the excess levels of kāma chanda and $v y \bar{a} p \bar{a} d a$, which could lead to rebirth in the $a p \bar{a} y \bar{a}$.
- If you could not grasp everything, that is fine. Come back and read the post again later, especially after reading other relevant posts. Each time you read, you may be able to grasp something that was not unclear. It happens to me all the time. When the minds starts grasping at least partly, it will become much easier.

13. It is very important to see the difference between the "physical world" which is made of "satara mah $\bar{a}$ bhūta" and the pañcakkhandha which is all mental.

- The physical world out there is the same for all of us. But our mental impressions of it (pañcakkhandha) are different for each of us. It is easy to see that our feelings, perceptions, and sañkhāra that we create upon seeing the same person are different.
- Our pañcaupādānakkhandha, or the fraction of the pañcakkhandha that we have attachment for, is even more personal, unique for each person.

### 3.8 Nāma \& Rūpa to Nāmarūpa

May 26, 2017; revised October 3, 2022
This important subsection will discuss the link between mind ( $n \bar{a} m a$ ) and matter ( $r \bar{u} p a$ ). These are deeper analyses. The "mind to matter" transition is described in sequence.

- Kamma Viññāna is not strictly mental and is responsible for the Nāmarūpa Formation leading to the arising of rūpa.

## Mental Aggregates (Except Kamma Viñãāna)

- Vedanā - What It Really Means (Being replaced with Vedanā and Samphassa-Jā-Vedanā - More Than Just Feelings)
- Does Bodily Pain Arise Only Due to Kamma Vipāka?
- Sañ̃ña - What It Really Means
- Future Suffering - Why It Arises
- Vipallāsa (Ditthi, Sañ̃ña, Citta) Affect Sañkhāra
- Sañkhāra - What It Really Means

## Kamma Viññāna

- Viñ̃̃āna - What It Really Means
- Kamma Viññāna - Link Between Mind and Matter
- Anidassana Viññāna - What It Really Means

## Nāmarūpa Formation

- Kamma Viñ̃̃āna and Nāmarūpa Pariccheda Ñāna

## Rūpa Aggregate

- What are rūpa? - Dhammā are rūpa too!

### 3.8.1 Mental Aggregates

What is Saññā (Perception)?

- Sañ̃̃̄a - What It Really Means
- Future Suffering - Why It Arises
- Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra

What Is Vedanā (Feelings)?

- Vedanā - What It Really Means

What Are Saṅkhāra (Mental Formations)?

- Sañkhāra - What It Really Means

### 3.8.1.1 What is Saññ̄ā (Perception)?

Saññā - What It Really Means

## Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra

### 3.8.1.1 Saññā - What It Really Means

## December 31, 2017; revised August 22, 2019; November 1, 2021

1. Saññā is usually translated to English as "perception" and sometimes as "recognition"; it is both and more! Sañ̃̃̄ $\bar{a}$ has a much deeper meaning and, at the same time, a more straightforward definition.

- Sañ̃̄̄ $\bar{a}$ is pronounced "sangnā" and gives an encoded meaning in Pāli and Sinhala with that pronunciation (click to play the audio):

## WebLink: Listen to the Pāli word "sañ̃̃ā"

- It means "sign" or even closer, "the embedded message." That latter expresses it well since it is how one "instantaneously gets the idea of what is meant by an external signal."

2. When we understand what is meant by sañ $\tilde{n} \bar{a}$, we can clarify many things, including how humans can communicate with beings in other realms via sañ̃̃ $\bar{a}$.

- Sa $\tilde{n} \tilde{n} \bar{a}$ is the "universal language." To give an analogy: if there is a sign that reads, "winding road ahead," only those who know English can understand what that sign says.
- But those universal signs - showing a picture of a winding road — provide the "sañña" that the road ahead will be curvy.

- A second example (on the right above) shows a sign with a hand. That conveys the "sañña" to stop.

3. At the fundamental level, sañ̃̃ā means "recognition" of an object, person, or concept; getting "full comprehension" of what it is AND what it means.

- Whether one says "fire" in English or "ginna" in Sinhala or "feu" in French, that will convey the same idea. However, a person MUST know how to associate any of those words with "fire." That is the sañ̃̃̄a that comes to one's mind when one hears either the word "fire," "ginna," or "feu."
- If a person does not speak those three languages, those words do not mean anything. However, with the following picture, anyone will have the idea that it is about a fire or a flame:

4. Therefore, sañ̃̄̄̄a is the "full picture that comes to mind instantaneously."

- When we think about a fire, that "sense of what a fire is" arises automatically. The mind can visualize a fire.
- Therefore, regardless of the language, one speaks, everyone who has seen a fire generates the same feeling about a fire in one's mind. That is a crucial point to contemplate and will be valuable in comprehending the "anicca sañña."

5. Our mental body (gandhabba) can register only pure saññā. When two gandhabbā are communicating, they cannot use words OR pictures. So, the process is much simpler. What one gandhabba X thinks about what to say to gandhabba Y, that message or saññā is automatically transmitted to Y, if Y points attention to X .

- When gandhabba X wants to see what is happening at a given location, it just needs to point to that direction and see that location. We will not discuss the details here, but essential point is that a gandhabba does not "see" things using light as we do.
- In the same way, a gandhabba does not hear using an ear. Sound waves propagating through the air are not needed.
- That is how most beings - who don't have physical bodies like us - communicate and interact with the external world, as emphasized briefly in the previous post, "Our Mental Body - Gandhabba."
- When someone gets to the fourth $j h \bar{a} n a$ and attains $a b h i n ̃ \tilde{n} \bar{a}$ powers, they will be able to see and hear without eyes and ears. These capabilities are dibba cakkhu or "divine eye" and dibba sota or "divine ear." One will be using one's own mental body (gandhabba). Then seeing and hearing are not limited to short distances.

6. However, when trapped inside a physical body, a gandhabba does not have those capabilities. Then one needs to rely on the sensory faculties located in the physical body (physical eyes, ear, etc.) to capture that information. The brain converts those signals to "sañ̃̃ $\bar{a}$ " and transmits them to the gandhabba inside.

- If you are not clear on this point, please re-read the previous post, "Our Mental Body - Gandhabba."
- In that post, we compared a gandhabba trapped in a physical body to a human operator enclosed in a military tank. That is a good analogy.

7. At conception, the gandhabba takes hold of a single cell called a zygote formed by the union of a mother and a father. That single cell grows to a baby inside the womb, and a grown adult after birth. See "Buddhist Explanations of Conception, Abortion, and Contraception."

- In an average human, the physical body shields the gandhabba. Thus, it cannot receive direct saññā. Pictures and sounds come through the eyes and ears not as sañ $\tilde{n} \bar{a}$ but as video and audio signals. Those signals need to be converted to sañña that the gandhabba can grasp.
- When a baby grows, the eyes and ears (as well as nose, tongue, and body) need to develop to capture those sensory inputs. The brain also needs to build the circuitry for converting that information to a "sañña" that can be transferred to the gandhabba to grasp what object, person, or concept it is.
- Once those capabilities develop, the signal transmission goes from the brain to the hadaya vatthu located close to the heart via "kirana" or in the language of modern science electromagnetic waves. That was discussed briefly in the post, "Gandhabba (Manomaya Kāya) - Introduction."

8. When a baby is growing up, it learns to associate words and pictures with each object, person, concept that it experiences. That requires many parts of the brain. That is why it takes a newborn baby several years to become fully functional in the world.

- So, when a person hears someone yelling "fire," the brain matches that with a visual of a fire, converts it to the correct "saññ̄" of a fire, and transmits that signal to the gandhabba.
- The association of a word with its meaning happens in the brain (which is acting like a computer). Then only the meaning is conveyed to the gandhabba, where thoughts arise.
- As I have discussed in the posts on the gandhabba, a human gandhabba is born at a cuti-patisandhi moment. It could have a lifetime thousands of years. It could be born many times with a physical human body. See, "Bhava and Jāti - States of Existence and Births Therein."

9. If the relevant parts of the brain are damaged later in one's life, one may not be able to recognize one's surroundings. That is what happens to people with Alzheimer's disease.

- When a person gets old, the brain starts degrading, and then again, one's ability to interact with the external world could become limited.
- When that person dies, the gandhabba comes out of the dead body if there is leftover kammic energy for the human bhava. When a suitable womb becomes available, it can start another human body. That is how there can be several births during a given human bhava.

10. Now, we move to the next level of sañña $\bar{a}$, which is more than just recognition. For example, when two people hear the name of a person X, they will have the picture of that person (or "sañ̃̄ $\bar{a} ")$ coming to their mind automatically. But not only that, they would register some qualities that they had attached to that person through their interactions with X. One may say. "It is my Dad. I love him so much." Another would say, "Oh, he is a crook."

- Then based on that sañña $\bar{a}$, each will generate different feelings (vedana $\bar{a}$ ) about X . That could lead to creating good or bad thoughts (mano sañkhāra) automatically. If one keeps thinking about X some more, one will be consciously generate more thoughts about X , and may even speak out (vaci sañkhāra). If the feelings get strong, kāya sañkhāra may arise (leading to bodily actions.)
- Therefore, based on the same thought object, different people can get different sañ̃̃̄̄ and thus can respond differently.

11. In general, how we make decisions about interacting with others or responding to external stimuli depends on our "world views." That is what is called "ditthi" in Buddha Dhamma.

- When one has wrong world views or ditthis, one could make the bad decisions based on "distorted saññā."
- When one's mind is free of greed, hate, and ignorance, it is easier to sort out wrong ditthis. The meanings of greed and hatred are apparent. Ignorance here is ignorance about the message of the Buddha. That message, of course, can be grasped only in stages.
- First, it is crucial to realize that one MUST live a moral life and follow that mundane Eightfold Path by abstaining from dasa akusala as much as possible.
- Then it will become easier to cultivate the "anicca sañ̃ña," start grasping the Tilakkhaṇa and become a Sotāpanna. We will discuss the anicca saññā in upcoming posts.

### 3.8.1. <br> Future Suffering - Why It Arises

## January 22, 2017; revised July 19, 2022

In the subsection "Living Dhamma - Fundamentals," we mentioned that there are two types of suffering that can be eliminated according to Buddha Dhamma. In that subsection, we discussed and explained how some suffering in this life could be stopped from arising. With this post, we will start a discussion on the second type suffering associated with future rebirths - which is even more important - can be stopped from arising.

1. Let us first review the existing ideas from other religions and philosophies. First, let us discuss the dominant religious view.

- Most major religions have a worldview based on three "realms" of existence: the human realm, the heavenly realm, and hell. If one lives according to the religious teachings, one will be happy in the heaven forever; if not, one will suffer in hell forever.
- It does not explain how one is born into the human realm. It could be that the Creator created Adam and Eve, and their descendants are just born. In this view, the sentient beings in this world started off at just two and will grow with time. How is that possible?
- In Hinduism, the "eternal realm of happiness" is not heaven but the Brahma realm (there is only one, where one merges with Mahā Brahma). Also, there is no permanent hell, as I understand.

2. In Christianity, based on whether one lives according to the "particular religious teachings" or not, one will be born in heaven or hell FOREVER.

- Of course, these religious teachings will vary from one religion to another.
- Furthermore, even within one religion, they can be changed by a decree from the "head of the Church."
- Since all those making those decisions are human, It seems illogical that they can decide on their fate.

3. Turning to philosophy, many people today - especially those who believe that the above religious reasoning is illogical - take the materialistic view that one is born out of inert matter only to die and be recycled back to the Earth. They are the so-called atheists.

- In this case, the logic would say that one could live immorally since immoral actions to benefit oneself would not have consequences.
- Still, most who belong to this category live moral lives. They have an innate feeling that morality must be adhered to, but cannot quite explain why.

4. I have discussed the above points in several posts:

- On religion, see "The Language of God" by Francis Collins" and "What Does Buddha Dhamma Say about Creator, Satan, Angels, and Demons?."
- On the belief in a materialistic view, see "Why Does the World Exist?" by Jim Holt" and "Waking Up" by Sam Harris."
- In the commonly-used sense of the word "religion" Buddha Dhamma is not a religion; see "Is Buddha Dhamma (Buddhism) a Religion?" and "What is Unique in Buddha Dhamma?."
- I would welcome any comments/criticisms on my points above. I can go into more details if needed, and I believe the above points cannot be logically refuted.

5. Buddha Dhamma (true and pure Buddhism) does not belong to the above two categories.

- The complex world view of Buddha Dhamma is explained in the subsection "The Grand Unified Theory of Dhamma." Still, a brief introduction is in the post, "What Reincarnates? - Concept of a Lifestream."
- Briefly, one is born in one of 31 realms of existence. From the beginning-less time, we all have been undergoing this rebirth process. But most times, we are born in the lower four realms filled with suffering; thus, the long-term solution is to stop the rebirth process. This is done in four steps, and at the Arahant stage, one stops the rebirth process.
- This is not a nihilistic or pessimistic view; see "Nibbāna "Exists", but Not in This World."

6. So, that is the background for our discussion. Let us discuss how one can get to Nibbāna or stop future suffering.

- Some Buddhists believe that Nibbāna can be attained by living a moral life and doing meritorious deeds (puñña kamma).
- We will now discuss why just living a moral life and doing puñña kamma will not lead to Nibbāna, even though they are necessary parts of the process.

7. We are born in one of the 31 realms due to six root causes (hethu): lobha, dosa, moha and alobha, adosa, and amoha. This categorization can be used to look at births in different realms in another way.

- Deeds (kamma) done with lobha, dosa, moha lead to rebirth in the apāy $\bar{a}$ (lowest 4 realms). For these deeds, moha is always present with either lobha (pretha and asura realms births) or dosa (niraya or the lowest realm). Births in the animal realms can be due to either.
- Those deeds are done with one or more alobha, adosa, or amoha, leading to rebirth in the higher realms, starting with the human realm.

8. As discussed, for example in the Dutiyasikkhāpada Sutta (AN 4.236), a verse that summarizes the results of meritorious deeds and immoral deeds is: "Atthi, bhikkhave, kammaì kaṇhaì kaṇha vipākaì; kammaì sukkaì sukka vipākaín.."

Here the word kanhha means bad or dark. Sukka means pure or white.

- So, the word "kanhaim" in the above verse refers to immoral deeds done with lobha, dosa, moha and other asobhana cetasika. "Sukkaì" implies meritorious deeds done with alobha, adosa, amoha, and other sobhana cetasika.
- How different types of cetasika contribute to either defile or purify our minds is discussed in the subsection, "Living Dhamma - Fundamentals."

9. In this beginning-less rebirth process, this is how we have been born in almost all of the 31 realms because we keep accumulating both kaṇha vipāka and sukka vipāka.

- Furthermore, we have accumulated enough of both kinds to bring about many, many future births in all those realms.
- Even if we do not commit a single kanha vipāka in this life, we have done enough of them in the past to bring about births in the apāy $\bar{a}$ in the future. This is a point that not many people understand. Many people have said, "I don't harm anyone, so I hope to get a good rebirth." Unfortunately, they are wrong.

10. Puñña kamma with "sukka vipāka" leads to two important results in this and future lives that make suitable conditions for attaining Nibbāna:

- Rebirth in the "good realms" (human realm and above). Attaining Nibbāna - or even working towards it - is possible only in the good realms, especially in the human realm.
- If done correctly, merits acquired through puñ̃̃a kamma can lead to a long life (āyusa), flawless sense faculties (vanna), healthy life without much physical suffering (sukha), and necessary resources to live without hardships (bala). These benefits make suitable conditions for one to focus on attaining Nibbāna. For example, if one is sick or is very poor, it is not easy to follow the Path.

11. On the other hand, "kaṇha vipāka" or results of immoral deeds lead to births in the ap $\bar{a} y \bar{a}$ where the suffering is intense.

- We have been born in the human realm due to a good upapatthi sukka vipāka.
- But in this unique human realm one is subject to both kaṇha vipāka and sukka vipāka as pavutti kamma vipāka that bring results during the lifetime.
- The way those six root causes lead to rebirths among the 31 realms is discussed in "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma."

12. Births in the human realm could be a tihethuka ("ti" + hethu," meaning all three of alobha, adosa, amoha), dvihethuka ("dvi" + hethu," meaning alobha and adosa), or ahethuka.

- Those humans with tihethuka births can attain magga phala in this life if they strive enough.
- Those with dvihethuka births cannot attain magga phala in this life. Since they do not have the amoha root cause, their wisdom level (pañ̃̄ $\bar{a}$ ) cannot grow beyond a certain point. However, they can do puñña kamma and be eligible to be reborn a human with a tihethuka birth in future lives.
- Even though the word ahethuka means "without causes", here it means a weak version of dvihethuka. Here ahethuka means "without sufficiently good hethu" to be able to follow the Path. They are born with mental deficiencies.

13. It is very important to realize that no one (at present) can distinguish between tihethuka and dvihethuka births. On the surface, both types appear the same. For example, there could be people with higher education who are dvihethuka, and some with no education who are tihethuka.

- So, the thing to do is to strive to the best of one's ability. No matter whether one is tihethuka or dvihethuka, the efforts will pay off in the long run. Furthermore, being tihethuka does not take one automatically to Nibbāna; one has to strive.
- Furthermore, no one should be discouraged and believe they are dvihethuka, if the efforts are not paying off quickly. One prominent example in the Tipitaka is the story about the Culapanthaka Thero. He almost disrobed because he could not even memorize a single gätha after trying hard for months. But with Buddha's help, he was able to attain Arahanthood in a day, and even developed abhiñ̃̄̄̄ powers: "WebLink: suttacentral: Cūlapanthaka."

14. Therefore, by thinking good thoughts, doing good deeds, and by living a moral life, we can improve our chances (but not guarantee) of a good future rebirth. In fact, this is the goal of all major religions (to be born in heaven and live there forever).

- However, nothing in this world of 31 realms is everlasting. Furthermore, we do not have control over where we will be born in the next life, regardless of how well we live this life.
- It is important to realize that one or more past bad deeds (kamma vipāka) may still lead to a bad rebirth, and it will be very difficult to again get a good rebirth.
- This is one aspect of the anicca nature, the futility of believing that there is happiness to be achieved somewhere in this world.
- The opposite belief that somehow happiness is to be achieved somewhere in this world gives rise to deeply-embedded nicca sañña (a sense of hope) in our minds.
- One cannot avoid future suffering until one comprehends first that immoral deeds with the nicca saññ̄ $\bar{a}$ lead to kaṇha vipāka and will bring much suffering. Even though moral deeds with the nicca saññā lead to sukka vipāka with happiness, one cannot avoid immoral deeds in the long run, BECAUSE OF this nicca saññā.

15. Therefore, until we change our wrong view (and the corresponding wrong perception or sañña $\overline{\text { }}$ ) that there is happiness to be had in this world.

- This is the unique message of the Buddha. We will discuss how we can get rid of this nicca saññā and cultivate the anicca sañña $\bar{a}$ in the next post.

### 3.8.1.1 Vipallāsa (Ditṭhi, Saññā, Citta) Affect Sañkhāra

January 28, 2017; re-written October 15, 2019; revised January 20, 2021 (\#13); added \#14 March 9, 2022; June 23, 2022

The word vipallāsa (used in plural) means "confusion." One gets confused because one has the wrong views (ditthi). That leads to distorted perceptions (sañña), which affect the way one thinks (citta). That is how we generate (abhi)sañkhāra that leads to future suffering. This is just another way to analyze the origin of suffering.

- You may want to read the previous posts on saññ̄ā and sañkhāra. See, "Sañ̃ña - What It Really Means" and "Sańkhāra - What It Really Means."
- This post is a re-write of an old post, "Ditṭhi, Saññ̄ā, and Sañkhāra - How They Relate."

## Wrong Views Come First

1. One's perceptions (saññ̄a) are closely associated with one's views (ditṭhi), and both of those affect how we think (citta), and generate sañkhāra.

Most of our world views are based on ideas from our families, friends, and religions that we are born into. Those inputs play a major role in our world views. In turn, they mold our perceptions and how we think and thus generate sañkhāra.

- It is not possible to get rid of the wrong or distorted perceptions (viparīta sañña) without getting rid of the erroneous views (micchā dittthi or simply dittthi). [viparīta : [adj.] reversed; changed; wrong.]
- Some dominant world views must be removed before one can even hope to get an idea about anicca saññā. We will discuss some of these critical factors first.

## Wrong Views on Heaven, Hell, and Human Realms

2. Most people believe in eternal heaven after death. That perception is based on the world view of three "major categories or realms." Those are hell, the human world, and heaven. This worldview and the corresponding perception of sañña come from families taught that worldview through generations via religious teachings.

- That world view also says that a Creator created the Earth. That Creator resides in the heavens, and those who live by those teachings will join the Creator. Those who disobey those teachings are supposed to be born in hell for eternity.
- Even though modern science rejects that cosmic worldview, most people still go by that wrong view. The heavens comprise trillions of planetary systems, just like our Solar system.
- It is astonishing to see that even some prominent scientists are willing to disregard scientific facts. They believe (i.e., have the perception) that a Creator created the Earth and the whole universe. I am not sure where they think that Creator resides among those trillions of star systems.

## Wrong Views About Animals

3. Another example is killing animals for sport, which includes fishing. That is based on the view that animals are not sentient and were created by the Creator for human consumption. That is such an ingrained ditt thi that many people who live otherwise moral lives fail to see the suffering endured by these animals.

- While fish cannot cry out, the severe pain felt by a wriggling fish caught on a hook is quite apparent. It is feeling the pain in the mouth due to the hook. It is also suffering due to a lack of oxygen since it cannot breathe as we do.
- Higher animals are capable of showing their pain, among other emotions. Anyone who has a pet dog or cat knows that they do have emotions as we do.
- But we tend to disregard such easy-to-see things because of our ditt $h \overline{\text {. }}$. The underlying reason is the religious view that animals are here for our consumption.

4. However, we all have had animal births and deva and Brahma births. Comprehension of this fact can help change one's perception of animals.

- However, even in Buddhist countries, there are fishing villages where fishing is the livelihood of many who have done it for many generations.
- Some may say that those people need to make a living to sustain their families. But that argument is no better than the argument that a drug addict needs to inhale another dose to get through the day: the longterm consequences are infinitely worse.
- It is customary for the older generations to teach their children or grandchildren how to fish or hunt animals for sport. That custom passes through generations.
- Still, we cannot equate animal lives to human lives, as some animal rights activists believe. When one comprehends Buddha's Dhamma, one can avoid going to either extreme.

## Wrong Views Lead to Wrong Perceptions (Sañ̃ña)

5. The above are several prominent examples of major micchā ditthi. One can remove distorted perceptions (viparita sañ̃̄̄̄) by removing such wrong views (micchā diṭthi). Learning Buddha Dhamma helps get rid of wrong views.

- The key reason that those dittthi propagate through generations is the inability to "breakthrough" such ingrained beliefs by contemplating on facts.

6. Another wrong view (and hence the wrong perception) that we have is about the high value placed on our physical bodies' "beautification." This perception is predominant in Western countries but is growing in other countries.

- People spend billions of dollars a year trying to make their physical bodies "more beautiful." They don't realize - or don't even contemplate - the following fact. No matter how much money one can spend, one's body will not stay in peak condition for too long.
- That wrong perception leads to an enhanced level of suffering at old age when one's body becomes frail and not so appealing. That can lead to severe depression.
- For those who have comprehended the anicca nature, old age is a fact of life. While the brain is working optimally, one needs to spend one's "peak years" not trying to beautify one's body but making progress on the Path. When the body starts degrading at old age, the brain deteriorates. So, one must exercise and eat healthy to keep both the body and the brain in good condition as long as possible.
- That happens to everyone, regardless of how powerful or wealthy they are. At President Trump's inauguration, this was quite obvious by looking at the ex-Presidents.
- Think about any famous, beautiful, or wealthy person who has grown old to convince the truth of this anicca nature.

## Characteristics of Anything (Sañkhata) In This World

7. Anything in this world - living or inert - has that anicca nature. A sañkhata is born (uppāda) and destroyed (vaya.) In between it is in existence but is still subjected to unexpected change (thitassa añ̃athattaim.) Those are the three stages of a sañkhata; see, for example, "WebLink: suttacentral: Ānanda Sutta (SN 22.37)."

- Some things in this world (sañkhata) last a short time: for example, a fly or a flower. Other things can last for tens of years: for example, humans or a car. Some things/beings live much longer: for example, a Brahma or a star system like our Solar system.
- But eventually, anything in this world - a sañkhata - decays and is destroyed at some point.
- Even though those things that reach the peak condition can provide/enjoy sense pleasures, they do not last long.
- The overall effect or the net effect is suffering when one considers the rebirths in the 31 realms in the long term.

## Three Types of Vipallāsa (Confusions)

8. The Buddha stated that there are four types of vipallāsa or distortions nicca, sukha, atta, and subha. See, WebLink: suttacentral: Vipallāsa Sutta (AN 4.49). We have discussed the first three in detail on this website. Asubha (not fruitful) is the opposite of subha (useful or beneficial).

- No matter how appealing those sense pleasures or sense objects can be, they all make one get trapped in the rebirth process. That is why they are asubha.
- The three types of vipallāsa are diṭthi vipallāsa, saññā vipallāsa, and citta vipallāsa.
- Those are the distortions associated with views, perceptions, and the way we think. We think (and speak and act) with sañkhāra, and especially puñ̃̃a abhisañkhāra and apuñña abhisañkhāra; see, "Sañkhāra - What It Really Means."

## Confusion About a Nicca Nature Is the Key - They Lead to Sañkhāra

9. Let us consider the dittthi, saññ̄a, and citta vipallāsa about the anicca nature as an example.

- We have the wrong view that things in this world have nicca nature, i.e., that they can provide happiness. That is the ditṭhi vipalläsa about the actual anicca nature.
- Because of this wrong view, we develop the sañ̃̄̄a vipallāsa about the anicca nature of things: We tend to perceive (sañ̃̃̄a) that worldly things can provide happiness.
- We tend to think (citta) that things in this world can provide us with happiness because of the wrong perception. Thus we do (abhi) sañkhāra that prolong the rebirth process for puñña abhisañkhāra. Even worse, they make one suffer mightily in the future rebirths through apuñ̃̃a abhisañkhāra.
- Therefore, we constantly generate mano sañkhāra (automatic thoughts about worldly sense objects), vacī sañkhāra (conscious thoughts or speech), and act accordingly (kāya sañkhāra).

## Sañkhāra Lead to Future Suffering

10. All three types of such sañkhāra lead to suffering in this life and in future rebirths. These are the sañkhāra that arise due to $a v i j j \bar{a}$ (not realizing the true nature of this world): "avijjā paccayā sañkhāra."

Those sañkhāra eventually lead to bhava and jāti via Pațicca Samuppāda. Here jāti means both future rebirths and "births during this life," see, "Suffering in This Life and Paticca Samuppāda."

- That is why it is essential first to learn Dhamma and first realize that suffering in this life can arise due to our conscious thoughts and actions. Not only that, but that suffering CAN BE stopped from arising.
- Once one comprehends this fact and lives accordingly, one can experience the nirāmisa sukha when one removes this type of suffering.
- Furthermore, this helps one build true faith (saddhā) in Buddha Dhamma. It will convince one of the truth about the much worse type of suffering in future rebirths.
- More details in the first few subsections in the "Living Dhamma" section.

11. At that stage, one may comprehend the anicca nature of the rebirth process. The truth of the rebirth process is that nowhere in the 31 realms can one find happiness.

- Moreover, one will "see" that unimaginable suffering levels are present in the lowest four realms (apāyā). That will help get rid of the diṭthi vipallāsa about dukkha. Instead of the wrong view that there is happiness in human, deva, or Brahma realms, one will "see" that any pleasure to be had is only temporary. Furthermore, there is much more suffering inevitable if one stays in the rebirth process.
- One will also "see" that one is genuinely helpless if stayed in this rebirth process (samisāra). Thus one will get rid of ditṭhi vipallāsa (that this world is of atta nature) and truly "see" the "anatta nature."
- One will also "see" that - in the long run - things in this world are not subha, i.e., they are not beneficial or fruitful. Attachment to anything in this world will lead to suffering in the long run. Thus a Sotāpanna will have removed the diṭthi vipallāsa "distorted views" about subha nature as well.
- That is how one gets rid of diṭthi vipallāsa. That leads to Nibbāna via dissociating from the material world, see, "Nibbāna."

## Saññā Vipallāsa

12. Saññā (pronounced "sangnā") comes from "san" + "gnāna," which means "wisdom" about "san." But regular humans have only viparīta sañ̃ña or saññā vipallāsa: they do not see "san" as bad.

- Removal of saññā vipallāsa requires getting rid of ditṭhi vipallāsa which in turn requires attaining samm $\bar{a}$ ditṭhi. Then, one will perceive the benefits or the harm in each speech or action that one is about to make.
- When one has the right vision and perceives things as they are, one will start thinking along those lines. Then one will begin removing citta vipallāsa.

## Removal of Vipallāsa

13. For completion, we will end with the following technical details. All three types of vipallāsa about anicca and anatta disappear at the Sotāpanna stage. However, only the diṭthi vipallāsa about dukkha and asubha goes away. [See Ps 1.8 Treatise of Distortions - Vipallāsakathā]

- That is why even though a Sotāpanna can "see" that things in this world can eventually lead to only suffering, he/she will still tend to enjoy sense pleasures. That is due to the remaining sañña and citta vipallāsa about dukkha and asubha. However, those do not involve apāyagāmi deeds.
- Sañ̃ñ vipallāsa about dukkha and asubha is lessened at the Sakadāgāmi stage are completely removed at the Anāgāmi stage. Even though an Anāgāmi has removed the desire for sense pleasures in the kāma loka, he/she will still tend to enjoy jhānic pleasures.
- All vipallāsa go away entirely only at the Arahant stage. An Arahant does not make apuñña abhisañkhāra that leads to heat (or tāpa) in mind and makes one eligible to be born in the apāy $\bar{a}$. He does not make puñña abhisañkhāra that make one eligible to be born in the "good realms" either. He makes only kammically neutral sañkhāra or kiriya to maintain life until Parinibbāna or death.

14. Removal of saññā and citta vipallāsa respectively at the Anāgāmi and Arahant stages can be understood as follows. Saññā and citta vipallāsa regarding sukha and subha arise due to "kāma."

- Most apāyagāmi deeds are done with kāmacchanda n̄̄varaṇa "covering a mind," and it is removed at the Sotāpanna stage. Kāmacchanda appears when "kāma" - craving for sensual pleasures optimizes and "makes one blind."
- However, a Sotāpanna has "kāma rāga" meaning a Sotāpanna still craves sensual pleasures.
- An Anāgāmi has removed "kāma rāga," and thus, saññ̄a vipallāsa for sukha and subha.
- It is only at the Arahant stage that even a trace of vipallāsa for kāma is removed with the removal of all "citta vipallāsa." This is explained in, "WebLink: suttacentral: Samāropanahāra vibhañga (Ne 19)." [Read in this book (with English translation) Samāropanahāra vibhañga (Ne 19)]
- The following charts provide a summary (much merits to Seng Kiat Ng for the charts and the above link):

| Characteristics | anicca | dukkha | anattā | asubha |
| :---: | :---: | :---: | :---: | :---: |
|  | nicca | sukha | attā | subha |
| Sañ̃̄ā Vipallāsa | Sotāpatti | Anāgāmi | Sotāpatti | Anāgāmi |
| Citta Vipallāsa | Sotāpatti | Arahatta | Sotāpatti | Arahatta |
| Dițthi Vipallāsa | Sotāpatti | Sotāpatti | Sotāpatti | Sotāpatti |

| Vipallāsa abandonment by | tanh $\bar{a}$ |  | ditthi |  |
| ---: | :---: | :---: | :---: | :---: |
| Vipallāsa abandonment by | kāya | vedanā | citta | dhammā |
| Characteristics | asubha | dukkha | anicca | anatt $\bar{a}$ |
| Abandonment of | subha | sukha | nicca | attā |
|  | Anāgāmi | Anāgāmi | Sotāpatti | Sotāpatti |
| Citta Vipallāsa | Arahatta | Arahatta | Sotāpatti | Sotāpatti |

## ${ }^{\text {3.8.1.1 }}$ Ps 1.8 Treatise of Distortions - Vipallāsakathā <br> .3.1

Paṭisambhidāmagga<br>1 Mahāvagga

Ps 1.8 Treatise of Distortions - Vipallāsakathā

## 1.1 <br> [Same as] the previous origin (cause).

Purimanidānaì.
1.2
'Bhikkhus, there are these four perversions of perception, perversions of thought, perversions of view.
"Cattārome, bhikkhave, saññāvipallāsā cittavipallāsā diṭthivipallāsā.
1.3

What four?
Katame cattāro?
1.4

Bhikkhus, [seeing] what is not getting according to desire impermanent as getting according to desire permanent is a perversion of perception, a perversion of thought, a perversion of view.
Anicce, bhikkhave, niccanti saññāvipallāso cittavipallāso diṭthivipallāso.
1.5
[Seeing] the painful as pleasant is a perversion of perception, a perversion of thought, a perversion of view.
Dukkhe, bhikkhave, sukhanti saññāvipallāso cittavipallāso diṭthivipallāso.
1.6
[Seeing] what is helpless/not in control net self as protection/in control self is a perversion of perception, a perversion of thought, a perversion of view.
Anattani, bhikkhave, attāti saññāvipallāso cittavipallāso diṭthivipallāso.
1.7
[Seeing] the unfruitful foul as fruitful beatift is a perversion of perception, a perversion of thought, a perversion of view.
Asubhe, bhikkhave, subhanti saññāvipallāso cittavipallāso ditṭhivipallāso.
1.8

These, bhikkhus, are the four perversions of perception, perversions of thought, perversions of view.
Ime kho, bhikkhave, cattāro sañ̃n̄avipallāsā cittavipallāsā ditṭhivipallāsā.
2.1
'Bhikkhus, there are these four non-perversions of perception, non-perversions of thought, non-perversions of view.
Cattārome, bhikkhave, nasaññāvipallāsā nacittavipallāsā nadiṭthivipallāsā.
2.2

What four?
Katame cattāro?
2.3

Bhikkhus, [seeing] what is not getting according to desire impermanent as not getting according to desire a mermanent is a non-perversion of perception, a non-perversion of thought, a non-perversion of view.
Anicce, bhikkhave, aniccanti nasaññāvipallāso nacittavipallāso nadiṭthivipallāso.
2.4
[Seeing] what is painful as painful is a non-perversion of perception, a non-perversion of thought, a nonperversion of view.
Dukkhe, bhikkhave, dukkhanti nasañn̄āvipallāso nacittavipallāso nadiṭthivipallāso.
2.5
[Seeing] what is helpless/not in control net self as helpless/not in control net self is a non-perversion of perception, a non-perversion of thought, a non-perversion of view.
Anattani, bhikkhave, anattāti nasaññāvipallāso nacittavipallāso nadiṭthivipallāso.
2.6
[Seeing] what is unfruitful as unfruitful fert is a non-perversion of perception, a non-perversion of thought, a non-perversion of view.
Asubhe, bhikkhave, asubhanti nasaññāvipallāso nacittavipallāso nadiṭthivipallāso.
2.7

These, bhikkhus, are the four non-perversions of perception, non-perversions of thought, non-perversions of view.
Ime kho, bhikkhave, cattāro nasañn̄āvipallāsā nacittavipallāsā nadiṭthivipallāsā"ti.
3.1

Perceive what is not getting according to desire
"Anicce niccasaññino,
3.2

As getting according to desire permanent, and what is pain as pleasure, dukkhe ca sukhasaññino;
3.3

As well as the helpless/not in control not self as protection/in control self,
Anattani ca attāti,
3.4

And fruitful beauty too in what is unfruitful feut; [81]
asubhe subhasaññino;
3.5

All beings are killed by wrong views,
Micchādiṭthihatā sattā,
3.6
their minds are confused and their thoughts are twisted (maddened).
khittacittā visañ̃̃ino.

Such beings, bound to Māra's yoke, Te yogayuttā mārassa,

## 4.2

Go where is no surcease of bonds;
ayogakkhemino janā,
4.3

They travel round the roundabout
Sattā gacchanti samisārain,
4.4

Where birth and death each hunt the other down.
jātimaraṇagāmino.
5.1

Now when Enlightened Ones appear
Yadā ca buddhā lokasmimi,
5.2

And bring the light into the world, uppajjanti pabhañkarā;
5.3

They promulgate the True Idea,
Te imaì dhammaì pakāsenti,
5.4

Which leads on to release from suffering.
dukkhūpasamagāminaì.
6.1

The wise, on hearing what they tell,
Tesain sutvāna sappaññā,
6.2

Apply their minds to seek the truth: sacittaim paccaladdhu te;
6.3

They see the not getting according to desire impermanent as it is,
Aniccaì aniccato dakkhum,
6.4

And pain they see as only pain,
dukkhamaddakkhu dukkhato.
7.1

They see what is helpless/not in control not self as such,
Anattani anattāti,
7.2

And likewise too they see the unfruitful foul;
asubhaí asubhataddasum்;

## 7.3 <br> Such views as they adopt are right, <br> Sammādiṭthisamādānā,

7.4

And they it is escape from suffering'. [WebLink: suttacentral: Vipallāsa Sutta (AN 4.49)] (A ii 52)
sabbaì dukkhaì upaccagun"ti.
8.1

In a person who possesses [right] view [by his being a stream enterer] are these four perversions abandoned or unabandoned?
Ime cattāro vipallāsā diṭthisampannassa puggalassa pahīnā, appahīnāti.

## 8.2

Some are abandoned, and some are unabandoned.
Keci pahīn̄, keci appahīn̄a?
8.3

The perversion of perception, perversion of thought, and perversion of view, [that see] what is not getting according to desire impermanent as getting according to desire permanent are abandoned in him. Anicce niccanti saññāvipallāso cittavipallāso diṭthivipallāso pahīno.
8.4

The perception [that sees] what is painful as pleasant arises, and so does the thought, but such perversion of view is abandoned in him.
Dukkhe sukhanti saññā uppajjati, cittai் uppajjati, ditṭhivipallāso pahīno.
8.5

The perversion of perception, perversion of thought, and perversion of view, [that see] what is helpless/not in control self as protection/in control self are abandoned in him.
Anattani attāti saññāvipallāso cittavipallāso diṭthivipallāso pahīno.
8.6

The perception [that sees] the unfruitful foul as fruitful beautifill arises, and so does the thought, but such perversion of view is abandoned in him.
Asubhe subhanti saññā uppajjati, cittain uppajjati, ditṭhivipallāso pahīno.
8.7
3. In two instances [ - the first and third - ] six perversions are abandoned.

Dvīsu vatthūsu cha vipallāsā pahīna.
8.8

In two instances [ - the second and fourth-] two perversions are abandoned and four perversions are unabandoned.

```
Dvīsu vatthūsu dve vipallāsā pahīnā, cattāro vipallāsā appahīna.
```

## 8.9

In [all] four instances eight perversions are abandoned and four perversions are unabandoned. ${ }^{1}$
1 At the beginning the perversions are reckoned as four ('instances'), namely, seeing the not getting according to desire impermanent as getting according to desire permanent, the painful as pleasant, the helpless/not in control not self as protection/in control self, and the unfruitful foul as fruitful beatiful. Here at the end they are reckoned as three, namely, perversion of perception, perversion of thought, and perversion of view; hence the total of 'twelve' ('eight' and 'four') in the 'four instances'. [See below chart.]
Catūsu vatthūsu attha vipallāsā pahīnā, cattāro vipallāsā appahīnāti.

| Characteristics | anicca | dukkha | anatt $\bar{a}$ | asubha |
| :---: | :---: | :---: | :---: | :---: |
|  | nicca | sukha | attā | subha |
| Sañn̄ Vipallāsa | Sotāpatti | Anāgāmi | Sotāpatti | Anāgāmi |
| Citta Vipallāsa | Sotāpatti | Arahatta | Sotāpatti | Arahatta |
| Diț̣hi Vipallāsa | Sotāpatti | Sotāpatti | Sotāpatti | Sotāpatti |

8.10<br>End of Treatise on Perversions.<br>Vipallāsakathā niṭthitā.

### 3.8.1.1 Samāropanahāra vibhañga (Ne 19)

Samāropana hāra is a method of understanding a sutta - not in isolation - but in combination with other aspects as well.
Specifically, the purport of a sutta is considered in terms of its basis, its synonyms and also the manner in which it pertains to the practice of developing and abandoning.

The following is a verse explaining this hāra.
Ye dhammā yaì mūlā, ye cekatthā pakāsitā muninā;
Te samāropayitabbā, esa samāropano hāro 'ti.
Those phenomena which are of a (the same) root, and those phenomena which are shown by the Sage to be of same meaning -
those (phenomena) are to be combined - this is the Samāropana hāra.
The above is a brief introduction to Samāropana hāra.
The ensuing is the original text elucidating the Samāropana hāra using examples.

Netti
Paținiddesavāra
Vibhañga 16

## Ne 19 Analysis of Mode of Conveying the Combining - Samāropanahāravibhañga

## 1.1

Therein, what is the samāropana hāra?
Tattha katamo samāropano hāro?

## 1.2

(It is explained in the verse) "Those phenomena which are of a (the same) root, and those phenomena which are shown by the Sage to be of same meaning. ..'
"Ye dhamm $\bar{a}$ yaimmūlā, ye cekatthā pakāsitā muninā"ti.
2.1

In one basis, how many other basis are accessed, all of them are to be combined.
Ekasmim̀ padaṭthāne yattakāni padaṭthānāni otaranti, sabbāni tāni samāropayitabbāni.
2.2

Just as in $\bar{a} v a t t a ~ h a ̄ r a ~(m o d e ~ o f ~ c o n v e y i n g ~ c o n v e r s i o n), ~ m a n y ~ b a s i s ~ a r e ~ a c c e s s e d . ~$
Yathā āvatṭe hāre bahukāni padaṭ! hānāni otarantīti.
2.3

Therein, combining is of four types - padatthāna (basis), vevacana (synonym), bhāvana (developing) and pahāna (abandoning).
Tattha samāropanā catubbidhā padaṭthānaí, vevacanaim, bhāvanā, pahānamiti.
3.1

Therein, what is combining with basis (padattthāna)?
Tattha katam $\bar{a}$ padaṭthānena samāropanā?

## 4.1

"The non-doing of all evil,
"Sabbapāpassa akaranam̀,
4.2
taking up the wholesome,
kusalassa upasampadā;
4.3
purifying one's own mind, Sacittapariyodāpanaín,
4.4
this is the teaching of the Buddha's."
etain buddhāna sāsanan"ti.
5.1

What is its basis?
Tassa kim padaṭthānaì?
5.2

There are three good conducts -
Tiñi sucaritāni-
5.3
good conducts of the body, good conducts of speech, good conducts of mind.
kāyasucaritaì vacīsucaritaì manosucaritaì-
5.4

This is the basis.
idaì padațthānam;
5.5

Therein, that which is the good conduct of the body and speech - this is the Morality-aggregate.
tattha yaì kāyikañca vācasikañca sucaritam், ayamं sīlakkhandho.
5.6

In the good conduct of mind is non-covetousness and non-ill-will - this is the Concentration-aggregate.
Manosucarite yā anabhijjhā abyāpādo ca, ayamं samādhikkhandho.
5.7

That which is Right View - this is the Wisdom-aggregate.
Yā sammāditṭhi, ayamं paññākkhandho.
5.8

This is the basis.

Therein, the Morality-aggregate and Concentration-aggregate are Samatha.
The Wisdom-aggregate is Vipassana $\overline{\text {. }}$
Idaí padaṭthānai், tattha sīlakkhandho ca samādhikkhandho ca samatho, paññākkhandho vipassanā.
5.9

This is the basis.
Therein, the result of Samatha is the mind-release due to fading away of passion.
The result of Vipassan $\bar{a}$ is the wisdom-release due to fading away of ignorance.
Idain padatṭhānai், tattha samathassa phalai் rāgavirāgā cetovimutti, vipassanāya phalaì avijjāvirāgā paññāvimutti.
5.10

This is the basis.
Idaì padaṭthānam.
6.1

Desired (vanam) is the basis for desiredness (vanatha).
Vanaì vanathassa padaṭthānam்.
6.2

What is the desired?
Kiñca vanam?
6.3

And what is desiredness?
Ko ca vanatho?
6.4

The desired is the five strands of sensuality; craving is the desiredness -
Vanaì nāma pañca kāmaguṇā, taṇhā vanatho.
6.5
this is the basis.
Idaì padaṭthānam.
6.6

Desired is the fastening on to the signs - as "woman" or as "man."
Vanaì nāma nimittaggāho "itthī"tiva' "puriso"ti v $\bar{a}$.
6.7

Desiredness is taking up the smaller details of the various parts as - "wow! the eye!" ' O ! the ear' 'the nose!' ' O ! the tongue!' ' O ! the body!' -
Vanatho nāma tesamं tesamं añgapaccañgānai் anubyañjanaggāho "aho cakkhu, aho sotaí, aho ghānaì, aho jivhā, aho kāyo" iti.
6.8
this is the basis.
Idaì padațthānam.
6.9

The desired is the uncomprehended internal and external bases.
Vanaì nāma cha ajjhattikabāhirāni āyatanāni apariññātāni.
6.10

The fetter that arises based on that is the desiredness.
Yain tadubhayaì paticca uppajjati samyojanam், ayamं vanatho.
6.11

This is the basis.
Idaim padatṭhānam.
6.12

The desired is the latent-tendency.
Vanaì nāma anusayo.
6.13

The desiredness is the manifestation.
Vanatho nāma pariyuṭthānam.
6.14

This is the basis.
Idaì padaṭthānaì.
6.15

Therefore said the Blessed One, "Having cut the forest (desired) and the afforestation (desiredness)..." Tenāha bhagavā "chetvā vanañca vanathañcā"ti.
6.16

This is combining with basis.
Ayamं padaṭthānena samāropanā.
7.1

Therein, what is combining with synonyms?
Tattha katamā vevacanena samāropanā?
7.2

The mind-release due to fading away of passion is the result for trainees.
Rāgavirāgā cetovimutti sekkhaphalaì;
7.3

The wisdom-release due to fading away of ignorance is the result for the trained (adept).
avijjāvirāgā paññāvimutti asekkhaphalain.
7.4

This is a synonym.
Idamं vevacanam.
7.5

The mind-release due to fading away of passion is the result for Non-returner.
Rāgavirāgā cetovimutti anāgāmiphalaí;
7.6

The wisdom-release due to fading away of ignorance is the exalted result for the trained (adept).
avijjāvirāgā paññ̄āvimutti aggaphalaì arahattaì.
7.7

This is a synonym.
Idamं vevacanam.

## 7.8

The mind-release due to fading away of passion is the transcending the element of sensuality.
Rāgavirāgā cetovimutti kāmadhātusamatikkamanaï;
7.9

The wisdom-release due to fading away of ignorance is the transcending of the three elements.
avijjāvirāgā pañn̄āvimutti tedhātusamatikkamanaì.
7.10

This is a synonym.
Idaì vevacanaim.
7.11

The faculty of wisdom, the strength of wisdom, the training of higher wisdom, the aggregate of wisdom, the investigation of phenomena which is a factor of enlightenment, the equanimity which is a factor of enlightenment, knowledge, right view, determining, investigating, shame to do evil, insight, knowledge in the Dhamma, all this is synonym.
Paññindriyaim, paññābalaì, adhipaññāsikkhā, pañ̃̄ākkhandho, dhammavicayasambojjhañgo, upekkhāsambojjhañgo, ñānaín, sammāditthi, tīranā, santīraṇā, hirī, vipassanā, dhamme ñānain, sabbaí, idaí vevacanaì.
7.12

This is combining with synonyms.
Ayamं vevacanena samāropanā.
8.1

Therein, what is combining with development?
Tattha katamā bhāvanāya samāropanā?
8.2

As the Blessed One said, "Therefore, you dwell here, contemplating the body in body, ardent, alert, mindful, putting aside greed and distress regarding the world.
Yathāha bhagavā "tasmātiha tvaỉ bhikkhu kāye kāyānupassī viharāhi, ātāp̄̀ sampajāno satimā vineyya loke abhijjhādomanassam்."
8.3
$\bar{A} t \bar{a} p i$ (removing heat [defilements] ardent) is the faculty of effort.
Ātāpīti vīriyindriyam.
8.4

Sampajāno (fully understanding defilements alert) is the faculty of wisdom.
Sampajānoti paññindriyam.
8.5

Satima (removing [defilements] with mindfulness mindfulness) is the faculty of mindfulness.
Satimāti satindriyam.
8.6

Vineyya loke abhijjhādomanassam (putting aside greed and distress regarding the world) is faculty of concentration.
Vineyya loke abhijjhādomanassanti samādhindriyaì.
8.7

Thus, while dwelling contemplating the body in the body, the development of the four foundations of mindfulness get fulfilled.
Evaï kāye kāyānupassino viharato cattāro satipaṭthānā bhāvanāpāripūrim gacchanti.
[8.1 to 8.7: Kāyānaupassā tackles all FOUR types of āhāra, and thus removes ALL vipallāsa. See: SN 47.42: Samudayasutta. One needs to understand what is involved in Dhammānupassanā first. Thus, the progression is backward: dhammānupassanā, cittānupassanā, vedanānupassanā, kāyānupassanā. ]

## 8.8

Due to what reason?
Kena kārañena?
8.9
(Due to) the analogous characteristics of the four faculties.
Ekalakkhanattā catunnaì indriyānaì.
8.10

When the four foundations of mindfulness are developed, the development of the four right exertions get fulfilled.
Catūsu satipațthānesu bhāviyamānesu cattāro sammappadhānā bhāvanāpāripūrimi gacchanti.

### 8.11

When the four right exertions are developed, the development of four basis of power get fulfilled.
Catūsu sammappadhānesu bhāviyamānesu cattāro iddhipādā bhāvanāpāripūrim gacchanti.
8.12

When the four basis of power are developed, the development of the five faculties get fulfilled.
Catūsu iddhipādesu bhāviyamānesu pañcindriyāni bhāvanāpāripūrim gacchanti.
8.13

Thus everything.
Evain sabbe.
8.14

Due to what reason?
Kena kāraṇena?
8.15

All are phenomena which are a part of enlightenment, are factors of enlightenment.
They are of analogous characteristic in terms of the characteristic of leading-to.
The development of those qualities which are analogous get fulfilled.
Sabbe hi bodhañgam $\bar{a}$ dhamm $\bar{a}$ bodhipakkhiy $\bar{a}$ niyyānikalakkhanena ekalakkhaṇā, te ekalakkhanattā bhāvanāpāripūrìं gacchanti.
8.16

This is combining with development.
Ayaì bhāvanāya samāropanā.
9.1

Therein, what is combining with abandoning?
Tattha katamā pahānena samāropanā?
9.2

While dwelling contemplating the body in the body - vipallāsa (distortion/mistakenness) of taking something that is 'asubha' (unfruitful umberutifu) as 'subha' (fruitfiul beautifil) is abandoned;
the physical food (kabalikāro) gets comprehended by him;
one becomes un-attached to the sensual-grasping;
one becomes disassociated with the yoke of sensuality;
one gets separated from the body of covetousness bond;
one is un-intoxicated with the intoxication of sensuality;
one crosses over the flood of sensuality;
one is un-pierced by the dart of passion;
there is comprehension of the sustaining of consciousness by associated form;
the passion for the form-element is abandoned;
one does not go the wrong way due to desiring.
Kāye kāyānupassī viharanto "asubhe subhan"ti vipallāsain pajahati, kabaḹ̄kāro cassa āhāro pariññaì gacchati, kāmupādānena ca anupādāno bhavati, kāmayogena ca visamiyutto bhavati, abhijjhākāyaganthena ca vippayujjati, kāmāsavena ca anāsavo bhavati, kāmoghañca uttinṇo bhavati, rāgasallena ca visallo bhavati, rūpūpikā cassa viññānaṭthiti pariññà் gacchati, rūpadhātuyain cassa rāgo pahīno bhavati, na ca chandāgatiin gacchati.

## 10.1

While dwelling contemplating the sensation in the sensation -
vipallāsa (distortion/mistakenness) of taking something that is 'dukkha' (suffering) as 'sukha' (happiness) is abandoned;
the physical food of contact (phassa āhāra) gets comprehended by him;
one becomes unattached to the becoming-grasping;
one becomes disassociated with the yoke of becoming;
one gets separated from the body of ill-will bond;
one is not intoxicated with the intoxication of becoming;
one crosses over the flood of becoming;
one is not pierced by the dart of ill-will;
there is comprehension of the sustaining of consciousness by associated sensation;
the passion for the sensation-element is abandoned;
one does not go the wrong way due to disliking.
Vedanāsu vedanānupassī viharanto "dukkhe sukhan"ti vipallāsain pajahati, phasso cassa āhāro pariññain gacchati, bhavūpādānena ca anupādāno bhavati, bhavayogena ca visamyyutto bhavati, byāpādakāyaganthena ca vippayujjati, bhavāsavena ca anāsavo bhavati, bhavoghañca uttinṇo bhavati, dosasallena ca visallo bhavati, vedanūpikā cassa viññānaṭthiti pariññaim gacchati, vedanādhātuyain cassa rāgo pahīno bhavati, na ca dosāgatim gacchati.

## 11.1

While dwelling contemplating the mind in the mind -
vipallāsa (distortion/mistakenness) of taking something that is 'anicca' (not getting according to desire impermant) as ' $n i c c a$ ' (getting according to desire permanent) is abandoned;
the food of consciousness (viññāna āhāra) gets comprehended by him;
one becomes unattached to the view-grasping;
one becomes dis-associated with the yoke of view;
one gets separated from the body of adherence to rites and rituals bond;
one is not intoxicated with the intoxication of view;
one crosses over the flood of view;
one is not pierced by the dart of conceit;
there is comprehension of the sustaining of consciousness by associated perception;
the passion for the perception-element is abandoned;
one does not go the wrong way due to fear.
Citte cittānupassī viharanto "anicce niccan"ti vipallāsain pajahati, viññānain cassa āhāro pariññain gacchati, diṭthupādānena ca anupādāno bhavati, diṭthiyogena ca visainyutto bhavati, silabbataparāmāsakāyaganthena ca vippayujjati, diṭthāsavena ca anāsavo bhavati, diṭthoghañca uttinṇo
bhavati, mānasallena ca visallo bhavati, sañ̃̄̄̄pika cassa viñ̃̄̄naṭṭhiti pariññaim gacchati, saññādhātuyamं cassa rāgo pahīno bhavati, na ca bhayāgatim gacchati.

## 12.1

While dwelling contemplating the phenomena in the phenomena -
vipallāsa (distortion/mistakenness) of taking something that is 'anattä' (not having control not-self) as 'att $\vec{a}$ ' (having control self) is abandoned;
the food of intention (manosañcetana āhāra) gets comprehended by him;
one becomes unattached to the 'doctrine of self'-grasping;
one becomes dis-associated with the yoke of ignorance;
one gets separated from the body of adherence to 'this is only true' bond;
one is not intoxicated with the intoxication of ignorance;
one crosses over the flood of ignorance;
one is not pierced by the dart of delusion;
there is comprehension of the sustaining of consciousness by associated formations;
the passion for the formation-element is abandoned;
one does not go the wrong way due to folly.
Dhammesu dhammānupassī viharanto "anattani attā" ti vipallāsam pajahati, manosañcetanā cassa āhāro pariññaì gacchati, attavādupādānena ca anupādāno bhavati, avijjāyogena ca visamiyutto bhavati, idamisaccābhinivesakāyaganthena ca vippayujjati, avijjāsavena ca anāsavo bhavati, avijjoghañca uttinnno bhavati, mohasallena ca visallo bhavati, sañkhārūpika cassa viññānatṭhiti pariññamं gacchati, sañkhāradhātuyamं cassa rāgo pahīno bhavati, na ca mohāgatim gacchati.

| Understanding Four Noble Truths leads to abandonment of | $\tanh \bar{a}$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Dwelling contemplating on ... | kāya | vedan $\bar{a}$ | citta | dhammā |
| vipallāsa abadonment of Characteristics | kabalīkāro | phasso | viññānam | manosañcetanā |
| Characteristics | asubha | dukkha | anicca | anattā |
| Abandonment of | subha | sukha | nicca | attā |
| Sañ̃na Vipallāsa | Anāgāmi | Anāgāmi | Sotāpatti | Sotāpatti |
| Citta Vipallāsa | Arahatta | Arahatta | Sotāpatti | Sotāpatti |
| Diṭthi Vipallāsa | Sotāpatti | Sotāpatti | Sotāpatti | Sotāpatti |

## 12.2

This is combining with abandoning.
Ayain pahānena samāropanā.
13.1

Therefore said Venerable Mahākaccāyana -
Tenāha āyasmā mahākaccāyano-
14.1
"Those phenomena which are of a (the same) root,
"Ye dhammā yaimmūlā,

## 14.2

and those phenomena which are shown by the Sage to be of same meaning -
Ye cekatthā pakāsitā muninā;
14.3
those (phenomenas) are to be combined -

Te samāropayitabbā,

## 14.4

this is the Samāropana hāra."
Esa samāropano hāro"ti.
14.5

The Samāropana hāra has been elucidated.
Niyutto samāropano hāro.
14.6

And the classification of $h \bar{a} r a s$ has ended.
Nitṭhito ca hāravibhañgo.

### 3.8.1.2 What Is Vedanā (Feelings)?

February 18, 2017

## Vedanā and Samphassa Jā Vedanā - More Than Just Feelings replaces (11Nov2018) Vedanā - What It

 Really MeansDoes Bodily Pain Arise Only Due to Kamma Vipāka?

### 3.8.1.2 Vedanā and Samphassa Jā Vedanā - More Than Just Feelings

February 18, 2017; November 10, 2018 Rewritten and replaces Vedanā - What It Really Means

1. Vedan $\bar{a}$ is conventionally translated as "feelings", but it is much more than just feelings. The Buddha said that vedanā can be analyzed in many ways, with simple or deeper meanings. Here we will analyze vedan $\bar{a}$ in a way that will be most helpful at this stage (for those who have been following the "Living Dhamma" section from the beginning.

- In this analysis, we will discuss 9 types of vedana $\bar{a}$.
- By understanding these 9 types of vedana $\bar{a}$, we can understand how to correctly do vedanānupassana $\bar{a}$ in the Satipatṭhāna bhāvanā.
 "one becomes aware (of a sense input)" and experience the corresponding good, bad, or neutral kamma vipāka.
- That is the vedana experienced by an Arahant. He/she simply is aware of a sense input, and does not ADD anymore vedanā in his/her mind to that sensory input.
- A vedanā can be a dukha vedanā (due to a past bad kamma), a sukha vedanā (due to a past good kamma), or a neutral sensation - like feeling the wind on the body - called an upekkha vedanā.
- Even an Arahant will experience those dukha or sukha vedanā, as long as he/she has the physical body. It is only those "samphassa-j $\bar{a}$-vedan $\bar{a}$ " that will not arise in an Arahant; see below. No more vedan $\bar{a}$ of any type arising in an Arahant after the death, because he/she will not be reborn in the 31 realms of "this world."
- However, normal humans go far beyond that and generate three additional types of their own mindmade "samphassa ja vedana $\bar{a}$," as we will discuss below.

3. It is important to realize that sukha and dukha vedana due to kamma vipāka are felt by the physical body. They result due to past good or bad kamma vipāka. This can be verified by referring to Abhidhamma:

- Akusala kamma vipāka coming though the body are listed as, "dukkha sahagataì kāya viññānaì," and kusala kamma vipāka coming though the body are listed as, "sukha sahagataì kāya viñnänaì."
- Neutral (upekkhā) vedanā can arise via all five physical senses; see \#7 below.

4. A normal human being will mentally generate three more type of vedana due to those sukha, dukha, and neutral vedanā that initially arise due to kamma vipāka via all five physical senses.

- If it is dukha vedanā (due to a headache, getting injured, etc.), one is likely to start worrying about it and add more suffering. Those are domanassa vedanā or āmisa dukha vedanā.
- If it is sukha vedana (getting a massage, lying in a luxurious bed, etc.), one is likely to start generating thoughts about how good it is and how one can enjoy similar sukha vedana in the future. Those are somanassa vedanā or $\overline{\text { anmisa sukha vedana }}$; one could also be generating them by remembering past such sukha vedan $\bar{a}$. These are also added in by the mind.
- Somanassa means "mind-made joyful." Domanassa means "mind-made misery", which is basically a depressed mindset.
- If a vedana due to a kamma vipāka is not that strong one may just generate neutral feelings about it; that is $\bar{a} m i s a ~ u p e k k h a ~ v e d a n a \bar{a}$.

5. Let us take some examples to illustrate how those additional types of vedanā can arise due to initial dukha vedan $\bar{a}$ and sukha vedana $\bar{a}$.

- Suppose someone comes down with an illness. Any pain (dukha vedanā) due to that illness CANNOT be avoided by anyone once the illness takes hold: It is the RESULT (vipāka) of a previous CAUSE (kamma).
- Of course, it is possible that one could have avoided the kamma vipāka to materialize by trying to minimize CONDITIONS (paccayā); see, "What Does "Paccayā"" Mean in Paticca Samuppāda?." That is why kamma vipāka can be avoided by being mindful and taking precautions.
- Once an illness starts, all one can do is to take medicines and also take any possible actions to reduce the pain.
- However, people tend to make the situation worse by starting to generate negative feelings about the situation. This gives rise to domanassa vedana .

6. In the same way, one can start generating somanassa vedanā based on a sukha vedanā that was brought by a good kamma vipāka.

- For example, when one is eating a delicious meal, one could be generating joyful thoughts about how delicious it is and how one can eat it again in the future. Such joyful thoughts (somanassa vedana $\bar{a}$ ) may be generated even long after the meal.
- Both domanassa and somanassa vedanā are "mind-made." They are called "samphassa-jā-vedanā"; see \#8 below.

7. Kamma vipāka also leads to sense inputs at the other four physical senses. They are all neutral. Thus neutral vedanā can arise via all five physical senses.

- Kusala and akusala vipāka coming through those four sensory doors are listed as, "upekkhā sahagataín cakkhu viññānami," "upekkhā sahagataim sota viññānaín," "upekkhā sahagataì ghāṇa viñ̃āṇamं," and "upekkhā sahagatamं jivhā viññānam.".
- For example, when we see an "eye-pleasing picture", the initial vedana felt by the mind is neutral.
- However, that "neutral feeling" may not even register in one's mind because "samphassa-j $\bar{a}$-vedan $\vec{a}$ " that we discuss next arise automatically and instantaneously based on one's gati.

8. But if one has cravings or repulsion to such pictures, one will start generating "samphassa-j $\bar{a}$-vedana $\bar{a}$," or feelings that arise due to "samphassa" ("san" + "phassa" or contacts with "san" that is in one's mind); see, "What is "San"? Meaning of Sansara (or Samsara)."

- It is easy to understand this when one contemplates on some examples. Upon seeing person X , an enemy of X will generate what are called "domanassa vedan $\bar{a}$ " or bad feelings, whereas a friend of X will generate "somanassa vedan $\vec{a} "$ or good feelings.
- The same is true for sounds, tastes, and smells. Even though there appear to be "universally good" tastes, that is not true for an Arahant. We just cannot comprehend it at this stage. But we know that some foods enjoyed by some could be repulsive to others, for example.
- In akusala-mula paticca samuppāda, the "phassa paccayā vedanā" step, the vedanā that arises is really "samphassa-jā-vedanā"; see, "Akusala-Mūla Paticca Samuppāda."

9. Three more types of mentally generated vedanā can arise in those who are on the Noble Eightfold Path. These arise by suppressing or eliminating those $\bar{a} m i s a ~ v e d a n \bar{a}$ or "samphassa-j $\bar{a}$-vedan $\bar{a}$ " discussed above.

- In the beginning of this section we discussed how heat or tāpa in the mind arise due to "san" which are greed (lobha), hate (dosa), and ignorance (moha); see, "Suffering in This Life - Role of Mental Impurities" and "Satipatthāna Sutta - Relevance to Suffering in This Life."

10. When one constantly is attached or repulsed by all those sensory inputs that one experiences in a given day, one's mind can get really stressed out. A normal human being may even not be aware of this heat (tāpa) in the mind; see those two posts mentioned above, and other posts in the beginning of the "Living Dhamma" section.

- Even if one is generating somanassa vedana , those inevitably lead to the stress in the mind. However, the effect is easily seen with domanassa vedanā.
- This is very important to grasp. You may want to go back and read those posts.

11. When one stays away from generating too many "samphassa-j $\bar{a}$-vedan $\bar{a}$ " of both kinds, one will start feeling three more types of vedana $\bar{a}$. These are called nirāmisa vedana $\bar{a}$, because they arise due to staying away from cravings (and repulsion) to worldly objects.

- When one prevents the mind from heating up by comprehending the adverse effects of "san" and staying away from them, one's mind starts "cooling down." This is the nirāmisa sukha vedanā that we have discussed in many posts.
- This is what is emphasized by "ātāpi sampajāno" in the Mahā Satipatṭhāna Sutta; it means "remove the fire or heat from one's mind by being aware of the 'san' or "immoral tendencies"; see, "Satipatthāna Sutta - Structure."
- The pleasant feelings one feels during $j h \bar{a} n \bar{a}$ are also nirāmisa sukha vedanā. They are devoid of tāpa or heat.
- Such feelings can also be experienced when one is doing a meritorious deed, such as giving or helping out someone in need. Those are also devoid of tāpa or heat and are nirāmisa sukha vedanā.
- Nirāmisa sukha can, of course, be experienced while engaging in meditation, especially Metta $B h \bar{a} v a n \bar{a}$. This is optimized when one does those bhāvanā with comprehension of anicca, dukkha, anatta, i.e., when one does it with full comprehension of "ātāpi sampajāno."

12. There are two more types of vedana that one experiences when proceeding on the Noble Eightfold Path.

- Sometimes, one gets a bit discouraged by not advancing "fast enough" on the Path. One thinks about "why am I not getting to the Sotāpanna stage?" or "Is there anything that I am missing in order to make progress?", etc.
- Those are not domanassa vedanā (because they are devoid of patigha anusaya); they are nirāmisa dukha vedan $\bar{a}$. It is common for one to experience such vedan $\bar{a}$.
- If a vedanā is not that strong one may just generate neutral feelings about it; that is nirāmisa upekkha vedanā.

13. The key to vedanānupassana in the Satipatthāna bhāvanā is to be able to recognize which type of vedanā one feels.

- If it is a dukha (vipāka) vedanā, one understands that one needs to bear it (after reducing it as much as possible with medicines, etc). One needs to understand why such a vipāka vedanā arise, and remedy it as much as possible. After all, our goal is to stop any type of suffering.
- A good example is a pain one feels when sitting cross-legged at meditation retreats. Just by saying "I feel this vedana $\vec{a}$ will not of any use. That vedan $\bar{a}$ can be removed by shifting one's posture. I have seen some instructors, advice people, to just bear the pain saying that it will go away. It may go away because the nerves may become numb. That is not good in the long term.
- Also, one needs to understand why one should stop generating domanassa and somanassa vedana $\bar{a}$, per above discussion.
- And one should, of course, cultivate nirāmisa sukha vedanā that arise when one starts on the Path (especially upon comprehending Tilakkhaṇa to some extent) and reduces the tendency to generate domanassa and somanassa vedanā.

14. Vedanānupassan $\bar{a}$ is all about first identifying the types of vedan $\bar{a}$ one is experiencing, and then deciding what to do about them. Getting rid of all vedan $\bar{a}$ - as some people believe - is the wrong thing to try to do.

Vipāka vedanā do not have lobha, dosa, moha, but vipāka vedanā can lead to samphassa-j $\bar{a}$-vedan $\bar{a}$ which will have lobha, dosa, moha.

- vipāka vedanā needs to be experienced with upekkhā.
- samphassa-jā-vedanā are the ones to be stopped.
- Nirāmisa vedanā are the ones to be cultivated.

15. In summary, try to avoid vipāka dukha vedanā by trying not to make conditions for them to appear; see, "Anantara and Samanantara Paccayā." Do not indulge in vipāka sukha vedanā when those arise. Suppress and gradually eliminate samphassa-j $\bar{a}$-vedan $\bar{a}$ and cultivate nirāmisa vedana $\bar{a}$, which is what the "Living Dhamma" section is all about.

- That is — in brief - what vedanānupassanā is all about.

More details on vedanā can be found at: Vedanā (Feelings) Arise in Two Ways" and "Feelings: Sukha, Dukha, Somanassa, and Domanassa."

### 3.8.1.2 Vedanā - What It Really Means

.1.1
February 18, 2017; this is being replaced by Vedanā and Samphassa Jā Vedanā - More Than Just Feelings

1. Vedan $\bar{a}$ is conventionally translated as "feelings", but it is much more than just feelings. The Buddha said that vedan $\bar{a}$ can be analyzed in many ways, with simple or deeper meanings. Here we will analyze vedan $\bar{a}$ in a way that will be most helpful at this stage (for those who have been following the "Living Dhamma" section from the beginning.

- In this analysis we will discuss 9 types of vedanā (highlighted in bold italic red).
- By understanding these 9 types of vedanā, we can understand how to correctly do vedananupassana in the Satipatṭhāna bhāvanā.

2. At the very fundamental level vedana means "veema danaveema" in Sinhala, which means "one becomes aware (of a sense input)" and experience the corresponding good, bad, or neutral kamma vipāka.

- That is the vedana experienced by an Arahant. He/she simply is aware of a sense input, and does not ADD anymore vedanā in his/her mind to that sense input.
- A vedanā can be a dukha vedanā (due to a past bad kamma), a sukha vedanā (due to a past good kamma), or a neutral sensation - like feeling the wind on the body - called an upekkha vedanā.
- An Arahant will bear them all with a neutral mind even though the dukha or sukha sensation cannot be avoided.
- However, normal humans go far beyond that and generate three additional types of their own mindmade "samphassa ja vedanā," as we will discuss below.

3. It is important to realize that sukha and dukha vedanā due to kamma vipāka are felt by the physical body. They result due to past good or bad kamma vipāka. This can be verified by referring to Abhidhamma:

- Akusala kamma vipāka coming though the body are listed as, "dukkha sahagatham kaya vinnanam," and kusala kamma vipāka coming though the body are listed as, "sukha sahagatham kaya vinnanam."

## - Neutral (upekkha) vedanā can arise via all five physical senses; see \#7 below.

4. A normal human being will mentally generate three more type of vedana due to those sukha, dukha, and neutral vedanā that initially arise due to kamma vipāka via all five physical senses.

- If it is dukha vedanā (due to a headache, getting injured, etc.), one is likely to start worrying about it and add more suffering. Those are domanassa vedanā or amisa dukha vedanā.
- If it is sukha vedana (getting a massage, lying in a luxurious bed, etc.), one is likely to start generating thoughts about how good it is and how one can enjoy similar sukha vedana in the future. Those are somanassa vedan $\bar{a}$ or amisa sukha vedan $\bar{a}$; one could also be generating them by remembering past such sukha vedan $\bar{a}$. These are also added in by the mind.
- Somanassa means "mind-made joyful." Domanassa means "mind-made misery", which is basically a depressed mindset.
- If a vedan $\bar{a}$ due to a kamma vipāka is not that strong one may just generate neutral feelings about it; that is amisa upekkha vedanā.

5. Let us take some examples to illustrate how those additional types of vedan $\bar{a}$ can arise due to initial dukha vedanā and sukha vedanā.

- Suppose someone comes down with an illness. Any pain (dukha vedanā) due to that illness CANNOT be avoided by anyone once the illness takes hold: It is the RESULT (vipāka) of a previous CAUSE (kamma).
- Of course, it is possible that one could have avoided the kamma vipāka to materialize by trying to minimize CONDITIONS (paccaya); see, "What Does "Paccaya" Mean in Paticca Samuppāda?." That is why kamma vipāka can be avoided by being mindful and taking precautions.
- Once an illness starts, all one can do is to take medicines and also take any possible actions to reduce the pain.
- However, people tend to make the situation worse by starting to generate negative feelings about the situation. This gives rise to domanassa vedana .

6. In the same way, one can start generating somanassa vedana based on a sukha vedan $\bar{a}$ that was brought by a good kamma vipāka.

- For example, when one is eating a delicious meal, one could be generating joyful thoughts about how delicious it is and how one can eat it again in the future. Such joyful thoughts (somanassa vedana $\bar{a}$ ) may be generated even long after the meal.

## 7. Kamma vipāka also lead to sense inputs at the other four physical senses. They are all neutral.

 Thus neutral vedanā can arise via all five physical senses.- Kusala and akusala vipāka coming through those four sense doors are listed as, "upekkha sahagatham cakkhu vinnanam," "upekkha sahagatham sota vinnanam," "upekkha sahagatham ghana vinnanam," and "upekkha sahagatham jivha vinnanam."
- For example, when we see an "eye-pleasing picture", the initial vedana felt by the mind is neutral.

8. But if one has cravings or repulsion to such pictures, one will start generating "samphassa ja vedanā," or feelings that arise due to "samphassa" ("san" + "phassa" or contacts with "san" that is in one's mind); see, "What is "San"? Meaning of Sansāra (or Samisāra)."

- It is easy to understand this when one contemplates on some examples. Upon seeing person X , an enemy of X will generate what are called "domanassa vedan $\vec{a}$ " or bad feelings, whereas a friend of X will generate "somanassa vedan $\bar{a}$ " or good feelings.
- The same is true for sounds, tastes, and smells. Even though there appear to be "universally good" tastes, that is not true for an Arahant. We just cannot comprehend it at this stage. But we know that some foods enjoyed by some could be repulsive to others, for example.

9. Three more types of mentally generated vedan $\bar{a}$ can arise in those who are on the Noble Eightfold Path. These arise by suppressing or eliminating those amisa vedana or "samphassa ja vedanä" discussed above.

- In the beginning of this section we discussed how heat or tāpa in the mind arise due to "san" which are greed (lobha), hate (dosa), and ignorance (moha); see, "Suffering in This Life - Role of Mental Impurities" and "Satipatthāna Sutta - Relevance to Suffering in This Life."

10. When one constantly is attached or repulsed by all those sense inputs that one experiences in a given day, one's mind can get really stressed out. A normal human being may even not be aware of this heat (tāpa) in the mind; see those two posts mentioned above, and other posts in the beginning of the "Living Dhamma" section.

- Even if one is generating somanassa vedanā, those inevitably lead to the stress in the mind. However, the effect is easily seen with domanassa vedana $\overline{\text {. }}$
- This is very important to grasp. You may want to go back and read those posts.

11. When one stays away from generating too many "samphassa ja vedana$\vec{a}$ " of both kinds, one will start feeling three more types of vedana . These are called nirāmisa vedana $\bar{a}$, because they arise due to staying away from cravings (and repulsion) to worldly objects.

- When one prevents the mind from heating up by comprehending the adverse effects of "san" and staying away from them, one's mind starts "cooling down." This is the nirāmisa sukha vedanā that we have discussed in many posts.
- This is what is emphasized by "ātāpi sampajāno" in the Mahā Satipatthāna Sutta; it means "remove the fire or heat from one's mind by being aware of the 'san' or "immoral tendencies"; see, "Satipatthāna Sutta - Structure."
- The pleasant feelings one feels during jhānā are also nirāmisa sukha vedanā. They are devoid of tāpa or heat.
- Such feelings can also be experienced when one is doing a meritorious deed, such as giving or helping out someone in need. Those are also devoid of thāpa or heat, and are nirāmisa sukha vedanā.
- Nirāmisa sukha can of course be experienced while engaging in meditation, especially mettā bhāvanā. This is optimized when one does those bhāvanā with comprehension of anicca, dukkha, anatta, i.e., when one does it with full comprehension of "ātāpi sampajāno."

12. There are two more types of vedanā that one experiences when proceeding on the Noble Eightfold Path.

- Sometimes, one gets a bit discouraged by not advancing "fast enough" on the Path. One thinks about "why am I not getting to the Sotāpanna stage?" or "Is there anything that I am missing in order to make progress?", etc.
- Those are not domanassa vedanā (because they are devoid of patigha anusaya); they are nirāmisa dukha vedan $\bar{a}$. It is common for one to experience such vedan $\bar{a}$.
- If a vedanā is not that strong one may just generate neutral feelings about it; that is nirāmisa upekkha vedanā.

13. The key to vedananupassana in the Satipatṭhāna bhāvanā is to be able to recognize which type of vedanā one feels.

- If it is a dukha (vipāka) vedanā, one understands that one needs to bear it (after reducing it as much as possible with medicines, etc). One needs to understand why such a vipāka vedanā arise, and remedy it as much as possible. After all, our goal is to stop any type of suffering.
- A good example is the pain one feels when sitting cross-legged at meditation retreats. Just by saying "I feel this vedanä" will not of any use. That vedanā can be removed by shifting one's posture. I have seen some instructors advice people to just bear the pain saying that it will go away. It may go away because the nerves may become numb. That is not good in the long term.
- Also, one needs to understand why one should stop generating domanassa and somanassa vedanā, per above discussion.
- And one should of course cultivate nirāmisa sukha vedanā that arise when one starts on the Path (especially upon comprehending Tilakkhaṇa to some extent) and reduces the tendency to generate domanassa and somanassa vedanā.

14. Vedananupassana is all about first identifying the types of vedana one is experiencing, and then deciding what to do about them. Getting rid of all vedan $\bar{a}$ - as some believe - is the wrong thing to try to do.

Vipāka vedanā do not have lobha, dosa, moha, but vipāka vedanā can lead to samphassa ja vedana $\bar{a}$ which will have lobha, dosa, moha.

- Vipāka vedanā needs to be experienced with upekkha.
- Samphassa ja vedanā are the ones to be stopped. [ja, $\left(-^{\circ}\right)$ [adj. -suffix from jan, see janati; cp. ${ }^{\circ} \mathrm{ga}$; gacchati] born, produced, sprung or arisen from]
- Nirāmisa vedana are the ones to be cultivated.

15. In summary, try to avoid vipāka dukha vedanā by trying not to make conditions for them to appear; see, "Anantara and Samanantara Paccaya." Do not indulge in vipāka sukha vedanā when those arise. Suppress and gradually eliminate samphassa ja vedan $\bar{a}$ and cultivate nirāmisa vedan $\bar{a}$, which is what the "Living Dhamma" section is all about.

- That is - in brief - what vedananupassana is all about.

More details on vedanā can be found at: "Vedanā (Feelings) Arise in Two Ways" and "Feelings: Sukha, Dukha, Somanassa, and Domanassa."

### 3.8.1.2 <br> Does Bodily Pain Arise Only Due to Kamma Vipāka?

## January 12, 2018

1. Vedanā can be categorized into five types (WebLink: suttacentral: Pathama Vibhañga Sutta; SN 48.4):

- Two are generated by the mind (called cetasikam sukham and cetasikam dukkham in the above Sutta) due to one's gathi: somanassa (joy) and domanassa (depression).
- Two felt by the body (called kāyikaí sukham and kāyikaí dukkham in the above Sutta) and are "real", not mind-made: sukha (bodily pleasure) and dukkha (bodily pain).
- Neutral: adukkhama sukha (without pain or pleasure) or upekkha (without somanassa or domanassa). In the Sutta stated as : "Katamañca, bhikkhave, upekkhindriyaì? Yaì kho, bhikkhave, kāyikaì vā cetasikaì vā nevasātaì nāsātaì vedayitaím-idaín vuccati, bhikkhave, upekkhindriyaì."
- Kāyika sukha and dukkha are also experienced by the mind, but they come through the body as direct results of previous $k a m m \bar{a}$, as we discuss below.

2. As clearly stated in the "WebLink: suttacentral: Nakulapitu Sutta (SN 22.1)":

- The two types of vedanā generated by the mind do not arise in Arahants. They are called "samphassa $j \bar{a}$ vedan $\bar{a} "$ "; see, "Vedanā (Feelings) Arise in Two Ways," and at a deeper level "Vedanā - What It Really Means."
- Those two felt by the body due to kammā vipāka are experienced also by the Arahants.
- This is also explained in the "WebLink: suttacentral: Salla Sutta (SN 36.6)," saying that while a normal human experiences both types of vedan $\bar{a}$ when pierced by a spear (including "samphassa j $\bar{a}$ vedanā"), an Arahant experiences only the "direct vedana"" caused by the wound.

3. This is why In Abhidhamma, all sense inputs via the other five sense inputs (other than physical body) are initially felt as upekkha (neutral) vedanā. Only the bodily sense inputs could lead to dukkha vedanā (getting injured, headaches, cancer, etc) or sukha vedan $\bar{a}$ (good massage, lying on a comfortable bed, etc).

- When we generate joy upon seeing something that we like, for example, it comes in as a neutral vedana $\bar{a}$. We generate joy via "samphassa j $\bar{a}$ vedan $\bar{a}$ " based on our gathi.
- A good example is seeing a well-known politician. Some people generate good feelings and others may generate bad feelings; but it is the same person they were all looking at. The joy or disgust was not in the politician, it was within the observer. One may need to contemplate this and let the idea sink in. It is an important point. It holds true for any sensory input other than the bodily sense inputs (except $k \bar{a} m a$ guna, discussed in \#6 below).

4. Regarding Abhidhamma, most people use the book "A Comprehensive Manual of Abhidhamma", by Bhikkhu Bodhi (First Edition 2000). This is the English translation of the "Abhidhammattha Sangaha", a commentary to the Abhidhamma Piṭaka in the Tipiṭaka, by Acariya Anuruddha, who lived around the same time as Acariya Buddhaghosa, who wrote the commentary Visuddhimagga.

- Both these recent commentaries have material inconsistent with the Tipiṭaka; see, "Incorrect Theravāda Interpretations - Historical Timeline."
- I have started a discussion focused on the book "A Comprehensive Manual of Abhidhamma", by Bhikkhu Bodhi (2000) at the discussion forum: "Comprehensive Manual of Abhidhamma (Bhikkhu Bodhi) - Grave Error on p. 164."

5. Going back to our original discussion, the key point from Abhidhamma is that only bodily sense inputs (experienced via the physical body) can bring in sukha (pleasant) or dukha (unpleasant or painful) bodily sensations.

- In other words, when we experience joy (upon seeing a loved one) and dislike (upon seeing an enemy) are both mind-made; same is true for taste, sounds, smell. The same is also true for dhamma $\bar{a}$ that comes to the mind (recalling past events or future plans).
- However, kāyika sukha or kāyika dukkha arises due to injuries and sicknesses (headaches, cancer, etc), and are thus "real."
- We have discussed these in various posts, but I wanted to find a couple of Suttā, where this is clearly stated concisely. Those are given in \#1 and \#2 above.

6. It must also be stated that the Buddha has described vedanā as two types to 108 types depending on the analysis; see, for example, "WebLink: suttacentral: Bahuvedanīva Sutta (MN 59)." For this discussion, the fives types are appropriate.

- Another complexity involved is due to sensory experiences that arise as part of a being's bhava (yet at the root still determined by kammā), which are called "kāma guna"; see, "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda." This is also mentioned in the above Sutta.
- For example, dogs and pigs eat feces because they taste such things as tasty. Humans, in general, taste sugar as sweet and salty as salty, etc. Those are kāma guna associated with each bhava; An Arahant would taste them the same way.

7. Everything in this world arises with the mind as the root cause. That is what is meant by the Dhammapada gāthā :"mano pubbangamā dhammā, mano setta manomayā..."

- At the very fundamental level, those 'kammā bī̄a" or "kammic energy" has its root in javana citta with one or more of the six root causes: lobha, dosa, moha, and alobha, adosa, amoha.
- It is also important to realize is that the three types of kammā are done by mano, vacī, and kāya sañkhāra: "Sañkhāra - What It Really Means."

8. This vicious cycle of "vipāka" leading to new "kammā" (via acting with avijjā), which in turn lead to more "vipāka", is the process that binds us to the samंsāra of endless rebirths, or perpetuate our "world" of suffering; see, "How Are Paticca Samuppāda Cycles Initiated?."

- The Buddha described this as, "kammā vipākā vaddanti, vipāko kammā sambhavo, tasmā punabbhavo hoti, evan loko pavattati."
- That means, "kammā lead to vipāka, vipāka, in turn, lead to kammā and thus to rebirth (punabbhavo), and that is how the world (existence) is maintained." Here "sambhava" is "san" + "bhava," or "adding more existences." Also, "loka" is world and "pavatta" means "maintain."

9. However, the working of kammā/kammā vipāka is NOT deterministic, i.e., just because one has done a bad (good) deed in the past, that DOES NOT mean one would get the corresponding result (bad or good); see, "What is Kamma? - Is Everything Determined by Kamma?."

- This is because "conditions" are a key aspect of Paticca Samuppāda (cause and effect) in Buddha Dhamma. Just because there are causes (kammā bīja), corresponding vipāka do not take place unless suitable conditions come into play; see, "How Are Paticca Samuppāda Cycles Initiated?" and "Patthāna Dhammā."

10. On the other hand, things DO NOT just happen. One or more causes MUST act as the root cause for a good (or bad) effect. Therefore, a past kammā, is ALWAYS needed to act as the cause.

- The above is an important point, so let me give an example. When someone gets a headache or cancer that is a bodily vedana arising solely due to a kamm $\bar{a}$ vipa $\bar{k} a$ and one's action at that time does not come into play. Of course, one can take subsequent actions to either alleviate that problem or even to get rid of it.
- On the other hand, one may encounter sufferings that seem to be not directly due to kammā vipāka. For example, one may have breathing problems because one's body has excess phlegm (semha). So, it
appears that the cause of breathing problems is excess phlegm. But there is a root cause for phlegm to be present at high levels in one's body, and that is a past kamm $\bar{a}$. The same is true for bile (pita), gas (vāta), body fluids (sannipāta), change in climate (utu), careless behavior (visama), others' harmful actions (opakkama).

11. There are three Sutt $\bar{a}(\mathrm{SN} 36.21$, AN 5.104 , and AN 10.60) that the reader Siebe mentioned in the discussion forum ("Could Bodily Pain be due Causes Other Than Kamma Vipāka?," that list 8 such possible "secondary causes" for bodily pain:

- One should read that discussion topic to get a good understanding of how this discussion evolved, but let me briefly describe the background.

12. Those other seven "causes" (except kammā) are not root causes. They all have past kamm $\bar{a}$ as the root cause. Nothing in this world happens without a connection somewhere to the six root causes: lobha, dosa, moha, and alobha, adosa, amoha.

- One may get an idea to stand on one's leg. But if one is mindful, one can see the bodily pain associated with that action and decide not to go through with it. Note that the kammā vipāka, in this case, came initially as a mental input (through mana indriya). But one has the CHOICE not to go along with that. Therefore, a second kammā of actually standing on one leg (one's willingness to go along with it) is needed for the $k \bar{a} y a v e d a n a ̄$ to arise.
- The first case above in \#10 (cancer etc) illustrates the vipāka solely attributed to past kammā. Pain due to standing on a leg is also an immediate kammā vipāka. Other cases involve those vipāka arising due to the seven other types of causes that are discussed in the Sutt $\bar{a}$ mentioned in \#11.

## 13. Therefore, sometimes it may not be easy to figure out what is the cause and what is the effect, because the result of a past action itself can act as a (new) cause.

- The above example of standing on one's leg is a good example. The kāya vedan $\bar{a}$ WOULD NOT arise unless one lets the initial kammā vipāka (came through the mana indriya) to proceed. One has the ability to stop that kāya vedanā from arising.
- On the other hand, one cannot stop the cancer by will. One could take actions (called upakkama or prayoga) to alleviate a bodily vedana due to a kammā vipāka. By the way, upakkama is one of the eight mentioned loosely as causes in those Suttā that mention possible eight causes for kammā vipāka.

14. Those upakkama or prayoga can work in the following way too. A upakkama by person A may cause harm to person B. For example, when person B detonate a suicide bomb, person A may die as a result of that action.

- But here again, person A MUST have a pending kammā vipāka for that action by person B to cause harm for him. As I have mentioned many times, we have collected innumerable kamm $\bar{a}$ vipāka and they are waiting for such conditions to appear to give vipāka.
- (Twenty four such conditions are listed and discussed in "Patthāna Dhammā." So far, I have discussed only a few).
- Some people escape such attacks "miraculously." There is no miracle, just the fact the there may not have been a suitable kamm $\bar{a}$ vipāka waiting to be ripened, OR, a past good kamm $\bar{a}$ could overcome even some pending bad vipāka.
- This is why the Buddha said that it is impossible for a human to figure out the causes of kammā vipāka.
- Another such special case is the demise of all living beings in the realms BELOW the abhassara brahma realm at the destruction of the "material world" (loka vināsaya); over a long time, all beings in the lower realms are reborn in higher realms above the abhassara Brahma realm until a new world (new Earth in our case) is formed over billions of years. We will not get to discuss this for a while, since more background material is needed.

15. One would think that the Buddha's good kammā done in his last life would be more than enough to override any kammā vipāka from the past. However, remnants of vipāka of an $\bar{a} n a n t a r i y a ~ k a m m \bar{a}$ were there, and also there could have been other strong kamma . That is the only exception, and that is the kamm $\bar{a}$ vipāka listed among the eight other possible causes. The other seven are really not the root causes, but actually effects that appear as causes.

- The Buddha is said to have to face 12 kammā vipāka ("WebLink: suttacentral: Pubbakammapilotikabuddhaapadāna ; Therāpadāna." An English translation is at: "WebLink: ancient-buddhist-texts.net: The Connection with Previous Deeds - Pubbakammapilotika-Buddhāpadānamí"'). Much merits to the two readers who sent me the reference!).
- Five of those 12 were due to remnants of annantariya papa kammā involving verbally or physically hurting Buddhas in past lives. Two were for killings, two for abusing sages, one for breaking the back of a wrestler, one for giving wrong medication intentionally, and another for watching others engaged in fishing and enjoying it.
- By the way, Moggallana Thero was beaten to death due to remnants of a kamm $\bar{a}$ of killing his parents in a past life. He paid for most of his kammā in a niraya (worst realms in apāy $\bar{a}$ ).

16. Finally, I would caution that material in the Milindapanha are based on conversations that took place between Ven. Nagasena and King Milinda more than 100 years after the Buddha's Parinibbana. Even though most of the material in Milindapanha seems to be compatible with the Sutt $\bar{a}$, it is possible that Ven. Nagasena referred to those extra seven causes as "root causes" just because those three Suttā in \#11 above (SN 36.21, AN 5.104, and AN 10.60) did not elaborate on the deeper explanation that we discussed above.

- Furthermore, as reader Akvan pointed out in the discussion forum, Ven. Nagasena's statement about Buddha not having to face kammā vipāka is not correct (I have not personally read that account in Milindapanaha, if it is there).

17. One's understanding in how kammā/kammā vipāka operates will grow only with an understanding of basic concepts. Until then, one's ingrained belief systems will be operating based on the 10 types of micch $\bar{a}$ ditthi. There are actually two levels of micchā ditṭhi. First one needs to remove the ten types of micchā diṭthi.

- Then one can start on the Noble Eightfold Path AFTER learning about the deeper level of micchā ditṭhi. That is to realize that it is a wrong view to believe that things in this world can bring long-term happiness. This second level of wrong views are dispelled when one comprehends Tilakkhana, the Three Characteristics of this world: anicca, dukkha, anatta.
- The strongest immoral deeds are done by the 10 types of micchā ditthi. They inevitably lead to suffering and can lead to rebirth in the apa $\bar{a} y \bar{a}$.

18. One can attain Nibbāna only by getting rid of the second level of micch $\bar{a}$ dițthi, i.e, only by comprehending Tilakkhaṇa. Thus ultimate and permanent happiness can be attained only by getting rid of the second level of micchā ditṭhi.

- Both types of micchā ditṭhi are discussed in the post: "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

### 3.8.1.3 Sañkhāra - What It Really Means

February 25, 2017, revised January 3, 2018; November 1, 2018; July 25, 2019; May 17, 2020; rewritten January 23, 2021; revised January 26, 2021

July 7, 2021: It is critically important to understand what is meant by "sañkhāra." I just started a new section "Basic Framework of Buddha Dhamma" to discuss the relationship among the Noble Truths, Tilakkhaṇa, and Paṭicca Samuppāda. I am including this post in that section.

## "Mental Formations"? - What Does That Mean?

1. "Mental formations" and "formations" are the conventional translations for sañkhāra. Certainly, the former is a better translation. But it is much better to grasp the idea of sañkhāra and just use that word. I recommend the same for most key Pāli words like sañ̃n̄a and viññāna.

- It comes from "san" + "khāra" or actions that involve "san"; see, "What is "San"? Meaning of Sansāra (or Samsīāra)."
- All sañkhāra arises in the mind. When they lead to conscious thinking or speech, they are called vacī sañkhāra. Those conscious thoughts that lead to bodily actions are kāya sañkhāra. On the other hand, mano sañkhāra arise automatically in the mind.
- Therefore, "san" is associated with anything that one is thinking about doing.
- Sañkhāra are responsible for just getting things done to live the current life (everyday activities). They can also lead to moral/immoral actions that can bring results (vipāka) in future lives.

## Categorizations of Sainkhāra

2. First categorization: Sañkhāra can be three types of mano, vacī, and $k \bar{a} y a$. Mano sañkhārāarise automatically due to one's gati. For example, when one hears a type of music, one may generate "thoughts of liking." But another person may not like that music. That is why it depends on one's gati.

- Based on such mano sañkhārā, one may start consciously thinking (talking to oneself) about it, and one may start talking about that music in the above example. Both those are vacī sañkhāra. See, "Correct Meaning of Vacī Sañkhāra. "
- Kāya sañkhāra are "conscious thoughts" that make our bodies move.

## Kammically Neutral or Not

3. Second Categorization: Some sañkhāra are kammically neutral. Others have kammic consequences.

- Thinking about going to the store to buy food is a vacī sañkhāra. One walks to the store using kāya sañkhāra. Both are kammically neutral.
- If thoughts involve greed, anger, ignorance, they will have kammic consequences. They can bring vipāka in the future. Strong sañkhāra that could lead to rebirth are abhisañkhāra.
- Thinking angry thoughts about an enemy is a vacī sañkhāra with kammic consequences. If then one hits that person, that is done with kāya sañkhāra. Both those have kammic consequences.
- Sañkhāra with kammic consequences can be categorized according to the type of kamma. Let us discuss that now.

## Sañkhāra With Kammic Consequences

4. Third Categorization: Those with kammic consequences fall into three categories.

- Apuñ̃na sañkhāra are "defiled thoughts" (with greed, hate, ignorance.) Apuñña means "immoral."
- On the other hand, puñña sañkhāra are "moral thoughts" (without greed, hate, ignorance.) They are thoughts responsible for proper speech and actions) have good kammic consequences.
- There is a third type with kammic consequences: āneñjābhisañkhāra. These come in ONLY $a b h i s a n ̃ k h a ̄ r a$ category leading to rebirth (see below.)
- Good or bad kammā are done via those types of sañkhāra. They can immediately bring results (kamma vipāka) in this life or future lives. However, not all kammā lead to kamma vipāka; see, "What is Kamma? - Is Everything Determined by Kamma?."

5. Strong sañkhāra with kammic consequences are abhisañkhāra, where "abhi" means "strong." They usually indicate those leading to rebirths.

- Apuñña abhisañkhāra (or apuññābhisañkhāra) can lead to birth in the apāyās. Such "strong" sañkhāra are normally vacī sañkhāra and kāya sañkhāra. Mano sañkhārā have kammic consequences but do not lead to rebirth.
- Puñña abhisañkhāra (or puññābhisañkhāra) lead to "good births" specifically in the human realms, 6 Deva realms, and the 16 rūpāvacara Brahma realms. These include engaging in "moral deeds" and the cultivation of the lower 4 rūpāvacara jhāna. Even more importantly, they are essential for making progress on the Path.
- Āneñjābhisañkhāra (or āneñja abhisañkhāra) lead to rebirths in the arūpāvacara Brahma realms. That basically means the cultivation of the higher 4 arupāvacara jhāna. They lead to rebirths in the 4 arūpāvacara Brahma realms. See \#3 in, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."

## Why Do "Good Sañkhāra" Also Arise With Avijjäa

6. "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb 6)" explains the step "avijjā paccayā sañkhāra" as, "Tattha katame avijjā paccayā sañkhārā? Puñ̃ābhisañkhāro, apuññābhisañkhāro, āneñjäbhisañkhāro."

Translated: 'What is meant by 'avijjā paccayā sañkhārā?' It means Puññābhisañkhāra, apuññäbhisañkhāra, āneñjābhisañkhāra."

- So, how can puññābhisañkhāra and āneñjābhisañkhāra arise due to avijjā, if they are "good sañkhāra?"
- This is a CRITICAL point that differentiates "living a moral life" from "working towards Nibbāna."

## Avijjā Is Ignorance About the Four Noble Truths!

7. One can be engaged in "moral deeds" and cultivate any type of jhāna without comprehending the Four Noble Truths/Paṭicca samuppāda/Tilakkhaṇa.

- That is why ANY living-being living today has been born in most of the higher realms an uncountable number of times, as well as in bad realms. Most live in the "bad realms" (apāyās) today.
- Some of us are living in a good realm today, but we will not be released from future rebirths in the apāyās until we comprehend the Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa.
- That is the CRITICAL point to understand.

## The Essence of Buddha Dhamma - Four Noble Truths, Paticca Samuppāda, Tilakkhaṇa

8. The Four Noble Truths are: (1) Rebirth process is filled with suffering, (2) The root-cause of that suffering is not understanding (avijjā) that our cravings for sensory pleasures (summarized as icchā/tanhhā), (3) That suffering-filled rebirth process will end when avijjā/taṇhā removed, and, (4) The way to achieve that is to follow the Noble Eightfold Path.

- Pațicca Samuppāda explains HOW good OR bad rebirths ( $j \bar{a} t i)$ arise due to the generation of (abhi) sañkhāra via avijjā. That is why the Patticca Samuppāda process starts with "avijjā paccayā sañkhārā."
- Tilakkhaṇa explains why it is NOT ENOUGH to engage in moral deeds. However, engaging in moral deeds is necessary to comprehend Tilakkhana. That is why the cultivation of the mundane eightfold path comes first. See, "Mahā Cattārīsaka Sutta (Discourse on the Great Forty)."
- When one starts understanding Tilakkhana, one becomes a Sotāpanna Anugāmi. At that point, one automatically switches over to the Noble Eightfold Path. Following that Path leads to various magga phala and eventually the Arahant stage.
- Now that we have the above summary, we can look into the word sañkhāra a bit more.

## Relationship Between Vedanā and Mano Sainkhāra

9. To generate sañkhāra, one MUST feel (vedanā) and recognize (sañ̃̄̄̄) something first. That "something" is a new ārammaṇa coming through one of the six sense faculties.

- Mano sañkhāra (same as citta sañkhāra) are DEFINED as "sañña ca vedanā ca citta sañkhāro" in the "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)."
- Thus, when a new ārammaṇa comes to the mind, mano/citta sañkhāra (vedanā, sañ̃̄̄a) arise automatically.
- Therefore, mano sañkhārā arise automatically WITH a new ārammaṇa (which is due to a kamma vipāka.) As we discuss below, such mano sañkhārā arise according to one's gati/anusaya.

## Based on Mano Sañkhāra We May Generate New Kamma

10. Based on that kamma vipāka, we may generate new kamma. If one gets "attached" to that
 could lead to immoral speech/actions, i.e., vacī and kāya sañkhāra that are apuññābhisañkhāra.

- Of course, some ārammaṇa (seeing someone doing a good deed, for example,) may initiate "good, moral thoughts (vacī sañkhāra). Those can develop to talking about it (more vacī sañkhāra) and even taking actions with kāya sañkhāra (like helping that person to continue those efforts.) Thye are all puññābhisañkhāra.
- Therefore, initial mano sañkhārā can be good or bad and can lead to puññābhisañkhāra or apuññābhisañkhāra.

## Mano Saṅkhāra and Gati/Anusaya

11. Those initial mano sañkhāra are automatically in mind due to one's gati/anusaya. Then subsequent vacī and kāya sañkhāra are generated, and we do have control over those; see, for example, "Correct Meaning of Vacī Sañkhāra."

- So, the seeds for thinking, speaking, and acting start at the instant of the first sense input, say, seeing something or hearing something that gets one's attention.
- If the sense input is strong (and one gets interested in it via like or dislike), one will start many such citta $v \bar{t} t h i$ in a short time. This leads to corresponding vacī and kāya sañkhāra to "talk to oneself," speak out or to do bodily actions.
- It is a good idea to follow the new section "Understanding the Terms in Paticca Samuppāda" to clarify that in detail. But let us discuss a few more details.

## The Way to Purify the Mind

12. As we can see from the above discussion, the mind is not pure UNTIL undefiled mano sankhāra arise automatically. By that time, anusaya and "defiled gati" would have been removed from the mind.

- That is achieved by being mindful at all times and following the three critical steps in meditation: (1) stopping bad vacī and kāya sañkhāra, (2) cultivating good vacī and kāya sañkhāra, and - most importantly - comprehending the Four Noble Truths/Pațicca Samuppāda/Tilakkhaṇa.
- Comprehending Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa makes one understand the dangers in the rebirth process. With the understanding, one's goal will change from "enjoying life" to "seeking Nibbāna."
- For that to happen, one would have to "see" the hidden dangers in sense pleasures. Then the "tendency to attach" (see \#10 above) will decrease. When that happens "puñ̃̄ābhisañkhāra" will "switch-over" to "kusala kammä" leading to Nibbāna. See, "Kilesa - Relationship To Akusala, Kusala, And Puñ̃na Kamma." I highly recommend reading this post.
- That is how one starts on the Noble Path. That is why Sammā Dittthi is the first step there.

13. The following "wise words" succinctly summarize the process of "cleansing the mind":

- Watch your conscious thoughts (vacī sañkhāra) - they become words (stronger vacī sañkhāra.)
- Watch your words - they become actions (kāya sañkhāra.)
- Watch your actions - they become habits (gati.)
- Watch your habits - they become your character (stronger gati.)
- Watch your character - it becomes your destiny (future births.)

Steps in Paṭicca Samuppāda describe that sequence. The following are further clarifications.

## Vacī and Kāya Sañkhāra Involve Javana Citta Generating Kammic Energy

14. Conscious thinking that could lead to speaking and physical actions occur in the seven javana citta in a citta vìthi. We will discuss that in "Understanding the Terms in Paticca Samuppāda."

- Vacī or kāya sañkhāra arise due to many citta vīthi running one after another. As we discussed previously, billions of citta vithi can run in a second; see, "Amazingly Fast Time Evolution of a Thought (Citta)."
- Another critical point is that the javana citta in subsequent citta vithi gets stronger and stronger. This is why when we start thinking about a person that we like or dislike, we can keep generating increasingly stronger feelings about the situation.
- Sometimes, we can see people getting angry by the minute. They are generating a lot of vacī sañkhāra even without getting a word out. But one can see the person getting highly agitated: the face gets red and facial expression can show how angry he/she has become.

## Samphassa jā Vedanā Lead to Vacī Saṅkhāra and Kāya Sañkhāra

15. In the post, "Vedanā and Samphassa-Jā-Vedanā - More Than Just Feelings," we discussed how "samphassa j $\bar{a}$ vedan $\vec{a} "$ could arise in our minds after the initial vipāka vedan $\bar{a}$. They are "mind-made" due to our gati/defilements and lead to new kamma.

- Those "samphassa jā vedanā" arise when we generate vacīsañkhāra and kāya sañkhāra as a result of the initial vipāka vedanā. Details at, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- Those "samphassa j $\bar{a}$ vedan $\vec{a}$ " are all made by us consciously. However, for someone who has not cultivated Satipattthāna or Ānāpāna (the correct versions), this may not be obvious.
- If one is mindful, one could see for oneself when one starts consciously having good or bad thoughts about sensory input. With practice, one can "catch oneself" before generating too many "samphassa j $\bar{a}$ vedan $\vec{a} "$ or - to say the same thing differently - before making a lot of vacī or kāya sañkhāra.
- Of course, if the $\bar{a} r a m m a n ̣ a ~ i s ~ a ~ g o o d, ~ m o r a l ~ o n e, ~ t h a t ~ w o u l d ~ l e a d ~ t o ~ g o o d, ~ m o r a l ~ v a c \bar{\imath} ~ a n d ~ k \bar{a} y a$ sañkhāra.
- Such good, moral vacī and kāya sañkhāra can lead to Nibbāna IF one has comprehended the Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa.

### 3.8.2 Rūpa Aggregate

## Bhūta and Yathābhūta - What Do They Really Mean

What are rūpa? - Dhamma are rūpa too!

### 3.8.2.1 Bhūta and Yathābhūta - What Do They Really Mean

December 28, 2017; revised January 21, 2022; re-written August 31, 2022 (\#10 revised later in the day) (\#10 revised on October 17, 2022)

## Yathābhūta - True Nature of Bhūta

1. Yathābhūta is usually translated as "true nature" (close to the true meaning). It implies that bhūta means "nature"; sometimes, bhūta is translated as "becoming." Both are wrong.

- These words are also associated with yathābhūta ñāna. Here ñaṇa means wisdom. That is wisdom about the true nature of this world made of four types of bhūta: pathavi, āpo, tejo, and vāyo.
- Everything in this world (alive and inert) is made of bhūta.

2. Bhūta is a Sinhala word as well as a Pāli word. It means a "ghost." That deeper meaning is associated with the four "mahā bhūta": pathavi, $\overline{a p o, ~ t e j o, ~ a n d ~ v a ̄ y o . ~ T h a t ~ i s ~ a l s o ~ w h y ~ a ~ g a n d h a b b a ~ i s ~ c a l l e d ~ a ~}$ "ghost" too: "Ghost 1990 Movie - Good Depiction of Gandhabba Concept." Also, see \#5 below.

- One cannot ever see mahā bhūta individually. The smallest unit of matter is a suddhāțthaka, which consists of the four mahā bhūta AND varna, gandha, rasa, and $\bar{o} j a$. Thus, a suddhāṭthaka ("suddha" + "attha" where "suddha" is pure or fundamental and "attha" is eight) means "pure octad" or "pure unit of eight components." The formation of a suddhäṭthaka is discussed in "The Origin of Matter - Suddhātthaka."
- Note that the four mahā bhūta are the primary rūpa. All others, including varna, gandha, rasa, and $\bar{o} j a$, are derived from them and are called upādaya rūpa. Those arise due to taṇhā for the primary rupa.

## The origin of Suddhatṭhaka (and thus the World) is the Mind

3. As mentioned in that post, bhūta originates in "gati" (one's character/habits). When one cultivates a certain gati, that can lead to the creation of bhūta (suddhāṭthaka) produced in javana citta according to abhisañkhāra.

- To understand these keywords, one needs to know about gati (I have sometimes spelled it as gathi, the way it is pronounced.) For example, see "Gati, Bhava, and Jāti. "
- Modern science is struggling to distinguish between pure energy and tangible matter; see the Reference below. That demarcation happens at the suddhäṭhaka stage.

## Mind Energy to Matter

4. A suddhātthaka is much smaller than even a photon (a particle of light,) and the Buddha said that mah $\bar{a}$ bhūta are actual "smallest units of matter." That is why he called them bhūta.

- One can NEVER see them or detect them individually. As we mentioned above, the smallest unit of $r \bar{u} p a$ or a suddhāṭthaka consists of eight subunits, including the four mahā bhūta.
- Furthermore, these bhūta arise from gati of living beings; see "The Origin of Matter - Suddhtthaka." A person with rough character qualities is likely to create suddhātt thaka with a higher proportion of pathavi, etc.

5. Billions of billions of suddhatthaka are combined to lead to the mahā bhūta stage of rūpa. Brahmās have bodies made of mahā bhūta. Only Brahmā can see such fine rūpa.

- Large aggregates of mahā bhūta combine to form the denser "dhātu stage" of rūpa. The bodies of Devas are at a lighter dhātu stage, and human bodies are denser.
- Forum participant Dosakkhayo has compiled a figure showing the formation of suddhatthaka and how their condensation leads to denser objects. You can download it here: "Evolution of Rupa." Much merits to him!

## Difference Between "Live Matter" and "Inert Matter"

6. Both types originate via the kammic energy created by the mind. That process is Paticca Samuppāda (PS.) I have only explained the arising of living beings (i.e., new bhavaljāti) via PS: "Paticca Samuppāda."

- All mater that we see are made of such dense dhātu. Rocks have dhātu that have mostly pathavi. Water mostly has āpo. Fire mainly contains tejo, and wind mostly vāyo. Thus, earth, water, fire, and wind are called pathavi, āpo, tejo, and vāyo.

## Some suddhatṭhaka "Acquire Life"

7. A suddhāṭthaka is inert. It acquires "life" when energized by the mind in creating "kammaja rūpa." That energy is in rotation (paribramana) and spin (bramana). When that embedded energy runs out, rotation and spin stop, becoming inert again.

- For example, a hadaya vatthu for a new existence comes into being as a kammaja rūpa at the cutipatisandhi moment. During its lifetime, the hadaya vatthu maintains its spin and rotation. Details at " 31 Realms Associated with the Earth."
- When the kammic energy is exhausted, its motion stops, and the bhava ends. At that time, a new hadaya vatthu for a new bhava is formed by kammic energy. Thus, NOTHING is transferred from "here to there." Kammic energy creates a new existence in the appropriate realm.

8. The hadaya vatthu is also called "vatthu dasaka" where dasaka means "ten." That is because the hadaya vatthu or vatthu dasaka has two energy modes (spin and rotation) in addition to the eight parts in the inert suddhätthaka. Thus the name dasaka (made of ten units). A navaka (discussed below) has only spin and is made of nine units.

- This added spin and rotation is what gives life to an inert suddhattthaka. That power or energy is created by javana citta (mind). If a kamma bija has more energy, it will sustain a bhava (hadaya vatthu) for longer.
- The same is true for the five pasāda rūpa (cakkhu, sōta, ghana, jivha, and kāya) formed at the moment of cuti-patisandhi. There are two bhava rūpa (which are also dasaka,) and jivitindriya rūpa (which is a navaka; just spin or bramana). The post discusses how different modes of rotation and spin give rise to these nine "life forming" basic units: "Gandhabba Sensing the World - With and Without a Physica.'Body".
- By the way, the word kammaja comes from "kamma" + " $j a$ " where " $j a$ " means birth. Therefore, kammic energy creates those nine kammaja rūpa.

## Physical Body Is Inert Without Gandhabba

9. Now, we can see that our heavy physical body, by itself, is inert. The real life is in the gandhabba with the hadaya vatthu and the five pasāda.

- At the death of the physical body, this life-sustaining gandhabba leaves the body, and the body becomes lifeless and decays.
- In the case of an out-of-body experience (OBE), even though the gandhabba leaves the physical body, it is still connected to the physical body (by a "silver cord" in the terminology of astral projection), and that is why the body does not start to decay: "Out-of-Body Experience (OBE) and Manomaya Kāya."

10. Therefore, in all life forms in the 31 realms, life energy is in the ultra-fine manomaya kaya ("mind-made body').

- In kāma loka, the manomaya kāya would have a hadaya vatthu (vatthu dasaka,) bhāva dasaka, and five pasāda rūpa (each of which is a dasaka.) A dasaka is a suddhāṭthaka (the smallest unit of matter with eight units) and two modes of vibration and rotation; "dasaka" means a "collection of ten." Thus, a manomaya kāya in kāma loka would have seven suddhāṭthaka-size units.
- In rūpāvacara Brahma realms, only cakkhu and sota pasāda rūpa are present in addition to hadaya vatthu, kāya dasaka, and bhāva dasaka, i.e., five suddhāṭthaka-size units. In the asañña realm, hadaya vatthu is there, but it is shielded by the "physical body," which has no mana indriya. Thus, it cannot interact with dhammā (or viññāna dhātu,) and cittās cannot arise.
- In arūpāvacara Brahma realms, there is only the hadaya vatthu.
- This is another critical factor in the yathābhūta ñāna: All life forms are like bhūta (ghosts); in essence, life is maintained by an ultra-fine (invisible) body that is impossible to see and has a temporary existence. Any life in any realm is short-lived on the samisāric scale. On the samisāric scale, trillion years is like a drop of water in the ocean.

## Yathābhūta Nāana - Ultimate Truth About the World

11. When someone comprehends what we discussed above about the true nature of matter that exists in this world, one is said to have the yathābhūta ñanna. That is the "knowledge about the true nature of things that comprise our world."

- However, just reading about them is just the start. That ñāna grows as one comprehends the finer details.
- Yathā means true nature. Yathābhūta means the true nature of matter (or the true nature of bhūta, which arises via the MIND. Of course, finer details need a good understanding of Abhidhamma.
- However, it is sufficient for most purposes to have a rough idea.

12. This is also why the Buddha said, "manō pubbangama dhamma $\bar{a}$, manō sett $\bar{a}$ manōmay $\bar{a}$ " in the famous Dhammapada verse.

- "Everything in this world has its origins in mind. The mind prepares all".
- See "Manōpubbangamā Dhammā..."

13. This yathābhūta ñāna about the real nature of our body also helps to get rid of the "ghana sañña" about our bodies. Humans value their dense bodies because they believe an unchanging "self' exists in the physical body.

- Those with uccheda ditthi (like most current scientists and philosophers) believe that our physical body (and its brain) is all there.
- Those with sāssata dittthi believe that there is a mental body that lives forever.

## Yathābhūta Ñāṇa Helps Dispel Sakkāya Diṭ̣̆hi

14. Buddha discovered that both are wrong views. There is a mental body, but it drastically changes from bhava to bhava. One could be a deva or a human for the time being, but the next bhava could be in an apāyā.

- Nothing in our physical body is worth being taken as "mine."
- When one comprehends this fact, sakkāya diṭthi (which is one of four conditions to attain the Sotāpanna stage) is removed.
- This aspect is discussed in "WebLink: suttacentral: Mūlapariyāya Sutta (MN 1)," "WebLink: suttacentral: Kaccānagotta Sutta (SN 12.15)," AND "WebLink: suttacentral: Mahā Hatthipadopama Sutta (MN 28)," among others.
- However, it is just one way to remove sakkāya ditṭhi. Don't worry if you don't comprehend sakkāya diṭthi this way.

## Ananubhūtaín - Inability to See the Real Nature of Things in the World

15. Now we see that the precursors for all matter in this world, four mahā bhūta, are mind-made and have a transient existence. They are "bhūta" or "ghosts." And since everything else is made of them, what we consider "solid, tangible things" in this world are really "ghost-like."

- The knowledge of this real "ghost-like" nature is called "yathābhūta ñāna." When one has that knowledge, one looks at the world according to that correct view, called "anu bhūtam.."
- When one is unaware of this true nature, it is called "na anu bhūtaí"," which rhymes "ananubhūtamं," just like "na āgāmi" becomes "Anāgāmi." It is to note that many key Pāli words are composed that way: anatta is "na" + "atta"; see, "Anatta - the Opposite of Which Atta?".
- Ānantariya is "na" + "an" + "antara". Words like this cannot be analyzed grammatically. This is why current Pāli experts incorrectly interpret such words (and cannot interpret many keywords).
- The word "ananubhūtam" comes in several key suttā, including the ones mentioned above in \#12.

16. One good example is the famous "WebLink: suttacentral: Brahmanimantanika Sutta (MN 49)": "Viññāṇaṃ anidassanaṃ anantaṃ sabbato pabham, taṃ pathaviyā pathavattena ananubhūtam,
āpassa āpattena ananubhūtaṃ, tejassa tejattena ananubhūtam, vāyassavāyattena ananubhūtam, bhūtānaṃ bhūtattena ananubhūtam, devānaṃ devattena ananubhūtam, pajāpatissa pajāpatittena ananubhūtam, brahmānaṃ brahmattena ananubhūtam, ābhassarānaṃ ābhassarattena ananubhūtaṃ, subhakiṇhānaṃ subhakiṇhānaṃ subhakiṇhattena ananubhūtaṃ, vehapphalānaṃ vehapphalattena ananubhūtaṃ, abhibhussa abhibhuttena ananubhūtam, sabbassa sabbattena ananubhūtam.."

Translated: "Viñ̃̃̄̄na is unseen, infinite, and leads to the rebirth process for all. With viñ̃̄̄̄na, one cannot comprehend the real nature of pathavi, àpo, tejo, vāyo, bhūta, deva, pajapti brahma, abhassara brahma, subhakinha brahma, vehapphala brahma, etc. and everything in this world (sabba)".

- One has a defiled consciousness or viññāna until one attains the Arahantship. Until then, one cannot fully comprehend the real "ghost-like" nature of everything in this world, i.e., one's yathābhūta ñāna is not complete.
- We will discuss the first part of the verse "Viññānam anidassanaṃ anantaṃ sabbatō pabhaṃ.." in the next post. This short phrase is commonly mistranslated. See "Anidassana Viñ̃̃āna - What It Really Means."

17. Another major sutta where it appears is "WebLink: suttacentral: Salāyatana Vibhañga Sutta (MN 137)": "Rūpānaì tveva aniccataì viditvā viparināmavirāganirodhaí, 'pubbe ceva rūpā etarahi ca sabbe te rūpā aniccā dukkhā vipariṇāmadhammā’ti evametaì yathābhūtaí sammappaññāya passato uppajjäti somanassaì."

- Loosely Translated: "Any rūpa that has existed or is in existence now has a "ghost-like transient nature." That is why they change unexpectedly (viparin̄ama) and have an anicca nature. Comprehending this true nature brings joy in one's mind (somanassa)."

## Reference (Scientific Theories of Matter)

1. Scientists have now verified the illusive nature of matter on a small scale. They thought the atom to be the smallest possible division of matter until 1897 when J.J. Thomson discovered the electron. An atom consists of protons, neutrons, and electrons. Subsequently, protons and neutrons turned out to have structure too. But their sub-units (quarks, etc.) cannot be detected individually).

- With the advent of quantum mechanics, the distinction between matter and energy has blurred. The mass of a particle depends on its speed. Photons or "particles of light" have zero mass at rest, i.e., zero rest mass. It is typical to state the mass of an elementary particle in terms of energy units.
- All the above is consistent with rūpa's elusive nature (bhūta) in Buddha Dhamma.

2. Furthermore, it is impossible to determine an elementary particle's exact position (Heisenberg uncertainty principle.) For example, it is only possible to say that an electron can be within a certain region of space. Thus, an electron is like a ghost. Scientists cannot precisely measure its location at any time.

- The situation is even worse for a photon, a particle of light. When a photon is released, one can only find it later by stopping it at a detector. It is IMPOSSIBLE to state the exact path of the photon from the source to the sensor. It could have been anywhere in between. The same applies to an electron, even though it has a non-zero rest mass.
- Some refer to the above observations as "quantum weirdness." Microscopic particles are as elusive as ghosts.

### 3.8.2.2 What are Rūpa? - Dhammā are Rūpa Too!

May 13, 2017; revised November 4, 2017; March 20, 2021; January 15, 2022

All our conscious thoughts start with one of the six senses getting input from the external world. With those six sense faculties, we detect six types of rūpa "out there" in the world.

## Dhammā Are Subtle Rūpa Below Suddhaṭthaka

1. Many people think rūpa means just "material things" that we can see out in the world, but EVERYTHING that we sense through our six senses is rūpa. I will systematically explain this.

- Those things that we detect with our five physical senses are what we can call "dense rūpa" made of suddhatthaka, i.e., they are made of mahā bhūta (pathavi, āpo, tejo, vāyo) and are located in $\bar{a} k \bar{a} s a \operatorname{dha} t u$; see, "The Origin of Matter - Suddhatthaka."
- Such rūpa that we detect with the mana indriya are called "dhammā." These are just energies and have not condensed to the suddhatṭhaka level, i.e., they are below the suddhatthaka stage.
- It is good to remember that dhamma refers to a doctrine (like in Buddha Dhamma), and dhamm $\bar{a}$ (with a long "a") refers to such fine (or subtle) rūp $\bar{a}$.
- Let us discuss those two types of $r \bar{u} p a$ in detail first.

## The Six Sense Faculties Detect Six Types of Rūpa

2. All things that we experience through our SIX senses are rūpa. But only the first FIVE types of sensory inputs come through the five physical senses (eyes, ears, nose, tongue, and body). Science is not aware of the SIXTH one, called mana indriya (located in the brain). But all six are clearly stated in the Cha Chakka Sutta, as discussed below.

- All six types of rūpa are EXPERIENCED by the mind, i.e., with citta (thoughts) with cetasika (mental factors) in them.
- For details of how the mind experiences the sensory inputs that come through the six "sense doors," see "Brain - Interface between Mind and Body."

## Dense Rūpa Made With Suddhatṭhaka

3. Those that we experience through our FIVE physical senses (eyes, ears, nose, tongue, and the body) are "dense rūpa." They have suddhatt!haka made of the four great elements or "cattāri mahā bhūtā."

- Those five kinds of $r \bar{u} p a$ are all in our "material world," the world that we experience with the five physical senses.
- We touch with our body or see with our eyes the rūpa that are familiar to everyone. They are "rūpa rūpa" or "vannáa rūpa" (varna rūpa in Sinhala or Sanskrit) to distinguish from other four types.
- However, we need light to "see" those "rūpa rūpa." Light consists of tiny particles called photons. Those photons have tiny masses due to their energies.

4. Now, let us look at the other four types of $r \bar{u} p a$ that we detect with our ears, noses, tongues.

- It is easy to see that what we taste is also "rūpa," ie., solid food or liquids.
- What we detect with the nose are scents, which are very small particulates. So, they are also "rūpa."
- When we hear sounds, our ears detect disturbances in the air due to that sound. Sound, therefore, involves energy, just like light. Sometimes sound energy is attributed to energy packets called "phonons."

## Dense Rūpa Are in Kāma and Rūpa Loka

5. Therefore, detection of $r \bar{u} p a$ in $k \bar{a} m a ~ l o k a$ and rūpa loka involve matter or energy, and all those are above the suddhatthaka stage.

- Yes. The light particles or photons are also made of suddhatt thaka.
- They are above the suddhatthaka stage, so one can see how minute a suddhatthaka is; it is much, much smaller than an atom in modern science.
- For example, a photon in the visible range (which is a suddhattthaka) is a billion times less massive than a hydrogen atom, the smallest atom. That is like the mass difference between a grain of sand an average airplane.
- A suddhatthaka could be a billion times smaller than that photon.

## Science Verified Light as a Type of Rūpa Recently

6. That is another example of how Buddha was ahead of modern science 2500 years ago. He had categorized all five "objects" sensed by the five physical senses as "rūpa" made up of suddhatthaka. It was only about 100 years ago that science identified photons as particles with the advent of quantum mechanics.

- Even many physicists did not accept the particle nature of light until the single-photon detection experiments of Grainger, Roger, and Aspect in 1986: Grainger et al-Experimental Evidence for a Photon Anticorrelation Effect-1986.
- Now it is accepted that light is made up of particles called photons.

## Experiencing Dhammā Requires Only the Mind

7. Now, let us think about what else we experience, other than those detected with the five physical senses. Imagine someone trapped in a cell with soundproof walls with no light inside and nothing in that room except its walls.

- That person can only touch the walls. He cannot see, hear, smell, or taste anything.
- But touch is not the only sensory experience he has. He can think about anything he wants to. He can think about past events and think about what can take place in the future.
- Those thoughts do not come at random but due to kamma vipāka. Of course, one can willingly recall them too. They are one's memories and future hopes, among others. That is the part that most people don't even consider.

8. As we discussed above, those are the finer $r \bar{u} p a$ detected by the mind lie below the suddhatthaka stage. They are detected by the mana indriya in the brain (another fact unknown to science) and subsequently sensed by the mind.

- Kamma bīja - that are generated by our minds (via our thoughts) - are also part of dhamm $\bar{a}$. They bring kamma vipāka back from time to time. We think of these as "random thoughts" that come to us about things and people.
- Those dhammā are not coarse enough to be "seeing" even with abhiñ̃n̄ $\bar{a}$ powers and do not make contact with other five coarse senses. Thus they are called, "anidassanamं appaṭighaì dhammāyatana pariyāpanna rūpam."
- Here, "anidassana" means "cannot be seen," and "appatigha" means "cannot be touched or sensed with even the finest instrument." And, "dhammāyatana pariyāpanna rūpam" means "rupa that belong to dhammāyatana"; see, "What are Dhamma? - A Deeper Analysis."

## Five Physical Senses and the Mana Indriya

9. We see a person when light reflected off of that person comes to our eyes. A sound is heard when the air disturbances due to that sound reach our ears. We smell a scent when tiny particulates of scent reach our noses. When food particles make contact with our tongues, we taste the food.

- So, we have five physical "sensors" on our bodies to detect those five five sense inputs. They are eyes, ears, nose, tongue, and our bodies. They are called cakkhu, sota, ghāna, jivhā, and $k \bar{a} y a$ indriya.
- The sixth sense that we have is called the mana indriya. It is located in the brain. But I have not yet been able to identify it with the known components of the brain. Of course, scientists do not think about it that way. That is how the Buddha described it.

10. We detect "dhamm $\vec{a}$ " with the mana indriya, just like we detect pictures with cakkhu indriya or sounds with sota indriya (ears). But all these sensory inputs are "felt" by the mind (hadaya vatthu) located close to the physical heart; see, "Brain - Interface between Mind and Body."

- These dhammā are also rūpa in Buddha Dhamma, but they are even finer (subtle) than those light particles or photons.
- "Dhamma" are just energies that lie BELOW the suddhatt!thaka stage. We cannot detect them with even the most advanced scientific instruments.
- That person locked up in an isolated room can generate thoughts about his past or future. That involves dhammā and the mana indriya.

## Dhammā Are Kamma Bīja

11. Just like the dense rūpa that we detect with our five physical senses are in Kāma loka and rūpa loka. Dhammā (which are the same as kamma bīja) are in the viññāṇa plane; see, "Our Two Worlds: Material and Mental."

- This mano loka is also called "bhava" because that is where one's kamma bïja are (see \#8.) We all have numerous kamma bïja that can give rise to a variety of bhava at the cuti-patisandhi moment when a new bhava is grasped (the strongest kamma bïja corresponding to an appropriate bhava is selected).
- Of course, kamma vipāka during a given life can also arise due to "smaller kamma bïja," as mentioned above.
- When kamma bïja lose their energies over long times, they become just "records." of what happened. Now they cannot bring any more vipāka, but become only "memories."

12. So, these dhamma (or kamma bīja) are rūpa that are below the suddhatthaka stage, and are in our "mano loka" or "mental world," as opposed to dense rūpa that are in our "material world" or "rūpa loka."

- The "mental world" is all around us, just like the "material world," but of course, we cannot "see it," just like we cannot "see" all those signals from radios, televisions, and cell phones that are all around us.
- But we do know that those radio, television, and cell phone signals are there because we can receive them with our radios, TVs, and cell phones. Just the same way, we receive those "dhammä" with our mana indriya.
- One may be engaged in some task, say washing dishes in the kitchen, but all of a sudden, a thought may come to mind about a friend far away or some incident at work. That is due to "dhamma" impinging on mana indriya due to kamma vipāka.
- Also, we can recall such memories at our will too.

## Six Types of Sensory Experiences - Chachakka Sutta (MN 148)

13. Chachakka Sutta (MN 148) (Ref. 1) describes the sensory interactions with all six senses; see, "Chachakka Sutta - Six Types of Vipāka Viññ̄̄na." For example, a "seeing event" is a sensory input through the eyes: "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānam்," i.e., "eye-consciousness arises when a rupa rūpa (with the aid of light) impinges on the eyes."

- Similarly, hearing is due to: "sotañca pațicca sadde ca uppajjati sotaviñ̃āṇaim," etc. for other physical senses of ghāna (smell), jivhā (taste), and kāya (body).
- Finally, detection of dhammā with the mana indriya stated as "manañca paṭicca dhamme ca uppajjati manoviññānam."."

## Abhidhamma Description

15. For those familiar with Abhidhamma, we can state the above with the Abhidhamma language. According to Buddha Dhamma, EVERYTHING in existence can be put into four ultimate realities (paramattha dhamma):

- Thoughts (citta)
- Thought qualities or mental factors (cetasika)
- Matter (rūpa) (includes energy and dhammā.)
- Nibbāna

16. These dhammā eventually lead to the formation of dense $r \bar{u} p a$ that we enjoy with our five physical senses.

Such dense $r \bar{u} p a$ have finite lifetimes (they are impermanent). Besides, they change unpredictably during their existence, and that is called viparināma lakkhana.

- But no matter how hard one tries, one will not be able to maintain such dense $r \bar{u} p a$ to one's satisfaction. Thus, such dense rūpa leads to more suffering than any pleasure.
- Five types of dense rūpa are in our "rūpa loka," the less dense dhammā are in our "mano loka"; see, "Our Two Worlds: Material and Mental."
- A living being exists to experience such dense $r \bar{u} p a$ and hopes to enjoy them with the mind (with citta and cetasika). That is the basis of existence in a sentence.

## Sabbe Dhammā Anattā

17. The Buddha said, "sabbe dhammā anatt $\bar{a}$," i.e., "all dhamm $\bar{a}$ are without essence at the end" and must be given up to attain Nibbāna. But that cannot be done by sheer willpower: One has to comprehend the true nature - Tilakkhaṇa - to see the real nature of all rūpa, including dhamm $\bar{a}$.

- We make our world by creating dhammā on our own. That is a critical point that I will try to explain in future posts in this "Living Dhamma" section.
- The basis for making dhammā are our thoughts with javana citta. A javana citta generates "kamma $b \bar{y} a$," and they give rise to future kamma vipāka. So, kamma bīja are dhamm $\bar{a}$. They are very tiny packets of energy below the suddhatthaka stage.
- But some javana (especially in jhāna samāpatti) can create energies above the suddhaṭthaka stage, i.e., they can produce tangible rūpa. That is how one with abhiñña powers can "create" physical objects.

18. Any $r \bar{u} p a$ (including kamma $b \bar{i} j a$ ) that one makes for oneself cannot be maintained to one's satisfaction.

- Any rūpa with energy will eventually be destroyed, or that energy will wear out. Furthermore, such rūpa can and will change unexpectedly while in existence, too; that is the viparinama characteristic and is a root cause of suffering.
- The only dhammās that are "permanent" are nāma gotta, records of our sañkhāra, which do not have energy in them; "Nāmagotta, Bhava, Kamma Bija, and Mano Loka (Mind Plane)."

19. When one sees the perils of this rebirth process (after one grasps the Tilakkhana), one stops making those causes via abhisañkhāra, and also gives up the craving (tanh $\bar{a})$ for them, which leads to Nibbāna.

- Nibbāna results when all those causes are removed, no rūpa can arise. Hence Nibbāna is permanent. No more suffering!

## Reference

1. The six sense inputs (āyatana) and the six types of rūpa that we experience with them are discussed in several suttā. For example, in the "WebLink: suttacentral: Cha Chakka Sutta (MN 148)":
"Cha ajjhattikāni āyatanāni veditabbānī'ti-iti kho panetaì vuttaì. Kiñcetam pațicca vuttam̀? Cakkhāyatanaì, sotāyatanam̀, ghānāyatanaì, jivhāyatanaì, kāyāyatanaì, manāyatanaì. 'Cha ajjhattikāni āyatanāni veditabbānū̄ti-iti yaim taì vuttaì, idametaì paṭicca vuttaì. Idaì pathamaí chakkam. (1)"
"Cha bāhirāni āyatanāni veditabbān̄̄’ti-iti kho panetaì vuttam. Kiñcetaím paticca vuttamं? Rūpāyatanaìm, saddāyatanaì, gandhāyatanaì, rasāyatanaì, phoṭṭhabbāyatanaì, dhammāyatanaì. 'Cha bāhirāni āyatanāni veditabbān̄̄’ti-iti yaì taín vuttaìm, idametaìm paṭicca vuttaim. Idä் dutiyamं chakkam. (2)"

- Thus, there are six (Cha) internal āyatana (ajjhattikāni āyatanāni) and six external (bāhirāni āyatanāni).
- The sixth internal āyatana is manāyatana, and it detects dhamma (called manāyatana, just like sadda or sound is called saddāyatana).

A more in-depth analysis of dhammā is at, "What are Dhamma? - A Deeper Analysis."

### 3.8.3 Viññāṇa Aggregate

November 30, 2017
Viññāna - What It Really Means
Kamma Viññāna - Link Between Mind and Matter
Anidassana Viññāna - What It Really Means

### 3.8.3. Viññāṇa - What It Really Means

May 26, 2017; revised May 16, 2020

## Two Types of Viññāna

It is a good idea to read the post, "Amazingly Fast Time Evolution of a Thought (Citta)" frrst. More at "Essential Abhidhamma - The Basics."

1. So far, in this subsection on the mental aggregates, we have discussed sañ̃ $\bar{a}, v e d a n \bar{a}$, and sañkhāra in simple terms, mainly focusing on their relevance to stay on the Path. See, "Nāma \& Rūpa to Nāmarūpa." My main goal is to provide the key and essential aspects of these terms so that one can see "how to cool down the mind" and progress towards Nibbāna.

- Viññāna can be said to encompass (include) all those three mental categories: saññā, vedana $\bar{a}$, and sañkhāra. So, we can say that viññāna is the overall effect our awareness encompassing our perceptions (sañ̃̄̄̄), feelings (vedanā), and our likes and dislikes (sañkhāra).
- But viññāna represents a bit more - mainly "our hopes and desires that we want to from this world." That is the more critical aspect - which makes the connection with $r \bar{u} p a$ - that we need to understand, but first, we need to know that there are two types of viñ $\tilde{n} a ̈ n a$.

## Vipāka Viññạ̣̄a

2. When we see something, a cakkhu viññāṇa arises. A split second later we may hear something, and sota viññāna arises. When we watch a movie, it seems like we are seeing and listening at the same time, but it only appears that way because our mind is so fast.

- Basically, six types of viññāna can arise via our six senses: eyes, ears, nose, tongue, body, and the mind, called cakkhu, sota, ghāna,jivhā, kāya, and mano viññ̄āna. They are all vipāka viññāṇa.
- Therefore, vipāka viññāna can be six types, and they will bring vipāka even for an Arahant until the death of the physical body.
- We don't have control over them once they arise. But we can, of course, avoid some. For example, if we don't want to watch a movie, we can decide not to view it.

## Kamma Viññ̄ạna

3. Then, based on that vipāka viññāna, kamma viññāna CAN arise, IF we get attached to that vipāka viññāna via greed, hate, or ignorance.

- For example, person X may see a person Y that X dislikes. That seeing event is a vipāka, and thus the viññāna generated is a vipāka viññāna.
- But as soon as X sees Y, hateful thoughts may come to X's mind, with which X can generate NEW KAMMA. Those thoughts have kamma viññāna.
- Kamma viññāna ALWAYS arise in the MIND door (not at the other five doors) i.e., kamma viññāna are ALWAYS mano viñ̃̃ān̄a. That is in contrast to vipāka viññāna which can arise at any of the six sense doors.

## Six Types of Vipāka Viññ̄āna

4. So, a vipāka viññāna can arise due to any of the six senses. Seeing a rūpa with eyes ("cakkhuñca paticca rūpe ca uppajjati cakkhuviññānain"), hearing a sound with ears ("sotañca paṭicca sadde ca uppajjati sotaviñ̃āṇam"),...dhamma with mana indriya ("manañca paticca dhamme ca uppajjati manoviñ̃̄ānà̀"').

- Note that vipāka viñ̃n̄ạna DO NOT arise via "sañkhāra paccayā viññāna." They ALWAYS appear via eyes seeing a ruppa, ears hearing a sound, etc.
- We are all familiar with how "visual awareness" or cakkhu viññanna arise due to seeing a rūpa. Similarly, auditory awareness arises due to hearing a sound, etc. But most of our vipāka viññanna occur due to "mental awareness" or mano viñ̃n̄ạna resulting via dhamma impinging on the mana indriya; see, "What are rūpa? - Dhamma are rūpa too!."
- Note that rūpa that we see with our eyes are rūpa rūpa (or vaṇna rūpa); they usually are just called rupa, but this can lead to confusion if someone is not aware of this detail.

5. In general, all we experience in this world are rūpa: rūpa rūpa, sadda rūpa, gandha rūpa, rasa rūpa, phott $h a b b a$ rūpa, and ALSO dhamma.

- Dhamma are not called rūpa, simply because they are below the suddhatṭhaka stage. They have not yet "condensed" to the suddhatthaka stage; see, "The Origin of Matter - Suddhatthaka."
- They are very subtle $r \bar{u} p a$ that cannot be seen or touched: "anidassanan appatighan"; see, "What are rūpa? - Dhamma are rūpa too!."

## Based on Vipāka Viññạ̄̂a We Initiate Kamma Viññāna

6. To summarize: vipāka viññāna can arise at any of the six senses, and thus can be cakkhu, sota, jivhā, ghāna, kāya, or mano viññāṇa.

- If the vipāka viññāna is strong (i.e., if the experience liked or disliked), then because of avijjā, we start generating sañkhāra about it, which lead to a viññanna that we create on our own, a kamma viñ̃̃āna.
- Therefore, in contrast to vipāka viññāna, kamma viññāna arise via "sañkhāra paccayā viññāna."
- They start automatically as mano viññāna, via mano sañkhāra. But then we consciously start generating more via vacī and kāya sañkhāra, and that will strengthen kamma viññāṇa.
- We have discussed how mano sañkhāra arise automatically due to our gati, and then we consciously generate vacī and kāya sañkhāra: "How Are Gati and Kilesa Incorporated into Thoughts?."

## Examples of Vipāka Viññāṇa

7. Let us first consider a couple of examples of vipāka viññāna.

- We may get to eat a tasty food item. The experience of that food on the tongue generates taste (jivh $\bar{a}$ viññāna), which is a vipāka viñ̃ñạa. We got to taste that as a result of a previous good kamma $v i p a \bar{k} a$. That experience includes identifying what food it is (sañña $\bar{a}$, and the taste it gives (vedan $\bar{a}$ ).
- If we get a headache, that is bad kāya viññāna that arose due to a past bad kamma, i.e., a kamma vipāka. We know it is a headache (sañña $\bar{a}$, and we feel the pain (vedanā).
- When the sense input first comes, we just become aware of it. There are no kamma done with vipāka viññāna.

## Examples of Kamma Viññạna

8. Based on those six types of vipāka viññāna that arise, we generate new mental states on our own. These are called kamma viñ̃̃̄̄̄na.

- In the above first example, if we like the taste, we immediately start getting attached to it and begin generating sañkhāra about that food. We begin to create vacī sañkhāra (talking to ourselves) about how good the food is. That is a different mental state that we make on our own. Of course, we are likely to generate kāya sañkhāra also when eating that food again. We have discussed the three types of sañkhāra in "Sañkhāra - What It Really Means."
- A kamma viññạna arises within a fraction of a second after the vipāka viññāna, so that we usually cannot differentiate between the two mental states. (For those who are familiar with Abhidhamma, this is discussed at the end of this post).
- Of course, vipāka viñ̃āạa lasts while we eat the food. A large number of jivhādvāra citta vīthi run while we eat. Kamma viññāna also arise later in the same citta vithi, but they also occur well after the meal. We can recall eating that food later at night (with a mano viñ̃ān̄a) and generate more kamma viññ̄ạa (mainly via vacī sañkhāra) by consciously thinking how good it was.
- In the second example above, a split second after we start experiencing the headache (vipāka viññ̄ạna and the associated feeling of pain), we start getting depressed and generating vacī sañkhāra about how this is going to ruin the day and mess up all our plans.

## Kamma Viññạ̣̄a Create Kamma Bija

9. In both those examples, our first mental state (vipāka viññāna) was so strong that we - on our own generated a kamma viññāna which also gives rise to a kamma bīja.

- That kamma būja can come back to our mind later as a vipāka viñnāṇa (this is a mano viñ̃̃āna). That is how we recalled our experience with tasty food later at night.
- If that headache was terrible, we might be able to recall it days or weeks later.

10. Thus the important point is that a kamma bija is the same as a "dhamm $\overrightarrow{\boldsymbol{a}}$ " that makes contact with the mind to give rise to a "mind sense event"; see, "What are rūpa? - Dhamma are rūpa too!."

- Just as a seeing event arises when the cakkhu indriya makes contact with a rūpa ("cakkhuñca paticca rūpe ca uppajjati cakkhuviññānam"'), a "mind event" occurs when a dhammā makes contact with the mana indriya ("manañca paṭicca dhamme ca uppajjati manoviññānam").
- One may attach to the taste of that delicious food. While thinking about how to taste it again in the future, many strong javana citta can lead to a kamma bïja.
- Don't be put off by those Pāli words. Once you get to know the meanings behind these words, it will become easy to see what happens.

## More Kamma Viññāna Lead to Strengthening of Kamma Bija

11. The strength of a given kamma bïja determines how likely would it to come back and make contact with the mind later on. For example, if it were a regular sandwich, one would not make craving for that and thus would not create strong kamma bīja or a "dhammā." Then it is likely that one would have forgotten that meal in a few hours.

- However, if the meal were delicious, one would be thinking about it many days after leaving the restaurant, and each time one generates javana citta, one will be making that kamma bïja stronger. The more one thinks about it (i.e., generates vacī sañkhāra) about it, the more robust it gets.
- See, "Correct Meaning of Vacī Sañkhāra" to see how thinking itself can lead to kamma generation.

## Three Types of Sañkhāra

12. This is how one becomes an alcoholic gradually. One starts remembering past "drinking events" and generate a lot of mano and vacī sañkhāra even when not drinking.

- By the way, drinking is a kāya sañkhāra, since it involves moving body parts.
- Mano sañkhāra arise automatically when one first think about a past drinking event (due to "manañca paṭicca dhamme ca uppajjati manoviñ̃nānami." Then when one starts consciously thinking about that past event, one starts generating vacī sañkhāra; see, "How Are Gati and Kilesa Incorporated into Thoughts?."
- All three types of sañkhāra contribute to "feed the viñ̃ān̄a for alcohol" via "sañkhāra paccayā viññāna" Paṭicca Samuppāda step. While we do not have control over mano sañkhāra that arise AUTOMATICALLY, we do have control over vacī and kāya sañkhāra that one generates CONSCIOUSLY, as discussed in the above post. That is the key to A$n \bar{a} p a \overline{n a}$ and Satipaṭthāna bhāvanā.

## Transition from Vipāka Viññạna to Kamma Viññāṇa

13. Let us look at the time-line of how these two types of viññanna arise. viññanna is not an "entity" that is always there. As with sañ̃̄̄ $\bar{a}$, vedanā, and sañkhāra, a given viññāna arises with a thought.

- When thoughts are not there, the mind is in the bhavañga state. Sometimes we see people - usually when they are not alert - staring out into space. Unless they are in deep thought (which is also possible), their minds are likely to be in the inactive bhavañga state.
- Our minds are moved away from the dormant bhavañga state to conscious thoughts first via a vipāka viññāna. Then if get attached ( $\operatorname{tanhha} \bar{a})$ to that, we start generating kamma viññanna, which will bring future kamma vipāka.
- It is essential to recognize this time-line. We start with a vipāka viññaña and then begin generating kamma viñ̃ãana. Of course, kamma leads to more vipāka later, and the whole process continues without end. That is how we go through the rebirth process.
- To stop this, we need to be mindful and stop generating kamma viññāṇa. Especially those lead to bad kamma vipāka. That is the key to $\bar{A} n \bar{a} p a \overline{n a}$ and Satipaṭ! hāna Bhāvanā.
- That is a lot of information to grasp. One may need to re-read and also read relevant posts to fully understand.

## The transition from Vipāka Viññāṇa to Kamma Viññāna is Fast

14. Finally, the time delay between vipāka viññāna and kamma viññāna is unimaginably small.

- In pañcadvāra citta vīthi with 17 thought moments, the vipāka viññāna arise at the beginning of the citta vīthi with the pañcadvārāvajjana citta. Kamma viññāṇa generate in javana citta that occur towards the end of the citta vīthi. Of course, many more pañcadvāra and manodvāra citta vīthi run if one gets attached to that object (ārammana).
- When dhamma impinges on the mana indriya to start a manodvāra vipāka event, a manodvāra citta $v i \bar{t} h i$ with around ten citta runs, with the initial vipāka viññ̄ạna arising at the mind-door adverting thought-moment. Again, kamma viññāna generate at javana citta at the end of the citta vīthi.
- Those who are into Abhidhamma can consult, "Citta vithi - Processing of Sense Inputs" for details.

## Viññāna is the Link Between Mind and Matter

15. Viñ $\tilde{a} \bar{n} a$ is the link between mind and matter, even though it is in the "nāma or mind category" sometimes.

- In the WebLink: suttacentral: Paticcasamuppāda Vibhangga, nāma is defined as only the first three khandha: "Tattha katamaín nāmaì? Vedanākkhandho, saññākkhandho, sañkhārakkhandhoidaí vuccati "nāmam." That is a clear indication that viññāna khandha does not belong in the "nāma or mind category."
- Information in these posts on viñ̃ãana could be new to many readers but are critically important. If one can grasp them, one will have the "nāmarūpa pariccheda ñāna." See, "Kamma Viññāna and Nāmarūpa Pariccheda Ñāna."
- One must read a couple of more posts before making that critical connection. See "Viññāna Aggregate."

## Next, "Kamma Viññāna - Link Between Mind and Matter", ...

### 3.8.3.2 <br> Kamma Viññāṇa - Link Between Mind and Matter

November 30, 2017; revised February 6, 2020; April 11, 2021

## Vipāka Viññāṇa Versus Kamma Viññāṇa

1. In the previous post in this series, we discussed that there are two types of viñ $\bar{n} n ̄ a$ : vipāka viññāna and kamma viññāna; see, "Viññāña - What It Really Means."

- We don't have control over vipāka viññāna, but we do have control over kamma viññāna (via controlling our sañkhāra,) and that is why it is possible to attain Nibbāna.
- We cannot do anything about the vipāka viññāna. Even in an Arahant, they arise as kamma vipāka; he/she will also see, hear, etc., like anyone else.
- Vipāka viññāna can arise via any of the six sense doors, i.e., as cakkhu, sota, ghāna, jivhā, kāya, or mano viññāna. Based on those, WE initiate new kamma viñ̃̃āna, as we discussed in the abovementioned post. This process is analyzed in detail in "How Are Paticca Samuppāda Cycles Initiated?."
- What we can - and need to do — is to stop "sañkhāra paccayā viññāna" - specifically strong vacī and kāya abhisañkhāra - leading to new strong kamma viññāna. Kamma viññāna ALWAYS arise first as mano viññāna.

## Controlling Kamma Viññāṇa

2. Ānāpāna and Satipaṭthāna Bhāvanā involve controlling kamma viññāna by being mindful of the mano sañkhāra that AUTOMATICALLY arise and controlling them with vacī and kāya sañkhāra that we consciously generate. The basis of this critical fact is discussed at "Root of All Suffering - Ten Immoral Actions."

- This means that during formal meditation, we only controls our vacī sañkhāra (conscious thoughts) since we do not move our bodies or speak.
- However, during all waking hours we need to control both vacī and $k \bar{a} y a ~ s a n ̃ k h a ̄ r a ~(i . e ., ~ o u r ~ c o n s c i o u s ~$ thoughts, speech, and bodily actions); see, "Root of All Suffering - Ten Immoral Actions."
- By the way, please do not ignore the initial posts in the "Living Dhamma" section, such as the above mentioned post. It is not possible to grasp complex posts like this one without that basic knowledge.

## Paticca Samuppāda Has Kamma Viññ̄ạna

3. In Paṭicca Samuppāda it is the kamma viññāña that comes into play in, "sañkhāra paccayā viññāna," NOT the vipāka viññāna.

- All sañkhāra are generated in our minds. While mano sañkhāra arise automatically, we CONSCIOUSLY generate vacī and kāya sañkhāra, leading to kamma viñãāna; see, "Root of All Suffering - Ten Immoral Actions."
- This is why sañkhāra are food for the viññāṇa, specifically for the kamma viñ̃ñana.

4. Furthermore, the next step in Paṭicca Samuppāda is "viññāna paccayā nāmarūpa." As you can see, this is where the connection to r $\bar{u} p a$ is made. We will discuss that in detail below.

The KEY POINT is that kamma viñnāna is not totally mental: The mind - when attached to something - will create energy (i.e., a kamma būja or a dhammā) that will be recorded in the kamma bhava.

- Then in the future, that dhammā can come back to the mana indriya and trigger a mind-sense event via "manañca paticca dhamme ca uppajjati manoviññānam.." that we discussed in "What are rūpa? Dhamma are rūpa too!."
- Then, in the latter part of that citta vīthi, more kamma viññāna are created; see, "How Are Paticca Samuppāda Cycles Initiated?."
- Thus it is a feedback process that gets strengthened with time.

## Kamma Viññạna Make Kamma Bīja

5. That kamma viññāna can be building up a kamma bīja (or a dhamm $\bar{a}$ ) in the kamma bhava overtime via the Pațicca Samuppāda process: "viññāna paccayā nāmarūpa", "nāmarūpa paccayā saḷāyatana", "salāyatana paccayā phassa", "phassa paccayā vedanā", "vedanā paccayā taṇhā", "taṇhā paccayā upādāna", and "upādāna paccayā bhava."

- Then under suitable conditions (see, "Anantara and Samanantara Paccaya"), that kamma bïja (or a dhammā) can come back - as a vipāka - and start that process all over again; see, "How Are Paticca Samuppāda Cycles Initiated?."
- A dhammā with energy or a kamma bīja created previously can come back to the mind as a vipāka viñ̃̄āṇa via "manañca paṭicca dhamme ca uppajjati manoviññānaim."
- Every time one generates vacī or kāya sañkhāra relevant to that viññāna, that makes viññaṇa stronger.

## Nāmarūpa Are Precursors to Rūpa Created by the Mind

6. As viññāna gets stronger, "viññāṇa paccayā nāmarūpa" makes nāmarūpa stronger. This nāmarūpa is the first stage of a $\boldsymbol{r} \bar{u} p a$ that is created by the mind, with the viññaña acting as the intermediary.

- It is also important to remember that dhammā includes kamma bīja, and nāmagotta (any record of anything that a given person has done. So, we can also recall events that have nothing to do with kammic energy, for example, remembering talking to someone or seeing something or solving a math problem; see, "Difference Between Dhammā and Sañkhāra."

7. For example, an alcoholic has a "viññ̄āna for drinking." He (she) constantly thinks about drinking and will build up a "drunk existence (bhava)" which comes back to his mind as a dhammā to trigger more thoughts about drinking.

- Until he breaks that loop by willfully controlling his thoughts and actions involving drinking, that viñãāna will grow with time.
- The only way to break that habit of drinking is to be mindful of the bad consequences of drinking and to forcefully suppress any thoughts about drinking (vacī sañkhāra) and abstain from drinking (kāya sañkhāra).

## Kamma Viññāna Is the Link Between Mind and Matter

8. What we discussed above is quite important. Kamma viñ$\tilde{n} a \underline{n} a$ is the link between mind and matter. It is energy made by the mind. A kamma viñnäāna creates tiny amounts of matter (rūpa) below the suddhatt!haka stage. It is important to fully understand this point for one to grasp the meaning of "mano pubbañgama dhamma $\ldots . .$. ." This is in fact how the mind (mano) is creating dhamma $\bar{a}$ via viññāna.

- This is confirmed in the WebLink: suttacentral: Majihe Sutta (AN 6.61), where it is stated that nāma is at one end, rūpa is at the other end, with viññana in the middle: "nāmaì kho, $\bar{a} v u s o$, eko anto, rūpaì dutiyo anto, viññānaim majjhe." ["Name (nāma), friends, is one end; form (rūpa) is the second end; consciousness (viññāna) is in the middle; and craving is the seamstress." For craving sews one to the production of this or that state of existence. It is in this way that a bhikkhu directly knows what should be directly known; fully understands what should be fully understood; and by doing so, in this very life he makes an end of suffering.]
- It would be helpful if one followed the preceding posts in the "Living Dhamma" section.

9. The goal of a given mind is to extract sense pleasures from the outside world, which is made of $r \bar{u} p a$ both above and below the suddhat! thaka stage; see, "Our Two Worlds: Material and Mental."

- We all are familiar with sense enjoyment via the five physical senses. But the most enjoyment we experience is through the sixth sense, the mind.
- The five physical senses only bring in imprints of the five types of "solidified $r \bar{u} p a$ ": $r \bar{u} p a r \bar{u} p a$, sadda rūpa, gandha rūpa, rasa rūpa, and photṭhabba rūpa (in other words, sights, sounds, smells, tastes, and body touches).
- The mind enjoys all those sense imprints that come in. The mind can also enjoy thinking about such past sense experiences and any planned future events. The "fine $r \bar{u} p a$ " involved here are "dhamm $\bar{a}$ "; see, "What are rūpa? - Dhammā are rūpa too!."

## Connection to Dhammā

10. How does the mind enjoy past sense experiences or future expected experiences? The answer to this question leads us to the concept of $\boldsymbol{\operatorname { d h a m m }} \overline{\boldsymbol{a}}$, those rupa that are below the suddhatthaka, and thus are really energies.

- Just like we "bring in" external rūpa (or rūpa rūpa or vanṇa rūpa) with our eyes, external sounds with our ears, etc, we bring in external dhammā through the mana indriya, as explained in "What are rūpa? - Dhamma are rūpa too!." [vaṇ̂a : [m.] colour; appearance; colour of the skin; sort; caste; a letter; quality.]
- Some of those dhammā are made by the mind via kamma viññāna! That kamma viññāna had created a dhamm $\bar{a}$ that got deposited in the kamma bhava as kamma bīja or dhammā with energy. This is the connecting piece of the puzzle. We discuss this in different ways, in order to grasp this key idea.
- All dhammās, including nāma gotta and kamma viññāna (also called kamma bīja) are in the nāma loka; see, "Our Two Worlds: Material and Mental."

## Rūpa Generation Process

11. The point is that "sañkhāra paccayā viñ̃n̄ạa" starts the "rūpa generation process" the "viññāna paccayā nāmarūpa" completes it.

- In Paticca Samuppāda cycles leading to rebirth, this nāmarūpa is the blueprint for the new existence via "nāmarūpa paccayā salāyatana," a new set of indriya are formed. In the case of human birth, this is the single cell (zygote); see, "Buddhist Explanations of Conception, Abortion, and Contraception."
- In Pațicca Samuppāda cycles operating during a lifetime, this nāmarūpa just gives rise to new sense events via "nāmarūpa paccayā salāyatana," where existing indriya become āyatana for a new sense event.
- Note that our indriya (cakkhu, sota, ghāṇa, etc) do not always act as àyatana. Only when we act with lobha, dosa, and moha act as āyatana to lead to new kamma.

## Connection to Gati (Habits/Character)

12. In many posts at the site, we have discussed how our gati lead to the creation of viññana for certain things we crave (and dislike); see, for example, " 2 . Viññāna (Consciousness) can be of Many Different Types and Forms" and "3. Viñ̃̃āna, Thoughts, and the Subconscious."

- We have also discussed how such viñ̃n̄ana arise due to our gati, see, for example, "Gati to Bhava to Jāti- Ours to Control," "The Law of Attraction, Habits, Character (Gati), and Cravings (Asavas)."
- So, gati and kamma viññāna are related to each other, feed on each other, and enhance each other.

## We Don't Have Control Over Vipāka Viññāna

13. Vipāka viñ̃āṇa are results of the previous kamma and cannot be stopped. What we need to stop is kamma viññāna that AUTOMATICALLY arise due to our gati; see, "Avyākata Paticca Samuppāda for Vipāka Viññāna."

- Now we are essentially putting together the pieces of a puzzle to develop with the Buddha's world view to illustrate how the mind creates the world. Key pieces to the puzzle are in various sections of the website. In the "Living Dhamma" section, all those components start from the basic components.
- The picture will become more clear with the next post in the series, "Kamma Viññāna and Nāmarūpa Paricceda Ñāna."

### 3.8.3.3 Anidassana Viññāṇa - What It Really Means

January 6, 2018; revised October 10, 2019; April 12, 2021; January 12, 2022

## Introduction

1. I have seen several discussion forums discuss the verse, "viñ̃̄ānāàm anidassanaim anantaim sabbato pabhamं..". Many say, "there is controversy about the precise meaning of this enigmatic phrase." See, for example, "WebLink: suttacentral: Viñ̃̃āna anidassana: the state of boundless consciousness."

- Most common translations say something like, "Consciousness non-manifest (sometimes as consciousness without surface), infinite, radiant all around."
- Such incorrect translations have then led to another drastic error by saying that "anidassana viññaṇa" is the same as the "pabhassara citta" and even as bhavañga. All these are astonishingly wrong!

## What Is Viññāna?

2. Viñ $\tilde{n} \bar{a} n a$ is a central and critical concept to understand. I have started an in-depth discussion of viññaṇa in an advanced subsection of the "Living Dhamma" section: "Viñ̃̃̄̄na Aggregate."

- In this post, I describe a meaningful translation to the verse, "viññānāàm anidassanam anantam sabbato pabhaí.." that is consistent with all the suttā in the Tipiṭaka. I would welcome any evidence to the contrary.
- Now we are getting into deep concepts. I would urge reading other related posts mentioned above first. Depending on one's background, it may take time to grasp these concepts.
- One needs to read the posts in the subsection "Nāma \& Rūpa to Nāmarūpa" of which "Viññāna Aggregate" is a part. If one does not understand those concepts, one could keep going back to earlier sections in the "Living Dhamma" section. It is designed to go from simple to profound.

## What Does Anidassana Mean?

3. First, let us find the meaning of "anidassana" from the Tipitaka. The meaning of the word nidassana means an 'illustration' visible. Anidassana implies something that is not visible.

- For example, dhammā impinge on the mana indriya and give rise to mano viññāna via "manañca paticca dhamme ca uppajjati manoviññānam̈." Those dhammā also cannot be seen; dhammā are just energies lying below the suddhatt!haka stage.
- These dhammā are, "anidassanaí appațighaín dhammāyatana pariyāpanna rūpaï" or "cannot be seen, cannot be touched, and can make contact only with the dhammāyatana"; see, "What are rūpa? - Dhammā are rūpa too!."

4. In the WebLink: suttacentral: Kakacūpama Sutta (MN 21): "..Seyyathāpi, bhikkhave, puriso
 imasmimं ākāse rūpaì likhissāmi, rūpapātubhāvai் karissāmītti. Tä̀ kim mañnatha, bhikkhave, api nu so puriso imasmimं ākāse rūpaì likheyya, rūpapātubhāvai் kareyyā"ti? "No hetaim, Bhante." "Taì kissa hetu"? "Ayañhi, Bhante, ākāso arūp̄̄ anidassano. ."

Translated: "..Bhikkhus, a man may come along bringing off white or yellow or dark green or crimson colors, and may say: ‘I will draw shapes in the sky, I will make material shapes appear. What do you think about this, monks? Could that man draw pictures in the sky with those colors?" "No, Bhante. It is not possible to draw shapes in the empty sky that are visible, that can manifest as figures."
5. In the "WebLink: wikipedia.org: Nibbāna-The Mind Stilled" series, Venerable Katuukurunde Ñāṇananda has provided more evidence that "anidassana" means "something that is not visible" or "something that does not manifest"; see, Sermons 7 and 8 in Volume II, which can be found under the references at, "Katukurunde Ñānananda Thera." [WebLink: PDF File: seeingthroughthenet.net: Books by Venerable Katukurunde Nān̄ananda]

- However, his explanation of viññāna is critically wrong, as I explain below. That is a common mistake that I see in many current interpretations.

## Viññāṇa Is More Than Consciousness

6. Even in Theravāda textbooks, Viññāna is translated as "consciousness" or "awareness." But it is much more than that. Viñnāna represents much more: "our hopes and desires that we want from this world." That is a critical point - that makes the connection between mind and matter ( $r \bar{u} p a$ ).

- We believe that things in this world will provide us with long-lasting happiness. Thus we do vacī and kaya sañkhāra to achieve them. Then, "sañkhāra paccayā viññāna" leads to the cultivation of a corresponding viññāna.
- Viññāna means without ñāna. When one follows the Noble Path, one will comprehend the Three Characteristics of nature (anicca, dukkha, anatta). Then one will realize the unfruitfulness of having such false hopes, i.e., cultivate pañña .

7. That is quite clear from Paticca Samuppada: "avijjā paccayā sañkhāra; sañkhāra paccayā viññāna; viññāna paccayā nāmarūpa, nāmarūpa paccayā salāyatana, salāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā taṇhā, tanhhā paccayā upādāna, upādāna paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, marana, soka-parideva-dukkha-domanassupāyasā sambhavan'ti."

- All future suffering arises because we act with avijjā (i.e., generate abhisañkhāra) to achieve pleasurable worldly things and thereby create viññā̃a.

## Two Types of Viññāna

8. Each citta of a human - which exists only for a billionth of a second - is contaminated in 9 stages. Then it is added to the viññānakkhandha! See; "Pabhassara Citta, Radiant Mind, and Bhavañga."

- A kamma viñnāna is a contaminated citta. Those arise via "sañkhāra paccayā viñ̃ñạna." However, vipāka viñ̃āạa are just consciousness or "awareness"; see, "Viññāna - What It Really Means."
- The contamination of a citta manifests in sañ̃̄ $\bar{a}$ and vedana $\bar{a} . "$
- See details in "Nāma \& Rūpa to Nāmarūpa."

9. It is stated in the "WebLink: suttacentral: Sañgīti Sutta (Digha Nikāya 33)": "Tividhena rūpasañgahosanidassanasappatighaì rūpam, anidassanasappaṭighaì rūpaì, anidassanaappaṭighaì rūpaì."

Translated: "Threefold classification of rūpa (matter) - visible and graspable, invisible and graspable, invisible and ungraspable."

- Three types of rūpa are sensed with the six sense faculties -five physical senses and the mana indriya.
- Those rūpā detected with the mana indriya are dhamma: "manañca paṭicca dhamme ca uppajjati manoviññānaì""; see, "What are rūpa? - Dhammā are rūpa too!."
- These are the $r \bar{u} p a$ of the third kind: invisible and ungraspable (anidassan aappatighaì): "anidassanaì appatighaì dhammāyatana pariyāpanna rūpaì"; see, "What are rūpa? - Dhammā are rūpa too!."
- Those $r \bar{u} p \bar{a}$ of the third kind are same as nāmarūpa that arise due to viññaña: "Kamma Viññāna and Nāmarūpa Paricceda Ñāna."
- That is explained systematically in the subsection: "Nāma \& Rūpa to Nāmarūpa."

## Viññāṇa Is The Link Between Mind and Matter

10. Viñ̃āna is also the link between mind and matter, even though it is in the "nāma" or mind category" most of the time.

- In the WebLink: suttacentral: Paticcasamuppāda Vibhanga, nāma is defined as only the first three khandha: "Tattha katamaì nāmaì? Vedanākkhandho, saññākkhandho, sañkhārakkhandhoidaí vuccati "nāmaim." This is a clear indication that viññāna khandha does not really belong in the "nāma or mind category."
- Even though vipāka viññāna is conclusively in the " $n \bar{a} m a$ " category, kamma viññāna have energies, and thus fall into the $r \bar{u} p a$ category. Sometimes viññanna is not included in the "nāma" category for this reason.
- That was pointed out in the post, "Viññāna - What It Really Means." You may want to read that first. As pointed out in that post, kamma viññāna are different from vipāka viññāna in that kamma viññāna have energies embedded in them.
- Solid confirmation is in the WebLink: suttacentral: Majje Sutta (AN 6.61), where the Buddha stated that nāma is at one end, rūpa is at the other end, with viñ $\tilde{n} \bar{a} \boldsymbol{a} \boldsymbol{a}$ in the middle: "nāmaim kho, āvuso, eko anto, rūpaì dutiyo anto, viññānami majjhe."

## Viññāna Is The Cause For Rebirth and Suffering

11. The real nature of viññana as the cause for suffering is clearly stated in the "WebLink: suttacentral: Dvavatānupassanāsutta (Sutta Nipata 3.12)":
"Yam் kiñci dukkhamं sambhoti,
Sabbaí viññānapaccayā;
Viññānassa nirodhena,
Natthi dukkhassa sambhavo."
Translated: "Whatever suffering that arises, all that arises due to viññāna; With the not arising of viñ̃̃āna, there is no existence with suffering."

- That should lay to rest any arguments about viñ̃āṇa being the same as Nibbāna, pabhassara citta, or bhavañga.
- A critical point that I have been trying to make is that when one sees such dramatic contradiction somewhere, one should be skeptical about that source's trustworthiness. That is the only way to make progress.

## Brahmanimantanika Sutta (MN 49)

 suttacentral: Brahmanimantanika Sutta (Majihima Nikāya 49). I will first provide the essential parts of the Sutta relevant to the meaning of this verse.

Here is the essence of the Sutta in plain English:
At one time, the Buddha saw that the following wrong view came to the mind of the Baka Brahma (who is the leader of the Mahā Brahma realm; see, " 31 Realms of Existence"): "My existence is permanent, it is stable, it is eternal, and is not liable to passing away."

To correct the wrong view of the Baka Brahmā, vanishing from near the great sāl-tree in the Subhaga Grove at Ukkatṭhā, the Buddha appeared in that Brahma-world.

Baka Brahmā saw the Buddha coming, welcomed him, and told him: "Idañhi, mārisa, niccamं, idamं dhuvȧ், idam் sassatam், idam் kevalam், idam் acavanadhammam், idañhi na jāyati na jīyati na mīyati na cavati na upapajjati. Ito ca panaññamं uttari nissaranamim natthī'ti."

Translated: "This existence, good sir, can be maintained to my liking; it is stable, it is eternal. It encompasses all, not liable to passing away. It is not born, nor does it age or die or pass away or uprise. There is no further further release from this existence."

The Buddha replied: "You are ignorant. You say your existence can be to your liking, but that is not so. It is not permanent as you say..." (yatra hi nāma aniccam̀yeva samānaím niccanti vakkhati, addhuvam்yeva samānaì dhuvanti vakkhati).

- By the way, here it is important to note that the Pāli word for "permanent" is "dhuva" and not "nicca."

The Buddha added, "..although you say there is no further release, there is indeed a permanent release" ("santañca panaññà் uttari nissaraṇaì "natthaññaì uttari nissaranan"ti vakkhatī'ti."

- Then there is an account of how Māra the Deva, having entered a particular company of Brahmā, spoke to encourage the Brahma. I will skip that account to get to the crux of the matter.

Baka Brahmā then replied to the Buddha: "But, good sir, I say "nicca" because it is so, I say "stable" because it is stable, I say "eternal" because it is eternal. There is no more suffering,...I have escaped from the cravings for pathavi, āpo, tejo, vāyo dhātu." (Meaning he has overcome taṇhā for sensual pleasures available in the kāma loka comprised from the four (cattāro) mahā dhātu).

The Buddha told the Baka Brahma that he knew that the Baka Brahma had transcended the kāma loka and was fully aware of his powers. The Buddha added that there were things in this world that the Brahma was not aware of. (1) There are higher Brahma realms, (2) Baka Brahma himself was in the Abhassara Brahma realm, died there and was now reborn in this lower Brahma realm. The Buddha told the Baka Brahma: "you neither know nor see those higher realms, but I know and see them."

Here is the relevant part of the Sutta where the Buddha tells Baka Brahma: "Pathavimi kho ahaï, brahme, pathavito abhiññāya yāvatā pathaviyā pathavattena ananubhūtain tadabhiññāya pathavim nāpahosim, pathaviyā nāpahosim, pathavito nāpahosim, pathavim meti nāpahosim, pathavim nābhivadim ..."

Translated: Brahma, knowing pathavi to be just pathavi (devoid of life), knowing the true nature of pathavi, I do not take pathavi to be me. (No attachment to things in the kāma loka made out of the cattāro (four) mahā bhūta)."

- Then he repeated the same verse for the other three mahā bhūta of which the bodies of beings in $k \bar{a} m a$ loka are made of āpo, tejo, vāyo.

Finally, he summarized it all in the following verse, which we discussed in the post: "Viñanānam anidassanamं anantaì sabbato pabhaì, tai் pathaviy $\bar{a}$ pathavattenaananubhūtaím, $\bar{a} p a s s a$ āpattena ananubhūtaì, tejassa tejattena ananubhūtaì, vāyassavāyattena ananubhūtaì, bhūtānaì bhūtattena ananubhūtai், devānaì devattenaananubhūtaì, pajāpatissa pajāpatittena ananubhūtaì, brahmānaì brahmattenaananubhūtaì, ābhassarānaì ābhassarattena ananubhūtaì,
subhakiṇhānaì subhakinhhānaì subhakinhhattena ananubhūtaí, vehapphalānai் vehapphalattena ananubhūtaì, abhibhussa abhibhuttena ananubhūtaì, sabbassa sabbattena ananubhūtaï.."

Translated: "Viññanna is unseen, infinite, and leads to the rebirth process for all. With viññanna (defiled consciousness), one cannot comprehend the real nature of pathavi, āpo, tejo, vāyo, bhūta, deva, pajapti brahma, abhassara brahma, subhakinha brahma, vehapphala brahma, etc., i.e., everything in this world (sabba)."

- See, "Bhūta and Yathābhūta - What Do They Really Mean." Also, note that viññāṇa referred to in the above verse and in \#11 is "kamma viññāna" and NOT "vipāka viññāṇa"; see, "Abhisañkhāra Lead to Kamma Viññ̄n̄a."

Then, the Buddha concluded: "Thus, Brahmā, I am not merely on an exact equality with you as regards super-knowledge; I am indeed higher in knowledge."

Then the Brahma challenged the Buddha, saying that he will disappear, and If the Buddha is of higher knowledge, try to find him. But he was unable to hide from the Buddha.

Then the Buddha said, "Now I am vanishing from you, Brahmā. Find me if you can." Of course, the Brahma was unable to find the Buddha and thus had to concede defeat.

That is the essence of that long sutta, that is relevant for this discussion.

## There Is No Refuge In Any of The Thirty One Realms

13. We have to realize that indeed the Mahā Brahmā has a very long lifetime of a quarter of our universe's age (several billion years).

- Furthermore, since Brahmās do not have solid bodies like ours, they are not subject to diseases or bodily pains. So, they live a peaceful life until the end of their bhava. So it is no surprise that the Baka Brahma thought that he had overcome all suffering by getting rid of the human body. See the post on "Body Types in 31 Realms - Importance of Manomaya Kāya" for details on bodies of beings in other realms.
- Of course, Brahmā can still have future births in the apāyā. Unless they had attained at least the Sotāpanna stage of Nibbāna, they have only suppressed kāma rāga, and have not removed any of the ten samiyojana.
- That should give us a lot to think about our suffering-causing body that lasts only about 100 years! There is absolutely nothing to be proud of one's physical body or to feel that it is worthwhile to take this foul body to be "mine." That is one way to get rid of sakkāya ditt thi.
- The question is not whether there is a "self" or not. Is it wise to think that it is worthwhile to have the perception of a "self"? The wrong perception of a "self" only leads to immoral actions and suffering in future lives.

14. I hope this post - together with the other posts in this subsection - make it clear what viññāna is, and what is meant by the famous verse, "viññānā̄̀ं anidassanaiं anantaiं sabbato pabhaì."

- Please make any comments/suggestions/criticisms in the discussion forum so that everyone can benefit from the discussion.

### 3.8.4 Nāmarūpa Formation

Dec 12, 2017
Kamma Viññāna and Nāmarūpa Paricceda Ñāna

### 3.8.4.1 Kamma Viññāṇa and Nāmarūpa Pariccheda Ñāṇa

## December 12, 2017; revised January 27, 2022; October 9, 2022 (\#1, \#3)

1. Nāmarūpa can have a few different (but related) meanings depending on the context, i.e., where it is used. But the most important meaning is associated with the "nāmarūpa pariccheda ñanna."

- When one has the nāmarūpa pariccheda ñāna, one understands how the mind is related to the matter, i.e., how viñ̃̄̄̄na acts as the critical link between mind and matter.
- Here "pari" means "complete" or "comprehensive"; "uccheda" means to "cut off" or "eradicate." Thus nāmarūpa pariccheda ñāṇa, means the knowledge or understanding how nāmarūpa are generated via kamma viññāna at the "viññāṇa paccayā nāmarūpa" step in Paṭicca Samuppāda (PS).
- The two previous posts in this series provided more related information. This post wraps up that discussion; see "Viññāna - What It Really Means" and "Kamma Viññāna - Link Between Mind and Matter."

2. It is also important to note that nāmarūpa can be of several varieties:

- When written as two words - nāma rūpa -, nāma refers to mental attributes, and rūpa relates to matter. There, nāma rūpa refers to mind AND matter.
- With viñnāna, nāma COMBINES with rūpa and creates nāmarūpa - imprints for future rebirths - which eventually lead to fully-formed living beings. This happens at the "viññāna paccayā nāmarūpa" step in PS.
- These are very fine rūpa which are below the suddhatthaka stage created by viññāna and are part of dhammā. Thus nāmarūpa are distinct from the more dense rūpa that we experience with the five physical senses; see, "What are rūpa? - Dhammā are rūpa too!."
- We also talk about nāmarūpa referring to visuals in our minds; these are also related to the fine rūpa. For example, an alcoholic will visualize scenes of a drinking party they plan to attend. That comes in Idappaccayatā PS; see, "Idappaccayatā Paticca Samuppāda."

3. Here, it is significant to note that in PS, it is the "viññāna paccayā nāmarūpa" step that separates the previous steps involving the mind from those involving rūpa. Now we have "nāmarūpa paccayā salāyatana," leading to internal rūpa.

- Then those saḷāyatana making contact (phassa) with external rūpa: "salāyatana paccayā phassa."
- Note that phassa means contact of internal rūpa (salāyatana) with external rūpa, and giving rise to vedanā: "phassa paccayā vedanā." Now we are back to just nāma, i.e., vedanā.
- If that vedanā lead to samphassa-j̄ $\bar{a}$-vedanā, then the Akusala-mūla PS process proceeds with "taṇhā paccayā upādāna," and we start generating vacī sañkhāra with avijjā. Then Akusala-mūla PS process re-starts at the "avijjā paccayā (abhi)sañkhāra." See "Tanhhā Paccayā Upādāna - Critical Step in Paticca Samuppāda" and "Difference Between Tanhā and Upādāna" for details.
- So, we can see that kamma viññāna plays a crucial role in bridging nāma with rūpa. It is imperative to read and understand the above two posts.

4. Kamma viññāna with kammic energy are created in javana citta. That kammic energy may start small but can grow with repeated generations of abhisañkhāra and grow to become a kamma bïja that can give rise to a new bhava. That kamma bīja then gives rise to a very subtle mental body (gandhabba), providing the "seed" for the dense physical body.

- That happens at the "upādāna paccayā bhava" step giving rise to a gandhabba, which is a very tiny $r \bar{u} p a$ that is a "packet of energy."
- Then at the "bhava paccayā $\bar{a} t i$ " step, gandhabba enters a womb and starts a new physical body.
- Just like a tiny seed can grow into a massive tree by taking in water and nutrients from the soil, an unimaginably small gandhabba gives rise to the heavy human body by taking in food. The only difference is that while a gandhabba or a human has a mind, a seed or a tree does not.

5. Our solid physical body starts with a gandhabba - smaller than the first cell made by the reunion of mother and father (zygote) - descending to a womb and taking hold of that zygote in the womb. We recall that the Buddha also called this event "a viñ̃̃āna descending to the womb"; see below and also "Gandhabba State - Evidence from Tipitaka,". The posts in this series show us why the "gandhabba descending" can also be called "viññāna descending."

- The complex process of this single zygote growing into an adult human is discussed in, "What does Buddha Dhamma (Buddhism) say about Birth Control?."
- Therefore, the "seed" to bring up this physical body of several hundred pounds (tens of kg) was the kammic energy created in the paṭisandhi viñnāna which gave rise to a gandhabba consisting of just a few suddhat!̣haka.

6. This primary mechanism of how a suddhatthaka - the smallest unit of matter (billion times smaller than an atom in modern science) - is created with the mind was discussed in the post, "The Origin of Matter Suddhatthaka" in the Abhidhamma section. But in this subsection on nāmarūpa, we are talking about it with a more simple, fundamental analysis that everyone can understand (if they have grasped the fundamentals.).

- Furthermore, those with abhiññ̄ $\bar{a}$ powers can intensify the kammic energy in javana citta in jhāna (specifically in jhāna samāpatti), and create matter directly too. We can compare that to the difference between a regular lamp that puts out a bit of light and a laser that puts out intense light that can cut through metal; see "Javana of a Citta - The Root of Mental Power."
- When we dive deeper into Buddha Dhamma, we can see that some phenomena that seem "supernatural" (like creating a flower using mind energy) are indeed possible. But that ability to create matter requires purifying the mind to very high levels.

7. The Buddha described how the paṭisandhi viññāna (which is the same as the gandhabba) "descends" to the womb of the mother and starts the process in the "WebLink: suttacentral: Mahā Nidana Sutta (Digha Nikāya 15)" where he has the following exchange with Ven. Ānanda:
'Viññānapaccayā nāmarūpan’ti iti kho panetaì vuttamं, tadānanda, imināpetaỉ pariyāyena veditabbaí, yathā viññānapaccayā nāmarūpaim. Viññānañca hi, ānanda, mātukucchismim na okkamissatha, api nu kho nāmarūpaì mātukucchismimं samuccissathā"ti? "No hetaì, bhante." "Viññānañca hi, ānanda, mātukucchismimं okkamitvā vokkamissatha, api nu kho nāmarūpaìn itthattāya abhinibbattissathā"ti? "No hetam̀, bhante." "Viññānañca hi, ānanda, daharasseva sato vocchijjissatha kumārakassa vā kumārikāya vā, api nu kho nāmarūpaì vuddhim virūḷhim vepullaì $\bar{a} p a j j i s s a t h a ̄ " t i$ ? "No hetamं, bhante." "Tasmātihānanda, eseva hetu etaim nidānamं esa samudayo esa paccayo nāmarūpassa-yadidaì viññānam.

## Here is the English translation:

'It was said: 'With consciousness as condition there is nāmarūpa (normally translated as mentalitymateriality; which in this case is the gandhabba).'

How that is so, Ānanda, should be understood in this way: If consciousness (viññanañca) were not to descend ( $n$ a okkamissatha) into the mother's womb, would that nāmarūpa take shape in the womb?"
"Certainly not, venerable sir."
'If, after descending (okkamitv $\bar{a}$ ) into the womb, consciousness were to depart (vokkamissatha), would that nämarūpa be generated into this present state of being?"
(Note: this happens in the case of a natural termination of pregnancy, where the gandhabba comes out of the womb on its own, because it is not a suitable match).
"Certainly not, venerable sir."
'If the consciousness of a young boy or girl (kumārakassa v $\bar{a} k u m \bar{a} r i k \bar{a} y a v \bar{a}$ ) were to come out, would that nāmarūpa grow up, develop, and reach maturity?"
"Certainly not, venerable sir."
"Therefore, Ānanda, this is the cause, source, origin, and condition (eseva hetu etaim nidānain esa samudayo) for nāmarūpa, namely, defiled consciousness (yadidaí viñ̃ñanaì).
8. Therefore, it is pretty clear that the kammic energy of the patisandhi viñ̃ãna "descends" to the womb and gives rise to the physical body. gandhabba is another term for patisandhi viññaña descending to the womb; it is also called "manomaya kāya."

- Sometimes the gandhabba in a human body can come out in a stressful situation; see "Manomaya Kāya and Out-of-Body Experience (OBE)." The Buddha compared a gandhabba coming out of a physical body to a sword being pulled out of the sheath.

9. The erroneous concept of a pattisandhi taking place in a womb is nowhere in the Tipitaka. Note that in the above verse in \#7, the term okkanti is used to describe the descent of the paṭisandhi viñ̃āña to the womb, and the word "patisandhi" is not there. Patisandhi took place in the previous life, at the end of that bhava, see, "Cuti-Patisandhi - An Abhidhamma Description."

- Furthermore, if patisandhi took place in the womb, a human bhava would last only until death. Then, since human bhava is so rare, rebirth accounts cannot be accounted for (children recall their previous human lives only several years before). See "How the Buddha Described the Chance of Rebirth in the Human Realm."
- Some criticize the concept of a gandhabba, saying it is a Mahāyāna concept about an "antarā bhava." Of course, there is no antarā bhava, i.e., no gap exists between two adjacent "bhava." Cuti (end of one bhava) is followed by grasping the next bhava in the next thought moment; see "Cuti-Patisandhi An Abhidhamma Description."

10. A human gandhabba may be born with a human body many times before the kammic energy for the human bhava runs out, and they are born in another existence (as a deva, animal, etc.); see, "Bhava and Jāti - States of Existence and Births Therein."

- During that whole time, the human gandhabba lives moving from one body to another and spending the time "in between successive human bodies" in para loka; see, "Hidden World of the Gandhabba: Netherworld (Para loka)."
- I keep repeating things, because these are essential points. The "Search" box on the top right is an excellent resource for finding relevant posts if there are still questions. The Pure Dhamma - Sitemap is another good resource.
- You can also use the "Comments" box to send a comment or ask a question. I will be opening the discussion forum soon too.

11. This connection between mind and matter (nāma and rūpa) - combined via viññāna to create nāmarūpa - is what the Buddha meant when he said that, "mano pubbangamā dhammā," i.e., "the mind is the precursor to all dhamma."

- When one understands that point one is said to have the "nāmarūpa pariccheda ñāna."
- We have all the significant components essentially in place now, and there may be some who can see the "whole picture" at least vaguely. But more minor pieces still need to be added to make the picture much clearer.
- However, the picture will not be clear if a critical piece cannot be understood. Please do not hesitate to comment if you have questions. Even if it is clear to me, I may not be conveying it optimally, and I can make it better with your input.

12. I must emphasize that one could be a Sotāpanna and may not even know about these details; I do not want to discourage those who are not really into Abhidhamma.

- What is needed for the Sotāpanna stage is a grasp of Tilakkhaña, the anicca nature of this world.
- The details discussed in this subsection dispel doubts about Buddha Dhamma's consistency and illustrate that it can explain mental phenomena to profoundly deep levels. Furthermore, it can give confidence to those who doubt the validity of critical concepts in Buddha Dhamma (laws of kamma, rebirth, gandhabba, etc).

## IV Living Dhamma

## August 26, 2016

An experience-based process of practicing Buddha Dhamma (Buddhism) is discussed with English discourses. Belief in rebirth process is not needed at beginning.

Ānāpānasati Eliminates Mental Stress Permanently

## Ānāpāna and Satipatthāna - Fundamentals

Sati in Ānāpānasati/Satipatthāna - Two Meanings of Sati

### 4.1.1 Four Noble Truths - Suffering and Its Elimination

January 6, 2019; revised May 26, 2021; May 27, 2021

## Introduction

1. The First Noble Truth is about the suffering that we can stop from arising.

- The second describes how suffering arises from our own cravings (which we manifest via our own sañkhāra that we generate willingly, as we have discussed; see, "Sañkhāra - What It Really Means"). I will write a simpler version in the next post.
- The Third Noble Truth says that we can stop future suffering by eliminating those cravings. That REQUIRES an understanding of the wider world view of the Buddha with the rebirth process within the 31 realms.
- The Fourth Noble Truth is the path to acquire that understanding by "learning and living" that Dhamm $\bar{a}$ (by following the Noble Eightfold Path).

2. The Buddha said, "my Dhammā has not been previously known in this world."

- What is new about knowing that there is suffering around us? Everybody knows that there is suffering from old age, diseases, poverty, etc. One does not have to be a Buddhist to see that.
- So, we need to figure out "what is new" about suffering explained in the First Noble Truth.

## The First Noble Truth - What is Suffering

3. I have discussed the First Noble Truth in the post, "Essence of Buddhism - In the First Sutta." Summary:
"Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering. Having to associate with things that one does not like is suffering, and so is separation from those things one likes. If one does not get what one likes (icch $\bar{a}$ ), that is suffering - in brief, the origin of suffering is the craving for the five aggregates of rūpa, vedanā, saññ̄, sañkhāra, and viññāna (pañcupādānakkhandha). [sañkhittena means being overthrown by defilements]

- (Here, I have translated upādāna as craving. However, the word upādāna CANNOT BE translated by just one word. It is a good idea to grasp the meaning. See, "Concepts of Upādāna and Upādānakkhandha.'")
- There is a deeper meaning in the part, "If one does not get what one likes (iccha), that is suffering." That is connected to the anicca nature.
- That deeper meaning is expressed in terms of upādāna with tanhh $\bar{a}$ (attachment) is expressed in the final part, "Doing worldly activities (samkhittena) to get all those things one craves for (pañcupādānakkhandha) is suffering."

4. Just as in science, something comes about due to causes. Our present life as humans has come about due to causes (kamma) done in the past. Some of those were "good kamma," and that is why we can enjoy some pleasures. Bad kammā has led to instances of suffering.

- But there are lower realms, including the animal realm, where suffering is much higher. Bad kamm $\bar{a}$ lead to such births.
- Suffering in the four lowest realms is real suffering. That is what we first need to focus on.
- And all that suffering arises because we crave things in this world because of our avijja (not comprehending the Four Noble Truths).

5. Seeing this hidden suffering is indeed difficult. When the Buddha attained the Buddhahood, he was worried about whether he could convey these deep ideas to most people.

- It is natural to seek pleasure and happiness. Some people act immorally, seeking such pleasures. The consequences of such immoral acts are not apparent. We can see a stone thrown up coming down, but we cannot see any bad consequences to the drug dealer who seems to be enjoying life.

## The Second Noble Truth - Causes for Future Suffering

6. The cause of future suffering is indicated indirectly in the First Noble Truth: Craving sensory pleasures. Suppose we do immoral things to get such sensory pleasures. The worst outcomes (rebirths in the apāyā) will result.

- For example, person X may kill another person to get his money or to marry his wife. Even though X may accomplish that goal and "enjoy life" for even 100 years, that is nothing compared millions of years of future suffering X will go through due to his immoral action.

7. When a fish bites the bait, it does not see the suffering hidden in that action. Looking from the ground, we can see the whole picture, and we know what will happen to the fish if it bites the bait. But the fish is unable to see that whole picture and thus does not see the hidden suffering. It only sees a delicious bit of food.

- In the same way, if we do not know about the wider world of 31 realms (with the suffering-filled four lowest realms), we only focus on what is easily accessible to our six senses.
- To really comprehend suffering through repeated rebirths, one needs to comprehend that most suffering is encountered in the 4 lowest realms (apāyā); see, "The Grand Unified Theory of Dhamma" at puredhamma.net.
- Thus, stopping suffering requires one to be mindful of one's actions and stop doing bad vacī and $k \bar{a} y a$ sañkhāra (i.e., immoral thinking, speech, and deeds).

8. Therefore, the "previously unheard truth about suffering" that the Buddha revealed is the suffering hidden in sense pleasures. The level of suffering depends on what we do (vaci and $k \bar{a} y a$ sañkhāra) to get those pleasures. If they are immoral then worst suffering in the apāya will result.

- We believe that those sense pleasures are to be valued and to be enjoyed. That is because we do not see right away the consequences of any bad actions that we do to get those sense pleasures.
- For example, if one rapes a woman to get enjoyment for a short time, one could be spending millions of years as an animal in the future because of that immoral action.
- However, it may not be easy to grasp this point. One needs to advance step-by-step; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."
- The first step is to reduce suffering in the future is to avoid doing bad deeds (kamma) via thoughts, speech, and bodily actions (again, these are associated with mano, vacī, and kāya sañkhāra).
- Therefore, we create our own future happiness via puñ̃̃a abhisañkhāra (good sañkhāra) or future suffering via apuñña abhisañkhāra (bad sañkhāra).

## The Third Noble Truth - How to Stop F uture Suffering

9. As discussed above, such suffering can arise in this life due to our own (apuññābhi) sañkhāra (which we generate to satisfy our cravings).

- In the same way, one can stop ALL FUTURE SUFFERING by controlling our own sañkhāra.
- We attach to things with greed and hate via sañkhāra, because of our ignorance of the Four Noble Truths (avijjā). As we have discussed, this is the first step in Paticca Samuppāda leading to "the whole mass of suffering": "avijjā paccayā sañkhāra."

10. The Third Noble Truth is about what can be achieved by systematically removing those causes.

- Nirāmisa sukha increases from the point of embarking on the Path and has four levels of PERMANENT increases starting at the Sotāpanna stage and culminating at the Arahant stage. See, for example, "Three Kinds of Happiness - What is Nirāmisa Sukha?."

11. To stop the arising of "bad sañkhāra" we need to do two things: (1) remove avijiā by learning true Dhamma, and (2) making use of our free will to get control of our sañkhāra (this is the basis of Ānāpānasati/Satipaṭ! hāna).

- A systematic way to achieve this is stated in the Fourth Noble Truth.

## The Fourth Noble Truth - The Way to Stop Future Suffering

12. The second Noble Truth describes those CAUSES that we need to work on. The root causes are greed, hate, and ignorance, but they need to be removed mainly via understanding the Three Characteristics (Tilakkhaṇa) and also via removing our bad sansāric habits; see a series of posts starting with, "Habits, Goals, Character (Gati)" to "The Way to Nibbāna - Removal of Āsavas."

- The way to achieve this is to follow the Noble Eightfold Path: Sammā Ditthi (understanding what is embedded in the Four Noble Truths), and then thinking (sañkappa), speaking (vācā), acting (kammanta), living one's whole life that way ( $\bar{a} j \bar{\imath} v a$ ), striving harder ( $v \bar{a} y \bar{a} m a$ ), getting to the right mindset (sati), and finally to samādhi.

13. When we follow the Noble Eightfold Path, nirāmisa sukha arises first and then various stages of Nibbāna.

- Nirāmisa sukha starts when one lives a moral life (see "Ten Immoral Actions (Dasa Akusala)" and follow-up posts).
- The root causes of immoral behavior are greed, hate, and ignorance. We can reduce ignorance to the level of the Sotāpanna stage just via comprehending the Three Characteristics of "this world of 31 realms," i.e., anicca, dukkha, anatta; see, "Anicca, Dukkha, Anatta - Wrong Interpretations," and the follow-up posts. It is that powerful.

## Why Is It Hard to See the "Hidden Suffering"? - Time Lag

14. The main problem in clearly seeing the "cause and effect of mind actions" is that the results of those actions have a time delay and that the time delay itself is not predictable.

- In contrast, it is easy to predict what will happen with material things (moving an object, a vehicle, a rocket, etc.). The success of physical sciences is due to this reason. Once the underlying laws are found (laws of gravity, laws of motion, electromagnetism, nuclear forces, quantum mechanics, etc.), one has complete control.

15. But the mind is very different. To begin with, no two minds work the same way. Under a given set of conditions, each mind will choose to act differently. With physical objects, that is not so; under a given set of conditions, what will happen can be predicted accurately.

- Effects of some actions (kamma) may not materialize in this life, and sometimes it may come to fruition only in many lives down the road (but with accumulated interest).
- Even in this life, mental phenomena are complex: This is why economics is not a "real science." It involves how people sometimes act "irrationally" for perceived gains. No economic theory can precisely predict how a given stock market will perform.

16. This "cause and effect" that involves the mind is the principle of kamma and kamma vipāka in Buddha Dhamma.

- But unlike in Hinduism, Kamma is not deterministic, i.e., not all kamma vipāka have to come to fruition; see, "What is Kamma? Is Everything Determined by Kamma?."
- Suitable CONDITIONS must be there to bring good or bad kamma vipāka to fruition. That is why kamma is not deterministic, and we can stop ALL future suffering.
- We just need to get rid of avijjā and taṇhā, two key steps in Paticca Samuppāda. That is how Angulimāla overcame all that bad kamma of killing almost 1000 people.

## We Can Eliminate Only a Part of Suffering Encountered in This Life

Finally, let us look into what kind of suffering can be stopped from arising and gain confidence in Buddha Dhamma. One does not need to believe Buddha's teachings blindly.
17. There are two types of vedanā (feelings); see, "Vedanā (Feelings) Arise in Two Ways."

- First is due to kamma vipāka.
- The second is mental suffering due to sañkhāra (via attachment to sensual pleasures and friction (patigha) due to things we don't like). This could lead to depression.

18. This life is the RESULT of past kamma. Once life starts, it cannot be stopped until "its kammic energy" is exhausted. This life WILL end up in old age, decay, and eventual death.

- Therefore, if someone has aches and pains due to old age, it is impossible to get rid of them other than to use medications or therapy to lessen the pain and manage it.
- Even the Buddha had back pain due to old age and had a severe stomach ache at the end.
- One may get injured, come down with a disease, etc.
- All these are due to kamma vipāka.

19. On the other hand, it is possible to stop the second type ("mental suffering") that arises due to our own way of thinking (again, our own vacī sañkhāra).

- Therefore, we can EXPERIENCE the relief from suffering (called nirāmisa sukha) in this life itself.
- The suffering (or vedanā) that a living Arahant has eliminated is called "samphassa ja vedanā." This is what leads to depression in some people.
- Here, "samphassa" is "san" + "phassa," or "contact with one's own defilements (san)"; see, "What is "San"? Meaning of Sansāra (or Samsāra)."

## Humans Have Free Will to Eliminate Future Suffering

20. The life we have as humans is a RESULT of a past good deed - a dog's or an ant's life results from a past deed by that sentient being.

- And what happens to us in this life is a COMBINATION of what we have done in the past (kamma vipāka) AND what we do in this life.
- What happens to an animal is MOSTLY due to kamma vipāka from the past.
- The difference between a human and an animal is that the animal does not have much control over what will happen to it. But human birth is a special one: We have a higher level mind that CAN change the future to some extent, and with possible enormous consequences.
- We have free will, and animals (or those beings in other lower realms) do not. We can control our sañkhāra, and they cannot. It is hard to get a human birth. We should not waste this opportunity.

## Introduction to Citta, Vedanā, Saññ̄ā, Sañkhāra, and Viññ̄āa

December 25, 2018; revised August 23, 2019; April 9, 2020; July 3, 2022; July 8, 2022

## Introduction

1. The Pāli words citta, vedanā, saññā, sañkhāra, and viñ $\tilde{n} a ̣ n a ~$ are mistranslated in most current literature as thought, feeling, perception, mental formations, and consciousness, respectively.

- The last four (vedanā, saññā, sañkhāra, and viññāṇa) are critical concepts in Buddha Dhamma. They represent the four mental aggregates.

2. The word sañkhāra is generally translated as "mental formations." It does not convey the meaning at all. Viññāna translated as just "consciousness," and that is simply wrong.

- Sañkhāra is associated with "emotions," so we need to make the connection to emotions. In particular, we get attached to some things and are repulsed by others. In both cases, we generate a wide variety of emotions that lead to three types of sañkhāra in our minds.
- They are puññābhisañkhāra (puñña abhisañkhāra,) apuññābhisañkhāra (apuñña abhisañkhāra,) and $\bar{a} n e n ̃ j a ̄ b h i s a \dot{n} k h a ̄ r a ~(a ̄ n e n ̃ j a ~ a b h i s a n ̃ k h a ̄ r a) ~ I n ~ s i m p l e ~ t e r m s,. ~ t h a t ~ m e a n s ~ m o r a l ~ t h o u g h t s / d e e d s, ~$ immoral thoughts/deeds, and the cultivation of arūpāvacara jhāna. For details, see, "Kamma, Sañkhāra, and Abhisañkhāra - What Is "Intention"?"

## Pāli to English Translations - Conventional Meanings

3. The following are the descriptions or definitions that I found online, which seem to be closest to the Pāli words.

Thought (for citta): "an idea or opinion produced by thinking or occurring suddenly in mind."
Feelings (for vedanā): Normally used together with emotion. For example, a "feeling of joy."
Perception (for saññ $\bar{a}):$ recognition. For example, a flower is a "rose" and its color is "red."
Emotions (for sañkhāra): Some define emotions as: "joy-sadness, anger-compassion, greed-benevolence, etc. etc.."

Consciousness (for viñ̃̄āna): "the state of being awake and aware of one's surroundings." However, this will be true only for " vipāka viññāna" as discussed in \#14 below.
4. That is all modern psychology says, and there are many overlaps there too. There are no universally accepted definitions for those words yet.

- On the other hand, the Buddha has provided detailed analyses of the Pāli words citta, sañ̃̄̄̄, vedan $\bar{a}$, sañkhāra, and viññāna.
- Sañkhāra arises due to emotions. These emotions are called cetasika typically translated as "mental factors."
- Therefore, citta, sañ̃̄̄̄, vedanā, sañkhāra, and viññāṇa SEEM TO correspond to the English words thought, perception, feeling, actions based on emotions, and consciousness. But that can lead to many misinterpretations, as we will discuss below.

## We Need to Use Pāli Words Like Citta, Sañn̄̄̄, Vedanā, Sañkhāra, Viññāna

5. That is why it is almost impossible to translate those Pāli words into a single English word. The Sinhala language uses the same words; there are no separate Sinhala words for most of the terms in the Paṭicca Samuppāda including vedanā, saññā, sañkhāra, and viññāna.

- It is much better to learn the meaning of each Pāli word and use that word itself.
- I will briefly discuss some key features to get a basic idea. Other aspects discussed in: "Pāli Dictionaries - Are They Reliable?."

## Citta and Thought - Not Even Close

6. Cittā arise as a series; a single citta never arises by itself.

- In a sensing event that involves the five physical senses (eyes, ears, nose, tongue, body), a citta vīthi (or a series of citta) arise with 17 citt $\bar{a}$. Note that citta is pronounced, "chiththa" and cittā is the plural of citta. See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1."
- In the case of cittā arising directly in the mind, the basic citta vīthi has 12-14 citta. But in some exceptional cases, there is no limit to the number of citta that can occur (like in jhāna samāpatti).
- There can be billions of citta vīthi running within "the blink of eye" according to Abhidhamma. The Buddha said that there is nothing in this universe faster than a citta.
- After reading this post, you may want to read the previous post, "Amazingly Fast Time Evolution of a Thought (Citta)." That could make things clearer.

## Citta and Cetasika

7. So you can see that what we call a "thought" is NOT a single citta. What we experience as a "thought" is the overall effect of a large number of citta vīthi.

- Each citta arises with at least seven cetasika (mental factors). Vedanā and saññ̄a are two of those psychological factors. Once a "good citta" occurs, many of those arise without changing to "bad citta" in the middle. That is why a "given senorye experience" is just called a citta, even though it may have billions of individual citta.
- There are 52 mental factors (cetasika) that could arise in a citta ("thought"). Thus, a "thought" can be quite complex.
- If it is a "moral citta," then it would have some combination of "good mental factors" such as compassion or "fear of wrongdoing" (hiri). There are 25 of them, and only several of them arise at a given time.
- If it is an "immoral citta," it would have "bad mental factors" such as greed and hate. There are 14 of them.
- Those good and bad mental factors (cetasika) never arise together. See, "Cetasika (Mental Factors)."

## Vedanā and Saññ̄ā - In Every Citta

8. Vedan $\bar{a}$ and saññ $\bar{a}$ are two specialized types of cetasika. That is why they are treated separately from other cetasika.

- Both of those arise with every citta.
- Vedanā basically "feels" that a sense event is happening. There is a sukha vedanā, dukkha vedanā, or a neutral vedana (more accurately adhukkhamasukha vedana $\overline{\boldsymbol{a}}$ ) associated with EACH sensory event. Therefore, joy is not a vedan $\bar{a}$; see \#2 above. There are only three types of vedana
- Sañ $\tilde{n} \bar{a}$ is responsible for recognizing what the sense object is, based on one's prior experience with that object. So, one perceives a rose and that it has the color red, for example.
- Those are, of course, fundamental descriptions.

9. There are 52 cetasika, including vedanā and sañ $\tilde{n} \bar{a}$. Out of the other 50 cetasika, some are included in "sañkhāra"; which particular cetasika will be involved will depend on the specific situation. They define whether a citta is good or bad.

- As we mentioned before, vedanā and saññ̄̄ arise with all citta, good and bad.
- When one does an immoral deed, some of those "bad cetasika" (called asobhana cetasika) arise with citta.
- When one does a moral deed, some "good cetasika" (called sobhana cetasika) arise.

## Sañkhāra Are Our Actions Done With Emotions

10. Cetasika represents the English word "emotions."

- When we experience those emotions, they are called "mano sañkhāra." They arise automatically, according to our gati.
- When we start thinking consciously about them, they become vacī sañkhāra; we also speak with vacī sañkhāra. Here, vacī pronounced "vachee."
- If we do bodily actions with such emotions, then those are done with kāya sañkhāra.
- So, we can see that "sañkhāra" are more than emotions. Saíkhāra is what we think and do with such sentiments.
- It is essential to realize that we have control over vacī sañkhāra and kāya sañkhāra, but mano sañkhāra arise automatically based on our gati.

11. To summarize what we have discussed so far:

- What we experience (and call a thought), is the overall effect of millions of citta vīthi.
- Current scientific research says a human can only register sense events lasting at least a hundredth of a second (about ten milliseconds). During that time, millions of citta vithi would have arisen.
- The sense object is recognized with the sañ̃̃ā cetasika, and accordingly, a sukha, dukkha, or neutral vedanā arises.
- Based on that recognition (but simultaneously) a set of good or bad cetasika arise.
- Based on those good or bad sets of cetasika, the mind generates good, and bad sañkhāra with which we think, speak, and do things.

## Emotions Arise Based on One's Gati and the Sensory Input

12. Thus mano sañkhāra arises automatically based on our gati (or gathi) and the particular sensory input. If one likes a specific sensory input (based on one's gati), then one will start thinking about it.

- So, we consciously think and speak with vacī sañkhāra based on those emotions (mano sañkhāra) that initially arise. If our emotions get high enough, we may take bodily actions based on kāya sañkhāra.
- All three types of sañkhāra arise in mind.

13. I need to emphasize the fact that occurring of a set of good or bad cetasika DOES NOT happen arbitrarily. Nothing happens without a cause.

- Two key factors determine what kind of cetasika arises for a given sense event: (1) One's gati (pronounced "gathi"), roughly meaning character/habits, and, (2) the particular sense object.
- Pali words are written differently than normal English words. See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and ""Tipitaka English" Convention Adopted by Early European Scholars - Part 2."
- Gati explained in many posts: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavā)," "How Habits are Formed and Broken - A Scientific View," "Gati to Bhava to Jāti - Ours to Control," are just a few.

## Viññāna Is the Overall Experience - Plus Future Expectations

14. Finally, viññ̄ạna represents one's overall sensory experience (including vedanā, sañña, sañkhāra). That is only one type of viññāna: "vipāka viññāna."

- Viññāna has something in addition to those. One may form a future expectation based on that sensory input. That type is "kamma viññāna."
- If one gets attracted to a given sensory experience, one may keep thinking about it and initiate an expectation to enjoy it further. "Kamma viñ̃̃̄ạa" is that expectation. That creates a kamma $b \bar{u} j a$ that can bring vipa$k a$ in the future.
- More information at: "Viññāna - Consciousness Together With Future Expectations" and "Viññāna What It Really Means."
- Thus, it is wrong to translate viññāna as just consciousness (or awareness). Specifically, "kamma viñãāna" is much more than just consciousness.

## Expectations Are Only in Mano Viñ̃āāna

15. Viññāṇa can be categorized in another way into six types.

- We become aware of something in our physical world via cakkhu viññanna (seeing), sota viñ̃āṇa (hearing), ghāṇa viññāṇa (smelling), jivhā viññāna (tasting), and kāya viññāna (touching).
- Then mano viññāna takes over, and will decide to act on it - and if needed - to make "future expectations" or "plans." (Three manodvāra citta vīthi follow each pañcadvāra citta vīthi per Abhidhamma.)
- Therefore, it is the mano viññāna that builds expectations for the future, i.e., "kamma viññạ̄a" are ALWAYS mano viññāṇa.
- To emphasize: Kamma bīja that can bring future vipāka are generated only in mano viññāna. The other five types of viñ̃āṇa only bring in the external sensory input, i.e., they are "vipāka viñ $\tilde{n} a n a "$ ".

## Viññạ̣̄a and Sañkhāra Feed on Each Other

16. For example, cakkhu viññāna is like a camera taking a picture (but is still contaminated by gati.) It is mano viññāna (in the kamma viññāna mode) that takes actions (generates sañkhāra) based on that sensory input.

- If the sensory input is attractive, it will try to get "more of such sensory inputs," i.e., it will initiate a kamma viññāna to "achieve that expectation" via "sañkhāra paccayā viñ̃̄āṇa." For example, let us assume that person X sees a new car and "falls in love with it" and makes a viññaña (an expectation, which is mental energy) for it.
- That kamma viññanna to "buy that car Y " will be in the subconscious of X . It will be in his subconscious until either he buys the car or it turns out that there is absolutely no way for him to afford it.

17. Days later, he is driving to work and sees a similar car on the road (that is, of course, a cakkhu viññāna).

- Now that kamma viññāna to "buy that car Y " will come back to his mind (triggered by that cakkhu viññāna. Then, of course, his mano viññāṇa will take over, and his interest in the car will come to his mind.
- Then we will start generating vacī sañkhāra (conscious thoughts) about buying that car and how nice it would drive to work in it, etc.). That is the backward step of "viññāna paccayā sañkhāra." The Pațicca Samuppāda step "sañkhāra paccayā viññāna" runs backward too; see, "Āsevana and Aññamañ̃̃a Paccayā."
- That, in turn, will provide "more food" for that viñ̃ñaṇa via "sañkhāra paccayā viññạ̄̂a."
- Therefore, sañkhāra and kamma viññāṇa "feed on each other."

One should contemplate these ideas and apply them to other "real life situations." That is real "insight meditation" or "vipassanā bhāvanā." It may take time to get used to the real meanings of these keywords.

## Resources

18. A reasonably good idea of the structure of Abhidhamma can be gained by reading Bhikkhu Bodhi's book, "WebLink: PDF download: A Comprehensive Manual of Abhidhamma."

- "WebLink: PDF download: Buddha Abhidhamma - Ultimate Science," by Dr. Mehm Tin Mon is also a good FREE publication.
- But both of those authors also translate viñ̃ñana as consciousness. Furthermore, they have translated citta also as consciousness. There are other translation problems too.
- However, by reviewing those two resources one can see how in-depth and detailed the mind processes are analyzed in Abhidhamma.
- The "Abhidhamma" section, together with the "Tables and Summaries" section also provides more information on Abhidhamma. Other resource posts are "Pāli Glossary - (A-K)" and "Pāli Glossary -(L-Z)."

### 4.1.3 Viññāṇa - Consciousness Together With Future Expectations

January 1, 2019; revised May 11, 2019; major revision July 1, 2022; July 10, 2022

## Nibbāna = Stopping of Kamma Viñ̃āāna

1. Viññāṇa means "without ñāṇa" or without wisdom, i.e., with ignorance. Viññaṇ̄a could also mean "defiled viñ̃̄̄̄ṇa", i.e., not knowing the consequences of doing dasa akusala. As we will see, there are two main types of viñ̃āṇa (vipāka viññāna and kamma viññāna) and both are defiled.

- However, it is the kamma viñ̃ñana that is responsible for creating kammic energies that can bring future rebirths. This is the viññāṇa ("sañkhāra paccayā viññāna") in Paṭicca Samuppāda. But vipāka
viññāṇa (cakkhu, sota, ghāna, jivhā, kāya, and mano viññạ̣̄a) also provide an "incorrect representation of the world." The Buddha called (any type of) viñ̃āạna a "magician." See "WebLink: suttacentral: Phenapindūpama Sutta (SN 22.95)."
- When one attains Arahanthood when one's paññā (wisdom) will be optimized and one will have "undefiled or clear viññāna."
- There are many suttās that clearly state "viññāna nirodha", or stopping the arising of kamma viñ̃̄āṇa (defiled viññāna) leads to Nibbāna.

2. A succinct statement can be found in the "WebLink: suttacentral: Dvavatānupassanāsutta (Snp 3.12)":
"Yaṃ kiñci dukkhaṃ sambhoti,
Sabbaṃ viññānapaccayā;

## Viñãānassa nirodhena,

Natthi dukkhassa sambhavo."

- Translated: "Whatever suffering that arises, all that arises due to "(kamma)viññāna"; With not arising of (kamma) viñ̃̃āna, there is no existence with suffering."
- I will introduce the concept of viññāṇa in a simple way. In the simplest form, "kamma viñ̃̃āṇa" is any type of expectation even without moral/immoral implications. See, " $\underline{\text {. Viññāna (Consciousness) can be }}$ of Many Different Types and Forms."
- A deeper explanation in, "Anidassana Viññāna - What It Really Means."

## Vipāka Viññāṇa and Kamma Viññāṇa

3. Viñ̃̄āna includes or encompasses the following: our feelings (vedanā), perceptions (saññā), and a set of individual mental factors (cetasika). They all arise together, and the set of cetasika that arises is dependent on each person's gati (habits/character). If you are not familiar with Abhidhamma, don't worry about it. I will take a simple example to illustrate viññāna below.

- Five of the six types of viññāna are strictly vipāka viññāna. These are the five types of viññ̄ạna associated with the five physical senses.
- We become aware of something in our physical world via cakkhu viñ̃āṇa (seeing), sota viñ̃̃āṇa (hearing), ghāna viñ̃n̄ạna(smelling), jivhā viññāṇa (tasting), and kāya viññāna (touching); these are due to past kamma vipāka. When memories come to mind, they are also vipāka viññanna. Therefore, "vipāka viññāna" can come in through all six senses.
- If we get interested in them, we may start generating mano viñ̃̃āna and doing kamma. Those are "kamma viññāna." Thus, "kamma viññāna" can only be mano viññāṇa. Cakkhu, sota, ghāna, jivhā, and kāya viññāṇa are ALWAYS "vipāka viññāna."
- Let us take a simple example to clarify those basic ideas.

## Examples of Two Types of Viññ̄āna

4. When a man X sees a young woman $(\mathrm{Y})$, that is called a "seeing event" or cakkhu viññaña. It is a vipāka viññāna. Suppose the woman has just come to X 's workplace as a new employee.

- With that cakkhu viññanna, X recognizes Y as an attractive female and that is called saññā; X may generate "happy feelings" when seeing Y and that is vedana ; X may also generate lust in his mind and that is a mental factor (cetasika).
- If X gets interested in Y , then X may also generate lust in his mind with subsequent mano viññāna, and start generating mano, vacī, and kāya sañkhāra; see the previous post. These are "kamma viññāna" that arise via "sañkhāra paccayā viññāṇa" in Paṭicca Samuppāda.

5. With the establishment of this new kamma viñ̃̄āna, there is now an expectation in X's mind of getting a date to go out with Y , and may be getting to marry Y someday.

- That is a mano viññāna that stays hidden in X's mind. It has the expectation of getting an opportunity to have a close relationship with Y.
- That idea will remain hidden in X's mind and can re-surface at appropriate times, especially when seeing Y again, or when someone mentions Y's name for example. This is "viññāna paccayā sañkhāra" in Paṭicca Samuppāda.
- The more X will be engaged in generating such sañkhāra, the kamma viñãāna will also strengthen; that is the "sañkhāra paccayā viññāna" in Paṭicca Samuppāda.

## It Is Kamma Viñ̃̃āṇa That Can "Grow"

6. Thus both "sañkhāra paccayā viññāna" and "viñ̃ñạna paccayā sañkhāra" will be operating back and forth, and will keep strengthening that viññāna.

- This is what is meant in many suttā by saying that "viñnäạa will grow" as one keeps doing sañkhāra. That refers to kamma viññāna.

For example, in the "WebLink: suttacentral: Cetanā Sutta (SN 12.38)": "Yañca, bhikkhave, ceteti yañca pakappeti yañca anuseti, ārammaṇametaṃ hoti viññāṇassa ṭhitiyā. Ārammaṇe sati patiṭth $\bar{a}$ viññānassa hoti. Tasmiṃ patiṭthite viñnāne virūlhe āyatim punabbhavābhinibbatti hoti.Āyatiṃ punabbhavābhinibbattiyā sati āyatim jāti jarāmaraṇam sokaparidevadukkhadomanassupāyāsā sambhavanti. Evametassa kevalassa dukkhakkhandhassa samudayo hoti."

Translated: "Bhikkhus, what one intends, and what one plans, and whatever one has a tendency towards this focus (ārammana) a basis for the maintenance of viññana. When there is an ārammaña there is support for the establishing of kamma viññāna. When that viññāna is established and has come to growth, there is the arising of future renewed existence (punabbhavā). When there is the future renewed existence, future birth, aging-and-death, sorrow, lamentation, pain, displeasure, and despair come to be. Such is the origin of this whole mass of suffering."
7. So, let us assume that X has been seeing Y for a few days and may be even got to talk to her a few times ( vacī and kāya sañkhāra are associated with those activities). Each time X interacts with Y , that "kamma viññāna for having a close relationship with Y " will grow in X 's mind.

- Furthermore, X will be thinking about Y often (which is generating vacī sañkhāra), which will also help make that "kamma viññāna for having a close relationship with Y " to grow.
- That happens via "sañkhāra paccayā viñ̃n̄ạa" step in Paṭicca Samuppāda.

8. Several days later, X finds out that Y is married when her husband comes to meet her at work.

- He could clearly see that she is happily married and there is no point in even thinking about having a relationship with her.
- In an instant, X's "kamma viññāṇa for having a close relationship with $Y$ " will be eliminated (for most people).
- When the reality of the situation is comprehended by the mind, the corresponding "kamma viñnäna" will be stopped. This is what is meant by "viñ̃nāna nirodha."

## Kamma Viññ̄āna Can be Stopped from Arising

9. Therefore, it is important to see that a kamma viñ $\tilde{a} n ̄ a$ (or an expectation) will be eliminated as soon as one realizes the futility (or the dangers) of that expectation.

- At a deeper level, all of one's highly immoral types of kamma viññāna will be permanently removed when one will be able to see the futility/dangers of engaging in immoral deeds. That is when one attains the Sotāpanna stage via comprehending Tilakkhana.
- Next, one's expectation for seeking pleasures in this world will be totally removed when one realizes the futility - and dangers - of seeking such sense pleasures. That is when one attains the Anāgāmi stage of Nibbāna.
- Once one becomes an $A n \bar{a} g \bar{a} m i$, one is at a stage where one can start seeing the futility of $j h a \overline{n i c}$ pleasures and start getting rid of rūpa rāga and arūpa rāga (or the futility of being born in the rūpāvacara and arupāvacara realms. That is when one becomes an Arahant.
- Therefore, the way to Nibbāna is a step-by-step process; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

10. There are many types of kamma viñ̃āṇa that we can have. The minor ones are just expectations of getting something done or buying something or getting a new job, etc.

- Sañkhāra or "thinking of that expectation and making plans to get it done also by speaking and doing things (that includes vacī sañkhāra and kāya sañkhāra)" will make that viññāna grow. This comes via the "sañkhāra paccayā viññāna" step.
- In another example, suppose X is thinking about buying a certain type of car. That idea or expectation will be "at the back of his mind" all the time. If he sees a car like that on the road, then that viñ $\tilde{n} a \underline{n} a$ will be awakened, and he will start thinking about it again. Now, one day X buys that car. Then that viññaña will also disappear since he will no longer be interested in buying a car. That expectation has been fulfilled.
- Therefore, a kamma viññāṇa will "take hold in the and grow" only as long as one has a desire AND one believes that it can be fulfilled.

11. I gave those two examples to illustrate the basic concept. But more complex types of viññāna can grow based on certain types of activities that X engages in, and those can become paṭisandhi viññāna that can lead to rebirths.

- For example, if X constantly engages in helping others, donating time and money to charities, etc, he would be cultivating the mindset of a deva (even without knowing). Then that "moral viññāna" would grow with time and may lead to a rebirth in a deva realm.
- If one is constantly thinking and planning to make money by exploiting/deceiving others, he/she is doing vacī/kāya sañkhāra that will be feeding a "bad kamma viññāna" that can lead to a birth in the apāyās.
- Therefore, viññāṇa can be various types.

## Kamma Viñ̃āāna Can Only be Mano Viññāṇa

12. As we discussed in \#2, there are five basic types of "vipāka viññāna" just bring external sense objects (pictures, sounds, tastes, smells, and touches) to our mind. Vipāka viññāña can also bring memories directly to mind (the sixth sense.)

- Then mano viññāṇa takes over, and will decide to act on it - and if needed - makes "future expectations" or "fiture plans". Therefore, it is the mano viñnäna that has expectations for the future.
- We ignore most of the things we see, hear, etc. But if we get attracted to something, then we will be going back to see, hear, etc, and may be making other related plans too. That is all done with mano viññāna, a "kamma viññāna."

13. Obviously, patisandhi viññāna is a very important kamma viñ̃āṇ̄a. It can determine future births.

- This is a complex subject, but when one engages in highly immoral deeds, the pațisandhi viñ̃nāṇa that grows may not be what one desires.
- For example, suppose X is a serial rapist. He gets a temporary sense of satisfaction by raping women. What he does not know is that he is cultivating a kamma viññāna that is appropriate for an animal. So, he could get an animal birth because of that immoral kamma viñ̃̃anna he is cultivating.
- So, hopefully, you can see the connection between viñ̃n̄ạa and gati (pronounced "gathi') too. Gati (character qualities/habits) is an important concept that has been hidden in recent years.

## Connection to Magga Phala

14. When one attains the Sotāpanna stage of Nibbāna, one would see the futility of such immoral and briefly-lived sense pleasures. Then such types of "immoral kamma viñ̃āạa" would not be cultivated in his mind.

- In other words, one's "hidden immoral gati" will be permanently removed at the Sotāpanna stage.
- That is comparable to X losing the "viñ̃āạa for having a close relationship with Y " in \#4 to \#7 above. In that case, X clearly saw the uselessness of having that viññanna, and it died.
- It would be a good idea to read and understand posts on gati: "How Habits are Formed and Broken A Scientific View"; "Bhava and Jāti - States of Existence and Births Therein"; "Gati to Bhava to Jāti Ours to Control."

15. I made this discussion simple in order to get two main ideas across, which are:

- Viññanna is a complex concept. This is why it is not appropriate to translate viñãāna as just "consciousness". See, "WebLink: puredhamma.net: Search Results for: viññāna two meanings."
- Mano viññāna arise due to sañkhāra ("san" + "khāra"). We cultivate those via "sañkhāra paccayā viññāna" in the Pațicca Samuppāda cycles.
- This is why "san" is a key root word in Pāli; see, "What is "San"? Meaning of Sansāra (or Samsāra)."

## Incorrect Translations Do Not Distinguish the Two Types of Viñnāāna

16. I hope that those who translate deep sutt $\bar{a}$ word-by-word will at least read these series of posts and make amendments to their ways of translating key sutt $\bar{a}$ that discuss deep meanings. They are no different from the Sāti bhikkhu who could not understand what is meant by viñ̃āạa in the WebLink: suttacentral: Mahā Tanhāsañkhaya Sutta (MN 38).

- One should not be translating such deep sutt $\bar{a}$ (also there is no point in reading them either) until one understands what is meant by viññāna.

17. The WebLink: suttacentral: Kevatta Sutta (DN 11) is another such sutta (among many others).

- The key verse there is at the end of the sutta: "Viññānam anidassanam, anantaṃ sabbatopabham Ettha āpo ca pathavī, tejo vāyo na gādhati. Ettha dīghañca rassañca, aṇuṃ thūlaṃ subhāsubhaṃ; Ettha nāmañca rūpañca, asesaṃ uparujjhati; Viñnāṇassa nirodhena, etthetạ̣ uparujijhatī"'ti.
- This is explained in detail in, "Pabhassara Citta, Radiant Mind, and Bhavañga."

18. As I have said many times, Buddha Dhamma is deep. It takes an effort to learn. Just translating deep suttā word-by-word or just reading those translations will not be of many benefits in the long run.

- Of course, some suttā can be translated word-by-word, like the WebLink: suttacentral: Kesamutti Sutta or Kälāma Sutta (AN 3.65). Those are basic suttā that provide guidelines to live a moral life. But deep suttā that discuss anicca, anatta, or Nibbāna require a deeper knowledge of the basics like what is meant by saññā, viññaṇa, sañkhāra, etc.
- It is best to learn the meanings of these keywords and just use them, instead of translating them as a single English word. I hope you can see why, with the above discussion on viñnäạa.

#### Abstract

Also see, "Connection Between Sañkhāra and Viññāna" and "Viññāna and Sañkhāra - Connection to Paticca Samuppāda." These three posts are essential to be understood if one really wants to understand Buddha Dhamma.

### 4.1.4 Connection Between Sañkhāra and Viññāṇa

## January 11, 2018

1. In a recent post, "Viññāna - Consciousness Together With Future Expectations," I discussed how viññāna or "future expectations" are established when one gets attached to something and starts doing sañkhāra (conscious thinking, speech, and actions) about it.

- In this post, I will elaborate more on the importance of sañkhāra and the connection to viññanna. In a few posts, I will try to explain how we create our own future suffering by engaging in abhisañkhāra or "strong sañkhāra."
- These abhisañkhāra are nothing but how we think about, speak about, and take actions on moral/immoral issues. If we do any of the dasa akusala, then we are generating "bad abhisañkhāra" or "apuñña abhisañkhāra" (abbreviated as "apuññābhisañkhāra").
- Those apuññābhisañkhāra lead to suffering. Therefore, key to stop future suffering is to gradually reduce apuññäbhisañkhāra and eventually to stop them.

2. In addition to what we discussed in that previous post, another key point is to realize that all our speech and bodily actions are started by the mind.

- Can you do anything, if you (or your mind) does not want to do?
- You may be in the middle of doing something (say walking to the kitchen), but you can decide you don't really want to go the kitchen and instead walk to the living room. If you start saying something, you can stop in mid-sentence if you want to.
- Some people have strange ideas about humans not having free will. They should try what I just suggested above. It is not that hard to verify.

3. All the progress that science has made is based on the "mind power" of the humans (scientists coming up with breakthrough innovations in their minds). Mind comes first and this is what is expressed in the very first Dhammapada gāthā: "manopubbangama dhammā.." or "mind is at the forefront."

- A child's future depends on how well he learns. If the mind of the child goes in the wrong direction, he/she could become a drug addict or even a murderer.
- In the same way, we determine our own LONG TERM future in the rebirth process by the ways in which we think, speak, and act. That is what is really explained in Patticca Samuppāda (normally translated as "Dependent Origination"; again, it is much better to use the Päli term and understand what is really meant by it).

4. From the moment we wake up in the morning, we do nothing but generate sañkhāra.

- When we just experience a sense input (seeing, hearing, etc) , "mano sañkhāra" are automatically generated.
- The Buddha said, "vedanā, saññā are mano sañkhāra": we just experience the sense input by recognizing it and generating a "sukha, dukkha, or neutral feeling about it."

5. When we start thinking consciously about a particular sense input (what we saw, heard, tasted, etc), we start generating vaci sañkhāra; we may also speak with vacī sañkhāra. Here, vacī is pronounced "vachee."

- For example, if we see a nice car and start thinking about how nice it would be to own such a car, how we can impress our friends with it, etc, we are fully aware of such thoughts.
- Such conscious generation of thoughts about "what to do about a given sense input and how to go about it", for example, are vacī sañkhāra. Actual speech is also vacī sañkhāra.
- The Buddha said, "vitakka, vicāra are vacī sañkhāra": stay on the given sense input and generating thoughts about it or related things.
- Furthermore, we can keep going with such "day dreaming" or we can stop them. If it is something we like, it may be hard to stop thinking about it, i.e., it may take will power.
- That is what is involved in Ānāpānasati/Satipaṭthāna: stopping bad vacī sañkhāra.

6. If we just proceed with those $v a c \bar{c}$ sañkhāra, our emotions may get strong and we may start speaking out (stronger vacī sañkhāra). If we get "really worked up" we may do bodily actions with such emotions, then those are done with kāya sañkhāra.

- For example, let us say two people get into an argument and start shouting at each other. Each person is speaking harsh words (generated via vacī sañkhāra).
- Then one of them (person X) gets "really worked up", loses all restraint, and hits the other person. That "hitting action" was done with kāya sañkhāra (generating thoughts to raise the hand and hit that person).

7. It is important to realize that both speech and bodily actions are initiated by the mind.

- In the above example, both people were engaged in generating "bad vacī sañkhāra," which are nothing but "bad speech", the opposite of "Sammā Vāca" or "correct speech."
- Then person X took did an even worse thing by hitting the other person. That was a "bad action", opposite of "Sammā Kammanta."
- Therefore, they were both acting with "avijja" or ignorance of the consequences of their actions. That is "avijjā paccayā sañkhāra," the first step in Pațicca Samuppāda.

8. Now, we can see what is meant by "sañkhāra" (and "abhisañkhāra").

- In the above example, both vacī sañkhāra and kāya sañkhāra generated by person X were "abhisañkhāra" or "strong sañkhāra."
- If those two people were just taking about something kammically neutral, say about the weather, then that would involve just "sañkhāra."
- If they were talking about weather, while walking, then that would involve both vacī and kāya sañkhāra that are NOT of "abhisañkhāra" type. That speech and action did not involve generation of "kammic energy."

9. Therefore, it is important to understand the difference between just sañkhāra and abhisañkhāra. In the suttā, or in Paticca Samuppāda, the word "sañkhāra" is used often without specifically saying whether it is just "sañkhāra" or "abhisañkhāra."

- Depending on the context, we should be able to determine whether it is just "sañkhāra" or "abhisañkhāra."
- Not only that, but abhisañkhāra are also two types: puññābhisañkhāra (puñña abhisañkhāra or "good deeds") and apuñ̃n̄̄̄hisañkhāra (apuñña abhisañkhāra or "bad deeds").
- Here by "deeds" we include all three types of sañkhāra: mano, vacī, and $k \bar{a} y a$. We should AVOID all three types of apuñ̃̄̄̄bhisañkhāra or immoral thoughts, speech, and actions.

10. It is again important to emphasize that mano sañkhāra arise AUTOMATICALLY based on two things:
(1) the sense input, and (2) one's own gati or gathi (character/habits), as we discussed in the post: "Introduction to Citta, Vedanā, Saññā, Sañkhāra, and Viññāna."

- For example, if someone has a bad temper (that is a bad gati), then that person can be made angry by the slightest provocation.
- On the other hand, there are people who are calm and measured and are not easy to become angry. It will take much stronger provocation to make them angry.
- In the same way, some people are greedy and are easily attached to tasty foods. Some people are kind and quick to come to help for others in need, etc.

11. The key to making progress in the Path of the Buddha is to cultivate "good gati" and gradually reduce "bad gati."

- If one is "quick to anger", that is a bad gati. One important way to reduce that bad gati is to stop generating vacī and kāya sañkhāra by will power when they start arising.
- For example, some people get angry even when they hear the name of a person they do not like. Then they start thinking about all the bad things that person has done in the past. That is generating "bad vaci sañkhāra."
- Even though one may not be saying a single bad word, just consciously think about bad thoughts about another person will feed that bad habit. So, it is important to realize that generating such "silent bad thoughts" is as bad as saying harsh words.
- Of course actually speaking out (also vacī sañkhāra) and doing bad things to person (hitting for example), are also bad abhisañkhāra.

12. This "feeding bad habits" via (apuññābhi)sañkhāra generation is explained via the step, "sañkhāra paccayā viññana"a" in Paṭicca Samuppāda.

- When person $X$ has a "grudge against person $Y$ ", person $X$ has a "viññāna" or an expectation in his mind to "get back to $Y$ or hurt $Y$ " whenever an opportunity arises.
- That viñ̃̄āna "gets food to grow" each time X starts generating bad thoughts about Y , speak against Y , or do something to hurt Y . Those all belong to vacī and kāya sañkhāra.
- On the other hand, mano sañkhāra about Y arise automatically in X's mind when X sees Y or even when Y's name is mentioned by someone else. Then X is likely to start generating vacī sañkhāra or "conscious thoughts about Y."
- The key to progress is to STOP such vacī sañkhāra AS SOON AS one becomes aware of them.

13. Just like a person, an animal, or even a tree would grow when given food on a regular basis, one's viññāṇa would grow when "it is fed on a regular basis" by generating vacī and kāya sañkhāra.

- It works backwards too. If food is reduced, a tree will not grow well. If food and water are totally stopped, the tree will die.
- In the same way, if one stops feeding a given "viññāna" (or a "future expectation") by stopping vacī and kāya sañkhāra, that viñãāna will die with time.
- In the same way, we want to "feed a good viññanna," say to act kindly towards other people and animals. So, we should INCREASE vacī and sañkhāra generation: generate more compassionate thoughts and engage in compassionate activities like giving.

14. So, hopefully, we now have a good idea about what sañkhāra (and abhisañkhāra) are and how they lead to good or bad viññāna.

- We will discuss more on viññāna in the next post. In the mean time, please do not hesitate to ask questions. It is important to understand these basic concepts.

### 4.1.5 <br> Viññāṇa and Sañkhāra - Connection to Paṭicca Samuppāda

## February 25, 2019; revised August 28, 2002

1. To review what we have covered in the last few posts in "Essential Buddhism":

- A defiled consciousness or viññāna has an "expectation" for the future. The "kammic energy" in "kamma viññāna" is responsible for "sustaining the rebirth process."
- We do that willingly by generating (abhi)sañkhāra, i.e., how we think, speak, and act.
- One who has not understood the First Noble Truth is willingly generating (abhi) sañkhāra via, "avijjā paccayā sañkhāra" which leads then to the cultivation of different types of viññāna via "sañkhāra paccayā viññāna" step. That is how Pațicca Samuppāda cycles start. They end up in "jāti paccayā jarā, maraṇa, soka, parideva, dukkha,..", the whole mass of suffering!
- Therefore, "avijjā paccayā sañkhāra" and "sañkhāra paccayā viññạna" lead to all future suffering. We will proceed step-by-step.

2. The five types of viññanna can be called "just consciousness," i.e., without "future expectations." These are cakkhu viññ̄ṇa (a "seeing event"), sota viññāṇa (a "hearing event"), etc for the five physical sense inputs. One more special case with mano viñãāna is discussed in \#4 below.

- A "defiled viññāna" or "an expectation for the future" is associated only with the mano viñ̃̃anna, which is what is normally referred to in a Pațicca Samuppāda cycle if a specific type is not mentioned.
- Therefore, in Paticca Samuppāda or any sutta, if a reference is made to viññāña, that is referring to "mano viññāna" or "mind consciousness."
- The mind generates the "kammic power" to create "kammic energy" or "kamma bīja" ("bīja" is pronounced "beeja"); see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka." [bīja :[nt.] seed; germ; generating element.]

3. Other five types of viñ̃̄āṇa (e.g., cakkhu viññāna, etc.) are only registered in the mind when we see, hear, taste, etc.

- This is stated as "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaì" in suttā or Abhidhamma. This normally translates as "eye-consciousness arises when a picture is seen or received by the eyes." That gives the basic idea but has a deeper meaning. See "Contact Between Āyatana Leads to Vipāka Viñ̃̃āna."
- Similarly, hearing happens with "sotañca paṭicca sadde ca uppajjati sotaviññānàm" ("hearing consciousness arises when a sound is heard or received by the ears"), etc.

4. In addition to the sensory inputs via the five physical senses, we also get sense inputs DIRECTLY to the mind. These are "memories and future hopes" that just come to the mind and are mano viñ̃ñana. Even though they seem to come to the mind for no reason, it also happens due to the mind DIRECTLY receiving a memory (called dhamm $\bar{a}$; this dhamm $\bar{a}$ is different from dhamma in Buddha Dhamma).

- This process is stated as "manañca paṭicca dhamme ca uppajjati manoviñãānamì", or "mind consciousness arises when the mana indriya or the mine receives a dhamma (of a memory)."
- This event is also "just consciousness," remembering a past event or a future expectation; for a deeper discussion, see, "What are Dhammā? - A Deeper Analysis."

5. Therefore, the mind can "receive" six types of "sensory inputs", i.e., the mind becomes "aware of" or "becomes conscious about" those six types of sense events.

- Based on those, the mind may "take actions" (to think further, to speak, or to act using the body). Those are called vacī and kāya sañkhāra.
- Such sañkhāra then leads to a defiled mindset or a "defiled viññāṇa" via the Pațicca Samuppāda (PS) process. Therefore, such "defiled viññāna" can arise only via PS processes.
- And that happens ONLY IF the mind gets attached to that sense input (an attractive figure, a pleasing sound, tasty food, nice smell, soothing touch, or an important past event (or planned future event).

6. Please read the above points in $\# 5$ carefully until the concept is understood. This is the key to understanding the key Pāli words sañkhāra and viññāna and also the concept of Paṭicca Samuppāda.

- Whenever we willingly grasp something (or get attached to something), whatever results from that action has the corresponding nature. Because one got attached willingly, a similar bhava (existence) will result: i.e., pati+icca leading to sama + uppāda or Paṭicca Samuppāda (PS).
- Here, "pati+icca" means "getting attached willingly," and "sama+uppāda" means "giving rise to a corresponding (similar) existence." [uppāda :[m.] rising; coming into existence; birth.]

7. The "existence" one gets according to one's sañkhāra generated according to one's mindset. As we have discussed before, the first mano sañkhāra arises automatically based on one's gati (or gathi), when one gets attached to a sensory event.

- Then if one does not act with mindfulness (i.e., does not see the bad consequences of generating such thoughts), one will start generating vacī sañkhāra. If one's emotions get strong enough, one could start speaking (more vacī sañkhāra) and even taking bodily actions (kāya sañkhāra). A deeper discussion at "Correct Meaning of Vacī Sañkhāra."
- We will first consider a PS process that happens often during a lifetime. This PS process is not discussed in the Visuddhimagga or any current English texts on Buddha Dhamma.

8. In pavutti PS, bhava or existence refers to a "temporary existence" during a given lifetime. Pavutti means "current." [pavatti : [aor. of pavattati] moved on; proceeded; existed. (f.) happening; incident; news.]

- In the most fundamental sense, a "greedy state of mind" will result when we get attached via greed, i.e., one develops a habit or gati or bhava corresponding to that state of mind; a 'hateful state" (habit/gati/bhava) results via hateful attachment; acts of greed and/or hate are always done with ignorance.
- The pavutti PS, which describes how we develop certain habits or bhava or gati during a given lifetime. It is often easier to use an example to illustrate these PS cycles.
- Pavutti PS is important because the habits (gati) cultivated during this lifetime can feed the uppatti PS process leading to future rebirths. [upapatti : [f.] birth; rebirth; approach.][uppatti:[f.] rebirth; coming forth; origin.]

9. Let us examine how a teenager becomes an alcoholic, using the pavutti PS. The teenager becomes friendly with a group of other teenagers who are into drinking. Initially, he may be reluctant to join in, but due to ignorance (avijj $\bar{a}$ ), he joins them and starts drinking.

- Suppose a good friend or a family member knew about the situation. In that case, they could have prevented the teenager from associating with such bad company, i.e., ignorance could have been dispelled by explaining to him the adverse effects of drinking and associating with such a group.
- Now we will examine in detail how this happens.

10. The PS cycle thus starts with "avijjā paccayā sañkhāra"; due to ignorance of the adverse results, the teenager starts drinking with that group (sañkhāra $=$ "san $+k h a \overline{r a}$ " or actions of accumulating, in this case bad kamma).

- The more he is involved with such drinking activities, the more he thinks about it and develops a "defiled mindset" or a "defiled viññāṇa" for that activity. This is "sañkhāra paccayā viñ̃nāṇa."
- This is explained in detail in the previous post: "Connection Between Sañkhāra and Viññ̄ān."

11. When he begins to like drinking, he starts thinking about it while doing other things. This is "viñ $\tilde{n} \bar{a} n a$ paccayā nāmarūpa" step.

- In this case, nāmarūpa are the mental images associated with that viñnāña, i.e., the names and shapes of particular alcohol bottles, the places where he normally drinks, the friends who drink with him, etc.
- He also thinks about the next "event" and visualizes the scene, all these are associated with nāmarūpa. Thus, here nāmarūpa are the mental images of "things" and "concepts" that one would like to enjoy.
- "Nāma" means "name" assigned to a person/object, and "rūpa" means "spatial profile" associated with that nāma.
- "Nāmarūpa" are the "mental images" together with the associated feelings (vedanā), perceptions (sañ̃n̄a), sañkhāra, and viññāna, the COMBINED effect of "nāma" and "rūpa."

12. Now his six senses become "involved" to provide a reality to those nāmarupa; to provide the desired sensory pleasures. In Pāli terms, the six indriya (senses) become "āyatana." For lack of a single English word, I will call an "ayatana" an "import/export facility" and get involved in the actions associated with drinking events.

- Eyes are used as indriya when they are used just to identify things out there. When eyes are used to repeatedly look at an object TO ENJOY IT, then the eyes are used as "āyatana."
- His mind is often thinking about the next "event" (where, when, with whom, etc), and he makes necessary preparations for the "event" using all six senses (now āyatanas) compatible with those nāmarūpa (that he is cultivating.)
- Therefore, this is the "nāmarūpa paccayā salāyatana" step, where salāyatana means the six $\bar{a} y a t a n a$. Eyes are now not merely for seeing, they have become an assistant looking for a "good drink" or a "good friend to chat with," etc.

## 13. Then we have "salāayatana paccay $\bar{a}$ phassa," i.e., all six $\bar{a} y a t a n a$ become actively engaged making contact with relevant sense objects.

- His eyes are on the lookout for a favorite drink or a favorite person to chat with, etc. Here instead of phassa, it is (more appropriately) called "samphassa" (= "san" + "phassa"), where "san" implies it not just contact, but a "san" contact or "samphassa." See "Vedanā (Feelings) Arise in Two Ways."
- This may be a good time to review the term "san" if you have not already done so: "What is "San"? Meaning of Sansāra (or Samisāra)."

14. Such "samphassa" lead to vedanā (feelings), i.e., "(san)phassa paccayā vedanā." He experiences "good (but immoral) feelings" with all those sense contacts.

- Because of such "good feelings," he gets further attached: "vedanā paccayā taṇhā"; see, "Tanhā - How We Attach via Greed, Hate, and Ignorance."

15. Now comes, "taṇhā paccayā upādāna." Upādāna means "grabbing or getting hold of something automatically," like an octopus grabbing its prey with all eight legs.

- In the present case, the teenager wants to re-live this experience and gets immersed in it. When he is experiencing the event, his mind is totally absorbed in it; he does not have the mindset to think about any adverse consequences. This is the critical "habit-forming" or "bhava forming" step.

16. So, the next inevitable step is "upādāna paccayā bhavo"; this particular state of getting drunk becomes increasingly ingrained in his mind. It becomes "a bhava" or "existence" or habit that is important to him. He very much wants to re-live that experience.

- And that is exactly what he gets: "bhava paccayā jāti." This "bhava" or the kamma seed is now well established, and he can be born in that state quite easily. All he needs is an invitation from a friend, or even a sight of a bar while travelling, for example.
- Getting into that state or being "born" there will happen more frequently. So, he gets drunk at every opportunity. See "Bhava and Jāti - States of Existence and (Repeated) Births Therein" for more details.

17. However, like everything else, any birth is subjected to decay and suffering: "jāti paccayā jarā, maraña., eva me tassa dukkhandha samudhayo hoti," i.e., "the whole mass of suffering."

- But in the case of a single drinking event, that state of intoxication comes to an end, possibly with a big headache and a huge hangover. That episode ends with nothing to show for it but a hangover.
- Even worse, now he is "hooked'; he has formed a bad habit, which only strengthens even more if he does it repeatedly. Because each time, the PS runs, the viñ̃̄̄ạna for that habit gets more fuel, and the bhava gets stronger.

18. The more the teenager gets trapped in that bhava, the more $j \bar{a} t i$ that occurs, i.e., more frequently he will be drunk.

- And it is not even necessary to participate in a "drinking event" to run another PS cycle. He may be sitting at a desk trying to study, and may start going through the PS cycle MENTALLY.
- He can start right at "avijjā paccayā sañkhāra" and be generating vacī sañkhāra (vitakka/vicāra or planning), thus generating (and strengthening) the viññāna for drinking, generating nāmarūpa (visuals of places, friends, alcohol bottles, etc), and thus going through the rest of the cycle: salāyatana, samphassa, vedanā, tanh $\bar{a}$, upādāna, bhava, jāti ('living it"), repeatedly.
- Thus numerous such PS cycles can run at any time, probably increasing their frequency as the bhava or the habit builds up. The stronger the bhava or habit is, it will be harder to break.
- This is why meditation together with another good habit to work on should be undertaken to replace a bad habit. While in meditation, one can contemplate the adverse consequences of the bad habit.

19. It is important to realize that the above PS cycle does not run to its conclusion when the drinking "event" is over. Rather the cycle can repeatedly run unless it is stopped willfully, deliberately.

- And the way to do that is to act with "mindfulness" and stop those bad first conscious thoughts (vacī sañkhāra) that start arising. This is the key to "real Ānāpāna and Satipatṭhāna meditations" in Buddha Dhamma.
- Then one would stop the "avijjā paccayā sañkhāra" step. That will stop "bad viññ̄āna" from arising or being cultivated by the elimination of "sañkhāra paccayā viñãāna" step. That will, of course, stop the end result of suffering.

20. If those abhisañkhāra cultivated get strong enough, they can also lead to future births. The rebirth process proceeds via the uppatti PS process, which is very similar; see "Paticca Samuppāda."

- Only by cultivating Ānāpāna and Satipatṭhāna can we break that cycle of rebirth: "Paticca Samuppāda, Tilakkhana, Four Noble Truths."

### 4.1.6 Breath Meditation Is Addictive and Harmful in the Long Run

January 15, 2019; revised January 21, 2020
I receive many questions from people who insist that breath meditation "works." Breath meditation can indeed provide a relief that can be exhilarating for those who have not experienced a "permanent cooling down." The latter is harder to get and require a determined effort, but will be a permanent solution to the "problem of existential suffering."

## Introduction

1. Doing breath meditation to achieve a "temporary relief" from the "suffering in this world" is like taking an aspirin or a tylenol or a sleeping pill to get relief from a headache. If that headache has a root cause in the onset of cancer in the body, then taking aspirins will only allow the tumor to grow. In the same way, breath meditation does absolutely nothing to remove the root causes (greed, anger, ignorance.)

- One needs to get long-term medical treatment to get rid of cancer. Then the headaches will also go away.
- In the same way, to stop future suffering from arising, one needs to remove defilements (greed, hate, and ignorance) from one's mind. Then all the mental stresses will also go away permanently.
- It makes sense to get a temporary relief using a pill, but one MUST start working on a long-term solution for the root cause of cancer.
- In the same way, it is OK to do a bit of breath meditation to deviate the mind from a stressful situation, but it is unwise to use it as a long-term solution.

2. The problem here is that many people get "addicted" to breath meditation, just as a drug addict starts an addiction by getting used to "taking a pill" to get to an "ecstatic state of mind" for a few hours.

- The problem is that the drug addict will have to keep increasing the dose with time to get the "same kick."
- Even though breath meditation is not directly harmful like drug addiction, it is dangereous in the sense that it will shift the focus from the primary goal of a permanent solution to the "problem of suffering."
- Furthermore, breath meditation can lead to anāriya jhāna, and that is a trap. Once people start enjoying $j h a \overline{n a}$, they even equate that to Nibbāna. I will discuss this later on.
- The Buddha always analyzed a given problem in detail so that one could get a clear picture of the whole situation. So, let us analyze possible causes for the agitation of the mind.

## Heating of the Mind Due to Too Many Sense Inputs

3. The mind can focus on only one thing at a time. However, it SEEMS that we can see, hear, smell, taste, touch, and also think about concepts all at the same time.

- For example, when watching a movie, we see and hear the film, and also be thinking about the movie plot. If we are eating popcorn, we can touch, smell, and taste popcorn too. So it SEEMS that we are using all six sense faculties "at the same time."
- But we have that perception of a mind engaged in all at once only because the mind is VERY FAST. It can go back and forth among the six sense inputs at an incredibly fast rate.
- The Buddha said that the mind is the fastest entity in the world.

4. But in the above example, the mind (or more accurately the brain) gets overworked. All those sensory inputs need to be processed by the brain, which is like a computer. You may have seen that a computer can get "overheated" when it is running too many applications at the same time.

- That is why we cannot watch movies all day long. If we watch even two movies without a break, we are likely to get a massive headache. The brain gets overloaded.
- So, this is one kind of stress that we feel. It is simply due to the mind (and the brain) trying to process too many sensory inputs.
- There is another, more important, way that a mind can get stressed. That may not be obvious to many. Let us discuss that now.

## Heating of the Mind Due to Greed, Hate, and Ignorance

5. Do you remember the last time when you got outraged? How did that feel? You get hot. The whole body becomes hot and agitated; blood pressure goes up; face becomes dark because the blood becomes dark (By the way, this is clear evidence that the mind can affect the body).

- This "burning up" is called "tāpa" in Pāli (pronounced "thāpa"; ъ3 in Sinhala), and is due to greed, hate, and ignorance. "A$t \bar{a} p i "$ means the opposite, "cooling down via getting rid of those defilements."
- That is the "fire" discussed in detail in the WebLink: suttacentral: Adittapariyaya Sutta (SN 35.28).
- Therefore, "ātāp̄ sampajāno" means "remove the fire or heat" from one's mind by being aware of the 'san' or "immoral tendencies."
- When someone can get to the "ātāpi sampajāno" state, one feels calm and "cooled down"; see, "Kāyānupassanā - The Section on Habits (Sampajānapabba)" and other sections in "Mahā Satipatthāna Sutta."

6. When one acts with greed, "heating up" still happens, may be to a lesser extent than when one is angry. As a kid, when I was stealing something, I felt heated and uncomfortable.

- The same is true when one acts with ignorance too. One is not confident whether that is the right thing to do; the mind goes back and forth: is this right or wrong? Should I do it or not? That is called "vicikicch $\vec{a}$ " in Pāli. Because one does know, one is not confident, one becomes anxious, and the body gets heated up.
- On the other hand, do you remember how you felt when you made someone happy, either via a good deed or word? You cooled down; it felt good. Didn't you feel the opposite of when you got mad?

7. Thus, when one gives up acting with hate, greed, or ignorance, one becomes less agitated, at ease, with a sense of peacefulness. One can enhance this calmness by also engaging in moral deeds - this is sila or ethical conduct.

- Giving up an immoral lifestyle and engaging in moral activities is the basis for getting to Nibbāna, the ultimate "cooling down."
- As one can see the benefits of cooling down, one will avoid actions done with hate, greed, and ignorance. And one will be looking forward to doing act of goodwill, generosity, and with mindfulness.
- Avoiding greed, hate, and ignorance is the same as preventing dasa akusala.

## Mind Can Handle Only One Sense Input at a Time

8. In \#3, \#4 above, I mentioned that the mind could focus on only one sensory input at a time. Let us take an analogy to see why that is so.

- We all have seen a "ring of fire" at some circuses. The performer rotates a long stick with burning torch, and it looks like a "ring." Yet, we know that it is not really a "ring," but it is just the fast rotation that "fools our eyes" to be seen as a continuous ring.
- The light is coming from only one point on the circle at a given time. But we see it as a continuous ring; see \#13 of "Do I Have "A Mind" That Is Fixed and "Mine"?."

9. In the same way, at a given instant, only one sensory input is processed by the mind: seeing ,hearing, smelling, tasting, touching, or contemplating. They come in packets of about a few milliseconds (a millisecond is a thousandth of a second).

- Yes. Scientists have done systematic studies in recent years to confirm this picture that the Buddha explained in Abhidhamma 2500 years ago!

10. For example, we may see a snapshot of the movie at a given instant. A few milliseconds later, we hear a word, followed by the brief smelling of popcorn. and so on. They go through the mind very fast, and we FEEL LIKE we are experiencing all those at the same time.

- The mind can to sort all those different sensory inputs and present a cohesive continuous picture. That is the magic of the mind.
- Even just the movie itself is a series of static pictures projected on the screen at a fast rate, above 20 frames per second. If we slow down the projector, we will be able to see individual frames very similar to a picture taken by a camera.
- A movie camera takes 24 frames a second. When projected on the screen, it appears to be continuous.

11. That is why the Buddha said that the mind is like a magician. The fast mind can give us the impression of experiencing many things at the same time. But it is a series of discrete events happening VERY FAST.

- All those sensory inputs need to be processed by the brain for the mind to experience them.
- If there are too many, that leads to stress in the mind and in the brain. That is why one could get a headache by watching too many movies or television programs.
- Even if it is just one sense input (say, looking at an attractive person and generating lustful thoughts), that itself can lead to stress (even though most people do not feel it that way). Here the real stress is masked by one's anticipation of sense pleasures.

## Why Breath Meditation "Works" on Temporary Basis

12. Now we have discussed three things that come in to play.

- A mind (with the help of the brain) can process only one sensory input at a time. But it handles a large number of such inputs in a second so that we have the illusion that we are experiencing many things at the same time.
- If the mind is experiencing many sense inputs (called ārammaṇa in Pāli) - like watching a movie and eating popcorn - both the brain and mind get stressed out or get "overheated."
- Another type of "heating" happens with greedy, hateful, and ignorant thoughts. Even if one focuses on one thing (say anger on someone), the mind gets heated internally, and that is called "tāpa" in Buddha Dhamma.

13. When we focus the mind on the breath, we are forcing the mind to "stay focused on just feeling the breath." The mind is staying on one "thought object" and not running back and forth among many. Also, the brain virtually has no "load" to process.

- That also avoids the more subtle yet essential "heating up" is due to greedy, hateful, or ignorant thoughts from coming to the mind.

14. Now we can see why "breath meditation works" temporarily.

- It disengages the mind from too many sensory inputs and forces them to stay on one task. That is really the easiest to see.
- Furthermore, it also removes the possibility of sensual, hateful, or even ignorant thoughts arising in the mind. The mind is OCCUPIED with one harmless sense input: monitoring the breath or something like that.
- You can prove this for yourself by focusing the mind on the up and down movement of your belly. In mundane kasiña meditation, yogis focus the mind on a kasina object. Since most of you are used to breath-meditation, it may appear to be better. But if you spend time doing any other type, like kasina meditation, you will get used to it.

## Breath Meditation: Addictive and No Long-Term Benefits

15. As you can see, "breath meditation" can be useful in solving the first problem: It can keep the mind on a single focus.

- While it can find a temporary solution to the problem of "internal heat generation" ( $t \bar{a} p a$ ) by SUPPRESSING the root causes (greed, hate, and ignorance), it is not able to permanently remove them.
- Then they can be "triggered" (or made to come to the surface) when a strong sense input (like seeing an attractive figure). The the "agitation" will be back.
- There is a second problem: When we have those lurking in our minds, we tend to do dasa akusala too, which will also lead to more suffering in the future.
- Therefore, REMOVING (instead of just suppressing) greed, hate, and ignorance will benefit in the short term as well as in the long run.
- That permanent solution is in the real Ānāpānasati bhāvanā in Buddha Dhamma.

16. As we discussed earlier, someone in pain feels the need to keep taking pain relievers to avoid the pain. A drug addict feels the need to keep taking drugs to maintain the "high."

- In the same a way, a person engaged in breath meditation feels the need to do it on a regularly to "maintain the calmness."
- If one does this all day long for several days (while at a retreat), one really starts feeling a "sense of great relief."
- But when one leaves the retreat and gets back to the "rat race," all those agitations come back.
- I know several people who go to retreats to get "refueled" regularly. Getting addicted to breath meditation can be harmful in that way. One is wasting precious time in doing something that will only provide a short-term solution AND is preventing one from undertaking a long-term PERMANENT solution.

## The Better Solution - Real Ānāpānasati/Satipaṭṭhāna

17. The better way is to systematically get rid of the tendencies for such greedy, hateful, and ignorant thoughts to come to mind and stay there.

- One cannot accomplish that in a few days. It needs an effort in two ways: First, one needs to understand why greed, hate, and ignorance (dasa akusala) give rise to "heating of the mind" or tāpa.
- At the same time, one needs to live a moral life with minimum burdens. We will live only for about 100 years at most. Is there a point in amassing a huge sums of money or luxurious things, only to leave all that behind at death?
- The more things one "owns," the more stressful it will be one's mind. One's mind will be burdened all the time.
- Of course, that does not mean one should endure poverty and suffering. We should ALWAYS minimize suffering. That is the "middle way" prescribed by the Buddha.

18. That seems to be simple enough, and it is. But there are many more details on how one can increase this "relief" or "cooling down" or "ātāpa." But it is a step-by-step process.

- The relief from this "heat" or "burning" does happen, especially after one gets on the Noble Path, by comprehending the root causes for this stress.

19. Many people tell me that they cannot focus their minds and do a meditation session without concentrating on the breath. If they try to meditate on a Dhamma concept, the mind tries to fly off in different directions.

- The solution is simple. It is not essential to do "formal meditation sessions" in the beginning.
- If you read the WebLink: suttacentral: Sabbāsava Sutta (MN 2) carefully, you will see that bhāvanā is essential only after the Sotāpanna stage ("āsavā dassanā pahātabbā"), to get to the Sakadāgāmi stage and beyond (" $\bar{a} s a v a \bar{a} b h a ̄ v a n a ̄ ~ p a h a ̄ t a b b \bar{a} ") . ~$
- What is really needed is "contemplation" and "examination," which is vimainsā (also related to dhammavicaya sabbojjhañga), though that could be also called "bhāvanā."

20. In any case, it is good to understand and practice the real $\bar{A} n \bar{a} p a \bar{n} a s a t i / S a t i p a t t h \bar{a} n a ~ b h \bar{a} v a n \bar{a}$. That means what to take into the mind and what to be rejected from the mind). That can be done even before getting to the Sotāpanna stage.

- The most important first thing is to learn true Buddha Dhamma and live a moral life (sila) while engaging in meritorious deeds like giving and helping out others in need.
- This will help maintain one's focus on learning Dhamma concepts first. Then one would be able to do formal meditation sessions without the help of breath meditation.

### 4.1.7 Ānāpānasati Eliminates Mental Stress Permanently

## January 21, 2019; revised July 1, 2022

## Introduction

1. In the last post, we discussed how focusing the mind on breath CAN calm a mind. But we also saw that any relief one gets is temporary. Here we discuss the $\bar{A} n \bar{a} p a \overline{n a s a t i ~ i n ~ t h e ~ W e b L i n k: ~ s u t t a c e n t r a l: ~ A ̄ n a ̄ p a ̄ n a s a t i ~}$ Sutta (MN 118).

- We also briefly discussed in the previous post the idea that in order to permanently REDUCE and eventually REMOVE the "mental stress" we need to purify our minds. ."
- Here we will discuss some details, and show the connection to dasa akusala and Paṭicca Samuppāda, key concepts in Buddha Dhamma.
- You may want to read the earlier post: "Breath Meditation Is Addictive and Harmful in the Long Run."

2. From the sutta (MN 118): "Ānāpānassati, bhikkhave, bhāvitā bahulīkatā mahapphalā hoti mahānisamisā. Ānāpānassati, bhikkhave, bhāvitā bahulīkatā cattāro satipatṭhāne paripūreti. Cattāro satipațthānā bhāvitā bahulīkatā satta bojjhañge paripūrenti. Satta bojjhañgā bhāvitā bahulīkatā vijjāvimuttim paripūrenti."

## Translated:

"Bhikkhus, when $\overline{A n} \bar{a} p \bar{a} n a s s a t i$ is developed and cultivated, it is of great benefit leading to the ultimate release. When Ānāpānassati is developed and cultivated, it fulfills cattāro satipatțthāna (the four foundations of mindfulness). When the four foundations of mindfulness are developed and cultivated, they fulfill the seven enlightenment factors (satta bojjhanga). When the seven enlightenment factors are developed and cultivated, they fulfill ultimate knowledge and release (vijjāvimuttim paripūrenti)."

- So, Ānāpānassati and Satipatṭhāna are the same and both lead to Nibbāna (Arahanthood). Satipatthāna describes the steps in more detail, but the key is to first understand what is meant by Ānāpāna.
- Here we discuss the basic ideas of Ānāpānassati bhāvanā. Details at: "Bhāvanā (Meditation)."

## An Example of Getting Angry

3. We start with a simple case of getting angry. Being angry makes one turns into a totally different person as we briefly mentioned in the last post.

- Not only one will have an agitated (and uncomfortable) state of mind, but one's body complexion will change too. One's face becomes "very unpleasant" even to look at.
- With that agitated mindset, one may do something really bad (even hit or kill someone if things get out of control).
- Now, let us see WHY we get angry.

4. The root cause of anger is greed. We get mad when someone or something gets in our way to prevent us from getting something that we really crave. Therefore, vyāpāda (anger) arises out of abhijjh $\bar{a}$ (greed).

- Note that $a b h i j j h \bar{a}$ and vyāpāda are the first two of pañcanīvaraṇa (five "hindrances"): they are a "hindrance" to a calm state of mind! See "Key to Calming the Mind - The Five Hindrances."
- Furthermore, vyāpāda can bring rebirths in the niraya (hell), while greed can bring rebirths as hungry ghosts (in preta or peta realms). Thus $\boldsymbol{v} \boldsymbol{y} \bar{a} p \bar{a} d a$ is worse than $a b h i j j h \bar{a}$.

## Why Some People Get Angry Than Others?

5. As the Buddha always pointed out, in order to eliminate a problem, we must first find the causes that gave rise to that problem. Then when we eliminate those causes, the problem will NOT ARISE anymore. That is the meaning of the word, "nirodha" ("nir" + "udā"). Dukkha nirodha is "stop future suffering from arising." It may NOT stop any dukkha vedanā currently experienced; those are results of the previous kamma! That is a common misunderstanding.

- When one understands dukkha samudaya ("san" + udaya" or how "san" give rise to suffering), then one can understand dukkha nirodha or how to stop suffering from arising; see, "What is "San"? Meaning of Sansāra (or Samsāra)."
- The tendency to get angry is a gati (pronounced "gathi"), which can be loosely translated as a "character quality", which gets established firmly if one has made it to be a habit.
- The more angry one gets (this is what is really meant by "āna" in Ānāpanasati), the more will the "tendency to get angry" becomes. This is important to understand.

6. This has been established in neuroscience in recent years. Our brains (or more accurately neural circuits in the brain) get "wired" for certain habitual activities. The more we do something, the easier it becomes to do it again.

- That holds not only for "defiled activities" like getting angry, to "getting addicted to doing something on a regular basis like smoking and drinking, to eating too much, or even harmless (and useful) habits like driving.
- For example, after one learns to drive, it becomes a habit. When we drive, we are mostly on "auto pilot", especially if it is a regular drive, like driving to work every day. Here is an article that is an easy read: "WebLink: healthtransformer.co: The Neuroscience of Behavior Change."

7. Therefore, the trick to stop getting angry is to "try to stop that anger when one becomes aware that one is angry" (this is what is really meant by "āpāna" or put out or get rid of, in Ānapāna, which comes from "āna" + "āpāna"). Many Pāli words are shortened to rhyme.

- The long-term solution is to think about the CONSEQUENCES of such an angry mindset, and focus one's attention deliberately on a neutral or a "pleasing thought object", say visualizing a calm Buddha image in one's mind.
- If such an angry mindset comes to one's mind while in a formal meditation session, then one COULD do "breath meditation" for a few minutes to get the mind off of that mindset.
- The easiest is just to count to 10 in order to quickly stop the incoming thought and then think about the bad consequences of such an angry mindset.
- The key point is that "stopping these angry thoughts from arising" MUST BE DONE any time and all the time, whether one is in formal me ditation or just engaged in regular activities.

8. Thus a critical aspect of being able to stop such bad thoughts is to really understand the bad CONSEQUENCES of having such thoughts (which would feed that bad kamma viññāna and could even lead to bad bodily actions).

- Therefore, an understanding of the bad consequences of immoral deeds and thoughts (kamma vipāka resulting from bad kamma) will be valuable.
- Viññāna can be of two types: (i) We do kamma with a certain (good or bad) mindset, i.e., kamma viññāna. (ii) the results of such actions will bring vipāka in the form of vipāka viññanna. See, "ِ. Viññāna (Consciousness) can be of Many Different Types and Forms."
- Also see, for example: "Kanha (Dark) and Sukka (Bright) Kamma and Kammakkhaya" and "How the Buddha Described the Chance of Rebirth in the Human Realm."

## How That Bad Vipāka Viñ̃ñaṇa Was Created in the First Place

9. Now we need to see how this "kamma viñãāna regarding enemy Y " is created and where it exists. This is what is explained in Paṭicca Samuppāda. Don't worry. It is easy to see this process.

- Let us take an example. Persons X and Y were competing for something that they crave: a girl friend, a job, an elected position, we can think about many possible scenarios. But suppose X starts hating Y because Y is competing to win the heart of a girl.
- Now, every day X is thinking about how to block Y from "getting the girl." He may try to get Y kicked out of his job or physically hurt or even kill Y.
- These conscious angry thoughts about Y are vacī sañkhāra generated by X .

10. That is how a Pațicca Samuppāda process starts with "sañkhāra paccayā viññāṇa." That viñ̃n̄ạa is a "kamma viññāna."

- The more one does any type of sañkhāra (mano, vacī, and kāya), the more strong that "kamma viñ̃̄āna of enemy Y " will become in X 's mind.
- In simple terms, that means thinking about harming Y , speaking against Y , or doing something to hurt Y . All those activities will help that "kamma viññanna of enemy Y " to grow.

11. When X is consciously generating such "bad thoughts" about Y , then X will be imagining (creating) scenarios in one's mind of hurting Y in some way. This could be telling a lie about Y's character to the girl in question or his boss, for example. Or it could even be creating in his mind how he will ambush Y and carry out a physical attack.

- This is called creating "nāmarūpa" (creating various scenarios) in one's mind: "(kamma) viñ̃āạna paccayā nāmarūpa."

12. That will initiate the next step: "nāmarūpa paccayā salāyatana."

- The more bad thoughts (vacī sañkhāra) that X generates, his all six sense faculties (salāyatana or six $\bar{a} y a t a n a)$ will start getting involved. He will be looking to see (using cakkhāyatana) whether Y is talking to that girl, and he may write a nasty email about Y to his boss (using kāyāyatana), etc.
- Of course, some of these steps occur simultaneously and go back and forth too. For example, "nāmarūpa paccayā viññāna" happens as well as "viññ̄ạna paccayā nāmarūpa." In other words, the more "nāmarūpa" X makes in his mind, his bad viññ̄ạna will grow too.

13. Each of such activities will lead to contact with "san" (his greed towards the girl and hate towards Y ), via "salāyatana paccayā (san)phassa" or "salāyatana paccayā samphassa."

- That invariably leads to the next step: "samphassa paccay $\bar{a}$ vedan $\bar{a}$," which is also known as "samphassa jā vedanā," i.e., X is now generating a lot of "angry feelings that arise due to hate," which leads to "vedanā paccayā tanhhā."
- That "samphassa-j $\bar{a}$-vedan $\vec{a}$ " is a mind-made vedan $\bar{a}$.

14. It is important to note that "tanh $\bar{a} "$ " is not just greed. Taṇhā really means "getting bonded to a situation via greed or hate."

- Now X cannot let go of it, and now he pulls it even closer: "tanhhā paccayā upādāna": upādāna ("upa" + "ādāna") means 'pulling closer' (in the mind).
- This leads to the next critical step of "upādāna paccayā bhava." This is where that "kammic energy" that was initially created via the "viññanna of enemy Y " gets really established in the kamma bhava. It is easier to just think of "kamma bhava" as a form of energy that stays out there in the universe (just like visible $r \bar{u} p a$ are out there).
- This energy also called dhamm $\bar{a}$ (with a long $\bar{a}$ ) can come back to one's mind at times. That is how the "subconscious" works, and we will discuss that at a later time.

Paṭicca Samuppāda processes are described in detail at, "Paticca Samuppāda."

## Viññāṇa, Kamma Bhava, Kamma Bīja - Related to Each Other

15. We can see that both kamma viññāna and bhava are associated with kammic energy. The easiest way to remember is that kamma bhava is where kammic energy is, and those various types of kammic energies (good and bad) are kamma būja (seeds, pronounced "beeja") in the kamma bhava. They are waiting to bring kamma vipāka or the results of such kamma.

- When we do good kamma (say donating food to the needy), we also create good kamma bïja in the kamma bhava that can bring future "good vipāka" or "good results."
- Therefore, there are good and bad kamma bïja (seeds) waiting in the kamma bhava, to bring in kamma vipāka, so to speak.
- Just like a seed can give rise to a plant, a kamma bīja can give rise to a kamma vipāka. A good seed will give rise to a good plant (something useful, say apples or grains), and a bad seed will give rise to a bad plant (weeds).

16. When a kamma bīja brings a kamma vipāka to the mind, it leads to a mindset that is compatible with the kamma vipāka; that is a "kamma viñ $\tilde{n} \bar{a} n ̃ a . "$

- A "Kamma viñ̃̃āna" can be good too (in a mundane sense), for example, when engaging in a meritorious deed. We first need to get rid of "bad kamma viññāna." All viññāna are reduced to "pure consciousness" at the Arahant stage. It may take some time to grasp this point.
- Earlier we saw (\#8-\#13) that kamma viññanna is the "initiator" of a kamma bïja that is "deposited" in the kamma bhava. Then that kamma bïja will be waiting for the right "conditions" to bring that mindset back to the mind.
- Then that mindset (kamma viññāna) can lead to doing more sañkhāra (i.e., more kamma) that will, in turn, make that kamma viññāna grow; that will, in turn, lead to strengthening the corresponding kamma $b \vec{j} a$ in the kamma bhava.
- Then a corresponding gati (pronounced "gathi") is established. It is important to understand what is meant by gati. Then it will be easier to see how different gati (including the "angry gati" of $\mathbf{X}$ that we discussed above) are established.

See, "The Law of Attraction, Habits, Character (Gati), and Cravings (Asavas)," "How Habits are Formed and Broken - A Scientific View," "Gati to Bhava to Jãti - Ours to Control."

## Putting It All Together - These Fundamentals Are Essential

17. So, now we are starting to see the connections among these different terms: sañkhāra, kamma viñ̃̄āṇa, bhava, kamma bīja, gati, Ānāpānasati, etc.

- Whenever you have time, you may want to go back and read relevant previous posts. With repeated readings, things will become much more clear.
- In the sutt $\bar{a}$, the Buddha used this pattern of repeating stuff over and over. That makes it easier for these concepts to sink in.
- Please don't hesitate to ask questions if something is not clear.

## 18. Understanding Buddha Dhamma is all about understanding the steps in Paticca Samuppāda:

"Yo paticcasamuppādam passati,
so Dhammam passati.
Yo Dhammam passati,
so paticcasamuppādam passati",
"One who sees paticcasamuppāda
sees the Dhamma.
One who sees the Dhamma
sees paticcasamuppāda."
(WebLink: suttacentral: Mahāhatthipadopama Sutta (MN 28); at the end)

- If one to understands Paṭicca Samuppāda, one needs to understand all these key terms like sañkhāra, kamma viññāṇa, bhava, kamma bīja, gati, Ānāpānasati, etc.
- Other relevant posts are listed below. The more one reads and contemplates, the more one will be able to understand:
"Viññ̄̄na - Consciousness Together With Future Expectations," "Pāli to English - Serious Problems With Current Translations," "Four Noble Truths - Suffering and Its Elimination," "Connection Between Sañkhāra and Viññāna."

### 4.1.8 Ānāpāna and Satipatṭhāna - Fundamentals

## January 30, 2019

1. Mahā Satipațthāna Sutta (DN 22) just describes in more detail the Ānāpānasati bhāvanā that is in the Ānāpānasati Sutta (MN 118).

- This post discusses the fundamentals related to both suttā. More details at: "Mahā Satipatthāna Sutta."

2. One synonym for Nibbāna is "cooled state", which means the mind is "permanently cooled down." There can be no anger, greed, or ignorance can arise such a mind.

- However, we start at a more basic state. When we start doing real Ānāpāna/Satipatṭhāna, we will start feeling a PERMANENT relief from our stressed minds.
- On the other hand, "breath meditation" provides only a temporary relief.

3. We discussed how our thoughts can affect our minds in the previous post, "Breath Meditation Is Addictive and Harmful in the Long Run."

- When angry thoughts arise, one's whole body becomes hot and agitated; blood pressure goes up; face becomes dark, because the blood becomes dark.
- On the other hand, when one has compassionate thoughts in one's mind, one's mind feels joyful and it shows up in the face too.

4. Some people are more prone to generating angry thoughts; others are more like to generate compassionate thoughts. In other words, some people have "angry gati" while other have "compassionate gati." Previously we discussed that there are a wide variation of gati ranging from very bad to very good.

- Of course, these gati do not show up all the time. Even a person with "angry gati" must be provoked for such angry thoughts to arise.
- In Buddha Dhamma's language, a person with "angry gati" has "anger hiding in the mind" waiting for a trigger to come to the surface. These are called "anusaya" or "kilesa" (hidden defilements).
- The key word gati (pronounced "gathi") is related to one's habits and character; see "The Law of Attraction, Habits, Character (Gati), and Cravings (Asavas)."

5. We can take an analogy to clarify this. Anusaya can be compared to dirt at the bottom of a glass of water. If the glass is not disturbed, the dirt will settle at the bottom, and the water may look clean at the top.

- If there is a lot of dirt at the bottom of the glass, only a slight disturbance can make the dirt come up and make the water dirty. But if it is only a little bit, most minor disturbances may not make the water dirty.
- Just like that, the more anusaya (or corresponding defilements) one has, it will be easier for them to come to the surface. If one has "very angry gati," that person would be easy to be angered.

6. On the other hand, if there is no dirt at the bottom of the glass, no matter what kind of disturbance it is, the water will remain pure.

- The mind of an Arahant is like that. He/she can live totally unaffected surrounded by the world's most tempting sense objects.
- We have a long way to get to the Arahant stage. But we can start getting rid of these "bad gati" or "anusaya" or "defilements" by cultivating the correct Ānāpāna/Satipatṭhāna.
- When one's mind becomes purified, it will be hard to make that person agitated or depressed. One will have a relatively calm mindset even under normally stressful conditions.

7. Even though a glass of water has dirt in it, if the water is left undisturbed for a while, the dirt gets settled at the bottom and the water becomes relatively clear.

- That is what happens with "breath meditation." One focuses one's mind on a neutral thought object for a while and all "agitations" subside. But they do not go away.
- Breath meditation appears to provide relief. In particular, if one goes to a retreat and spends several days with one's mind removed from "enticing" AND "angry" thoughts, one feels a high sense calmness.
- However, when one comes back and gets into the usual "rat race", with all kinds of enticing and aggravating inputs from the environment, all those anusaya" come back to the surface!

8. In real Ānāpāna/Satipaṭthāna, those anusaya or "hidden defilements" will be REMOVED gradually. The procedure involves the following:

- Get rid of bad thoughts (such as anger) that may arise due to whatever reasons.
- Let any "good thoughts" that may arise (such as compassion or just thoughts about dhamma concepts) to continue.
- Deliberately contemplate on Dhamma concepts like dasa akusala, gati, anusaya, kilesa, kamma, kamma vipāka, Noble Truths, Noble Eightfold Path, Paṭicca Samuppāda, etc.
- We will see in upcoming posts, how those "three components" are taken into account in the four types of Satipaṭthāna: kāyānupassanā, vedanānupassanā, cittānupassanā, and dhammānupassanā.

9. If a bad thought comes to the mind, one must think about the bad consequences of keeping such thoughts in one's mind and forcefully remove them. For example, if someone says something to make one angry, one could count to ten in one's mind (or just walk away) and not retaliate.

- This is hard to do first. But with practice, one can see the benefits and one will be motivated to continue.
- The nice thing is that the more one trains, the easier it becomes to control one's impulsive reactions.

10. In order to get rid of any bad habit (which are related to gati), it will be VERY HELPFUL to see the bad consequences of such bad habits.

- A smoker needs to convince himself that smoking can lead to various health problems, including cancer. That will be an incentive to get rid of smoking.
- Taking drugs is even worse, one could die with many health problems if one becomes addicted to drugs.
- Even eating too much is a bad habit. One should look at the statistics that clearly show the bad health consequences of over-eating.

11. Learning Dhamma is like learning the bad consequences of bad habits. When one is engaged in immoral activities, one will have bad consequences of those actions, speech, and thoughts in two ways:

- Even if one is making a lot money doing immoral things, one WILL have a stressed mind even in this life.
- The more important consequences may realize in future lives. Highly immoral activities lead to births in the four bad realms (animal realm is one).
- Therefore, it is essential to learn true Buddha Dhamma, where one can begin to understand kamma and kamma vipāka.

12. Another way to say this is that one needs to see the difference between "dhamma" and "adhamma."

Dhamma are the "good, moral deeds" and adhamma are the "bad immoral deeds."

- Note that dhamma here is different from the Buddha Dhamma, even though they are related. Adhamma are opposite of dhamma.
- As we have discussed before, adhamma lead to a stressed mind and dhamma lead to a calm mind at the very basic level.
- At the next level, strong adhamma or "highly immoral deeds" have very bad consequences in the future, especially in future lives (rebirths in the lowest 4 realms). On the other hand, strong dhamma or "highly moral deeds" lead to good rebirths in the higher realms.
- I have discussed them previously. It would be beneficial to review them.
"Rebirth - Connection to Suffering in the First Noble Truth."
"Does the Hell (Niraya) Exist?."

4.1.9 Sati in Ānāpānasati/Satipaṭṭāna - Two Meanings of Sati

## February 4, 2019; revised August 2, 2019; August 13, 2021

This post is critical. Before one can do Ānāpānasatisati or Satipatțthāna meditations, one needs to understand what is meant by "sati."

## Double Meanings of Words - Unique In Pāli with Deeper "Dhamma Meanings"

1. Many Pāli words have "double meanings." As we will see below, that happens in other languages too.

- However, the situation is unique in Pāli in the context of Buddha Dhamma because some Pāli words have deeper meanings that are only to do with Buddha Dhamma.
- An example that we have already discussed is viñ̃̄̄̄na. The ordinary meanings is "consciousness", but the more profound meaning is "defiled consciousness" for mano viññanna that arise via "sañkhāra paccayā viñ̃̄āna." In order to see the context in a given situation, one must know both meanings; see, "Connection Between Sañkhāra and Viññāna."
- Therefore, unlike in other languages, one must have a more in-depth knowledge of Buddha Dhamma to see the deeper meanings of words like viññāna and sati.

2. One fundamental problem with English translations today arises because most translators try to use dictionary translations. Many times, a dictionary may not list all possible meanings, especially the deeper meanings.

- For example, in most Pāli dictionaries, "sati" is given the following two meanings: mindfulness and attention.
- However, another more profound meaning is only approximated by "mindfulness" as we discuss below. The key is to figure out "mindful of what?".
- But let us first see why this is not a big problem in English (or any other language).

## Double Meanings in English versus Pāli

3. In English novels or any other "mundane text," two different meanings are commonly used even in the same paragraph.

- For example, the word right conveys two different meanings in the following sentence: These are the right directions; make a right turn at the first traffic light.
- Following are more examples:

Rose: My favorite flower is a rose. He quickly rose from his seat.
Type: He can type over 100 words per minute. That dress is not her type.
(Read more at "WebLink: grammar.yourdictionary.com: Words with Multiple Meanings").
4. The unique situation in Pāli is that words like "sati" have unique meanings that one can understand ONLY in terms of fundamental concepts and the context.

- To comprehend the deeper meaning of some keywords, one must learn and understand that meaning.
- It has nothing to do with one's academics qualifications. If one has not heard that meaning from a Buddha or a true disciple of a Buddha, one can NEVER figure that out by oneself.
- Since "sati" is a critical Pāli word that appears in the context of Ānāpānasati/Satipatṭhāna, we should spend some time on it.

## Mundane Meaning of Sati - Attention Can Lead to Bhava and Jāti

5. Perhaps "attention" is the best from the "mundane meanings" in \#2 above. When we are engaged in a specific task, we need to keep our attention on that task.

- For example, one needs to keep attention to traffic while driving or paying attention to a teacher who is teaching a new concept.
- Another example is keeping one's attention on a particular "thought object," whether one is looking at something, studying, etc.

6. When one focuses attention to get possession of a worldly thing, that is the "seed" for future bhava. That is a crucial point for those who would like to look into it.

- It is discussed in the post, "Imasmim Sati Idam Hoti - What Does It Really Mean?."
- One may not be able to grasp it until one understands Paṭicca Samuppāda to some extent.

## Why the Mundane Meaning Is Not Enough for $\overline{\text { An }} \boldsymbol{n} \bar{p} \bar{a} n a s a t i / S a t i p a t t ̣ h a ̄ n a ~$

7. Now let us take some examples to see why "attention" and even "mindful" will not give the deeper meaning in the context of Ānāpānasati/Satipatṭhāna.

- Suppose a suicide bomber is assembling a bomb that he intends to use to kill many people. He must be paying careful attention to what he is doing, and that is the ordinary meaning of sati there.
- The term "mindful" also describes the mindset of a suicide bomber while assembling the bomb. He must be mindful of his task. If he makes even a slight mistake, he may trigger the bomb right there.
- Therefore, that bomb maker must have attention and be mindful of his task. Obviously, he is not engaged in Satipatṭhāna.

8. We can see this in many other "mundane" examples too.

- A surgeon doing a complicated operation must pay total attention to the task; he must be mindful of the task.
- The same applies to anyone doing any critical mundane task. Driving, studying, a nuclear scientist designing an atomic bomb that can kill millions of people, an engineer designing a crucial component for a spaceship, etc.
- That is not the "sati" that one must have to cultivate $\bar{A} n \bar{a} p \bar{a} n a s a t i / S a t i p a t t h \bar{a} n a$, even though one must ALSO pay attention and be mindful.

9. However, breath meditation only requires ordinary meanings: one must be paying total attention to the breath and one must be mindful of that task.

- I have explained in the post, "Breath Meditation Is Addictive and Harmful in the Long Run," how "breath meditation" can provide a temporary relief, AND why that can be addictive and bad in the long run.
- For one to engage in true Ānāpānasati/Satipaṭthāna, one must have a particular "mindset" IN ADDITION to paying attention. That is being aware of the moral/immoral implications of one's thoughts, speech, and actions.
 actions. The Iriyāpatapabba section in Satipatṭhāna is ALL ABOUT physical actions. One cannot do that by sitting down and focusing on the breath. We will discuss that later in detail.
- To understand "sati," we need to look at the ultimate goal of a Buddhist.

## One Needs to be Mindful of the Goal in Buddha Dhamma

10. The ultimate goal is Arahanthood, or Nibbāna, which is, "rāgakkhayo Nibbānam, dosakkhayo Nibbānam, mohakkhayo Nibbānam," or "completely removing greed, anger, and ignorance from one's mind."

- We don't need to start there. But one embarks on the Path by gradually removing those three defilements from one's mind.
- One definition of Nibbāna is "cooling down (of the mind)." That "cooling down" can be experienced even at the beginning to some extent.

11. WHEN one is attracted to a sense input (IF IT is enticing OR repulsive), that WILL lead to a burdened mind. Thoughts associated with greed or anger are unavoidable.

- Therefore, one needs to be aware of such DEFILED thoughts, speech, and actions and stop them as they arise. That is the key to true $\bar{A} n \bar{a} p a \overline{n a s a t i / S a t i p a t t!h a ̄ n a . ~}$
- An even deeper meaning of "sati" is to be mindful of the unfruitful and dangerous nature of this world (Tilakkhana.) See, "Basic Framework of Buddha Dhamma." At least read the first post there: "Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana."
- That particular mindset is "sati."

## Deeper Meaning of Sati Involves a Unique Mindset

12. Therefore, the meaning of "sati" in the context of Ānāpānasati/Satipatthāna has a more specialized meaning. A suicide bomber making a bomb, or even a student intensely concentrating on learning a subject, will not have that sati.

- This "deeper sati" is a "good mental factor" (a sobhana cetasika). The sati cetasika is cultivated by learning Dhamma and eventually comprehending Tilakkhaṇa.
- This "sati" is VERY DIFFERENT from the ordinary meanings. The elementary version means "having a mindset to stay away from dasa akusala," which is what one does when one follows the Eightfold Path.
- In short, one needs to focus attention on getting rid of "immoral thoughts, speech, and actions" AND on cultivating "moral thoughts, speech, and actions."

13. However, we can see that the ordinary meanings of "maintaining attention" or "being mindful" must ALSO be there during $\bar{A} n \bar{a} p a \overline{n a s a t i / S a t i p a t!t h a ̄ n a . ~}$

- One must keep the attention (sati) on "good things" and remove attention away (asati) from "bad things" too while keeping the "sati mindset."
- By the way, there is no "asati" cetasika or a "bad mental factor"; it has only the ordinary meaning. Asati means keeping the mind away from any ārammana or any "thought object."
- Asati means "not being focused on a given thought object." There is ONLY one meaning for asati.

14. I hope one can see why just paying attention or being mindful is not enough to cultivate Ānāpānasati/Satipațthāna.

- One must understand that "cooling down of the mind" has its origins in staying away from dasa akusala and actively engaging in moral deeds, speech, and thoughts.
- In particular, it is essential to understand the importance of cultivating moral vacī sañkhāra (conscious thoughts and speech); see, "Connection Between Sañkhāra and Viññāna."

15. When that is done consistently (keeping the mind on good things and off of bad things), over time it leads to Sammā Sati over time. That, in turn, leads to Sammā Samādhi completing the Noble Eightfold Path.

- But one needs to know what is good and what is bad. What is bad is dasa akusala and what is good is dasa kusala, i.e., staying away from dasa akusala.
- When one makes progress on the Path and starts comprehending Tilakkhaṇa (anicca, dukkha, anatta), one's sati will grow. That will be lead to better samādhi.

## The Goal Is Not To Remove All Thoughts From the Mind

16. I also need to mention a common mistake some people make. They think they need to get rid of ALL thoughts that come to mind.

- When one is engaged in $\bar{A} n a \bar{p} a \overline{n a s a t i / S a t i p a t t!h a ̄ n a, ~ o n e ' s ~ g o a l s ~ a r e ~ t w o ~ f o l d: ~ g e t ~ r i d ~ o f ~ e v i l ~ t h o u g h t s ~}$ that come to the mind AND cultivate good thoughts.
 "passāsa" (discarding bad things).

17. Another way to say this is that one needs to see the difference between "dhamma" and "adhamma." Dhamma are the "good, moral deeds," and adhamma are the "bad, immoral deeds."

- As we have discussed before, adhamma leads to a stressed mind, and dhamma leads to a calm mind at a fundamental level.
- At the next level, strong adhamma or "highly immoral deeds" have terrible consequences in the future, especially in future lives (rebirths in the lowest four realms). On the other hand, strong dhamma or "highly moral deeds" lead to good rebirths in the higher realms.
- We discussed dhamma/adhamma in the previous post. I want to mention another aspect of it now.

## What are Dhamma and Adhamma?

18. In many suttā, the Buddha has clearly stated that dasa akusala are adhamma, and that staying away from those is dhamma. For example, in the "WebLink: suttacentral: Dhamma Sutta (AN 10.182)": "katamo ca, bhikkhave, adhammo? Pān̄ātipāto ... pe ... micchāditthi," ie., basically dasa akusala.

- There are many suttā where the Buddha describes adhamma as dasa akusala or opposites of the eight factors in the Noble Eightfold Path.
- On the other hand, dhammas are dasa kusala and the eight factors in the Noble Eightfold Path.

19. This act of keeping the mind (sati) on "good things" and keeping it away (asati) from "bad things" is the key to Buddhist meditation: Satipatṭhāna, Anāpānasati.

- Both require keeping the mind focused on "good things" and stopping it from focusing on "bad things."
- When that is done consistently, over time, it leads to Samm $\bar{a}$ Sati (or always keeping the mind on good things), and then to Samm $\bar{a}$ Samādhi, completing the Noble Eightfold Path.
- But one needs to know what is right and what is bad. What is bad is dasa akusala and what is right is dasa kusala, i.e., staying away from dasa akusala.

## Dhamma Are the Things to "Bear" and Adhamma Are the Things One Should Not "Bear"

20. What is meant by "dhamma" here is "what one bears in mind" or "the mindset." One thinks, speaks, and acts according to that mindset.

- But as we have seen, what one thinks, speaks, and acts are called sañkhāra. And "sañkhāra paccayā viññāna" means one's viñ̃̃āṇa are based on one's sañkhāra; see, "Connection Between Sañkhāra and Viññ̄n̄a."
- Then Pațicca Samuppāda leads to "bhava paccayā jāti." Therefore, when one generates "bad sañkhāra," one ends up creating "bad $j \bar{a} t i$ " for oneself (both during this life and in future lives).

21. Now, "bad sañkhāra" are generated when one bears "bad dhamma." "Good sañkhāra" are created when one takes "good dhamma."

- That is the basis of Paticca Samuppāda, and its connection to "sati."
- When one gradually gets rid of "bad dhamma" by staying away from dasa akusala, and cultivates "good dhamma" by engaging in moral deeds, one cultivates "sati" via Satipaț! hānalĀnāpānasati.

## Sati Included in Five of the 37 Factors of Enlightenment

22. There are " 37 Factors of Enlightenment" that the Buddha said are critical to attaining Nibbāna and thus must be cultivated.

- The importance of the word "sati" is apparent since it appears in 5 of the 37 factors in different forms.
- Sati is in the Five Faculties (Pañca Indriya), Five Powers (Pañca Bala), Four Factors of Mindfulness (Cattāro Satipatṭhāna), Seven Factors of Enlightenment (Satta Bojjhañga), and the Eightfold Noble Path (Ariya Atthangika Magga); see, "37 Factors of Enlightenment."

23. When Ānāpānasati/Satipatt Nibbāna.

- For example, according to the WebLink: suttacentral: Ānāpānassati Sutta (MN 118): "..Ānāpānassati, bhikkhave, bhāvitā bahulīkatā cattāro satipaṭthāne paripūreti. Cattāro satipaṭthānā bhāvitā bahulīkatā satta bojjhañge paripūrenti. Satta bojjhañgā bhāvitā bahulīkatā vijjāvimuttiim paripūrenti."
- Translated: "..Ānāpānassati, when used (bhāvitā) and used frequently (bahulīkatā), completes (paripūreti) four types of Satipațthāna. Cattāro Satipaṭthāna, when used and used frequently, completes Satta Bojjhañga. Satta Bojjhañga, when used and used frequently, completes the full release (Nibbāna or Arahanthood)."

### 4.2 Living Dhamma - Overview

October 27, 2016

\author{

- Living Dhamma - Introduction <br> - Peace of Mind to Nibbāna - The Key Step <br> - Starting on the Path Even without Belief in Rebirth (with first Desana "The Hidden Suffering that We All Can Understand"; desanā title different from post title)
}

### 4.2.1 Living Dhamma - Introduction

August 5, 2016; Revised August 26, 2016 (This replaces the deleted post, "Introduction to a New Approach to Meditation").

1. This series started as a subsection in the "Bhāvana (Meditation)" section. But I think it can be the "step-by-step" by process of "learning and living" Dhamma starting from a very fundamental level. One does not need to be bothered about too many Pāli words or deeper concepts at the beginning.

- From many comments that I get, it is clear that many people have "road blocks" at concepts like "kamma vipāka" and "rebirth." When we start at a fundamental level, one does not need to worry about them. One's own change in experience - as we proceed - will hopefully help clarify those concepts as we proceed.
- All other sections at the website can be used to investigate and learn different aspects from different angles. Buddha Dhamma is a self-consistent theory of nature. There are no contradictions.

2. About a month ago, I started thinking about this approach based on emails from a few people about their experiences. Many people feel the positive effect of meditation, but seem to be "stuck" without being able to go past a certain point.

- I must hasten to add that this "new approach" is fully consistent with Buddha Dhamma and not an invention of mine. It is just another way and - hopefully a refreshing way - to look at how to practice Buddha Dhamma (Buddhism) with a clear understanding.

3. What got me started thinking was the following email from a person (X) who has been doing mostly anāriya meditation, including conventional metta bhāvana ( I am withholding the name for obvious reasons); highlights are mine. Anariya meditation basically means doing meditation without comprehending anicca nature, so most people start that way:
"..The other issue I wanted to ask you about was that I sometimes start wondering if meditation is just dulling my mind, making me less sensitive to what others are doing around me, like a sedative almost. Am I getting addicted to meditation that I need a constant dose, and when I stop I feel I am missing something. for example when I was meditating regularly I no longer felt like reading books or listening to music which I loved earlier so I felt like it was changing my core personality.

To experiment I stopped my formal meditation for a few weeks and I found that I began to get agitated and anxious as before. I was also able to enjoy songs as before. I know that is consistent with what you say about anāriya meditations - that the effects are temporary.

So I am curious to ask you, have you experimented with stopping your meditation practice for a few weeks? I am asking because I understand that you are doing the Ariya meditation and that those effects should be more permanent. Or are you so used to your meditation practice that it would be a torture to ask you to stop even for a few days let alone a few weeks. But the trouble is - if you never stop how will you know if the effects are permanent or not..."
4. I am grateful to X for sharing this beautifully written description. I believe many people have experienced such thoughts at various times. Our tendency to always go back to sense pleasures is very strong, because that is what we have been doing through uncountable rebirths in the kāma loka in the past.

- Whether it is Ariya or anāriya meditation (including even breath meditation), the tranquility of mind (peace of mind) that comes during a meditation session is due to the suppression of the five hindrances (pancanivarana); see, "Key to Calming the Mind - The Five Hindrances."
- In simple terms, the five hindrances are: sense cravings, tendency to be angry, sleepy or dull mind, scattered mind, and the inability to decide the right action. They are always in the background, "covering the mind" and constantly making the mind "agitated and anxious" as X described above.
- What happens during a meditation session (or even if one a fully focused on some task that does not involve sense pleasures), is that the mind is taken off of all such hindrances temporarily. This is actually the first stage where one could experience the "cooling down" or "nivana" or "niveema." It can be called a mundane version of Nibbāna. This is also called "nirāmisa sukha"; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?."
- When one is on a regular meditation program (or in a meditation retreat), that "cooling down" can last during that whole time - days or weeks - outside the meditation sessions.

5. Another person $(\mathrm{Y})$ asked the following related question: "Nirāmisa sukha is felt by which citta?."

- Nirāmisa sukha is not experienced by a specific citta. Rather, nirāmisa sukha APPEARS when cittō BECOME free of defilements, i.e., when the mind becomes (at least temporarily) free of hindrances; see, "Key to Calming the Mind - The Five Hindrances." We will go into details in upcoming posts, but this is a CRITICAL point.
- More examples: Water becomes clear and pleasant when all the dirt is removed. One feels good when a headache goes away; that relief was not gained by adding something, but by removing the headache.
- Similarly, nirāmisa sukha is felt when hindrances and defilements are SUPPRESSED temporarily. When those are removed PERMANENTLY in four stages, one feels more permanent happiness of Nibbāna. At the Sotāpanna stage, a big junk of stresses associated with defilements are PERMANENTLY removed. At the Arahant stage, ALL defilements are PERMANENTLY removed, and the "cooling down" is complete.
- Thus it is going to be a gradual process. It is a mistake to try to go all the way all at once. Don't even think about the Arahant stage (let alone the Anāgāmī stage where one has removed kāma rāga or attachment to sense pleasures), but concentrate on attaining the Sotāpanna stage.
- For many, even before that one needs to experience the nirāmisa sukha. That is what we focus on initially.
- It is when kämacchanda and other nivarana are suppressed that one is able to experience the nirāmisa sukha, grasp the anicca nature, and become a Sotāpanna. This is easier when one abstain from dasa akusala too.
- Thus, in order to grasp the anicca nature (i.e., to suppress the nivarana), the mind needs to be purified to some extent. Person X above is almost there, but you can see how hard for X to be not be tempted by sense pleasures.

6. I will go into details in the upcoming posts in this section, but through countless rebirths we have cultivated a craving for sense pleasures that inevitably lead to the five hindrances, that cover our minds and not letting us see the real nature of this world. Sense pleasures have the following key characteristics:

- They are definitely "pleasurable", i.e., the sense experience is palpable and enjoyable. The Buddha himself said that beings will not be trapped in this suffering-filled rebirth process unless they are seduced by these pleasurable sense contacts.
- The price we pay for that "happy feeling" is that the mind gets excited and restless. Furthermore, that pleasurable feeling cannot be maintained for long times; we get tired of it no matter what it is. Think about anything (food, sex, watching movies, etc), and you will realize that soon we would have had enough of it and we just move onto some other pleasurable activity or "just take a rest."
- But that experience is addictive. The urge to do it again comes back very strong at later times. If we cannot experience it at that time, we at least tend to recall the past experience and try to enjoy that. This is due to the fact that we have a reservoir of mental impurities (kilesa) in our minds, as we discuss in an upcoming post.
- Until one can realize the dangers in at least excessive sense pleasures (anicca, dukkha, anatta nature), one's mind is easily tempted by those sense pleasures; one is afraid that one will "miss out" on the sense pleasures. This is what $X$ was trying to convey above.

7. The meditation experience is the totally opposite of sense pleasures. Nirāmisa sukha can be maintained as long as one stays in the "meditation mindset." But it is not an "enjoyment" in the sense of a sense pleasure. It is really a "peace of mind" (one could actually feel a bodily sukha sensation in a $j h a \bar{a} a$, but we will discuss that later). This is why X is tempted by them, even though they lead to general agitation of the mind (see the first highlighted sentences in \#3 above).

- Nirāmisa sukha BECOMES addictive (i.e., preferable over sense pleasures) only AFTER getting to the Sotäpanna stage (at which time it can be called beginning of the "Nibbāna sukha" or "nivan suva"). At that time, even though one may still be tempted by sense pleasures until the Anāgāmī stage, one will ALWAYS go back to meditation for relief. Until then it is always a battle that is so eloquently expressed by $X$ in \#3 above.
- Furthermore, at that stage one will have voluntarily given up some of more excessive sense pleasures. This is something that just happens. One needs to forcefully give up only those things that are directly harmful to oneself or to others. For example, sexual MISCONDUCT needs to be forcefuilly given up, but not sex (We recall that one of the main upāsikā of the Buddha, lady Visaka, attained the Sotāpanna stage at age 7, but got married and had 22 children). The urge for sexual pleasure will AUTOMATICALLY go away only at the Anāgāmī stage.
- Of course, one could start discarding some "conventionally pleasurable" but not directly harmful things like watching TV or going to concerts etc. (as X stated in \#3 above). I also experienced the same kind of things in early practice. I would rather learn Dhamma than watch TV even in the early days. "pleasure of Dhamma" is different.
- However, I still get pulled into a limited number of sense pleasures occasionally, so I know how hard it is to resist especially those activities that one has gotten used to. Getting rid of all kāma rāga (i.e., reaching the Anāgāmi stage) is the hardest. But once the anicca nature is comprehended to some extent, it becomes easy to discard most things as a waste of time.

8. Therefore, in the beginning it could be a "tug of war" between those addictive sense pleasures that we are used to enjoy and the long-lasting but not so addictive nirāmisa sukha of meditation. Here, meditation also includes listening, reading, and contemplation of Dhamma.

- As one's mind gets more and more cleansed, the "joy of Dhamma" WILL increase. One WILL BE able to grasp deeper and deeper meanings even from the same discourse or a post.
- The time to contemplate on anicca (and Tilakkhana in general) is when one starts "liking Dhamma", with the pancanivarana temporarily lifted. If one starts forcing the mind to accept the anicca nature, that may not be successful, and one may get discouraged. Of course, each person is different and some may be able to do it.

9. Finally, in X's last (highlighted) statement in \#3 above, the question was: If I stopped meditating for two weeks, would I be able to "switch back to enjoying sense pleasures" as X did?

- I am quite sure I could abstain from meditating for two weeks if I really wanted to. But, such an abstinence would not change "my core." It just cannot. Sometimes when I go on a trip with my family, I do not get to meditate for several days. For example, last month there was a break of about 7-8 days during such a trip. But when I get back, I automatically get back to my normal schedule of meditation.
- In addition, most of my "meditation" is not formal. I think about Dhamma concepts whenever there is time, sitting in a car, just before falling asleep, first thing when I wake up, etc.
- Furthermore, I don't feel "missed out" on those cravings that I have lost, even though I can still experience that "sense pleasure." For example, while I was working I used to have an alcoholic beverage daily for over 30 years, even though I did not really get "drunk"; it was just a habit. Nowadays, that habit has automatically disappeared. Still, If I am out with an old friend (who does not know that I have changed) and he has a drink, I may have one just to keep him company. But the "urge" to have a drink at the end of the day is never coming back. A big chunk of "mental impurities" (or kilesa) have permanently been removed from my mind.

10. What we are going to do is to look closely at what these defilements are that needs to be removed in order to purify the mind, so that those pancanivarana will be permanently lifted and the mind can grasp deeper and deeper concepts easily.

- It is easier to solve a problem when one figures out what the problem is, and the root causes that lead to the problem.
- Our problem here is the defiled mind. The root causes are the mental impurities (or kilesa, keles, or klesha in Pāli, Sinhala, and Sanskrit respectively) that have accumulated in our minds over the beginningless rebirth process. These are ultimately responsible for the five hindrances (pancanivarana) that cover our minds.
- We will discuss these kilesa in future posts. They provide a simple way to identify and quantify mental impurities, and how they are to be discarded step-by-step.

Next in the series, "Peace of Mind to Nibbāna - The Key Step."

### 4.2.2 Peace of Mind to Nibbāna - The Key Step

August 12, 2016; Revised December 21, 2016; June 27, 2022 (note that I wrote this in 2016) ; August 27, 2022 (note that I wrote this in 2016)

I have changed the title of this post from "Nirāmisa Sukha to Nibbāna Suva - The Key Step."
One needs to experience a "peace of mind" or "cooling down" (nirāmisa sukha) before starting on the Noble Path to Nibbāna; the transition to the Sotāpanna stage happens when one comprehends the anicca nature while experiencing nirāmisa sukha.

- After that transition, nirāmisa sukha becomes permanent with the removal of the pañcanīvaraṇa. The full explanation will take more posts, but we start here.
- Many people start meditating without understanding what to meditate on. One needs to learn the basics of pure Buddha Dhamma first. One can start with conventional meditation techniques that are out there. Still, to grasp deeper Dhamma, one needs to stay away from the ten defilements (dasa akusala) as much as possible.

1. In the previous post "Living Dhamma - Introduction", we discussed the experience of X. Please read it before reading this post.

- X had experienced nirāmisa sukha by engaging in a regular anāriya Mettā Bhāvanā. Even though it led to a relaxed and calm state of mind, X realized that at the same time the desire to engage in some types of sensual pleasures (reading books or listening to music) went away.
- Then X stopped meditating for two weeks, and the ability to enjoy books or music returned. However, the nirāmisa sukha also disappeared, and X's mind was again burdened and agitated.
- Some people may not have experienced such a temporary "cooling down" or nirāmisa sukha, so I thought of discussing this a bit more before discussing the technical term "kilesa." It is important to figure out one's current status before reaching the next stage. It is a step-by-step process.
- One needs to get to that stage (where X was) to at least experience the difference between the nirāmisa sukha and sensory pleasures to start comprehending anicca nature. At that stage, pañcanīvaraṇa is temporarily lifted and the mind becomes calm enough to comprehend anicca nature. However, that can happen momentarily during listening to a discourse too.

2. When fully immersed in sensory pleasures, the mental burden that inevitably comes with it is not apparent to that person. We have gotten used to the "mental agitation in the background" and don't feel it most of the time. Only when one gets into a "calmed state of mind" can one appreciate the burden of this "constant agitation or incessant distress" in the background.

- Through the meditation program, X has begun to appreciate the relief from this "incessant distress" effect due to pañan̄̄varana, and the relief is called nirāmisa sukha.
- However, the conundrum is that there is a price to pay (if one does not comprehend the anicca nature)! To the dismay of X , the ability to enjoy some favorite sense pleasures disappeared.

3. In very simple terms, this problem arises because X has not comprehended the anicca nature (what we will be doing in this new section is to discuss a step-by-step process that could help comprehend the anicca nature).

- In X's mind, those sensory pleasures are worth hanging on to. And that feeling is VERY POWERFUL.
- Even though a Sotāpanna who has lost the craving for SOME sensory pleasures has still more left. So, even a Sotāpanna knows how hard it is to eliminate that "nagging feeling" of needing to seek sensory pleasures. Of course, a Sotāpanna would not do any apāyagāmi deeds seeking sensory pleasures.

4. This is why comprehending the anicca nature is so important at X's stage. When one comprehends the anicca nature of SOME EXTENT, one loses the "nagging feeling" to seek some sensory pleasure.

- Only when one truly realizes the dangers (or at least the worthlessness) of given sensory pleasure will the mind automatically lose that "nagging feeling." For example, if one likes to go hunting, one will not give it up voluntarily until one starts seeing the bad consequences of that activity. Same for fishing, being an alcoholic or a drug user, etc.
- Comprehension of the anicca nature comes gradually. One first sees the dangers in immoral sense pleasures. Then one sees the worthlessness in extreme sense pleasures that are not harmful to others but oneself. One sees the worthlessness of any sensory pleasure in the kāma loka only at the Anāgām $\bar{\imath}$ stage. This is why it is a step-by-step process.

5. It is like holding onto a gold necklace that was considered valuable. But if it were undoubtedly proven that the necklace was an imitation, one would instantly lose the attachment to it.

- Attaining the Sotāpanna stage via comprehending the anicca nature to some extent is like that, i.e., realizing the dangers (and/or worthlessness) of SOME extreme sense pleasures. Even though one may not realize that one has lost the craving for SOME sense attractions, one will realize that within weeks or months.
- Then, the more one meditates on the anicca nature, the more one starts seeing the perils of other (less harmful) sense pleasures too. That is why one HAS TO proceed step-by-step. Getting rid of ALL kāma rāga (attachment to sense inputs via the body touches, smells, and tastes) happens only at the Anāgām $\bar{\imath}$ stage.

6. However, I must say that X is a bit unusual in losing the desire to read books and listen to music. Those are not really "extreme sense pleasures." Before that one will lose the desire to go fishing, mistreat animals, etc., and get pleasure from lying, gossiping, slandering, stealing, sexual misconduct, etc. I am quite sure X never tended to those anyway.

- I also do not want people to think that one needs to lose sensory pleasures such as reading books or listening to music to become a Sotāpanna or to experience nirāmisa sukha. That is not the case. One could even be a Sotāpanna and still have those two tendencies. I have mentioned a person in the time of the Buddha who became a Sotāpanna but could not get rid of the urge to have a drink (however, he did not live that long after attaining the Sotāpanna stage). No one can say whether another person has attained the Sotāpanna stage.
- A Sotāpanna would not do only those deeds that could make him/her suitable for rebirth in the $a p \bar{a} y \bar{a}$. That means he/she has removed high levels of greed, hate, and ignorance to the levels of kāma rāga, paṭigha, and avijjā; see, "Lobha, Dosa, Moha versus Raga, Patigha, Avijiāa."
- I believe X had cultivated anāriya jhānā in previous but recent rebirths and is carrying that "gati" to this life. X has described some bodily sensations that are associated with $j h \bar{a} n \bar{a}$. This is why it is easy for X to at least temporarily lose attachment to even fairly harmless things like reading books or listening to music.

7. Each person loses a set of characteristics (gati) upon attaining the Sotāpanna stage. One should be able to look back and see what those are, just like X did. And, of course, whether those changes are permanent. (Note that my personal experiences discussed below were as of 2016.)

- As I mentioned, I have lost the urge to have a drink at the end of the day, which I had been doing for over 30 years. I did not force that, even though I contemplated the possible bad consequences of keeping that habit.
- When one follows the Path, one does not forcefully give up sensory pleasures, only immoral actions that can hurt other living beings; even X did not forcefully give up books or music, it just happened. Losing the desire for sense pleasures happens gradually, starting with extremes.
- I have only lost interest in reading fiction books. I used to read all types of books, but now I am not interested in reading fiction because it is a waste of time, just like watching TV. On the other hand, I am now reading more non-fiction books.
- Over the past two years, I have also been more productive in my science interests. I have learned the subtleties of quantum mechanics that were not apparent to me even two years ago. The mind becomes much clear as one gets rid of kilesa.
- So, it is important to realize that one is not supposed to lose all interests. One loses interest in only those activities related to greed, hate, and ignorance. That is a must and should be fairly obvious when one looks back. One loses interest in all worldly affairs only upon attaining the Arahanthood.

8. My point is that it is desirable to first get into this stage of X , where X can see the difference between sensual pleasures (āmisa sukha) and the nirāmisa sukha that arise by at least temporarily suppressing the desire for sensual pleasures via a meditation program.

- Even more critical than a meditation program is living a moral life, staying away from dasa akusala as much as possible.

9. Many people try to attain "Nibbānic pleasure" just because they think sensual pleasures, i.e., that Nibbānic pleasure is like the pleasure of music, good food, etc. This is why the account of X is so good an example in pointing out the difference between the two.

- Actually, this is good place to discuss the differences among āmisa, nirāmisa, and jhāna sukha and the Nibbānic sukha.
- I reserved the name "sukha" for Nibbāna because it differs from the nirāmisa sukha. It is an overall state of "well-being." I have no idea what that is like at higher stages, but it is now an ever-present calming effect on the body and mind.
- Sense pleasures lead to āmisa (or sāmisa) sukha. So, we are all familiar with āmisa sukha.

10. Nirāmisa sukha can arise due to a few different causes. They are all beneficial for the Path and to comprehend the anicca nature.

- Those cittā that bring us àmisa sukha are burdened with kilesa or akusala cetasika (which we will discuss in the next post). These give rise to an agitated mind that is under incessant distress; see, "Anicca - The Incessant Distress ("Pilana")." This is what X described in the previous post, ".. I stopped my formal meditation for a few weeks, and I found that I began to get agitated and anxious as before." When one gets rid of this incessant distress, one feels the nirāmisa sukha.
- One can also feel the nirāmisa sukha for short times when engaged in moral activities, for example, helping others or giving food to hungry people or animals. Again, this feeling comes because those kilesa are not present in citta (thoughts) that arise during such activities.
- Another is engaging in Ariya or anāriya meditations. Here also, one's mind is mostly devoid of kilesa (depending on the strength of the samādhi).

11. There is also a higher nirāmisa sukha that the Buddha recommended. That is the sukha arising due to $j h a \bar{a} \bar{a}$. When in a jhāna, one has citta running through one's mind that belongs to rūpa or arūpa loka.

- By definition, those cittā are also devoid of kilesa or mental impurities.
- Jhānā arise when samādhi is intensified (cultivated) to a certain level.

12. "Nivan sukha" or "Nibbānic sukha" or "Nibbānic bliss" is due to cittā that are even purer. There is no trace of incessant agitation or stress left in those citt $\bar{a}$.

- These cittā are also called pabhassara (bright) citta; see "Nibbāna - Is it Difficult to Understand?" and "Pabhassara Citta, Radiant Mind, and Bhavaniga."
- Also, Sotāpanna will not be able to experience the Nibbāna sukha for that stage unless he/she can get into Sotāpanna phala samāpatti via cultivating jhānā. Still, he/she will not have the nirāmisa sukha going away. Whatever relief gained from the "incessant distress" is permanent.

13. We will discuss the kilesa (akusala cetasika) that give rise not only to incessant agitation and stress but eventually to all sansäric suffering - soon in this series.

- The incessant distress can be considered "immediate kamma vipāka" due to cittā burdened with kilesa or akusala cetasika. The "delayed effects" of such citta will bring more kamma vipāka at later times, and the more potent ones can bring rebirth in the ap $\bar{a} y \bar{a}$.
- Thus the key step to the Sotāpanna stage is to experience nirāmisa sukha by cleansing the mind via moral behavior (sila) and a good meditation program. Then the mind is open to grasping the anicca nature, i.e., pañcañ̄varaṇa could be suppressed for days.
- However, that transition may happen quickly when one is living a moral life and contemplating pure Dhamma be followed by the Sotāpanna phala moment without one noticing it then. Different people get there in different ways.
- But there is much to discuss before discussing the Sotāpanna stage.

Next in the series, "Starting on the Path Even without Belief in Rebirth", ....

### 4.2.3 Starting on the Path Even without Belief in Rebirth

August 19, 2016; revised August 24, 2022

1. The "Living Dhamma" section lays out a step-by-step Path from fundamentals. You may want to read it after reading this post.

- Many people, including some Buddhists, have difficulty connecting with the idea of rebirth.
- Rather than making the idea of rebirth a prerequisite to starting the practice, one can start practicing by comprehending another type of suffering that the Buddha revealed to the world.

2. The Buddha revealed at least two types of suffering unknown to the world (and taught how to get rid of both PERMANENTLY).

- Even though the future suffering associated with the rebirth process is the one that is mostly highlighted in the literature, there is a suffering that we all experience in this life without even knowing about it.
- That first type of suffering we all experience is the incessant distress that we all feel (but may not even be aware of). One starts feeling the nirāmisa sukha when one temporarily suppresses this incessant distress.
- In a way, it is necessary first to realize the existence of this first type of suffering, at least suppress it, and experience the nirāmisa sukha that results from it (as X did ).
- That will provide the initial faith in Buddha Dhamma and enable the mind to get to samādhi and help comprehend the anicca nature. That will lead to the next step of comprehending the second type of suffering associated with the rebirth process.

3. Rather than writing a few more posts on this, I decided to present this idea in audio format. I have never delivered a "desanä" previously, but hopefully, you will be able to grasp the concept. You need to adjust the volume control on your computer:

### 4.3 Dhamma with Less Pāli

November 14, 2017
This new subsection is now the second subsection in the "Living Dhamma" section.

- Initially, I had "Living Dhamma - Fundamentals" as the second subsection after the "Living Dhamma Overview" subsection.
- Now I realize that it was to much of a jump, even for many who have had exposure to Buddha Dhamma, but are not familiar with cetasika and other key Pāli words. So, in this new subsection, I plan to close that gap.

## Posts:

Buddha Dhamma for an Inquiring Mind - Part I

### 4.3.1 Buddha Dhamma for an Inquiring Mind - Part I

April 12, 2018; revised April 27, 2022
Today, Buddha Dhamma remains hidden under a lot of incomprehensible Pāli words. I can see that many people use Pāli words without knowing their true meanings. If one has a good understanding of the "basics" or the "framework," it is easier to understand and remember the meanings of key Pāli words.

- This post will be in summary form, since it is impossible to describe even an outline in several essays. One can find relevant posts by using the "Search" box at the top right. Furthermore, one can ask questions at the discussion forum ("Forum"). I encourage any opposing to views, as long as one provides evidence from the Tipitaka.
- This website is based solely on the Tipitaka and only the three Commentaries there. The reasons discussed in the section "Historical Background."

## Buddhism (Buddha Dhamma) - What Happens After Death?

1. The majority of people in the world today belong to one of the following two camps:

- The next life is going to be forever, in heaven or hell.
- This life is all one has. When one dies, it is over-no rebirth or hell or heaven.

2. The first theory has been handed down from generation to generation, and there are many "holes" in that theory. It seems illogical in many ways (it is one thing to create the Earth, but to make billions of galaxies with billions of planets like Earth? And how did the Creator come about?), but think about this:

- If a baby dies within a few months, will it go to heaven or hell (it has not done anything good or bad)?
- Furthermore, how come some people are born wealthy and thus have a better chance to go to heaven than one who is born poor and therefore may be tempted to do immoral things to survive (and hence go to hell)?

3. The second theory appears more logical to many "scientifically-oriented" people with a "materialistic" view.

- But even if just one of the rebirth stories is believable or proven to the satisfaction of someone, then that person has to throw away that theory.
- More importantly, no explanation is available for how consciousness arises from inert matter. Our bodies are made of the "same stuff" that makes a tree or a house.

4. In contrast, Buddha Dhamma says that there will be future lives as long as there are causes for future lives to arise.

- We can learn a lot about Buddha Dhamma by looking at what those causes are. Those causes arise in one's mind.
- One's Creator is oneself. And, as long as one perceives that one can find ultimate happiness in this world, one will be reborn in this world.

## The Four Noble Truths

1. In simple terms, Buddha Dhamma is based on the following four truths about this world, called the Four Noble Truths:

- The Noble Truth about suffering.
- The causes for such suffering.
- One can eliminate those causes and thereby stop future suffering from arising.
- Fourth is the way to eliminate those causes. That leads to ultimate happiness (Nibbāna).

2. The Buddha said that when one understands the First Truth, one will automatically understand the other three. Therefore, let us discuss the First Noble Truth.

- The key and critical issue here is understanding what is meant by "suffering" in Buddha Dhamma.
- It is essential to realize that "suffering" and "the Truth about suffering" are different.

3. Everyone knows suffering very well as a FEELING. One does not have to be a Noble Person or even a Buddhist to see that suffering. Even animals know what that suffering is, and they don't like that either. We all have seen dogs cry with pain when hit.

- So, what is the Noble Truth about suffering? The Buddha said that this Truth is unknown and is hidden from humans until a Buddha teaches what it is.
- The cause for FUTURE suffering is attachment to sense pleasures. That is the Noble TRUTH about suffering. Thus, "attachment to sense pleasures" is what the Buddha called "dukkha."

4. Understanding the truth about suffering requires an understanding of the broader world of 31 realms and that most of that future suffering would be in the four realms or the ap $\bar{a} y \bar{a}$ (of which the animal realm is one). But suffering is associated with all realms.

- There are causes for that suffering, i.e., causes for leading to rebirth in the $a p \bar{a} y \bar{a}$ or in any realm in general.
- Thus, one can stop the worst types of suffering by abstaining form such immoral actions. Yet, it is difficult to overcome such temptations.
- The Noble Eightfold Path is the way to overcome such temptations. So, now we can begin to see why one will know all four Truths when one understands the First Truth.

## Mind - Where Root Causes for Suffering Arise

1. We know that we are conscious because we can think. We think via thoughts. We can think about many types of things.

- When we are sleepy, we are just aware that we are alive.
- On the other hand, if one is about to be run over by a car, one will generate enough power to jump a long distance away from that car or, if chased by a lion, can probably beat a world record for sprinting.

2. One's mind also controls one's actions and speech via thoughts or citta that arise in mind.

- We cannot even lift a finger without a citta or a thought arising in mind. We may not even think about lifting that finger, but we do. It is easy to figure out this way: We can fold that finger any time we want to.
- You may not realize that speech comes via thinking or citta. Again, it is easy to see that we can stop that speech any time we want to.

3. One's actions, speech, and thoughts have consequences. One's conscious thoughts determine the level of future suffering.

- Future suffering arises due to our conscious thoughts or citta, and they are also called sañkhāra in some contexts.

4. There is a difference between citta and sañkhāra (the English word "thought" does not translate precisely as either).

- The word citta is used in Abhidhamma to denote the smallest mental activity that lasts only a fraction of a billionth of a second.
- Sañkhāra represents the overall effect of billions of citta.
- In that sense, the word thought is closer to sañkhāra.

5. Those thoughts that move the body (e.g., lifting that finger) are kāya sañkhāra, because those sañkhāra control the body or kāya.

- Those that lead to speech are called vacī sañkhāra, which are two types: We can speak out loudly or just "talk to ourselves" (thinking consciously); both are vacī sañkhāra.
- However, the word "vāc $\vec{a}$ " is used only for speaking aloud.
- Other thoughts that arise are called mano sañkhāra, which are those thoughts that arise without us even thinking about it consciously.
- So, I hope it is clear what those three types of sañkhāra are. It is crucial to be able to see the differences. But they all arise in the mind.

6. Mano sañkhāra arise automatically based on our gati (or character or habits). We only become aware of them after they arise.

- Immediately after mano sañkhāra arise, we become aware of them and if we are not paying attention, we may just keep generating vacī sañkhāra along the same lines.
- For example, when an alcoholic sees a bottle of alcohol at a party, their first reaction is to have a drink. But if that person has willpower, they can think about the harmful consequences and forcefully move the mind to some other matter.
- Both Satipatṭhāna and $\bar{A} n a \bar{a} a \overline{n a}$ Bhāvanā is based on understanding how vacī sañkhāra arise based on mano sañkhāra that occur according to one's gati (and that we have control over vacī sañkhāra).

7. Another critical observation from the above discussion is that our physical bodies are "inert shells." It is the mental body (called "gandhabba") where all thoughts (i.e., sañkhāra) arise, thereby controlling the physical body.

- That is why in many confirmed Out of Body Experiences (OBE), the body becomes lifeless when the gandhabba comes out of the body.
- These are all key concepts discussed in detail on the website. One can use the "Search" box to find pieces as needed.

## Importance of Javana Citta

Not all thoughts are the same. To get a better idea about thoughts or sañkhāra, it is good to know some basic facts about citta.

1. Citta can be of 89 types and that analysis is very complex. We don't need to know all those. We need to know that some of those 89 types are called "javana citta." They are very powerful citt $\bar{a}$.

- The word "javana" comes from the root " $j a$," meaning "birth." Thus javana citta is the root for all births. Javana can also mean "running" or "spear" that can penetrate, to indicate the power.
- The opposite of javana citta would be "ati parittârammana citta," that we don't really even feel. Citt $\bar{a}$ (plural) arise when we are asleep and are responsible for breathing.
- Breathing involves the movement of body parts (lungs), and is thus a "kāya sañkhāra." That is an excellent example of an "undefiled" sañkhāra. It is a necessary action to maintain life.

2. On the other side of the spectrum, we have powerful javana citta, which CAN lead to strong sañkhāra called abhisañkhāra.

- Javana cittā generate energies that are the root cause of future vipāka (results) that can give rise to various types of $v i p a \bar{k} a$ during a lifetime. Strong ones can lead to future rebirths. Thus, the key to future suffering is in javana citta.
- However, not all javana citta lead to abhisañkhāra. For example, kusala kamma (wholesome deeds) done by Arahants are not abhisañkhāra. They are called kriya (or "action without lobha, dosa, moha.") They don't have kammic energy to fuel rebirths or bring pavutti vipāka.

3. A very strong kāya sañkhāra would be to kill a human, say by stabbing. That requires a very strong impulse, a high javana power. One can do that only when one's mind is very agitated and is full of hate. These are called apuññābhi sañkhāra (apuñña abhi sañkhāra, meaning "bad strong sañkhāra").

- However, high javana power does not necessarily mean an evil action. When someone does good deeds (kusala kamma), those involve puññābhi sañkhāra (puñña abhi sañkhāra, meaning "good strong sañkhāra").
- High javana power may involve neutral actions too. For example, lifting a heavy object requires high javana power. But such an action while cleaning house, for example, is a neutral action (no kammically good or bad intention), therefore is not called good or bad (puñ̃̃a or apuñña). Such javana cittā are not included in Abhidhamma because they do not have kammic consequences.

4. There are 12 types of javana citta corresponding to the 12 types of akusala citta and 8 types of javana citta corresponding to the eight types of kusala citta.

- These are the javana citta of importance to us.
- The 12 types of akusala citta with akusala javana can bring bad vipāka during a lifetime or rebirth in "bad realms."
- The eight types of kusala citta with kusala javana can bring good vipāka during a lifetime or rebirth in "good realms." We need to do kusala kamma to avoid rebirth in the apāyā to attain Nibbāna.
- However, "good" and "bad" in the above are relative. It is just that "bad realms" have extreme suffering. But no realm out of the possible 31 realms is free of suffering.

5. Now we are beginning to see why dasa akusala kamma or the ten immoral deeds (done with those 12 types of akusala citta), are at the heart of Buddha Dhamma.

- When one is engaged in such immoral deeds, they generate "energies" called "bhava shakti" to fuel future kamma vipāka (bad results), including rebirths in the apāy $\bar{a}$.
- Thus it is unfruitful and dangerous to engage in dasa akusala; this is why such activities are of anicca nature (do not lead to what one expects and only lead to more stress and suffering), one of the three characteristics of this world (Tilakkhana).
- Such activities lead to suffering or dukkha, the second of the Tilakkhana.
- Once one gets a rebirth in the $a p \bar{a} y \bar{a}$, it is tough to get out, and thus, one becomes "helpless." Furthermore, clearly such actions are fruitless in the long run, even if born in "good realms." That is the key to understanding "anatta," the third characteristic of this world.

So, that is the first part of a highly-condensed outline of Buddha Dhamma. We will continue this outline in the next post.

Ongoing discussion on this topic at the discussion forum: "Buddha Dhamma for an Inquiring Mind."

### 4.3.2 <br> Root of All Suffering - Ten Immoral Actions

## November 14, 2017

1. This new subsection of "Dhamma with Less Pāli" is now the second subsection in the "Living Dhamma" section.

- In the first desan $\bar{a}$ of the "Living Dhamma - Overview" subsection, we talked about how one's mind get agitated when one is engaged in dasa akusala or the ten immoral actions.

2. After that "Living Dhamma - Overview" subsection, I had "Living Dhamma - Fundamentals" as the next subsection, where I started discussing the connection between those dasa akusala and cetasika or mental factors in our thoughts.

- Now I realize that it was to much of a jump, even for many who have had exposure to Buddha Dhamma but are not familiar with cetasika.
- So, in this new subsection - "Dhamma with Less Pāli" - I plan to close that gap. This subsection will have much less Pāli words, and I will try to introduce only the essential Pāli words as I proceed.

3. Here is the first desanā: "Ten Immoral Actions (Dasa Akusala)." Here we discuss the ten immoral actions (dasa akusala) and how avoiding them helps calm the mind; in fact, this is the key to avoid depression.

## WebLink: Download "The Hidden Suffering that We All Can Understand"

I recommend reading the three posts in that "Living Dhamma - Overview" subsection.

### 4.3.3 Is Suffering the Same as the First Noble Truth on Suffering?

## Re-written September 4, 2022

A common misconception is that dukkha means the feeling of suffering. Current suffering is a result of the previous kamma. We need to focus on eliminating future suffering.

## Misconception 1 - Sensory Pleasures Can Overcome Suffering

1. There was this question in the discussion forum apparently by a young person, "With so many pleasurable things around us with the innovations from science and technology, why do people need to think about suffering? Isn't Buddha's message kind of outdated?"

- We all are seeking to avoid suffering. Modern society gives the impression that pursuing sensory pleasures will lead to happiness. But we have ample evidence that it does not work. Many people have enough wealth to acquire any sensory pleasure they desire. But don't they suffer just like everyone else?
- Suffering due to injuries, sicknesses, old age, etc., will be there irrespective of one's wealth or accessibility to sensory pleasures.
- Some wealthy people have committed suicide because they could not cope with depression. If they have enough wealth to access any sensory pleasures they desire, how can they become depressed?
- Buddha taught something that no one has ever taught: "We suffer in the long run BECAUSE of our attachment to sensory pleasures."
- Don't be turned off yet. It will be worthwhile to read this post to the end.

2. The Buddha never said that "there are no sensory pleasures to be had in this world." There are plenty of mind-pleasing things and activities. He said people could not SEE the hidden suffering in sensory pleasures.

- We can get into trouble at different levels depending on how we pursue such sensory pleasures. The bad outcomes are obvious if one does immoral things (stealing, sexual misconduct, etc.) in pursuing sensory pleasures.
- However, even "harmless" sensory pleasures can bring about suffering in the rebirth process. That is the "previously unheard teachings" of a Buddha.
- But that does not mean one should start giving up sensory pleasures from this moment. That will only lead to frustration. There is a step-by-step to be followed. See "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"

## Misconception 2 - First Noble Truth Is About Getting Rid of Physical Suffering

3. Some believe practicing Buddha Dhamma can lead to a pain-free life.

- That was clear from the following comment by another person: "I understand what the Buddha meant by suffering because I came down with this ailment."
- Some others have a wrong idea that the First Noble Truth on Suffering is about physical suffering and that one can get rid of it by practicing Buddhism, i.e., by "doing meditation."
- The goal of a Buddhist is to avoid such suffering in future lives. Any physical suffering we experience now requires medical treatment. Even the Buddha experienced physical suffering (due to an injury and backaches.)
- Of course, practicing Buddhism/meditation can also bring relief in this life. But that is relief from depression or other "mental suffering." See "Three Kinds of Happiness - What is Nirāmisa Sukha?"
- Relief from sicknesses or other ailments cannot be overcome that way. One must seek medical advice in those cases.

## First Noble Truth on Suffering Is About a More Serious Issue

4. The First Noble Truth on Suffering or Dukkha Sacca (pronounced "sachcha") is about suffering in future lives and how to overcome it.

- It is the ultimate truth about suffering. Any suffering that one may be experiencing in this life is negligible compared to that when born in the four lowest realms (apāyās.) The animal realm is included there.
- Buddha Dhamma needs to be understood with wisdom. Wisdom (pañña) is a mental factor (cetasika) that needs to be cultivated mostly by reading (or listening) to the Buddha's worldview first.

5. In his first sermon, Dhamma Cakka Pavattana Sutta, the Buddha stated that his teachings are: "pubbe ananussutesu dhammesu" or "a Dhamma that has never been known to the world."

- However, those teachings can not be understood if we just focus on this life, like the young person who commented in \#1 above.
- In other words, the First Noble Truth is primarily about the suffering in the rebirth process. If one does not believe in rebirth, it would be worthwhile to look into the evidence for rebirth. See "Starting on the Path Even without Belief in Rebirth" and "Evidence for Rebirth."

## The worldview of the Buddha

6. The "wider worldview" of the Buddha can be briefly stated as:

- There is a wider world out there with many more beings living in 29 more realms than the human and animal realms that we experience, AND the real suffering is in the lower four realms.
- This life is only a brief stop in our long journey through the cycle of rebirths called samsāra.
- Even in this life, there is hidden suffering even when one seems to be enjoying life, AND there is real suffering in old age and death that is inevitable for everyone. That last part is apparent to anyone but is not thought about much. As one gets old, when the real suffering starts, the mind could be too weak to learn Dhamma.

## Importance of "Understanding the Big Picture"

7. Analogy 1: When a fish bites a bait, it does not see the suffering hidden in that action. Looking from the ground, we can see the whole picture and know what will happen to the fish if it bites the bait. But the fish cannot see that whole picture and thus does not see the hidden suffering. It only sees a delicious bit of food.

- In the same way, if we do not know about the wider world of 31 realms (with the suffering-laden four lowest realms) and that we have gone through unimaginable suffering in those realms in the past, we only focus on what is easily accessible to our six senses.
- That analogy is in the "WebLink: suttacentral: Balisa Sutta (SN 17.2)." You can read the translation there.

8. Analogy 2: Suppose someone makes you an offer. He says, "I will put you in one of the best resorts with all amenities paid for a month. But there is a catch. The food will taste great but have traces of poison that will become effective in a few months and lead to death within the year".

Will anyone accept the offer, knowing it will lead to suffering and death? Of course not.

- But they would gladly accept the offer if they were not told about the poison in the food. They will have a good time but bear the same consequences as the fish in the above analogy.
- In the same way, we enjoy sensory pleasures without knowing their long-term consequences, especially if we do immoral things to get them.

## Things to Contemplate (This is Meditation!)

9. We all have seen how a parent, a grandparent, or even an unrelated celebrity from past years transforms from a dynamic, self-confident, and sometimes imposing character to a feeble, helpless person in the latter years. Sometimes they die under pathetic conditions that would have been unimaginable for them when they were young. But this change is gradual, and even they do not realize it until it is too late.

- When one becomes too old, it may be too late to start thinking about these facts; one needs to spend a little time contemplating these "facts of life" now.
- Not to get depressed about this inevitability, but to DO SOMETHING ABOUT IT; this will enable one to enjoy the latter days of life with nirāmisa sukha, even if no stage of Nibbāna is attained.

10. However, it DOES NOT MEAN one should rush to get away from all sensory pleasures even if one becomes convinced of the core message of the Buddha.

- Abandoning everything abruptly may have even worse consequences if it is not done with true understanding. It takes time to digest the whole message. It has taken me several years to reach where I am now. I have not given up anything with remorse; I do not "miss" anything that I have given up. The only things one may want to "forcefully give up" are things that directly hurt other beings, like killing, stealing, etc., which most people don't do anyway.
- Giving up sensory pleasures comes gradually with understanding when one sees the benefits of giving up.

11. There is no need to rush into taking drastic actions. The urgent task is to get started. Allocate a little time each day to learn Dhamma, preferably when the mind is a bit calmer so that one can focus and contemplate. As the Buddha said, this Dhamma differs from what we are used to.

- As one begins to understand the message of the Buddha, the learning process will become easier. What I hope to do with this site is to present all the background material I have gone through so that others do not have to repeat it all.
- Of course, you may want to do additional research. Each person evaluates things differently.

## Summary

12. The First Noble Truth on suffering is NOT so much about current suffering, especially physical suffering. It is not about the dukha vedana but needs to be UNDERSTOOD with wisdom (pañña).

- The Pāli word for suffering is dukha, with one "k." The First Noble Truth (Dukkha Sacca) is not merely about dukha but how to get rid of it or dukkha (dukha + khaya); see "Does the First Noble Truth Describe only Suffering?"

## Dhamma, Sañkhāra, San̉khata, Rūpa, Viññāṇa, Gati, Āsava, Anusaya

July 22, 2018; revised October 9, 2022

1. I recently realized that it would be a good idea to explain what some critical Pāli words mean in one place.

- This information could be spread over hundreds of posts on the website, but not many people have read even a fraction of what is on the web site.
- Since it is critical to understand these key terms, I will try to provide another condensed "big picture" in terms of these keywords. In the last post we analyzed the big picture in terms of root causes; see, "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

2. One way to look at this is to start with how the Buddha described "everything in this world." We have two worlds: the physical world (rūpa loka) and the mind world (mano loka).

- Everything that is in the physical world is detected by the five physical senses of the eyes, ears, nose, tongue, and body: vaṇna rūpa (visible objects), sadda rūpa (sounds), gandha rūpa (smells), rasa rūpa (tastes), and photthabba rūpa (touchable objects).
- Therefore, everything in our physical world is called r $\bar{u} p a$ and includes the five types mentioned above. Those rūpa are all above the suddhatthaka stage.
- For example, we can see vaṇ̣a rūpa with eyes: "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaim." Similarly, for the other four.
- Some objects in the physical world can be detected with more than one sense faculty, and the more information we get, the more knowledgeable we become of the object: we can see and touch an apple; if we can also smell it, the apple is probably ripe; if we taste it, we can confirm that it is ripe.

3. We have a sixth sense faculty: mana indriya, which detects everything else in our world, and they are called dhammā: "manañca paṭicca dhamme ca uppajjati manoviñ̃̃ānaim." These dhammā are in our mano loka (mental world).

- These dhammā include everything that is not detected with the five physical senses. They include, for example, kamma bïja, nāma gotta (memory records or memories), mathematics, philosophy, Buddha Dhamma, etc.
- Those are also called $r \bar{u} p a$, but those $r \bar{u} p \bar{a}$ are different from the $r \bar{u} p a$ in the physical world: Some have energies that lie below the suddhatthaka stage (kamma bīja), and the rest of them are either just memories (nāma gotta) or concepts.
- These fine rūpa are described as, "anidassanaì, appațighaì, dhammāyatana pariyāpanna rūpaì" or "rūpa that cannot be seen, touched, and only detected via dhammāyatana (mana indriya)."

4. When one of our senses detects something in our physical world or the mental world, one of the six types of viñ $\tilde{n} \bar{a} n a$ arise, and we become aware of that "thing", whether it is a vaṇna rūpa, sadda rūpa, or a dhammā.

- Viññanna is a very complex entity: it includes or encompasses the following: our feelings (vedanā), perceptions (saññ̄), and a set of individual mental factors (cetasika). They all arise together, and the set of cetasika arising depends on each person's gati.
- For example, totally different sets of vedanā, saññ̄a, and sañkhāra (i.e., cetasika) arise when a famous politician is seen by one of his supporters and a person from the opposition party.
- But in addition, viññāna also includes one's hopes for the future. That is important.

5. The initial response in one's mind upon subjected to an external sense input (whether it is seeing, hearing or just a memory coming to the mind), is called a mano sañkhāra. Of course, that is part of viññāna.

- We can see why different people generate different types of viññāna when exposed to the same sensory input. Such mano sañkhāra - generated instantaneously - depends on one's gati or set of kilesa (lobha, dosa, moha).
- Each person has a set of kilesa called āsava, and one's gati (and therefore mano sañkhāra) closely follow those anusaya/āsava; we will discuss that below.

6. If that sensory input is an interesting one (a like or a dislike), one immediately starts thinking about it. This is called "generating vaci sañkhāra" or basically "talking to oneself." Now one is fully aware that one is thinking about that sensoru input, whether it is a picture, sound, memory, or anything else.

- Furthermore, if one gets animated about that object, one may speak about (still with vacī sañkhāra), and may even take a bodily action that will involve kāya sañkhāra.
- In contrast to mano sañkhāra that arise AUTOMATICALLY, both vacī and kāya sañkhāra are generated consciously. This is key to Ānāpānasati and Satipatṭhāna meditation since we have the ability to stop or to continue with those vacī and kāya sañkhāra.
- Those three types are collectively called sañkhāra.
- So, I hope you now have a better understanding of what is meant by viññāna and sañkhāra and also how they are related. From \#4 above, we can also see that sañkhāra are part of dhammā.

7. By the way, kāya kamma are those actions done with the body, but we see that kāya sañkhāra are responsible for such kāya kamma.

- In the same way, vacī sañkhāra are responsible for vacī kamma, and mano sañkhāra are responsible for mano kamma.
- All kamma (actions) are done with sañkhāra. They all have origins in the mind.

8. Now, such sañkhāra can be "harmless," "dangerous," or "beneficial." Our actions, speech, and thoughts are all based on such saṅkhāra.

- When one gets hungry, one may generate vacī and kāya sañkhāra to ask for food or walk to the kitchen to get something to eat. Such sañkhāra are kammically neutral because they don't lead to "good or bad kamma vipāka" in the future other than getting what one wants to satisfy the hunger.
- Of course, if one gets attached to that food while eating, one may generate strong sañkhāra or abhisañkhāra that will have significant kammic consequences. That is an apuñña abhisañkhāra since that involves the lobha cetasika.

9. If one is planning to kill another human, then one would be generating very strong "apuñña abhisañkhāra" that involves vacī sañkhāra and may lead to kāya sañkhāra if one goes through the killing. Then one would have generated a strong kamma bīja that can bring a future birth in the $a p \bar{a} y \bar{a}$.

- On the other hand, if one is studying Buddha Dhamma, one will be generating all three types of puñña abhisañkhāra (thinking, contemplating and doing things like downloading material from the internet). They will create good kamma bīja that will lead to good vipāka: either leading to magga phala or at least births in good realms so one could continue on the Path.

10. Now, we can see how sañkhāra can lead to the formation (or arising) of sañkhata. A potent kamma bīja generated via a strong apuñña abhisañkhāra can lead to say, animal bhava and to the birth of an animal.

- Therefore, that sañkhata (animal) came to be because of that kamma bīja, and many abhisañkhāra could have contributed to that kamma bïja.
- In the same way, a strong "good kamma bīja" generated via puñña abhisañkhāra (puñña kamma) can lead to a human or a deva birth. That human or deva is a sañkhata too.

11. It is much more complex, but ALL material things arise in this world are due to sañkhāra. I will take a simple example to show the basic idea.

- A house (a sañkhata) comes into being due to many types of sañkhāra. First, one needs to get the idea of building a house. Then he/she may consult an architect and after much discussion (a lot of mano and vacī sañkhāra and also kāya sañkhāra), they will come up with a blueprint (plan) for the house.
- Then many people will work to build the house. Innumerable mano, vacī, kāya sañkhāra are involved in bringing the house to completion (of course, most of those are not puñña or apuñña abhisañkhāra; they are just primarily neutral sañkhāra).
- The explanation of how a tree arises is more complex, but it also has origins in mind. We may get to that in the future, but it is not necessary to attain Nibbāna. As the Buddha said: "mind is the precursor to everything in this world."

12. Any sañkhata has the following universal properties: it comes into being and eventually is destroyed and undergoes unexpected change while in existence. Think about anything in this world. Those three characteristics are associated with any of them.

- This is why ANY sañkhata HAS the anicca nature. It is said that "uppāda vayattena aniccā," emphasizes those main properties: any sañkhata arises and eventually is subjected to decay and death, whether living or inert.

13. However, it is essential to realize that a sañkhata WILL NOT bring suffering to anyone unless one gets attached to it. A sañkhata has the anicca nature (i.e., the potential to bring suffering), but it does not automatically lead to suffering.

- A bottle of poison sitting on a table has the potential to kill someone. But unless someone takes the bottle and drinks from it, he/she will not be affected.
- In the same way, we will be subjected to suffering ONLY IF we get attached to worldly things (sankkhata (sankata in Sinhala), whether it is a person, house, car, etc). Then why do we get attached to such things all the time? That is because we have not comprehended the real anicca nature of sañkhata (sankata in Sinhala). It is not easy to see anicca nature.

14. Therefore, the critical point is that any type of rūpa (or any sañkhata in general) WILL NOT bring us $d u k k h a$ unless we get attached to (or repulsed by it), i.e., it leads to taṇhā in mind.

- This is why the Buddha said, "..pañca upādānakkhandhā dukkhā," and NOT "pañcakkhandha dukkhā."
- There could be all kinds of attractive/hateful things around us, but if we don't generate upādāna for them via craving (lobha) or hate (dosa), we will not be subjected to suffering.
- However, that is hard until one cultivates pañña (wisdom) by learning Buddha Dhamma and eventually grasping the Tilakkhaṇa (anicca, dukkha, anatta).

15. Until then, when we experience a sense input via any of the six senses (see above), we may automatically generate bad mano sañkhāra and then willingly generate vacī and $k \bar{a} y a$ sañkhāra along the same lines, if we are not being mindful.

- As we discussed above, mano sañkhāra arisse AUTOMATICALLY according to our gati. Those gati are closely associated with anusaya (mental fermentations) that cannot be removed until one comprehends Tilakkhaṇa.
- Based on the sense input, those āsava may come to the surface and that is called $\bar{a} s a v a$; see, "Gathi (Gati), Anusaya, and Āsava."
- The only way to change those gati (i.e., to remove āsava from one's mind permanently) is to cultivate $\bar{A} n \bar{a} p \bar{a} n a s a t i$ and Satipatṭhāna, by being mindful of what kind of sañkhāra arise in our minds as we are exposed to such external sense inputs.
- So, it is VERY IMPORTANT to both learn Buddha Dhamma (in particular Tilakkhaṇa) and ALSO to practice real Ānāpānasati/Satipaṭthāna Bhāvanā.

16. It must be clear now that the main cause of suffering is not sañkhata, but sañkhāra, specifically apuñña abhisañkhāra. This is why it is said that "sabbe sañkhāra aniccā" and NOT "sabbe sañkhata anicc $\bar{a} "$ or "sabbe dhamma aniccā"

- Another word for apuñña abhisañkhāra is dasa akusala. Abstaining from dasa akusala is the same as stopping BAD mano, vacī, and kāya sañkhāra.
- Some of that can be done via pure determination. However, that discipline becomes challenging when one gets tempting sensory inputs. For example, one may not take a bribe, but if the offer is a million dollars, one may be tempted to take the bribe.

17. That is the difference a fundamental comprehension of Tilakkhana will accomplish; one's tendency to do immoral things will naturally reduce as one's comprehension of Tilakkhaṇa increases. An Arahant will not be tempted by absolutely anything.

- An Anāgāmī will not be tempted by any "kāma" input, for example, seeing the most attractive person. But he/she will have a liking (craving) for Buddha Dhamma and possibly for jhānic pleasures.
- A Sotāpanna WILL NOT do any apāyagāmi akusala (i.e., will not generate such apuñña abhisañkhāra).
- Those controls take place automatically. The mind will automatically do that by not generating even spontaneous mano sañkhāra belonging to those categories. That is done via permanently changing one's gati for the better via pañña.

18. Finally, another thing to remember is that most of what we experience is dhamm $\bar{a}$, via the mana indriya.

- Those five physical senses are active ONLY in bringing that sensory input, which means that sense experience is very brief.
- Let us take the example of watching a person walking toward you. When the person is 100 meters away, you see a snapshot of him. Then that mental imprint immediately goes to the past. By the time he is close to you, all those visual events of him walking towards you will have gone to the past; they can now be recalled only as dhamma $\overline{\text { a }}$
- The same is true for all five physical senses. We experience them only DURING the sense event, only momentarily. After that we can only RECALL those events with the mana indriya. Those past sense events come back as nāma gotta or memories. A day after meeting that person, you can visualize the whole event with the mana indriya.

19. Therefore, pañcakkhandha (except for those arising at any given moment) is dhammā, experienced by the mind via the mana indriya. This subtle point may not be apparent immediately; also, see "Pañcakkhandha or Five Aggregates - A Misinterpreted Concept."

- We get attached to only a small fraction of pañcakkhandha, and that is called pañca upādānakkhandha; see, "Pancupādānakkhandha - It is All Mental."

20. If you think deeply enough, you will realize the world that one's mind makes up one experiences to some extent. It is easy to see that our vedanā, sañ̃ña, sañkhāra, and viññāna are all highly personal and are based on one's gati.

- The physical world around us exists for sure and is real, but what we perceive is highly personal. What we see and experience is our own "mental picture" of the world: our own vedanā, saññā, sañkhāra, and viññāna.

21. This post became longer than I expected. However, it is impossible even provide a basic outline in a short post. Still, one would need to read other relevant posts to understand this basic layout, thereby understanding those keywords better. But it is essential to do if one is really interested in grasping the actual teachings of the Buddha.

- As the Buddha said, "this Dhamma has never been known to the world, and it is not easy to comprehend." It requires a real effort. On the other hand, getting released from the apāy $\bar{a}$ should not be expected to be done quickly. Otherwise, none of us would still be here.

### 4.3.5 Complexity of the Mind - Viññāṇa and Sañkhāra

April 28, 2019; revised November 8, 2019

## Vipāka Viññāna and Kamma Viññāṇa

1. Even though science has made significant progress in the understanding of the material world, science has advanced very little on the subject of mental phenomena.

- The words viññāna and sañkhāra have no corresponding words in English. It is absurd to translate viññāna as "consciousness." There are two types of viññāna. Vipāka viññanna are only consciousness. However, kamma viññāṇa that arise via "sañkhāra paccayā viññāna" are much more than just consciousness.
- I looked up the definition of consciousness. It is usually defined as "the state of being awake and aware of one's surroundings" or "the awareness or perception of something by a person." That is not what is meant by viññāna.

2. Kamma viñ̃̃āna arises only when one acts with avijjä: "avijjā paccayā sañkhāra" and "sañkhāra paccayā viññāna." Thus, kamma viññāṇa can occur only if one acts with avijjā or ignorance.

- The Buddha did not act with viññāna (i.e., did not generate kamma viññāna) after attaining the Buddhahood. But he had perfectly good consciousness.
- Viññāna is a very complicated word. Even though I have simplified viñãāṇa as "defiled consciousness," that is also not adequate; see, "Viññāna - Consciousness Together With Future Expectations."

## Different Categorizations of Sañkhāra

3. In WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb 6), the term "avijjā paccayā sañkhārā" in akusala-mūla Paticca Samuppāda (that leads to suffering) is explained as follows: "Tattha katame avijjā paccayā sañkhārā? Puññābhisañkhāro, apuñn̄ābhisañkhāro, āneñjābhisañkhāro, kāyasañkhāro, vacīsañkhāro, cittāsañkhāro."

Translated: "What is avijjā paccayā sañkhārā? Puññābhisañkhāra, apuñ̃̄ābhisañkhāra, āneñjābhisañkhāra, kāyasañkhāra, vacīsañkhāra, cittāsañkhāra." (here, cittāsañkhāra is the same as manosañkhāra).

- They are all abhisañkhāra, even though the verse has simplified as "avijjā paccayā sañkhārāey."
- There are two types of abhisañkhāra mentioned there: one kind refers to types of kamma accrued. The second categorization says whether it involves the body, speech, or just mind.
- Therefore, sañkhāra has a much deeper meaning than just "mental formations," even though that is better than the translation for viññāna as consciousness.
- Let us discuss those two types next.

## Mano, vacī, and kāya Saṅkhāra

4. First, let us consider mano sañkhāra, vacī sañkhāra, and kāya sañkhāra.

- They all arise in the mind, but have differences: thoughts that appear automatically in the mind are called mano sañkhāra.
- When we consciously think about something, those are vacī sañkhāra (speaking out is also included).
- When we move the body with our thoughts, those thoughts are kāya sañkhāra.
- Of course, those sañkhāra become abhisañkhāra when immoral or moral intentions play a role. Such abhisañkhāra lead to rebirth and future suffering (see \#5 below).

4. In other words, sañkhāra in "avijjā paccayā sañkhāra" in akusala-mūla Paṭicca Samuppāda are abhisañkhāra that can lead to rebirth.

- Even an Arahant will generate sañkhāra (all three types of mano sañkhāra, vacī sañkhāra, and kāya sañkhāra) to live in this world the physical body dies.
- However, an Arahant will NOT generate any abhisañkhāra.

## Apuñ̃̃a, Puñña, and $\bar{A} n e \tilde{n} j a ~ a b h i s a n ̃ k h a ̄ r a ~$

5. Abhisañkhāra falls into three categories of apuñna abhisañkhāra, puñña abhisañkhāra, and āneñja abhisaǹkhāra.

- Apuñña abhisañkhāra are immoral actions leading to births in the apāyā.
- Puñ̃̃a abhisañkhāra are moral actions leading births in the "good" realms of human, deva, and rūpāvacara brahma realms (via cultivation of rūpāvacara jhāna).
- Āneñja abhisañkhāra are involved in the cultivation of arūpāvacara jhāna leading to rebirth in arūpāvacara brahma realms.
- Therefore, just translating sañkhāra as "mental formations" is not very useful in describing what they are; see, "Sañkhāra - What It Really Means."

## Current Scientific Knowledge of Consciousness

6. Modern science is far behind the Buddha in the understanding of mental phenomena. To understand the severity of this problem, let us examine a presentation by the philosopher John Searle, "Our Shared Condition - Consciousness."

## WebLink: youtube: John Searle: Our shared condition -- consciousness

7. In my opinion, John Searle is one of few philosophers who comes even close to understanding mind phenomena. Some philosophers/scientists do not even believe that consciousness is real. They say: "..Science is objective, consciousness is subjective. Therefore there cannot be a science of consciousness." Whether there can be a "science of consciousness" or not, consciousness is real, as Searle points out.

- Some others object, "..Maybe consciousness exists, but it can’t make any difference to the world. How could spirituality move anything?." In response, Searle points out: "..I decide consciously to raise my arm, and the damn thing goes up."

## Consciousness Is Real

8. John Searle is also quite correct that consciousness is not an illusion. As he points out, only a conscious living being can decide to move a body part, say raise a hand.

- But to be perfectly correct, consciousness is not what moves an arm. One needs to make a "conscious effort" to move the arm, i.e., one must decide to raise the hand. Those thoughts are kāya sañkhāra: conscious thoughts that lead to moving body parts.
- However, it is essential to realize that the energy to raise the hand does not come from the mind. The mind initiates the process, and the brain sends the necessary commands to the muscles to raise the hand; energy for such muscle movements comes from the food we eat.
- Just like an on-board computer carries out the commands of the pilot flying a plane, the brain acts like a computer and carries out the commands given by the mind.

## Breathing Involves Basic Kāya Sañkhāra

9. The definition of $k \bar{a} y a$ sañkhāra is "assāsa passāsā kāya sañkhāra" or "breathing in and out is $k \bar{a} y a$ sañkhāra." We all do such kāya sañkhāra through our lives, and that is the most basic kāya sañkhāra.

- Even though we do not realize it, breathing in and out involves "thinking at the lowest level" or with "atiparittārammana citta vīthi." Those citta vīthi do not have javana citta, and thus, we do not "feel them."
- In the fourth jhāna samāpatti, kāya sañkhāra involved in breathing stop, i.e., breathing stops.
- Kāya sañkhāra lead to any bodily movement. Unless those bodily movements lead to kammic effects (good or bad), they do not become abhisañkhāra, which could lead to rebirth.

## Vacī Abhisaṅkhāra and Kāya Abhisañkhāra Can Lead to Rebirth

10. Vacī sañkhāra also can be just sañkhāra (thinking to oneself/speaking about normal activities) or abhisañkhāra with kammic consequences. See, "Correct Meaning of Vacī Sañkhāra."

- Both vacī and kāya abhisañkhāra can lead to rebirth.
- Mano sañkhāra - which arise automatically - do not lead to rebirths.

## Some Pāli Words Should Not be Translated

11. Modern science cannot explain sañkhāra (more correctly how a person moves body parts or speaks on his/her volition). The English language does not have an equivalent word for "sañkhāra." Furthermore, as explained above, "consciousness" should not be used as the English translation for "viññạ̄na."

- We need to learn the Pāli words (sañkhāra and viñnänaa) and then just use those words.
- That is what has been the practice in the Sinhala language. The same words viñnāna and sañkhāra appear in the Sinhala translations of the Tipitaka. Just like in English, there are no Sinhala words assigned for viññāṇa and sañkhāra.

## Citta, Manō, Viññāṇa - Nine Stages of a Thought

January 24, 2018; revised January 6, 2019; July 26, 2020; August 23, 2022

## Citta, mano, viññāṇa - All Different

1. Citta, mano, and viññāna are common words used indiscriminately in many texts on Buddhism (Buddha Dhamma). They are all related yet different.

- A citta becomes "contaminated" in eight steps to viñ̃n̄ana (and in another step to becoming part of the viññānakkhandha.) That transformation happens in an unbelievably short time. The level of "contamination" depends on one's gati (character/habits.)
- I hope this post will clarify some fundamental concepts, will be invaluable in understanding other concepts.
- I cringe when I see some online comments even say viññāna is Nibbāna. It is exactly the opposite. One attains Nibbāna when one gets rid of viñ̃̃āna or more accurately, when one purifies one's mind to the extent that a citta does not contaminate to the viññanna stage.
- Viññāna discussed at "Viññāña Aggregate."

## Fundamentals of a Citta

2. The generic term in English, "thought," cannot even begin to explain the complex process that happens within a fraction of a billionth of a second when a citta arises. A citta goes through three stages (uppāda, tithi, bhañga) before terminated within a billionth of a second.

- When we see, hear, smell, taste, or touch, seventeen citt $\bar{a}$ flow uninterrupted. Such a series of citt $\bar{a}$ is called a pañcadvāra citta vīthi. For example, it happens in "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaṁ."
- Many such citta vīthis flow before we consciously become aware of that "thought."
- If the thought object comes through the māna indriya ("manañca paṭicca dhamme ca uppajjati manoviññānaï"), that citta vīthi is called a manodvāra citta vith hi, and it has 10-12 citta. Again, many such citta vīthi flow before we consciously become aware of that "thought."

## A "Thought" May Have Billions of Citta
